Working Party on GATS Rules

- DRAFT -

**ANNUAL REPORT OF THE WORKING PARTY ON GATS RULES
TO THE COUNCIL FOR TRADE IN SERVICES (2005)**

1. Since its annual report for 2004, the Working Party on GATS Rules held three formal meetings: on 24 November 2004, on 7 February 2005, and on 20 June 2005.¹ The three negotiating mandates the Working Party is entrusted with were put on the agenda of each meeting: emergency safeguard measures (Article X), government procurement (Article XIII), and subsidies (Article XV). The Working Party also held one informal meeting.

2. In the three areas, discussions referred to the need to consider work priorities in the context of upcoming key timelines and the current state of discussions, including as mentioned by the Chairperson in the annotated agenda circulated as JOB(05)/115.

**I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS
ARTICLE X**

3. At the meetings of November 2004 and February 2005, delegations continued their discussion on emergency safeguard measures on the basis of an informal communication from a group of ASEAN Members² (JOB(04)/175), which presented answers to questions raised with respect to their proposal. Issues touched upon in the discussion included: situations justifying the use of a safeguard measure; the definition of domestic industry; availability of appropriate statistics; the relationship between safeguard measures and obligations in bilateral investment treaties; link to progressive liberalization; and the use of safeguard-type entries in schedules.

4. At the meeting of June 2005, a representative from UNCTAD presented a paper on emergency safeguard measures that the organization had earlier circulated. The ensuing discussion touched upon a number of issues, such as the purpose and effects of a safeguard mechanism in services, relevant comparisons with rules in the area of goods, special and differential treatment, domestic industry, procedures and indicators, compensation, as well as possible approaches for a way forward.³ Divergent views were expressed on the various aspects raised in relation to emergency safeguard measures, including desirability and feasibility.

**II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS
ARTICLE XIII.**

5. At the meetings of November 2004 and February 2005, delegations continued their discussion of an earlier proposal by the European Communities for a framework under GATS for government procurement in services (S/WPGR/W/48). At the meeting of June 2005, the European Communities

¹ Reports of these meetings are contained in documents S/WPGR/M/50, S/WPGR/M/51, and S/WPGR/M/52. They should be read in conjunction with this report.

² Brunei Darussalam, Indonesia, Malaysia, Myanmar, the Philippines and Thailand.

³ Discussions on emergency safeguard measures are reflected in paragraphs 33-55 of S/WPGR/M/50, paragraphs 55-79 of S/WPGR/M/51, and paragraphs 4-37 of S/WPGR/M/52.

presented a communication on the structure of an annex to the GATS on procedural rules for government procurement (S/WPGR/W/52). Issues raised in the discussion included the application of the MFN obligation, the relationship to the Government Procurement Agreement (GPA), modal application, the possibility of distinguishing between goods and services, scheduling approaches, comparisons with approaches taken in regional trade agreements, thresholds, and elements of procedural rules. As requested, the Secretariat prepared the following Note: *Main Approaches to the Undertaking of Commitments on Government Procurement in Economic Integration Agreements: Summary Observations* (S/WPGR/W/52).

6. A number of delegations continued to reiterate that, in their view, the negotiating mandate under Article XIII did not entail market access issues, while others thought that these were covered. Some delegations drew attention to the General Council's decision, in the July Package, that there be no negotiations on the Singapore issue of transparency in government procurement, while others pointed out that the July Package also called on Members to intensify efforts to conclude the rule-making negotiations, including those on Article XIII.⁴

III. NEGOTIATIONS ON SUBSIDIES UNDER GATS ARTICLE XV

7. At the meeting of November 2004, delegations pursued their discussion on issues relating to the information exchange, the definition of subsidy, and trade distortion, including in the light of a previous communication from the delegation of Hong Kong, China (JOB(04)/127). At the meeting of February 2005, delegations discussed an informal communication from the United States, which put forward some thoughts regarding the information exchange. The delegation of Singapore also presented an informal communication which enumerated a number of relevant issues for the negotiations, in particular with respect to definition (JOB(04)/180). At the meeting of June 2005, delegations discussed an informal communication from the delegations of Chile, Hong Kong, China, Mexico, Peru and Switzerland, which put forward suggestions regarding the development of a provisional definition of subsidy and suggested next steps for the information exchange, including timelines (JOB(05)/96).

8. During the three meetings, the issues raised, and on which various views were expressed, included the scope and depth of the information exchange provided for in Article XV:1, the selection of sectors and timelines for the provision of information, the relevance of the ASCM concepts for a provisional definition in services, the treatment of public services, and flexibility for developing countries pursuant to Article XV:1. As requested, the Secretariat prepared the following informal Note: *Synthesis of Views Expressed on the Definition of Subsidy* (JOB(05)/4).⁵

⁴ Discussions on government procurement are reflected in paragraphs 56-70 of S/WPGR/M/50, paragraphs 37-54 of S/WPGR/M/51, and paragraphs 38-58 of S/WPGR/M/52.

⁵ Discussions on subsidies are reflected in paragraphs 4-32 of S/WPGR/M/50, paragraphs 2-36 of S/WPGR/M/51, and paragraphs 59-81 of S/WPGR/M/52.

COMMUNICATION FROM THE EUROPEAN COMMUNITIES

Government Procurement in Services

The following communication, dated 13 June 2005, from the delegation of the European Communities is being circulated to the Members of the Working Party on GATS Rules.

1. In its communications on government procurement in services of July 2002, May 2003 and May 2004, the European Communities (hereinafter the EC) submitted proposals for a framework that could be developed under the GATS, including an Annex to the GATS on procedural rules for government procurement and the possibility to make specific commitments in GATS Schedules to open up to international competition government procurement in services. These communications underlined the flexibility of such framework and the benefits that could be drawn from it. The underlying principle would be that each WTO Member would have the possibility to undertake relevant government procurement commitments in the sectors it wishes to open to international competition and according to the specifications it would set in order to fulfil its public investment and development needs.

2. In the EC communication submitted in May 2004 (S/WPGR/W/48), the EC gave in particular elements that could be developed into **scheduling guidelines for government procurement commitments under the GATS**. The WTO Secretariat Note S/WPGR/W/51 on the main approaches to the undertaking of commitments on government procurement in Economic Integration Agreements (EIAs) provides interesting observations that could enable the Working Party on GATS Rules to further work on such scheduling guidelines.

3. The WTO Secretariat Note S/WPGR/W/49, on the government procurement provisions contained in economic integration agreements, provides a good working basis and a useful source of inspiration in regard to **procedural rules** that could be developed for government procurement in the context of the GATS. Singapore, in its Statement of 24 November 2004, underlined that most of the agreements reviewed in that Secretariat Note contain procedural rules typically covering such topics as: non-discrimination, valuation of contracts, technical specifications, procurement methods, qualification of suppliers, procedural rules regarding invitations to participate, time limits for tendering and delivery, tender documentation, and award of contracts. This provides the structure of an annex to the GATS on procedural rules for government procurement and the question now is what types of rules should be developed under the relevant headings.

4. In this context, the EC is hereby putting forward a new contribution that aims at helping defining the appropriate procedural rules to be developed in an Annex to the GATS on government procurement in services. Such rules are particularly important to ensure the effective opening of government procurement markets. They would apply to sectors where Members undertake specific government procurement commitments.

I. PRELIMINARY CONSIDERATIONS

A. SCOPE AND DEFINITIONS

5. The proposed GATS Annex would indicate that it applies to government procurement of services as it is defined in Article XIII:1 of the GATS. This brings into the scope of the Annex any law, regulations or requirements governing the procurement by governmental agencies of services purchased for governmental purposes and not with a view to commercial resale nor with a view to use in the supply of services for commercial sale.

6. During discussions in the Working Party on GATS Rules, some WTO Members have suggested that the scope of government procurement in services, as opposed to government procurement of goods, should be defined. In its Statement of 24 November 2004, Singapore underlined that a basic question to address was whether a clear distinction could be made between goods and services procurement.

7. The Tokyo Round Agreement on government procurement had to address this question since it was aimed at covering government procurement of goods. Its Article I: 1 (a) provided that: "This Agreement applies to any law, regulation, procedure and practice regarding the procurement of products by the entities subject to this Agreement. This includes services incidental to the supply of products if the value of these incidental services does not exceed that of the products themselves, but not service contracts *per se*."

8. The GATS Annex on Government Procurement could include a provision precisizing that it applies to measures by Members affecting the government procurement of services, defined as covering government procurement contracts in which services are the primary subject.

9. Within the scope of the Annex, the procuring entities could be defined as encompassing all entities listed in Article I: 3 (a) GATS. Nevertheless, the Annex should recognise the right for a WTO Member to limit the scope of its government procurement commitments to a limited group of procuring entities, which could be listed in the Schedule, sector by sector, on the basis of either a positive-list or negative-list approach. For practical purposes, Members might consider listing covered entities in an annex to their Schedule, especially in the case they were to be the same for all committed sectors.

B. THRESHOLDS

10. Threshold values would be indicated in the Members' Schedules. According to studies conducted by the EC in the framework of the integration of the EC procurement market, it appears that below certain thresholds no effective cross-border procurement takes place. The EC is therefore of the opinion that all Members should apply the same level of thresholds, regardless of the size of their procurement market. This would increase the efficiency and transparency of the future GATS Annex on Government Procurement.

C. SPECIAL AND DIFFERENTIAL TREATMENT

11. The positive list structure of the GATS and the flexibility of the proposed approach, notably the possibility to schedule partial commitments including specific limitations, mean that WTO Members would retain full discretion about the timing and coverage of the commitments they would undertake to open their government procurement markets to international competition. Developing countries would therefore be able to open up progressively their government procurement markets in the services sectors they see fit, and to implement measures aimed at the development of certain

services sectors and domestic industry, including the possibility of applying preferential pricing policies.

12. In addition to this “built-in flexibility”, the EC considers that it may be useful to reflect on specific special and differential treatment provisions in the GATS Annex on government procurement. For instance, it is often accepted in government procurement instruments to include provisions in favour of offset regimes aimed to develop industrial sectors or regions.

II. RULES APPLICABLE TO PROCUREMENT PROCEDURES

A. NON-DISCRIMINATION

1. National treatment

13. In its previous communications, the EC proposed that WTO Members could indicate in a fifth column of their GATS Schedules, for each sector and each mode of supply, whether and if so, which specific commitments and limitations they undertake for laws, regulations or requirements governing government procurement in services.

2. MFN treatment

14. The Most-Favoured Nation (MFN) clause of the GATS applies across the board to each services sector, regardless of whether the sector has been subject to specific market access or national treatment commitments. Discussions in the Working Party on GATS Rules have suggested that WTO Members would favour following this principle also as regards government procurement in services.

15. However, there could be a one-off possibility to schedule MFN exemptions at the time of entry into force of the GATS Annex on Government Procurement, to take account of the fact that MFN exemptions relating to government procurement were not scheduled at the time of entry into force of the GATS because Article II GATS was not applying to government procurement. The scheduling of MFN exemptions relating to government procurement could follow the usual structure of the GATS lists of MFN exemptions.

16. Finally, the EC has proposed that the GATS Annex on Government Procurement include an exception to the MFN principle to ensure that the more favourable treatment that GPA parties may accord to each others in the framework of the GPA regime, are not extended on an MFN basis to non GPA parties.

B. VALUATION OF CONTRACTS

17. In order to prevent Members’ procuring entities from splitting or dividing government procurement contracts with the intention of avoiding or circumventing the application of future specific commitments for procurement above certain thresholds, some common rules on the valuation of contracts should be fixed. These valuation rules should furthermore enable Members to identify whether services are the primary subject of a given government procurement contract.

C. TECHNICAL SPECIFICATION AND QUALIFICATION OF SUPPLIERS

18. The provisions of Article VI of the GATS and the disciplines of Article VI:4, once agreed, would apply to government procurement in services. Article VI:4 refers to specific types of domestic regulation, more precisely to licensing requirements and procedures, qualification requirements and procedures, and technical standards.

19. The question may be discussed whether those provisions and disciplines would be sufficient to ensure that domestic regulations relating to technical specification and qualification of suppliers in the case of government procurement are not unduly restrictive. The need to have tenders that reflect the diversity of possible technical solutions (when technical specifications are drawn up in terms of functional performance) or the use of official or permanent lists of qualified suppliers by some WTO Members, would however plead for the development in the GATS Annex on Government Procurement of additional specific provisions on technical specification and qualification of suppliers for government procurement.

D. PROCUREMENT METHODS

20. Three broad categories of procedures are commonly distinguished: public or open tendering procedures, selective or restricted tendering procedures (whereby only those suppliers invited to do so may submit a tender) and limited tendering or direct contracting or single tendering (where the procuring entity contacts directly potential suppliers).

21. The agreements reviewed in the Secretariat Note S/WPGR/W/49 (pp. 23-34) explicitly foresee as a standard procedure the use of open or selective tendering procedures and permit, under certain conditions, the use of limited tendering procedures.

22. Accordingly, the GATS Annex on Government Procurement could indicate that, in general, open or selective procurement should be favoured. Conditions and circumstances justifying the use of limited tendering could also be specified in the GATS Annex on Government Procurement.

23. Effective access to government procurement opportunities is closely linked to competitive and transparent procedural rules. This heading would also cover information on procurement opportunities, tendering, and qualification and contract award procedures. It could include a minimum set of information to be provided in procurement notices, such as title, date and place for submission of tenders, etc.

E. TIME PERIODS

24. The GATS Annex on Government Procurement should fix reasonable time periods that would enable interested suppliers to prepare and submit requests for participation where appropriate and/or to prepare and submit tenders in a responsive manner. In determining time periods, Members could take into account such factors as the distance, the use of electronic means and the complexity of the tender.

F. TENDER DOCUMENTATION

25. The GATS Annex on Government Procurement could provide that the information made available should be sufficiently precise to enable suppliers to assess their interest in a particular government procurement contract and, should they wish to participate in it, to submit tenders. Sufficiently precise tender documentation should attract only the best-qualified service providers and at the same time achieve effective competition. Specific elements of information to be included are the address of the entity where tenders should be sent, the language or languages in which tenders and any other documents may be submitted, the criteria for awarding the contract and the terms of payment.

G. CONTRACT AWARD

26. The GATS Annex on Government Procurement could assert the principle that contracts are awarded either to the lowest tender or to the tender determined to be economically the most advantageous in terms of the specific evaluation criteria set earlier in the procurement notice or tender documentation (for instance quality, price, technical merit, aesthetic and functional characteristics, environmental criteria, which are linked to the subject matter of the contract, etc.).

27. The GATS Annex on Government Procurement could in addition provide that, as regards domestic review of decisions to award a specific contract, and appropriate and prompt information of bidders, provisions of GATS Article VI:2 and VI:3, respectively, should apply.

III. CONCLUSION

28. The EC looks forward to discussing elements presented in this Communication and to elaborating an Annex to the GATS on Government Procurement in Services.

Working Party on GATS Rules

**MAIN APPROACHES TO THE UNDERTAKING OF COMMITMENTS ON
GOVERNMENT PROCUREMENT IN ECONOMIC INTEGRATION AGREEMENTS:
SUMMARY OBSERVATIONS**

Note by the Secretariat¹

I. INTRODUCTION

1. At the Working Party's meeting of 20 September 2004, the Secretariat was asked to prepare a Note summarizing main approaches taken in economic integration agreements with respect to commitments on government procurement, including scheduling issues. The summary observations in the next section were prepared after examining the relevant provisions in the economic integration agreements (EIA) reviewed in S/WPGR/W/49.² Part II is thus not intended to provide a description of approaches followed in each agreement, but to highlight some of the main trends. Further details on the scope of particular agreements, or their annexes, might best be provided by parties to such agreements.

II. SUMMARY OBSERVATIONS

A. GENERAL STRUCTURE

2. At the outset, it should be pointed out that government procurement provisions in EIAs typically do not refer to such terms as commitments or schedules, which are used in the GATS. Rather, the application of liberalizing obligations (e.g., the sectors to which they apply) is generally determined by the Article relating to the scope or coverage of the whole set of government procurement provisions. In most agreements, the scope and coverage (e.g., in terms of thresholds, sectors, procuring entities) is further defined through annexes.

3. Both goods and services are included within the scope of the government procurement provisions of all agreements reviewed.³ Relevant obligations (non-discrimination, award procedures, etc.) typically apply across the sectors covered, although a few exceptions exist in specific cases.⁴

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

² See Table 1 on page 5 of S/WPGR/W/49. With respect to the EC, this Note focuses, unless indicated otherwise, on the recent EC Directive 2004/18/EC. Given their close relationship with EC Directives, the EEA and the Europe Agreements with Bulgaria and Romania are not examined in Part II.

³ While EC Directive 2004/18/EC has broader coverage, EC Directive 2004/17/EC applies specifically to contracts awarded by entities in such sectors as water, energy, transport and postal services sectors. Such contracts can, however, involve the supply of goods or services.

⁴ For example, the EC Directive sometimes make distinctions (e.g., Article 31 "Cases justifying the use of the negotiated procedure without publication of a contract notice").

B. SERVICES COVERED

4. Most agreements specify, in an annex, the service sectors that are subject to procurement provisions. While the EFTA-Mexico, EC-Mexico, EC-Chile and EFTA Agreements, as well as the EC Directive, list the service sectors that are covered (i.e., positive-list approach)⁵, the NAFTA, US-Chile and US-Singapore Agreements use a negative-list approach (i.e., all relevant service sectors are covered except those listed). The Japan-Singapore Agreement specifies that all services listed in each country's relevant GPA annex (which is based on a positive list of services sectors for these countries) are covered except for certain sectors which are mentioned in its annex. The Republic of Korea-Chile Agreement provides that all service sectors referred to in the Services Sectoral Classification List (MTN.GNS/W/120) are covered. Other agreements do not have country-specific annexes specifying sector coverage.

C. ENTITIES COVERED

5. Most agreements limit the scope of the provisions to procurement by specified entities. The relevant lists are often structured by type of entity, e.g., central government entities, sub-central government entities, government enterprises. In addition, the annexes on entities in the US-Singapore and Japan-Singapore Agreements refer to entities included in relevant annexes of the Government Procurement Agreement (GPA), which also follow a positive-list approach. In contrast, the Chile-El Salvador and Chile-Costa Rica Agreements use a negative-list approach. The Australia-New Zealand and New Zealand-Singapore Agreements do not contain lists of entities; the entities covered are those captured by the definition of government procurement.⁶ The definition of contracting authorities in the EC Directive includes, in addition to State, regional or local authorities, bodies governed by public law, which themselves are further defined (see Article 1(9)). A non-exhaustive list of bodies and categories of bodies governed by public law is annexed to the Directive.

D. THRESHOLDS

6. Agreements also typically limit the scope of the provisions to procurement above a certain threshold value. Thresholds often differ between types of entity (e.g., central government entities versus sub-central government entities) and also vary between goods, construction services and other services (thresholds are generally higher for construction services than other services). Apart from construction, however, agreements do not have different thresholds across services sectors or similar types of entities. The Australia-New Zealand, Singapore-Australia, Chile-Costa Rica and Chile-El Salvador are the only agreements that do not have specific thresholds.

E. CLASSIFICATION

7. Agreements that include lists of service sectors (either those covered or those excluded) tend to make reference, at least in part, to either the provisional CPC and/or the Services Sectoral Classification List. Exceptions are the NAFTA (where the US and Canada refer to the Common Classification System)⁷ and the US-Chile Agreement (where the Common Classification System is used by both signatories).

⁵ While the EC-Chile Agreement uses a positive list approach for the EC, the relevant annex for Chile's sectoral coverage provides that no services from the universal list of services (W/120 and relevant CPC categories) are excluded.

⁶ Article 48(e) of the New Zealand-Singapore Agreement and clause 1(e) of the Australia-New Zealand Government Procurement Agreement (Revised 1997).

⁷ See Appendix 1001.1b-2-B of Annex 1001.1b-2 of NAFTA for more information. For construction services, the Common Classification System is based on CPC Division 51. Mexico's temporary schedule of services refers to the CPC. Canada's schedule refers to the Common classification system, but notes that the appropriate CPC definitions will continue to be applied until such time as definitions under the NAFTA classification system are mutually agreed upon.

F. COUNTRY-SPECIFIC RESERVATIONS

8. While the agreements reviewed do not provide for the inscription of limitations or reservations to particular liberalization obligations, many provide for country-specific exclusions from the coverage of the set of provisions. These typically take the form of Notes in annexes, which typically exclude, for example, certain forms of procurement or certain services. They do not specifically permit price preferences or other discriminatory measures, although Mexico has reserved certain rights in that regard in the agreements to which it is party. The extent to which country-specific derogations are included in agreements might depend on the scope of common exceptions or derogations that parties have agreed to (typically found in the text of the agreement), as well as on the comprehensiveness of an agreement.

9. Examples of country-specific derogations include: (a) a derogation regarding contracts for the acquisition, development, production or co-production of programme material by broadcasters and contracts for broadcasting time (for EFTA States in the EFTA Mexico Agreement); (b) a derogation allowing Mexico to impose certain local content requirements for particular types of projects (in NAFTA, the EFTA-Mexico, and EC-Mexico Agreements); (c) a derogation for contracts awarded under an international agreement and intended for the joint implementation or exploitation of a project by signatory States and for contracts awarded under the particular procedure of an international organization (for EFTA States in the EFTA-Mexico Agreement); and (d) a derogation for set asides for small and minority businesses (for the US and Canada in the NAFTA).

G. MODAL COVERAGE

10. The agreements reviewed generally do not make distinctions between different modes of supply. The only mode-specific derogations that could be identified in the context of this study are the following: Article 16.02(4)(c) of the Chile-El Salvador and Chile-Costa Rica Agreements which exclude cross-border financial services from the chapter's coverage; and Article 2(2)(e) of Chapter 6 of the Singapore-Australia Agreement which excludes from coverage the procurement of goods and services outside the territory of the procuring Party, for consumption outside this territory.

Working Party on GATS Rules

- DRAFT -

**ANNUAL REPORT OF THE WORKING PARTY ON GATS RULES
TO THE COUNCIL FOR TRADE IN SERVICES (2004)**

1. Since its annual report for 2003, the Working Party on GATS Rules held five formal meetings: on 2 December 2003, on 10 and 15 March 2004, on 24 March 2004, on 23 June 2004, and on 20 September 2004.¹ While the meeting of 10 and 15 March was specifically devoted to the issue of the deadline for the negotiations under Article XV, the three negotiating mandates the Working Party is entrusted with were put on the agenda of the other meetings: emergency safeguard measures (Article X), government procurement (Article XIII), and subsidies (Article XV). The Working Party also held a number of informal meetings.

**I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS
ARTICLE X**

2. At the meeting of December 2003, discussions focused on the hypothetical example of an emergency situation provided by a group of delegations from ASEAN², as well as on a non-paper earlier submitted by the delegation of Switzerland which analyzed avenues available under a "no ESM scenario". At the meeting of 10 and 15 March, the Working Party agreed on the content of a draft decision on the extension of the negotiations pursuant to Article X³, which was later adopted by the Council for Trade in Services.⁴ In subsequent meetings, delegations discussed an informal communication from the group of ASEAN Members (JOB(04)/4), which provided further thoughts on an emergency safeguard mechanism. Members expressed divergent views on various aspects, including regarding desirability and feasibility. To facilitate discussions, the Chairperson compiled a list of main questions raised (JOB(04)/49). Focal issues of interest included situations justifying a safeguard, link to progressive liberalization, the concept of limited window, domestic industry and acquired rights, injury determination, applicable measures and modal issues, duration and compensation, surveillance, and special and differential treatment.⁵

**II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS
ARTICLE XIII**

3. At the meetings of December 2003 and March 2004, delegations continued their discussion of an earlier communication from the European Communities on a proposed framework for government procurement of services under the GATS (S/WPGR/W/42). They also considered an informal

¹ Reports of these meetings are contained in documents S/WPGR/M/45, S/WPGR/M/46 (and corr.1), S/WPGR/M/47, S/WPGR/M/48 and S/WPGR/M/49. They should be read in conjunction with this report.

² Brunei Darussalam, Indonesia, Malaysia, Myanmar, the Philippines and Thailand.

³ As reflected in S/C/W/236.

⁴ As reflected in S/L/159.

⁵ Discussions on emergency safeguard measures are reflected in paragraphs 5-22 of S/WPGR/M/45, in S/WPGR/M/46 and S/WPGR/M/46/Corr.1, paragraphs 2-38 of S/WPGR/M/47, paragraphs 46-47 of S/WPGR/M/48, and paragraphs 39-58 of S/WPGR/M/49.

communication from Singapore (JOB(03)/216), which listed a number of issues and questions for further discussion in the light of the proposal by the European Communities. At the meetings of June and September 2004, discussions focused on a new communication from the European Communities (S/WPGR/W/48), which provided examples of how commitments and MFN exemptions relating to government procurement could be incorporated in the GATS. The delegation of Hong Kong, China circulated an informal communication (JOB(04)/130), which listed questions relating to the proposal from the European Communities. Many questions and issues were raised, including the application of the MFN obligation, the relationship to the GPA, modal application, scheduling approaches, the possibility of distinguishing between goods and services, link to development, and procedural rules. A number of delegations reiterated that, in their view, the negotiating mandate under Article XIII did not entail market access issues, while others thought that these were covered. Some delegations drew attention to the General Council's decision, in the July Package, that there be no negotiations on the Singapore issue of transparency in government procurement, while others pointed out that the July Package also called on Members to intensify efforts to conclude the rule-making negotiations, including those on Article XIII. As requested, the Secretariat prepared a Note on *Government Procurement-Related Provisions in Economic Integration Agreements* (S/WPGR/W/49).⁶

III. NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

4. Delegations first focused on an informal communication from Chile (JOB(03)/218), which provided anonymous examples of subsidies that might distort trade in services. Delegations tended to concentrate on the first example, which raised issues relating to export subsidies. Members also discussed an informal communication from the delegation of Chinese Taipei on the definition of subsidies in services (JOB(04)/78). At the last meeting, discussions focused on an informal communication from the delegation of Hong Kong, China that put forward some thoughts on the possible way forward on aspects such as the information exchange, other sources of information about subsidies, the definition of subsidy, and trade distortion (JOB(04)/127). Noting the lack of progress in that area, some delegations called for a target date to be set for the exchange of information pursuant to Article XV, while others raised doubts about the precise meaning of Article XV in that regard. The importance of working on a definition of subsidy was stressed, as well as the need for discussing concrete negotiating proposals. It was also recommended to address different aspects of the negotiations in tandem. As requested, the Secretariat produced four Notes, which were subsequently discussed: *Overview of Subsidy Disciplines Relating to Trade in Services in Economic Integration Agreements* (S/WPGR/W/46), *List of Publications from International Organizations Relating to Subsidies in Services* (S/WPGR/W/47), *Subsidies for Services Sectors: Information Contained in WTO Trade Policy Reviews* (S/WPGR/W/25/Add.4), and *Limitations in Members' Schedules Relating to Subsidies* (S/WPGR/W/13/Add.2).⁷

⁶ The discussions on government procurement are reflected in paragraphs 23-33 of S/WPGR/M/45, paragraphs 39-53 of S/WPGR/M/47, paragraphs 26-45 of S/WPGR/M/48 and paragraphs 2-38 of S/WPGR/M/49.

⁷ The discussions on subsidies are reflected in paragraphs 34-52 of S/WPGR/M/45, paragraphs 54-80 of S/WPGR/M/47, paragraphs 5-25 of S/WPGR/M/48, and paragraphs 59-80 of S/WPGR/M/49.

Working Party on GATS Rules

GOVERNMENT PROCUREMENT-RELATED PROVISIONS IN ECONOMIC INTEGRATION AGREEMENTS

Note by the Secretariat¹

At its meeting of 24 March 2004, the Secretariat was requested to expand upon its earlier Note of 24 June 2003 on government procurement-related provisions in economic integration agreements (S/WPGR/W/44). This new Note compiles and provides more information on the types of provisions on government procurement found in economic integration agreements (EIAs) notified under GATS Article V.

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

	M. OTHER ISSUES SUBJECT TO SPECIFIC DISCIPLINES	78

I. INTRODUCTION

1. The initial Note by the Secretariat on this topic (S/WPGR/W/44) provided summary information on the procurement-related provisions of each relevant agreement. To avoid duplication, the present document aims at providing a general overview of the main types of government procurement-related provisions encountered in these EIAs. While highlighting some similarities and differences in the types of procurement provisions, it does not attempt to provide a detailed description of what is found in each agreement. In addition, the Note does not simply replicate all relevant provisions of the agreements, since this would have led to an unreasonably bulky document. Moreover, the full text of these agreements can already be found in official WTO documents (see Table 1). Rather, for each of the issues reviewed, the Note reproduces the relevant provisions of some agreements so as to illustrate similarities and differences by way of example.

2. While this note focuses on the main government procurement-related provisions found in these EIAs (e.g., provisions relating to tendering procedures, offsets, or challenge procedures), it needs to be kept in mind that no attempt has been made to assess the scope and coverage of the respective agreements, i.e., how government procurement is defined, what are the exceptions or exclusions, or what sectors, thresholds, levels of government or entities are covered. Addressing these issues in detail would have required much more time and resources because it would have involved, in many cases, going through the various annexes or list of commitments attached to the procurement provisions. An element of caution is thus necessary since the impact of the procurement provisions reviewed would also need to be seen in the context of the definitional scope of an agreement. Similar or even identical provisions of different agreements may nevertheless have different implications when scope or definition is taken into account. Further, this Note only looks at procurement-related provisions and does not cover provisions of a horizontal nature that may be found in other sections of EIAs, but that can nonetheless be of relevance for government procurement (e.g., horizontal transparency disciplines including those governing the publication of laws and regulations).

3. Also, this Note will not discuss agreements whose government procurement-related provisions essentially consist of calls for future negotiations, co-operation or consultations on the issue (i.e., US-Jordan, CARICOM, Singapore-EFTA, and Chile-Mexico agreements). Nor does it cover the Europe Agreements involving countries that now form part of the European Union². Of the 10 Europe Agreements that have been notified under Article V, only those involving Bulgaria and Romania have thus been reviewed. It should also be noted that since the circulation of the last Secretariat Note on this issue in 2003, the European Communities now has new Directives in force on government procurement.³ The relevant rules have been consolidated in two Directives: Directive 2004/18/EC of 31 March 2004 on the coordination of procedures for the award of public works contracts, public supply contracts and public service contracts; and Directive 2004/17/EC of 31 March 2004 on coordinating the procurement procedures of entities operating in the water, energy, transport and postal services sectors.⁴ Since the provisions of these two Directives tend to be similar - a key difference relates to scope and coverage -, this Note refers, unless indicated otherwise, to the

² The Europe Agreements have been concluded between the European Communities and, respectively, Bulgaria, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Romania, Slovak Republic, and Slovenia.

³ The Directives entered into force on 30 April 2004. Member States have up to 21 months to implement them in national law. Until they have done so, the current directives continue to apply.

⁴ According to the webpage of the European Commission, the objectives of the legislative package were to simplify and clarify the existing Directives and to adapt them to modern administrative needs, for example by facilitating electronic procurement and, for complex contracts, by introducing more scope for dialogue between contracting authorities and tenderers in order to determine contract conditions. The text of these two directives can be found at:

http://europa.eu.int/comm/internal_market/publicprocurement/legislation_en.htm.

Directive with the broadest sectoral coverage, i.e., Directive 2004/18/EC. In addition, for information purposes, the agreement between Chile and the European Communities has been included in the list of the agreements reviewed despite the fact that it has not yet been notified under Article V. The agreement, notified under GATT Article XXIV, includes a chapter on procurement that covers services.

4. Overall, the following observations are thus based on a total of 18 agreements (see Table 1). The WTO Government Procurement Agreement (GPA) is often referred to in the following Parts because some EIAs incorporate certain of its provisions by reference. In that regard, it should be noted that GPA Members are currently engaged in a process of review of the existing provisions of that Agreement with a view to simplifying it. Therefore, it can be assumed that the text of the Agreement will undergo modifications at the end of the review process.

5. Members may also wish to consult Secretariat Notes prepared for the Working Party on Transparency in Government Procurement, which dealt, at least in part, but sometimes with more detail, with related matters: WT/WGTGP/W/6, WT/WGTGP/W/32, WT/WGTGP/W/33.

6. The Note is structured as follows. The following Part provides a summary of key points and observations. Part III then provides information on the government procurement provisions found in EIAs. It is divided in 13 sections, corresponding to issues on which disciplines are typically found in EIAs: non-discrimination, procurement methods, invitations to participate, etc.

Table 1
Agreements Reviewed in This Note⁵

Economic Integration Agreement	Document reference ⁶	Relevant provisions ⁷
EC Treaty of Rome, as well as enlargement.	WT/REG39 WT/REG170 and WT/REG3 (enlargement)	Directives 2004/18/EC, 2004/17/EC, 89/665/EEC, 92/13/EEC.
Australia – New Zealand (ANZCERTA)	WT/REG40	Art. 11 + 1997 Government Procurement Agreement (revised)
EEA	WT/REG138	Art. 65 + Annex XVI

EC – Bulgaria	WT/REG1	Art. 68
EC – Romania	WT/REG2	Art. 68
New Zealand – Singapore	WT/REG127	Part 8, Art. 46-58
EFTA – Mexico	WT/REG126	Chapter III, Art. 56-68 + Annexes XII-XVII
EC – Mexico	WT/REG109	Title III, Art. 25-38 + Annexes X-XIII
EFTA (cons. version)	WT/REG154	Art. 37 + Annex R
Chile – Costa Rica	WT/REG136	Chapter 16
Japan – Singapore	WT/REG140	Chapter 11, Art. 101-102
Singapore – Australia	WT/REG158	Chapter 6
US – Chile	WT/REG160	Chapter 9
US – Singapore	WT/REG161	Chapter 13
Chile – El Salvador	WT/REG165	Chapter 16
Republic of Korea – Chile	WT/REG169	Chapter 15
EC-Chile	WT/REG164	Title IV, Art. 136-162

⁵ As of August 2004. The Agreement between the EC and Chile is included for information purposes, even though not notified under Article V of GATS. As noted earlier, the Europe Agreements involving countries that now form part of the European Union are not reviewed.

⁶ WTO document reference number, where a copy of the agreement, as well as related information, can be found, are also available at: http://www.wto.org/english/tratop_e/region_e/provision_e.xls

⁷ Agreements that include provisions on government procurement that solely provide for future negotiations, consultations or co-operation on procurement issues are not included. See Annex to S/WPGR/W/44 for a more complete picture in this regard.

II. MAIN OBSERVATIONS

7. A significant share of the agreements notified under Article V contain substantive disciplines on government procurement for services (25 out of 34). More than half of these 25 agreements involve the EC (owing largely to the 10 Europe Agreements notified). Many also involve developing countries, and some Members are parties to more than one such EIA (e.g., Chile and Singapore are each party to four agreements⁸). Also, while a good number of the signatories of the agreements reviewed in this Note are parties to the WTO's plurilateral Government Procurement Agreement (GPA), many are not, i.e., Australia, New Zealand, Chile, Costa Rica, El Salvador, Mexico, Bulgaria, and Romania.

8. Significant similarities exist across the procurement provisions found in many of the EIAs reviewed in this Note. In addition to obligations relating to non-discriminatory treatment, they tend to include additional procedural rules relating to fair and open procurement procedures, transparency, and to accountability and due process. Most of the agreements reviewed contain a number of detailed procedural obligations that procuring entities have to fulfil to ensure the effective application of basic principles. The general purpose of these procedural requirements is to guarantee that access to procurement is effectively open and an equal opportunity is given to foreign suppliers in competing for government contracts. Most of the 18 agreements considered in the following Part have provisions - with different degrees of detail and comprehensiveness however - relating to the valuation of contracts (e.g., key principles to be followed for determining the value of contracts), technical specifications (e.g., to avoid unnecessary obstacles to trade), procurement methods (e.g., to specify permissible methods and, more specifically, the conditions under which procedures other than open tendering can be used), qualification of suppliers (e.g., focus on criteria essential to ensure fulfilment of the contract), invitations to participate (e.g., requirements relating to the publication of a tender notice), time limits (e.g., minimum periods of time for allowing suppliers to prepare and submit tenders), tender documentation (e.g., requirements relating to the type of information contained in tender documentation provided to suppliers), award of contracts (e.g., rules regarding award criteria and information of results), provision of information (e.g., requirement to publish laws, regulations, decisions, rulings and other procedures relating to government procurement), and challenge procedures (e.g., requirement to allow suppliers recourse to an impartial body to review complaints).

9. Despite such general similarities across agreements, differences exist in terms of the types of provisions included, as well as the levels of detail and comprehensiveness of such provisions. Agreements such as, for example, NAFTA, EFTA, Singapore-US, Japan-Singapore, EFTA-Mexico or the EC Directives have very detailed and comprehensive rules which often approach - and in some cases go beyond - those contained in the WTO's GPA. Other agreements, like the Chile-Costa Rica and Chile-El Salvador agreements or the agreements involving New Zealand and Australia, provide for a less extensive and detailed set of procedural rules overall. However, it needs to be emphasized that no direct link necessarily exists between the degree of comprehensiveness of the provisions reviewed and the level of liberalization achieved or of the scope of entities and service sectors covered.

10. Finally, instead of containing their own detailed provisions, many agreements rather incorporate by reference the provisions of other agreements. The EFTA, Japan-Singapore and US-Singapore agreements incorporate many GPA provisions by reference. In other cases, the parties to a particular agreement do not comply with identical obligations: some provisions of the GPA are incorporated by reference and apply to one signatory while related provisions of the NAFTA Chapter on Government Procurement are incorporated by reference and apply only to the other signatory. This is the case in the EC-Mexico and EFTA-Mexico agreements, where some NAFTA provisions apply to Mexico and related GPA provisions apply to the EC and EFTA States.

⁸ Without counting the EC-Chile Agreement

III. REVIEW OF MAIN PROVISIONS

A. NON-DISCRIMINATION

11. All agreements reviewed in this Note contain specific provisions relating to non-discrimination. However, their exact content and drafting differ across agreements. The **EFTA** and the **US-Singapore** Agreements each incorporate by reference Article III of the GPA (reproduced below).⁹ According to that provision, parties are required, with respect to procurement covered by the Agreement, to give services and suppliers of the other parties treatment no less favourable than that they give to their domestic services and suppliers or the services and suppliers of any other party. Further, each party is required to ensure that its entities do not treat a locally-established supplier less favourably than another locally established supplier on the basis of the degree of foreign affiliation or ownership and do not discriminate against a locally-established supplier on the basis of the country of production of the service being supplied.

GPA

Article III: National Treatment and Non-Discrimination

1. With respect to all laws, regulations, procedures and practices regarding government procurement covered by this Agreement, each Party shall provide immediately and unconditionally to the products, services and suppliers of other Parties offering products or services of the Parties, treatment no less favourable than:
 - (a) that accorded to domestic products, services and suppliers; and
 - (b) that accorded to products, services and suppliers of any other Party.
2. With respect to all laws, regulations, procedures and practices regarding government procurement covered by this Agreement, each Party shall ensure:
 - (a) that its entities shall not treat a locally-established supplier less favourably than another locally-established supplier on the basis of degree of foreign affiliation or ownership; and
 - (b) that its entities shall not discriminate against locally-established suppliers on the basis of the country of production of the good or service being supplied, provided that the country of production is a Party to the Agreement in accordance with the provisions of Article IV.
3. The provisions of paragraphs 1 and 2 shall not apply to customs duties and charges of any kind imposed on or in connection with importation, the method of levying such duties and charges, other import regulations and formalities, and measures affecting trade in services other than laws, regulations, procedures and practices regarding government procurement covered by this Agreement.

12. The Agreement between **Japan and Singapore** also incorporates Article III of the GPA by reference, except that the application of paragraph 1 (b), providing for MFN treatment, is specifically excluded.¹⁰ Article 26 of the **EC-Mexico** Agreement and Article 57 ("National Treatment and Non-Discrimination", reproduced below) of the **EFTA-Mexico** Agreement reflect Article III of the GPA, except that like in the Japan-Singapore agreement, the issue of non-discrimination amongst foreign services or foreign suppliers (i.e., MFN treatment) is not addressed.¹¹ Article 3 ("National

⁹ See Article 6 of Annex R of the EFTA Agreement and paragraph 1 of Article 13:3 and paragraph 5 of Article 13:2 of the US-Singapore Agreement.

¹⁰ See paragraph 1 of Article 101 of the Japan-Singapore Agreement.

¹¹ In the GPA or NAFTA, for example, the obligation of MFN treatment relates to discrimination between Parties to the agreement. Such type of an obligation may not be necessary in agreements in which there are only two parties. It should also be noted that in the GPA, Members typically attach reciprocity conditions to their commitments.

Treatment") of Chapter 6 of the **Singapore-Australia** Agreement includes similar language, but further specifies that "(a) Party shall not discriminate in favour of corporate bodies in which that Party is a shareholder".

EFTA-Mexico

Article 57: National Treatment and Non-Discrimination

1. With respect to all laws, regulations, procedures and practices regarding government procurement covered by this Chapter, each Party shall provide immediately and unconditionally to the products, services and suppliers of the other Party treatment no less favourable than that accorded to domestic products, services and suppliers.
2. With respect to all laws, regulations, procedures and practices regarding government procurement covered by this Chapter, each Party shall ensure:
 - (a) that its entities do not treat a locally-established supplier less favourably than another locally-established supplier on the basis of the degree of foreign affiliation to, or ownership by, a person of the other Party; and
 - (b) that its entities do not discriminate against locally- established suppliers on the basis of the country of production of the good or service being supplied, provided that the country of production is the other Party.
3. The provisions of paragraphs 1 and 2 shall not apply to customs duties and charges of any kind imposed on, or in connection with, importation, the method of levying such duties and charges, other import regulations and formalities, and measures affecting trade in services other than laws, regulations, procedures and practices regarding government procurement covered by this Chapter.

13. Article 1003 ("National Treatment and Non-Discrimination", reproduced below) of **NAFTA** contains language similar to that used in the Japan-Singapore, US-Singapore and EFTA agreements. One difference is that such Agreement refers to "treatment no less favourable than the most favourable treatment that the Party accords to (...)". Also, it does not include the expression "provide immediately and unconditionally" used in the GPA. Paragraphs 1, 2 and 5 of the **US-Chile** Agreement ("National Treatment and Non Discrimination") are similar to Article III of the GPA, except that, like others, the granting of "no less favourable treatment is solely in relation to domestic services and suppliers (in the sense of national treatment) and not in relation to services and suppliers of non-parties (in the sense of MFN). Like in the NAFTA, treatment no less favourable does not have to be provided "immediately and unconditionally".

NAFTA

Article 1003: National Treatment and Non-Discrimination

1. With respect to measures covered by this Chapter, each Party shall accord to goods of another Party, to the suppliers of such goods and to service suppliers of another Party, treatment no less favorable than the most favorable treatment that the Party accords to:
 - (a) its own goods and suppliers; and
 - (b) goods and suppliers of another Party.
2. With respect to measures covered by this Chapter, no Party may:
 - (a) treat a locally established supplier less favorably than another locally established supplier on the basis of degree of foreign affiliation or ownership; or

(b) discriminate against a locally established supplier on the basis that the goods or services offered by that supplier for the particular procurement are goods or services of another Party.

3. Paragraph 1 does not apply to measures respecting customs duties or other charges of any kind imposed on or in connection with importation, the method of levying such duties or charges or other import regulations, including restrictions and formalities.

14. The national treatment and non-discrimination provisions of the **EC-Chile** (Article 139) and the **Republic of Korea-Chile** Agreements (Article 15.3), which essentially have the same content as the Article of the GPA reproduced above, include an additional paragraph which provides that "(e)ach Party shall ensure that the procurement of its entities (...) takes place in a transparent, reasonable and non-discriminatory manner, treating any supplier of either Party equally and ensuring the principle of open and effective competition".

15. The **Australia-New Zealand** Agreement contains provisions (Clauses 2 and 4, reproduced below) relating to the granting of treatment no less favourable than that granted to domestic services and suppliers, but also includes additional concepts such as equal opportunity and equal access. The **New Zealand-Singapore** Agreement includes similar language (see paragraphs (c) and (d) of Article 49).

Australia-New Zealand: Government Procurement Agreement (revised 1997)

2. It is agreed that, except as stated otherwise in this Agreement, the Parties will:

(...)

(c) Provide to services, goods and suppliers of the other Parties equal opportunity and treatment no less favourable than that accorded to their own domestic services, goods and suppliers (see 4 below).

(d) Promote opportunities for ANZ suppliers to compete for government business on the basis of value for money and avoid purchasing practices which are biased in favour of foreign goods and suppliers.

(...)

4. In accordance with Clause 2 (b) and (c) of this Agreement, Parties to the Agreement will not use amongst themselves any form of procurement practice which:

- discriminates against;
- is biased against; and
- or has the effect of denying equal access or opportunity to any ANZ supplier.

16. The **Chile-Costa Rica** and **Chile-El Salvador** Agreements each contain an Article on national treatment and non-discrimination (Article 16.04 in each case), which use the same language¹². It provides for national treatment, except that this is limited to "government procurement carried out by entities through tendering" (Article 16.04(1)). Paragraph 2 then provides that when different procedures are used, Parties shall adopt "such measures as are reasonably available to ensure compliance with the obligations established in Article 16.03(1)(f)".¹³ Article 16.03(1)(f), which bears some resemblance to what is found in the New Zealand-Australia and New Zealand-Singapore Agreements, provides as follows:

¹² The provisions of these two agreements are always identical. Even though notified separately, the provisions result from the negotiations on the framework for a free trade agreement between governments of Central America and Chile.

¹³ Tendering procedures are defined (Article 16.01) as "all government procurement procedures other than contracting on own account". Hence, the use of different procedures in Article 16.04 would mean contracting on own account.

Chile-El Salvador
Article 16.03: General rights and obligations

1. The Parties agree upon the following rights and obligations, as provided in this Chapter:

(...)

(f) to refrain from applying measures that:

(i) Are discriminatory;

(ii) are arbitrary; or

(iii) have the effect of denying equal access or opportunity to a supplier from another Party.

17. As regards EU Members, Article 2 of the **EC Directive** simply provides that “contracting authorities shall treat economic operators equally and non-discriminatorily and shall act in a transparent way”.¹⁴ The explanatory memorandum to the Commission's proposed Directive in 2000 (COM(2000)275, page 18) noted that “in accordance with the established case-law of the Court of Justice, the general principle of equality of treatment, of which the prohibition of discrimination on grounds of nationality is no more than a specific expression, is one of the fundamental principles of Community law. Under this principle, analogous situations must not be treated in different ways unless the difference in treatment is justified by objective reasons.”

18. The **Europe Agreements** with Bulgaria (Article 68, reproduced below) and Romania (Article 68) provide for access to contract award procedures under a treatment no less favourable than that accorded to domestic companies.

EC-Bulgaria
Article 68

1. The Parties consider the opening up of the award of public contracts on the basis of the principles of non-discrimination and reciprocity, in particular in the GATT context, to be a desirable objective.

2. The Bulgarian companies as defined in Article 49 shall be granted access to contract award procedures in the Community pursuant to Community procurement rules under a treatment no less favourable than that accorded to Community companies as of the entry into force of the Agreement.

Community companies as defined in Article 49 shall be granted access to contract award procedures in Bulgaria under a treatment no less favourable than that accorded to Bulgarian companies at the latest at the end of the transitional period referred to in Article 7.

Community companies established in Bulgaria under the provisions of Chapter II of Title IV in the form of subsidiaries as described in Article 45 and in the forms described in Article 55 shall have upon entry into force of the Agreement access to contract award procedures under a treatment no less favourable than that accorded to Bulgarian companies. Community companies established in Bulgaria in the form of branches and agencies as described in Article 45 shall be granted such treatment at the latest by the end of the transitional period.

The Association Council shall periodically examine the possibility for Bulgaria to introduce access to award procedures in Bulgaria for all Community companies prior to the end of the transitional period.

¹⁴ The EEA Agreement provides, in the area of procurement, for the application of the EC Directives. Thus, for the purposes of this Note, no specific reference will be made to the EEA. As noted earlier, this Note focuses on the EC Directive with the broadest sectoral coverage: 2004/18/EC.

3. As regards establishment, operations, supply of services between the Community and Bulgaria, as well as employment and movement of labour linked to the fulfilment of public contracts, the provisions of Articles 38 to 59 are applicable.

Offsets

19. It may also be noted that various EIAs include a provision that explicitly prohibits offsets. While the **Japan-Singapore** and **US-Singapore** Agreements incorporate Article XVI:1 of the GPA by reference (reproduced below), the **NAFTA** (Article 1006, reproduced below), **US-Chile** (paragraph 4 of Article 9.2.), **New Zealand-Singapore** (Article 53), **Australia-New Zealand** (paragraph 2 of Article 11), **EC-Mexico** (Article 28), **EFTA-Mexico** (Article 60), **EC-Chile** (Article 140, reproduced below), **Chile-El Salvador** (paragraph 3 of Article 16.04, reproduced below), **Chile-Costa Rica** (paragraph 3 of Article 16.04), and **Republic of Korea-Chile** Agreements (Article 15.4) include their own provisions on offsets.¹⁵ They do not tend to vary very significantly. Many of these agreements also include a definition of offsets, which is inserted either within the text of the relevant Article or in the section on definitions.

GPA Paragraph 1 of Article XVI: Offsets

1. Entities shall not, in the qualification and selection of suppliers, products or services, or in the evaluation of tenders and award of contracts, impose, seek or consider offsets.¹ (...)

¹ Offsets in government procurement are measures used to encourage local development or improve the balance-of-payments accounts by means of domestic content, licensing of technology, investment requirements, counter-trade or similar requirements.

NAFTA Article 1006: Prohibition of Offsets

Each Party shall ensure that its entities do not, in the qualification and selection of suppliers, goods or services, in the evaluation of bids or the award of contracts, consider, seek or impose offsets. For purposes of this Article, offsets means conditions imposed or considered by an entity prior to or in the course of its procurement process that encourage local development or improve its Party's balance of payments accounts, by means of requirements of local content, licensing of technology, investment, countertrade or similar requirements.

EC-Chile Article 140: Prohibition Of Offsets And National Preferences

Each Party shall ensure that its entities do not, in the qualification and selection of suppliers, goods or services, in the evaluation of bids or in the award of contracts, consider, seek or impose offsets, nor conditions regarding national preferences such as margins allowing price preference.

¹⁵ Although it is not replicated in the EIAs reviewed, paragraph 2 of Article XVI of the GPA permits developing countries to negotiate conditions for the use of offsets at the time of accession to the Agreement.

Chile-El Salvador

Article 16.04: National treatment and non-discrimination

(...)

3. Each Party shall ensure that its entities do not demand offsets from suppliers of another Party participating in a government procurement process.

(...)

20. In sum, and not surprisingly, all the agreements reviewed contain provisions on non-discriminatory treatment. The obligation to grant treatment no less favourable to services and suppliers of the other party than that granted to domestic services and suppliers is central to any set of government procurement provisions found in EIAs, even though sometimes expressed in different terms. Obviously, the actual implications of the non-discrimination provisions contained in these agreements, i.e., the extent to which they imply liberalization, depend on the service sectors, entities and thresholds typically found in annexes to the set of procurement provisions. Most agreements contain, in addition, a provision specifically providing for the prohibition of offsets. It should also be noted that many agreements complement the general provisions on national treatment or non-discrimination with additional references to non-discriminatory treatment in the context of particular procedural obligations. For example, the agreement between **Australia and Singapore** provides, in addition to the obligation on national treatment (Article 3), that tendering procedures be "conducted in a fair and non-discriminatory manner" and that the "tender evaluation process be fair and non-discriminatory" (Article 6 of Chapter 6: Tendering Principles).

B. VALUATION OF CONTRACTS

21. A majority of the agreements reviewed include specific provisions relating to the valuation of contracts. These provisions generally set out key principles to be followed in determining the value of contracts covered, especially since agreements typically only apply to contracts above certain threshold values. Relevant provisions typically include at least some of the following elements: an obligation to take all forms of remuneration into consideration in the valuation; an anti-avoidance clause, providing that the valuation method shall not be used, nor procurement requirement be divided into separate contracts, with the intention of avoiding the application of the agreement; criteria for valuation when contracts are awarded in separate parts; criteria for valuation in the case of contracts that do not specify a total price or in the case of contracts for the lease, rental or hire purchase of services; and special valuation provisions in cases where an intended procurement specifies the need for option clauses.

22. Many agreements incorporate by reference Article II of the GPA (reproduced below): **Japan-Singapore, US-Singapore, EC-Mexico** in the case of the EC, **EFTA-Mexico** in the case of EFTA, **EFTA**.

GPA
Article II: Valuation of Contracts

1. The following provisions shall apply in determining the value of contracts¹ for purposes of implementing this Agreement.
2. Valuation shall take into account all forms of remuneration, including any premiums, fees, commissions and interest receivable.
3. The selection of the valuation method by the entity shall not be used, nor shall any procurement requirement be divided, with the intention of avoiding the application of this Agreement.
4. If an individual requirement for a procurement results in the award of more than one contract, or in contracts being awarded in separate parts, the basis for valuation shall be either:
 - (a) the actual value of similar recurring contracts concluded over the previous fiscal year or 12 months adjusted, where possible, for anticipated changes in quantity and value over the subsequent 12 months; or
 - (b) the estimated value of recurring contracts in the fiscal year or 12 months subsequent to the initial contract.
5. In cases of contracts for the lease, rental or hire purchase of products or services, or in the case of contracts which do not specify a total price, the basis for valuation shall be:
 - (a) in the case of fixed-term contracts, where their term is 12 months or less, the total contract value for their duration, or, where their term exceeds 12 months, their total value including the estimated residual value;
 - (b) in the case of contracts for an indefinite period, the monthly instalment multiplied by 48.

If there is any doubt, the second basis for valuation, namely (b), is to be used.

6. In cases where an intended procurement specifies the need for option clauses, the basis for valuation shall be the total value of the maximum permissible procurement, inclusive of optional purchases.

¹ This Agreement shall apply to any procurement contract for which the contract value is estimated to equal or exceed the threshold at the time of publication of the notice in accordance with Article IX.

23. The **NAFTA** also includes a similarly detailed provision on the valuation of contracts (Article 1002, reproduced below). That NAFTA Article has been incorporated by reference in the EC-Mexico and EFTA-Mexico agreements, both in relation to Mexico solely. The **EC Directive** also has detailed rules on valuation of contracts: Article 9 entitled "Methods for calculating the estimated value of public contracts, framework agreements and dynamic purchasing systems".¹⁶

NAFTA
Article 1002: Valuation of Contracts

1. Each Party shall ensure that its entities, in determining whether a contract is covered by this Chapter, apply paragraphs 2 through 7 in calculating the value of that contract.
2. The value of a contract shall be estimated as at the time of publication of a notice in accordance with Article 1010.
3. In calculating the value of a contract, an entity shall take into account all forms of remuneration, including premiums, fees, commissions and interest.
4. Further to Article 1001(4), an entity may not select a valuation method, or divide procurement requirements into separate contracts, to avoid the obligations of this Chapter.
5. Where an individual requirement for a procurement results in the award of more than one contract, or in contracts being awarded in separate parts, the basis for valuation shall be either:
 - (a) the actual value of similar recurring contracts concluded over the prior fiscal year or 12 months adjusted, where possible, for anticipated changes in quantity and value over the subsequent 12 months; or
 - (b) the estimated value of recurring contracts in the fiscal year or 12 months subsequent to the initial contract.
6. In the case of a contract for lease or rental, with or without an option to buy, or in the case of a contract that does not specify a total price, the basis for valuation shall be:
 - (a) in the case of a fixed term contract, where the term is 12 months or less, the total contract value, for its duration or, where the term exceeds 12 months, the total contract value, including the estimated residual value; or
 - (b) in the case of a contract for an indefinite period, the estimated monthly instalment multiplied by 48.If the entity is uncertain as to whether a contract is for a fixed or an indefinite term, the entity shall calculate the value of the contract using the method set out in subparagraph (b).
7. Where tender documentation requires option clauses, the basis for valuation shall be the total value of the maximum permissible procurement, including all possible optional purchases.

¹⁶ The Europe Agreements are not mentioned in this context since they do not contain specific procedural rules. The procurement provisions in these agreements are essentially limited to non-discrimination. This might relate to the fact that the countries with which the EC has concluded these agreements are committed to progressively taking over the *acquis communautaire* in the area of procurement.

Directive 2004/18/EC

Article 9: Methods for calculating the estimated value of public contracts,
framework agreements and dynamic purchasing systems

1. The calculation of the estimated value of a public contract shall be based on the total amount payable, net of VAT, as estimated by the contracting authority. This calculation shall take account of the estimated total amount, including any form of option and any renewals of the contract.

Where the contracting authority provides for prizes or payments to candidates or tenderers it shall take them into account when calculating the estimated value of the contract.

2. This estimate must be valid at the moment at which the contract notice is sent, as provided for in Article 35(2), or, in cases where such notice is not required, at the moment at which the contracting authority commences the contract awarding procedure.

3. No works project or proposed purchase of a certain quantity of supplies and/or services may be subdivided to prevent its coming within the scope of this Directive.

4. With regard to public works contracts, calculation of the estimated value shall take account of both the cost of the works and the total estimated value of the supplies necessary for executing the works and placed at the contractor's disposal by the contracting authorities.

5. (a) Where a proposed work or purchase of services may result in contracts being awarded at the same time in the form of separate lots, account shall be taken of the total estimated value of all such lots.

Where the aggregate value of the lots is equal to or exceeds the threshold laid down in Article 7, this Directive shall apply to the awarding of each lot.

However, the contracting authorities may waive such application in respect of lots the estimated value of which net of VAT is less than EUR 80 000 for services or EUR 1 million for works, provided that the aggregate value of those lots does not exceed 20 % of the aggregate value of the lots as a whole.

(b) Where a proposal for the acquisition of similar supplies may result in contracts being awarded at the same time in the form of separate lots, account shall be taken of the total estimated value of all such lots when applying Article 7(a) and (b).

Where the aggregate value of the lots is equal to or exceeds the threshold laid down in Article 7, this Directive shall apply to the awarding of each lot.

However, the contracting authorities may waive such application in respect of lots, the estimated value of which, net of VAT, is less than EUR 80 000, provided that the aggregate cost of those lots does not exceed 20 % of the aggregate value of the lots as a whole.

6. With regard to public supply contracts relating to the leasing, hire, rental or hire purchase of products, the value to be taken as a basis for calculating the estimated contract value shall be as follows:

(a) in the case of fixed-term public contracts, if that term is less than or equal to 12 months, the total estimated value for the term of the contract or, if the term of the contract is greater than 12 months, the total value including the estimated residual value;

(b) in the case of public contracts without a fixed term or the term of which cannot be defined, the monthly value multiplied by 48.

7. In the case of public supply or service contracts which are regular in nature or which are intended to be renewed within a given period, the calculation of the estimated contract value shall be based on the following:

(a) either the total actual value of the successive contracts of the same type awarded during the preceding 12 months or financial year adjusted, if possible, to take account of the changes in quantity or value which would occur in the course of the 12 months following the initial contract;

- (b) or the total estimated value of the successive contracts awarded during the 12 months following the first delivery, or during the financial year if that is longer than 12 months.

The choice of method used to calculate the estimated value of a public contract may not be made with the intention of excluding it from the scope of this Directive.

8. With regard to public service contracts, the value to be taken as a basis for calculating the estimated contract value shall, where appropriate, be the following:

- (a) for the following types of services:
- (i) insurance services: the premium payable and other forms of remuneration;
 - (ii) banking and other financial services: the fees, commissions, interest and other forms of remuneration;
 - (iii) design contracts: fees, commission payable and other forms of remuneration;
- (b) for service contracts which do not indicate a total price:
- (i) in the case of fixed-term contracts, if that term is less than or equal to 48 months: the total value for their full term;
 - (ii) in the case of contracts without a fixed term or with a term greater than 48 months: the monthly value multiplied by 48.

9. With regard to framework agreements and dynamic purchasing systems, the value to be taken into consideration shall be the maximum estimated value net of VAT of all the contracts envisaged for the total term of the framework agreement or the dynamic purchasing system.

24. Other agreements tend to be less detailed with regard to valuation principles, although many include specific provisions on how to calculate threshold values (adjustment for inflation; conversion to national currency, etc.). The Agreement between **New Zealand and Singapore** also includes specific provisions on valuation of contracts (Article 50). It replicates paragraphs 1 to 3 and paragraph 6 of Article II of the GPA. The **EC-Chile** Agreement (Article 141, reproduced below) contains an anti-avoidance clause and an obligation to take into account all forms of remuneration in calculating the value of a contract.

EC-Chile
Article 141: Valuation Rules

1. Entities shall not split up a procurement, nor use any other method of contract valuation with the intention of evading the application of this Title when determining whether a contract is covered by the disciplines of thereof, subject to the conditions set out in Annexes XI and XII, Appendices 1 to 3.
2. In calculating the value of a contract, an entity shall take into account all forms of remuneration, such as premiums, fees, commissions and interests, as well as the maximum permitted total amount, including option clauses, provided for by the contract.
3. When, due to the nature of the contract, it is not possible to calculate in advance its precise value, entities shall estimate this value on the basis of objective criteria.

25. Other examples include paragraph 1 of Section G of Annex 9.1 of the **US-Chile** Agreement and paragraph 1 of Appendix 2 to Annex 15.2 of the **Republic of Korea-Chile** Agreement, which mention the need to take into account all forms of remuneration when determining values and provides an illustrative list. The other agreements reviewed do not contain specific provisions in this regard.

Republic of Korea-Chile
ANNEX 15.2

APPENDIX 2

Value Of Thresholds

1. In calculating the value of a contract, entities shall include any procurement for which the value of the procurement is estimated to be below the relevant values specified in the Parties' respective Appendices to Annex 15.1 of this Chapter. Entities shall include in such an estimate the maximum total estimated value of the procurement and any resulting contracts over the duration of such contracts, taking into account all options, premiums, fees, commissions, interest and other revenue streams or forms of remuneration, provided for in such contracts.

(...)

C. TECHNICAL SPECIFICATIONS

26. Many agreements include specific provisions relating to the technical specification of the goods and services to be procured, i.e., such characteristics as quality, performance, or processes or methods of production. Such provisions typically provide that technical specifications shall not constitute unnecessary obstacles to international trade.

27. Several agreements incorporate by reference Article VI of the GPA (reproduced below): **Japan-Singapore**, **US-Singapore**, **EC-Mexico** with respect to the EC, **EFTA-Mexico** with respect to EFTA, and **EFTA**. In addition to paragraph 1, which relates to technical specifications as unnecessary obstacles to international trade, the following paragraphs are about the need for technical specifications to be expressed in terms of performance and be based on international standards where appropriate (paragraph 2), the avoidance of requirements or reference to particular trademarks, patents, suppliers or the like (paragraph 3), and about precluding effects on competition arising from the receipt of advice from a firm on the preparation of specifications.

GPA
Article VI: Technical Specifications

1. Technical specifications laying down the characteristics of the products or services to be procured, such as quality, performance, safety and dimensions, symbols, terminology, packaging, marking and labelling, or the processes and methods for their production and requirements relating to conformity assessment procedures prescribed by procuring entities, shall not be prepared, adopted or applied with a view to, or with the effect of, creating unnecessary obstacles to international trade.
2. Technical specifications prescribed by procuring entities shall, where appropriate:
 - (a) be in terms of performance rather than design or descriptive characteristics; and
 - (b) be based on international standards, where such exist; otherwise, on national technical regulations¹, recognized national standards², or building codes.
3. There shall be no requirement or reference to a particular trademark or trade name, patent, design or type, specific origin, producer or supplier, unless there is no sufficiently precise or intelligible way of describing the procurement requirements and provided that words such as "or equivalent" are included in the tender documentation.
4. Entities shall not seek or accept, in a manner which would have the effect of precluding competition, advice which may be used in the preparation of specifications for a specific procurement from a firm that may have a commercial interest in the procurement.

¹ For the purpose of this Agreement, a technical regulation is a document which lays down characteristics of a product or a service or their related processes and production methods, including the applicable administrative provisions, with which compliance is mandatory. It may also include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements as they apply to a product, service, process or production method.

² For the purpose of this Agreement, a standard is a document approved by a recognized body, that provides, for common and repeated use, rules, guidelines or characteristics for products or services or related processes and production methods, with which compliance is not mandatory. It may also include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements as they apply to a product, service, process or production method.

28. Article 1007 of the **NAFTA** (reproduced below) addresses the same four issues that are addressed in the Article VI of the GPA. The EC-Mexico and EFTA-Mexico agreements - both in the case of Mexico only - incorporate this NAFTA Article by reference. Article 9.7 of the **US-Chile** Agreement is along the same lines, except that an additional paragraph is added to specify that "for greater certainty, this Article is not intended to preclude a Party from preparing, adopting or applying technical specifications to promote the conservation of natural resources".

NAFTA
Article 1007: Technical Specifications

1. Each Party shall ensure that its entities do not prepare, adopt or apply any technical specification with the purpose or the effect of creating unnecessary obstacles to trade.
2. Each Party shall ensure that any technical specification prescribed by its entities is, where appropriate:
 - (a) specified in terms of performance criteria rather than design or descriptive characteristics; and
 - (b) based on international standards, national technical regulations, recognized national standards, or building codes.
3. Each Party shall ensure that the technical specifications prescribed by its entities do not require or refer to a particular trademark or name, patent, design or type, specific origin or producer or supplier unless there is no sufficiently precise or intelligible way of otherwise describing the procurement requirements and provided that, in such cases, words such as "or equivalent" are included in the tender documentation.
4. Each Party shall ensure that its entities do not seek or accept, in a manner that would have the effect of precluding competition, advice that may be used in the preparation or adoption of any technical specification for a specific procurement from a person that may have a commercial interest in that procurement.

29. Article 149 of the **EC-Chile** Agreement and Article 15.11 of the **Republic of Korea-Chile** Agreement (reproduced below), which are identical, also include detailed provisions on technical specifications. These Articles contain key elements found in the NAFTA or the GPA provisions mentioned above, except that they do not explicitly mention the avoidance of the receipt of advice on specifications from a person having interest in the procurement.

Republic of Korea-Chile
Article 15.11: Technical Specifications

1. Technical specifications shall be set out in the notices, tender documents or additional documents.
2. Each Party shall ensure that its entities do not prepare, adopt or apply any technical specifications with a view to, or with the effect of, creating unnecessary obstacles to trade between the Parties.
3. Technical specifications prescribed by entities shall:
 - (a) be in terms of performance and functional requirements, rather than design or descriptive characteristics; and
 - (b) be based on international standards, where they exist or, in absence of such standards, on national technical regulations¹, recognised national standards² or building codes.
4. Paragraph 3 does not apply when the entity may objectively demonstrate that the use of technical specifications referred to in that paragraph would be ineffective or inappropriate for the fulfilment of the legitimate objectives pursued.
5. In all cases, entities shall consider bids which do not comply with the technical specifications but meet the essential requirements thereof and are fit for the purpose intended. The reference to technical specifications in the tender documents must include words such as "or equivalent".

6. There shall be no requirement or reference to a particular trademark or trade name, patent, design or type, specific origin, producer or supplier, unless there is no sufficiently precise or intelligible way of describing the procurement requirements and provided that words, such as "or equivalent", are included in the tender documentation.

7. The tenderer shall have the burden of proof to demonstrate that its bid meets the essential requirements.

¹ For the purpose of this Chapter, a technical regulation is a document, which lays down characteristics of a product or a service or their related processes and production methods, including the applicable administrative provisions, with which compliance is mandatory. It may also include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements as they apply to a product, service, process or production method.

² For the purpose of this Chapter, a standard is a document approved by a recognised body, that provides, for common and repeated use, rules, guidelines or characteristics for products or services or related processes and production methods, with which compliance is not mandatory. It may also include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements as they apply to a product, service, process or production method.

30. The **EC Directive** (Article 23) also contains detailed rules on this particular aspect. Technical specifications are required to "afford equal access" and not to have "the effect of creating unjustified obstacles to the opening of public procurement to competition". The use of European standards is encouraged. Where references are made to a European standard or, in its absence, to a national standard, tenders based on equivalent arrangements must be considered. To demonstrate equivalence, tenderers should be permitted to use any form of evidence.

Directive 2004/18/EC
Article 23: Technical specifications

1. The technical specifications as defined in point 1 of Annex VI shall be set out in the contract documentation, such as contract notices, contract documents or additional documents. Whenever possible these technical specifications should be defined so as to take into account accessibility criteria for people with disabilities or design for all users.

2. Technical specifications shall afford equal access for tenderers and not have the effect of creating unjustified obstacles to the opening up of public procurement to competition.

3. Without prejudice to mandatory national technical rules, to the extent that they are compatible with Community law, the technical specifications shall be formulated:

(a) either by reference to technical specifications defined in Annex VI and, in order of preference, to national standards transposing European standards, European technical approvals, common technical specifications, international standards, other technical reference systems established by the European standardisation bodies or — when these do not exist — to national standards, national technical approvals or national technical specifications relating to the design, calculation and execution of the works and use of the products. Each reference shall be accompanied by the words 'or equivalent';

(b) or in terms of performance or functional requirements; the latter may include environmental characteristics. However, such parameters must be sufficiently precise to allow tenderers to determine the subject-matter of the contract and to allow contracting authorities to award the contract;

(c) or in terms of performance or functional requirements as mentioned in subparagraph (b), with reference to the specifications mentioned in subparagraph (a) as a means of presuming conformity with such performance or functional requirements;

(d) or by referring to the specifications mentioned in subparagraph (a) for certain characteristics, and by referring to the performance or functional requirements mentioned in subparagraph (b) for other characteristics.

4. Where a contracting authority makes use of the option of referring to the specifications mentioned in paragraph 3(a), it cannot reject a tender on the grounds that the products and services tendered for do not comply with the specifications to which it has referred, once the tenderer proves in his tender to the satisfaction of the contracting authority, by whatever appropriate means, that the solutions which he proposes satisfy in an equivalent manner the requirements defined by the technical specifications.

An appropriate means might be constituted by a technical dossier of the manufacturer or a test report from a recognised body.

5. Where a contracting authority uses the option laid down in paragraph 3 to prescribe in terms of performance or functional requirements, it may not reject a tender for works, products or services which comply with a national standard transposing a European standard, with a European technical approval, a common technical specification, an international standard or a technical reference system established by a European standardisation body, if these specifications address the performance or functional requirements which it has laid down.

In his tender, the tenderer must prove to the satisfaction of the contracting authority and by any appropriate means that the work, product or service in compliance with the standard meets the performance or functional requirements of the contracting authority.

An appropriate means might be constituted by a technical dossier of the manufacturer or a test report from a recognised body.

6. Where contracting authorities lay down environmental characteristics in terms of performance or functional requirements as referred to in paragraph 3(b) they may use the detailed specifications, or, if necessary, parts thereof, as defined by European or (multi-) national eco-labels, or by any other eco-label, provided that:

- those specifications are appropriate to define the characteristics of the supplies or services that are the object of the contract,
- the requirements for the label are drawn up on the basis of scientific information,
- the eco-labels are adopted using a procedure in which all stakeholders, such as government bodies, consumers, manufacturers, distributors and environmental organisations can participate, and
- they are accessible to all interested parties.

Contracting authorities may indicate that the products and services bearing the eco-label are presumed to comply with the technical specifications laid down in the contract documents; they must accept any other appropriate means of proof, such as a technical dossier of the manufacturer or a test report from a recognised body.

7. 'Recognised bodies', within the meaning of this Article, are test and calibration laboratories and certification and inspection bodies which comply with applicable European standards.

Contracting authorities shall accept certificates from recognised bodies established in other Member States.

8. Unless justified by the subject-matter of the contract, technical specifications shall not refer to a specific make or source, or a particular process, or to trade marks, patents, types or a specific origin or production with the effect of favouring or eliminating certain undertakings or certain products. Such reference shall be permitted on an exceptional basis, where a sufficiently precise and intelligible description of the subject-matter of the contract pursuant to paragraphs 3 and 4 is not possible; such reference shall be accompanied by the words 'or equivalent'. to subcontract to third parties and any proposed subcontractors. This indication shall be without prejudice to the question of the principal economic operator's liability.

31. The **Singapore-Australia** (Article 5 of Chapter 06, reproduced below), the **Chile-Costa Rica** and **Chile-El Salvador** Agreements (Article 16.06), contrasting from the previously mentioned agreements, use less detailed rules. They focus solely on the need not to create unnecessary obstacles

to trade, i.e., along lines similar to paragraphs 1 of the relevant Article of the GPA and Korea-Chile Agreement or paragraph 2 of NAFTA (reproduced above). The **Australia-New Zealand** and **New Zealand-Singapore** Agreements have no Article specifically addressing the issue of technical specifications. Nevertheless, Article 12:1(a) of the Australia-New Zealand Agreement provides that Members shall examine the scope for taking action to harmonize requirement relating to various matters, including technical specifications. Paragraph 2(d) of Article 46 of the New Zealand-Singapore Agreement states that the parties should provide "a mechanism for co-operation to work toward achieving the greatest possible consistency in contractual, technical and performance standards and specifications (...)".

Singapore-Australia
Article 5: Technical Specifications

Technical specifications laying down the characteristics of the goods or services to be procured shall not be prepared, adopted or applied with a view to, or with the effect of, creating unnecessary obstacles to trade between the Parties.

D. PROCUREMENT METHODS

32. The agreements reviewed typically contain provisions providing for tendering procedures to be applied in a non-discriminatory manner and specifying the types of procurement methods that can be used. Open tendering procedures, whereby all interested suppliers may submit a tender, are encouraged, while other procedures are allowed under certain conditions or circumstances. As is the case for various other provisions, a significant number of the agreements either follow the approach taken in the GPA or under NAFTA, which closely parallel each other: **Japan-Singapore** (incorporates GPA Articles VII, X and XV), **US-Singapore** (incorporates GPA Articles VII, X and XV), **NAFTA, EC-Mexico** (incorporates GPA Articles VII, X and XV for the EC and NAFTA Articles 1008, 1011 and 1016 for Mexico), and **EFTA-Mexico** (incorporates GPA Articles VII, X and XV for EFTA and NAFTA Articles 1008, 1011 and 1016 for Mexico), and **EFTA** (incorporates GPA Articles VII, X and XV).

33. These agreements explicitly foresee as a standard procedure the use of open tendering procedures and permit, under certain conditions and provided particular procedures are followed, the use of selective tendering procedures, whereby only those suppliers invited to do so may submit a tender, and of limited tendering procedures, where the procuring entity contacts the potential suppliers individually (see GPA Articles X and XV and NAFTA Articles 1011 and 1016).

34. With respect to selective tendering procedures, purchasing entities are required, in order to ensure effective competition, to invite tenders from the maximum number of domestic and foreign suppliers. Procedures and conditions for qualification must not discriminate against suppliers of other parties. NAFTA Article 1011(4) further provides that, upon request of a supplier, an entity shall provide information concerning a decision not to invite or admit that supplier to tender.

35. Regarding limited tendering procedures, the provisions of the above-mentioned agreements closely circumscribe situations in which this method can be used, for example in the absence of tenders in response to an open tender or selective tender, when the tenders submitted have been collusive, when the service can be supplied only by a particular supplier, or for reasons of extreme urgency brought about by events unforeseeable by the entity.

GPA
Article VII: Tendering Procedures

1. Each Party shall ensure that the tendering procedures of its entities are applied in a non-discriminatory manner and are consistent with the provisions contained in Articles VII through XVI.
2. Entities shall not provide to any supplier information with regard to a specific procurement in a manner which would have the effect of precluding competition.
3. For the purposes of this Agreement:
 - (a) Open tendering procedures are those procedures under which all interested suppliers may submit a tender.
 - (b) Selective tendering procedures are those procedures under which, consistent with paragraph 3 of Article X and other relevant provisions of this Agreement, those suppliers invited to do so by the entity may submit a tender.
 - (c) Limited tendering procedures are those procedures where the entity contacts suppliers individually, only under the conditions specified in Article XV.

Article X: Selection Procedures

1. To ensure optimum effective international competition under selective tendering procedures, entities shall, for each intended procurement, invite tenders from the maximum number of domestic suppliers and suppliers of other Parties, consistent with the efficient operation of the procurement system. They shall select the suppliers to participate in the procedure in a fair and non-discriminatory manner.
2. Entities maintaining permanent lists of qualified suppliers may select suppliers to be invited to tender from among those listed. Any selection shall allow for equitable opportunities for suppliers on the lists.
3. Suppliers requesting to participate in a particular intended procurement shall be permitted to submit a tender and be considered, provided, in the case of those not yet qualified, there is sufficient time to complete the qualification procedure under Articles VIII and IX. The number of additional suppliers permitted to participate shall be limited only by the efficient operation of the procurement system.
4. Requests to participate in selective tendering procedures may be submitted by telex, telegram or facsimile.

Article XV: Limited Tendering

1. The provisions of Articles VII through XIV governing open and selective tendering procedures need not apply in the following conditions, provided that limited tendering is not used with a view to avoiding maximum possible competition or in a manner which would constitute a means of discrimination among suppliers of other Parties or protection to domestic producers or suppliers:
 - (a) in the absence of tenders in response to an open or selective tender, or when the tenders submitted have been collusive, or not in conformity with the essential requirements in the tender, or from suppliers who do not comply with the conditions for participation provided for in accordance with this Agreement, on condition, however, that the requirements of the initial tender are not substantially modified in the contract as awarded;
 - (b) when, for works of art or for reasons connected with protection of exclusive rights, such as patents or copyrights, or in the absence of competition for technical reasons, the products or services can be supplied only by a particular supplier and no reasonable alternative or substitute exists;
 - (c) in so far as is strictly necessary when, for reasons of extreme urgency brought about by events unforeseeable by the entity, the products or services could not be obtained in time by means of open or selective tendering procedures;
 - (d) for additional deliveries by the original supplier which are intended either as parts replacement for existing supplies, or installations, or as the extension of existing supplies, services, or installations where a change of supplier would compel the entity to procure equipment or services not meeting requirements of interchangeability with already existing equipment or services¹;
 - (e) when an entity procures prototypes or a first product or service which are developed at its request in the course of, and for, a particular contract for research, experiment, study or original development. When such contracts have been fulfilled, subsequent procurements of products or services shall be subject to Articles VII through XIV²;
 - (f) when additional construction services which were not included in the initial contract but which were within the objectives of the original tender documentation have, through unforeseeable circumstances, become necessary to complete the construction services described therein, and the entity needs to award contracts for the additional construction services to the contractor carrying out the construction services concerned since the separation

of the additional construction services from the initial contract would be difficult for technical or economic reasons and cause significant inconvenience to the entity. However, the total value of contracts awarded for the additional construction services may not exceed 50 per cent of the amount of the main contract;

(g) for new construction services consisting of the repetition of similar construction services which conform to a basic project for which an initial contract was awarded in accordance with Articles VII through XIV and for which the entity has indicated in the notice of intended procurement concerning the initial construction service, that limited tendering procedures might be used in awarding contracts for such new construction services;

(h) for products purchased on a commodity market;

(i) for purchases made under exceptionally advantageous conditions which only arise in the very short term. This provision is intended to cover unusual disposals by firms which are not normally suppliers, or disposal of assets of businesses in liquidation or receivership. It is not intended to cover routine purchases from regular suppliers;

(j) in the case of contracts awarded to the winner of a design contest provided that the contest has been organized in a manner which is consistent with the principles of this Agreement, notably as regards the publication, in the sense of Article IX, of an invitation to suitably qualified suppliers, to participate in such a contest which shall be judged by an independent jury with a view to design contracts being awarded to the winners.

2. Entities shall prepare a report in writing on each contract awarded under the provisions of paragraph 1. Each report shall contain the name of the procuring entity, value and kind of goods or services procured, country of origin, and a statement of the conditions in this Article which prevailed. This report shall remain with the entities concerned at the disposal of the government authorities responsible for the entity in order that it may be used if required under the procedures of Articles XVIII, XIX, XX and XXII.

¹ It is the understanding that "existing equipment" includes software to the extent that the initial procurement of the software was covered by the Agreement.

² Original development of a first product or service may include limited production or supply in order to incorporate the results of field testing and to demonstrate that the product or service is suitable for production or supply in quantity to acceptable quality standards. It does not extend to quantity production or supply to establish commercial viability or to recover research and development costs.

NAFTA
Article 1008: Tendering Procedures

1. Each Party shall ensure that the tendering procedures of its entities are:
 - (a) applied in a nondiscriminatory manner; and
 - (b) consistent with this Article and Articles 1009 through 1016.
2. In this regard, each Party shall ensure that its entities:
 - (a) do not provide to any supplier information with regard to a specific procurement in a manner that would have the effect of precluding competition; and
 - (b) provide all suppliers equal access to information with respect to a procurement during the period prior to the issuance of any notice or tender documentation.

Article 1011: Selective Tendering Procedures

1. To ensure optimum effective competition between the suppliers of the Parties under selective tendering procedures, an entity shall, for each procurement, invite tenders from the maximum number of domestic suppliers and suppliers of the other Parties, consistent with the efficient operation of the

procurement system.

2. Subject to paragraph 3, an entity that maintains a permanent list of qualified suppliers may select suppliers to be invited to tender for a particular procurement from among those listed. In the process of making a selection, the entity shall provide for equitable opportunities for suppliers on the list.

3. Subject to Article 1009(2) (f), an entity shall allow a supplier that requests to participate in a particular procurement to submit a tender and shall consider the tender. The number of additional suppliers permitted to participate shall be limited only by the efficient operation of the procurement system.

4. Where an entity does not invite or admit a supplier to tender, the entity shall, on request of the supplier, promptly provide pertinent information concerning its reasons for not doing so.

Article 1016: Limited Tendering Procedures

1. An entity of a Party may, in the circumstances and subject to the conditions set out in paragraph 2, use limited tendering procedures and thus derogate from Articles 1008 through 1015, provided that such limited tendering procedures are not used with a view to avoiding maximum possible competition or in a manner that would constitute a means of discrimination between suppliers of the other Parties or protection of domestic suppliers.

2. An entity may use limited tendering procedures in the following circumstances and subject to the following conditions, as applicable:

(a) in the absence of tenders in response to an open or selective call for tenders, or where the tenders submitted either have resulted from collusion or do not conform to the essential requirements of the tender documentation, or where the tenders submitted come from suppliers that do not comply with the conditions for participation provided for in accordance with this Chapter, on condition that the requirements of the initial procurement are not substantially modified in the contract as awarded;

(b) where, for works of art, or for reasons connected with the protection of patents, copyrights or other exclusive rights, or proprietary information or where there is an absence of competition for technical reasons, the goods or services can be supplied only by a particular supplier and no reasonable alternative or substitute exists;

(c) in so far as is strictly necessary where, for reasons of extreme urgency brought about by events unforeseeable by the entity, the goods or services could not be obtained in time by means of open or selective tendering procedures;

(d) for additional deliveries by the original supplier that are intended either as replacement parts or continuing services for existing supplies, services or installations, or as the extension of existing supplies, services or installations, where a change of supplier would compel the entity to procure equipment or services not meeting requirements of interchangeability with already existing equipment or services, including software to the extent that the initial procurement of the software was covered by this Chapter;

(e) where an entity procures a prototype or a first good or service that is developed at its request in the course of and for a particular contract for research, experiment, study or original development. Where such contracts have been fulfilled, subsequent procurement of goods or services shall be subject to Articles 1008 through 1015. Original development of a first good may include limited production in order to incorporate the results of field testing and to demonstrate that the good is suitable for production in quantity to acceptable quality standards, but does not include quantity production to establish commercial viability or to recover research and development costs;

(f) for goods purchased on a commodity market;

- (g) for purchases made under exceptionally advantageous conditions that only arise in the very short term, such as unusual disposals by enterprises that are not normally suppliers or disposal of assets of businesses in liquidation or receivership, but not routine purchases from regular suppliers;
- (h) for a contract to be awarded to the winner of an architectural design contest, on condition that the contest is
 - (i) organized in a manner consistent with the principles of this Chapter, including regarding publication of an invitation to suitably qualified suppliers to participate in the contest,
 - (ii) organized with a view to awarding the design contract to the winner, and
 - (iii) to be judged by an independent jury; and
- (i) where an entity needs to procure consulting services regarding matters of a confidential nature, the disclosure of which could reasonably be expected to compromise government confidences, cause economic disruption or similarly be contrary to the public interest. 3. An entity shall prepare a report in writing on each contract awarded by it under paragraph 2. Each report shall contain the name of the procuring entity, indicate the value and kind of goods or services procured, the name of the country of origin, and a statement indicating the circumstances and conditions described in paragraph 2 that justified the use of limited tendering. The entity shall retain each report. They shall remain at the disposal of the competent authorities of the Party for use, if required, under Article 1017, Article 1019 or Chapter Twenty (Institutional Arrangements and Dispute Settlement Procedures).

36. The **EC Directive**, while containing key elements of the agreements mentioned above, also differs in certain aspects. The Directive (Article 28) provides for the use of either open or restricted procedures. Restricted procedures bear resemblance with but are defined differently from "selective tendering procedures". They are defined as "those procedures in which any economic operator may request to participate and whereby only those economic operators invited by the contracting authority may submit a tender". The Article also provides that negotiated procedures can be used, although only in specific cases and circumstances, as provided for in Articles 30 (for cases with prior publication of a contract notice) and 31 (for cases without publication of a contract notice) of the Directive.¹⁷ Further, another type of procedure, called "competitive dialogue"¹⁸, can be used in specific circumstances (as provided in Article 29). Such circumstances relate to cases of particularly complex contracts where the use of open or restricted procedures would not allow the award of the contract. Further, Article 44 of the Directive includes procedural rules regarding the choice of participants invited to tender. For example, a minimum number of candidates invited in restricted and negotiated procedures is set and the number of invitations shall be "sufficient to ensure genuine competition".

¹⁷ Article I of the EC Directive defines negotiating procedures as "those procedures whereby the contracting authorities consult the economic operators of their choice and negotiate the terms of contract with one or more of these". The use of negotiated procedures without publication of a contract notice (Article 31) bears resemblance to what other agreements call 'limited tendering procedures'. See also Section J on negotiation for some related issues.

¹⁸ Article I of the Directive defines competitive dialogue as "a procedure in which any economic operator may request to participate and whereby the contracting authority conducts a dialogue with the candidates admitted to that procedure, with the aim of developing one or more suitable alternatives capable of meeting its requirements, and on the basis of which the candidates chose are invited to tender".

Directive 2004/18/EC

Article 28: Use of open, restricted and negotiated procedures and of competitive dialogue

In awarding their public contracts, contracting authorities shall apply the national procedures adjusted for the purposes of this Directive.

They shall award these public contracts by applying the open or restricted procedure. In the specific circumstances expressly provided for in Article 29, contracting authorities may award their public contracts by means of the competitive dialogue. In the specific cases and circumstances referred to expressly in Articles 30 and 31, they may apply a negotiated procedure, with or without publication of the contract notice.

Article 29: Competitive dialogue

1. In the case of particularly complex contracts, Member States may provide that where contracting authorities consider that the use of the open or restricted procedure will not allow the award of the contract, the latter may make use of the competitive dialogue in accordance with this Article.

A public contract shall be awarded on the sole basis of the award criterion for the most economically advantageous tender.

2. Contracting authorities shall publish a contract notice setting out their needs and requirements, which they shall define in that notice and/or in a descriptive document.

3. Contracting authorities shall open, with the candidates selected in accordance with the relevant provisions of Articles 44 to 52, a dialogue the aim of which shall be to identify and define the means best suited to satisfying their needs. They may discuss all aspects of the contract with the chosen candidates during this dialogue.

During the dialogue, contracting authorities shall ensure equality of treatment among all tenderers. In particular, they shall not provide information in a discriminatory manner which may give some tenderers an advantage over others.

Contracting authorities may not reveal to the other participants solutions proposed or other confidential information communicated by a candidate participating in the dialogue without his/her agreement.

4. Contracting authorities may provide for the procedure to take place in successive stages in order to reduce the number of solutions to be discussed during the dialogue stage by applying the award criteria in the contract notice or the descriptive document. The contract notice or the descriptive document shall indicate that recourse may be had to this option.

5. The contracting authority shall continue such dialogue until it can identify the solution or solutions, if necessary after comparing them, which are capable of meeting its needs.

6. Having declared that the dialogue is concluded and having so informed the participants, contracting authorities shall ask them to submit their final tenders on the basis of the solution or solutions presented and specified during the dialogue.

These tenders shall contain all the elements required and necessary for the performance of the project. These tenders may be clarified, specified and fine-tuned at the request of the contracting authority. However, such clarification, specification, fine-tuning or additional information may not involve changes to the basic features of the tender or the call for tender, variations in which are likely to distort competition or have a discriminatory effect.

7. Contracting authorities shall assess the tenders received on the basis of the award criteria laid down in the contract notice or the descriptive document and shall choose the most economically advantageous tender in accordance with Article 53.

At the request of the contracting authority, the tenderer identified as having submitted the most

economically advantageous tender may be asked to clarify aspects of the tender or confirm commitments contained in the tender provided this does not have the effect of modifying substantial aspects of the tender or of the call for tender and does not risk distorting competition or causing discrimination.

8. The contracting authorities may specify prices or payments to the participants in the dialogue.

Article 30: Cases justifying use of the negotiated procedure with prior publication of a contract notice

1. Contracting authorities may award their public contracts by negotiated procedure, after publication of a contract notice, in the following cases:

(a) in the event of irregular tenders or the submission of tenders which are unacceptable under national provisions compatible with Articles 4, 24, 25, 27 and Chapter VII, in response to an open or restricted procedure or a competitive dialogue insofar as the original terms of the contract are not substantially altered.

Contracting authorities need not publish a contract notice where they include in the negotiated procedure all of, and only, the tenderers which satisfy the criteria of Articles 45 to 52 and which, during the prior open or restricted procedure or competitive dialogue, have submitted tenders in accordance with the formal requirements of the tendering procedure;

(b) in exceptional cases, when the nature of the works, supplies, or services or the risks attaching thereto do not permit prior overall pricing; Official Journal of the European Union EN 30.4.2004 L 134/136

(c) in the case of services, *inter alia* services within category 6 of Annex II A, and intellectual services such as services involving the design of works, insofar as the nature of the services to be provided is such that contract specifications cannot be established with sufficient precision to permit the award of the contract by selection of the best tender according to the rules governing open or restricted procedures;

(d) in respect of public works contracts, for works which are performed solely for purposes of research, testing or development and not with the aim of ensuring profitability or recovering research and development costs.

2. In the cases referred to in paragraph 1, contracting authorities shall negotiate with tenderers the tenders submitted by them in order to adapt them to the requirements which they have set in the contract notice, the specifications and additional documents, if any, and to seek out the best tender in accordance with Article 53(1).

3. During the negotiations, contracting authorities shall ensure the equal treatment of all tenderers. In particular, they shall not provide information in a discriminatory manner which may give some tenderers an advantage over others.

4. Contracting authorities may provide for the negotiated procedure to take place in successive stages in order to reduce the number of tenders to be negotiated by applying the award criteria in the contract notice or the specifications. The contract notice or the specifications shall indicate whether recourse has been had to this option.

Article 31: Cases justifying use of the negotiated procedure without publication of a contract notice

Contracting authorities may award public contracts by a negotiated procedure without prior publication of a contract notice in the following cases:

(1) for public works contracts, public supply contracts and public service contracts:

(a) when no tenders or no suitable tenders or no applications have been submitted in response to an open procedure or a restricted procedure, provided that the initial conditions of contract are not substantially altered and on condition that a report is sent to the Commission if it so requests;

(b) when, for technical or artistic reasons, or for reasons connected with the protection of exclusive rights, the contract may be awarded only to a particular economic operator;

(c) insofar as is strictly necessary when, for reasons of extreme urgency brought about by events unforeseeable by the contracting authorities in question, the time limit for the open, restricted or negotiated procedures with publication of a contract notice as referred to in Article 30 cannot be complied with. The circumstances invoked to justify extreme urgency must not in any event be attributable to the contracting authority;

(2) for public supply contracts:

(a) when the products involved are manufactured purely for the purpose of research, experimentation, study or development; this provision does not extend to quantity production to establish commercial viability or to recover research and development costs;

(b) for additional deliveries by the original supplier which are intended either as a partial replacement of normal supplies or installations or as the extension of existing supplies or installations where a change of supplier would oblige the contracting authority to acquire material having different technical characteristics which would result in incompatibility or disproportionate technical difficulties in operation and maintenance; the length of such contracts as well as that of recurrent contracts may not, as a general rule, exceed three years;

(c) for supplies quoted and purchased on a commodity market;

(d) for the purchase of supplies on particularly advantageous terms, from either a supplier which is definitively winding up its business activities, or the receivers or liquidators of a bankruptcy, an arrangement with creditors, or a similar procedure under national laws or regulations;

(3) for public service contracts, when the contract concerned follows a design contest and must, under the applicable rules, be awarded to the successful candidate or to one of the successful candidates, in the latter case, all successful candidates must be invited to participate in the negotiations;

(4) for public works contracts and public service contracts:

(a) for additional works or services not included in the project initially considered or in the original contract but which have, through unforeseen circumstances, become necessary for the performance of the works or services described therein, on condition that the award is made to the economic operator performing such works or services:

— when such additional works or services cannot be technically or economically separated from the original contract without major inconvenience to the contracting authorities, Official Journal of the European Union EN 30.4.2004 L 134/137 or

— when such works or services, although separable from the performance of the original contract, are strictly necessary for its completion.

However, the aggregate value of contracts awarded for additional works or services may not exceed 50 % of the amount of the original contract;

(b) for new works or services consisting in the repetition of similar works or services entrusted to the economic operator to whom the same contracting authorities awarded an original contract, provided that such works or services are in conformity with a basic project for which the original contract was awarded according to the open or restricted procedure.

As soon as the first project is put up for tender, the possible use of this procedure shall be disclosed and the total estimated cost of subsequent works or services shall be taken into consideration by the contracting authorities when they apply the provisions of Article 7.

This procedure may be used only during the three years following the conclusion of the original contract.

37. The **EC-Chile** Agreement provides that entities award public contracts by open or selective tendering according to their national procedures and in a non-discriminatory manner (Article 143).

Article 144 provides for certain disciplines to be followed when selective tendering procedures are followed, e.g., need to select the maximum number of domestic suppliers and suppliers from the other party, need to make the selection in a fair and non-discriminatory manner and on the basis of the criteria indicated in the notice of intended procurement or in tender documents. The Agreement permits parties to use a procedure other than open and selective tendering in specific cases and only when certain conditions (set out in Article 145) are met. These conditions reflect in part those contained in Article XV of the GPA ("Limited tendering").

EC-Chile

Article 143: Tendering Procedures

1. Entities shall award their public contracts by open or selective tendering procedures according to their national procedures, in compliance with this Title and in a non-discriminatory manner.
2. the purposes of this Title:
 - (a) open tendering procedures are those procedures whereby any interested supplier may submit a tender.
 - (b) selective tendering procedures are those procedures whereby, consistent with Article 144 and other relevant provisions of this Title, only suppliers satisfying qualification requirements established by the entities are invited to submit a tender.
3. However, in the specific cases and only under the conditions laid down in Article 145, entities may use a procedure other than the open or selective tendering procedures referred to in paragraph 1 of that Article, in which case the entities may choose not to publish a notice of intended procurement, and may consult the suppliers of their choice and negotiate the terms of contract with one or more of these.
4. Entities shall treat tenders in confidence. In particular, they shall not provide information intended to assist particular participants to bring their tenders up to the level of other participants.

Article 144: Selective Tendering

1. In selective tendering, entities may limit the number of qualified suppliers they will invite to tender, consistent with the efficient operation of the procurement process, provided that they select the maximum number of domestic suppliers and suppliers of the other Party, and that they make the selection in a fair and non-discriminatory manner and on the basis of the criteria indicated in the notice of intended procurement or in tender documents.
2. Entities maintaining permanent lists of qualified suppliers may select suppliers to be invited to tender from among those listed, under the conditions of Article 146(7). Any selection shall allow for equitable opportunities for suppliers on the lists.

Article 145: Other Procedures

1. Provided that the tendering procedure is not used to avoid maximum possible competition or to protect domestic suppliers, entities shall be allowed to award contracts by means other than an open or selective tendering procedure in the following circumstances and subject to the following conditions, where applicable:
 - (a) when no suitable tenders or request to participate have been submitted in response to a prior procurement, on condition that the requirements of the initial procurement are not substantially modified;

- (b) when, for technical or artistic reasons, or for reasons connected with protection of exclusive rights, the contract may be performed only by a particular supplier and no reasonable alternative or substitute exists;
- (c) for reasons of extreme urgency brought about by events unforeseeable by the entity, the goods or services could not be obtained in time by means of open or selective tendering procedures;
- (d) for additional deliveries of goods or services by the original supplier where a change of supplier would compel the entity to procure equipment or services not meeting requirements of interchangeability with already existing equipment, software or services;
- (e) when an entity procures prototypes or a first product or service which are developed at its request in the course of, and for, a particular contract for research, experiment, study or original development;
- (f) when additional services which were not included in the initial contract but which were within the objectives of the original tender documentation have, through unforeseeable circumstances, become necessary to complete the services described therein. However, the total value of contracts awarded for the additional construction services may not exceed 50 % of the amount of the main contract;
- (g) for new services consisting of the repetition of similar services and for which the entity has indicated, in the notice concerning the initial service, that tendering procedures other than open or selective might be used in awarding contracts for such new services;
- (h) in the case of contracts awarded to the winner of a design contest, provided that the contest has been organised in a manner which is consistent with the principles of this Title; in case of several successful candidates, all successful candidates shall be invited to participate in the negotiations; and
- (i) for quoted goods purchased on a commodity market and for purchases of goods made under exceptionally advantageous conditions which only arise in the very short term in the case of unusual disposals and not for routine purchases from regular suppliers.

2. The Parties shall ensure that, whenever it is necessary for entities to resort to a procedure other than the open or selective tendering procedures based on the circumstances set forth in paragraph 1, the entities shall maintain a record or prepare a written report providing specific justification for the contract awarded under that paragraph.

38. The approach followed in the **US-Chile** Agreement is less detailed. Article 9.9 provides that contracts be awarded by means of open tendering, but specifies that, provided this is not used to avoid competition or to protect domestic suppliers, other means of award contracts can be used in certain circumstances. A list of such circumstances is provided, which include some of the conditions listed in Article XV ("Limited Tendering") of the GPA. Paragraph 3 of the Article also provides that "an entity shall maintain a record or prepare a written report providing specific justification for any contract awarded by means other than open tendering procedures". The Agreement between the **Republic of Korea and Chile** is along similar lines (Article 15.6, reproduced below).

Republic of Korea-Chile
Article 15.6: Tendering Procedures

1. Entities shall award their public contracts by open tendering procedures according to their respective domestic procedures, in compliance with this Chapter and in a non-discriminatory manner.
2. Provided that the tendering procedure is not used to avoid competition or to protect domestic suppliers, entities shall be allowed to award contracts by means other than an open tendering procedure in the following circumstances and subject to the following conditions, where applicable:
 - (a) in the absence of tenders that conform to the essential requirements in the tender documentation provided in a prior tendering procedure, including any conditions for participation, provided that the requirements of the initial procurement are not substantially modified in the contract as awarded;
 - (b) where, for works of art, or for reasons connected with the protection of exclusive rights, such as patents, copyrights or proprietary information or in the absence of competition for technical reasons, the goods or services can be supplied only by a particular supplier and no reasonable alternative or substitute exists;
 - (c) for additional deliveries by the original supplier that are intended either as replacement parts, extensions, or continuing services for existing equipment, software, services or installations, where a change of supplier would compel the entity to procure goods or services not meeting requirements of interchangeability with existing equipment, software, services, or installations;
 - (d) for quoted goods purchased on a commodity market and for purchases of goods made under exceptionally advantageous conditions, which only arise in the very short term in the case of unusual disposals, and not for routine purchases from regular suppliers;
 - (e) when an entity procures prototypes or a first good or service which are developed at its request in the course of, and for, a particular contract for research, experiment, study or original development;
 - (f) when additional construction services which were not included in the initial contract but which were within the objectives of the original tender documentation have, due to unforeseeable circumstances, become necessary to complete the construction services described therein, provided that the total value of contracts awarded for additional construction services does not exceed 50 per cent of the amount of the main contract; or
 - (g) insofar as it is strictly necessary where, for reasons of extreme urgency brought about by events unforeseeable by the entity, the goods or services could not be obtained in time under an open tendering procedure and the use of such procedure would result in serious injury to the entity, the entity's program responsibilities or the responsible Party. This exception may not be used as a result of a lack of advance planning or concerns relating to the amount of funds available to an entity within a particular period of time.
3. The Parties shall ensure that, whenever it is necessary for entities to resort to a procedure other than open tendering procedures based on the circumstances set forth in paragraph 2, the entities shall maintain a record or prepare a written report providing specific justification for the contract.

39. The rules contained in the Agreement between **Singapore and Australia** are also relatively general. Article 6 provides that open or limited tendering procedures may be used. Unlike in the agreements referred to above, however, the relevant conditions are not further specified. The Article provides, among other things, that the procedures used shall provide for mechanisms to eliminate

conflict of interest, achieve value for money, and be conducted in a fair and discriminatory manner. The **New Zealand-Singapore** Agreement (Article 52) provides that procurement procedures be consistent with the APEC Non-binding Principles on Government Procurement and good commercial practice. It stipulates that "in cases of procurement by open call for tender, invitations to tender shall be advertised in a publicly accessible medium; and in cases of procurement by selective invitation to tender, prior calls to prequalify or register interest shall be advertised in a publicly available medium". The **Australia-New Zealand, Chile-El Salvador** and **Chile-Costa Rica** Agreements have no detailed rules governing the types of procurement methods that can be used. Clause 2 (f) of the Australia-New Zealand Agreement mandates parties to "achieve maximum simplicity and consistency in the application of procurement policies, practices and procedures". The Chile-Costa Rica and Chile-El Salvador Agreements provide that in cases where tendering procedures are not used (i.e., contracting on own account), parties are required to "adopt such measures as are reasonably available" to "refrain from applying measures that are discriminatory, arbitrary or have the effect of denying equal access or opportunity to a supplier from another Party" (see Articles 16.04(2) and 16.03(1)(f)).

E. QUALIFICATION OF SUPPLIERS

40. Various agreements incorporate by reference the provisions of the GPA on qualification of suppliers (Article VIII): **Japan-Singapore, US-Singapore, EFTA, EC-Mexico** in the case of the EC, and **EFTA-Mexico** in the case of EFTA. The **NAFTA** provisions on qualification of suppliers (Article 1009, reproduced below), which are similar in general to those of the GPA, have been incorporated by reference by Mexico in the EC-Mexico and EFTA-Mexico Agreements.

41. The relevant provisions call for non-discrimination among suppliers of other parties or between domestic suppliers and suppliers of other parties. They also commit parties to ensuring that the qualification procedures are consistent with a series of principles. Some relate to transparency, such as the obligation to publish conditions for participation in tendering sufficiently in advance so as to permit suppliers to initiate or to complete the qualification procedures. A further requirement stipulates that the conditions governing the qualification of suppliers shall be limited to those which are essential to ensure the fulfilment of the contract. GPA Article VIII or NAFTA Article 1009 also provide, among other things, that entities that maintain a permanent list of qualified suppliers need to ensure that suppliers may apply for qualification at any time, and that any interested supplier be informed of the decision of the entities.

NAFTA
Article 1009: Qualification of Suppliers

1. Further to Article 1003, no entity of a Party may, in the process of qualifying suppliers in a tendering procedure, discriminate between suppliers of the other Parties or between domestic suppliers and suppliers of the other Parties.
2. The qualification procedures followed by an entity shall be consistent with the following:
 - (a) conditions for participation by suppliers in tendering procedures shall be published sufficiently in advance so as to provide the suppliers adequate time to initiate and, to the extent that it is compatible with efficient operation of the procurement process, to complete the qualification procedures;
 - (b) conditions for participation by suppliers in tendering procedures, including financial guarantees, technical qualifications and information necessary for establishing the financial, commercial and technical capacity of suppliers, as well as the verification of whether a supplier meets those conditions, shall be limited to those that are essential to ensure the fulfillment of the contract in question;
 - (c) the financial, commercial and technical capacity of a supplier shall be judged both on the basis of that supplier's global business activity, including its activity in the territory of the Party of the supplier, and its activity, if any, in the territory of the Party of the procuring entity;
 - (d) an entity shall not misuse the process of, including the time required for, qualification in order to exclude suppliers of another Party from a suppliers' list or from being considered for a particular procurement;
 - (e) an entity shall recognize as qualified suppliers those suppliers of another Party that meet the conditions for participation in a particular procurement;
 - (f) an entity shall consider for a particular procurement those suppliers of another Party that request to participate in the procurement and that are not yet qualified, provided there is sufficient time to complete the qualification procedure;
 - (g) an entity that maintains a permanent list of qualified suppliers shall ensure that suppliers may apply for qualification at any time, that all qualified suppliers so requesting are included in

the list within a reasonably short period of time and that all qualified suppliers included in the list are notified of the termination of the list or of their removal from it;

(h) where, after publication of a notice in accordance with Article 1010, a supplier that is not yet qualified requests to participate in a particular procurement, the entity shall promptly start the qualification procedure;

(i) an entity shall advise any supplier that requests to become a qualified supplier of its decision as to whether that supplier has become qualified; and

(j) where an entity rejects a supplier's application to qualify or ceases to recognize a supplier as qualified, the entity shall, on request of the supplier, promptly provide pertinent information concerning the entity's reasons for doing so.

3. Each Party shall:

(a) ensure that each of its entities uses a single qualification procedure, except that an entity may use additional qualification procedures where the entity determines the need for a different procedure and is prepared, on request of another Party, to demonstrate that need; and

(b) endeavor to minimize differences in the qualification procedures of its entities.

4. Nothing in paragraphs 2 and 3 shall prevent an entity from excluding a supplier on grounds such as bankruptcy or false declarations

42. The **US-Chile** Agreement also contains detailed procedural rules on qualification of suppliers (Article 9.8: "Conditions for Participation", reproduced below). They provide that entities publish a notice sufficiently in advance to provide interested suppliers to submit and prepare applications, where suppliers are required to satisfy registration, qualification or any other conditions for participation in procurement (paragraph 1). The Article also lists a series of disciplines, many of which are similar to the relevant NAFTA or GPA provisions, e.g., limiting the scope of conceivable conditions to essential requirements, and promptly starting qualification procedures to allow a supplier to be included in a list. While not detailed in some respects (i.e., no specific provision on non-discrimination in respect of these types of procedures), the US-Chile Agreement contains rather specific provisions on other issues. For example, paragraph 4 of Article 9.8 explicitly proscribes requirements stipulating, as a condition for participation, that a supplier has been awarded contracts by an entity of the party or that the supplier has prior work experience in the territory of that party. Paragraph 5 provides that, when rejecting an application for qualification or ceasing to recognize a supplier as qualified, the entity concerned shall, at the supplier's request, promptly give a written explanation of the reasons. The provisions contained in Article 15.7 of the Agreement between the **Republic of Korea and Chile** ("Conditions for Suppliers' Participation in Procurement") reflects paragraphs 1, 2(a), 2(b), 3, and part of paragraph 4 of the US-Chile Agreement. Although worded differently, Article 146 of the **EC-Chile** Agreement ("Qualification of Suppliers", reproduced below) also includes detailed provisions on qualification of suppliers touching upon similar issues.

US-Chile
Article 9.8: Conditions For Participation

1. Where an entity requires suppliers to satisfy registration, qualification, or any other requirements or conditions for participation ("conditions for participation") in order to participate in a procurement, the entity shall publish a notice inviting suppliers to apply for participation. The entity shall publish the notice sufficiently in advance to provide interested suppliers sufficient time to prepare and submit applications and for the entity to evaluate and make its determinations based on such applications.

2. Each entity shall:

- (a) limit any conditions for participation in a procurement to those that are essential to ensure that the potential supplier has the legal, technical, and financial capacity to fulfill the requirements and technical specifications of the procurement;
- (b) base qualification decisions solely on the conditions for participation that it has specified in advance in notices or tender documentation; and
- (c) recognize as qualified all suppliers of the other Party that meet the requisite conditions for participation in a procurement covered by this Chapter.

3. Entities may establish publicly available lists of suppliers qualified to participate in procurements. Where an entity requires suppliers to qualify for such a list in order to participate in a procurement, and a supplier that has not yet qualified applies to be included on the list, the entity shall promptly start the qualification procedures for the supplier and shall allow the supplier to participate in the procurement, provided there is sufficient time to complete the procedures within the time period established for tendering.

4. No entity may impose the condition that, in order for a supplier to participate in a procurement, the supplier has previously been awarded one or more contracts by an entity of that Party or that the supplier has prior work experience in the territory of that Party. An entity shall judge a supplier's financial and technical capacities on the basis of its global business activities including both its activity in the territory of the Party of the supplier, and its activity, if any, in the territory of the Party of the entity.

5. An entity shall promptly communicate to any supplier that has applied for qualification its decision on whether that supplier is qualified. Where an entity rejects an application for qualification or ceases to recognize a supplier as qualified, that entity shall, on request of the supplier, promptly provide it a written explanation of the reasons for its decision.

6. Nothing in this Article shall preclude an entity from excluding a supplier from a procurement on grounds such as bankruptcy or false declarations.

EC-Chile

Article 146: Qualification Of Suppliers

1. Any conditions for participation in procurement shall be limited to those that are essential to ensure that the potential supplier has the capability to fulfil the requirements of the procurement and the ability to execute the contract in question.

2. In the process of qualifying suppliers, entities shall not discriminate between domestic suppliers and suppliers of the other Party.

3. A Party shall not impose the condition that, in order for a supplier to participate in a procurement, the supplier has previously been awarded one or more contracts by an entity of that Party or that the supplier has prior work experience in the territory of that Party.

4. Entities shall recognise as qualified suppliers all suppliers who meet the conditions for participation in a particular intended procurement. Entities shall base their qualification decisions solely on the conditions for participation that have been specified in advance in notices or tender documentation.

5. Nothing in this Title shall preclude the exclusion of any supplier on grounds such as bankruptcy or false declarations or conviction for serious crime such as participation in criminal organisations.

6. Entities shall promptly communicate to suppliers that have applied for qualification their decision on whether or not they qualify.

Permanent Lists Of Qualified Suppliers

7. Entities may establish permanent lists of qualified suppliers provided that the following rules are respected:

- (a) entities establishing permanent lists shall ensure that suppliers may apply for qualification at any time.
- (b) any supplier having requested to become a qualified supplier shall be notified by the entities concerned of the decision in this regard.
- (c) suppliers requesting to participate in a given intended procurement who are not on the permanent list of qualified suppliers shall be given the possibility to participate in the procurement by presenting the equivalent certifications and other means of proof requested from suppliers who are on the list.
- (d) when an entity operating in the utilities sector uses a notice on the existence of a permanent list as a notice of intended procurement, as provided in Article 147(7), suppliers requesting to participate who are not on the permanent list of qualified suppliers shall also be considered for the procurement, provided there is sufficient time to complete the qualification procedure; in this event, the procuring entity shall promptly start procedures for qualification and the process of, and the time required for, qualifying suppliers shall not be used in order to keep suppliers of other Parties off the suppliers' list.

43. The Agreement between **Singapore and Australia** includes provisions on qualification of suppliers (Article 7: "Registration and Qualification of Suppliers", reproduced below), although they are much less detailed than those contained in the agreements mentioned above. They focus on non-discrimination and conditions relating to permanent lists of registered or qualified suppliers.

Singapore-Australia
Article 7: Registration And Qualification Of Suppliers

1. In the process of registering and/or qualifying suppliers, the entities of a Party shall not discriminate between domestic suppliers and suppliers of the other Party.
2. Any conditions for participation in open tendering procedures shall be no less favourable to suppliers of the other Party than to domestic suppliers.
3. The process of, and the time required for, registering and/or qualifying suppliers shall not be used in order to keep suppliers of the other Party off a list of suppliers or from being considered for a particular procurement.
4. Entities maintaining permanent lists of registered and/or qualified suppliers shall ensure that suppliers may apply for registration or qualification at any time, and that all registered and qualified suppliers are included in the lists within a reasonably short time.

44. The **EC Directive** includes detailed provisions relating to criteria for qualitative selection, which, given their level of specificity and the level of integration contemplated do not resemble provisions typically included in other EIAs (see Articles 45 to 52). For example, Article 48 ("Technical and/or professional capability") lists types of evidence of the supplier's technical capability that may be required in the notice or invitation to tender, e.g., list of principal services delivered in the past three years, and a description of the supplier's measures for ensuring quality.

45. The **Chile-Costa Rica, Chile-El Salvador, Australia-New Zealand** and the **New Zealand-Singapore** Agreements do not include specific provisions on qualification of suppliers. As pointed out in the preceding Section, disciplines pertaining to tendering procedures (e.g., Article 52 of the New Zealand-Singapore Agreement) more generally may nevertheless impinge on the use of measures taken by entities with respect to qualification.

F. PROCEDURAL RULES REGARDING INVITATIONS TO PARTICIPATE

46. Many EIAs include specific provisions on procedures to be followed prior to the actual tendering process, for example a requirement for parties to publish an invitation to participate in the form of a tender notice in a publicly accessible publication, in order to inform interested suppliers about the procurement opportunity.

47. The **Japan-Singapore, US-Singapore, EFTA-Mexico** in the case of EFTA, **EC-Mexico** in the case of the EC, and **EFTA** Agreements incorporate by reference Article IX of the GPA ("Invitation to Participate Regarding Intended Procurement", reproduced below). The relevant provisions are similar to **NAFTA** Article 1010 ("Invitation to Participate"), which has been incorporated by reference in the EC-Mexico and EFTA-Mexico Agreements, in both cases for Mexico only.

48. In addition to a requirement to publish an invitation to participate, the provisions of these EIAs provide, for entities at the central government level, that it take the form of a notice of proposed procurement. Elements of information that such notices need to contain include the type and quantity of services to be procured; the procuring procedures that will be followed; a statement of the economic, technical or other requirements; the types of documents or information required of suppliers; etc. These Agreements typically provide that entities below central government levels may, instead, use a notice of planned or intended procurement. It has to include at least some of the elements of information that are required in the case of central government entities. The provisions also typically include specific procedures where a notice regarding a qualification system is used as an invitation to participate, as well as in cases where entities maintain permanent lists of qualified suppliers in case of selective tendering procedures. Parties are also required to indicate whether the procurement is covered by the provisions of the EIA.

GPA

Article IX: Invitation to Participate Regarding Intended Procurement

1. In accordance with paragraphs 2 and 3, entities shall publish an invitation to participate for all cases of intended procurement, except as otherwise provided for in Article XV (limited tendering). The notice shall be published in the appropriate publication listed in Appendix II.
2. The invitation to participate may take the form of a notice of proposed procurement, as provided for in paragraph 6.
3. Entities in Annexes 2 and 3 may use a notice of planned procurement, as provided for in paragraph 7, or a notice regarding a qualification system, as provided for in paragraph 9, as an invitation to participate.
4. Entities which use a notice of planned procurement as an invitation to participate shall subsequently invite all suppliers who have expressed an interest to confirm their interest on the basis of information which shall include at least the information referred to in paragraph 6.
5. Entities which use a notice regarding a qualification system as an invitation to participate shall provide, subject to the considerations referred to in paragraph 4 of Article XVIII and in a timely manner, information which allows all those who have expressed an interest to have a meaningful opportunity to assess their interest in participating in the procurement. This information shall include the information contained in the notices referred to in paragraphs 6 and 8, to the extent such information is available. Information provided to one interested supplier shall be provided in a non-discriminatory manner to the other interested suppliers.
6. Each notice of proposed procurement, referred to in paragraph 2, shall contain the following information:

- (a) the nature and quantity, including any options for further procurement and, if possible, an estimate of the timing when such options may be exercised; in the case of recurring contracts the nature and quantity and, if possible, an estimate of the timing of the subsequent tender notices for the products or services to be procured;
- (b) whether the procedure is open or selective or will involve negotiation;
- (c) any date for starting delivery or completion of delivery of goods or services;
- (d) the address and final date for submitting an application to be invited to tender or for qualifying for the suppliers' lists, or for receiving tenders, as well as the language or languages in which they must be submitted;
- (e) the address of the entity awarding the contract and providing any information necessary for obtaining specifications and other documents;
- (f) any economic and technical requirements, financial guarantees and information required from suppliers;
- (g) the amount and terms of payment of any sum payable for the tender documentation; and
- (h) whether the entity is inviting offers for purchase, lease, rental or hire purchase, or more than one of these methods.

7. Each notice of planned procurement referred to in paragraph 3 shall contain as much of the information referred to in paragraph 6 as is available. It shall in any case include the information referred to in paragraph 8 and:

- (a) a statement that interested suppliers should express their interest in the procurement to the entity;
- (b) a contact point with the entity from which further information may be obtained.

8. For each case of intended procurement, the entity shall publish a summary notice in one of the official languages of the WTO. The notice shall contain at least the following information:

- (a) the subject matter of the contract;
- (b) the time-limits set for the submission of tenders or an application to be invited to tender; and
- (c) the addresses from which documents relating to the contracts may be requested.

9. In the case of selective tendering procedures, entities maintaining permanent lists of qualified suppliers shall publish annually in one of the publications listed in Appendix III a notice of the following:

- (a) the enumeration of the lists maintained, including their headings, in relation to the products or services or categories of products or services to be procured through the lists;
- (b) the conditions to be fulfilled by suppliers with a view to their inscription on those lists and the methods according to which each of those conditions will be verified by the entity concerned; and
- (c) the period of validity of the lists, and the formalities for their renewal.

When such a notice is used as an invitation to participate in accordance with paragraph 3, the notice shall, in addition, include the following information:

- (d) the nature of the products or services concerned;
- (e) a statement that the notice constitutes an invitation to participate.

However, when the duration of the qualification system is three years or less, and if the duration of the system is made clear in the notice and it is also made clear that further notices will not be published, it shall be sufficient to publish the notice once only, at the beginning of the system. Such a system shall not be used in a manner which circumvents the provisions of this Agreement.

10. If, after publication of an invitation to participate in any case of intended procurement, but before the time set for opening or receipt of tenders as specified in the notices or the tender documentation, it becomes necessary to amend or re-issue the notice, the amendment or the re-issued notice shall be given the same circulation as the original documents upon which the amendment is based. Any significant information given to one supplier with respect to a particular intended procurement shall be given simultaneously to all other suppliers concerned in adequate time to permit the suppliers to consider such information and to respond to it.

11. Entities shall make clear, in the notices referred to in this Article or in the publication in which the notices appear, that the procurement is covered by the Agreement.

49. The **EC Directive** also contains relevant rules which, given the type of integration contemplated in the EC, tend to go beyond the rules found in other EIAs. Articles 35 and 36 contain rules regarding the publication of notices. They provide, among other things, that contracting authorities make known, by means of a prior information notice the estimated total value of services contracts they intend to award over the following twelve months. The Articles also include an obligation to publish, along with detailed technical specifications, and to specify the information that need to be included in notices (see part of Annex VII A, reproduced below). Article 40 (reproduced below) includes further provisions relating to invitations to participate in the case of restricted, competitive dialogue, or negotiated procedures.

Directive 2004/18/EC

ANNEX VII A
INFORMATION WHICH MUST BE INCLUDED IN PUBLIC CONTRACT NOTICES

NOTICE OF THE PUBLICATION OF A PRIOR INFORMATION NOTICE ON A BUYER PROFILE

1. Country of the contracting authority
2. Name of the contracting authority
3. Internet address of the 'buyer profile' (URL)
4. CPV Nomenclature reference No(s)

PRIOR INFORMATION NOTICE

1. The name, address, fax number and email address of the contracting authority and, if different, of the service from which additional information may be obtained and, in the case of services and works contracts, of the services, e.g. the relevant governmental internet site, from which information can be obtained concerning the general regulatory framework for taxes, environmental protection, employment protection and working conditions applicable in the place where the contract is to be performed.

2. Where appropriate, indicate whether the public contract is restricted to sheltered workshops, or whether its execution is restricted to the framework of protected job programmes.

3. In the case of public works contracts: the nature and extent of the works and the place of execution; if the work is to be subdivided into several lots, the essential characteristics of those lots by reference to the work; if available, an estimate of the range of the cost of the proposed works; Nomenclature reference No(s).

In the case of public supply contracts: the nature and quantity or value of the products to be supplied, Nomenclature reference No(s).

In the case of public services contracts: the total value of the proposed purchases in each of the service categories in Annex II A; Nomenclature reference No(s).

4. Estimated date for initiating the award procedures in respect of the contract or contracts, in the case of public service contracts by category.

5. Where appropriate, indicate whether a framework agreement is involved.

6. Where appropriate, other information.

7. Date of dispatch of the notice or of dispatch of the notice of the publication of the prior information notice on the buyer profile.

8. Indicate whether the contract is covered by the Agreement.

CONTRACT NOTICES

Open and restricted procedures, competitive dialogues, procedures, negotiated procedures:

1. Name, address, telephone and fax number, email address of the contracting authority.
2. Where appropriate, indicate whether the public contract is restricted to sheltered workshops, or whether its execution is restricted to the framework of protected job programmes.
3.
 - (a) The award procedure chosen;
 - (b) Where appropriate, the reasons for use of the accelerated procedure (in restricted and negotiated procedures);
 - (c) Where appropriate, indicate whether a framework agreement is involved;
 - (d) Where appropriate, indicate whether a dynamic purchasing system is involved;
 - (e) Where appropriate, the holding of an electronic auction (in the event of open, restricted or negotiated procedures, in the situation covered by Article 30(1)(a)).
4. Form of the contract.
5. Place of execution/performance of the works, for delivery of products or of the provision of services.
6.
 - (a) Public works contracts:
 - nature and extent of the works and general nature of the work. Indication in particular of options concerning supplementary works, and, if known, the provisional timetable for recourse to these options as well as the number of possible renewals, if any. If the work or the contract is subdivided into several lots, the size of the different lots; Nomenclature reference number(s),
 - information concerning the purpose of the work or the contract where the latter also involves the drawing up of projects,
 - in the event of a framework agreement, indication also of the planned duration of the framework agreement, the estimated total value of the works for the entire duration of the framework agreement and, as far as possible, the value and the frequency of the contracts to be awarded.
 - (b) Public supply contracts:
 - nature of the products to be supplied, indicating in particular whether tenders are requested with a view to purchase, lease rental, hire or hire purchase or a combination of these, nomenclature reference number. Quantity of products to be supplied, indicating in particular options concerning supplementary purchases and, if known, the provisional timetable for recourse to these options as well as the number of renewals, if any. Nomenclature reference number(s),
 - in the case of regular or renewable contracts during the course of a given period, indicate also, if known, the timetable for subsequent contracts for purchase of intended supplies,
 - in the event of a framework agreement, indication also of the planned duration of the framework agreement, the estimated total value of the supplies for the entire duration of the framework agreement and, as far as possible, the value and the frequency of the contracts to be awarded.
 - (c) Public service contracts:
 - category and description of service. Nomenclature reference number(s). Quantity of services to be provided. Indicate in particular options concerning supplementary purchases and, if known, the provisional timetable for recourse to these options as well as the number of renewals, if any. In the case of renewable contracts over a given period, an estimate of the time frame, if known, for subsequent public contracts for purchase of intended services, in the event of a framework agreement, indication also of the planned duration of the framework agreement, the estimated total value of the services for the entire duration of the framework agreement and, as far as possible, the value and the frequency of the contracts to be awarded,
 - indication of whether the execution of the service is reserved by law, regulation or administrative provision to a particular profession.
Reference to the law, regulation or administrative provision.
 - indication of whether legal persons should indicate the names and professional qualifications of the staff to be responsible for the execution of the service.

7. If the contracts are subdivided into lots, indication of the possibility of tendering for one, for several or for all the lots.
8. Any time limit for completion of works/supplies/services or duration of the works/supply/services contract; where possible any time limit by which works will begin or any time limit by which delivery of supplies or services will begin.
9. Admission or prohibition of variants.
10. Where applicable particular conditions to which the performance of the contract is subject.
11. In the case of open procedures:
 - (a) name, address, telephone and telefax number and electronic address of the service from which contract documents and additional documents can be requested;
 - (b) where appropriate, time limit for submission of such requests;
 - (c) where appropriate, cost of and payment conditions for obtaining these documents.
12. (a) Time limit for receipt of tenders or indicative tenders where a dynamic purchasing system is being used (open procedures);
 - (b) time limit for receipt of request to participate (restricted and negotiated procedures);
 - (c) address where these have to be transmitted;
 - (d) the language or languages in which they must be drawn up.
13. In the case of open procedures:
 - (a) persons authorised to be present at the opening of tenders;
 - (b) date, time and place for such opening.
14. Where appropriate any deposit and guarantees required.
15. Main terms concerning financing and payment and/or references to the texts in which these are contained.
16. Where applicable, the legal form to be taken by the grouping of economic operators to whom the contract is to be awarded.
17. Selection criteria regarding the personal situation of economic operators that may lead to their exclusion, and required information proving that they do not fall within the cases justifying exclusion. Selection criteria and information concerning the economic operators' personal situation, information and any necessary formalities for assessment of the minimum economic and technical standards required of the economic operator. Minimum level(s) of standards possibly required.
18. Where there is a framework agreement: the number and, where appropriate, proposed maximum number of economic operators who will be members of it, the duration of the framework agreement provided for, stating, if appropriate, the reasons for any duration exceeding four years.
19. In the case of a competitive dialogue or a negotiated procedure with the publication of a contract notice, indicate, if appropriate, recourse to a staged procedure in order gradually to reduce the number of solutions to be discussed or tenders to be negotiated.
20. In the case of a restricted procedure, a competitive dialogue or a negotiated procedure with the publication of a contract notice, when recourse is had to the option of reducing the number of candidates to be invited to submit tenders, to engage in dialogue or to negotiate: minimum and, if appropriate, proposed maximum number of candidates and objective criteria to be used to choose that number of candidates.
21. Time frame during which the tenderer must maintain its tender (open procedures).
22. Where appropriate, names and addresses of economic operators already selected by the contracting authority (negotiated procedures).

23. Criteria referred to in Article 53 to be used for award of the contract: 'lowest price' or 'most economically advantageous tender'. Criteria representing the most economically advantageous tender as well as their weighting shall be mentioned where they do not appear in the specifications or, in the event of a competitive dialogue, in the descriptive document.
24. Name and address of the body responsible for appeal and, where appropriate, mediation procedures. Precise information concerning deadlines for lodging appeals, or if need be the name, address, telephone number, fax number and email address of the service from which this information may be obtained.
25. Date(s) of publication of the prior information notice in accordance with the technical specifications of publication indicated in Annex VIII or statement that no such publication was made.
26. Date of dispatch of the notice.
27. Indicate whether the contract is covered by the Agreement.

SIMPLIFIED CONTRACT NOTICE FOR USE IN A DYNAMIC PURCHASING SYSTEM

1. Country of contracting authority.
2. Name and e-mail address of contracting authority.
3. Publication reference of the contract notice for the dynamic purchasing system.
4. E-mail address at which the technical specification and additional documents relating to the dynamic purchasing system are available.
5. Subject of contract: description by reference number(s) of 'CPV' nomenclature and quantity or extent of the contract to be awarded.
6. Time frame for submitting indicative tenders.

CONTRACT AWARD NOTICES

1. Name and address of the contracting authority.
2. Award procedures chosen. In the case of negotiated procedure without prior publication of a contract notice (Article 28), justification.
3. Public works contracts: nature and extent of the contract, general characteristics of the work.

Public supply contracts: nature and quantity of products supplied, where appropriate, by the supplier; nomenclature reference number.

Public service contracts: category and description of the service; nomenclature reference number; quantity of services bought.

4. Date of contract award.
5. Contract award criteria.
6. Number of tenders received.
7. Name and address of the successful economic operators.
8. Price or range of prices (minimum/maximum) paid.
9. Value of the tender (tenders) retained or the highest tender and lowest tender taken into consideration for the contract award.
10. Where appropriate, value and proportion of contract likely to be subcontracted to third parties.

11. Date of publication of the tender notice in accordance with the technical specifications for publication in Annex VIII.
12. Date of dispatch of the notice.
13. Name and address of the body responsible for appeal and, where appropriate, mediation procedures. Precise information concerning the deadline for lodging appeals, or if need be the name, address, telephone number, fax number and email address of the service from which this information may be obtained.

Directive 2004/18/EC

Article 40: Invitations to submit a tender, participate in the dialogue or negotiate

1. In restricted procedures, competitive dialogue procedures and negotiated procedures with publication of a contract notice within the meaning of Article 30, contracting authorities shall simultaneously and in writing invite the selected candidates to submit their tenders or to negotiate or, in the case of a competitive dialogue, to take part in the dialogue.
2. The invitation to the candidates shall include either:
 - a copy of the specifications or of the descriptive document and any supporting documents, or
 - a reference to accessing the specifications and the other documents indicated in the first indent, when they are made directly available by electronic means in accordance with Article 38(6).
3. Where an entity other than the contracting authority responsible for the award procedure has the specifications, the descriptive document and/or any supporting documents, the invitation shall state the address from which those specifications, that descriptive document and those documents may be requested and, if appropriate, the deadline for requesting such documents, and the sum payable for obtaining them and any payment procedures. The competent department shall send that documentation to the economic operator without delay upon receipt of a request.
4. The additional information on the specifications, the descriptive document or the supporting documents shall be sent by the contracting authority or the competent department not less than six days before the deadline fixed for the receipt of tenders, provided that it is requested in good time. In the event of a restricted or an accelerated procedure, that period shall be four days.
5. In addition, the invitation to submit a tender, to participate in the dialogue or to negotiate must contain at least:
 - (a) a reference to the contract notice published; Official Journal of the European Union EN 30.4.2004 L 134/142
 - (b) the deadline for the receipt of the tenders, the address to which the tenders must be sent and the language or languages in which the tenders must be drawn up;
 - (c) in the case of competitive dialogue the date and the address set for the start of consultation and the language or languages used;
 - (d) a reference to any possible adjoining documents to be submitted, either in support of verifiable declarations by the tenderer in accordance with Article 44, or to supplement the information referred to in that Article, and under the conditions laid down in Articles 47 and 48;
 - (e) the relative weighting of criteria for the award of the contract or, where appropriate, the descending order of importance for such criteria, if they are not given in the contract notice, the specifications or the descriptive document.

However, in the case of contracts awarded in accordance with the rules laid down in Article 29, the information referred to in (b) above shall not appear in the invitation to participate in the dialogue but it shall appear in the invitation to submit a tender.

50. The **EC-Chile** Agreement also contains detailed rules on invitations to participate, although their content differs somewhat from those referred to above. Article 147 requires the publication of a

notice inviting interested suppliers to participate and also lists the type of information that, at a minimum, should figure in such notices. In addition, the Article requires notices to contain information on the main criteria used for award of the contract. It also includes specific provisions for notices of planned procurement (focusing on entities operating in the utilities sector) and for notices with respect to permanent lists of qualified suppliers. The Article (paragraph 10) further provides that notices be published "in a timely manner through means which offer the widest possible and non-discriminatory access to the interested suppliers of the Parties" and that these means be "accessible free of charge through a single point of access".

51. The **US-Chile** Agreement (Article 9.4: Publication of Notices of Intended Procurement) is not as detailed as provisions of the agreements mentioned above. It focuses on the requirement to publish a notice inviting tenders and on the types of information that such notices need to contain. Article 15.8 of the **Republic of Korea-Chile** Agreement is similar to Article 15.8 of the US-Chile agreement. The key difference is that the former Agreement contains an additional provision along the lines of paragraph 10 of Article 147 of the EC-Chile Agreement, mentioned above.

<p>US-Chile <u>Article 9.4: Publication Of Notice Of Intended Procurement</u></p> <p>1. For each procurement covered by this Chapter, an entity shall publish in advance a notice inviting interested suppliers to submit tenders for that procurement ("notice of intended procurement"), except as provided in Article 9.9(2). Each such notice shall be accessible during the entire period established for tendering for the relevant procurement.</p> <p>2. Each notice of intended procurement shall include a description of the intended procurement, any conditions that suppliers must fulfill to participate in the procurement, the name of the entity issuing the notice, the address where suppliers may obtain all documents relating to the procurement, the time limits for submission of tenders, and the dates for delivery of the goods or services to be procured.</p>

52. Other agreements contain less detailed rules, if any, concerning invitation to participate. Article 6 of Chapter 6 of the **Singapore-Australia** Agreement and paragraph 2 of Article 52 of the **New Zealand-Singapore** Agreement contain a paragraph requiring publication of an invitation to participate. Article 16.05 of the **Chile-Costa Rica** and of the **Chile-El Salvador** Agreements simply contains the following provision:

<p>Chile-Costa Rica / Chile-El Salvador <u>Article 16.05: Transparency and the provision of information</u></p> <p>1. Further to Article 17.04 (Provision of Information), each Party shall ensure that its entities effectively publish and afford an understanding of:</p> <p>(...)</p> <p>(b) the business opportunities created by the corresponding government procurement processes, providing the suppliers of another Party with all the information necessary to participate in said procurements; and (...)</p>

G. TIME LIMITS FOR TENDERING AND DELIVERY

53. Many EIAs include specific prescriptions concerning minimum periods that must be allowed for the preparation, submission and receipt of tenders so as to ensure responsive tendering. Deadlines must be set long enough to allow all suppliers, domestic and foreign, to prepare and submit tenders before the closing of the tendering procedures.

54. As for the preceding observations relating to tendering procedures (e.g., invitation to participate), many of the agreements reviewed include provisions replicating those of the GPA (Article XI) or NAFTA (Article 1012), which are similar. The **Japan-Singapore**, **US-Singapore**, **EFTA-Mexico** in the case of EFTA, **EC-Mexico** in the case of the EC, and **EFTA** Agreements incorporate by reference Article XI of the GPA ("Time-Limits for Tendering and Delivery"). Article 1012 of **NAFTA** has been incorporated by reference in the EC-Mexico and EFTA-Mexico Agreements, in both cases for Mexico only.

55. All these agreements contain a general provision specifying that prescriptions of time limits need to provide adequate space to allow suppliers of another party to submit tenders before the closing of the procedures, and that such factors as the time required for transmitting tenders by mail from foreign points need to be taken into account (Article XI:1 of the GPA and Article 1012(1) of NAFTA). Both models provide, in open procedures, for the period for the receipt of tenders to be no less than 40 days from the date of publication of the notice. For selective procedures not involving the use of a permanent list of qualified suppliers, the period for submitting an application to be invited to tender must not be less than 25 days and that for the receipt of tenders not less than 40 days. Special provisions for selective tendering procedures involving the use of a permanent list of qualified suppliers are also included. The agreements provide that these time limits may be reduced in certain specified circumstances, e.g., where a state of urgency, to be duly substantiated, renders them impracticable. Further, there is an obligation to take into account certain factors when establishing a delivery date for services procured, e.g., extent of subcontracting anticipated, complexity of the procurement, time of production. Article XI of the GPA is reproduced below.

<p>GPA <u>Article XI: Time-limits for Tendering and Delivery</u></p>
<p><i>General</i></p> <p>1. (a) Any prescribed time-limit shall be adequate to allow suppliers of other Parties as well as domestic suppliers to prepare and submit tenders before the closing of the tendering procedures. In determining any such time-limit, entities shall, consistent with their own reasonable needs, take into account such factors as the complexity of the intended procurement, the extent of subcontracting anticipated and the normal time for transmitting tenders by mail from foreign as well as domestic points.</p> <p>(b) Each Party shall ensure that its entities shall take due account of publication delays when setting the final date for receipt of tenders or of applications to be invited to tender.</p>
<p><i>Deadlines</i></p> <p>2. Except in so far as provided in paragraph 3,</p> <p>(a) in open procedures, the period for the receipt of tenders shall not be less than 40 days from the date of publication referred to in paragraph 1 of Article IX;</p> <p>(b) in selective procedures not involving the use of a permanent list of qualified suppliers, the period for submitting an application to be invited to tender shall not be less than 25 days from the date of publication referred to in paragraph 1 of Article IX; the period for receipt of tenders shall in no case be less than 40 days from the date of issuance of the invitation to</p>

tender;

(c) in selective procedures involving the use of a permanent list of qualified suppliers, the period for receipt of tenders shall not be less than 40 days from the date of the initial issuance of invitations to tender, whether or not the date of initial issuance of invitations to tender coincides with the date of the publication referred to in paragraph 1 of Article IX.

3. The periods referred to in paragraph 2 may be reduced in the circumstances set out below:

(a) if a separate notice has been published 40 days and not more than 12 months in advance and the notice contains at least:

(i) as much of the information referred to in paragraph 6 of Article IX as is available;

(ii) the information referred to in paragraph 8 of Article IX;

(iii) a statement that interested suppliers should express their interest in the procurement to the entity; and

(iv) a contact point with the entity from which further information may be obtained,

the 40-day limit for receipt of tenders may be replaced by a period sufficiently long to enable responsive tendering, which, as a general rule, shall not be less than 24 days, but in any case not less than 10 days;

(b) in the case of the second or subsequent publications dealing with contracts of a recurring nature within the meaning of paragraph 6 of Article IX, the 40-day limit for receipt of tenders may be reduced to not less than 24 days;

(c) where a state of urgency duly substantiated by the entity renders impracticable the periods in question, the periods specified in paragraph 2 may be reduced but shall in no case be less than 10 days from the date of the publication referred to in paragraph 1 of Article IX; or

(d) the period referred to in paragraph 2(c) may, for procurements by entities listed in Annexes 2 and 3, be fixed by mutual agreement between the entity and the selected suppliers. In the absence of agreement, the entity may fix periods which shall be sufficiently long to enable responsive tendering and shall in any case not be less than 10 days.

4. Consistent with the entity's own reasonable needs, any delivery date shall take into account such factors as the complexity of the intended procurement, the extent of subcontracting anticipated and the realistic time required for production, de-stocking and transport of goods from the points of supply or for supply of services.

56. Article 38 of the **EC Directive** ("Time limits for the receipt of requests to participate and for receipt of tenders") also provides for various time limits. The Article 38 (reproduced below) require contracting authorities to take into account, when fixing time limits, the complexity of the contract and the time required for drawing up tenders. In the case of open procedures, the period between the time the notice is sent and the receipt of tenders shall be no less than 52 days. The Agreement provides detailed time limits for various circumstances, for example in the case of restricted and negotiated procedures. Limits can be reduced by seven days where notices are drawn-up and transmitted by electronic means, in accordance with specific procedures.

Directive 2004/18/EC

Article 38: Time limits for receipt of requests to participate and for receipt of tenders

1. When fixing the time limits for the receipt of tenders and requests to participate, contracting authorities shall take account in particular of the complexity of the contract and the time required for drawing up tenders, without prejudice to the minimum time limits set by this Article.
2. In the case of open procedures, the minimum time limit for the receipt of tenders shall be 52 days from the date on which the contract notice was sent.
3. In the case of restricted procedures, negotiated procedures with publication of a contract notice referred to in Article 30 and the competitive dialogue:
 - (a) the minimum time limit for receipt of requests to participate shall be 37 days from the date on which the contract notice is sent;
 - (b) in the case of restricted procedures, the minimum time limit for the receipt of tenders shall be 40 days from the date on which the invitation is sent.
4. When contracting authorities have published a prior information notice, the minimum time limit for the receipt of tenders under paragraphs 2 and 3(b) may, as a general rule, be shortened to 36 days, but under no circumstances to less than 22 days.

The time limit shall run from the date on which the contract notice was sent in open procedures, and from the date on which the invitation to tender was sent in restricted procedures.

The shortened time limits referred to in the first subparagraph shall be permitted, provided that the prior information notice has included all the information required for the contract notice in Annex VII A, insofar as that information is available at the time the notice is published and that the prior information notice was sent for publication between 52 days and 12 months before the date on which the contract notice was sent.
5. Where notices are drawn up and transmitted by electronic means in accordance with the format and procedures for transmission indicated in point 3 of Annex VIII, the time limits for the receipt of tenders referred to in paragraphs 2 and 4 in open procedures, and the time limit for the receipt of the requests to participate referred to in paragraph 3(a), in restricted and negotiated procedures and the competitive dialogue, may be shortened by seven days.
6. The time limits for receipt of tenders referred to in paragraphs 2 and 3(b) may be reduced by five days where the contracting authority offers unrestricted and full direct access by electronic means to the contract documents and any supplementary documents from the date of publication of the notice in accordance with Annex VIII, specifying in the text of the notice the internet address at which this documentation is accessible.

This reduction may be added to that referred to in paragraph 5.
7. If, for whatever reason, the specifications and the supporting documents or additional information, although requested in good time, are not supplied within the time limits set in Articles 39 and 40, or where tenders can be made only after a visit to the site or after on-the-spot inspection of the documents supporting the contract documents, the time limits for the receipt of tenders shall be extended so that all economic operators concerned may be aware of all the information needed to produce tenders.
8. In the case of restricted procedures and negotiated procedures with publication of a contract notice referred to in Article 30, where urgency renders impracticable the time limits laid down in this Article, contracting authorities may fix:
 - (a) a time limit for the receipt of requests to participate which may not be less than 15 days from the date on which the contract notice was sent, or less than 10 days if the notice was sent by electronic means, in accordance with the format and procedure for sending notices indicated in point 3 of Annex VIII;
 - (b) and, in the case of restricted procedures, a time limit for the receipt of tenders which shall be not less than 10 days from the date of the invitation to tender. request was made in good time before the deadline for the submission of tenders.

57. Article 150 of the **EC-Chile** Agreement, as well as its Annex XIII, Appendix 3, provide detailed time lines. The first paragraph of the Article reflects many elements of paragraph 1 of Article XI of the GPA, e.g., requirement for time limits to be adequate, taking into account such factors as normal time to transmit tenders from foreign to national points. The Annex provides, like the agreements that reproduce the GPA or NAFTA provisions, for a minimum of 40 days between the date of publication of the invitation to participate and that of the receipt of tenders. When certain qualification requirements need to be met, the period shall be no less than 40 days, along with a period of no less than 25 days between the publication of the invitation and the submission of applications for being invited. The Annex also provides that the periods can be reduced in certain circumstances (e.g., state of urgency), but not to less than 10 days in any event, and not in a way that prevents the preparation and presentation of adequate tenders.

58. The provisions of the **US-Chile** Agreement (Article 9.5: Time Limits for the Tendering Process) provide that time limits for the tendering process need to be sufficient for suppliers to prepare and submit tenders, "taking into account the nature and complexity of the procurement". It specifies that no less than 30 days shall be provided between the date on which the notice of intended procurement is published and the deadline for submitting tenders. Where there are no qualification requirements for suppliers, the time limit can be reduced, although not to less than 10 days, when specific circumstances exist, e.g., state of urgency.

59. The **Republic of Korea-Chile** Agreement is less detailed. Article 15-10 (reproduced below) provides that time limits need to be sufficiently long to enable the preparation and submission of responsive tenders and that the period between the publication of the advance notice of intended procurement and the submission of tenders shall be no less than 10 days.

Republic of Korea-Chile
Article 15.10: Time-Limits

1. Time-limits established by the entities during a procurement process shall be sufficiently long to enable suppliers to prepare and submit responsive tenders, in relation to the nature and complexity of the procurement.
2. Notwithstanding paragraph 1, entities shall establish no less than ten days between the date on which the advance notice of intended procurement is published and the final date for the submission of tenders.

60. Other agreements (e.g., Singapore-Australia, Chile-Costa Rica) do not have specific provisions on this particular issue.

H. TENDER DOCUMENTATION

61. Many of the agreements reviewed contain provisions specifically on the type of information that the tender documentation provided to suppliers should contain. Again, various agreements include provisions modelled on either GPA Article XII ("Tender documentation") or NAFTA Article 1013 ("Tender documentation"), which are similar. The **Japan-Singapore, US-Singapore, EFTA-Mexico** in the case of EFTA, **EC-Mexico** in the case of the EC, and **EFTA** Agreements incorporate by reference Article XII of the GPA, while Article 1013 of **NAFTA** has been incorporated by reference in the EC-Mexico and EFTA-Mexico Agreements, in both cases for Mexico only.

62. These agreements include a general obligation requiring that the tender documentation provided to suppliers contain all information necessary to submit responsive tenders. Examples of specific elements of information to be included are the address of the entity where tenders should be sent, the criteria for awarding the contract, or the terms of payment. The agreements further provide that entities need to forward tender documentation to any supplier participating in open tendering procedures or requesting to participate in selective tendering procedures. Entities shall also reply promptly to any reasonable request for explanation, provided it does not provide a supplier with an advantage over its competitors in the process.

NAFTA
Article 1013: Tender Documentation

1. Where an entity provides tender documentation to suppliers, the documentation shall contain all information necessary to permit suppliers to submit responsive tenders, including information required to be published in the notice referred to in Article 1010(2), except for the information required under Article 1010(2) (h). The documentation shall also include:

- (a) the address of the entity to which tenders should be submitted;
- (b) the address to which requests for supplementary information should be submitted;
- (c) the language or languages in which tenders and tendering documents may be submitted;
- (d) the closing date and time for receipt of tenders and the length of time during which tenders should be open for acceptance;
- (e) the persons authorized to be present at the opening of tenders and the date, time and place of the opening;
- (f) a statement of any economic or technical requirements and of any financial guarantees, information and documents required from suppliers;
- (g) a complete description of the goods or services to be procured and any other requirements, including technical specifications, conformity certification and necessary plans, drawings and instructional materials;
- (h) the criteria for awarding the contract, including any factors other than price that are to be considered in the evaluation of tenders and the cost elements to be included in evaluating tender prices, such as transportation, insurance and inspection costs, and in the case of goods or services of another Party, customs duties and other import charges, taxes and the currency of payment;
- (i) the terms of payment; and
- (j) any other terms or conditions.

2. An entity shall:

- (a) forward tender documentation on the request of a supplier that is participating in open tendering procedures or has requested to participate in selective tendering procedures, and reply promptly to any reasonable request for explanations relating thereto; and
- (b) reply promptly to any reasonable request for relevant information made by a supplier participating in the tendering procedure, on condition that such information does not give that supplier an advantage over its competitors in the procedure for the award of the contract.

63. The **US-Chile** Agreement (Article 9.6: "Information on Intended Procurement") also provides that entities provide tender documentation including all the information necessary for submitting responsive tenders. While the Article does not include a detailed list of elements of information to be made available, it does specify that the award criteria need to be included. It goes further than the agreements mentioned above by further requiring disclosure of the weights or, where appropriate, the relative values that will be assigned to these criteria in evaluating tenders. Entities shall inform suppliers in writing if the criteria are modified in the course of a procurement and allow adequate time for the modification or re-submission of tenders. The Agreement also includes provisions regarding the need to promptly forward the documentation in written form to the supplier upon request (conditional on availability of the documentation through electronic means).

US-Chile
Article 9.6: Information On Intended Procurements

1. An entity shall provide interested suppliers tender documentation that includes all the information necessary to permit suppliers to prepare and submit responsive tenders. The documentation shall include all criteria that the entity will consider in awarding the contract, including all cost factors, and the weights or, where appropriate, the relative values, that the entity will assign to these criteria in evaluating tenders.
2. Where an entity does not publish all the tender documentation by electronic means, the entity shall, on request of any supplier, promptly make the documentation available in written form to the supplier.
3. Where an entity, during the course of a procurement, modifies the criteria referred to in paragraph 1, it shall transmit all such modifications in writing:
 - (a) to all suppliers that are participating in the procurement at the time the criteria are modified, if the identities of such suppliers are known, and in all other cases, in the same manner as the original information was transmitted; and
 - (b) in adequate time to allow such suppliers to modify and re-submit their tenders, as appropriate.

64. The **EC-Chile** Agreement (Article 148) is less detailed. It only contains a general obligation to include in the tender documentation all necessary information to allow for the submission of responsive tenders (this is the basic elements found in all the agreements that contain such obligation). In a manner similar to the US-Chile Agreement, there are rules on the need to forward documentation upon request, which are conditional on the tender documents being freely accessible through electronic means. Unlike the US-Chile Agreement, however, Article 148 (paragraph 3) also requires that entities promptly reply to reasonable requests for relevant information. Article 15.9 of the **Republic of Korea-Chile** Agreement ("Tender Documentation") reflects paragraphs 1 and 2 of Article 148 of the EC-Chile Agreement.

EC-Chile
Article 148: Tender Documentation

1. Tender documentation provided to suppliers shall contain all information necessary to permit them to submit responsive tenders.
2. Where contracting entities do not offer free direct access to the entire tender documents and any supporting documents by electronic means, entities shall make promptly available the tender documentation at the request of any supplier of the Parties.
3. Entities shall promptly reply to any reasonable request for relevant information relating to the intended procurement, on condition that such information does not give that supplier an advantage over its competitors.

65. Relevant **EC** rules in this area are quite detailed and more specific than what is commonly found in free trade agreements. Article 36 of the EC Directive ("Form and manner of publication of notices") provides that the contract notice contain, as a minimum, the elements of information listed in Annex VII A which, in turn, tends to be more detailed than the relevant GPA provision. Further, Article 39 ("Open procedures: Specifications, additional documents and information") requires, among other things, the contracting authorities to send the specifications and any supporting documents within six days of receipt of a request to participate, unless the documents had been made available by electronic means. Article 40 ("Invitations to submit a tender, participate in the dialogue or negotiate", reproduced in Section F) includes detailed rules on the type of specifications, descriptive documents or supporting documents to the participants, along with timelines for doing so.

66. The other EIAs do not contain specific provisions on tender documentation. It may be noted, nevertheless, that paragraph 5 of Article 6 of the **Singapore-Australia** Agreement provides that "entities shall not provide to any tenderer information that with regard to a specific procurement in a manner which would have the effect of giving that tenderer an advantage over other tenderers".

I. AWARD OF CONTRACTS

67. As for previous topics mentioned, a group of the agreements reviewed contain procedural rules for submission, receipt and opening of tenders so as to ensure fairness, equity and transparency in the procurement process. The **Japan-Singapore, US-Singapore, EFTA-Mexico** in the case of EFTA, **EC-Mexico** in the case of the EC, and **EFTA** Agreements incorporate by reference Article XIII ("Submission, Receipt and Opening of Tenders and Awarding of Contracts") and XVIII ("Information and Review as Regards Obligations of Entities") of the GPA. Another group of agreements (EC-Mexico and EFTA-Mexico agreements, in both cases for Mexico) use Article 1015 of the **NAFTA**.

68. Under these agreements, only bids that conform to the essential requirements of the tender notice or documentation and are from a supplier that complies with the conditions for participation can be considered for award. Entities have the obligation to select the tenderer who has been determined to be fully capable of undertaking the contract and whose bid is either the lowest or is determined to be the most advantageous in terms of the evaluation criteria set forth in the notices or tender documentation. An entity that has received a bid that is abnormally lower in price than others may make enquiries to ensure that the tenderer can comply with the conditions of participation and is capable of fulfilling the terms of the contract. The agreements further specify that tenders can be forwarded by such means as telex or mail, but not by telephone.

69. Information must also be provided, upon awarding the contract, on the award decision in the form of a notice that provides information on such matters as the nature and quantity of the products and services covered, the name and address of the winning tenderer, and the value of the winning award or the highest and lowest offers taken into account. Moreover, in response to a request from a supplier from a party to an agreement, the procuring entity must provide prompt and pertinent information on: its procurement practices; the reasons why a supplier's application to qualify was rejected; why an existing qualification to tender was rescinded; and on the characteristics and relevant advantages of the tender selected.

GPA

Article XIII: Submission, Receipt and Opening of Tenders and Awarding of Contracts

1. The submission, receipt and opening of tenders and awarding of contracts shall be consistent with the following:

(a) tenders shall normally be submitted in writing directly or by mail. If tenders by telex, telegram or facsimile are permitted, the tender made thereby must include all the information necessary for the evaluation of the tender, in particular the definitive price proposed by the tenderer and a statement that the tenderer agrees to all the terms, conditions and provisions of the invitation to tender. The tender must be confirmed promptly by letter or by the despatch of a signed copy of the telex, telegram or facsimile. Tenders presented by telephone shall not be permitted. The content of the telex, telegram or facsimile shall prevail where there is a difference or conflict between that content and any documentation received after the time-limit; and

(b) the opportunities that may be given to tenderers to correct unintentional errors of form between the opening of tenders and the awarding of the contract shall not be permitted to give rise to any discriminatory practice.

Receipt of Tenders

2. A supplier shall not be penalized if a tender is received in the office designated in the tender documentation after the time specified because of delay due solely to mishandling on the part of the entity. Tenders may also be considered in other exceptional circumstances if the procedures of the entity concerned so provide.

Opening of Tenders

3. All tenders solicited under open or selective procedures by entities shall be received and opened under procedures and conditions guaranteeing the regularity of the openings. The receipt and opening of tenders shall also be consistent with the national treatment and non-discrimination provisions of this Agreement. Information on the opening of tenders shall remain with the entity concerned at the disposal of the government authorities responsible for the entity in order that it may be used if required under the procedures of Articles XVIII, XIX, XX and XXII.

Award of Contracts

4. (a) To be considered for award, a tender must, at the time of opening, conform to the essential requirements of the notices or tender documentation and be from a supplier which complies with the conditions for participation. If an entity has received a tender abnormally lower than other tenders submitted, it may enquire with the tenderer to ensure that it can comply with the conditions of participation and be capable of fulfilling the terms of the contract.
- (b) Unless in the public interest an entity decides not to issue the contract, the entity shall make the award to the tenderer who has been determined to be fully capable of undertaking the contract and whose tender, whether for domestic products or services, or products or services of other Parties, is either the lowest tender or the tender which in terms of the specific evaluation criteria set forth in the notices or tender documentation is determined to be the most advantageous.
- (c) Awards shall be made in accordance with the criteria and essential requirements specified in the tender documentation.

Option Clauses

5. Option clauses shall not be used in a manner which circumvents the provisions of the Agreement.

70. NAFTA Article 1015 (reproduced below) includes the elements mentioned in the GPA, but goes further on a number of points. Its procedural rules specify (paragraph 5) that having been awarded contracts by the party concerned in the past or having prior work experience in its territory cannot be conditions for awarding a contract. It also specifies that the submission of tenders by electronic means is permitted.

71. The NAFTA Article also provides for suppliers to be promptly informed of decisions on contract awards, if they so request (paragraph 6), and for the prompt publication of relevant information (paragraph 7). NAFTA Article 1015 also permits entities to withhold information in specific cases, e.g., where it would impede law enforcement or might prejudice fair competition between suppliers (paragraph 8). Similar procedural rules are contained in Article XVIII of the GPA ("Information and Review as Regards Obligations of Entities").

NAFTA

Article 1015: Submission, Receipt and Opening of Tenders and Awarding of Contracts

1. An entity shall use procedures for the submission, receipt and opening of tenders and the awarding of contracts that are consistent with the following:
- (a) tenders shall normally be submitted in writing directly or by mail;
- (b) where tenders by telex, telegram, telecopy or other means of electronic transmission are permitted, the tender made thereby must include all the information necessary for the evaluation of the tender, in particular the definitive price proposed by the supplier and a statement that the supplier agrees to all the terms and conditions of the invitation to tender;

- (c) a tender made by telex, telegram, telecopy or other means of electronic transmission must be confirmed promptly by letter or by the dispatch of a signed copy of the telex, telegram, telecopy or electronic message;
- (d) the content of the telex, telegram, telecopy or electronic message shall prevail where there is a difference or conflict between that content and the content of any documentation received after the time limit for submission of tenders;
- (e) tenders presented by telephone shall not be permitted;
- (f) requests to participate in selective tendering procedures may be submitted by telex, telegram or telecopy and if permitted, may be submitted by other means of electronic transmission; and
- (g) the opportunities that may be given to suppliers to correct unintentional errors of form between the opening of tenders and the awarding of the contract shall not be administered in a manner that would result in discrimination between suppliers.

In this paragraph, "means of electronic transmission" consists of means capable of producing for the recipient at the destination of the transmission a printed copy of the tender.

2. No entity may penalize a supplier whose tender is received in the office designated in the tender documentation after the time specified for receiving tenders if the delay is due solely to mishandling on the part of the entity. An entity may also consider, in exceptional circumstances, tenders received after the time specified for receiving tenders if the entity's procedures so provide.
3. All tenders solicited by an entity under open or selective tendering procedures shall be received and opened under procedures and conditions guaranteeing the regularity of the opening of tenders. The entity shall retain the information on the opening of tenders. The information shall remain at the disposal of the competent authorities of the Party for use, if required, under Article 1017, Article 1019 or Chapter Twenty (Institutional Arrangements and Dispute Settlement Procedures).
4. An entity shall award contracts in accordance with the following:
 - (a) to be considered for award, a tender must, at the time of opening, conform to the essential requirements of the notices or tender documentation and have been submitted by a supplier that complies with the conditions for participation;
 - (b) if the entity has received a tender that is abnormally lower in price than other tenders submitted, the entity may inquire of the supplier to ensure that it can comply with the conditions of participation and is or will be capable of fulfilling the terms of the contract;
 - (c) unless the entity decides in the public interest not to award the contract, the entity shall make the award to the supplier that has been determined to be fully capable of undertaking the contract and whose tender is either the lowest-priced tender or the tender determined to be the most advantageous in terms of the specific evaluation criteria set out in the notices or tender documentation;
 - (d) awards shall be made in accordance with the criteria and essential requirements specified in the tender documentation; and
 - (e) option clauses shall not be used in a manner that circumvents this Chapter.
5. No entity of a Party may make it a condition of the awarding of a contract that the supplier has previously been awarded one or more contracts by an entity of that Party or that the supplier has prior work experience in the territory of that Party.
6. An entity shall:
 - (a) on request, promptly inform suppliers participating in tendering procedures of decisions on contract awards and, if so requested, inform them in writing; and

(b) on request of a supplier whose tender was not selected for award, provide pertinent information to that supplier concerning the reasons for not selecting its tender, the relevant characteristics and advantages of the tender selected and the name of the winning supplier.

7. No later than 72 days after the award of a contract, an entity shall publish a notice in the appropriate publication referred to in Annex 1010.1 that shall contain the following information:

- (a) a description of the nature and quantity of goods or services included in the contract;
- (b) the name and address of the entity awarding the contract;
- (c) the date of the award;
- (d) the name and address of each winning supplier;
- (e) the value of the contract, or the highest-priced and lowest-priced tenders considered in the process of awarding the contract; and
- (f) the tendering procedure used.

8. Notwithstanding paragraphs 1 through 7, an entity may withhold certain information on the award of a contract where disclosure of the information:

- (a) would impede law enforcement or otherwise be contrary to the public interest;
- (b) would prejudice the legitimate commercial interest of a particular person; or
- (c) might prejudice fair competition between suppliers.

72. The relevant procedural rules in the **EC Directive** are in some respects more detailed than those in the GPA. For example, Article 41 ("Informing candidates and tenderers") requires entities to inform a supplier, upon request, of the reasons for rejection within 15 days. Unlike other agreements, the Article also provides that candidates and tenderers shall be informed of the grounds for not having been awarded a contract for which there has been a call for competition. Article 43 ("Content of reports") requires a written report to be drawn up for each contract, which must include information on the names of the candidates or tenderers admitted and the reasons for selection, as well as the names of the candidates or tenderers rejected and the relevant reasons. Article 53 ("Contract award criteria") is more specific than the procedural rules included in paragraph 4 of Article XIII of the GPA or paragraph 4 of Article 1015 of NAFTA. It requires the contracting authority to specify the relative weighting, or at least the ranking, of each criterion used to choose the tender when the decision is not solely based on price. Article 55 ("Abnormally low tenders") contains detailed procedures in situations where, for a given contract, tenders appear to be abnormally cheap.

Directive 2004/18/EC

Article 41: Informing candidates and tenderers

1. Contracting authorities shall as soon as possible inform candidates and tenderers of decisions reached concerning the conclusion of a framework agreement, the award of the contract or admittance to a dynamic purchasing system, including the grounds for any decision not to conclude a framework agreement or award a contract for which there has been a call for competition or to recommence the procedure or implement a dynamic purchasing system; that information shall be given in writing upon request to the contracting authorities.

2. On request from the party concerned, the contracting authority shall as quickly as possible inform:
— any unsuccessful candidate of the reasons for the rejection of his application,
— any unsuccessful tenderer of the reasons for the rejection of his tender, including, for the cases

referred to in Article 23, paragraphs 4 and 5, the reasons for its decision of non-equivalence or its decision that the works, supplies or services do not meet the performance or functional requirements, — any tenderer who has made an admissible tender of the characteristics and relative advantages of the tender selected as well as the name of the successful tenderer or the parties to the framework agreement.

The time taken may in no circumstances exceed 15 days from receipt of the written request.

3. However, contracting authorities may decide to withhold certain information referred to in paragraph 1, regarding the contract award, the conclusion of framework agreements or admittance to a dynamic purchasing system where the release of such information would impede law enforcement, would otherwise be contrary to the public interest, would prejudice the legitimate commercial interests of economic operators, whether public or private, or might prejudice fair competition between them.

Article 43: Content of reports

For every contract, framework agreement, and every establishment of a dynamic purchasing system, the contracting authorities shall draw up a written report which shall include at least the following:

- (a) the name and address of the contracting authority, the subject-matter and value of the contract, framework agreement or dynamic purchasing system;
- (b) the names of the successful candidates or tenderers and the reasons for their selection;
- (c) the names of the candidates or tenderers rejected and the reasons for their rejection;
- (d) the reasons for the rejection of tenders found to be abnormally low;
- (e) the name of the successful tenderer and the reasons why his tender was selected and, if known, the share of the contract or framework agreement which the successful tenderer intends to subcontract to third parties;
- (f) for negotiated procedures, the circumstances referred to in Articles 30 and 31 which justify the use of these procedures;
- (g) as far as the competitive dialogue is concerned, the circumstances as laid down in Article 29 justifying the use of this procedure;
- (h) if necessary, the reasons why the contracting authority has decided not to award a contract or framework agreement or to establish a dynamic purchasing system.

The contracting authorities shall take appropriate steps to document the progress of award procedures conducted by electronic means.

The report, or the main features of it, shall be communicated to the Commission if it so requests.

Article 53: Contract award criteria

1. Without prejudice to national laws, regulations or administrative provisions concerning the remuneration of certain services, the criteria on which the contracting authorities shall base the award of public contracts shall be either:

- (a) when the award is made to the tender most economically advantageous from the point of view of the contracting authority, various criteria linked to the subject-matter of the public contract in question, for example, quality, price, technical merit, aesthetic and functional characteristics, environmental characteristics, running costs, cost-effectiveness, after-sales service and technical assistance, delivery date and delivery period or period of completion, or
- (b) the lowest price only.

2. Without prejudice to the provisions of the third subparagraph, in the case referred to in paragraph 1(a) the contracting authority shall specify in the contract notice or in the contract documents or, in the case of a competitive dialogue, in the descriptive document, the relative weighting which it gives to each of the criteria chosen to determine the most economically advantageous tender.

Those weightings can be expressed by providing for a range with an appropriate maximum spread.

Where, in the opinion of the contracting authority, weighting is not possible for demonstrable reasons, the contracting authority shall indicate in the contract notice or contract documents or, in the case of a competitive dialogue, in the descriptive document, the criteria in descending order of importance.

Article 55: Abnormally low tenders

1. If, for a given contract, tenders appear to be abnormally low in relation to the goods, works or services, the contracting authority shall, before it may reject those tenders, request in writing details of the constituent elements of the tender which it considers relevant.

Those details may relate in particular to:

- (a) the economics of the construction method, the manufacturing process or the services provided;
- (b) the technical solutions chosen and/or any exceptionally favourable conditions available to the tenderer for the execution of the work, for the supply of the goods or services;
- (c) the originality of the work, supplies or services proposed by the tenderer;
- (d) compliance with the provisions relating to employment protection and working conditions in force at the place where the work, service or supply is to be performed;
- (e) the possibility of the tenderer obtaining State aid.

2. The contracting authority shall verify those constituent elements by consulting the tenderer, taking account of the evidence supplied.

3. Where a contracting authority establishes that a tender is abnormally low because the tenderer has obtained State aid, the tender can be rejected on that ground alone only after consultation with the tenderer where the latter is unable to prove, within a sufficient time limit fixed by the contracting authority, that the aid in question was granted legally. Where the contracting authority rejects a tender in these circumstances, it shall inform the Commission of that fact.

73. Provisions found in other agreements reviewed tend to be less detailed. The **US-Chile** Agreement (Article 9.10: "Awarding of Contracts") includes rules on the selection of suppliers (e.g., need to conform to essential requirement of tender documentation and to satisfy the conditions for participation) and the relevant criteria. This reflects some of the provisions contained in paragraph 4 of Article XIII of the GPA (or paragraph 4 of NAFTA Article 1015). Further, Article 9.11 ("Information on Awards") of the US-Chile Agreement includes rules concerning the need to promptly inform non-successful participants, upon request, of the reasons and the publication of award information. Unlike other agreements referred to above, the US-Chile Agreement does not have procedural disciplines governing the receipt or opening of tenders.

US-Chile
Article 9.10: Awarding Of Contracts

1. An entity shall require that in order to be considered for award, a tender must be submitted in writing and must, at the time it is submitted:

- (a) conform to the essential requirements of the tender documentation; and
- (b) be submitted by a supplier that has satisfied the conditions for participation that the entity has provided to all participating suppliers.

2. Unless an entity determines that it is not in the public interest to award a contract, it shall award the contract to the supplier that the entity has determined to be fully capable of undertaking the contract and whose tender is determined to be the most advantageous in terms of the requirements and evaluation criteria set out in the tender documentation.

3. No entity may cancel a procurement, or terminate or modify awarded contracts, in order to avoid the obligations of this Chapter.

Article 9.11: Information On Awards

Information Provided To Suppliers

1. Subject to Article 9.15, an entity shall promptly inform suppliers participating in a tendering procedure of its contract award decision. On request, an entity shall provide a supplier whose tender was not selected for award the reasons for not selecting its tender and the relative advantages of the tender the entity selected.

Publication Of Award Information

2. After awarding a contract covered by this Chapter, an entity shall promptly publish a notice that includes at least the following information about the award:

- (a) the name of the entity;
- (b) a description of the goods or services procured;
- (c) the name of the winning supplier;
- (d) the value of the contract award; and
- (e) where the entity has not used open tendering procedures, an indication of the circumstances justifying the procedures used.

Maintenance Of Records

3. An entity shall maintain records and reports relating to tendering procedures and contract awards covered by this Chapter, including the records and reports provided for in Article 9.9(3), for a period of at least three years.

74. The **EC-Chile** Agreement also includes rules on the award of contracts (Article 153: "Awarding of Contracts") and the need to inform tenderers of relevant decisions (Article 154: "Information on Contract Award"). In addition, it includes an obligation aimed at guaranteeing transparency and non-discrimination in procedures and conditions for the opening and receipt of bids (Article 152: "Submission, Receipt and Opening of Tenders"). The **Republic of Korea-Chile** Agreement is more succinct. It includes rules on the award criteria along the lines of paragraphs 1 and 2 of Article 9.10 of the US-Chile Agreement (or Article 153 of the EC-Chile Agreement). With respect to information, entities are required to "provide for effective dissemination of the results of government procurement processes".

EC-Chile

Article 152: Submission, Receipt And Opening Of Tenders

1. Tenders and requests to participate in procedures shall be submitted in writing.
2. Entities shall receive and open bids from tenderers under procedures and conditions guaranteeing the respect of the principles of transparency and non-discrimination.

Article 153: Awarding Of Contracts

1. To be considered for award, a tender must, at the time of opening, conform to the essential requirements of the notices or tender documentation and be submitted by a supplier which complies with the conditions for participation.
2. Entities shall make the award to the tenderer whose tender is either the lowest tender or the tender which, in terms of the specific objective evaluation criteria previously set forth in the notices or tender documentation, is determined to be the most advantageous.

Article 154: Information On Contract Award

1. Each Party shall ensure that its entities provide for effective dissemination of the results of government procurement processes.
2. Entities shall promptly inform tenderers of decisions regarding the award of the contract and of the characteristics and relative advantages of the selected tender. Upon request, entities shall inform any eliminated tenderer of the reasons for the rejection of its tender.
3. Entities may decide to withhold certain information on the contract award where release of such information would prevent law enforcement or otherwise be contrary to the public interest, would prejudice the legitimate commercial interests of suppliers, or might prejudice fair competition between them.

75. Similar provisions in other agreements are couched in more general terms. The **Chile-Costa Rica** and **Chile-El Salvador** Agreements (Article 16.05: "Transparency and the provision of information") require entities to publish and afford an understanding of the outcome of government procurement processes, while parties are held to "ensure that contract awards are duly based on the criteria established prior to the award by its contracting entities". The **Singapore-Australia** Agreement mandates entities (paragraph 7 of Article 6 ("Tendering Principles") of Chapter 6) to promptly inform unsuccessful suppliers, on request, of reasons for rejection, subject to certain exceptions. Article 13 ("Transparency") mandates parties to publish and make accessible, among other things, decision on contract awards. The **New Zealand-Singapore** Agreement (paragraph 4 of Article 52) includes information requirements in the case of rejection identical to those of the Australia-Singapore Agreement. Further, the **Australia-New Zealand** (Clause 2(e)) and **New Zealand-Singapore** (Article 49(e)) Agreements calls on parties to use value for money as the main determinant in procurement decisions.¹⁹ The Singapore-Australia Agreement (Article 6(2) of Chapter 6) requires parties to ensure that tendering procedures achieve value for money outcomes.

¹⁹ Article 48 of the New Zealand-Singapore Agreement defines value for money as "the best available outcome for money spent in terms of the procuring agency's needs. The test of value for money requires relevant comparison of the whole life costs and benefits relating directly to the procurement". "Whole of life costs and benefits" is then defined as including "fitness for purpose and other considerations of quality, performance, price, delivery, accessories and consumables, service support and disposal".

J. NEGOTIATION

76. Some agreements, in particular those following closely the GPA, specify that entities may hold negotiations with tenderers, provided this is indicated in the initial tender notice or it appears from the evaluation that there is no single most advantageous bid. Certain procedural safeguards are intended to ensure that such negotiations do not discriminate between suppliers. Several agreements (**Japan-Singapore**, **US-Singapore**, **EFTA**, EC-Mexico with respect to the EC and EFTA-Mexico with respect to EFTA) incorporate by reference Article XIV of the GPA ("Negotiation"). Article 1014 of the **NAFTA** ("Negotiation Disciplines"), which is incorporated by reference in the **EC-Mexico** and **EFTA-Mexico** Agreements in the case of Mexico, is very similar to the GPA provisions. In addition to specifying the conditions for negotiations, these agreements mandate entities not to discriminate between suppliers. For example, it requires them to ensure that the elimination of participants is carried out in accordance with the pre-determined criteria.

GPA
Article XIV: Negotiation

1. A Party may provide for entities to conduct negotiations:
 - (a) in the context of procurements in which they have indicated such intent, namely in the notice referred to in paragraph 2 of Article IX (the invitation to suppliers to participate in the procedure for the proposed procurement); or
 - (b) when it appears from evaluation that no one tender is obviously the most advantageous in terms of the specific evaluation criteria set forth in the notices or tender documentation.
2. Negotiations shall primarily be used to identify the strengths and weaknesses in tenders.
3. Entities shall treat tenders in confidence. In particular, they shall not provide information intended to assist particular participants to bring their tenders up to the level of other participants.
4. Entities shall not, in the course of negotiations, discriminate between different suppliers. In particular, they shall ensure that:
 - (a) any elimination of participants is carried out in accordance with the criteria set forth in the notices and tender documentation;
 - (b) all modifications to the criteria and to the technical requirements are transmitted in writing to all remaining participants in the negotiations;
 - (c) all remaining participants are afforded an opportunity to submit new or amended submissions on the basis of the revised requirements; and
 - (d) when negotiations are concluded, all participants remaining in the negotiations shall be permitted to submit final tenders in accordance with a common deadline.

77. Article 151 ("Negotiations") of the **EC-Chile** Agreement includes most of the elements contained in the agreements mentioned above. As mentioned in Section D on procurement methods, the **EC Directive** (Articles 30 and 31) contains detailed provisions on the use of negotiated procedures, which impose strict conditions on the conduct of negotiations. Other agreements do not have distinct procedural rules focusing on negotiations.

K. PROVISION OF INFORMATION

78. The agreements reviewed typically contain a general requirement to publish laws, regulations, judicial decisions, administrative rulings of general application and any procedures regarding government procurement covered by the relevant disciplines.²⁰

79. The **Japan-Singapore**, **US-Singapore** and **EFTA** Agreements incorporate parts of Article XIX of the GPA ("Information and Review as Regards Obligations of Parties").²¹ In addition to providing for the publication of laws, regulations and other procedures in specified publications, parties are required, among other things, to be prepared to explain to the other Party, upon request, their government procurement procedures. Paragraph 5, which was incorporated only in the EFTA Agreement, contains rules on the collection of statistics and their provision to the other parties.

GPA

Article XIX: Information and Review as Regards Obligations of Parties

1. Each Party shall promptly publish any law, regulation, judicial decision, administrative ruling of general application, and any procedure (including standard contract clauses) regarding government procurement covered by this Agreement, in the appropriate publications listed in Appendix IV and in such a manner as to enable other Parties and suppliers to become acquainted with them. Each Party shall be prepared, upon request, to explain to any other Party its government procurement procedures.
2. The government of an unsuccessful tenderer which is a Party to this Agreement may seek, without prejudice to the provisions under Article XXII, such additional information on the contract award as may be necessary to ensure that the procurement was made fairly and impartially. To this end, the procuring government shall provide information on both the characteristics and relative advantages of the winning tender and the contract price. Normally this latter information may be disclosed by the government of the unsuccessful tenderer provided it exercises this right with discretion. In cases where release of this information would prejudice competition in future tenders, this information shall not be disclosed except after consultation with and agreement of the Party which gave the information to the government of the unsuccessful tenderer.
3. Available information concerning procurement by covered entities and their individual contract awards shall be provided, upon request, to any other Party.
4. Confidential information provided to any Party which would impede law enforcement or otherwise be contrary to the public interest or would prejudice the legitimate commercial interest of particular enterprises, public or private, or might prejudice fair competition between suppliers shall not be revealed without formal authorization from the party providing the information.
5. Each Party shall collect and provide to the Committee on an annual basis statistics on its procurements covered by this Agreement. Such reports shall contain the following information with respect to contracts awarded by all procurement entities covered under this Agreement:
 - (a) for entities in Annex 1, statistics on the estimated value of contracts awarded, both above and below the threshold value, on a global basis and broken down by entities; for entities in Annexes 2 and 3, statistics on the estimated value of contracts awarded above the threshold value on a global basis and broken down by categories of entities;
 - (b) for entities in Annex 1, statistics on the number and total value of contracts awarded above the threshold value, broken down by entities and categories of products and services according to uniform classification systems; for entities in Annexes 2 and 3, statistics on the estimated

²⁰ Various EIAs have general obligations on transparency (e.g., publication of laws and regulations) that are not specific to government procurement issues. Even though they may complement or substitute for the provisions related to procurement, they are not looked at in this Note in view of their horizontal nature.

²¹ In the case of the former two Agreements, this applies only to paragraphs 1 to 4 of Article XIX of the GPA.

value of contracts awarded above the threshold value broken down by categories of entities and categories of products and services;

- (c) for entities in Annex 1, statistics, broken down by entity and by categories of products and services, on the number and total value of contracts awarded under each of the cases of Article XV; for categories of entities in Annexes 2 and 3, statistics on the total value of contracts awarded above the threshold value under each of the cases of Article XV; and
- (d) for entities in Annex 1, statistics, broken down by entities, on the number and total value of contracts awarded under derogations to the Agreement contained in the relevant Annexes; for categories of entities in Annexes 2 and 3, statistics on the total value of contracts awarded under derogations to the Agreement contained in the relevant Annexes.

To the extent that such information is available, each Party shall provide statistics on the country of origin of products and services purchased by its entities. With a view to ensuring that such statistics are comparable, the Committee shall provide guidance on methods to be used. With a view to ensuring effective monitoring of procurement covered by this Agreement, the Committee may decide unanimously to modify the requirements of subparagraphs (a) through (d) as regards the nature and the extent of statistical information to be provided and the breakdowns and classifications to be used.

80. Although differing from each other, the **NAFTA** (Article 1019: "Provision of Information"), as well as the **EC-Mexico** (Article 31: "Provision of Information") and the **EFTA-Mexico** Agreements (Article 63: "Provision of Information", reproduced below) include transparency rules that reflect key elements of the GPA. NAFTA (Article 1020: "Technical Cooperation") also includes rules on such issues as the provision of information with respect to training and orientation programmes relating to a party's procurement systems.

EFTA-Mexico
Article 63: Provision of Information

1. Each Party shall promptly publish any law, regulation, precedential judicial decision, administrative ruling of general application and any procedure regarding government procurement covered by this Chapter in the appropriate publications referred to in Annex XIX.
2. Each Party shall designate upon entry into force of this Agreement one or more contact points to:
 - (a) facilitate communication between the Parties;
 - (b) answer all reasonable inquiries from the other Party to provide relevant information on matters covered by this Chapter; and
 - (c) on request of a supplier of a Party, provide in writing within a reasonable time period a reasoned answer to the supplier and the other Party as to whether a specific entity is covered by this Chapter.
3. A Party may seek such additional information on the award of the contract as may be necessary to determine whether the procurement was made fairly and impartially, in particular with respect to unsuccessful tenders. To this end, the Party of the procuring entity shall provide information on the characteristics and relative advantages of the winning tender and the contract price. Where release of this information would prejudice competition in future tenders, the information shall not be released by the requesting Party, except after consultation with, and agreement of, the Party that provided the information.
4. Upon request, each Party shall provide to the other Party information available to that Party and its entities concerning covered procurement of its entities and the individual contracts awarded by its entities.

5. No Party may disclose confidential information the disclosure of which would prejudice the legitimate commercial interests of a particular person or might prejudice fair competition between suppliers, without the formal authorisation of the person that provided the information to that Party.

6. Nothing in this Chapter shall be construed as requiring any Party to disclose confidential information, the disclosure of which would impede law enforcement or otherwise be contrary to the public interest.

7. Each Party shall collect and exchange on an annual basis statistics on its procurements covered by this Chapter.¹ Such reports shall comply with the requirements of Annex XX.

¹The first exchange of information under paragraph 7 of Article 63 (Provision of Information) will take place two years after the entry into force of this Agreement. In the meantime, the Parties will communicate to each other all available and comparable relevant data on a reciprocal basis.

81. The **EC-Chile** (Article 142), **US-Chile** (Article 9.3), and **Republic of Korea-Chile** (Article 15.5, reproduced below) Agreements focus on a requirement to publish procurement laws and regulations as well as any modifications. In addition, the **Singapore-Australia** Agreement (Article 13 of Chapter 6) provides that "parties shall apply all procurement laws, regulations, procedures and practices consistently, fairly and equitably so that their corporate governance structures provide transparency to potential suppliers".

Republic of Korea-Chile
Article 15.5: Transparency

1. Each Party shall promptly publish any law, regulation, judicial decision and administrative ruling of general application and procedure, including standard contract clauses, regarding procurement covered by this Chapter, in the appropriate publications, including officially designated electronic media.

2. Each Party shall promptly publish in the same manner as in paragraph 1 any modification to such measures therein.

82. The **Chile-Costa Rica** and **Chile-El Salvador** Agreements (Article 16.05) provide that entities "effectively publish and afford an understanding" of "their respective systems of government procurement" and "outcomes of government procurement processes". Parties also undertook to inform each other of their domestic legislation governing government procurement, as well as any changes, within one year from the date of entry into force of the Agreement.

83. The **EC Directive** (see Annex VIII) includes specific rules on publication of procurement-related information. For example, contracting authorities are required to send relevant information to the Office for Official Publications of the European Communities²². Practices relating to the publication of laws and regulations are governed by other EC provisions that are not specific to procurement. Further, as noted before, Article 41 of the Directive ("Informing candidates and tenderers") provides, among other things, that, on request from a supplier, authorities shall quickly inform any unsuccessful candidate or tenderer of the reasons for the rejection of his application or tender.

84. Some agreements, in particular among those most recently concluded, have procurement-related disciplines on the provision of information through electronic means. The **US-Chile**

²² See also the detailed rules on publication of notices (Articles 35 and 36), including with respect to publication of results of the awards.

Agreement (Article 9.17: "Public Information", reproduced below) mandates parties to ensure that they maintain electronic databases providing information of all covered procurements.

US-Chile
Article 9.17: Public Information

1. In order to facilitate access to information on commercial opportunities under this Chapter, each Party shall ensure that electronic databases that provide current information on all procurements covered by this Chapter that are conducted by entities listed in Annex 9.1(A), including information that can be disaggregated by detailed categories of goods and services, are made available to interested suppliers of the other Party, through the Internet or a comparable computer-based telecommunications network. Each Party shall, on request of the other Party, provide information on:
 - (a) the classification system used to disaggregate information on procurement of different goods and services in such databases; and
 - (b) the procedures for obtaining access to such databases.
2. Entities listed in Annex 9.1(A) shall publish notices of intended procurement in a government-wide, single point of entry electronic publication that is accessible through the Internet or a comparable computer-based telecommunications network. For entities listed in Annex 9.1(B), each Party shall facilitate a reasonable means for suppliers of the other Party to easily identify procurement opportunities, which should include a single point of entry.
3. Each Party shall encourage its entities to publish, as early as possible in the fiscal year, information regarding the entity's procurement plans.

85. The **EC-Chile** Agreement (Article 156: "Information Technology") as well as the Chile-Korea (Article 15.14), the **Chile-Costa Rica** and the **Chile-El Salvador** (Article 16.11, reproduced below) Agreements, encourage the use of electronic means of communication in the dissemination of information on government procurement.

Chile-El Salvador
Article 16.05: Transparency and the provision of information

1. Further to Article 17.04 (Provision of Information), each Party shall ensure that its entities effectively publish and afford an understanding of:
 - (a) Their respective systems of government procurement;
 - (b) the business opportunities created by the corresponding government procurement processes, providing the suppliers of another Party with all the information necessary to participate in said procurements; and
 - (c) the outcomes of government procurement processes.
2. Each Party shall ensure that contract awards are duly based on the criteria established prior to the award by its contracting entities.
3. Each Party undertakes to inform the other Parties within not more than one year after this Agreement comes into force of the legislation governing government procurement in its territory and of the entities covered by this Chapter. This obligation extends to all changes in such information.

86. The Agreement between the **EC and Mexico** (Article 33: "Information Technology", reproduced below) also calls for co-operation aiming at ensuring, among other things, that the information that parties exchange through electronic means are comparable in terms of accessibility and quality.

EC-Mexico
Article 33: Information technology

1. The Parties shall cooperate with a view to ensuring that the type of procurement information, notably in tender notices and documentation, held on their respective databases is comparable in terms of quality and accessibility. The Parties shall also cooperate with a view to ensuring that the type of information exchanged through their respective electronic means between interested parties for the purposes of public procurement is comparable in terms of quality and accessibility.
2. Paying due attention to issues of interoperability and interconnectivity, and after having agreed that the type of procurement information referred to in paragraph 1 is comparable, the Parties shall grant access to suppliers of the other Party to relevant procurement information, such as tender notices, held on their respective databases, and to their respective electronic procurement systems, such as electronic tendering, in accordance with Article 26.

87. The **Singapore-Australia** Agreement (Article 11 of Chapter 6: "Electronic Procurement", reproduced below) includes provisions encouraging greater use of electronic means in the procurements process, including in terms of access to information.

Singapore-Australia
Article 11: Electronic Procurement

1. The Parties shall, within the context of their commitment to promote electronic commerce, seek to provide opportunities for government procurement to be undertaken through electronic means, hereafter referred to as "e-procurement".
2. Each Party shall work toward a single entry point for the purpose of enabling suppliers to access information on procurement opportunities in its territory.
3. To facilitate access of suppliers of one Party to e-procurement opportunities of the other Party, the Parties shall, to the extent possible, cooperate to ensure policies and procedures are adopted that:
 - (a) promote equitable access for all potential suppliers of the other Party;
 - (b) promote the use of systems that are the most cost-effective for potential suppliers, where the Parties utilise authentication systems;
 - (c) provide for the least cost to potential suppliers, where the Parties elect to procure goods or services through online or reverse auctions;
 - (d) protect documentation from unauthorised and undetected alteration; and
 - (e) provide appropriate levels of security for data on, and passing through, the procuring entity's network.
4. Each Party shall, to the extent possible, make procurement opportunities that are available to the public accessible to suppliers via the Internet or any publicly available electronic medium. To the extent possible, each Party shall make available relevant documentation by the same means.

88. The **EC Directive** goes further in this regard than most other agreements. Article 42 ("Rules applicable to communication") provides that the tools used by contracting authorities for communicating electronically, as well as the technical characteristics, must be non-discriminatory and generally available. It also includes rules on devices for the electronic transmission and receipt of tenders or requests to participate (also found in Annex X), e.g., electronic signatures.

L. CHALLENGE PROCEDURES

89. Many of the agreements reviewed contain mandatory requirements for the establishment of a domestic bid challenge system. Adversely affected suppliers have a right of recourse to an independent domestic tribunal or review body.

90. The **Japan-Singapore**, **US-Singapore** and **EFTA** Agreements incorporate by reference Article XX ("Challenge Procedures") of the GPA (reproduced below). Parties may confer the authority to hear challenges on national courts or an impartial and independent review body. In the event that a bid challenge is heard by a body that does not have the status of a court of law, either the body's decisions must be subject to judicial review or it must comply with the procedures and criteria laid down in detail in these agreements. For example, the challenge body must have the authority to order the correction of a breach of the agreement or, within certain limits, compensation for the loss or damage suffered by a supplier. Pending the outcome of the challenge, the body must be able to order rapid interim measures, including suspension of the procurement process, to correct breaches of the relevant obligations and to preserve commercial opportunities.

GPA

Article XX: Challenge Procedures

Consultations

1. In the event of a complaint by a supplier that there has been a breach of this Agreement in the context of a procurement, each Party shall encourage the supplier to seek resolution of its complaint in consultation with the procuring entity. In such instances the procuring entity shall accord impartial and timely consideration to any such complaint, in a manner that is not prejudicial to obtaining corrective measures under the challenge system.

Challenge

2. Each Party shall provide non-discriminatory, timely, transparent and effective procedures enabling suppliers to challenge alleged breaches of the Agreement arising in the context of procurements in which they have, or have had, an interest.

3. Each Party shall provide its challenge procedures in writing and make them generally available.

4. Each Party shall ensure that documentation relating to all aspects of the process concerning procurements covered by this Agreement shall be retained for three years.

5. The interested supplier may be required to initiate a challenge procedure and notify the procuring entity within specified time-limits from the time when the basis of the complaint is known or reasonably should have been known, but in no case within a period of less than 10 days.

6. Challenges shall be heard by a court or by an impartial and independent review body with no interest in the outcome of the procurement and the members of which are secure from external influence during the term of appointment. A review body which is not a court shall either be subject to judicial review or shall have procedures which provide that:

- (a) participants can be heard before an opinion is given or a decision is reached;
- (b) participants can be represented and accompanied;
- (c) participants shall have access to all proceedings;
- (d) proceedings can take place in public;
- (e) opinions or decisions are given in writing with a statement describing the basis for the opinions or decisions;

- (f) witnesses can be presented;
 - (g) documents are disclosed to the review body.
7. Challenge procedures shall provide for:
- (a) rapid interim measures to correct breaches of the Agreement and to preserve commercial opportunities. Such action may result in suspension of the procurement process. However, procedures may provide that overriding adverse consequences for the interests concerned, including the public interest, may be taken into account in deciding whether such measures should be applied. In such circumstances, just cause for not acting shall be provided in writing;
 - (b) an assessment and a possibility for a decision on the justification of the challenge;
 - (c) correction of the breach of the Agreement or compensation for the loss or damages suffered, which may be limited to costs for tender preparation or protest.
8. With a view to the preservation of the commercial and other interests involved, the challenge procedure shall normally be completed in a timely fashion.

91. The **EC-Mexico** (Article 30) and **EFTA-Mexico** (Article 62) Agreements replicate the provisions of Article XX of the GPA, except that an additional clause is in both cases included:

"A Party may require under its legislation that a challenge procedure be initiated only after the notice of procurement has been published or, where a notice is not published, after tender documentation has been made available. Where a Party imposes such a requirement, the 10-day period described in paragraph 5 shall begin no earlier than the date that the notice is published or the tender documentation is made available. Nothing in this provision precludes the right of interested suppliers to judicial review."

92. The **US-Chile** Agreement (Article 9.13) also has detailed rules concerning the establishment of independent review authorities. Although it does not use the same terms as the agreements referred to above, it includes as a key element the requirement to establish an independent authority to review challenges with authority to take interim measures. However, no specific provision is made for compensation to be paid for loss or damage suffered.

US-Chile
Article 9.13: Domestic Review Of Supplier Challenges

Independent Review Authorities

1. Each Party shall establish or designate at least one impartial administrative or judicial authority that is independent from its entities to receive and review challenges that suppliers submit relating to the Party's measures implementing this Chapter in connection with a procurement covered by this Chapter and make appropriate findings and recommendations. Where a challenge by a supplier is initially reviewed by a body other than such an impartial authority, the Party shall ensure that the supplier may appeal the initial decision to an impartial administrative or judicial authority that is independent of the entity that is the subject of the challenge.
2. Each Party shall provide that an authority it establishes or designates under paragraph 1 has authority to take prompt interim measures pending the resolution of a challenge to preserve the supplier's opportunity to participate in the procurement and to ensure that the Party complies with its measures implementing this Chapter, including by suspending the contract award or the performance of a contract that has already been awarded.

3. Each Party shall ensure that its review procedures are published and are timely, transparent, effective, and consistent with due process principles.
4. Each Party shall ensure that all documents related to a challenge to a procurement covered by this Chapter are made available to any authority it establishes or designates under paragraph 1.
5. Notwithstanding other review procedures provided for or developed by each of the Parties, each Party shall ensure that any authority it establishes or designates under paragraph 1 provides at least the following:
 - (a) an opportunity for the supplier to review relevant documents and to be heard by the authority in a timely manner;
 - (b) sufficient time for the supplier to prepare and submit written challenges, which in no case shall be less than 10 days from the time when the basis of the complaint became known or reasonably should have become known to the supplier;
 - (c) a requirement that the entity respond in writing to the supplier's challenge;
 - (d) an opportunity for the supplier to reply to the entity's response to the challenge; and
 - (e) prompt delivery in writing of the decisions relating to the challenge, with an explanation of the grounds for each decision.
6. Each Party shall ensure that a supplier's submission of a challenge will not prejudice the supplier's participation in ongoing or future procurements.

93. The **NAFTA** (Article 1017: "Bid Challenge") also includes detailed rules in this area (reproduced below). Article 1017 requires parties to establish an independent reviewing authority, which may direct the entity concerned to re-evaluate offers, or terminate or re-compete the contract in question. Unlike the GPA, which specifically provides the challenge body with the authority to order correction of breaches or payment of compensation, the NAFTA provides that entities "normally shall follow the recommendations of the reviewing authority".

NAFTA
Article 1017: Bid Challenge

1. In order to promote fair, open and impartial procurement procedures, each Party shall adopt and maintain bid challenge procedures for procurement covered by this Chapter in accordance with the following:
 - (a) each Party shall allow suppliers to submit bid challenges concerning any aspect of the procurement process, which for the purposes of this Article begins after an entity has decided on its procurement requirement and continues through the contract award;
 - (b) a Party may encourage a supplier to seek a resolution of any complaint with the entity concerned prior to initiating a bid challenge;
 - (c) each Party shall ensure that its entities accord fair and timely consideration to any complaint regarding procurement covered by this Chapter;

- (d) whether or not a supplier has attempted to resolve its complaint with the entity, or following an unsuccessful attempt at such a resolution, no Party may prevent the supplier from initiating a bid challenge or seeking any other relief;
- (e) a Party may require a supplier to notify the entity on initiation of a bid challenge;
- (f) a Party may limit the period within which a supplier may initiate a bid challenge, but in no case shall the period be less than 10 working days from the time when the basis of the complaint became known or reasonably should have become known to the supplier;
- (g) each Party shall establish or designate a reviewing authority with no substantial interest in the outcome of procurements to receive bid challenges and make findings and recommendations concerning them;
- (h) on receipt of a bid challenge, the reviewing authority shall expeditiously investigate the challenge;
- (i) a Party may require its reviewing authority to limit its considerations to the challenge itself;
- (j) in investigating the challenge, the reviewing authority may delay the awarding of the proposed contract pending resolution of the challenge, except in cases of urgency or where the delay would be contrary to the public interest;
- (k) the reviewing authority shall issue a recommendation to resolve the challenge, which may include directing the entity to re-evaluate offers, terminate or re-compete the contract in question;
- (l) entities normally shall follow the recommendations of the reviewing authority;
- (m) each Party should authorize its reviewing authority, following the conclusion of a bid challenge procedure, to make additional recommendations in writing to an entity respecting any facet of the entity's procurement process that is identified as problematic during the investigation of the challenge, including recommendations for changes in the procurement procedures of the entity to bring them into conformity with this Chapter;
- (n) the reviewing authority shall provide its findings and recommendations respecting bid challenges in writing and in a timely manner, and shall make them available to the Parties and interested persons;
- (o) each Party shall specify in writing and shall make generally available all its bid challenge procedures; and
- (p) each Party shall ensure that each of its entities maintains complete documentation regarding each of its procurements, including a written record of all communications substantially affecting each procurement, for at least three years from the date the contract was awarded, to allow verification that the procurement process was carried out in accordance with this Chapter.

2. A Party may require that a bid challenge be initiated only after the notice of procurement has been published or, where a notice is not published, after tender documentation has been made available. Where a Party imposes such a requirement, the 10-working day period described in paragraph 1(f) shall begin no earlier than the date that the notice is published or the tender documentation is made available.

94. The EC also has detailed rules on challenge procedures, which are contained in separate Directives.²³ An unsuccessful applicant or tenderer is entitled to bring contract award procedures before national review bodies such as courts or specialized administrative bodies. Prior to the signature of a contract, the review bodies are empowered in appropriate cases to take interim measures, including the suspension of the award procedures. In cases where the contract has been signed, damages can be awarded to aggrieved tenderers.

Directive 89/665/EEC
Articles 1, 2 and 3

Article 1

1. The Member States shall take the measures necessary to ensure that, as regards contract award procedures falling within the scope of Directives 71/305/EEC and 77/62/EEC, decisions taken by the contracting authorities may be reviewed effectively and, in particular, as rapidly as possible in accordance with the conditions set out in the following Articles, and, in particular, Article 2 (7) on the grounds that such decisions have infringed Community law in the field of public procurement or national rules implementing that law.

2. Member States shall ensure that there is no discrimination between undertakings claiming injury in the context of a procedure for the award of a contract as a result of the distinction made by this Directive between national rules implementing Community law and other national rules.

3. The Member States shall ensure that the review procedures are available, under detailed rules which the Member States may establish, at least to any person having or having had an interest in obtaining a particular public supply or public works contract and who has been or risks being harmed by an alleged infringement. In particular, the Member States may require that the person seeking the review must have previously notified the contracting authority of the alleged infringement and of his intention to seek review.

Article 2

1. The Member States shall ensure that the measures taken concerning the review procedures specified in Article 1 include provision for the powers to:

- (a) take, at the earliest opportunity and by way of interlocutory procedures, interim measures with the aim of correcting the alleged infringement or preventing further damage to the interests concerned, including measures to suspend or to ensure the suspension of the procedure for the award of a public contract or the implementation of any decision taken by the contracting authority;
- (b) either set aside or ensure the setting aside of decisions taken unlawfully, including the removal of discriminatory technical, economic or financial specifications in the invitation to tender, the contract documents or in any other document relating to the contract award procedure;
- (c) award damages to persons harmed by an infringement.

2. The powers specified in paragraph 1 may be conferred on separate bodies responsible for different aspects of the review procedure.

3. Review procedures need not in themselves have an automatic suspensive effect on the contract award procedures to which they relate.

²³ Rules on challenge procedures in public procurement are contained in Directive 89/665/EEC on the coordination of the laws, regulations and administrative provisions relating to the application of review procedures to the award of public supply and public works contracts; and Directive 92/13/EEC, which applies to entities operating in the water, energy, transport and telecommunications sectors. For the sake of brevity, this Note focuses on the rules contained in the Directive 89/665/EEC, which are of more general application.

4. The Member States may provide that when considering whether to order interim measures the body responsible may take into account the probable consequences of the measures for all interests likely to be harmed, as well as the public interest, and may decide not to grant such measures where their negative consequences could exceed their benefits. A decision not to grant interim measures shall not prejudice any other claim of the person seeking these measures.

5. The Member States may provide that where damages are claimed on the grounds that a decision was taken unlawfully, the contested decision must first be set aside by a body having the necessary powers.

6. The effects of the exercise of the powers referred to in paragraph 1 on a contract concluded subsequent to its award shall be determined by national law.

Furthermore, except where a decision must be set aside prior to the award of damages, a Member State may provide that, after the conclusion of a contract following its award, the powers of the body responsible for the review procedures shall be limited to awarding damages to any person harmed by an infringement.

7. The Member States shall ensure that decisions taken by bodies responsible for review procedures can be effectively enforced.

8. Where bodies responsible for review procedures are not judicial in character, written reasons for their decisions shall always be given. Furthermore, in such a case, provision must be made to guarantee procedures whereby any allegedly illegal measure taken by the review body or any alleged defect in the exercise of the powers conferred on it can be the subject of judicial review or review by another body which is a court or tribunal within the meaning of Article 177 of the EEC Treaty and independent of both the contracting authority and the review body.

The members of such an independent body shall be appointed and leave office under the same conditions as members of the judiciary as regards the authority responsible for their appointment, their period of office, and their removal. At least the President of this independent body shall have the same legal and professional qualifications as members of the judiciary. The independent body shall take its decisions following a procedure in which both sides are heard, and these decisions shall, by means determined by each Member State, be legally binding.

Article 3

1. The Commission may invoke the procedure for which this Article provides when, prior to a contract being concluded, it considers that a clear and manifest infringement of Community provisions in the field of public procurement has been committed during a contract award procedure falling within the scope of Directives 71/305/EEC and 77/62/EEC.

2. The Commission shall notify the Member State and the contracting authority concerned of the reasons which have led it to conclude that a clear and manifest infringement has been committed and request its correction.

3. Within 21 days of receipt of the notification referred to in paragraph 2, the Member State concerned shall communicate to the Commission:

- (a) its confirmation that the infringement has been corrected; or
- (b) a reasoned submission as to why no correction has been made; or
- (c) a notice to the effect that the contract award procedure has been suspended either by the contracting authority on its own initiative or on the basis of the powers specified in Article 2 (1) (a).

4. A reasoned submission in accordance with paragraph 3 (b) may rely among other matters on the fact that the alleged infringement is already the subject of judicial or other review proceedings or of a review as referred to in Article 2 (8). In such a case, the Member State shall inform the Commission of the result of those proceedings as soon as it becomes known.

5. Where notice has been given that a contract award procedure has been suspended in accordance with paragraph 3 (c), the Member State shall notify the Commission when the suspension is lifted or another contract procedure relating in whole or in part to the same subject matter is begun. That

notification shall confirm that the alleged infringement has been corrected or include a reasoned submission as to why no correction has been made.

(...)

95. Other agreements are less detailed. Article 155 of the **EC-Chile** Agreement (reproduced below) provides for challenges to be heard by an impartial and independent reviewing authority, which can, if appropriate, provide for correction of a breach or for compensation. Article 15.13 of the **Chile-Costa Rica** and **Chile-El Salvador** Agreements is along the same lines, except that it does not provide the reviewing authority with authority to take rapid interim measures to correct breaches of the Agreement and preserve commercial opportunities. Article 16.08 in these agreements requires each party to adopt or maintain administrative or judicial procedures that permit, on request, prompt review of administrative decisions affecting government procurement.

EC-Chile
Article 155: Bid Challenges

1. Entities shall accord impartial and timely consideration to any complaints from suppliers regarding an alleged breach of this Title in the context of a procurement procedure.
2. Each Party shall provide non-discriminatory, timely, transparent and effective procedures enabling suppliers to challenge alleged breaches of this Title arising in the context of procurements in which they have, or have had, an interest.
3. Challenges shall be heard by an impartial and independent reviewing authority. A reviewing authority which is not a court shall either be subject to judicial review or shall have procedural guarantees similar to those of a court.
4. Challenge procedures shall provide for:
 - (a) rapid interim measures to correct breaches of this Title and to preserve commercial opportunities. Such action may result in suspension of the procurement process. However, procedures may provide that overriding adverse consequences for the interests concerned, including the public interest, may be taken into account in deciding whether such measures should be applied; and
 - (b) if appropriate, correction of the breach of this Title or, in the absence of such correction, compensation for the loss or damages suffered, which may be limited to costs for tender preparation and protest.

96. The **Singapore-Australia** Agreement adopts an even more general approach. Article 12 of Chapter 6 ("Review of Tender Process") requires parties to provide suppliers with non-discriminatory, timely, transparent and effective access to an administrative tribunal or judicial body to review alleged breaches.

Singapore-Australia
Article 12: Review Of Tender Process

1. In the event of a complaint by a supplier that there has been a breach of the procuring Party's laws, regulations, procedures or practices regarding procurement in the context of a procurement in which they have, or have had, an interest, each Party shall encourage the supplier to seek resolution of its complaint in consultation with the procuring entity. In such instances the procuring entity shall

accord timely and impartial consideration to any such complaint.

2. Each Party shall provide suppliers of the other Party with non-discriminatory, timely, transparent and effective access to an administrative or judicial body competent to hear or review complaints of alleged breaches of the procuring Party's laws, regulations, procedures and practices regarding procurement in the context of procurements in which they have, or have had, an interest.

3. Each Party shall make information on complaint mechanisms generally available.

97. The **New Zealand-Singapore** Agreement does not have rules calling for the establishment of a challenge body. Article 54 ("Disputes between a supplier and the Procuring Government Body") provides for complaints by suppliers to be brought to the designated body in whose territory it is located. The body receiving the complaint can then raise it with the designated body of the other party, for the alleged breach to be investigated. The **Australia-New Zealand** Agreement includes similar monitoring procedures (Annex 2 to Government procurement agreement (revised 1997)).

M. OTHER ISSUES SUBJECT TO SPECIFIC DISCIPLINES

98. Since this Note aims to review key elements of government procurement disciplines in economic integration agreements, it necessarily needs to distinguish between more and less relevant provisions. Some provisions not covered in the previous sections may nevertheless be worth mentioning. For example, many agreements contain provisions on cooperation between parties or entities, as well as on future reviews of the agreement. Many of the agreements also contain an Article on denial of benefits²⁴, as well as provisions on the privatisation of entities or divestiture from entities.²⁵ The latter provisions relate to the withdrawal of entities from a party's list of commitments when a government decides to relinquish control over an entity.

99. The **US-Chile** Agreement (Article 9.12, reproduced below) includes specific 'good governance' provisions. It mandates each party to ensure that certain actions are considered criminal offences under its law, e.g., procurement officials soliciting money.

US-Chile
Article 9.12: Ensuring Integrity In Procurement Practices

Each Party shall adopt the necessary legislative or other measures to establish that it is a criminal offense under its law for:

- (a) a procurement official of that Party to solicit or accept, directly or indirectly, any article of monetary value or other benefit, for that procurement official or for another person, in exchange for any act or omission in the performance of that procurement official's procurement functions;
- (b) any person to offer or grant, directly or indirectly, to a procurement official of that Party, any article of monetary value or other benefit, for that procurement official or for another person, in exchange for any act or omission in the performance of that procurement official's procurement functions; and
- (c) any person intentionally to offer, promise or give any undue pecuniary or other advantage, whether directly or through intermediaries, to a foreign procurement official, for that foreign procurement official or for a third party, in order that the foreign procurement official act or refrain from acting in relation to the performance of procurement duties, in order to obtain or retain business or other improper advantage.

100. The **EC Directive** includes rules on a "dynamic purchasing system", which is a completely electronic process for commonly used purchases. Article 33 lays down specific rules for setting up and operating such an electronic auction system in order to ensure fair treatment of any supplier who wants to take part. In addition, Article 54 (reproduced below) of the Directive provides rules for the use of electronic auctions.²⁶ Such a process enables contracting authorities to ask tenderers to submit new prices, revised downwards. It can be used by contracting authorities prior to the awarding of a contract in open, restrictive or negotiated procedures when contract specifications can be determined with precision.

²⁴ NAFTA, EFTA-Mexico, Chile-Costa Rica, Chile-El Salvador.

²⁵ NAFTA, EC-Mexico, EFTA-Mexico, Chile-Costa Rica, Chile-El Salvador.

²⁶ In the Directive, an electronic auction is defined as "a repetitive process involving an electronic device for the presentation of new prices, revised downwards, and/or new values concerning certain elements of tenders, which occurs after an initial full evaluation of the tenders, enabling them to be ranked using automatic evaluation methods".

Directive 2004/18/EC
Article 54: Use of electronic auctions

1. Member States may provide that contracting authorities may use electronic auctions.
2. In open, restricted or negotiated procedures in the case referred to in Article 30(1)(a), the contracting authorities may decide that the award of a public contract shall be preceded by an electronic auction when the contract specifications can be established with precision.

In the same circumstances, an electronic auction may be held on the reopening of competition among the parties to a framework agreement as provided for in the second indent of the second subparagraph of Article 32(4) and on the opening for competition of contracts to be awarded under the dynamic purchasing system referred to in Article 33.

The electronic auction shall be based:

- either solely on prices when the contract is awarded to the lowest price,
- or on prices and/or on the new values of the features of the tenders indicated in the specification when the contract is awarded to the most economically advantageous tender.

3. Contracting authorities which decide to hold an electronic auction shall state that fact in the contract notice. The specifications shall include, *inter alia*, the following details:
 - (a) the features, the values for which will be the subject of electronic auction, provided that such features are quantifiable and can be expressed in figures or percentages;
 - (b) any limits on the values which may be submitted, as they result from the specifications relating to the subject of the contract;
 - (c) the information which will be made available to tenderers in the course of the electronic auction and, where appropriate, when it will be made available to them;
 - (d) the relevant information concerning the electronic auction process;
 - (e) the conditions under which the tenderers will be able to bid and, in particular, the minimum differences which will, where appropriate, be required when bidding;
 - (f) the relevant information concerning the electronic equipment used and the arrangements and technical specifications for connection.

4. Before proceeding with an electronic auction, contracting authorities shall make a full initial evaluation of the tenders in accordance with the award criterion/criteria set and with the weighting fixed for them.

All tenderers who have submitted admissible tenders shall be invited simultaneously by electronic means to submit new prices and/or new values; the invitation shall contain all relevant information concerning individual connection to the electronic equipment being used and shall state the date and time of the start of the electronic auction. The electronic auction may take place in a number of successive phases. The electronic auction may not start sooner than two working days after the date on which invitations are sent out.

5. When the contract is to be awarded on the basis of the most economically advantageous tender, the invitation shall be accompanied by the outcome of a full evaluation of the relevant tenderer, carried out in accordance with the weighting provided for in the first subparagraph of Article 53(2).

The invitation shall also state the mathematical formula to be used in the electronic auction to determine automatic rerankings on the basis of the new prices and/or new values submitted. That formula shall incorporate the weighting of all the criteria fixed to determine the most economically advantageous tender, as indicated in the contract notice or in the specifications; for that purpose, any ranges shall, however, be reduced beforehand to a specified value.

Where variants are authorised, a separate formula shall be provided for each variant.

6. Throughout each phase of an electronic auction the contracting authorities shall instantaneously communicate to all tenderers at least sufficient information to enable them to ascertain their relative rankings at any moment. They may also communicate other information concerning other prices or

values submitted, provided that that is stated in the specifications. They may also at any time announce the number of participants in that phase of the auction. In no case, however, may they disclose the identities of the tenderers during any phase of an electronic auction.

7. Contracting authorities shall close an electronic auction in one or more of the following manners:
 - (a) in the invitation to take part in the auction they shall indicate the date and time fixed in advance;
 - (b) when they receive no more new prices or new values which meet the requirements concerning minimum differences. In that event, the contracting authorities shall state in the invitation to take part in the auction the time which they will allow to elapse after receiving the last submission before they close the electronic auction;
 - (c) when the number of phases in the auction, fixed in the invitation to take part in the auction, has been completed.

When the contracting authorities have decided to close an electronic auction in accordance with subparagraph (c), possibly in combination with the arrangements laid down in subparagraph (b), the invitation to take part in the auction shall indicate the timetable for each phase of the auction.

8. After closing an electronic auction contracting authorities shall award the contract in accordance with Article 53 on the basis of the results of the electronic auction.

Contracting authorities may not have improper recourse to electronic auctions nor may they use them in such a way as to prevent, restrict or distort competition or to change the subject-matter of the contract, as put up for tender in the published contract notice and defined in the specification.

Working Party on GATS Rules

LIMITATIONS IN MEMBERS' SCHEDULES RELATING TO SUBSIDIES

Note by the Secretariat¹

Addendum

I. INTRODUCTION

1. At its meeting of 23 June 2004, the Working Party on GATS Rules requested the Secretariat to bring documents S/WPGR/W/13 and S/WPGR/W/13/Add.1 up to date by listing the subsidy-related limitations contained in schedules of specific commitments submitted since the last update in June 2000. The following section presents these subsidy-related limitations. The list was compiled by reviewing the commitments of acceding Members, as well as other new commitments, such as those resulting from acceptance of the Fourth or Fifth Protocol.

2. As in S/WPGR/W/13 and S/WPGR/W/13/Add.1, it is worth recalling that the information contained in this Note is limited in at least two respects. First, only those entries that make explicit reference to subsidies and other forms of financial contributions or transfers of funds by the public authorities of a Member have been taken into account. Nevertheless, given the limited amount of information available, the entries listed do not necessarily constitute subsidies as the term might be understood by Members. Secondly, it has to be kept in mind that discriminatory subsidies may also be granted in situations where no commitments have been undertaken. For obvious reasons, Members' schedules are silent on any such programmes.

3. At its meeting of 23 June 2004, the Working Party also requested the Secretariat to indicate whether Members' schedules of specific commitments contained definitions of subsidies. The Secretariat could find no such definitions in schedules.

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

II. COMPILATION OF SUBSIDY-RELATED LIMITATIONS IN SCHEDULES OF SPECIFIC COMMITMENTS

(a) Armenia (GATS/SC/137, p. 3)

Modes of supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or subsector	Limitations on Market Access	Limitations on National Treatment	Additional Commitments
I. HORIZONTAL COMMITMENTS			
ALL SECTORS INCLUDED IN THIS SCHEDULE	[...]	[...] <u>Subsidies</u> 1), 2), 3), 4) Unbound with respect to subsidies. Only legal entities constituted under Armenian legislation are eligible for subsidization, irrespective of their capital ownership.	

(b) China (GATS/SC/135, p. 2)

Modes of supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or Sub-sector	Limitations on Market Access	Limitations on National Treatment	Additional Commitments
I. HORIZONTAL COMMITMENTS			
ALL SECTORS INCLUDED IN THIS SCHEDULE	[...]	[...] (3) Unbound for all the existing subsidies to domestic services suppliers in the sectors of audio-visual, aviation and medical services.	

(c) Croatia (GATS/SC/130, p. 2)

Modes of supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or sub-sector	Limitations on market access	Limitations on national treatment	Additional commitments
I. HORIZONTAL COMMITMENTS			
ALL SECTORS INCLUDED IN THIS SCHEDULE	[...]	<p>[...]</p> <p><u>Subsidies</u></p> <p>1,2,3) Eligibility for subsidies from the Republic of Croatia may be limited to legal persons established within the territory of Croatia or a particular geographical sub-division thereof. Research and development subsidies are limited to legal persons established in Croatia.</p> <p>4) To the extent that any subsidies are made available to natural persons, their availability may be limited to the nationals of the Republic of Croatia.</p>	

(d) Former Yugoslav Republic of Macedonia (GATS/SC/138, p. 5 and 17)

Modes of supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or subsector	Limitations on market access	Limitations on national treatment	Additional commitments
I. HORIZONTAL COMMITMENTS			
<u>All sectors</u> [...]	[...]	[...] Subsidies 1) 2) 3) 4) Eligibility for subsidies reserved for national services and service suppliers.	
II. COMMITMENTS IN SPECIFIC SECTORS			
[...]			
5. EDUCATION SERVICES <u>All education services included in this section:</u> Subsectors listed below only cover privately funded education services. Educational services in investigation, security and defense areas and in history and culture of people and nationalities in FYROM are excluded.	[...]	1) 2) 3) 4) Unbound for grants and scholarships	

(e) Georgia (GATS/SC/129, p. 2)

Modes of supply: (1) Cross-border supply (2) Consumption abroad (3) Commercial presence (4) Presence of Natural Persons

Sector or subsector	Limitations on Market Access	Limitations on National Treatment	Additional Commitments
I. HORIZONTAL COMMITMENTS			
Commitments include all sectors	[...]	1) Unbound for subsidies 2) Unbound for subsidies 3) [...] Eligibility for subsidies may be limited to persons established in a particular geographical sub-division of Georgia.	

(f) Lithuania (GATS/SC/133, p. 2 and 19)

Modes of supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or sub-sector	Limitations on market access	Limitations on national treatment	Additional commitments
I. HORIZONTAL COMMITMENTS			
	[...]	(3) [...] Eligibility of subsidies may be limited to legal persons established within the territory of Lithuania or a particular geographical subdivision thereof. (4) [...] Subsidies available only to natural persons may be limited to Lithuanian citizens	
II. SECTOR-SPECIFIC COMMITMENTS			
8. HEALTH RELATED AND SOCIAL SERVICES A. Hospital services (CPC 9311)	[...]	[...] (3) None, except foreign private establishment and their consumers may not be entitled to receive financial support from public resources, including usage of public medical insurance funds. [...]	

(g) Nepal (GATS/SC/139, p. 3)

Modes of supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or subsector	Limitations on market access	Limitations on national treatment	Additional commitments
I. HORIZONTAL COMMITMENTS			
All Sectors included in this Schedule	[...]	[...] (3) None, except [...] - Incentives and subsidies are available only to enterprises wholly owned by Nepalese nationals.

Working Party on GATS Rules

Original: English

COMMUNICATION FROM THE EUROPEAN COMMUNITIES

Government Procurement in Services

The following communication, dated 6 May 2004, from the delegation of the European Communities is being circulated to the Members of the Working Party on GATS Rules.

1. Within the framework of the negotiations under the mandate given by GATS Article XIII:2, the European Communities (hereinafter the EC) submitted in July 2002 and May 2003 contributions with proposals on a framework that could be developed under the GATS for government procurement in services, and on the benefits that could be drawn from them. The EC is hereby putting forward a new contribution aiming at replying to questions on its two communications mentioned above, which were raised by WTO Members, including by Singapore in its Non-Paper of November 2003, circulated as JOB(03)/216.

2. As requested by several WTO Members in previous meetings of the Working Party on GATS Rules, this contribution includes examples of government procurement commitments and MFN exemptions that could be scheduled by Members. It proposes to define the scope of application of future GATS provisions on government procurement and clarifies the relationship between the proposed GATS framework for government procurement in services and the plurilateral Agreement on Government Procurement (GPA). Finally, it notes the importance attached by several Members to the development of an appropriate set of procedural rules.

I. SCHEDULING OF GOVERNMENT PROCUREMENT COMMITMENTS AND OF MFN EXEMPTIONS

A. SPECIFIC GOVERNMENT PROCUREMENT COMMITMENTS

– Example 1 – no government procurement commitment

Sector or subsector	Limitations on market access	Limitations on national treatment	Additional commitments	Limitations on government procurement
Advertising (CPC 871)	Modes 1,2,3) None Mode 4) Unbound except as indicated in the horizontal section	Modes 1,2,3) None Mode 4) Unbound except as indicated in the horizontal section		Unbound

3. This example reflects the current situation, when no commitments have been made for government procurement in services. In such a situation, laws, regulations and requirements governing government procurement in services in this particular sector would only be subject to the GATS provisions, to which they are already subject today, i.e. all GATS provisions other than GATS Articles II, XVI and XVII. This includes notably (but not only) GATS Article III on Transparency covering relevant measures of general application, GATS Article VI on Domestic Regulation (in particular as regards domestic review), GATS Article VII on Recognition, GATS Article XII on Restrictions to safeguard the Balance of Payment, GATS Article XXIII on Dispute Settlement and Enforcement.

– Example 2 – full government procurement commitment above a specific threshold

Sector or subsector	Limitations on market access	Limitations on national treatment	Additional commitments	Limitations on government procurement
CPC 84 – Computer services	Modes 1,2,3) None Mode 4) Unbound except as indicated in the horizontal section	Modes 1,2,3) None Mode 4) Unbound except as indicated in the horizontal section		None for contracts above 200.000 SDR (Special Drawing Rights)

4. In this situation, a commitment has been made for all government procurement contracts in the CPC 84 sector above the 200.000 SDR (Special Drawing Rights) threshold. This means that all laws, regulations, procedures and practices regarding government procurement in services above this threshold have to be open to services regardless of their country of production and to foreign service providers and to locally-established suppliers with foreign affiliation or ownership on a National Treatment and MFN basis (unless MFN exemptions have been scheduled – see section B hereafter). All entities listed in GATS Article I:3, i.e. central, regional & local governments and authorities, as well as non-governmental bodies in the exercise of powers delegated by central, regional or local governments or authorities, are covered by this commitment. WTO Members could schedule thresholds adapted to their economic size and needs, on a sector by sector basis.

– Example 3 – partial government procurement commitment

Sector or subsector	Limitations on market access	Limitations on national treatment	Additional commitments	Limitations on government procurement
Architectural Services (CPC 8671)	Modes 1,2,3) None Mode 4) Unbound except as indicated in the horizontal section	Modes 1,2,3) None Mode 4) Unbound except as indicated in the horizontal section		None for central procuring entities only, and for contracts above 200.000 SDR. Domestic price preference of 5%.

5. In this situation, only procurement by central governments and authorities is covered. The threshold is 200.000 SDR. In addition, a 5% price preference may be awarded to domestic service providers.

– Example 4 – articulation between government procurement commitment on one side and market access and national treatment commitments on the other side

Sector or subsector	Limitations on market access	Limitations on national treatment	Additional commitments	Limitations on gov. procurement
Construction services (CPC 51)	Modes 1,2) Unbound Mode 3) None Mode 4) Unbound except as indicated in the horizontal section	Modes 1,2) Unbound Mode 3) None, except that the CEO is subject to a residency requirement. Mode 4) Unbound except as indicated in the horizontal section		None for contracts above 5.000.000 SDR.

6. In this situation, procedures to award public contracts above the 5 million SDR threshold in the construction sector have to be open to foreign service providers, on a National Treatment and MFN basis (unless MFN exemptions have been scheduled – see section B hereafter). Central, regional & local governments and authorities, as well as non-governmental bodies in the exercise of powers delegated by central, regional or local governments or authorities, are covered by this commitment.

7. However, these commitments for government procurement have to be read in conjunction (i.e. cumulatively) with Members' existing market access and national treatment commitments for the relevant sector (including horizontal commitments – or limitations). This means that a foreign service provider having been awarded a government procurement contract would then have to comply with market access and national treatment conditions applying to foreign service providers. This is a general rule – i.e. the validity of this comment is not limited to this specific example. In the particular case above, it may be obliged to establish a commercial presence and to comply with a residency requirement, as such conditions may be imposed on all foreign construction companies willing to provide services in the territory of the WTO Member under consideration.

8. This means that the GATS commitments for government procurement would not apply to measures affecting trade in services other than measures regarding government procurement: any benefit gained from government procurement commitments under the GATS would be subject to the traditional GATS commitments on market access and national treatment.

– Example 5 – government procurement commitment limited to some modes of supply

Sector or subsector	Limitations on market access	Limitations on national treatment	Additional commitments	Limitations on government procurement
Telecom services	Modes 1,2,3) None Mode 4) Unbound except as indicated in the horizontal section	Modes 1,2,3) None Mode 4) Unbound except as indicated in the horizontal section	As contained in the attached Reference Paper	Modes 1, 2) Unbound Modes 3, 4) None for contracts above 200.000 SDR, except that Mode 4 is limited to ICTs.

9. In this situation, government procurement of telecom services may be open only to foreign service providers that have established a commercial presence in the territory of the WTO Member under consideration.

10. The indication of an “Unbound” in modes 1 and 2 in the government procurement column serves precisely to indicate that companies that are not established in the territory of the WTO Member under consideration, may not bid for a government procurement contract in the telecom sector.

11. It may be recalled that in financial services, some WTO Members have already opened, under the Understanding on Commitments on Financial Services, government procurement of financial services to suppliers of other WTO Members established in their territory.

– Example 6 – government procurement of services covering several sectors

Sector or subsector	Limitations on market access	Limitations on national treatment	Additional commitm.	Limitations on government procurement
CPC84 – Computer services	Modes 1,2,3) None Mode 4) Unbound except as indicated in the horizontal section	Modes 1,2,3) None Mode 4) Unbound except as indicated in the horizontal section		None for contracts above 200.000 SDR (Special Drawing Rights)
Management Consulting Services & Related (CPC 865 & 866)	Modes 1,2,3) None Mode 4) Unbound except as indicated in the horizontal section	Modes 1,2,3) None Mode 4) Unbound except as indicated in the horizontal section		None for contracts above 200.000 SDR (Special Drawing Rights)

12. In this situation of a government procurement contract covering services falling in several CPC categories, e.g. CPC 84 (computer services) and CPC 865 (Management Consulting Services), procedures to award such contract would have to be open to foreign service providers, on a National Treatment and MFN basis (unless MFN exemptions have been scheduled – see section B hereafter), since commitments have been made in all services categories covered by the contract.

13. If GATS government procurement commitments have been made only in one of the two sectors concerned, e.g. CPC 84 but not CPC 865, *and if* the contract cannot be divided into two different contracts – one covering activities falling in CPC 84, which would be covered by GATS commitments in this example, and the other covering activities falling into CPC 865, which would not be covered by GATS commitments in this example –, a specific provision of the GATS Annex on government procurement would define how to determine the “main object of the contract” (determined according to the value of each category of service covered). This provision would be similar to the one dealing with mixed contracts covering the procurement of goods and services (see Part II of this paper). In this example, if the “main object of the contract” appears to be the procurement of computer services, the contract would then be covered by the Member’s GATS government procurement commitments.

B. MFN EXEMPTIONS

14. The proposed agreement on government procurement in services would provide that the MFN Treatment should apply to the government procurement procedures in sectors opened to international competition.

15. However, at the time when the GATS entered into force, WTO Members had the possibility to list MFN exemptions. GATS Article XIII:1 specifically provided that Article II on MFN does not apply to government procurement, which rendered irrelevant the scheduling of MFN exemptions at that point in time. Since the agreement on procurement that will result from GATS Article XIII:2 negotiations would extend the application of MFN to procurement, consistency would require that this extension should be accompanied by the one-off possibility to schedule MFN exemptions. This possibility would be provided for in a specific article of the GATS Annex on Government Procurement.

16. MFN exemptions could for instance be scheduled by WTO Members to provide more favourable treatment to service providers originating from countries of their region or from developing countries. They would follow the usual structure of GATS MFN exemptions.

– Example – government procurement MFN exemption that could be scheduled

Sector or subsector	Description of measure indicating its inconsistency with the MFN Treatment obligation	Countries to which the measure applies	Intended duration	Conditions creating the need for the exemption
Architectural Services (CPC 8671)	Measures aimed at offering preferential conditions for the provision of architectural by nationals of countries X, Y, Z.	Countries X, Y, Z.	10 years	This measure reflects the wish to foster regional cooperation.

17. These MFN exemptions would not serve to cover the benefits deriving from being a Party to the GPA. The relationship between the GPA and the GATS would be done through the inclusion of specific provisions in the future GATS Annex on Government Procurement (see part III), which would ensure that the GATS does not extend on an MFN-basis to other WTO Members the more favourable treatment that GPA parties may accord to each other in the framework of the GPA regime. This specific provision would cover current GPA Parties, as well as future GPA Parties, who will not need to schedule an MFN exemption for that purpose.

II. SCOPE OF THE GATS AGREEMENT ON GOVERNMENT PROCUREMENT

18. Several Members underlined the need to define the scope of government procurement provisions under the GATS, since the GATS covers trade in services. The situation is similar to the one prevailing before the entry into force of the WTO Agreement, when the GATT was covering trade in goods and the GATT Code on Government Procurement was applying to the procurement of goods.

19. Article 1-1 (a) of the GATT Code on Government Procurement was providing that it applied to any law, regulation, procedure and practice regarding the procurement of products by the entities subject to the Code, and that this included services incidental to the supply of products if the value of these incidental services did not exceed that of the products themselves, but not service contracts *per se*.

20. An analogous provision could be included in the "Annex to the GATS on Government Procurement of Services".

III. RELATIONS WITH THE GPA

21. It was underlined in several meetings of the Working Party on GATS Rules that new government procurement rules and obligations under the GATS should not extend on an MFN-basis to other WTO Members the more favourable treatment that GPA parties may accord to each other in the framework of the GPA regime.

22. The EC has proposed that a specific provision would organise appropriate interface between the GPA and the "Annex to the GATS on Government Procurement in Services". This provision would ensure that the GATS agreement on government procurement would not affect GPA rules and obligations, which would continue to apply between existing and future GPA parties. It would also make clear that benefits gained by GPA parties from GPA commitments would not be extended under the GATS on an MFN-basis to other WTO Members.

23. In a specific service sector, a GPA-party may make no government procurement commitment under the GATS, but may have made a commitment under the GPA. In this case, government procurement contracts awarded by the GPA-party under consideration would only have to be opened to GPA-parties, under the conditions set out by the GPA.

24. In another specific service sector, a GPA party may make a limited government procurement commitment under the GATS (limited sectoral coverage, limited coverage of procuring entities – for instance restricted to the central level, + scheduling of price preferences), and a broader commitment under the GPA (broader sectoral coverage, broader coverage of procuring entities and no price preference). A WTO Member that would not be party to the GPA would only be assured of having access to the government procurement contracts awarded by the GPA party under consideration, as limited by the GATS commitments of that GPA party. This is not dissimilar to the situation that prevails today with the coexistence of bilateral and regional government procurement agreements between WTO Members, some of which may be party to the GPA and some of which may not be, e.g. NAFTA.

25. In order to ensure the effective co-existence and coherence of both systems (GPA and future GATS regime), further in-depth consideration should be given on the relative level of government procurement commitments under the GPA and under the GATS.

IV. PROCEDURAL RULES

26. The importance of developing appropriate procedural rules, in order to ensure that access to procurement opportunities will be effective, has been underlined in previous contributions and in discussions of the Working Party on GATS Rules, with several Members mentioning in particular challenge procedures.

27. The EC underlined that a number of such provisions were already included in the text of the GATS, such as for instance in GATS Article VI on Domestic Regulation, in particular as regards domestic review. More specific rules on the transparency of bidding procedures may have to be developed in the GATS Annex on Government Procurement. The rules contained in the bilateral and regional agreements listed by the WTO Secretariat in S/WPGR/W/44 may be a useful source of inspiration in this regard. The EC would therefore like to invite Members to share the experience they may have got from the bilateral, regional and/or plurilateral agreements they have signed, and to discuss procedural rules that they think have to be implemented to ensure the effective application of future GATS obligations regarding opportunities to bid, national treatment and MFN treatment.

Working Party on GATS Rules

SUBSIDIES FOR SERVICES SECTORS

INFORMATION CONTAINED IN WTO TRADE POLICY REVIEWS

Background Note by the Secretariat¹

Addendum

I. INTRODUCTION

1. At its meeting of 1 October 2003, the Working Party on GATS Rules requested the Secretariat to prepare an update of the information on subsidies in services contained in Trade Policy Reviews. This document, which complements the information provided in S/WPGR/W/25, - Add. 1, Add. 2 and Add. 3, covers 26 Reviews carried out between August 2002 and 11 February 2004 (WT/TPR/S/103 to 128). Relevant information has been added, in italics, in the overview table already contained in the previous documents (Table 1).

2. The compilation of information from TPR reports necessarily suffers from certain limitations, as explained at length in the introduction to previous versions of this Note². The same considerations continue to apply. Suffice it to recall, for instance, that the selection of Members to be reviewed, or the content of reports, are not driven by subsidy-related issues and problems, but rather by a Member's main policy challenges and constraints. As a result, the amount of information contained on subsidies in reports might vary from Member to Member. Also, TPR reports do not normally attempt to assess the possible distortive effects of subsidies on trade. While most reports contain some information on subsidies, the limited level of detail sometimes makes it difficult to identify the extent to which a benefit is actually being conferred or the identity of the recipient of the subsidy.

3. It also needs to be kept in mind that, while this Note compiles potentially relevant information against the background of the definition of "subsidy" and related concepts (e.g., "benefit", "financial contribution") contained in the Agreement on Subsidies and Countervailing Measures (ASCM), not all data recorded in TPR reports may be compatible with this definition. As previous versions of this Note, the compilation of information from TPR reports focuses, in the light of Article 2 of the ASCM, on specific subsidies. As well, some of the subsidies mentioned in TPR reports may be financial contributions to services which are beyond the scope of the GATS, i.e., services provided in the exercise of governmental authority (Article I:3(b)) or services excluded through the Annex on Air Transport Services.

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

² See introductions to: S/WPGR/W/25, S/WPGR/W/25/Add.1, S/WPGR/W/25/Add.2, and S/WPGR/W/25/Add.3.

II. POLICY PATTERNS

4. The information contained in the TPR reports issued since September 2002 generally tends to confirm the broad patterns identified in previous documents. Subsidies are found in the whole range of services sectors, but mainly in tourism, transport and banking. A good number of Members also provide subsidies relating to telecommunications services, many of which in the form of grants relating to the fulfilment of universal service obligations. Concerning the types of measures used, Members continued to rely on tax incentives more than on direct grants. A significant number of Members used duty-free inputs and free zone incentives, which sometimes appeared to be linked to exports.

ANNEX

Content of Individual Trade Policy Reviews

Mauritania -- WT/TPR/S/103

P. 49, para. 86

In 2002, the new Investment Code introduced a free points regime applicable to enterprises whose total production is exported.³ The enterprises covered by this regime are under the supervision of the customs administration and benefit from advantages such as exemption from export duties and taxes, exemption from import duties and taxes on production means and inputs, simplified customs formalities and controls, and freedom to recruit up to four expatriate agents without authorization or a work permit. These enterprises pay a flat rate of 25 per cent on profits and the minimum flat rate tax (IMF) of 2 per cent on turnover, which constitutes advance payment of the profits tax.

Australia – WT/TPR/S/104

P. xiii, para. 25

In the period under review, Government support to the services sector, through direct financial assistance, tax expenditures, and funding to public-sector institutions, has risen; the main recipients have been **finance and insurance, cultural and recreational, transport and storage, property, and business and communication services**. Several access restrictions have remained in force. Financial services reforms (e.g. prudential rules, institutional) have been pursued in several areas in the light of recommendations made in 1997. Liberalization of telecommunications has led to further privatization of state-owned firms, increased entry of private sector operators, and lower tariffs; however, operational costs relating to the universal service obligation have been a concern. Support for domestic advertisement and film producers has been maintained through local-content requirements in television broadcasting as well as **film production** funding. As regards maritime services, state involvement seems to have been reduced; financial assistance to **shippers of freight** between Tasmania and the mainland has been maintained. **Maritime road, and rail transport** have also benefited from tax rebates on fuels. Efforts have been made to reduce air transportation costs and improve the quality of services through more operators and airport leasing. E-commerce is being promoted through network funding and bilateral arrangements.

P. 60-61, para. 96

Despite public spending cuts as part of the fiscal consolidation programme (Chapter I), between 1997/98 and 2000/01, different forms of direct financial, tax or institutional assistance to exports of goods and **services** followed an overall upward trend, largely due to increased support for exports of primary and mining products as well as certain services (Table III.6). By contrast, assistance to exports of manufactured goods declined.

³ According to Article 8 of the Code the following may be covered by the free points regime: activities directly intended for export (the production and sale of goods abroad or the supply of **services**), activities indirectly intended for export comprising the integral sale of goods or supply of **services** to beneficiaries situated in Mauritania whose activities directly involve export.

.. Not available.

n.a. Not applicable

a Estimates.

b Includes programmes or amounts of funding where the industry is not stated or recipients are unknown.

Note: DFA: direct financial assistant; FI: funding to institutions; TE: tax expenditures. To calculate the total, data given as "<A\$1 million" have been read as \$A 1 million.

Source: Productivity Commission (2001), *Trade & Assistance Review 2000-01*, Tables 4.3, 4.4, 4.5, 4.6, 4.7 and 4.8 [Online], 12 December, Annual Report Series 1999-2000, AusInfo. Available at: <http://www.pc.gov.au/research/annrpt/> [11 June 2002].

P. 109-113, para. 77

The estimated level of support provided to the services sector through direct financial assistance, tax expenditures, and funding to public-sector institutions has been increasing (Table IV.5); budgetary outlays aimed at encouraging investment, R&D, and exports have been allocated mainly to **finance and insurance, cultural and recreational, transport and storage, property, and business and communication services.**

- Nil.

a DFA: direct financial assistance; FI: funding to institutions; TE: tax expenditures.

b 2000-01 data are Budget estimates and 2001-02 data are Budget appropriations.

c The above industry allocations reflect the availability of recently supplied data. In the *Trade & Assistance Review 1999-2000*, these programmes were classified under the unallocated category due to a lack of information. Consequently, the previous classification is no longer appropriate.

d Estimates for 1999/00, 2000/01, and 2001/02 are based on Austrade industry allocations for 1998/99. Austrade has not assembled data on the industries benefiting from its export promotion activities for subsequent years.

Note: Figures may not add to total due to rounding.

P. 119, para. 98

During the period under review, the universal service obligation (USO) subsidy levels have been an issue and the subject of comprehensive reform. Telstra's USO requires that standard **telephone services, including services for the disabled, public payphones, digital data services and prescribed carriage services**, are reasonably accessible to all people in Australia on an equitable basis at affordable prices, wherever they reside or carry on business. As a matter of course, Telstra's \$A 1.8 billion USO claim (lodged on 28 September 1998) was subject to scrutiny by the independent regulator, the Australian Communications Authority (ACA), which finally estimated Telstra's cost for 1997/98 at \$A 548 million. Given the unprecedented size of the claim, however, and its potential to cause industry instability and deter investment, the authorities decided the setting of a subsidy would be set by agreement between the carriers, or capped at the historical level of \$A 253.2 million. The subsidies for 1998/99 and 1999/00 varied in line with ACA advice, at around \$A 280 million in each year. Following the 1997/98 claim, an extensive review of Australia's USO arrangements was undertaken and, in 2000, new arrangements were enacted. Amongst other things, the Minister was empowered to set USO subsidies for up to three years in advance, based on the advice of the ACA. This approach enables a range of factors to be considered in setting subsidies. According to the authorities, the setting of subsidies in advance provides industry with certainty, helping it to plan. Subsidies of \$A 240 million, \$A 234.1 million, and \$A 231.7 million have been set for 2001/02, 2002/03, 2003/04.

P. 121, para. 107

The Australian film production industry receives government support in several ways. The Australian Film Commission provides screen, cultural, and industry support through a range of measures including project development through script and other pre-production assistance, post-production grants and low-budget production funding, and grants in support of a vigorous and diverse screen culture.⁴ The Australian Film Finance Corporation (FFC), the principal government agency for funding the production of Australian **film and television programmes**, has annual public funding of \$A 50 million for the period from 2001/02 to 2003/04.⁵

P. 122, para. 110

Financial assistance to **shippers of freight** between Tasmania and the mainland under the Tasmanian Freight Equalisation Scheme (TFES) was modified and put in effect as of 1 July 1999. The modified TFES provides a more transparent and appropriate basis for assistance to shippers and defines more clearly the transport cost disadvantage (the difference between a shipper's wharf gate to wharf gate cost and the notional road freight cost for an equivalent freight task). All commodities are being compensated on an identical basis, that is, on a per twenty-foot container (TEU) basis. The TFES assists in alleviating the comparative interstate freight cost disadvantage incurred by the

shippers of eligible non-bulk goods. Eligible items include goods produced in Tasmania for use or sale on the mainland as well as equipment and raw materials of Australian origin used as inputs by mining, manufacturing, agricultural, fishing, and forestry industries in Tasmania. Cargoes intended for export, bulk cargoes, and goods manufactured overseas are ineligible. Some 1,450 shippers benefit from the scheme.

Dominican Republic -- WT/TPR/S/105

P. 42-43, para. 105, 107 and 109

In January 2001, the Dominican Republic notified the export subsidy measures maintained under the Free Trade Zone Law (Law No. 8-90) of 8 January 1990, and requested an extension of the transition period provided for in Article 27.4 of the WTO Agreement on Subsidies and Countervailing Measures.⁶ The Ministerial Conference directed the Committee on Subsidies and Countervailing Measures to extend the transition period under this Article for certain export subsidies provided by Members.⁷ (...)

More than half of the enterprises installed in FTZs are engaged in the production of textiles. The authorities indicated, however, that there had been increasing diversification in recent years. Activities with particularly high growth rates include the production of jewellery, electronic components, **marketing services**, and pharmaceutical products. Chapter IV(4) contains a more detailed description of individual industries operating in FTZs. (...)

As described in detail in the previous Secretariat Report on the Dominican Republic, Law No. 8-90 grants considerable incentives for a renewable period of fifteen years to enterprises located in FTZs. These incentives include the exemption from the payment of: income and corporate taxes; value-added tax on imports, and import duties for all inputs and all equipment used in establishing and operating the company; municipal taxes; export taxes; and various specific taxes. Additional benefits under this Law, such as a 20-year exemption from the above taxes, and rental subsidies, are available for companies located in FTZs in the Haitian-Dominican border area.

P. 82, para. 132

The Tourism Development Law aims to promote **tourism** development in specifically defined priority regions. In particular, the Law offers exemptions from income tax and a 50% reduction of ITBIS for enterprises investing in tourism-related activities in the stipulated regions. In order to administer the benefits, the Law established a Council for Tourism Development (CONFOTUR), composed of representatives from various ministries and the National Hotel and Restaurant Association (ASONAHORES). In addition, the Law created a Fund for the Promotion of Tourism, to promote tourism to the Dominican Republic internationally in a more effective manner.

Zambia – WT/TPR/S/106

P. 45, para. 80

Zambia provides a variety of incentives to assist exporters and investment in export-oriented industries. Under the 1993 Investment Act, most recently amended in 1998, a concessional income tax of 15%, compared with the standard rate of 35%, is granted to exporters of non-traditional goods

⁶ WTO document G/SCM/N/74/DOM, 8 January 2002.

⁷ WTO document WT/MIN(01)/17, 20 November 2001.

who hold an investment licence.⁸ Investments in the **tourism** sector that earns foreign exchange in excess of 25% of gross annual earnings are exempt from duties and VAT.

P. 79-80, para. 111

New investment in the sector has come from Zambians and from foreigners, largely through the privatization programme. Revitalization is taking place in the Livingstone/Victoria Falls area, as Zambia is in a position to take advantage of the decline in tourism in neighbouring countries. As part of the effort to expand tourism, the Government has offered several incentives. These included reducing corporate tax to 15% for **tourist operators** and recognizing them as exporters of non-traditional exports, and refunding VAT on costs incurred in establishing tourism enterprises and zero-rating accommodation offered by **hotels, lodges, and guest houses** in the Livingstone District for two years. A Tourism Development Master Plan has lagged, however, because of the Government's failure to provide necessary resources in recent Budgets. It is hoped that a bilateral partner will assist in developing the Tourism Master Plan in 2003.

Japan -- WT/TPR/S/107

P. 66, para. 41

According to the authorities, no exclusive rights or subsidies are given to Japanese-flag carriers. Nonetheless, support measures for Japanese-flag carriers (the "International Ship Regime") have been unchanged since Japan's previous Review.⁹ According to the authorities, the International Ship Regime does not distort trade in **maritime transport services**; it aims to place Japanese vessels on an equal footing with those of other countries that provide preferential tax treatment for their registered ships.

Venezuela -- WT/TPR/S/108

P. 32, para. 65

Venezuela provides a series of investment incentives, primarily in the form of tax reductions or credits. New investments made within five years of the entry into force of the 1999 Income Tax Law are eligible for a 10 per cent reduction in the top income tax rate in the farm, agribusiness, manufacturing, fisheries, fish-farming, livestock, tourism, **construction**, electrical power, **telecommunications**, and science and technology (other than hydrocarbons-related) industries (or of 80 per cent under certain conditions in the farm, livestock, fisheries and aquacultural sectors). Tax reductions are also granted for greenfield investments in the hydrocarbons industry (8 per cent), **hotel construction** (75 per cent) and in sectors that are considered to be of particular importance for the country's economic development or that create jobs (see Chapter III(4)(ii)(a)). Investors undertaking industrial projects that are in their pre-operation stages may be exempted from the value-added tax for a period of five years or until the pre-operation stages have been completed.

P. 66, para. 145-146

Exporters of goods and **services** may qualify for the recovery of VAT. Upon application to SENIAT, the exporter is entitled to recover all taxes paid on inputs represented in imported goods

⁸ Investment licences are granted by the Zambia Investment Centre for all activities, excluding banking, insurance, mining and quarrying.

⁹ These measures include tax breaks in ship-registration tax and local property tax.

purchased and services received in connection with his export activities.¹⁰ In his application to SENIAT the exporter must provide a list of domestic purchases of goods, domestic services received and services provided in Venezuela by non-resident natural or non-domiciled legal persons, indicating the amount invoiced and the VAT.

Under cover of Partial Regulations No. 2 of the Law on VAT, in force since 26 August 1999, exporters of goods and services may also recover the tax paid on domestic and imported purchases of capital goods and on services that increase the value of such goods or are necessary for them to perform the functions for which they are intended, made during the pre-operational phase of implementation of industrial projects essentially intended to produce goods for export or to generate hard currency.¹¹ To qualify for the tax credit the volume of exports of goods or services must represent at least 50 per cent of the enterprise's operations, or 25 per cent if the goods produced are exempt from VAT. In the case of **tourism projects**, foreigners must account, on average, for not less than 40 per cent of the stays each year. The recovery regime has a maximum period of validity of five years from the commencement of the pre-operational phase. If on the expiry of this period the applicant can show that the pre-operational phase has not yet ended, the duration of the recovery regime may be extended for a further period of not more than five years.

P. 67, para. 151

Free area activities are restricted to specific sectors or types of goods and services. For example, the Free Area for the Promotion of Tourism Investment in the Paraguaná Peninsula was established under the Law on the Establishment and Regime of the Free Area for the Promotion of Tourism Investment in the Paraguaná Peninsula, Falcón State, of 6 August 1998 for promoting the provision of tourism services and commercial services related to tourism. The Cultural, Scientific and Technological Free Area of Mérida State (ZOLCCYT), established under the Law on the Cultural, Scientific and Technological Free Area of Mérida State of 14 July 1995 and regulated by Decree No. 2.714 of 9 September 1998, operates under a preferential tax regime set up for the purpose of encouraging the **production, dissemination and distribution of cultural, scientific and technological goods and activities** in the region. Activities relating to the production, **distribution**, marketing and promotion of goods subject to the regime carried out within ZOLCCYT are exempt from income tax.

P. 74, para. 190

The entity responsible for tourism grants incentives in the form of exemptions from customs duties on the importation of vessels, aircraft, vehicles and parts used for **transporting tourists**.

P. 119-120, para. 165

The supply of universal telecommunications services is guaranteed by the State. CONATEL is therefore obliged to set as one of its priorities the supply of services intended gradually to meet the universal service obligation, ensuring *inter alia*, that everyone can be connected to a **fixed public telephone network**, and there is a sufficient number of public telephones, and there is general **access to the Internet**. The universal service is guaranteed through the Universal Service Fund (FSU), whose purpose is to subsidize the infrastructural costs involved in compliance with the universal service obligations. Universal service obligations are attributed through an open selection process to

¹⁰ The legal basis for the refunding of taxes is Resolution No. 454 of 8 June 2000 and Decree No. 596 of 21 December 1999 (Partial Regulations No. 1 of the VAT Law concerning the Recovery of Tax Credits for Exporter Taxpayers).

¹¹ Decree No. 236 of 2 August 1999 adopting Partial Regulations No. 2 of the VAT Law on the Recovery of Tax Credits, published in Official Gazette No. 36.772 of 25 August 1999.

the operator that seeks the lowest amount from the FSU. The FSU's resources come from contributions by operators of telecommunications services for profit, with the exception of suppliers of sound broadcasting or open television services; the contributions amount to 1 per cent of the operator's gross revenue from the services covered by the authorization. As at September 2002, the FSU's resources had not been utilized.

P. 122, para. 179

Vessels listed in RENAVE which are engaged in **international transport** operations in Venezuelan ports benefit from a 10 per cent reduction in port and quay charges. In addition, they only have to pay this tax once each calendar year, whereas foreign vessels must pay the tax each time they utilize the National Marine Navigation Support System (*Sistema Nacional de Ayudas a la Navegación Acuática*) (SNANA). Other incentives include permanent exemption from the Tax on Capital Assets and from VAT on temporary or permanent import of vessels. The Law also gives those who earn revenue from merchant marine activities or shipyards an income tax (ISRL) reduction amounting to 75 per cent of the amount of new investment in the purchase or lease of new vessels or navigation equipment, new maritime security technology, and vocational training of their employees.

P. 123, para. 182

The INEA proposes fees for marine-related services. For commercial vessels, navigation fees are determined according to the vessel's gross tonnage. The principle of national treatment does not apply to the payment of such charges and navigation fees. **Vessels** listed in the RENAVE pay 50 per cent of the fee stipulated for the use of pilot services and 50 per cent of navigation fees. This percentage may be applied to foreign-registered vessels, but only on the basis of reciprocity. The same applies to fees for tug and berthing services.

P. 125-6, para. 198

The **air transport** subsector benefits from a number of tax incentives. The Civil Aviation Law grants a five-year exemption (until the end of 2006) from all duties on imports of civil aircraft, accessories and parts, and all vehicles required for the operation of aircraft. Imports of materials and equipment, accessories, and parts to be used for extinguishing fires and air rescue are duty-free. Persons earning revenue from the supply of public air transport services are granted an income tax reduction over five years amounting to 75 per cent of new investment in modernizing fleets or purchasing aircraft provided that they meet environmental protection requirements, or for investment in incorporating new technology in the services they supply, or in training technical aviation personnel. Aircraft to be used for public air transport purchased until the end of 2006 are also exempt from the capital assets tax.

Hong Kong, China – WT/TPR/S/109

P. 35, para. 78

There do not appear to have been any major changes in the HKSAR's income tax system, and particularly the use of tax incentives, since the previous Review, with taxes on profits and earnings accounting for almost 60% of total taxes collected in fiscal year 2000/01 (Chapter I). The income tax system retains low statutory tax rates and few tax incentives. Statutory tax rates of 16% and 15% are levied on the profits of corporations and unincorporated businesses, respectively.¹² Effective tax rates on profits tend to be lower than statutory rates, however, as a consequence of incentives, especially

¹² There is also a Salaries Tax calculated on a sliding scale that cannot exceed the standard rate of 15% of total income.

accelerated depreciation; for example, companies may immediately write off 100% of expenditure on manufacturing plant and machinery and on computer software and hardware. Moreover, profits earned from **international shipping**¹³, and from **airline services**¹⁴, and interest income from deposits placed locally with all authorized banking institutions by corporations (except financial institutions) and individuals are exempt from tax. Exemptions on property tax are also provided. Owners of land or buildings are charged property tax at the standard rate of 15% (less an allowance of 20% for repairs and maintenance); however property owned by a corporation carrying on a business in Hong Kong, China is exempt from this tax.¹⁵ The authorities considered that during 1998/99 and 1999/00 the most important tax incentives were those affecting profits and salaries taxes; taxes forgone as a consequence of these incentives amounted to HK\$31.2 billion. No breakdown was available on the amounts of revenues forgone as a consequence of individual tax incentives, such as accelerated depreciation and the other exemptions.

P. 50, para. 2

Sectoral policies have undergone little change since Hong Kong, China's Review in 1998. By and large, Hong Kong, China continues to follow a policy of minimal intervention, allowing market forces to allocate resources. The authorities maintain that no "winners" are picked nor "losers" salvaged, and that Hong Kong, China does not discriminate for or against particular sectors. The Government's role is that of "proactive market enabler" or "facilitator" maintaining an institutional framework conducive to market development, providing the required infrastructure and support services, fostering applied research and development together with technology transfer, and investing in human capital in all sectors of the economy. Nevertheless, the 2002-03 Budget Speech states that Hong Kong, China needs to focus on "high-value-added" economic activities and lists four areas of particular importance: financial services, logistics, tourism, and producer and professional services.¹⁶ In addition, the Government takes "appropriate measures" to secure projects deemed beneficial to the economy when the private sector is not ready to invest in them. Some measures are aimed at certain sectors. For example, a 100% immediate write-off for tax purposes is accorded for expenditure on machinery and plant related to manufacturing processes as well as computer hardware and software, and there is a reciprocal tax exemption for income earned from **shipping services**. Furthermore, over the next few years the Hong Kong Government will waive the Mass Transit Company's (MTRC) dividend payments to help it fund a **rail-link** to the Disneyland amusement park.¹⁷

El Salvador – WT/TPR/S/111

P. 54, para. 96

The Export Reactivation Law grants a refund of 6% of the f.o.b. value of the exports to natural or legal persons, whether Salvadoran or foreign, owning enterprises that export Salvadoran goods and **services** outside the Central American area, except for exports of metallic and non-metallic mineral products derived from the exploitation of the subsoil. In principle, traditional products such as coffee, sugar and cotton, are not eligible for this refund; however, subject to the approval of the Ministries of Finance and of the Economy, coffee and sugar with at least 30% of local content

¹³ Shipping profits are exempted from tax when they are derived from: international operations of a Hong Kong registered ship; the international operation of a ship by a non-resident shipowner from a country that provides tax exemption in respect of uplifts by a non-resident shipowner from Hong Kong, China; and the international operation of a ship by an enterprise of a country with which Hong Kong, China has signed an agreement for the avoidance of double taxation on/covering shipping income.

¹⁴ Profits earned from airlines originating in a country that has a double taxation agreement with Hong Kong, China.

¹⁵ Inland Revenue Department (undated).

¹⁶ The Government of the HKSAR (2002a).

¹⁷ *Financial Times*, 10 July 2002.

(calculated on the basis of the value added generated in the factory) may benefit from it (for "organic" or "gourmet" coffee and refined sugar the refund applies irrespective of local content). Between 1998 and 2001, Salvadoran exports benefiting from the refund accounted for between 7.6% and 8.2% of total exports (Table III.7).

P. 55-56, para 101-103 and 106

Domestic or foreign enterprises engaged in the production, assembly (*maquila*), manufacturing, processing or marketing of goods and services may be established and operate in a free zone. The new law also explicitly mentions the provision of **services linked to international and regional trade (such as storage, packing and repacking, re-exportation, grouping of packages, the distribution of goods and other related or complementary activities)** as an activity eligible for the benefits available in free zones.

Where enterprises satisfy the criteria described above but for technical reasons are not located in free zones, they may apply to the Ministry of the Economy to have their establishment declared an Inward Processing Warehouse (*Depósito para Perfeccionamiento Activo*, DPA), provided that they are situated in an industrial, agricultural or agro-industrial zone, their facilities meet the appropriate industrial, occupational and environmental safety requirements, and they have a stable administrative and financial structure.

The advantages available to users who set up in free zones or inward processing warehouses include exemption from:

- Import duties on machinery, equipment, tools, parts and accessories, implements, etc. needed to carry out the activity encouraged;
- import duties on lubricants, catalysts, reagents, fuels and any other consumables needed for the productive activity;
- income tax during the period in which they carry out their operations in the country, reckoned from the tax year in which the beneficiary began operating;
- municipal taxes on company assets and net worth, for the period in which they carry out operations in the country, from the first year of operation;
- tax on the transfer of real property, when purchasing real property to be used for the activity encouraged. (...)

The tax concessions and incentives do not apply to certain activities, in particular: hotels; travel agencies and airlines; air, sea and land transport; financial activities; fishing, except for tuna fishing; mining; and the production and marketing of sugar, ethyl alcohol, and any product that contains them.

P. 81, para. 44-45

The legislative framework for the sector does not include provisions concerning end-consumer subsidies; however, the Government does grant direct subsidies focused on low-income users. In view of the shortage of resources, up to March 2001 the revenues of the public enterprise CL were indirectly tapped through discounts granted by that enterprise on invoices for **energy sales to distributors**. Since April 2001, these subsidies have been covered by the State through the National Electricity and Telephony Investment Fund (Fondo de Inversión Nacional en Electricidad y Telefonía, FINET) (see Section (iii)).

P. 95-96, para. 97

The National Electricity and Telephony Investment Fund (FINET) was established for the purpose of facilitating access to electricity and telephone services for rural communities and low-income families. FINET's functions include subsidizing telephone infrastructure and the supply of **telephone services** (and of electrical energy, see Section 4) in rural and low-income areas, provided that they benefit the community.¹⁸ The Law provides for the Fund to subsidize these activities using the income obtained as a result of investing its resources. The assets of the Fund consist mainly of contributions from the State, 98.5% of the resources generated by granting concessions to use the radio-frequency spectrum, and all the resources produced by concessions for generating geothermal and hydroelectric power. In January 2002, 18 FINET-funded projects awarded by auction, with a total value of US\$1.64 million, were in progress, together with 57 projects awarded by competition for funds (*concurso de fondos*), with a total value of US\$5.54 million.

Canada – WT/TPR/S/112/Rev1

P. 73, para. 180

The Ontario Sound Recording Tax Credit is a 20% refundable tax credit for certain expenditures incurred by a qualifying corporation in the production of "eligible Canadian **sound recordings**" by "emerging Canadian artists or groups".¹⁹

P. 115, para. 82

In November 2000, the CRTC established a national revenue-based contribution collection mechanism effective 1 January 2001, whereby companies would contribute a percentage of their revenues that are considered to be contribution-eligible (Decision 2000-745). The purpose of the contribution is to fund local **telephone service** in high-cost areas in Canada (i.e. rural and remote areas). This mechanism was to be reviewed and finalized during 2002.²⁰ The authorities have indicated that, aside from subsidies to fund services in high cost areas, cross-subsidies have been eliminated in the telecommunications industry, and that the competitive services offered by the incumbent operators are not being subsidized by other monopoly or near-monopoly service offerings.

P. 122, para. 113

Following the 11 September 2001 attacks, the Canadian Government announced a Can\$160 million programme to compensate Canadian **air carriers** for losses resulting from the closure of Canadian airspace; the authorities indicated that Can\$99.3 million were actually disbursed, of which Air Canada received Can\$69.8 million.²¹ The Government has also provided indemnity for third-party aviation war-risk liability following the cancellation of this coverage by insurance underwriters. The programme was extended until 1 March 2003.

¹⁸ Electricity consumption associated with water extraction and pumping projects and with buildings used for providing educational and health services, if community owned or administered, are considered to be of benefit to the community.

Burundi – WT/TPR/S/113

P. 43, para. 81-82

The Free Zone Law provides for four types of free zone enterprise: agricultural and stock-breeding enterprises, industrial and handicraft enterprises, commercial enterprises; and service enterprises. Some activities do not qualify for the free zone regime: trade in precious metals and mineral ores; exploration, mining, enrichment, refining, buying and selling of mineral ores; and coffee-related activities such as roasting. One of the conditions of eligibility is export of the entire output (in the case of commercial firms, import and re-export of imported goods in an unaltered state or after packaging). The generation of "substantial" value added (of at least 35 per cent) is a condition applicable to agricultural and stock-breeding, industrial and craft enterprises in free zones. The service enterprises eligible for free zone enterprise status are those intending to provide one or more of **the following services**: assembly of computer equipment; software manufacture; packaging for export; printing and publication; production and distribution of cinematographic films; sound recording; and organized tourism services. Both foreign and domestic investors may obtain free zone status. An advisory commission set up by the Ministry of Trade and Industry is responsible for free zone enterprises.

The tax benefits granted by the decree-law are total exemption from existing or prospective indirect taxes, from registration fees and stamp duties, and from profits tax during the first ten years of operation, followed by a regime in which the taxation rate is reduced to 15 per cent instead of the standard 40 per cent rate. Any free zone enterprise that has created more than 100 permanent jobs for Burundian nationals is subject to a 10 per cent profits tax, and any free zone enterprise which reinvests at least 25 per cent of the profits earned over the last ten years of its existence pays 10 per cent less than the standard rate. Commercial free zone enterprises are liable to a 1 per cent turnover tax, this rate being reduced to 0.8 per cent in cases where the enterprise creates more than 20 permanent jobs. The dividends distributed to shareholders are exempt from all taxes during the lifetime of the company. Free zone enterprises are also exempt from the 3 per cent tax on the wages of foreign workers.

P. 87, para. 110

Bujumbura's **hotels** have a capacity of 1,067 beds. The State intervened in this sub-sector by participating in the capital of the Novotel and Source du Nil hotels and the Lake Tanganyika Club. The Club has been privatized, while the Source du Nil is in the process of privatization. The Government has signed an agreement with the hotel chain Accor for the management of Novotel. Outside Bujumbura, there are hotels at Kayanza, Ngozi, Gitega, Muyinga, Cankuzo and Kirundo. The national park of Ruvubu has its own eco-tourism camp. Foreign nationals must pay their hotel bills either in foreign currency or in Burundi francs purchased through official channels (a certificate must be provided by the bureau de change). Prices can be set freely. The Government is not systematically evaluating the performance of the hotels and has not yet developed a hotel classification system.

Southern African Customs Union – WT/TPR/S/114

P. A1-96, para. 50 (Botswana)

Although there are no universal service provisions in the **Telecommunications** Act, BTA is responsible for implementing government policy on such services and on special tariffs for disadvantaged users. The Government is currently formulating a new universal service policy to replace existing subsidies paid annually to BTC, under the Rural Telecommunications Programme, to

provide basic services to rural users. BTA is developing a programme based on a universal service fund, and is proposing legislative changes.

P. A1-103, para. 80 (Botswana)

Tourism became eligible for government support under the Financial Assistance Policy (FAP) in 1996 (Financial Assistance Policy (FAP-Tourism), 1996). However, this scheme has recently been discontinued and replaced by the Citizen Entrepreneurship Development Agency (CEDA), which also covers tourism.

P. A2-147, para. 57 (Lesotho)

In 2002, the Lesotho Government enacted the Tourism Act, 2002²², which establishes the Lesotho Tourism Development Corporation (LTDC), a 51% government-owned corporation with wide powers, including the designation of **tourism** development areas and provision of financial assistance in the shape of grants, loans or tax exemptions for tourist development. The LTDC is chaired by the Director of Tourism and has a Board comprising representatives of Government, local associations, and the private sector.

P. A3-180, para. 39 (Namibia)

Farmers benefit periodically from emergency drought relief. In 2002/03, for example, N\$1.5 million was given to livestock farmers north of the veterinary Cordon Fence in the form of a subsidy of N\$150 per head for cattle delivered to the abattoirs. The Meat Board administered the scheme on behalf of the Government. Drought relief costing N\$36.4 million was provided from April 1996 to November 1998,²³ and again in 1998-99 at a cost of N\$2.1 million.²⁴ Marketing incentives (subsidies) were paid to farmers at N\$15 or N\$100 per animal sold, depending upon size, to encourage farmers to reduce stock levels. A restocking scheme to replace breeding animals sold during the drought also paid N\$13 or N\$70 per head. **Transport** subsidies of N\$3.77 per kilometre were paid to contractors transporting animals to markets.

P. A3-202, para. 62 (Namibia)

After announcing in 1999 that new entrants would be allowed by 2000, the Government extended the timetable to 2004 at the latest, when the telecommunications market would be fully opened. Namibia is a founding member of the Telecommunication Regulators' Association of Southern Africa (TRASA), inaugurated in September 1997 among SADC nations.²⁵ The Government approved a Telecommunications Policy and Regulatory framework in 1999 along the lines of the SADC Protocol on Transport, Communication and Meteorology, and the Model Regulatory Framework for Telecommunications. From 2002 until 2004, the Government may defer competition in any market segment for socio-economic reasons. The Government will establish a Universal Service Fund to finance universal services, such as basic **telephone services** in rural areas. All telecommunications equipment should comply with the National Operators Network and have type approval from the Namibian Communication Commission.

²² Act No. 4 of 2002.

²³ WTO document G/AG/N/NAM/7, 12 July 1999.

²⁴ WTO document G/AG/N/NAM/11, 12 May 2000.

²⁵ Other founding members are Botswana, Mozambique, South Africa, Tanzania, and Zambia.

P. A4-283, para. 81 (South Africa)

Overall policy in road transport is the responsibility of the DoT. The planning, construction, and maintenance of roads and bridges, other than those under SANRAL or local governments, are the responsibility of the provincial governments. Streets are the responsibility of metropolitan, district or local communities. The bulk of the road and street system is financed by national and local taxes, but SANRAL operates 600 km of state toll roads, and has concessioned 1,300 km to private consortia which toll those roads. While legislative and executive powers for public transport are a provincial competency, the DoT is responsible for policy formulation, monitoring, and strategic implementation. The DoT is currently working on redesigning the subsidies scheme for public transport, so as to redress the current practice of paying subsidies to **buses and commuter rail**²⁶, to the exclusion of the taxi industry, and of subsidizing only about 35% of the commuting public. The National Land Transport Transition Act (Act No. 22 of 2000)²⁷, provides for a new system of 'permissions' to replace permits for taxi and bus transport, and is meant to lay the foundation for a fully integrated, long-term, user-orientated land transport system. Both DTI and DoT are engaged in a major initiative to recapitalize the **taxi** fleet.

P. A4-284, para. 86 (South Africa)

The Industrial Development Corporation (IDC) currently provides medium-term finance in the form of loans, suspensive sales, equity and quasi-equity for the development and expansion of the tourism industry (Table AIII.1). Also, the Department of Trade and Industry (DTI) provides the subsector with the Small and Medium Enterprise Development Programme (SMEDP)(Chapter III(4)(ii)). According to the authorities, other than exchange control and immigration regulations, there are no barriers to foreign entry.

Table AIII.1
Incentive schemes, January 2003

Name of scheme	Objective	Access criteria	Description
(...)			
Capacity Building Support for Retail Finance Intermediaries (RFIs)	To provide capacity building support to new RFIs to initiate a loan portfolio and to assist existing RFIs to expand their loan portfolios.	To qualify, an RFI must: - be legally constituted; - have clearly defined SMME target markets; - have sound accounting and financial systems; - have sound internal organizational guidelines, policies and procedures; - have capacity to carry out current and proposed projects; - have clear and achievable short and medium term objectives.	Support will be structured around the capacity needs to the RFIs. The grants range from R 10 000 to R 500 000.
(...)			
Seed Loans for Retail Finance Intermediaries (RFIs)	To provide initial capital to new organizations to initiate their portfolio, and to fund operational expenses over a predetermined period.	To qualify and RFI must: - be legally constituted; - have clearly defined SMME target markets; - have sound accounting and financial systems; - have sound internal organizational guidelines, policies and procedures; - have capacity to carry out current and proposed projects; - have clear and achievable short and medium term objectives; - have matching funds of at least 15% of envisaged operating expenses.	The amount ranges between R 50 000 and R 20 million. Seed loans are converted to grants once mutually agreed upon performance criteria are met.

²⁶ In the Department's budget for 2002/2003, the allocation for buses and rail amounts to R 37 million (National Department of Transport, 2002b).

²⁷ This has been amended by the National Land Transport Transition Amendment Act (Act No. 31 of 2001).

New Zealand – WT/TPR/S/115

P. 77, para. 36

New Zealand grants subsidies to **education, broadcasting, film production, land transport, air transport, business, and tourism services**.²⁸ Most domestically produced services, with the exception of some financial services, are subject to the GST. Financial services, with the exception of most insurance services (GST does not apply to life insurance and reinsurance), are exempt from GST because of the difficulty of levying the GST on this type of service. This exemption is under review and the proposal is that the business-to-business supply of financial services will be zero-rated instead of exempt.²⁹

Morocco – WT/TPR/S/116

P. 27, para. 75

Exporting enterprises are exempt from corporation tax (IS) and the general income tax (IGR) for a period of five years, after which there is a 50 per cent reduction in these taxes. For enterprises exporting **services, including hotels**, the exemption or reduction only applies to turnover in foreign currency. Enterprises established in prefectures or certain provinces covered by a decree and handicrafts enterprises are eligible for a 50 per cent reduction in the IS or IGR for a period of five years.

P. 58, para 131

The 1995 Investment Charter gave investors additional benefits (Chapter II(6)). In 2000, the Government also established the Hassan II Fund for economic and social development³⁰ which, *inter alia*, promotes investment in certain industrial sectors.³¹ It contributes up to 50 per cent of the purchase price of industrial land and up to 30 per cent of the cost of building business premises.³²

P. 87-88, par. 101-102

In view of **tourism's** importance, the Government is seeking to promote investment, for which benefits are available under the Investment Charter, the Hassan II Fund, the Finance Laws, and special provisions (Table IV.5). A reduction in VAT for hotels is under consideration.

On 10 January 2001, a framework agreement was signed between the Government and the General Confederation of Moroccan Enterprises (CGEM) reaffirming that tourism was a national priority and defining several objectives for the coming decade, including an increase in the number of

²⁸ For a full description of these programmes see WTO document S/WPGR/16/Add.2, 23 July 1997.

²⁹ GST and Financial Services [Online]. Available at: <http://www.taxpolicy.ird.govt.nez/publications/files/html/gstfinserv/cl.html> [20.11.2002].

³⁰ Decree No. 2-00-129 of 16 March 2000 establishes the trust fund No. 3.1.04.04 called the "Hassan II Fund for economic and social development"; Dahir No. 1-02-02 of 29 January 2002 enacts Law No. 36-01 creating the Hassan II Fund for economic and social development and its implementing Decree No. 2-02-93 of 12 March 2002.

³¹ For example textiles (spinning, weaving and finishing); electronics; clothing and knitted and crocheted articles; automobile sub-contracting (manufacture of automobile components and precision engineering); leather; **tourism**; fishing; **environmental protection through the treatment, recycling and industrial use of waste**.

³² The contribution to the cost of the land is based on a maximum price of DH 250/m² and the cost of building on a maximum cost of DH 1,500/m². The contribution may be 100 per cent if it only concerns purchase of land.

tourists to 10 million by 2010. The implementation of these objectives has been codified in the Implementation Agreement signed on 29 October 2001, which constitutes the operational charter for the new tourism policy (called "Vision 2010").³³ The following are some of the measures taken to achieve the objectives: liberalization of land ownership and State participation in the cost of purchasing land (through the Hassan II Fund); tax exemptions and simplification; better training and a more professional approach in tourism-related occupations; facilitation of access to financing; increased resources for promoting tourism; restructuring of the Moroccan National Tourism Board (ONMT)³⁴; availability of special financing for the renovation of hotels; liberalization of air transport; and the creation of a strategic steering committee. At the legal level, two decrees have recently been adopted on the classification of hotels and the status of tourist facilities; a new text regulating tourist transport, independently of the text on passenger transport, is under consideration.³⁵

Table IV.5
Indicative framework for investment in tourism

Taxes	Description
Registration tax	Reduction in the fees for establishing tourism companies, with a rate of 0.5 per cent for registration duties. Exemption from registration fees for purchase deeds for land to be used for investment projects within a maximum period of 36 months. Reduced rate of 1 per cent for registration fees for emphyteutic leases on properties to be used for hotels and accessory buildings. Reduced registration fees for the sale of businesses.
Customs duties	Exemption from customs duties for investment of DH20 million or more under agreements concluded with the Government.
IS and IGR	Total exemption from IS or IGR on the part of the taxable base corresponding to the turnover of hotel companies in foreign currency over a period of five years and a 50 per cent reduction as of the sixth year. Reduction of 50 per cent in the IS for five years for all companies setting up in the following provinces <i>inter alia</i> : Larache, Nador, Tangiers, Asilah, Tetouan. Reduction of 50 per cent in the IS, without any time limit, for any company setting up in the province of Tangiers, which can be combined with the aforementioned benefits.
Other benefits	Free convertibility guaranteeing foreign investors total freedom to transfer tax-free profits (capital, capital gains and income). Total exemption from the business tax and the urban tax for a period of five years for investment in creating an enterprise and for any additional investment. Reduction of 100 per cent on dividends and other yields from holdings received by companies. Reductions and exemptions for capital gains and profits made when disposing of or selling fixed assets. Ceiling of DH50 million for the basis used to calculate the rentable value of taxable investment.

Source: Information provided by the Moroccan authorities.

P. 93, para. 120

In order to lower transport costs, the Government has granted several tax benefits, for example, exemption from VAT, with the right to deduction, for **international transport operations and the supply of related services**; exemption from VAT for the import of motor coaches, lorries and capital goods needed for TIR activities; exemption from VAT, with the right to deduction, for the purchase of motor coaches, lorries and related capital goods; imposition of a minimum customs tariff (2.5 per cent) on imports of trailers for the transport of textiles and clothing products for export;

³³ "Vision 2010" fixes precise targets, for example, reaching a figure of 10 million tourists by 2010, the provision of 80,000 additional rooms, DH30 to 40 billion in investment in hotels, generation of DH80 billion in foreign currency earnings annually, and the creation of 600,000 new jobs.

³⁴ A draft law on the restructuring and organization of the ONMT has already been prepared.

³⁵ Decree No. 2-01-186 of 5 March 2002 amending and supplementing Decree No. 2-81-471 of 16 February 1982 establishing classification of tourist facilities, and Decree No. 2-02-640 of 9 October 2002 implementing Law No. 61-00 on the status of tourist facilities.

refund of VAT on diesel fuel to public road transport companies; and extension of the deduction of VAT on diesel fuel to enterprises engaged in the road transport of goods on their own account.

P. 98, para. 149

An offshore financial centre, which is composed of **banks and portfolio management companies and holdings**, is situated in Tangiers. Only subsidiaries and branches of well-known international banks, with minimum capital or allotment of US\$500,000 may be set up there. Offshore banks are exempt from registration and stamp duty when constituting or increasing capital or purchasing property for leasing. They are also exempt from VAT on the purchase of capital goods and supplies needed for conducting their activities, duties and taxes on the import of equipment, furniture and capital goods needed for their operations. Dividends paid out to shareholders, interest on customers' deposit accounts and investments and on loans granted by offshore banks are also exempt from levies. Offshore banks benefit from optional imposition of corporation tax (IS) for the first 15 years following the date of issue of approval at a rate of 10 per cent, or a flat rate tax fixed according to the equivalent value in DH of US\$25,000, free of any other tax on profits or revenue; for offshore holdings, the flat rate tax is the equivalent in DH of US\$500 for the first 15 years after their establishment; after that period, they are subject to IS according to the ordinary law regime.

Indonesia – WT/TPR/S/117

P. 31, para. 48

Investment incentives apply to all, including foreign, investors. They include duty and VAT concessions on imported inputs and capital goods, and additional incentives for export-oriented investment as well as investment in certain regions (e.g. eastern Indonesia). Special investment incentives, such as income tax, value-added tax, and luxury tax exemptions, may also be approved by BKPM on a case-by-case basis.³⁶ The criteria for granting tax holidays, of up to eight years, for new investors in designated "pioneer" industries, such as capital goods, **sea and air transport**, and agri-businesses, were clarified in 1999³⁷; these measures were largely eliminated under the IMF package in January 2000.

P. 85-87, para. 69-71

The Government has acquired equity in recapitalized private **banks**: four banks taken over by IBRA and seven joint national domestic banks (Table IV.3).³⁸ All seven state banks also needed substantial recapitalization and restructuring; four of them (Bank EXIM, BDN, BBD, and Bapindo) were merged to become Bank Mandiri in September 1998.³⁹ State ownership of banks has increased substantially, and now dominates the sector (almost 85% of total third-party bank liabilities and three-quarters of the sectors' assets at end 2001). State bank divestment has lagged. It was initially due to be completed by end 2001 with BCA and Bank Niaga being divested in 2000; at end 2001, only 32.5% of BCA had been divested (10% to the public).⁴⁰ However, in 2002, IBRA sold a 51% stake (out of a total state share of 97.2%) in Bank Niaga for Rp 5.6 trillion to a joint-venture, and 40% (out of total state share of 70.3%) of BCA. Bank Bali was also merged with four weak recapitalized banks (Bank Universal, Bank Patriot, Bank Prima Express, and Bank Artamedia) to form Bank Permata in September 2002. In early 2002, the Government presented a comprehensive plan to Parliament for

³⁶ U.S. Embassy Jakarta (2001a).

³⁷ Presidential Decision No. 7, Evaluation Criteria for Taxation Facilities in Particular Industrial Fields.

³⁸ Of the 13 banks taken over by IBRA, nine were merged with Danamon in 2000, and BCA, Niaga, and Bali were recapitalized.

³⁹ The other state banks (BNI, BTN, and BRI) have continued operations subject to recapitalization and restructuring. The four state banks accounted for some half of total banking assets at end 2001.

⁴⁰ Bank Bukopin was fully divested in late 2001 by the original owners exercising share option rights.

divesting remaining banks by 2004, including majority stakes in Bank Lippo and Bank Danamon, and of 30% of Bank Mandiri, in 2002.⁴¹ The Government's latest timetable, announced in November 2002, is to divest at least 51% of Bank Danamon in early (March) 2003 by placement with a strategic partner, and to sell (as yet unspecified) shareholdings to the public in Bank Lippo, Bank Mandiri, and Bank International Indonesia.⁴²

P. 95, para. 102

The Directorate General of Land Communications (Ministry of Communications and Information) is responsible for road and rail transportation. Transportation of dangerous goods, special goods, and heavy-duty equipment is regulated, including by technical requirements. Transport border crossings were informally established with Malaysia, Brunei Darussalam, and Papua New Guinea in 2002. Transport border crossing regulations apply to both goods and passengers, and cabotage restrictions apply. Foreign investment is prohibited in public transport (taxi and bus services). The Government subsidizes **passenger rail and bus (economy) travel**, but intends to phase out such subsidies gradually.

P. 97, para. 110

International **tourism** is increasingly important for Indonesia, particularly for Bali where one third of the economy depends directly on tourists. Nationally, there were approximately 5.1 million visitors, accounting for 9% of total exports (in value terms), in 2001.⁴³ However, the industry has suffered severely from several recent developments, including the political upheavals during 1998 and the East Timor crisis in 1999. The industry was again hit by the 11 September 2001 events in the United States, which adversely affected global tourism, and the bombing in Bali in October 2002. Occupancy rates at hotels in major tourist destinations have declined recently from already low levels to around 30%; in Bali they dropped from 60% to below 10% after the bombing. The Government implemented various rescue (in late 2002), rehabilitation (first half of 2003) and normalization programmes (second half 2003). The rescue programme included special support arrangements and additional overseas export promotion. Bali tourism is beginning to rebound. Most foreign tourists, especially in Bali, are Japanese, Australian, or Taiwanese.

Niger – WT/TPR/S/118

P. 44, para. 64-65

Enterprises which invest in one of the activities covered by the Investment Code are eligible for tax and customs incentives during the investment phase and for five years during the operating phase, depending on the approval regime applicable – A, B or C (Table III.3). The sectors covered by the Code are production or processing of primary agricultural, livestock or fisheries products, production for export, mining or processing of quarrying products or mineral substances (access to which is subject to the Mining or Petroleum Codes, where applicable), **air transport**, and the **building of hotels or social housing**. Investment in the production of handicrafts⁴⁴, **cultural and**

⁴¹ Parliament established a special committee to oversee each bank sale.

⁴² Indonesia's latest agreement with the IMF included launching the sale of majority stakes in Bank Danamon (for conclusion by end 2002) and in Bank Lippo by July, to be finished December 2002. The majority divestment of Bank Niaga was to be completed by 15 September 2002 (see IMF, 2002d).

⁴³ World Bank (2002).

⁴⁴ Investment of CFAF 2 to 25 million; exemption from tax on industrial and commercial profits (BIC), the minimum fiscal tax (IMF), the business licence fee, and property tax.

artistic production⁴⁵, the building of hotels, schools and clinics⁴⁶, and technological innovation⁴⁷ may also be eligible for special incentives.

Approved investment enjoys exemption from duties and taxes on imports of material and equipment needed to set up a production unit, unless these are available locally. The benefits given during the operating phase are mainly fiscal because enterprises in Niger are subject to heavy and dissuasive taxation: the business licence fee (12 per cent), the minimum fiscal tax (1 per cent), and tax on industrial and commercial profits (45 per cent). Employers must also pay social contributions amounting to 15.4 per cent of the payroll. The benefits increase in proportion to the amount of the investment or the creation of jobs for Niger's nationals.

P. 52, para. 95-96

Niger has not notified the WTO of its various subsidy programmes, but according to the authorities it intends to do so. According to the information available to the WTO Secretariat, these programmes concern in particular the incentives under the Investment Code (section (4)(ii)), the sectoral regimes (mining, petroleum, **telecommunications**), and the agreement between the State and the company COMINAK, which exploits uranium.

Senegal – WT/TPR/S/119

P. 48-51, para. 66 and 69

The following are the sectors covered by the Code: agriculture, fishing, livestock breeding and related processing activities, storage and packaging of products of plant, animal or fish origin; manufacturing; prospecting, mining or processing of mineral substances; **tourism and other hotel-related activities; cultural activities by a small- or medium-sized enterprise⁴⁸; services provided by small- or medium-sized enterprises in the areas of** health, education, assembly and maintenance of industrial machinery and equipment; port infrastructure work; installation and management of railways. The authorities are currently examining broader sectoral coverage for the Code, including telecommunications and “new technologies” such as call centres so as to give investors access to the guarantees and benefits of the Code. (...)

Enterprises approved under the Investment Code are eligible for a number of benefits under the common regime and one or more of the four privileged regimes (Table III.3). The four privileged regimes correspond to the four priority objectives of the Investment Code: the promotion of small- and medium-sized enterprises (SMEs); the upgrading of local resources through processing in Senegal; the development of technological innovation through research or the use of research findings; and the establishment of economic activities in regions in the interior of Senegal.⁴⁹

⁴⁵ Exemption from duties and taxes, including VAT, except for the statistical charge, on cinematographic production equipment and building materials, tools and equipment produced locally or imported and utilized on one single occasion, where equivalent local products are not available, provided that they are used directly for the purposes of the investment.

⁴⁶ Minimum investment of CFAF 50 million; during the installation phase, exemption from duties and taxes, including VAT, except for the statistical charge, on materials, tools and equipment produced locally or imported where equivalent local products are not available.

⁴⁷ Fiscal rebate of two thirds of the cost incurred in purchasing or finishing the innovation and of BIC for the fiscal year following that in which the innovation is introduced.

⁴⁸ Defined in Article 17 of the Code. A small- or medium-sized enterprise is one that invests CFAF5 to 200 million, creates at least three jobs for Senegalese nationals, and keeps proper accounts.

⁴⁹ Zone A includes the city of Dakar and its surroundings; Zone B covers the rest of the Dakar region and the region of Thiès; Zone C includes the regions of Diourbel, Louga and Kaolack; and Zone D covers the regions of Fatick, Kolda, Tambacounda, Ziguinchor and Saint-Louis.

Although Senegal has not notified the WTO of any trade-related investment measure, one of the conditions of approval of projects under the privileged regime for the upgrading of local resources through processing in Senegal is that 65 per cent (in value terms) of intermediate consumption should be of Senegalese origin or that the cost of imported products should represent less than 35 per cent of the total cost of the products obtained after processing in Senegal. The Senegalese authorities indicate that there is no exhaustive list of enterprises benefiting from this regime.

Honduras – WT/TPR/S/120

P. 21, para. 31

Honduran legislation grants fiscal incentives for investment in certain **tourism** projects (see Chapter III(4)(v)).

P. 67-68, para. 157-161

As explained in section (3)(iv), Honduras has two schemes providing fiscal incentives for exporting goods. The Law on Tourism Incentives (Decree No. 314-98 of 18 December 1998), including its amendments, also offers a range of fiscal incentives to encourage national and foreign investment in the development of the tourism sector.

Enterprises eligible under the Law on Tourism Incentives are companies located in areas deemed by the Honduran Tourism Institute to have tourism potential, which are engaged in activities directly related to **tourism** and which provide services such as accommodation (e.g. hotels, lodges and time-share apartments); inward tourism; **air and water passenger transport; vehicle rental; and recreation**, with the exception of casinos, nightclubs or private clubs, discotheques, games rooms, cinemas or television rooms, billiard parlours, gymnasiums, saunas and the like, Internet cafés and teaching centres. **Convention centres** and Honduran craft workshops and **shops** are also eligible for incentives under the Law.

The Law on Tourism Incentives provides 10-year income tax exemption for projects that are "new", i.e. projects by Hondurans or foreigners "that do not involve expansion, remodelling, change of ownership, or the like".⁵⁰ Moreover, beneficiaries under the Law pay no duty or other taxes on imports of printed materials for the promotion of tourism projects or of Honduras as a tourism destination; new motor vehicles for sole use within the enterprise; new and used aircraft and boats; new goods and equipment needed for tourism construction and the launching of tourism projects (with a few exceptions); and replacement goods and equipment for a period of 10 years.

Expansion, remodelling or replacement projects carried out by established entrepreneurs whose activities fall within the scope of the Law are also eligible for the above benefits, with the exception of income tax exemption. The Law further provides that persons whose activities are not directly related to tourism but who invest in new projects involving the remodelling or expansion of convention centres or hotels may deduct up to 15 per cent of their investment returns for tax purposes over a period of 10 years.

The Ministry of Tourism authorizes the granting of benefits under the Law on Tourism Incentives. Those interested in making use of the Law must apply to the Ministry with full details of the project they wish to develop. Before issuing its final decision, the Ministry consults other government bodies, including the Honduran Tourism Institute.

⁵⁰ Article 5 of the Law on Tourism Incentives.

Bulgaria -- WT/TPR/S/121

P. 67, para. 88

"Free trade zones" were originally established in Bulgaria in 1987. The Customs Act of 1998 redefined them as "free zones".⁵¹ Currently six such zones exist. Free zones are formally part of Bulgaria's customs territory but separated from it by fixed checkpoints. Import duty and VAT are not paid on imported goods entering free zones unless they are released for sale in Bulgaria, while Bulgarian goods may be stored in free zones without payment of VAT. Goods leaving a free zone may be exported or re-exported from Bulgaria or be brought into another part of the customs territory of Bulgaria. The perimeter and the entry and exit points of free zones are subject to supervision and control by the customs authorities. **Handling, storage, and warehousing** are the most common activities, but goods may be admitted to the free zones for inward processing or processing under customs control, as temporary imports, or under the normal import regime.

P. 70, para. 101-102

According to the authorities, state aid is provided for purposes of compensating high production costs in key economic sectors that have considerable social implications, such as the **energy and transportation sectors**, and for other social considerations, such as aid to the poor, producers in mountainous regions, employment promotion, and environmental protection.

In line with the Government's conservative fiscal stance, the amount of state aid offered has declined both in absolute and relative levels in recent years. As a percentage of GDP, state aid declined from 3.3 in 1999 to 0.7% in 2001. Similarly, direct subsidies have declined, from 2.5% of GDP to 0.6% in 2002. The mining and transport sectors have benefited the most from state aid; with assistance for the production of coal (29.5%) and provision of transport services (29.0%) accounted for almost 60% of the total in 2001.

Guyana – WT/TPR/S/122

P. 53-54, para. 84

Guyana applies a number of incentive schemes; some are applied across-the-board and are contingent on an investor meeting specific criteria or making certain investments. The incentives, include benefits for industrial estates, accelerated depreciation, flat business tax rate, export allowances, loss carryforward, construction allowance, and research and development allowances. Guyana also offers several sector-specific programmes. In this respect, tax and tariff incentive programmes are available to promote trade and investment in **tourism**, fisheries, mining, forestry, manufacturing, and agriculture (Table III.10). Locals and foreigners are treated alike with respect to these incentives.

P. 93-94, para. 157

In the 2002 Budget Speech the Government announced plans to enhance the contribution of the tourism sector through, *inter alia*, the abolition of the 10% room tax for tourism facilities that are deemed to be resorts.⁵² The Government of Guyana is encouraging an increase in the number of hotel rooms and improvement in existing plant and other facilities in the **tourism** sector. To facilitate this

⁵¹ The main legislation is Decree No. 2242 of 1987 (*State Gazette* No. 55/1987, amended in No. 153/1998); the Customs Act, 1998, Article 166-179 and its implementing regulation, Article 620-653; the VAT Act, the Excise Act, and their implementing regulations.

⁵² Ministry of Finance (2002a), p. 50.

growth, the government has made available a package of incentives. This comprises mainly duty-free and consumption tax concessions for basic furnishings, plant, equipment, and building materials. In order to qualify for duty and consumption tax exemption an applicant must provide, *inter alia*, a project profile or business plan and an environmental impact assessment. Duty-free concessions will be limited to 25% of the value of the investment for refurbishing, and 50% of the value of investment for new facilities or expansion.

Thailand – WT/TPR/S/123

P. 58-59, para. 84

In August 2000, the BOI undertook various reforms in its investment incentive schemes⁵³:
(...)

- The BOI selected five targeted industries: agri-business, automobiles, fashion, electronics, and **high-valued services**⁵⁴; these industries appear to be eligible for exemptions of import duties on certain machinery and a corporate tax holiday for eight years, irrespective of the location of the project.⁵⁵ (...)

P. 79, para. 41

Several government institutions were formed to help rehabilitate the financial sector. The Financial Sector Restructuring Agency (FRA), under the Ministry of Finance, was established in 1997 to determine the viability of 56 suspended debt-laden finance companies and to review their rehabilitation plans. These firms (with total assets of B 860 billion or 11% of the financial sector) were liquidated, and asset auctions completed in late 1999. The state-owned Asset Management Corporation, established in 1997, purchased some of these assets as "bidder of last resort"; its assets totalled B 25.8 billion at end of 2000. The Financial Institutions Development Fund (FIDF), established in 1985 to rehabilitate distressed institutions, was instrumental in taking over and re-capitalizing/restructuring troubled **banks**. It has also provided a blanket guarantee for depositors and non-subordinated creditors of every financial institution incorporated in Thailand since 1997. The authorities plan to establish the Deposit Insurance Agency (DIA) to operate a limited deposit insurance scheme when the economy and financial sector achieves sustainable growth and stability. Draft legislation establishing the DIA is being considered by the Ministry of Finance.

P. 88, para.81

Urgent tourism development measures, aimed at raising annual tourism earnings by B 50 million, were introduced in April 2001 to stimulate the economy. The package included preventing attractions from deteriorating, improved immigration procedures, and market promotion. The Committee for National Tourism Development, chaired by the Prime Minister, was formed in 2001 to prepare tourism plans and policies. Government promotion is directed at attracting long-stay tourists. The average length of stay of international visitors is eight days. The Government is revising the Hotel Act of 1935 and introducing a hotel grading system. The Board of Investment offers tax and other investment incentives for **hotels** with more than 100 rooms, and is considering

⁵³ According to Board of Investment Announcement No. 1/2543 (1/2000).

⁵⁴ BOI Bulletin No.68/45, 10 April 2002 "BOI Targets Five Industries For Proactive Marketing Campaign" [Online]. Available at: http://www.boi.go.th/english/focus/boi_pr_target_industries02.html.

⁵⁵ These incentives also seem to apply to enterprises engaged in other priority activities. Priority activities are: agriculture and agriculture products; technological and human resource development; public utilities and infrastructure; environmental protection; and targeted industries.

granting special privileges to foreign investors in certain types of accommodation, such as retirement homes.

Chile – WT/TPR/S/124

P. 54, para. 149

The Fund for the Promotion and Development of Remote Areas, instituted in 1980, has as an objective to contribute to the development of various provinces in Chile's extreme north and south by providing assistance to small- and medium-sized enterprises investing there. Funds are accorded only to producers of goods and services in the **construction**, machinery, equipment, special animal feed, and small-scale fishing industries. Annual individual investment must not exceed U.F. 50,000, equivalent to US\$1.3 million. Funds granted under this programme may not be accepted together with any other public benefit granted for the same goods or services. Pursuant to Law No. 19.606 of 30 March 1999 the Fund contributes 20% of the cost of the investment or reinvestment in projects carried out until 31 December 2007. The amount paid out in 2002 was Ch\$1,422 million, equivalent to US\$2.3 million.

P. 81, para. 121

In 1994, the Chilean Government established the Telecommunications Development Fund to encourage improved telecom service to rural and low income areas. The original goal of the fund was to provide public telephone service to about 6,000 unserved localities, a target that was met over the five-year period 1995-99. After this objective was achieved, the government redefined the fund to support community telecenters, which offer various kinds of **communication services, including internet access**, to the public. An initial target is to install telecenters in about 90 municipal towns with over 8,000 rural inhabitants. By 2006, there would be telecenters in all 341 municipalities. The Fund is administered by Subtel and financed by contributions from the government budget.

Turkey -- WT/TPR/S/125

P. 68, para. 114

Few changes have been introduced to the overall Turkish investment incentive programme, which became region- rather than sector-specific in 1993.⁵⁶ The Programme for Incomplete and/or Operating Enterprises was abolished on 30 June 2001. There are two main investment encouragement programmes: the General Investment Encouragement Programme (GIEP), and Aids Granted to Small and Medium-sized Enterprises (SMEs) Investments. The purpose of these programmes is to encourage and orient investments, in order to reduce regional imbalances within the country, and create new employment opportunities, while using technologies with greater value added. To qualify for any of these programmes, potential investors have to apply for an investment incentive certificate, which is non-transferable. In addition, regional programmes, designed to address specific needs of under developed regions, are put into force for specified periods as necessary.

⁵⁶ Several incentive schemes run in parallel to the general investment aid programme. These include assistance provided to exporters (such as duty concessions, export finance, insurance, guarantee, promotion, and marketing assistance) (section (3)(v)), to the agriculture sector (including input subsidy payments), to the **energy** sector (such as subsidies for the production of hard coal), to **maritime** (tax incentives), and to **tourism** (including corporate income tax exemption). See Chapter IV for details.

P. 68-69 para. 116

Under the Aids Granted to SMEs, companies entitled to receive investment incentives are those: operating in manufacturing, agri-industry, **tourism, education and health**, mining, and **software** industries; employing up to 250 workers; and holding assets not exceeding TL 600 billion. The incentives are the same as under the GIEP, except that different ceilings are set for the amount of credit to be allocated and the interest rate to be applied depending on the regional location of the investment.⁵⁷

P. 108, para. 98

The BSRP also aims to promote a healthier financial situation among private banks through the implementation of internationally accepted minimum capital requirements. In February 2002, the BRSA announced a new plan to recapitalize **banks** after a strict three-level audit of the 26 major private money deposit banks.⁵⁸ Prior to the audit, all banks have to switch to inflation adjusted financial statements. The next phase of the plan involves the possible use of public money but with incentives to maximize shareholders' contributions⁵⁹, as well as to merge with other banks. Furthermore, the plan seeks to accelerate new lending by requiring that a portion of any public funds be on-lent to non-related parties.

P. 114-115, para. 128

Special tax incentives are provided to Turkish investors in the maritime subsector. The wages of seafarers working on ships registered under Turkey's International Ship Registry are exempted from income tax and funds; and revenues gained from operating and transferring **ships** registered under Turkish International Ship Registry, are exempted from personal income and corporate income tax. Profits from non-operation activities are not covered by the exemption. Book profits resulting from sales of vessels can be deducted from the purchase price of the same kind of replacement vessels within three years and after deducting the realized depreciation amount.⁶⁰

P. 116, para. 138

Turkey's railway system consists of over 10,000 km of track.⁶¹ The share of railways in total transport has diminished over the years, to 4% of freight and 2% of passenger transport. The Turkish State Railways (TCDD), a state-owned enterprise affiliated to the Ministry of Transport (MT), has *de jure* monopoly in providing railway passenger and freight transport services. It owns and operates the whole **railway** system, together with seven ports that have rail access (i.e. Haydarpaşa, Mersin, Iskenderun, Derince, Izmir, Samsun, and Bandırma). There are no private rail operators. TCDD has freedom to introduce fares on a market basis or to increase them, after verbal approval by the MT.

⁵⁷ The investment credit limit allocated to SMEs is TL 300 billion, with a 10% interest rate in priority development regions and 15% in other regions, and maturity of four years. The operational credit limit for SMEs is TL 120 billion, with a 15% interest rate in the priority development regions and 25% in other regions, and maturity of two years. With the investment credits, no repayment is made in the first year.

⁵⁸ The auditing stage was completed in mid-June 2002. The first two audits were made by major audit firms (the first chosen by the bank itself and the second by the BRSA), and the third by BRSA.

⁵⁹ Three banks were assessed to have capital needs: the administration of Pamukbank was assessed to have a capital deficit of US\$2 billion as of December 2001, and was taken over by the SDIF; the capital of Sekerbank was increased by its shareholders; while Vakıflar Bankası was given a subordinated loan amounting to TL213.3 trillion by the SDIF upon a resolution of the BRSA.

⁶⁰ Turkish International Ship Registry Law No. 4490 of 16 December 1999, Article 12.

⁶¹ During 2001-05, the objective is to set up 185 km of new tracks, renew 1,800 km, and complete 180 km of signalling works and 160 km of electrification (Undersecretariat of State Planning Organization, 2001).

The construction of new railway infrastructure and ports is the responsibility of the Directorate General of Ports, Railways and Airports Construction of the MT. In 2002, TCDD received government subsidies amounting to TL 266.8 trillion for: track maintenance and repair, in accordance with Law No. 233 and TCDD's main statutes; uneconomic lines, under Decree No. 7-11254 of 23 January 1976; express trains; and **ferry traffic** on lake Van. Subsidies paid to TCDD totalled TL 197.8 trillion in 2001 (124% of TCDD's revenue for operational activities and 19% of total railway expenditure).

P. 118, para. 144

The Turkish Government remains active in the **tourism** subsector. It grants incentives for tourism investments in accordance with the Tourism Encouragement Law; provides infrastructure and public services for tourism; defines zones with high tourism potential; promulgates designated tourism centres or areas by decree; elaborates and approves land-use plans; conducts environmental controls; promotes the country abroad; carries out research and collects statistics; and provides vocational training. Local administrations are responsible for similar matters at the local level. Investors in the tourism sector also have access to incentives granted under the general investment aid programme (Chapter III(2)(iii)(d)).

United States – WT/TPR/S/126

P. xi, par. 26

As the United States is among the world's largest producers, exporters, and importers, domestic support although not targeted at exports may significantly affect trade. Assistance to domestic producers may take the form of tax exemptions, financial outlays, and credit programmes. Since the last Review of the United States, there have been sizeable financial transfers in **air transport** and agriculture. In air transport, government financial support was extended to U.S. carriers in the aftermath of 11 September 2001. In agriculture, the Farm Security and Rural Investment Act of 2002 expanded the coverage of marketing loan provisions; and introduced a counter-cyclical income support mechanism that, although not linked to current production, increases subsidies when commodity prices fall, and vice versa. The new legislation may thus further blunt the effects of market signals on production decisions, and runs the risk of large increases in assistance in the event of price falls. Under the new Act, government payments in 2003 were expected to approach the high level of 2001; such payments had declined substantially in 2002 when commodity prices increased and virtually no ad hoc emergency payments were disbursed.

P. 80, para. 212-213

Nine of the 50 programmes notified at federal level are in favour of agriculture; five federal programmes are in favour of the aerospace and aeronautic sectors. The **energy** sector was the recipient of the largest number of notified programmes (14), mostly geared towards energy conservation, although measures to encourage the development of domestic coal, oil, and gas resources were also notified. Six programmes applied to fisheries, including subsidies for fishing vessels, research and development in management of U.S. fisheries, and conservation of marine resources. Assistance to lumber and timber was also notified, as were five programmes to encourage the extraction and processing of mineral resources, including iron ore and steel. The subsidy notification also contains a description of the Emergency Steel Loan Guarantee Act of 1999.

P. 132, para. 127

Under the Capital Construction Fund (CCF) and Construction Reserve Fund (CRF), U.S. citizens owning or leasing vessels may obtain tax benefits to construct qualified vessels. The CCF

provides tax-deferral benefits to **vessel operators** in U.S.-foreign commerce, Great Lakes, non-contiguous domestic trade, and U.S. fisheries. CCF vessels must be built in the United States and documented under the laws of the United States. The purpose of the CCF programme is to make up for the competitive disadvantage operators of U.S.-flag vessels face in the construction and replacement of their vessels relative to foreign-flag operators whose vessels are registered in countries that do not tax shipping income.⁶² The CRF is a financial assistance scheme that provides tax deferral benefits to U.S.-flag operators; eligible parties can defer gains attributable to the sale or loss of a vessel, provided the proceeds are used to expand or modernize the U.S. merchant fleet.

P. 134-135, para. 139-144

In order to assist the U.S. aviation industry after the 11 September attacks, the U.S. President signed into law, on 22 September 2001 the Air Transportation Safety and System Stabilization Act (ATSSSA), which made available funds to compensate U.S. **air carriers'** losses suffered as a result of the attacks.⁶³ Under the Act, up to US\$5 billion in compensation was authorized for direct losses incurred by air carriers as a result of any federal ground stop order issued by the Secretary of Transportation (or its continuation); and for the incremental losses by air carriers incurred beginning 11 September 2001 and ending 31 December 2001, as a direct result of the attacks. At the close of the programme on 31 December 2002, the DOT had transferred a total of just over US\$4.6 billion to 426 U.S. air carriers.

In addition to the federal grants, the Act made available to airlines up to US\$10 billion in federal loan guarantees.⁶⁴ The guarantees were to be allocated to airlines on a discretionary basis by the Air Transportation Stabilization Board, established for that purpose.⁶⁵ Borrowers had to submit their applications no later than June 2002. Approximately US\$1.6 billion in loan guarantees has been committed; the only application pending as at October 2003, was that of United Airlines.

Two distinct programmes were established under the ATSSSA to help airlines meet increased insurance costs after September 2001. The two programmes require two separate transactions and may be in effect for different periods of time. Under the first FAA Aviation Insurance Program, the FAA provides, *inter alia*, indemnity for third-party aviation war-risk liability beyond US\$50 million per occurrence, following the cancellation of this coverage by commercial insurance underwriters.⁶⁶ There is no aggregate limit to the overall disbursements, but the maximum per occurrence limit is twice the limit the carrier had in its war risk liability policy prior to 11 September 2001. Since November 2002, domestic airlines may, in addition to extended third party war risk coverage, obtain expanded coverage for war risk hull and passenger, crew, and property liability.

The second programme, also run by the FAA, consists, *inter alia*, of reimbursements to U.S. air carriers for the increase in the cost of insurance premiums, relative to the premium that was in effect at the beginning of September 2001. Payments for this support were to be made from a revolving fund established for this purpose.⁶⁷ Approximately US\$60 million was disbursed for 30 days of additional war risk premium expense immediately after 11 September 2001. According to the authorities, no further payments were being made or contemplated.

⁶² MARAD online information. Available at: <http://www.marad.dot.gov/TitleXI/crf.html>.

⁶³ The Act is available online at: <http://www.treas.gov/offices/domestic-finance/atsb/hr2926.pdf>.

⁶⁴ See for example U.S. General Accounting Office GAO (2001).

⁶⁵ The Regulations for Air Carrier Guarantee Loan Program are found in the Federal Register of 12 October 2001. Available online at: http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=2001_register&docid=f:12ocr2.pdf.

⁶⁶ Information available online at: <http://insurance.faa.gov>.

⁶⁷ The legislation is available online at: <http://apo.faa.gov/Insurance/49USC443.pdf>.

Prior to September 2001, support to the U.S. air transport industry had been confined largely to the provision of federal subsidies for service to remote areas. The main programmes were the DOT's Essential Air Service (EAS) Subsidy Programme (under which approximately US\$100 million were spent in 2002) and the grants provided to small communities under the Small Community Air Service Development Pilot Program (approximately US\$20 million), under which funds were appropriated for the first time in FY 2002 (October 2001-September 2002). Under the EAS Program a community is eligible for subsidies if it is more than 70 miles away from the nearest medium or large hub airport, and if the service costs less than US\$200 per passenger.

To cut costs after 11 September 2001, major airlines have retreated from airports in small and midsize cities. According to a recent GAO Study, new financial incentives granted by local governments since September 2001 have been the most effective instrument to attract airline services back to small communities.⁶⁸ These have consisted mostly of subsidies, revenue guarantees, and reduced airport fees.

P. 139, para. 161

The universal service provisions in the Communications Act of 1934 require common carriers, as defined under the Act, to provide access to **telecommunications services** at reasonable and affordable rates throughout the country, including rural, insular, and high costs areas, and to public institutions.⁶⁹ To finance this universal service, telecommunications companies must pay a percentage of their interstate end-user revenues to the Universal Service Fund. The contribution is revised quarterly depending on the needs of the universal service programmes. In the fourth quarter of 2003, this contribution factor was 9.2%. In 2002, universal service support needs totaled US\$5.9 billion.

P. 148, para. 199

Government-sponsored enterprises (GSEs) are private companies established and chartered by the U.S. Government for public policy purposes in the **financial sector**. GSEs include: the Federal National Mortgage Association (Fanny Mae); the Federal Home Loan Mortgage Corporation (Freddie Mac); the Farm Credit System (Farmer Mac); the Federal Agricultural Mortgage Corporation; the Federal Home Loan Banks; and the Student Loan Mortgage Association (Sallie Mae), which is on a congressionally mandated track to rescind its GSE charter. While the benefits provided to the GSEs vary according to each GSE's charter, some common benefits include an exemption from state and local taxation and potential access to a back-up credit line with the U.S. Treasury. In addition, GSE debt is eligible for use as collateral for public deposits, for unlimited investment by federally chartered banks and thrifts, and for purchase by the Federal Reserve in open-market operations. GSE securities are not guaranteed by the U.S. Government, but they are treated as government securities for certain purposes under U.S. securities laws. GSE obligations are classified by financial markets as "agency securities" and priced at yield above those on U.S. Treasuries, but below those on AAA corporate obligations.⁷⁰ The Federal Housing Enterprises Financial Safety and Soundness Act of 1992 (GSE Act, P.L. 102-550) established the current regulatory structure for Fannie Mae and Freddie Mac; other GSEs are regulated under a different legal structure.

⁶⁸ See General Accounting Office (2003a).

⁶⁹ An explanation of the U.S. universal service regime is available online at: http://www.fcc.gov/wcb/universal_service/welcome.html.

⁷⁰ Congressional Budget Office (1985), and (2003b).

The Gambia – WT/TPR/S/127P. 17-18, para. 17

Under the Investment Promotion Act, special incentives are available to encourage investment in "**priority sectors and activities (Table II.2)**". In addition to investing in these sectors, other eligibility criteria are that: investment must be organized as a company or partnership under the Law of The Gambia; the minimum investment of fixed assets must be US\$100,000 or the equivalent in local or any other freely convertible currency; and that investments are outside the free zones. Any investor satisfying the eligibility criteria may apply to GIPFZA for a Certificate of Special Investment. These certificates are valid for five years, and are renewable. In considering an application for a certificate for special investment, GIPFZA is required to carry out an appraisal of the proposed project or business to contribute to the achievement of the following objectives: (a) the generation of new foreign-exchange earnings or savings through exports, or import substitution, or service activities; (b) the use of local materials, suppliers, and services; (c) the creation of employment opportunities in The Gambia; (d) the introduction of advanced technology or upgrading of indigenous technology; (e) the contribution to locally or regionally balanced socio-economic development; and (f) any other objectives that the Agency may consider relevant for achieving the objectives of the Investment Promotion Act. It is not required for a project to meet each of these criteria. No specific benchmarks or objective indicators have been developed to date to assess the performance of a project or business against these desired objectives, giving GIPFZA a certain degree of discretion in awarding investment incentives.

Table II.2
Priority sectors and activities under the Investment Promotion Act

Sector	Qualifying activities
Agriculture	- Crops: groundnuts, cashew, sesame, cotton, cereals - Animal husbandry: livestock, poultry including meat processing, tannery, export of live animals - Floriculture and horticulture, agro-processing
Fisheries	- Aqua-culture: fish and shrimp farming - Fishing and fish processing at industrial level
Tourism	- Eco-tourism: national heritage and others - Up-country tourism: motels, tourist camps, sport fishing, river cruising - Hotel development for a 4 or 5 stars
Forestry	- Development of private/community forest parks agro-forestry plantation
Manufacturing	- Assembling and packaging processing - Foundry and forging - Light pharmaceuticals and cosmetics
Energy	- Electricity generation and distribution - Renewable energy sources: solar, wind, hydro-energy
Skills development	- Vocational training: carpentry, welding, masonry - Development of specialized skills: electronics, computing, others
Other services	- Financial services - Off-shore services - Health and veterinary services - River and air transportation - Information technology
Minerals exploration and exploitation	- Petroleum exploration: refer to Petroleum Act and regulations - Mining of precious stones and others: refer to Mineral Act.
Communications	- Transportation (land, sea, and air) - Communication equipment.

Source: Government of The Gambia.

P. 19-20, para. 23-25

In its capacity as administrator of free zones, the GIPFZA has developed criteria that all investors (regardless of the category to which they belong) must satisfy in order to benefit from free-zone incentives⁷¹:

- investments must be in **the following activities**: warehousing, breaking bulk, assembling, storage, grading, cleaning, mixing, labelling, packaging and repackaging, processing, manufacturing, telecommunication, information technology, energy, financial and offshore services, health and veterinary services, or transportation services;
- transactions are to be carried out in specified foreign exchange;
- activities must significantly add value to qualify finished products for conferment of origin status;
- investments must generate employment and train nationals;
- a substantial portion of output (the benchmark currently used by GIPFZA is 70%) must be exported to foreign markets, the remainder can be sold on the domestic market, in which case they are treated as imports; and
- investment must contribute positively to domestic capital formation.

Applications to operate within the free zone are submitted to GIPFZA, which is required to make a decision within a period of 30 days. Licences are granted for a period of not less than one year, and not greater than 30 years, and are renewable. GIPFZA may suspend, amend or revoke a licence if the licensee fails to carry out any authorized activity within six months of the issue of the licence; substantially ceases, for a reasonable length of time, its activities in the zone; or contravenes the provisions of the Free Zones Act or conditions attached to the licence. Appeals may be lodged with the Secretary of State responsible for trade.

Investment incentives generally take the form of customs duty exemptions on selected items, exemptions from various domestic indirect taxes, tax holidays, and a special scheme for accelerated depreciation (Chapter III(4)(i)). The incentives provided to free-zone investors take the form of tax and duty concessions or exemptions (Chapter III(3)(v)), and apply equally to all three classes of investor.

P. 43, para. 64

Amongst the criteria that The Gambia Investment Promotion and Free Zones Agency is required to take into account in granting incentives are: the capacity of the business under consideration to contribute to the generation of new earnings or savings of foreign exchange through increased exports; import substitution; and the level of local content (materials or services) of the goods to be produced or of the **services** to be supplied.

P. 81, para. 81

The Gambia's 1.3 million people shared 33,300 fixed telephone lines in 2000, i.e. a teledensity of 2.56 (Table IV.13), which was above the African average of 2.48, and well above the sub-Saharan Africa's average of 0.75.⁷² Fixed line telephony services are provided by GAMTEL, a

⁷¹ The criteria are not specified in the Free Zones Act itself. Please see online information. Available at: http://www.gipfza.gm/Free_Zones_/body_free_zones_.html

⁷² ITU (2001).

public monopolist, with a subscriber base of 38,359 at end 2002.⁷³ The Permanent Secretary of the Department of State for Communication, Information and Technology (DOSCIT), and a representative of DOSFEA, are members of the GAMTEL board of directors. GAMTEL is also the Government's vehicle for the maintenance and expansion of the telephone network system, and for the development of fibre-optic cables and wireless telephone technology. GAMTEL does not receive government funding for its recurrent expenses. Recent capital expenditure plans for the maintenance and expansion of the telephone network is supported primarily by donor funds, and to a lesser extent government counterpart funding, and own funds. GAMTEL has begun the implementation of an expansion project, running from 2003 to 2007, and mainly financed by a grant of €15 million, which aims to significantly increase the number of fixed-line phones. GAMTEL currently pays an annual subvention of D3 million to The Gambia **Radio and Television Services**.

Sri Lanka – WT/TPR/S/128

Source: Government of Sri Lanka; and Board of Investment of Sri Lanka [Online]. Available at: http://www.boisrilanka.org/web/investinc_common.php?conID=1.

P. 58-59, para. 103 (and Tables AIII.3 and AIII.4)

Sri Lanka offers a wide range of tax incentives, notably tax holidays, primarily for investment purposes. In 2002, Sri Lanka notified a list of tax incentives available equally to national and foreign enterprises investing in Sri Lanka.⁷⁴ The 2002 Budget proposed the rationalization of tax incentives but not their elimination. The Government was committed to granting no new exemptions either under the Board of Investment (BOI) or Inland Revenue Department (IRD) regimes.⁷⁵ Under the IRD

⁷³ Strictly speaking, the Government's share in GAMTEL is 99%; while The Gambia National Insurance Company has a 1% share.

⁷⁴ WTO document G/SCM/N/74/LKA, 7 January 2002.

⁷⁵ Sri Lanka operates two distinct direct tax systems: the normal regime, and the other under the auspices of the BOI. However, moves appear to be afoot to amend the BOI Act so as to abolish this distinction.

regime, income tax exemptions are provided usually for five years. Despite this policy, there are still an array of tax incentives in place, which seem to overlap; some are contingent on export and investment performance (Table AIII.3 and AIII.4). These incentives are considered exceptions to the new policy, according to which, a "limited" number of incentives would remain in place. These were aimed at assisting non-traditional exports (i.e. others than exporters of tea, rubber and coconut), and sectors such as information technology, electronics, industrial tools, and food processing, as well as, investments exceeding Rs 500 million in specific services. There is also a 5-10 year income tax holiday for pioneering investment in power generation, transmission and distribution, and for the development of highways, sea and airports, railways, and water services. Upon expiry of the tax holiday, these enterprises will be subject to a 15% income tax.⁷⁶ The revenue forgone as a result of these tax incentives has not been assessed.

Table AIII.3
Investment incentives under the Board of Investment (BOI) regime, September 2003

Category	Qualifying Criteria			Incentives			Exemption from exchange control
	Minimum investment (US\$)	Minimum export requirement (% of output)	Full tax holiday ^a	Concessionary income tax	Import duty exemptions		
				10%, 15%, 20%	Capital goods	Raw material	
(...)							
Export-oriented services	150,000	70	5 years	10% 2 years 15% thereafter 20% n.a.	Yes	Yes ^b	Yes
Small-scale infrastructure projects ^c	500,000	n.a.	5 years	10% 2 years 15% n.a. 20% thereafter	Yes ^d	No	As determined by the Board
IT related training institutes (min 300 students in IT related Training Institutes)	n.a.	n.a.	3 years	10% 2 years 15% thereafter if the industry is export oriented 20% thereafter if the industry is not export oriented	Yes	No	No
(...)							
Power generation, transmission and distribution	10,000,000	None	6 years	10% n.a. 15% thereafter 20% n.a.	Yes ^d	No	As determined by the Board
Development of highways, sea ports, airports, water services	25,000,000	None	8 years	10% n.a. 15% thereafter 20% n.a.	Yes ^d	No	As determined by the Board

- a The tax holiday period will start from the year the enterprise begins to make profits or not later than two years of the date of commencement of commercial operations or production whichever is earlier, except for existing enterprises undertaking an expansion of its same location or new location.
- b On raw materials used to produce exports.
- d During the project establishment/implementation period
- e Power generation, tourism and/or recreation, warehousing and/or cold storage, garbage collection and/or disposal, construction of houses (not less than 25 housing units in no more than 4 locations), construction of hospitals.
- f If exports are less than 70% only during the project implementation period.
- g IT enabled services includes call centre or contact centres, transcription (data entry), data centres, hosting centres, e-governance, related projects and any other related activity determined by the Board.

P. 60, para. 107

The need to support small and medium-size enterprises (SMEs) has been emphasized in the Government's industrialization strategy.⁷⁷ An SMEs Policy Unit has been established at the Ministry of Enterprise Development, Industrial Policy and Investment Promotion to help SMEs get installed and develop their businesses. Industrial parks are being created in the rural areas to cater to SMEs. The Export Development Board implements special programmes to support export-oriented SMEs. Under the Inland Revenue Act, tax incentives are also provided to small-scale infrastructure facilities engaged in, *inter alia*, power generation, **tourism and recreation, warehousing and cold storage, and construction of houses and hospitals.**

⁷⁷ A small-scale enterprise is defined as one with fixed assets not exceeding Rs 20 million; and a medium-size enterprise is defined as one with fixed assets above Rs 20 million but not exceeding Rs 50 million.

P. 60, para.110

In emergency situations the Government may offer relief packages. For instance, in 2001 a relief package was offered to the **hotel and tourist industry** to cover for temporary losses incurred after a terrorist attack on the international airport. The industry was granted a moratorium on the repayment of capital and interest from 1 August 2001 until 31 March 2002; the moratorium could be extended on a case-by-case basis. Other relief measures adopted during 2001 included removal of a 1% turnover tax on banking and finance; removal of import duties on essential raw materials; reduction of import duty on bagged cement to 15% and bulk cement to 10%; reduction of interest rates on loans in foreign currency to 6%; and the allocation of Rs 1 billion for drought relief.⁷⁸

P. 106, para. 115-116

Passenger bus services are provided by private operators and state-owned regional transport companies (RTCs, also called cluster bus companies) under the Central Transport Board. RTC services account for about one third of the commuter bus market. RTCs are poorly managed and over-staffed (over 40,000 staff for 5,000 operating buses). Their operating losses rose by 55% in 2001, but fell by 9% in 2002, to Rs 2.2 billion. Government subsidies to RTCs totalled Rs 1.2 billion in 2002.⁷⁹ Private bus operators are disadvantaged by small operations and low government-set fares. A new bus-fare policy for private and public operators, adopted in 2002, replaced the ad hoc fare revisions with annual reviews using an improved cost-based pricing formula.⁸⁰ However, the Government directed RTCs not to adopt the 15% fare increase recommended by the National Transport Commission (NTC), the national transport regulator, from July 2002. The regulatory regime for bus transport remains fragmented with overlapping responsibilities vested in provincial Councils and the NTC (National Transport Commission Act No. 37 of 1991).

The Government is establishing private-public partnership arrangements (PPPA) in RTCs to improve efficiency. In 2002, the Public Enterprises Reform Commission (PERC) invited investors to acquire 39% equity in and to manage RTCs. They are expected to inject extra funds through government-guaranteed debt financing, maintain existing employees on no worse terms and conditions, and provide public services under government supervision, all in return for state subsidies.⁸¹ As a result of low interest in RTCs, divestment was postponed. Six RTCs were to have been divested to a private consortium in 2003. However, following court action, Cabinet withdrew this award and the PERC is calling for new tenders for all 13 RTCs.

P. 108, para. 125

The BOI supports **tourism** with tax incentives (Chapter III(3)). Tourism on the east coast, which was closed in 1987 for security reasons, re-opened in 2002. The Government has established a concessional loan facility of up to Rs 50 million to help hotels in the Trincomalee district to refurbish.

⁷⁸ Ministry of Finance (undated).

⁷⁹ Rs 225 million was also paid to subsidize bus travel by school children and Rs 300 million to fund bus services on uneconomic rural routes.

⁸⁰ Cost components of the formula are fuel (27%), crew (22%), repairs (12%), service, lubricants, tyres, and tubes (11%), depreciation (10%), finance costs and risk (10%) and overheads (8%). Interim fare increases are possible when diesel prices rise rapidly.

⁸¹ Government guarantees are limited to 30% of the investor's purchased equity.

Working Party on GATS Rules

**OVERVIEW OF SUBSIDY DISCIPLINES RELATING TO TRADE IN SERVICES
IN ECONOMIC INTEGRATION AGREEMENTS**

Note by the Secretariat¹

I. INTRODUCTION

1. At its meeting of 1 October 2003, the Secretariat was asked to provide an overview of subsidy disciplines relating to trade in services in economic integration agreements notified under GATS Article V.

2. The following overview takes into account a previous Note of the Secretariat dated 20 May 1996 (*Provisions on Subsidies Relating to Trade in Services in Regional Trade Agreements*)². The present Note thus only looks at agreements, 24 in total, notified under Article V after that date and focuses on specific provisions on services subsidies that go beyond GATS-type obligations such as national treatment or MFN. An Annex lists the agreements reviewed, as well as the relevant provisions.

3. Of the 24 agreements reviewed, 13 contain disciplines on subsidy practices relating to services. Of these, 11 are agreements between the European Communities and other European countries, which contain disciplines on state aids that may distort competition. Four other agreements include provisions calling for further consideration of this issue in the future, sometimes making a reference to the negotiations under Article XV of the GATS.

II. OVERVIEW OF RELEVANT PROVISIONS

A. AGREEMENTS WITH DISCIPLINES ON SUBSIDIES IN SERVICES SECTORS

4. A first group of economic integration agreements with subsidy disciplines relating to services are the agreements signed between the European Communities and other European countries. As explained in the previous Note from the Secretariat (see paragraph IV of S/WPGR/W/12), such agreements contain a provision similar to that of Article 87 of the EC Treaty, prohibiting aid which may distort competition. For example, Article 64 of the *Europe Agreement establishing an association between the European Communities and their Members States and the Republic of Slovakia* states:

"1. The following are incompatible with the proper functioning of the Agreement, in so far as they may affect trade between the Community and the Slovak Republic: (...)

(iii) any public aid which distorts or threatens to distort competition by favouring certain undertakings or the production of certain goods.

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

² S/WPGR/W/12

2. Any practices contrary to this Article shall be assessed on the basis of criteria arising from the application of the rules of Articles 85, 86, and 92 of the Treaty establishing the European Economic Community."

5. Paragraph 3 then envisages the adoption by the Association Council, within three years of the Agreement's entry into force, of rules to implement provisions relating to state aids. Paragraph 4 indicates that, for purposes of applying the provisions of paragraph 1(iii), the Slovak Republic shall be regarded, during the first five years of entry into force of the agreement, as an area identical to those areas of the Community described in Article 92(3)(a) of the Treaty establishing the European Economic Community. That provision of the EC Treaty says: "3. The following may be considered to be compatible with the common market: (a) aid to promote the economic development of areas where the standard of living is abnormally low or where there is serious underemployment."

6. Paragraph 4 also includes provisions on transparency. It specifies that each Party shall report annually on the total amount and the distribution of the aid given and shall provide, upon request, information on aid schemes. In addition, when a Party considers that a particular practice is incompatible with the terms of paragraph 1, paragraph 6 allows such a Party, to take "appropriate measures", in certain specific circumstances, e.g., when such incompatible practice is not adequately dealt with under the implementing rules mentioned in paragraph 3 of the Article.

7. Other agreements notified after 20 May 1996 and that include similar but not necessarily identical disciplines on subsidies are the agreements between, on one hand, the European Communities and their Member States and, on the other hand, the following WTO Members: Hungary (Article 62), Poland (Article 63), Czech Republic (Article 64), Romania (Article 64), Bulgaria (Article 64), Estonia (Article 63), Lithuania (Article 64), Latvia (Article 64), Slovenia (Article 65)³.

8. The *Agreement establishing the European Economic Area* (EEA) concluded between the European Communities and their Member States, and Norway, Iceland and Liechtenstein also contains substantive disciplines on state aids that may distort competition (Article 61 to 64 and Protocol 27). The agreement was notified on 10 October 1996, but its relevant provisions were already described in paragraph V of the previous Secretariat Note. In short, paragraph 1 of Article 61 stipulates that "(s)ave as otherwise provided in this Agreement, any aid granted by EC Member States, EFTA States or through State resources in any form whatsoever which distorts or threatens to distort competition by favouring certain undertakings or the production of certain goods shall, in so far as it affects trade between Contracting Parties, be incompatible with the functioning of this Agreement". Paragraphs 2 and 3 then respectively indicate which types of state aid either are to be, or may be, considered to be compatible with the functioning of the Agreement. Article 62 then provides for state aid to be reviewed for their compatibility with Article 61. It specifies that the EC Commission shall conduct such review for EC Member States according to the rules laid out in the EC Treaty, and that the EFTA Surveillance Authority shall do the same according to the rules set out in an agreement between the EFTA States. Article 62 also provides for cooperation between the EC Commission and the EFTA Surveillance Authority, as set out in Protocol 27.

9. In the event that one of the surveillance authorities considers that the implementation by the other surveillance authority of Articles 61 and 62 is not in conformity with the maintenance of equal conditions of competition, Article 64 provides that an exchange of views takes place. If no solution can be agreed within two weeks, the affected Contracting Party may adopt appropriate interim

³ In addition to the information provided in S/WPGR/W/12, the delegation of the European Communities presented a Communication to the Working Party entitled *The Community Regime for State Aid in Services Area* (JOB(00)/4302), which can be of use in view of the relationship between the subsidy disciplines found in the EC Treaty and the Europe Agreements.

measures in order to remedy the resulting distortion of competition. Consultations are then to be held and, if no commonly acceptable solution is found within 3 months and if the practice causes or threatens to cause distortion of competition affecting trade between the Contracting Parties, the interim measures may be replaced by definitive measures. Such measures must be strictly necessary to offset the effect of such distortion and priority shall be given to such measures that least disturb the functioning of the EEA.

10. The *Protocol on Trade in Services to the Australia-New Zealand Closer Economic Relations Agreement* (ANZCERTA) contains a prohibition on the introduction of new or the expansion of existing "export subsidies, export incentives and other assistance measures having a direct distorting effect on trade" between Member States (Article 11). The Article also mandated Parties to work towards the elimination of any such measures by 30 June 1990. This Agreement was notified under GATS Article V in October 1997, but was already mentioned in paragraph II of the previous Note from the Secretariat on this issue.

11. The *Revised Treaty of Chaguaramas establishing the Caribbean Community including the CARICOM Single Market and Economy*⁴ provides, in paragraph 1 of Article 69, that "Member States shall harmonize national incentives to investments in the industrial, agricultural and services sectors". The following paragraphs of Article 69 then provide, among other things, that the Council for Finance and Planning (COFAP), a principal organ of the Community, make proposals regarding incentives regimes "consistently with relevant international agreements".

B. AGREEMENTS WITH PROVISIONS CALLING FOR FUTURE CONSIDERATION OF THE ISSUE

13. A number of agreements, while not containing substantive disciplines on subsidy practices, provide for future consideration of the issue. Some refer in that regard to possible results of the negotiations under GATS Article XV. Paragraph 3 of Article 16 of the *European Free Trade Association (EFTA)*, notified by Switzerland, Norway, Liechtenstein and Iceland, provides that Member States shall review the scope of application of the Chapter on State Aid "with a view to extending the disciplines on state aid to the field of services, taking into account international developments in the sector". Such reviews are to take place at yearly intervals.

14. The *Free Trade Agreement between the EFTA States and Mexico* provides, in Article 19, that "Parties shall pay particular attention to any disciplines agreed under the negotiations mandated by Article XV of the GATS with a view to their incorporation into this Agreement". Similarly, Article 23(2) of the *Agreement between New Zealand and Singapore on a Closer Economic Partnership* states that the Parties "shall pay particular attention to any disciplines agreed under Article XV of GATS with a view to their incorporation into this Agreement". Paragraph 3 of the same Article says that "Parties shall consult on appropriate steps in regard to subsidies related to trade in services where any subsidy issues arise in bilateral services trade under this Agreement".

15. The *Singapore-Australia Free Trade Agreement* provides, in Article 21, that "Parties shall review the treatment of subsidies in the context of developments in international fora of which both Parties are Members" and that "Parties shall consult on appropriate steps in regard to subsidies related to trade in services where any subsidies issues arise under this Chapter".

⁴ The Revised Treaty was notified by the following WTO Members: Antigua and Barbuda, Barbados, Belize, Dominica, Grenada, Guyana, Jamaica, St. Kitts and Nevis, Saint Lucia, St. Vincent and the Grenadines, Suriname and Trinidad and Tobago.

ANNEX

Economic Integration Agreement Notified under GATS Article V since 20 May 1996⁵

Economic Integration Agreement	Date of Notification	Document reference	Where Relevant Provision(s) Can Be Found
EC – Slovak Republic	27 August 1996	S/C/N/23	Art. 64

Working Party on GATS Rules

**LIST OF PUBLICATIONS FROM INTERNATIONAL ORGANIZATIONS
RELATING TO SUBSIDIES IN SERVICES**

Note by the Secretariat¹

I. INTRODUCTION

1. At its meeting of 1 October 2003, Members asked the Secretariat to compile a list of studies published by other international organizations that contain information on subsidies in services sectors.

2. In the absence of a definition of subsidies, the following list includes studies that contain potentially relevant information, without regard to trade effects. Thus, it should not be implied that the Secretariat considers the studies listed below as necessarily being of direct relevance to Members' discussions pursuant to the negotiating mandate under Article XV. Most studies do not tend to focus on trade.

3. The compilation consists of studies prepared by the well-known international organizations, i.e., IMF, ITU, OECD, UNCTAD, World Bank. Further updates to the list may be provided as additional information becomes available.

II. LIST OF STUDIES

A. INTERNATIONAL MONETARY FUND.

Working Party on GATS Rules

- DRAFT -

**ANNUAL REPORT¹ OF THE WORKING PARTY ON GATS RULES
TO THE COUNCIL FOR TRADE IN SERVICES (2003)**

1. Since its last update to the annual report, the Working Party on GATS Rules held two formal meetings: on 2-3 July 2003 and 1 October 2003. Reports of these meetings are contained in documents S/WPGR/M/43 and S/WPGR/M/44. They should be read in conjunction with this update. The three negotiating mandates the Working Party is entrusted with were put on the agenda of the two meetings: emergency safeguard measures (Article X), government procurement (Article XIII) and subsidies (Article XV). At its meeting of 2 and 3 July, the Working Party also took stock of progress made in the negotiations, as reflected in the report of that meeting, as well as in the report of the following meeting of the Special Session of the Council for Trade in Services.²

**I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS
ARTICLE X**

2. At the meeting of July 2003, the issue of emergency safeguard measures was not addressed. At the meeting of 1 October 2003, delegations continued their examination of issues related to a possible ESM, including the questions of desirability and feasibility. The Swiss delegation presented a non-paper which examined a particular example and analysed the possibilities available to a member government in the absence of an ESM. Various points of views, as well as preliminary reactions were expressed. The delegation of Thailand, speaking for a number of other delegations, responded to questions previously asked regarding how an ESM model might apply to a hypothetical example. These discussions are reflected in paragraphs 2-22 of S/WPGR/M/44.

**II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS
ARTICLE XIII**

3. The issue of government procurement was not addressed at the meeting of July 2003. At the meeting of 1 October 2003, the European Communities explained its proposal for a framework of rules in this area.³ Also, the Secretariat had prepared a note on government procurement disciplines in economic integration agreements.⁴ A number of delegations commented and asked questions, while others reserved their position for the time being or recalled their views on the mandate for negotiations. These discussions are reflected in paragraphs 23-38 of S/WPGR/M/44.

III. NEGOTIATIONS ON SUBSIDIES UNDER GATS ARTICLE XV

4. The issue of subsidies was discussed at both the meetings of July and October 2003. Discussions focused on the issue of definition and on ways to obtain more information on subsidies in

¹ This report, together with the update in document S/WPGR/12, complete the reporting requirement for 2003.

² TN/S/M/8.

³ S/WPGR/W/42

⁴ S/WPGR/W/44

services sectors. Regarding the latter point, a proposal by the delegation of Chile, supported by various other delegations, was put forward and several Members referred to UNCTAD's work on a study on subsidies in services sectors. In addition, Members mandated the Secretariat to update its previous Note on subsidy disciplines in economic integration agreements notified under Article V and to put together a list of studies pertaining to subsidies in services sectors that have been done by other international organizations. These discussions are reflected in paragraphs 44-69 of S/WPGR/M/43 and paragraphs 39-83 of S/WPGR/M/44.

Working Party on GATS Rules

- DRAFT -

**UPDATE TO THE ANNUAL REPORT OF 2002 OF THE WORKING PARTY
ON GATS RULES TO THE COUNCIL FOR TRADE IN SERVICES (2003)**

Revision

1. Since its last annual report¹, the Working Party on GATS Rules held 3 formal meetings.² In each meeting, the Working Party considered the three negotiating mandates it is entrusted with: emergency safeguard measures (Article X); government procurement (Article XIII); and subsidies (Article XV). It also held various informal meetings on the three items.

**I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS
ARTICLE X**

2. Members continued their examination of various themes as they had emerged from previous meetings and submissions. Issues under examination included desirability and feasibility of an emergency safeguard mechanism (ESM), the interpretation of the GATS Article X mandate, modal application, alleged safeguard-type provisions contained in economic integration agreements, in Members' schedules and in WTO instruments, as well as S&D. Members also discussed possible common elements of various types of ESM, based on the Synopsis³ and on the Overview of the Synopsis,⁴ and process-related issues such as transparency, notification, consultation, surveillance provisions and expedited dispute settlement proceedings.

3. Many delegations called for the Working Party to discuss actual or hypothetical situations where a safeguard action might be needed, and which form action could take, as an important aspect for further progress in the negotiations. One example was presented at the February meeting by Thailand, on behalf of the ASEAN Members. The Working Party is still examining whether this example can be considered as a possible situation justifying an ESM. Other delegations suggested that discussion on alleged existing safeguard-type provisions applying to services should continue.

Deleted: as a prerequisite

Deleted: such

4. As requested by Members the Secretariat prepared three background documents: (i) a *Compilation of References Made by Delegations to Safeguard-Type Provisions*⁵; (ii) a note on *Core Elements Contained in Members' Proposals – Overview of the Synopsis*⁶; and (ii) a note on *Safeguard-Type Provisions in Economic Integration Agreements*⁷.

5. On 14 March 2003, the former Chairperson of the Working Party, Mr. Thomas Chan, circulated under his responsibility a Report on Negotiations on Emergency Safeguard Measures⁸, as

mandated in the work programme on ESM adopted on 22 July 2002.⁹ Delegations had a first exchange of views on this Report during an informal meeting held on 20 April. At the formal meeting of 13-14 May, the Working Party gave further consideration to the Report. Comments made by delegations are recorded in the minutes of this meeting.¹⁰ At the same meeting, the European Communities introduced a written contribution on *Scope for Emergency Safeguard Measures (ESM) in the GATS*.¹¹ A number of delegations welcomed this contribution. Other delegations expressed different views.

Deleted: delegations

II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS ARTICLE XIII

6. Discussions continued on the Communication from the European Communities and their Member States on government procurement of services.¹² In May, the European Communities introduced a new contribution proposing a legal framework for government procurement in services.¹³ At the same time, several delegations maintained the view that Article XIII excludes from the negotiations the obligations of most-favoured-nation treatment, market access and national treatment, whilst others underlined that the mandate of Article XIII:2 included no such limitation.

Deleted: negotiations on

7. Members noted the possibility of duplication between the WPGR and the Working Group on Transparency in Government Procurement (WGTGP). The WPGR should be aware of the relevant issues raised in the WGTGP, and information exchanges between the two Groups should be allowed for on a flexible basis.

Deleted: stressed the need to avoid

8. On 24 June 2003, the WTO Secretariat issued a note prepared at the request of Members, presenting an Overview of Government Procurement-Related Provisions in Economic Integration Agreements.

Formatted: Bullets and Numbering

9. On 30 June 2003, Mr. Santiago Urbina, Chairperson of the Working Party, submitted a note under his responsibility to report on the progress of work, as mandated in the work programme on government procurement adopted on 22 July 2002.¹⁵

Deleted: At the same time, several delegations maintained the view that Article XIII excludes from the negotiations the obligations of most-favoured-nation treatment, market access and national treatment.[¶]

III. NEGOTIATIONS ON SUBSIDIES UNDER GATS ARTICLE XV

10. The delegation of Poland circulated an informal contribution containing thoughts on the definition of subsidies in services.¹⁶ Two main issues emerged from the discussion: (i) the scope of a generic definition of subsidies in the services context, including the relevance of the definition contained in the SCM Agreement; and (ii) the meaning of the concept of trade-distortive or "actionable" subsidies. Several delegations recalled the mandate in GATS Article XV to exchange information concerning all subsidies related to trade in services that they provide to their domestic service suppliers. Members could obtain this information from different sources, including intergovernmental organizations.

Formatted

Deleted: Mr. Santiago Urbina, Chairperson of the Working Party, informed that, as mandated in the work programme on government procurement adopted on 22 July 2002, he would submit a note by 30 June 2003 under his responsibility to report on the progress of work.¹⁴

11. On 17 March 2003, the Chairperson circulated a revised *Checklist on Subsidies*,¹⁷ as had been agreed at the February meeting.¹⁸ This new revision, prepared again under the responsibility of the Chairperson, includes two changes. First, the question of categorization of subsidies has been explicitly spelled out under the first point, i.e. definition of a subsidy in trade in services. Second, a

Deleted: The need for more information on services subsidies from Members as well as other sources such as other intergovernmental organizations was also stressed by some delegations.

Working Party on GATS Rules

**OVERVIEW OF GOVERNMENT PROCUREMENT-RELATED PROVISIONS
IN ECONOMIC INTEGRATION AGREEMENTS**

Note by the Secretariat¹

I. INTRODUCTION

1. At its meeting on 13-14 May 2003, the Secretariat was asked to prepare a compilation of provisions relating to government procurement found in the agreements that have been notified to the WTO under GATS Article V.

2. When starting this work, the initial intention was to provide delegations with a full reproduction of the pertinent texts. However, such a compilation would have amounted to more than 100 pages and, thus, proven too unwieldy for information. Therefore, the current Note provides only an overview of the main provisions relating to government procurement in economic integration agreements. The Secretariat stands ready to provide a deeper analysis based on a specific mandate from Members.

3. This Note covers the 25 economic agreements notified so far to the WTO under GATS Article V (see Annex). Virtually all agreements (24 out of 25) contain government procurement-related provisions. However, the level of detail and the obligations incurred vary from mere commitments to negotiate to highly specified procurement regimes.

4. This Note is without prejudice to delegations' position on the scope of the mandate in GATS Article XIII.

II. OVERVIEW OF RELEVANT PROVISIONS

(a) Treaty of Rome (EC)

5. The notification under GATS Article V of the Treaty Establishing the European Community explains that the Treaty "embraces a common market for public-sector procurement and construction contracts which is based on various Council directives co-ordinating procurement procedures in all public-sector procurement subject to the Treaties. The public procurement directives are based on three main principles:

- EC-wide advertising of contracts so that firms in all Member States have an opportunity of bidding for them;
- the banning of technical specifications liable to discriminate against potential foreign bidders;

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

- application of objective criteria in tendering and award procedures.

The directives on public works were co-ordinated in Council Directive 93/37/EEC ("the Works Directive") of 14 June 1993 and the directives on supplies were consolidated in Council Directive 93/36/EEC ("the Supplies Directive") of 14 June 1993. The latter also aligned the text on Supplies with that on Works. The Council directive 92/50 concerning the coordination of public procurement on services has been adopted on 18 June 1992. It should be noted that public works, supplies and services contracts in the water, energy, transport and telecommunications sectors are covered by a separate Directive 93/38/EEC."²

(b) Australia – New Zealand Closer Economic Relations Trade Agreement (ANZCERTA)

6. Access to government procurement between Australia and New Zealand is governed by the 1991 Government Procurement Agreement, which, in turn, is based on Article 11 (*Government Purchasing*) of the ANZCERTA. The latter provision stipulates, *inter alia*, that "the maintenance of preferences for domestic suppliers over suppliers from the other Member State is inconsistent with the objectives of this Agreement, and the Member States shall actively and on a reciprocal basis work towards the elimination of such preferences".

7. Provisions of the 1991 Agreement relate in particular to: measures aiming at maximising competitive opportunities for suppliers of both Parties, including an illustrative list of discriminatory or biased procurement practices; exemptions; preference margins for Australian or New Zealand made goods and services; monitoring procedures; guidelines for the assistance of purchasing officers and other interested bodies; transitional arrangements; review of the Agreement; and definitions.

(c) European Economic Area³ (EEA)

8. The Agreement on the EEA contains procurement provisions applying to goods and services (Article 65, *Other Common Rules*). Annex XVI, entitled *Procurement*, lists the EC procurement instruments which shall be applicable to EEA Contracting Parties as well as the sectoral adaptations needed. It also contains a list of bodies and entities covered.

(d) Europe Agreements

9. The 10 so-called Europe Agreements⁴ contain very similar provisions on government procurement. Most agreements state that Parties consider "the opening up of the award of public contracts on the basis of the principle of non-discrimination and reciprocity, in particular in the GATT and WTO context,⁵ to be a desirable objective".⁶ Relevant provisions further stipulate, *inter alia*, that, from the entry into force of the agreement, companies shall be granted access to award procedures in the Community pursuant to Community procurement rules under a treatment no less favourable than that accorded to Community companies. In turn, Community companies must be granted treatment no less favourable than that accorded to local companies; the date of entry into force of this requirement may be different depending on whether the EC companies are established in the country concerned or not.

² WT/REG39/1, page 9.

³ Signatories to the EEA Agreement are: the European Communities, Iceland, Liechtenstein and Norway.

⁴ The Europe Agreements have been concluded between the European Communities and, respectively, Bulgaria, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Romania, Slovak Republic, and Slovenia.

⁵ Some agreements refer only to GATT, others only to WTO and a third category to both GATT and WTO.

⁶ NB: this clause does not appear in the agreement with Lithuania.

(e) North American Free Trade Agreement⁷ (NAFTA)

10. Government procurement rules are contained in Part four, Chapter ten (*Government Procurement*) of the NAFTA. Section A contains provisions relating to: the scope and coverage of the Chapter (entities; goods, services or construction services; thresholds; examples of procurement methods); valuation of contracts; national treatment and non-discrimination; rules of origin; denial of benefits; prohibition of offsets; and technical specification.

11. Section B specifies tendering procedures, including: qualification of suppliers; invitation to participate; selective tendering procedures; time limits for tendering and delivery; tender documentation; negotiation disciplines; submission, receipt and opening of tenders and awarding of contracts; and limited tendering procedures.

12. Section C stipulates the bid challenge procedures that Parties have to adopt for government procurement. Section D contains general provisions, including exceptions; provision of information; technical cooperation; joint programs for small business; rectifications and modifications; divestiture of entities; further negotiations; and definitions.

(f) Revised Treaty of Chaguaramas Establishing the Caribbean Community Including the CARICOM Single Market and Economy⁸ (CARICOM)

13. In Article 239 (*Undertaking*), CARICOM Member States "undertake to elaborate a Protocol relating, *inter alia*, to [...] government procurement [...]."

(g) Free Trade Agreement Canada – Chile

14. The free trade agreement between Canada and Chile does not contain any government procurement-related provision.

(h) Free Trade Agreement Chile – Mexico

15. In the free trade agreement between Chile and Mexico, the Parties agree that the Free Trade Commission established under the treaty shall "begin negotiations on a chapter on government procurement one year after this Agreement comes into force, at which time it shall appoint negotiators and establish appropriate procedures" (Art. 20-08, *Future Negotiations*).

(i) Agreement Between New Zealand and Singapore on a Closer Economic Partnership

16. Under Part 8 (*Government Procurement*) of the Agreement, the Parties "agree to establish a single New Zealand/Singapore government procurement market [...]". This shall be achieved by, *inter alia*, implementing the APEC Non-Binding Principles on Government Procurement. Further, relevant provisions include: scope and coverage (thresholds, schedules of commitments); definitions; general principles (such as non-discrimination and value for money); valuation of contracts; rules of origin; procurement procedures; prohibition of offsets; procedures to be followed in the event of a dispute between a supplier and the procuring government body; exemptions; and administration and review.

⁷ Signatories to the NAFTA are Canada, Mexico and the United States.

⁸ Members of CARICOM are Antigua and Barbuda, Barbados, Belize, Dominica, Grenada, Guyana, Jamaica, St. Kitts and Nevis, Saint Lucia,, St. Vincent and the Grenadines, Suriname and Trinidad and Tobago.

(j) Free Trade Agreement Between EFTA and Mexico

17. Provisions contained Chapter V (*Government Procurement*), Articles 56 to 68, of the FTA between EFTA and Mexico include: coverage (such as covered entities; goods, services or construction services; thresholds, examples of procurement methods); national treatment and non-discrimination; rules of origin; denial of benefits; prohibition of offsets; procurement procedures, including notification, consultation and dispute settlement; procedures for bid challenge; provision of information; technical cooperation; exceptions; privatisation of entities; further negotiations and "other provisions".

(k) Free Trade Agreement between the European Communities and Mexico

18. Provisions contained in Title III (*Government Procurement*), Articles 25 to 38, of the FTA between the EC and Mexico include: coverage (such as covered entities; goods, services or construction services; thresholds, examples of procurement methods); national treatment and non-discrimination; rules of origin; prohibition of offsets; procurement procedures, including notification, consultations and dispute settlement; procedures for bid challenge; provision of information; technical cooperation; information technology; exceptions; rectifications or modifications; privatisation of entities; further negotiations; and final provisions.

(l) Free Trade Agreement between Jordan and the United States

19. The Agreement establishing a free trade area between Jordan and the United States stipulates that "Pursuant to Jordan's July 12, 2000, application for accession to the WTO Agreement on Government Procurement, the Parties shall enter into negotiations with regard to Jordan's accession to that Agreement" (Art. 9, *Government Procurement*).

(m) Convention Establishing the European Free Trade Association (consolidated version)⁹ (EFTA)

20. Under the EFTA Convention, Member States "reaffirm their rights and obligations under the WTO Agreement on Government Procurement (GPA). Under this Convention, the Member States broaden the scope of their commitments under the WTO Government Procurement Agreement with an aim to pursue liberalisation in public procurement markets in accordance with Annex R" (Art. 37). The same provision further calls on Members to "secure non-discriminative, transparent and reciprocal access to their respective public procurement markets and shall ensure open and effective competition based on equal treatment". Provisions and Appendices contained in Annex R relate, *inter alia*, to the scope of the EFTA procurement regime, definitional and competition issues, activities covered and excluded, establishment of thresholds, national treatment and non-discrimination, procurement and challenges procedures, information exchange and institutional arrangements.

(n) Free Trade Agreement Between Chile and Costa Rica

21. Part six, Chapter 16 (*Government Procurement*) of the Free Trade Agreement between Chile and Costa Rica includes provisions relating to: definitions; objective (establish a "single market for government procurement"), scope (ensuring equal conditions, non-discrimination and transparency in government procurement processes) and coverage (definition of entities, identification of goods and services concerned); general rights and obligations (relating, *inter alia*, to the promotion of competition, transparency, non-discrimination, the quality-price ratio principle, simplicity and publicity in the application of measures, etc.); national treatment and non-discrimination; transparency and the provision of information; technical specification; denial of benefits; appeal

⁹ The EFTA comprises Iceland, Liechtenstein, Norway and Switzerland.

procedures for affected suppliers; modifications to coverage; privatization; information technology; Committee on government procurement; cooperation and technical assistance; relation to other chapters of the FTA.

(o) Agreement Between Japan and Singapore for a New-Age Economic Partnership

22. Article 101 (*Scope of Chapter 11*), contained in Chapter 11 (*Government Procurement*), stipulates, *inter alia*, that "[p]aragraph 2 of Article I, and Article II to Article XXIII of the Agreement on Government Procurement in Annex 4 to the WTO Agreement [...] shall apply mutatis mutandis to procurement of goods and services specified in Annex VIIA, by entities specified in Annex VIIB". Article 102 provide for exchange of information on government procurement between the Parties.

(p) Free Trade Agreement Between EFTA and Singapore

23. In Chapter VI (*Government Procurement*) of the FTA between EFTA and Singapore, the Parties stipulate that their rights and obligations in respect of public procurement "shall be governed by the WTO Agreement on Government Procurement" (Art. 51:1). They further agree to cooperate "with the aim of increasing the understanding of their respective procurement systems, and achieving further liberalisation and mutual opening up of public procurement markets" (Art. 51:2). Other provisions relate to the exchange of information through "contact points" (Art. 52); whenever a Party "grants additional benefits with regard to the access to its public procurement markets, it shall agree to enter into negotiations with a view to extending these benefits to another Party on a reciprocal basis." (Art. 53).

Working Party on GATS Rules

- DRAFT -

UPDATE TO THE ANNUAL REPORT OF 2002 OF THE WORKING PARTY ON GATS RULES TO THE COUNCIL FOR TRADE IN SERVICES (2003)

1. Since its last annual report¹, the Working Party on GATS Rules held 3 formal meetings.² In each meeting, the Working Party considered the three negotiating mandates it is entrusted with: emergency safeguard measures (Article X); government procurement (Article XIII); and subsidies (Article XV). It also held various informal meetings on the three items.

I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS ARTICLE X

2. Members continued their examination of various themes as they had emerged from previous meetings and submissions. Issues under examination included desirability and feasibility of an emergency safeguard mechanism (ESM), the interpretation of the GATS Article X mandate, modal application, safeguard-type provisions contained in economic integration agreements and in WTO instruments, as well as S&D. Members also discussed possible common elements of various types of ESM, based on the Synopsis³ and on the Overview of the Synopsis,⁴ and process-related issues such as transparency, notification, consultation, surveillance provisions and expedited dispute settlement proceedings.

3. Many delegations called for the Working Party to discuss actual or hypothetical situations where a safeguard action might be needed, and which form action could take, as a prerequisite for further progress in the negotiations. One such example was presented at the February meeting by Thailand, on behalf of the ASEAN Members.

4. As requested by Members the Secretariat prepared three background documents: (i) a *Compilation of References Made by Delegations to Safeguard-Type Provisions*⁵; (ii) a note on *Core Elements Contained in Members' Proposals – Overview of the Synopsis*⁶; and (iii) a note on *Safeguard-Type Provisions in Economic Integration Agreements*⁷.

5. On 14 March 2003, the former Chairperson of the Working Party, Mr. Thomas Chan, circulated under his responsibility a Report on Negotiations on Emergency Safeguard Measures⁸, as mandated in the work programme on ESM adopted on 22 July 2002.⁹ Delegations had a first exchange of views on this Report during an informal meeting held on 20 April. At the formal meeting

⁹ S/WPGR/7.

of 13-14 May, delegations gave further consideration to the Report. At the same meeting, the European Communities introduced a written contribution on *Scope for Emergency Safeguard Measures (ESM) in the GATS*.¹⁰

II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS ARTICLE XIII

6. Discussions continued on the Communication from the European Communities and their Member States on government procurement of services.¹¹ In May, the European Communities introduced a new contribution proposing a legal framework for negotiations on government procurement in services.¹²

7. Members stressed the need to avoid duplication between the WPGR and the Working Group on Transparency in Government Procurement (WGTGP). The WPGR should be aware of the relevant issues raised in the WGTGP, and information exchanges between the two Groups should be allowed for on a flexible basis.

8. At the same time, several delegations maintained the view that Article XIII excludes from the negotiations the obligations of most-favoured-nation treatment, market access and national treatment.

9. Mr. Santiago Urbina, Chairperson of the Working Party, informed that, as mandated in the work programme on government procurement adopted on 22 July 2002, he would submit a note by 30 June 2003 under his responsibility to report on the progress of work.¹³

III. NEGOTIATIONS ON SUBSIDIES UNDER GATS ARTICLE XV

10. The delegation of Poland circulated an informal contribution containing thoughts on the definition of subsidies in services.¹⁴ Two main issues emerged from the discussion: (i) the scope of a generic definition of subsidies in the services context, including the relevance of the definition contained in the SCM Agreement; and (ii) the meaning of the concept of trade-distortive or "actionable" subsidies. The need for more information on services subsidies from Members as well as other sources such as other intergovernmental organizations was also stressed by some delegations.

11. On 17 March 2003, the Chairperson circulated a revised *Checklist on Subsidies*,¹⁵ as had been agreed at the February meeting.¹⁶ This new revision, prepared again under the responsibility of the Chairperson, includes two changes. First, the question of categorization of subsidies has been explicitly spelled out under the first point, i.e. definition of a subsidy in trade in services. Second, a new issue has been added, relating to concepts relevant to what should be regarded as trade-distortive subsidies. The *Checklist* is without prejudice to the position of any Member.

12. Mr. Santiago Urbina, Chairperson of the Working Party, informed that, as mandated in the work programme on subsidies adopted on 22 July 2002, he would submit a note by 30 June 2003 under his responsibility to report on the progress of work.

COMMUNICATION FROM THE EUROPEAN COMMUNITIES

Government Procurement of Services

The following communication is circulated at the request of the European Communities to Members of the Working Party on GATS Rules.

1. Within the framework of the negotiations under the mandate given by GATS Article XIII:2, the European Communities (hereafter "the EC") submitted in July 2002 a contribution with proposals on a framework for rules for government procurement of services that could be developed, and on the benefits that could be drawn from them. WTO Members have discussed this contribution and raised questions, which helped clarify their concerns and interests. The EC is hereby putting forward a new contribution aiming at suggesting practical steps and putting forward concrete proposals for the negotiations under the mandate of GATS Article XIII:2.

I. OBJECTIVES OF A FRAMEWORK FOR GOVERNMENT PROCUREMENT OF SERVICES UNDER THE GATS

2. The objective pursued is to offer a multilateral framework for rules for government procurement of services providing WTO Members with the possibility to open their Government procurement markets with maximum flexibility to modulate their level of openness to their development needs and their national policy objectives. The possibility to open up government procurement opportunities progressively and sector by sector would give WTO Members time to establish the relevant regulatory framework where necessary. This would also mean that a Member taking no commitment as regards access to, and national treatment in respect of, government procurement opportunities, would actually have no additional obligation in these regards as compared to the present situation.

3. In other words, the system proposed would offer the possibility for Members to open up their Government procurement opportunities if they so wish, sector by sector, partially or fully, now or at a later stage. WTO Members would open up government procurement opportunities in the sectors where they would most benefit from international services, at their pace and to the extent they wish to open up (e.g. the possibility to open up only certain activities, above certain thresholds, for selected procuring entities, and with scheduled limitations to National Treatment).

4. Procedural rules agreed multilaterally shall give assurance that access to procurement opportunities will be effective. The binding of such access will give legal certainty to service providers. The proposed framework would provide supplementary access to foreign government procurement opportunities, and would improve tender conditions where such access already exists by

introducing more transparency and certainty regarding applicable rules, and by cutting down discrimination.

II. SCOPE AND FORM OF THE AGREEMENT

5. WTO Members could approve the text of an Annex to the GATS, that would specify the conditions under which GATS would apply to Government procurement of services. GATS Article XIII could be amended to refer to that Annex.

6. “**Government procurement of services**” for the purpose of this “Annex to the GATS” should cover procurement of services by any governmental agency or body (see paragraph on procuring entities in part III. A. below). It should also cover procurement involving a combination of services and goods when the latter are necessary for the provision of the service considered and their procurement cannot be done separately, and presupposing that the value of the service is greater than the value of the goods.

III. MODALITIES FOR THE SCHEDULING OF COMMITMENTS REGARDING GOVERNMENT PROCUREMENT OF SERVICES (ACCESS TO OPPORTUNITIES TO BID AND NATIONAL TREATMENT), AND FOR THE APPLICATION OF THE MOST-FAVOURLED-NATION PRINCIPLE.

A. GOVERNMENT PROCUREMENT COMMITMENTS

7. The EC suggests that a 4th specific column (“Government procurement” column) should be added to the existing three of the GATS Schedules of commitments of WTO Members (Article XVI, Article XVII and Article XVIII columns). WTO Members would indicate in that column, for each sector and each mode of supply, whether – and if so, which – specific restrictions apply to Government procurement, that would limit bidding opportunities for foreign service providers or impinge on the National Treatment principle.

8. For instance, **thresholds** above which tenders would fall under the scope of GATS, would be indicated in Members’ schedules of commitments in the Government procurement column, for each sector where Government procurement is opened to international competition.

9. Here also would be listed restrictions on the **procuring entities** to be covered by commitments. GATS Article I:3 provides that for the purposes of this Agreement, “measures by Members” means measures taken by central, regional or local governments and authorities, and by non-governmental bodies in the exercise of powers delegated by central, regional or local governments or authorities. All these entities are therefore a priori covered and any exclusion of some of them for some specific sectors would have to be explicitly indicated in Members’ Schedules.

10. **Price preferences** would also have to be indicated in Members’ schedules of commitments in the Government procurement column, for each sector where Government procurement is opened to international competition.

11. These commitments for Government procurement would have to be read in conjunction (i.e. cumulatively) with Members’ existing Market Access and National Treatment commitments for the relevant sector (including horizontal commitments – or limitations).

12. An “**Unbound**” in the Government procurement column for a specific sector would indicate that the WTO Member concerned has made no commitment to provide foreign suppliers with opportunities to bid, nor made any National Treatment commitment for Government Procurement of Services.

B. MOST-FAVOURED-NATION TREATMENT

1. Application of the MFN principle – Built-in exemption for GPA (*Agreement on Government Procurement*) obligations

13. The EC suggests that the “Annex to the GATS on Government Procurement of Services” provide that the Most-Favoured-Nation treatment should be applied to Government procurement, without prejudice to the obligations and rights under the Agreement on Government Procurement. This means that when a GPA-signatory accords to a WTO-Member in the framework of the GPA regime a more favourable treatment, this treatment would not have to be accorded on an MFN-basis to other WTO Members. Specific provisions would organise appropriate interface between the GPA and the “Annex to the GATS on Government Procurement of Services”.

2. MFN Exemptions

14. At the time when the GATS entered into force, WTO Members had the possibility to list MFN exemptions. GATS Article XIII:1 specifically provides that Article II on MFN does not apply to Government procurement. Since the agreement on procurement that will result from GATS Article XIII:2 negotiations should extend the application of MFN to procurement, consistency would require that this extension should be accompanied by the possibility to schedule MFN exemptions.

IV. PROCEDURAL RULES TO BE APPLIED

15. The EC, with its experience of the EC Single Market and of the GPA, is acutely aware that MFN and national treatment commitments are necessary but would not be sufficient to ensure in practice equal treatment and non-discrimination in the area of government procurement. In order to ensure effective market opening, procedural rules (on transparency, bidding periods etc.) have to be developed. This is why, at the time of the Uruguay Round, the EC and other WTO Members supported the decision that market access, national treatment and MFN obligations should not apply to government procurement until appropriate procedural rules are developed, and that the GATS should provide WTO Members with a mandate to negotiate these procedural rules multilaterally. The GATS therefore provides on the one hand in its Article XIII:1 that laws, regulations and requirements governing government procurement of services are exempted from the disciplines contained in GATS Articles II (Most-Favoured-Nation Treatment), XVI (Market Access) and XVII (National Treatment)¹, and on the other hand in its Article XIII:2 that WTO Members have a mandate to negotiate multilaterally on Government procurement².

16. In order to avoid duplication of work with the Working Group on Transparency in Government Procurement, the EC suggests that the “Annex to the GATS on Government Procurement of Services” to be negotiated refers to the future Agreement on Transparency and states that the provisions of that future Agreement will apply to Government procurement of services under the GATS.

¹ It is to be underlined that GATS Articles other than Articles II, XVI and XVII, do apply to Government procurement, since the exclusion provided for in GATS Article XIII:1 does not extend to them.

² Some WTO Members have tried to argue that the mandate of GATS Article XIII:2 excludes a priori discussions on market access. GATS Article XIII:2 however, does not provide for any exclusion: it provides for “multilateral negotiations on Government procurement”, without excluding any specific aspect from the negotiations. Obviously, this mandate was meant to negotiate first and foremost procurement rules and modalities for the binding of opportunities to bid and of non-discrimination commitments that would enable GATS principles to apply appropriately to Government procurement. GATS Article XIII:2 also indicates that these negotiations should be done “under the GATS Agreement”, i.e. not in other frameworks.

17. For information purposes, WTO Members will find in the Annex to this submission a reference to the elements that have been identified in the Transparency Working Group as the ones to be covered in a future Transparency Agreement.

18. The EC would like to invite Members to discuss procedural rules that they think have to be implemented to ensure the application of these transparency principles and the effectiveness of future GATS obligations regarding opportunities to bid, national treatment and MFN treatment.

V. ADDITIONAL PROVISIONS

19. One should note that the provisions of GATS, notably (but not only) GATS Article III on Transparency covering relevant measures of general application, GATS Article VI on Domestic Regulation (in particular as regards domestic review), GATS Article VII on Recognition, GATS Article XII on Restrictions to safeguard the Balance of Payment, GATS Article XXIII on Dispute Settlement and Enforcement, do apply to Government procurement of services.

ANNEX

Reference for Information, on the Elements identified by the Working Group on Transparency in Government Procurement, that would apply to Government Procurement of Services under the GATS.

The Working Group on Transparency in Government Procurement (WGTGP) has developed the elements to be included in a future Agreement on Transparency in Government Procurement based in the informal note by the Chairman: "List of issues raised and points made" (JOB(99)/6782) dated 12 November 1999.

The latest state of discussion on these issues is contained in the Secretariat's notes of 23 May 2002 (WT/WGTGP/W/32) and 3 October 2002 (WT/WGTGP/W/33).

**COMMUNICATION FROM THE EUROPEAN COMMUNITIES
AND THEIR MEMBER STATES**

Scope for Emergency Safeguard Measures (ESM) in the GATS

The following communication is circulated at the request of the European Communities and their Member States, to Members of the Working Party on GATS Rules.

—————

This submission is made in accordance with point 3, (a) and (b), of the work program on ESM adopted by the WPGR on 22 July 2002. It summarises the views of the European Communities on this issue.

I. ARTICLE X OF GATS EXPRESSLY REFERS TO *EMERGENCY SAFEGUARD MEASURES*

1. A safeguard measure that is in conformity with the wording and spirit of Article X of GATS needs to be based on a situation of emergency, which is characterised by its extraordinary nature and intended to deal with unforeseen developments. Such characteristics are not met by the mere increase in trade and competition that is inherent in any liberalisation commitment.

2. The mandate set out in Article X of GATS was not intended to allow Members to introduce new general exceptions into the GATS, to carry out structural adjustments or to protect infant industries. The GATS already has provisions dealing with general exceptions, which are set out in articles XIV and XIV bis of GATS. As regards structural problems, which by their very nature are not extraordinary, and in particular the protection of infant industries, the bottom-up architecture of the GATS affords Members enough flexibility to fully take them into account when undertaking commitments. Also the Agreement provides for a procedure to deal with situations whereby Members decide to modify or withdraw in whole or in part their commitments (Article XXI of GATS).

3. Furthermore, situations of emergency related to capital movements that can seriously compromise the balance of payments or the monetary policy of Members are already contemplated by the GATS. The Agreement provides in its Article XII a remedy for serious balance-of-payments and external financial difficulties or threat thereof. As regards capital movements causing serious difficulties for monetary policy, no specific remedy is needed since, by application of the annex on financial services, the GATS does not cover the activities conducted by a central bank or monetary authority or any other public entity in pursuit of monetary or exchange rate policies.

4. It is therefore not surprising that no concrete example of emergency situation has yet been provided by the experience gathered in the application of GATS¹ or identified on a hypothetical basis by the different written contributions submitted to the WPGR².

II. ARTICLE X CLEARLY STIPULATES THAT NEGOTIATIONS WILL ADDRESS THE QUESTION OF ESM

5. At the time of concluding the GATS negotiations, notwithstanding the existence of a precedent in the goods area, ESM in services could not be agreed since the question of their feasibility and desirability was not solved. This explains the language used by Article X³.

6. The contributions submitted to the WPGR, which, in the absence of concrete examples of emergency situations, are based on abstract considerations, show that this question remains still unresolved. Most of them, whether they directly refer to feasibility and desirability or are made without prejudice to that question, have identified a number of issues that show the difficulties for the application of ESM in the GATS (legal certainty of commitments, modal application, protection of acquired rights, applicability of the principle of non-discrimination,...).

7. From a modal application perspective, the goods model is not appropriate for services, since trade in goods is equivalent only to cross-border supply of services (mode 1). A very extensive interpretation of the analogy argument might lead to cover trade in services in modes 2 and 4, but in no case the establishment under mode 3. In all circumstances, the application of ESM to any of the four modes of supply as well as the inter-modal relations raise important concerns already identified by the European Communities⁴ and which so far have not been fully addressed by the WPGR.

III. A POSITIVE CONCLUSION ON THE QUESTION OF ESM PRESUPPOSES THEREFORE

- (a) The identification, in case they exist, of concrete examples of emergency situations in the services area that are not already addressed by GATS provisions, and
- (b) The demonstration that an ESM would be feasible and desirable to deal with the identified situations (i.e. that the difficulties and concerns that have been raised in respect of ESM can be overcome in practice).

¹ The second paragraph of Article X has never been enacted.

Working Party on GATS Rules

SAFEGUARD-TYPE PROVISIONS IN ECONOMIC INTEGRATION AGREEMENTS

Note by the Secretariat¹

Addendum

I. INTRODUCTION

1. At its meeting on 3 December 2002, the Secretariat was asked to undertake a compilation of safeguard-type provisions contained in economic integration agreements, building on previous work. This Note takes into account the agreements that have been notified to the WTO under GATS Article V (see Annex).

2. The Note builds on, and complements, previous notes by the Secretariat contained in S/WPGR/W/2 and S/WPGR/W/4. As in S/WPGR/W/4, provisions relating to balance-of-payments measures under GATS Article XII and exceptions to general obligations in the sense of GATS Article XIV have been left aside. The provisions reproduced below focus on sector-specific or industry-specific safeguard provisions comparable to GATT Article XIX. This Note does not purport in any way to prejudge the nature or qualification of the measures referred to as "emergency safeguard measures" within the meaning of GATS Article X.

II. RELEVANT PROVISIONS

**A. TREATY ESTABLISHING THE EUROPEAN COMMUNITY, CONSOLIDATED VERSION
(1 JANUARY 1958)**

Article 134 (ex Article 115)

In order to ensure that the execution of measures of commercial policy taken in accordance with this Treaty by any Member State is not obstructed by deflection of trade, or where differences between such measures lead to economic difficulties in one or more Member States, the Commission shall recommend the methods for the requisite cooperation between Member States. Failing this, the Commission may authorise Member States to take the necessary protective measures, the conditions and details of which it shall determine.

In case of urgency, Member States shall request authorisation to take the necessary measures themselves from the Commission, which shall take a decision as soon as possible; the Member States concerned shall then notify the measures to the other Member States. The Commission may decide at any time that the Member States concerned shall amend or abolish the measures in question.

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

In the selection of such measures, priority shall be given to those which cause the least disturbance of the functioning of the common market.

B. THE NORTH AMERICAN FREE TRADE AGREEMENT (NAFTA) (1 JANUARY 1994)

Annex 1413.6 – Section B - Payments System Protection

1. If the sum of the authorized capital of foreign commercial bank affiliates (as such term is defined in the Schedule of Mexico to Annex VII), measured as a percentage of the aggregate capital of all commercial banks in Mexico, reaches 25 percent, Mexico may request consultations with the other Parties on the potential adverse effects arising from the presence of commercial banks of the other Parties in the Mexican market and the possible need for remedial action, including further temporary limitations on market participation. The consultations shall be completed expeditiously.

2. In considering the potential adverse effects, the Parties shall take into account:
- (a) the threat that the Mexican payments system may be controlled by non-Mexican persons;
 - (b) the effects foreign commercial banks established in Mexico may have on Mexico's ability to conduct monetary and exchange-rate policy effectively; and
 - (c) the adequacy of this Chapter in protecting the Mexican payments system.

3. If no consensus is reached on the matters referred to in paragraph 1, any Party may request the establishment of an arbitral panel under Article 1414 or Article 2008 (Request for an Arbitral Panel). The panel proceedings shall be conducted in accordance with the Model Rules of Procedure established under Article 2012 (Rules of Procedure). The Panel shall present its determination within 60 days after the last panelist is selected or such other period as the Parties to the proceeding may agree. Article 2018 (Implementation of Final Report) and 2019 (Non-Implementation -- Suspension of Benefits) shall not apply in such proceedings.

C. THE AGREEMENT ON THE EUROPEAN ECONOMIC AREA (1 JANUARY 1994)

Article 112

1. If serious economic, societal or environmental difficulties of a sectorial or regional nature liable to persist are arising, a Contracting Party may unilaterally take appropriate measures under the conditions and procedures laid down in Article 113.

2. Such safeguard measures shall be restricted with regard to their scope and duration to what is strictly necessary in order to remedy the situation. Priority shall be given to such measures as will least disturb the functioning of this Agreement.

3. The safeguard measures shall apply with regard to all Contracting Parties.

Article 113

1. A Contracting Party which is considering taking safeguard measures under Article 112 shall, without delay, notify the other Contracting Parties through the EEA Joint Committee and shall provide all relevant information.

2. The Contracting Parties shall immediately enter into consultations in the EEA Joint Committee with a view to finding a commonly acceptable solution.

3. The Contracting Party concerned may not take safeguard measures until one month has elapsed after the date of notification under paragraph 1, unless the consultation procedure under paragraph 2 has been concluded before the expiration of the stated time limit. When exceptional circumstances requiring immediate action exclude prior examination, the Contracting Party concerned may apply forthwith the protective measures strictly necessary to remedy the situation.

For the Community, the safeguard measures shall be taken by the EC Commission.

4. The Contracting Party concerned shall, without delay, notify the measures taken to the EEA Joint Committee and shall provide all relevant information.

5. The safeguard measures taken shall be the subject of consultations in the EEA Joint Committee every three months from the date of their adoption with a view to their abolition before the date of expiry envisaged, or to the limitation of their scope of application.

Each Contracting Party may at any time request the EEA Joint Committee to review such measures.

Article 114

1. If a safeguard measure taken by a Contracting Party creates an imbalance between the rights and obligations under this Agreement, any other Contracting Party may towards that Contracting Party take such proportionate rebalancing measures as are strictly necessary to remedy the imbalance. Priority shall be given to such measures as will least disturb the functioning of the EEA.

2. The procedure under Article 113 shall apply.

D. CONVENTION ESTABLISHING THE EUROPEAN FREE TRADE ASSOCIATION, CONSOLIDATED VERSION (1 JUNE 2002)

Article 40

1. If serious economic, societal or environmental difficulties of a sectorial or regional nature liable to persist are arising, a Member State may unilaterally take appropriate measures under the conditions and procedures set out in Article 41.

2. Such safeguard measures shall be restricted with regard to their scope and duration to what is strictly necessary in order to remedy the situation. Priority shall be given to such measures as will least disturb the functioning of this Convention.

3. The safeguard measures shall apply with regard to all Member States.

4. This Article is without prejudice to the application of specific safeguard provisions set out in the Annexes to this Convention or of special safeguard measures in accordance with Article 5 of the WTO Agreement on Agriculture.

Article 41

1. A Member State which is considering taking safeguard measures under Article 40, shall, without delay, notify the other Member States through the Council and shall provide all relevant information.

2. The Member States shall immediately enter into consultations in the Council with a view to finding a commonly acceptable solution.

3. The Member State concerned may not take safeguard measures until one month has elapsed after the date of notification under paragraph 1, unless the consultation procedure under paragraph 2 has been concluded before the expiration of the stated time limit. When exceptional circumstances requiring immediate action exclude prior examination, the Member State concerned may apply forthwith the protective measures strictly necessary to remedy the situation.

4. The Member State concerned shall, without delay, notify the measures taken to the Council and shall provide all relevant information.

5. The safeguard measures taken shall be the subject of consultations in the Council every three months from the date of their adoption with a view to their abolition before the date of expiry envisaged, or to the limitation of their scope of application.

Each Member State may at any time request the Council to review such measures.

E. THE EUROPE AGREEMENTS

1. Europe Agreement between the European Communities and Bulgaria (1 February 1995)

Article 51

During the first five years following the date of entry into force of this Agreement, or for the sectors referred to in Annex XVb and XVc during the transitional period referred to in Article 7, Bulgaria may introduce measures which derogate from the provisions of this chapter as regards the establishment of Community companies and nationals if certain industries:

- are undergoing restructuring, or
- are facing serious difficulties, particularly where these entail serious social problems in Bulgaria, or
- face the elimination or a drastic reduction of the total market share held by Bulgarian companies or nationals in a given sector or industry in Bulgaria, or
- are newly emerging industries in Bulgaria.

Such measures:

- (i) shall cease to apply at the latest two years after the expiration of the fifth year following the date of entry into force of this Agreement; and
- (ii) shall be reasonable and necessary in order to remedy the situation; and
- (iii) shall only relate to establishments in Bulgaria to be created after the entry into force of such measures and shall not introduce discrimination concerning the operations of Community companies or nationals already established in Bulgaria at the time of introduction of a given measure compared to Bulgarian companies or nationals.

The Association Council may exceptionally, upon request by Bulgaria, and if the necessity arises, decide to prolong the period referred to in indent (i) for a given sector for a limited period of time not exceeding the duration of the transitional period referred to in Article 7.

While devising and applying such measures, Bulgaria shall grant whenever possible to Community companies and nationals a preferential treatment, and in no case a treatment less favourable than that accorded to companies or nationals from any third country.

Prior to the introduction of these measures, Bulgaria shall consult the Association Council and shall not put them into effect before a one month period following the notification to the Association Council of the concrete measures to be introduced by Bulgaria, except where the threat of irreparable damage requires the taking of urgent measures in which case Bulgaria shall consult the Association Council immediately after their introduction.

Upon the expiration of the fifth year following the entry into force of the Agreement, or for the sectors referred to in Annexes XVb and XVc upon expiration of the transitional period referred to in Article 7, Bulgaria may introduce such measures only with the authorization of the Association Council and under conditions determined by the latter.

2. Europe Agreement between the European Communities and the Czech Republic (1 February 1995)

Article 51

During the first six years following the date of entry into force of this Agreement, or for the sectors referred to in Annexes XVIa and XVIb, during the transitional period referred to in Article 7, the Czech Republic may introduce measures which derogate from the provisions of this chapter as regards the establishment of Community companies and nationals if certain industries:

- are undergoing restructuring, or
- are facing serious difficulties, particularly where these entail serious social problems in the Czech Republic, or
- face the elimination or a drastic reduction of the total market share held by Czech Republic companies or nationals in a given sector or industry in the Czech Republic, or
- are newly emerging industries in the Czech Republic.

Such measures:

- (i) shall cease to apply at the latest two years after the expiration of the sixth year following the date of entry into force of this Agreement or for the sectors included in Annex XVIa and in Annex XVIb upon the expiration of the transitional period referred to in Article 7; and
- (ii) shall be reasonable and necessary in order to remedy the situation; and
- (iii) shall only relate to establishment in the Czech Republic to be created after the entry into force of such measures and shall not introduce discrimination concerning the operations of Community companies or nationals already established in the Czech Republic at the

time of introduction of a given measure compared to Czech Republic companies or nationals.

The Association Council may exceptionally, upon request of the Czech Republic, and if the necessity arises, decide to prolong the periods referred to in point (i) above for a given sector for a limited period of time.

While devising and applying such measures, the Czech Republic shall grant whenever possible to Community companies and nationals a preferential treatment, and in no case a treatment less favourable than that accorded to companies or nationals from any third country.

Prior to the introduction of these measures, the Czech Republic shall consult the Association Council and shall not put them into effect before a one-month period following the notification to the Association Council of the concrete measures to be introduced by the Czech Republic, except where the threat of irreparable damage requires the taking of urgent measures in which case the Czech Republic shall consult the Association Council immediately after their introduction.

Upon the expiration of the sixth year following the entry into force of this Agreement, or for the sectors included in Annexes XVIa and XVIIb upon expiration of the transitional period referred to in Article 7, the Czech Republic may introduce such measures only with the authorization of the Association Council and under conditions determined by the latter.

3. **European Communities – Estonia Europe Agreement (1 February 1998)**

Article 50

Up to the end of 1999, Estonia may introduce measures which derogate from the provisions of this Chapter as regards the establishment of Community companies and nationals if certain industries:

- are undergoing restructuring, or
- are facing serious difficulties, particularly where these entail serious social problems in Estonia, or
- face the elimination or a drastic reduction of the total market share held by Estonian companies or nationals in a given sector or industry in Estonia, or
- are newly emerging industries in Estonia.

Such measures:

- shall cease to apply at the latest on 31 December 1999,
- shall be reasonable and necessary in order to remedy the situation, and
- shall only relate to establishments in Estonia to be created after the entry into force of such measures and shall not introduce discrimination concerning the operations of Community companies or nationals already established in Estonia at the time of introduction of a given measure compared with Estonian companies or nationals.

While devising and applying such measures, Estonia shall grant whenever possible to Community companies and nationals a preferential treatment, and in no case a treatment less favourable than that accorded to companies or nationals from any third country.

Prior to the introduction of these measures, Estonia shall consult the Association Council and shall not put them into effect before a one-month period following the notification of the Association Council of the concrete measures to be introduced by Estonia, except where the threat of irreparable damage requires the taking of urgent measures in which case Estonia shall consult the Association Council immediately after their introduction.

**4. Europe Agreement between the European Communities and Hungary
(1 February 1994)**

Article 50

During the first stage referred to in Article 6, or for the sectors included in Annexes XIIa and XIIb during the transitional period referred to in Article 6, Hungary may introduce measures which derogate from the provisions of this Chapter as regards the establishment of Community companies and nationals if certain industries:

- are undergoing restructuring, or
- are facing serious difficulties, particularly where these entail serious social problems in Hungary, or
- face the elimination or a drastic reduction of the total market share held by Hungarian companies or nationals in a given sector or industry in Hungary, or
- are newly emerging industries in Hungary.

Such measures:

- shall cease to apply at the latest two years after the expiration of the first stage referred to in Article 6, or for the sectors included in Annexes XIIa and XIIb upon the expiration of the transitional period referred to in Article 6, and
- shall be reasonable and necessary in order to remedy the situation, and
- shall only relate to establishments in Hungary to be created after the entry into force of such measures and shall not introduce discrimination concerning the operations of Community companies or nationals already established in Hungary at the time of introduction of a given measure compared to Hungarian companies or nationals.

While devising and applying such measures, Hungary shall grant whenever possible to Community companies and nationals a preferential treatment, and in no case a treatment less favourable than that accorded to companies or nationals from any third country.

Prior to the introduction of these measures, Hungary shall consult the Association Council and shall not put them into effect before a one-month period following the notification to the Association Council of the concrete measures to be introduced by Hungary, except where the

threat of irreparable damage requires the taking of urgent measures in which case Hungary shall consult the Association Council immediately after their introduction.

Upon the expiration of the first stage referred to in Article 6, or for the sectors included in Annexes XIIa and XIIb upon expiration of the transitional period referred to in Article 6, Hungary may introduce such measures only with the authorization of the Association Council and under conditions determined by the latter.

5. Europe Agreement between the European Communities and Latvia (1 February 1999)

Article 51

During the transitional period referred to in Article 3, Latvia may introduce measures which derogate from the provisions of this Chapter as regards the establishment of Community companies and nationals if certain industries:

- are undergoing restructuring, or
- are facing serious difficulties, particularly where these entail serious social problems in Latvia, or
- face the elimination or a drastic reduction of the total market share held by Latvian companies or nationals in a given sector or industry in Latvia, or
- are newly emerging industries in Latvia.

Such measures:

- shall cease to apply at the latest upon the expiration of the transitional period referred to in Article 3, and
- shall be reasonable and necessary in order to remedy the situation, and
- shall only relate to establishments in Latvia to be created after the entry into force of such measures and shall not introduce discrimination concerning the operations of Community companies or nationals already established in Latvia at the time of introduction of a given measure compared with Latvian companies or nationals.

While devising and applying such measures, Latvia shall grant whenever possible to Community companies and nationals a preferential treatment, and in no case a treatment less favourable than that accorded to companies or nationals from any third country.

Prior to the introduction of these measures, Latvia shall consult the Association Council and shall not put them into effect before a one-month period following the notification of the Association Council of the concrete measures to be introduced by Latvia, except where the threat of irreparable damage requires the taking of urgent measures in which case Latvia shall consult the Association Council immediately after their introduction.

Upon expiration of the transitional period referred to in Article 3, Latvia may introduce such measures only with the authorization of the Association Council and under conditions determined by the latter.

6. European Communities – Lithuania Europe Agreement (1 February 1998)

Article 51

During the transitional period referred to in Article 3, Lithuania may introduce measures which derogate from the provisions of this Chapter as regards the establishment of Community companies and nationals if certain industries:

- are undergoing restructuring, or
- are facing serious difficulties, particularly where these entail serious social problems in Lithuania, or
- face the elimination or a drastic reduction of the total market share held by Lithuanian companies or nationals in a given sector or industry in Lithuania, or
- are newly emerging industries in Lithuania.

Such measures:

- shall cease to apply at the latest on the expiration of the transitional period referred to in Article 3,
- shall be reasonable and necessary in order to remedy the situation, and
- shall only relate to establishments in Lithuania to be created after the entry into force of such measures and shall not introduce discrimination concerning the operations of Community companies or nationals already established in Lithuania at the time of introduction of a given measure compared with Lithuanian companies or nationals.

While devising and applying such measures, Lithuania shall grant whenever possible to Community companies and nationals a preferential treatment, and in no case a treatment less favourable than that accorded to companies or nationals from any third country.

Prior to the introduction of these measures, Lithuania shall consult the Association Council and shall not put them into effect before a one-month period following the notification of the Association Council of the concrete measures to be introduced by Lithuania, except where the threat of irreparable damage requires the taking of urgent measures in which case Lithuania shall consult the Association Council immediately after their introduction.

On expiration of the transitional period referred to in Article 3, Lithuania may introduce such measures only with the authorisation of the Association Council and under conditions determined by the latter.

7. Europe Agreement between the EC and the Republic of Poland (1 February 1994)

Article 50

During the first stage referred to in Article 6 for the sectors included in Annexes XIIa and XIIb, or for the sectors included in Annexes XIIc and XIId during the transitional period referred to in Article 6, Poland may introduce measures which derogate from the provisions

of this chapter as regards the establishment of Community companies and nationals in certain industries:

- are undergoing restructuring, or
- are facing serious difficulties, particularly where these entail serious social problems in Poland, or
- face the elimination or a drastic reduction of the total market share held by Polish companies or nationals in a given sector or industry in Poland, or
- are newly emerging industries in Poland.

Such measures:

- shall cease to apply at the latest two years after the expiration of the first stage referred to in Article 6 for the sectors included in Annexes XIIa and XIIb, or for the sectors included in Annexes XIIc and XIId upon the expiration of the transitional period referred to in Article 6, and
- shall be reasonable and necessary in order to remedy the situation, and
- shall only relate to establishments in Poland to be created after the entry into force of such measures and shall not introduce discrimination concerning the operations of Community companies or nationals already established in Poland at the time of introduction of a given measure compared to Polish companies or nationals.

While devising and applying such measures, Poland shall grant whenever possible to Community companies and nationals a preferential treatment, and in no case a treatment less favourable than that accorded to companies or nationals from any third country.

Prior to the introduction of these measures, Poland shall consult the Association Council and shall not put them into effect before a one-month period following the notification to the Association Council of the concrete measures to be introduced by Poland, except where the threat of irreparable damage requires the taking of urgent measures in which case Poland shall consult the Association Council immediately after their introduction.

Upon the expiration of the first stage referred to in Article 6 for the sectors included in Annex XIIb, or for the sectors included in Annexes XIIc and XIId upon expiration of the transitional period referred to in Article 6, Poland may introduce such measures only with the authorization of the Association Council and under conditions determined by the latter.

8. Europe Agreement between the European Communities and Romania (1 February 1995)

Article 51

During the first five years following the date of entry into force of the Agreement, Romania may introduce measures which derogate from the provisions of this Chapter as regards the establishment of Community companies and nationals in certain industries:

- are undergoing restructuring, or

- are facing serious difficulties, particularly where these entail serious social problems in Romania, or
- face the elimination or a drastic reduction of the total market share held by Romanian companies or nationals in a given sector or industry in Romania, or
- are newly emerging industries in Romania.

Such measures:

- (i) shall cease to apply at the latest two years after the expiration of the fifth year following the date of entry into force of this Agreement; and
- (ii) shall be reasonable and necessary in order to remedy the situation; and
- (iii) shall only relate to establishments in Romania to be created after the entry into force of such measures and shall not introduce discrimination concerning the operations of Community companies or nationals already established in Romania at the time of introduction of a given measure compared to Romanian companies or nationals.

The Association Council may exceptionally, upon request by Romania, and if the necessity arises, decide to prolong the period referred to in indent (i) above for a given sector for a limited period of time not exceeding the duration of the transition period referred to in Article 7.

While devising and applying such measures, Romania shall grant whenever possible to Community companies and nationals a preferential treatment, and in no case a treatment less favourable than that accorded to companies or nationals from any third country.

Prior to the introduction of these measures, Romania shall consult the Association Council and shall not put them into effect before a one month period following the notification to the Association Council of the concrete measures to be introduced by Romania, except where the threat of irreparable damage requires the taking of urgent measures in which case Romania shall consult the Association Council immediately after their introduction.

Upon the expiration of the fifth year following the entry into force of the Agreement, Romania may introduce such measures only with the authorization of the Association Council and under conditions determined by the latter.

9. Europe Agreement between the EC and the Slovak Republic (1 February 1995)

Article 51

During the first six years following the date of entry into force of this Agreement, or for the sectors referred to in Annexes XVIa and XVIb, during the transitional period referred to in Article 7, the Slovak Republic may introduce measures which derogate from the provisions of this chapter as regards the establishment of Community companies and nationals if certain industries:

- are undergoing restructuring, or
- are facing serious difficulties, particularly where these entail serious social problems in the Slovak Republic, or

- face the elimination or a drastic reduction of the total market share held by Slovak Republic companies or nationals in a given sector or industry in the Slovak Republic, or
- are newly emerging industries in the Slovak Republic.

Such measures:

- (i) shall cease to apply at the latest two years after the expiration of the sixth year following the date of entry into force of this Agreement or for the sectors included in Annex XVIa and in Annex XVIIb upon the expiration of the transitional period referred to in Article 7; and
- (ii) shall be reasonable and necessary in order to remedy the situation; and
- (iii) shall only relate to establishment in the Slovak Republic to be created after the entry into force of such measures and shall not introduce discrimination concerning the operations of Community companies or nationals already established in the Slovak Republic at the time of introduction of a given measure compared to Slovak Republic companies or nationals.

The Association Council may exceptionally, upon request of the Slovak Republic, and if the necessity arises, decide to prolong the periods referred to in point (i) above for a given sector for a limited period of time.

While devising and applying such measures, the Slovak Republic shall grant whenever possible to Community companies and nationals a preferential treatment, and in no case a treatment less favourable than that accorded to companies or nationals from any third country.

Prior to the introduction of these measures, the Slovak Republic shall consult the Association Council and shall not put them into effect before a one-month period following the notification to the Association Council of the concrete measures to be introduced by the Slovak Republic, except where the threat of irreparable damage requires the taking of urgent measures in which case the Slovak Republic shall consult the Association Council immediately after their introduction.

Upon the expiration of the sixth year following the entry into force of this Agreement, or for the sectors included in Annexes XVIa and XVIIb upon expiration of the transitional period referred to in Article 7, the Slovak Republic may introduce such measures only with the authorization of the Association Council and under conditions determined by the latter.

10. European Communities – Slovenia Europe Agreement (1 February 1999)

Article 52

During the first four years following the date of entry into force of this Agreement, or for the sectors referred to in Annex IX(a), during the transitional period referred to in Article 3, Slovenia may introduce measures which derogate from the provisions of this Chapter as regards the establishment of Community companies and nationals of certain industries:

- are undergoing restructuring, or
- are facing serious difficulties, particularly where these entail serious social problems in Slovenia, or

- face the elimination or a drastic reduction of the total market share held by Slovenian companies or nationals in a given sector or industry in Slovenia, or
- are newly emerging industries in Slovenia.

Such measures:

- (i) shall cease to apply at the latest two years after the expiry of the fourth year following the date of entry into force of this Agreement or, for the sectors included in Annex IX(a), upon the expiry of the transitional period referred to in Article 3, and
- (ii) shall be reasonable and necessary in order to remedy the situation, and
- (iii) shall relate only to establishments in Slovenia to be set up after the entry into force of such measures and shall not introduce discrimination concerning the activities of Community companies or nationals already established in Slovenia at the time of introduction of a given measure, by comparison with Slovenian companies or nationals.

The Association Council may exceptionally, at the request of Slovenia, and if the necessity arises, decide to prolong the periods referred to in (i) above for a given sector for a limited period of time.

While devising and applying such measures, Slovenia shall grant preferential treatment wherever possible to Community companies and nationals, and in no case treatment less favourable than that accorded to companies or nationals from any third country.

Prior to the adoption of these measures, Slovenia shall consult the Association Council and shall not put them into effect before a one month period has elapsed following the notification to the Association Council of the concrete measures to be introduced by Slovenia, except where the threat of irreparable damage requires the taking of urgent measures, in which case Slovenia shall consult the Association Council immediately after their adoption.

Upon the expiry of the fourth year following the entry into force of this Agreement or, for the sectors included in Annex IX(a), upon the expiry of the transitional period referred to in Article 3, Slovenia may introduce such measures only with the authorisation of the Association Council and under conditions determined by the latter.

- (a) shall ensure that the other Party is treated as favourably as any non-Party; and
 - (b) shall avoid unnecessary damage to the commercial, economic and financial interests of the other party.]

Working Party on GATS Rules

- DRAFT -

REPORT OF THE WORKING PARTY ON GATS RULES TO THE COUNCIL FOR TRADE IN SERVICES (2002)

1. Since its last annual report¹, the Working Party on GATS Rules held five formal meetings.² In each meeting, the Working Party considered the three negotiating mandates it is entrusted with: emergency safeguard measures (Article X); government procurement (Article XIII); and subsidies (Article XV).

2. On 22 July 2002, the Working Party adopted work programmes on emergency safeguard measures, subsidies and government procurement respectively, recognizing, *inter alia*, that these did not prejudice in any way the outcome of the negotiations under the respective agenda items, and that the undertaking of individual items of work, including the questions of desirability and feasibility, should be without prejudice to each other under each subject of negotiations (S/WPGR/7).

I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS ARTICLE X

3. At its meeting on 15 March 2002, the Working Party agreed to extend the negotiating mandate under Article X until 15 March 2004 (S/C/W/205/Rev.1). This proposal was adopted the same day by the Council for Trade in Services (S/L/102).

4. Moreover, on 22 July 2002, the Working Party adopted a work programme for organizing its work on emergency safeguard measures (S/WPGR/7). Main elements are, *inter alia*, to identify, elaborate and consolidate elements for an ESM, to address the questions of desirability and feasibility, to encourage Members to put forward submissions as early as possible before 31 December 2002, and to finalize the negotiations by 15 March 2004.

5. Various delegations presented formal and informal written contributions on specific aspects of a possible emergency safeguard mechanism (ESM) in services.³ During several formal and informal meetings, delegations continued their examination of issues related to a possible ESM, including the question of desirability and feasibility, the form of a possible ESM, the modal application of safeguard measures, the concept of special and differential treatment, and relevant procedural matters, such as notification, consultation and surveillance. Divergent views continued to be expressed on these issues.

¹ S/WPGR/6, 4 October 2001.

² Minutes of the meetings are contained in documents S/WPGR/M/35-39.

³ See *Desirability of a Safeguard Mechanism for Services: Promoting Liberalization of Trade in Services*, Communication from the United States (S/WPGR/W/37); *Modal Application of an Emergency Safeguard Measure*, Communication from the European Communities and Their Member States (S/WPGR/W/38); Contribution from Cuba, the Dominican Republic, Guatemala, Honduras and Nicaragua (JOB(01)/166); *Elements for a Possible "Core Mechanism" for Temporary Suspension or Modification of Commitments*, Communication from Australia (JOB(02)/8). See also JOB(02)/9 and JOB(02)/85.

II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS ARTICLE XIII

6. On 22 July 2002, the Working Party adopted a work programme on government procurement (S/WPGR/7). It provides, *inter alia*, for continued discussion on the basis of submissions from Members and materials available, and encourages Members to put forward submissions as early as possible before 31 March 2003.

7. In their discussions, Members examined a Communication from the European Communities and their Member States on government procurement of services (S/WPGR/W/39). The issue of the scope of the mandate contained in Article XIII was also raised.

III. NEGOTIATIONS ON SUBSIDIES UNDER GATS ARTICLE XV

8. On 22 July 2002, the Working Party adopted a work programme on subsidies (S/WPGR/7). It provides, *inter alia*, for continued discussion on subsidies on the basis of submissions from Members and materials available, and encourages Members to put forward submissions on subsidies as early as possible before 31 March 2003.

9. Discussions under this agenda item focused on the information exchange mandated in Article XV, and on the need for further information on services subsidies in general. Members gave consideration to a simplified questionnaire put forward by the delegations of Argentina, Chile and Hong Kong, China (JOB(02)/82). Moreover, the Secretariat circulated a further addendum to the overview of information on subsidies contained in Trade Policy Review reports (S/WPGR/W/25/Add.3).

Working Party on GATS Rules

SUBSIDIES FOR SERVICES SECTORS

INFORMATION CONTAINED IN WTO TRADE POLICY REVIEWS

Background Note by the Secretariat¹

Addendum

I. INTRODUCTION

1. At its meeting on 15 July 2002, the Working Party on GATS Rules requested the Secretariat to prepare an update of information contained in Trade Policy Reviews on subsidies in services. This document, which complements the information contained in S/WPGR/W/25, - Add. 1 and Add. 2, covers 24 Reviews carried out between January 2001 and July 2002 (WT/TPR/S/79 to 102). Relevant information has been added, in italics, in the overview table already contained in the previous documents (Table 1).

2. As has been noted on past occasions, TPR-based information does not necessarily provide a comprehensive picture of Members' trade policies in any narrowly defined area. The selection of countries for review follows a schedule established by the Trade Policy Review Body and, thus, is not driven by subsidy-related considerations. Moreover, to be as relevant as possible within the TPR's overall mandate, the individual reports seek to focus on a country's main policy challenges and constraints; among these, services subsidies do not appear to have figured prominently to date. While many reports contain some information on such subsidies, no attempts have been made to assess their wider economic implications or any (distortive) effects on trade.

3. Potentially relevant information for this Note was compiled and structured against the background of the definition contained in Article 1 of the Agreement on Subsidies and Countervailing Measures.² However, the terms "subsidy" and related concepts ("financial contribution", "state aid", "tax benefits", etc.) may not have been used in TPR reports with the same definition in mind.

4. As in the two preceding documents, the following types of assistance have not been included: (i) Exemptions from indirect taxes, in particular VAT, which are frequently intended to encourage consumption rather than production of a service; (ii) generally available support, for example in the context of regional development or research programmes; and (iii) company-internal cross-subsidization between monopoly and market-oriented activities in sectors such as telecommunications. By contrast, government financial interventions in the form of share purchases and similar equity transfers have been taken into account. This drew some criticism in the past as such actions might have been driven by macroeconomic concerns and no particular service sector

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

² Accordingly, a subsidy is deemed to involve a financial contribution by a government or public body which confers a benefit. This covers assistance provided in the form of direct transfers of funds, including grants, loans and equity infusions; potential direct transfers of funds or liabilities, e.g. loan guarantees; government revenue foregone; supply of goods and services other than general infrastructure; purchase of goods; payments to funding mechanisms; or income and price support.

might have been targeted (S/WPGR/M/28). However, the Secretariat felt that it might be preferable, for the sake of consistency, to continue applying the above subsidy definition to the information contained in TPRs rather than introducing additional considerations case-by-case.

5. As discussed in the initial Secretariat Note, it may be difficult in individual cases to identify the ultimate beneficiaries of a subsidy, which may include the direct recipients, downstream industries, or individual consumers.³ Thus, given the infrastructural importance of many services sectors as providers of generally available inputs, it might be necessary to look beyond the subsidized sector, e.g., communication or transport, and take into consideration the users of the services rendered. Moreover, various qualifications have to be kept in mind when surveying subsidy-related information in TPR reports. For example, there is often no information as to whether the subsidy is discriminatory or not. In some instances, it may also be difficult to determine if the subsidy is targeted at a service or a good. Finally, one should not discard the possibility that some of the "subsidies" mentioned in TPR reports are in fact financial contributions to services provided "in the exercise of governmental authority" (GATS Article 1:3(b)).

II. POLICY PATTERNS

6. The information contained in the last 24 TPR reports largely confirms the sector pattern identified in the previous document: services-related subsidies are found mainly in three sectors, tourism, transport (in particular maritime transport) and banking services. However, it is not clear whether this is the result of governmental policy choices or whether it is simply due to the fact that TPR reports tend to focus on these sectors.

7. Concerning the measures used, the update confirms Members' strong reliance on tax incentives as compared to direct grants. This may reflect a preference in the political process for less obvious and, in terms of immediate disbursements, less "costly" forms of support. However, these observations are rather impressionistic in nature; for example, they may overrate developments in sectors that attracted particular policy attention at the time of reporting. As a general feature, it appears that areas such as financial services have been reviewed in more detail than, for instance, rail or road transport and professional services.

³ For example, the provision of basic health services may be ensured through: (a) cost-free treatment in state-owned hospitals; (b) the extension of public funds to commercially independent hospitals; or (c) government-sponsored premiums for basic health insurance. While possibly conferring the same benefits to the same target group, such measures might be defined, respectively, as the provision of infrastructural services, subsidies for the health sector, social transfers and/or subsidies for insurers.

ANNEX

Content of Individual Trade Policy Reviews**Mozambique – WT/TPR/S/79**p. 14, para. 28-29

Investments in new undertakings benefit from exemption of payment of customs duties on equipment goods classified in the "Customs Manual" in "K" Class. Imports involved with expansions, rehabilitation or modernization, or a new company formed through reorganization are not eligible for this exemption. These benefits exist only when the goods to be imported are not produced in Mozambique or, if produced, are not available at similar quality and price conditions.

Investments in provincial capitals in new undertakings or in the rehabilitation of existing ones due to obsolescence benefit from a reduction of 50% of Industrial Contribution Tax and Supplementary Tax rates, during the period of recovery of the investment made, but not exceeding ten fiscal years from the start of operation. In certain provinces (Niassa, Cabo Delgado, and Tete), the reduction is 80%. Outside of provincial capitals, the reduction is 65%. Special incentives exist for undertakings destroyed by acts of war. These incentives can be extended for certain periods at lower rates; these vary by province.

Table II.2 provides detailed information on the investment projects approved in 1999 and the projected employment involved.

Table II.2
Investment projects approved in 1999, and projected employment

Branch	Number of projects	Value (US\$)		Total		Employment

Madagascar – WT/TPR/S/80

P. 13, paras. 22-23

An entity needs to be legally established in Madagascar in order to benefit from investment incentives. The incentives include reduced tax on profits, accelerated depreciation on goods related to the investment, reduced customs duties of 5% on imported equipment, and exemption from import and excise taxes during the start-up of an investment.

Special benefits are directed toward investment in agriculture, fisheries, crafts, manufacturing, mining, **energy**, **tourism** (hotels), and **transportation**. For example, taxes related to the acquisition of buildings is reduced from 12% to 10% for these activities

P. 13-14 . paras. 26-28

Madagascar has been actively promoting export-oriented activities since 1991, and export-processing zones (EPZs) in particular, as a means of increasing foreign direct investment. The regulations related to EPZs are governed by Law No. 91-020 of 12 August 1991, which is currently under review. About 50% of the companies licensed to operate within EPZs are concentrated in the apparel and textile branches, with the balance divided among food processing, footwear, jewellery, and **service providers such as data processing** [(Table II.2)].

[...]

Incentives under the EPZs scheme include:

- (i) a grace period on the corporate tax for the first 2-15 years of operation (depending on the type of business), the rate of taxation is 10% as opposed to 33% for non-EPZ companies;
- (ii) after the grace period, the corporate tax is reduced by an amount based on 75% of the non-initial investment;
- (iii) exemption from customs duties and taxes on imported equipment, inputs, spare parts, packaging, and building materials;
- (iv) taxation of dividends is reduced from 25% to 10%;
- (v) 99 year leases are available for investment (land is generally not available for purchase by foreigners);
- (vi) free repatriation of profits after payment of taxes; and
- (vii) 100% foreign ownership.

Ghana – WT/TPR/S/81

P. 25, para. 46

The investment incentives include exemption from tariff and other duties on imported plant, machinery, and equipment falling with Chapters 82, 84, 85 and 98 of the Customs Schedule.⁴ Other incentives include accelerated depreciation provisions and a reduced company tax rate of 8% for firms exporting non-traditional products, and 25% for income from licenced **hotels**. Tax holidays of five

⁴ Any enterprise may apply to the Centre to have tariffs and duties eliminated on other plant, machinery, and equipment falling outside these chapters.

years apply to certain activities, such as general farming, fisheries, aquaculture, livestock, and real estate. Investments in **rural banks** and cattle ranching are exempted from income tax for ten years. Location incentives also apply.⁵ Investors are also entitled to an automatic immigration quota tied to the value of the investment: investments of US\$10,000 receive an immigration quota for one person.

P. 76, paras. 73-74

Tourism development based on private sector participation is a government priority. According to the Government's "Vision 2020", tourism is to be expanded to make Ghana a major international venue and regional tourist destination. Investment incentives are provided to hotels. The company tax rate for the sector is reduced from 35% to 25%, depending on location of the investment (urban/rural). Additionally, approval can be given by the Minister of Tourism for investors in hotels of at least 50 rooms to defer payment of import duties until completion of the project and commencement of operations. Certain items, such as furniture, fans, air conditioners, and television sets, can also be imported duty free. A National Tourism Development Plan 1992-2010 is being implemented by the Ministry of Tourism aimed at more than doubling the size of the industry by 2010. Medium-term developmental projects are contained in the Tourism Development Action Programme for 1996-2000, as well as the Tourism Public Awareness Programme and Tourist Behaviour Code for 1996-2000. Net foreign exchange earnings in 2010 are projected under the long-term plan to rise to US\$1.6 billion.

To attract private investment, the Plan calls for improving the public and private sector institutional framework for investment; simplifying investment procedures; adopting tourism investment incentives; establishing a tourism financial credit programme; and creating a Tourism Development Fund to be financed from a 1% tax on hotel and restaurant expenditure.

Macau, China – WT/TPR/S/82

P. 57, para. 26

Offshore **banks** are not regulated by the same legislation as full-licensed banks. New legislation to govern Macau's offshore banking activities was introduced in 1999.⁶ The main purpose of the legislation is to facilitate the establishment of offshore banks so that Macau SAR may become an offshore financial service centre, thus the application process has been simplified and expedited. Offshore financial institutions (OFIs) may not engage in the operations that are specifically prohibited in the licence granted by the Chief Executive and/or in operations that are contrary to Macau's laws. OFIs must register at least 51% of their shares locally. The Chief Executive of Macau SAR may, on a case-by-case basis, authorize OFIs to grant credit or provide guarantees to residents so long as the goal of the operation is in the interest of the Government. OFIs are exempt from profit tax and business registration tax.⁷

P. 61, para. 46

Air Macau has been exempt from income taxes since 1995. In addition, the **airline** is exempt from consumption tax on fuels. Air Macau holds the monopoly rights for air, passenger, and cargo transport services. However, any decision whether to operate a particular route, rests with the airline itself and it is based purely on market considerations. Civil servants and/or government-related cargoes are not compelled to fly Air Macau.

⁵ Manufacturing industries located in cities other than Accra receive a 25% tax rebate. A 50% tax rebate is paid if located outside regional capitals.

⁶ Decree-Law No. 58/99/M of 18 October 1999.

⁷ Law No. 3/99/M, 8 September 1999.

P. 64, para. 63

Macau, China provides a number of sector-specific and general incentives to encourage investment. These include interest rate subsidies and refundable and non-refundable subsidies for investment projects. Imported goods to be used in the **tourism** industry are not taxed. Other sector-specific incentives include: property tax exemption for up to eight years in Macau and 12 years in Taipa and Coloane; industrial tax exemption for the same period; property transfer tax exemption for the transfer of buildings used for tourism purposes; and exemption of vehicle tax for vehicles used in the tourism sector (Decree-Law No.81/89/M).

Costa Rica – WT/TPR/S/83

P. 68-69, paras. 188-189, 196-197 and 199

The Tourism Development Incentives Act (Law No. 6990 of 5 July 1985) establishes a series of incentives and concessions for domestic and foreign enterprises investing in the **tourism** sector. The incentives include exemption from all taxes and surcharges applicable to the importation or local purchase of articles indispensable to the operation and installation of hotel trade services; exemption from all taxes and surcharges applicable to the importation or local purchase of goods indispensable to the construction of piers and other tourist embarkation points; and exemption from all taxes, other than customs duties, on the importation of public transport vehicles with a minimum of 15 seats, etc.

Enterprises awarded contracts for **gas and oil exploration and development** are exempted from payment of all taxes and surcharges, general and local, on the importation of machinery, equipment, vehicles for field work, instruments, spare parts, materials and other goods and services they need to carry out their contracts properly. The exemption covers the exploration period and the first 10 years of development of the oil or gas, provided the goods to be imported cannot be obtained in the country under similar conditions of quality, quantity and price; in any case they must then be purchased in the country and benefit from the same exemption.⁸

The Costa Rican Cancer Institute Establishment Act (Law No. 7765 of 17 April 1998) exempted the Costa Rican Cancer Institute (Instituto Costarricense Contra el Cáncer) from the payment of any taxes, duties, contributions, levies, charges or surcharges on the goods or services it imports or purchases in the country. These exemptions also apply to the holders of concession contracts for the provision of **cancer prevention and treatment services** and to research and teaching activities under such contracts.

The Tax Exemption and Price Control for Literary, Educational, Scientific, Technological, Artistic, Sporting and Cultural Productions Act (Law No. 7874 of 23 April 1999) **exempted literary, educational, scientific, technological, artistic, sporting and cultural productions** declared to be in the public interest from sales tax, selective consumption tax, charges, surcharges, consular fees and customs duties.

In March 2000, a training programme financed by the National Apprenticeship Institute (Instituto Nacional de Aprendizaje, INA) began to be developed. This institution has allocated 500 million colones for training in the **tourism**, agricultural and industrial sectors. MEIC has promoted this programme among businessmen belonging to the CES and has worked with them to enable them to make use of these resources and to facilitate the development of small and medium-sized enterprises through targeted training. More than 150 enterprises in the metallurgical, plastics, graphic arts and food industries are now benefiting from this programme.

⁸ Regulations on the bidding system for oil and gas exploration and development contracts, Executive Decree No. 25785 of 22 January 1997.

P. 98, para. 67

The State **banks** enjoy advantages over their private competitors since they have the guarantee and fullest cooperation of the State and all its departments and institutions. The Executive Board in each case is appointed by the Government Cabinet and their capital may be increased by law or by capitalization. Public deposits in the State banks are fully guaranteed by the State, while private banks do not have any kind of insurance to protect public deposits. The authorities indicated that they were looking at the possibility of creating deposit insurance for private banks.

Brunei Darussalam – WT/TPR/S/84P. 80, para. 46

As with other sectors of the economy, the Government tends to be dominant in services. This is particularly true for social and personal services, which account for over half of the sector's contribution to GDP. In addition, other services, notably **transport and communication** services and **energy generation and distribution**, have a strong Government presence. The Seventh National Development Plan allocated around 22% of its total funding to public utilities, including electricity, transportation, and telecommunications, in addition to finance for **social services** and **construction**, which accounts for the largest share of government funding in the Plan.

P. 81, para. 51

However, progress seems to have been slow and much remains to be done especially in order to improve transparency in **financial services**. In addition, there has been a tendency in the past for the Government to assist financial companies in trouble. In the 1980s, for example, following financial failure of the United National Finance Company in 1985, the National Bank of Brunei, the second largest local bank, in 1986, and Jan Shen, a commodity trading firm, in 1988, the Government provided relief through the budget.

P. 94, para. 94

The new "Tourism Master Plan", launched in July 1999, focuses on the economic and social benefits of **tourism** for Brunei, while preventing an erosion of Brunei's socio-cultural and religious values, and ensuring conservation of the environment. Particular activities targeted by the Master Plan include niche markets such as eco-tourism, adventure and cultural tourism, theme parks, and cruising.⁹ The Plan also outlines investment strategies and policies for infrastructure development in order to promote the sector.¹⁰ In this regard, the Government would like to see tourist arrivals increase to 1 million by 2000. In addition to improving infrastructure, the Government is also trying to attract local employment in the industry; it announced in July 2000 that it would compensate employers in the industry for up to 80% of their costs of training local workers. The Government is also making efforts to develop the sector in eco-tourism, international exhibitions and fora, and as a gateway for the BIMP-EAGA area.¹¹

WTO Members of the Organization of East Caribbean States (OECS) – WT/TPR/S/85

Dominica - WT/TPR/S/85/DMA

P. 14, paras. 54-55

To encourage the establishment of new businesses, Dominica, like other OECS countries, offers a wide range of incentives to potential investors in the areas of manufacturing, **services, and hotel development**. These incentives generally imply a temporary exemption from taxes on profits, on import duties, and on the general consumption tax (CGT), and are contained in the Income Tax Act, the Fiscal Incentives Act, the Hotel Aids Act, the Customs (Control and Management) Act, the Consumption Tax Act, and the Alien Landholding Act. Horizontal incentives for foreign investors are also in place with respect to exemptions from foreign exchange remittance limitations under the Foreign Exchange Control Act.

Under the Fiscal Incentives Act No. 17 of 1974, Cap. 84: 51 of the revised Laws of Dominica, an approved enterprise may import plant, equipment, spare parts, raw materials or components free from customs duties for constructing, altering, reconstructing or extending the approved enterprise. Also under this Act, an enterprise may be granted complete or partial exemption from the payment of income tax on profits.

P. 43, para. 175

Offshore **insurance services** are regulated by the Exempt Insurance Act No. 14 of 1997. All risks and premiums must originate from abroad, and shareholders must reside outside Dominica. To benefit from the status of exempt insurance, a company must be incorporated in Dominica under the Companies Act 1994 and obtain a licence specifying the type of insurance activities in which the company may engage. Some nationality requirements apply: at least one of the directors of the licensed company must be a resident citizen of Dominica. Minimum paid-up capital must be US\$100,000. Mergers and acquisitions are allowed with prior approval of the Minister of Finance. All licensees are exempt from income tax, capital gains tax or other direct taxes on profits or on the transfer of the assets and securities, as well as from import duties.¹² Licensees are also exempt from withholding taxes on their dividends or interest, as well as from the provisions of the Exchange Control Ordinance with respect to the limitation of remittances, and do not require permission to issue shares to non-residents. Licensees, holding companies or management companies may place fixed-term deposits and hold current accounts with a person licensed under the Offshore Banking Act of 1996. The benefits of the Act may also be extended to holding companies and management companies incorporated in Dominica.

P. 45-46, paras. 184-185 and 188

In addition to financial services, Dominica's offshore services industry comprises international business companies, **management services operations, a medical school, Internet gaming**, and the Economic Citizenship Programme. Plans are currently under way for the establishment of an offshore ship registry, possibly in 2001. The contribution of the offshore sector to central government revenue was EC\$10 million in 1999 [(Table IV.2)].

International business companies (IBCs) are regulated by the International Business Companies Act No. 10 of 1996. [...] IBCs enjoy a wide range of benefits including exemption from all local taxes, duties, and other similar charges for 20 years, and exemption from the regulations of the Exchange Control Ordinance.

¹² Transfers between licensees or to a holding company or management company do not require the approval of the Minister of Finance. In all other cases prior written approval of the Minister is required.

Internet gaming is among the offshore activities that are developing rapidly in Dominica. [...] Companies licensed to operate on-line gaming business in Dominica enjoy the fiscal incentives and tax exemptions granted to offshore businesses domiciled in Dominica, including exemption from income, withholding, sales, and other taxes, and customs duty concessions for imports needed to carry on Internet gaming. [...]

P. 48, para. 192

The **tourist industry** may benefit from the Hotel Aid Act, as amended by the Hotel Aid (Amendment) Act No. 21 of 1991 and the Income Tax Act No. 37 of 1982, which allows for a 20-year relief from income tax and import duties on building materials, machinery, and equipment for approved hotel and resort developments. For the purposes of the Hotel Aid Act, a hotel is defined as a building or group of buildings containing no less than five bedrooms. The Aid to Development Enterprises Act provides for the granting of relief from customs duties on raw materials and inputs, materials, tools, plant, machinery, and building materials to be used, among other things, in the equipping of hotels.

Grenada - WT/TPR/S/85/GRD

P. 8, para. 26

Investors benefit from a number of fiscal incentives. The GIDC is an industrial development agency responsible for stimulating, facilitating, and assisting investors. The focus of the GIDC is to encourage investment in projects that generate employment and foreign exchange, particularly in **tourism**, manufacturing and **information technology**. This is done mainly through incentives schemes, including exemptions from taxes on corporate profits for up to 15 years, as well as on import duties and taxes on plant, machinery, equipment, spare parts, raw materials, and components.

P. 25, paras. 103, 111-112

The legislation of Grenada provides a package of benefits and concessions for specific activities such as manufacturing or processing industries, **data processing**, deep-sea fishing and shrimping. There are also incentives for **hotels, and for some other service activities**. Incentives available include tax holidays, import duty exemptions, repatriation of profits, and withholding tax exemptions. In some cases, these incentives are trade-related, including local-content requirements, and export-performance requirements.

The Hotels Aids Act of 1954 allows for full exemption from taxes on profits for ten years for hotels, apartments, and guest houses, as well as exemption from customs duties and taxes on articles of hotel equipment to equip and upgrade hotel property, service vehicles, material for construction, repair, renovation or extension to **hotel properties**. The Qualified Enterprises Act, Cap. 276 provides for tax benefits and exemptions for certain enterprises. The authorities noted that the Act is rarely used, and that currently only three enterprises benefit from it.

Grenadian enterprises may also receive concessionary credits, funded or guaranteed by the Caribbean Development Bank (CDB), for between US\$750,000 and US\$5 million at a current (2000) preferential rate of interest of 8.75% with a repayment period of up to 14 years with three years grace. To benefit, projects are expected to have an expected minimum rate of return of 12%. The areas of priority are agriculture, livestock, fisheries, manufacturing, mining, **tourism, transportation**, and infrastructure. Support through concessionary loans at preferential interest rates is also available from the Agricultural and Industrial Development Bank (AID) for the establishment and development of production activities. Grenada, as an ACP country may benefit from financial contributions from the European Investment Bank (EIB).

P. 39-40, paras. 177 and 179

Despite the recent positive developments, **tourism** in Grenada is nevertheless faced with several problems. Relatively high wages for the region and relatively less developed infrastructure compared with competing markets, have made tourism in Grenada lag behind that of other islands in the Caribbean. Despite recent improvement, small hotels have not performed well and some have fallen behind on their debt service to the state-owned Grenada Development Bank and to commercial banks. To address this problem, the GBT has assisted small hotels by helping to finance the cost of marketing as well as some development programmes.

Tourism activities benefit from tax concessions and other incentives provided by the Government. The two major concessions under the Hotels Aid Act of 1954 are a holiday on corporate income taxes granted to hotels with over ten rooms for up to ten years, and a waiver of duties on imports of building materials and equipment for the construction and furnishing of a hotel, or for upgrading facilities. In addition, multiple renewals of these concessions have been granted, and some hotels have been exempted from paying import duties on all imports. The Grenada Industrial Development Corporation (GIDC) is responsible for facilitating new investment in the industry, and makes recommendations to the Ministry of Finance for the granting of concessions to hotels under the Hotel Aid Act of 1954.

St. Kitt and Nevis - WT/TPR/S/85/KNA

P. 27, para. 119

Under the Income Tax Act No. 17 of 1966, **hotel** owners are granted a tax holiday (their profits are exempt from income tax) for five years, if the hotel has fewer than 30 rooms, and for ten years if the hotel has more than 30 rooms. Moreover, under the Hotels Aid Ordinance, Cap. 342 of the Laws of St. Kitts and Nevis, total relief from customs duties on materials, supplies, and structures is granted for the construction, enlargement or equipping of a hotel of at least ten rooms. Tax waivers are also granted on a case-by-case basis to foreign investors for the construction of infrastructure, with preference given to the construction of hotels, casinos, homes, and office buildings. These incentives are decided by Cabinet; they do not require approval by Parliament. Offshore companies registered in St. Kitts under the Companies Act of 1996, and in Nevis under the Nevis Island Business Ordinance of 1984, are exempt indefinitely from taxes on their offshore activities.

P. 37, para. 176

The Trusts Act of 1996 regulates the registration of **trusts**, which is to be done in the Registrar of Trusts of the High Court. [...] Trusts are granted a large number of advantages and privileged treatment: they are exempt from income, withholding, capital gains, and stamp taxes for all transactions with non-residents. Beneficiaries of a trust do not lose this exemption if trustees are active in the Federation, own or lease property for an office or residence for beneficiaries, hold meetings, conduct banking, sign employment contracts, and arrange for goods and services. [...]

P. 38, paras. 180 and 183

Telecommunications and postal services in St. Kitts and Nevis accounted for 14.6% of GDP in 1999, up from 9.7% in 1995. In order to develop the industry, the Government intends to establish information technology parks, where office space would be made available for rent to new enterprises in the informatics industry, and tax and fiscal incentives would be offered.

P. 40, para. 92

[tourism] In order to attract private sector investment, the Government provides a package of investment incentives similar to that offered by other OECS countries. The package applies to both local and foreign investors for establishments of at least ten rooms, and offers a tax holidays on profits for a maximum of a ten years (for hotels of 30 or more rooms; five years for hotels of between 10 and 30 rooms), with exemptions from import duties on construction material and equipment. Additional benefits, such as exemptions from import duties on operating supplies, can be negotiated for investments that are deemed to make a significant impact on the Government's objectives, mainly large establishments. The Government intends to reduce the threshold for these incentives in an effort to promote local investment in guest houses.

Saint Lucia - WT/TPR/S/85/LCA

P. 23, para. 90

The Free Zone Act No. 10 of 1999, which repealed the Customs Free Zone Act No. 18 of 1983, provides for the establishment and operation of export processing zones. Cabinet may, by Order, designate any geographical area to be a free zone. The Act establishes a Free Zone Management Authority (FZMA), administered by a Board comprising representatives from both the public and the private sector, who are also responsible for granting licences for operation in the zones. Enterprises conducting trade and investment activities in manufacturing, **financial services, telecommunications, professional services**, and other activities may apply to operate within a free zone. Licences are specific to a business. Price controls do not apply to sales of goods and services within the free zone. The main industrial free zones are in Vieux Fort, Cul-de-Sac, and Odsan.

P. 38, para. 169

The **tourist industry** benefits from income tax concessions and other incentives provided by the Government. These concessions are inscribed in the Tourism Incentives Act No. 7 of 1996, which repealed the Hotel Aids Ordinance No. 25 of 1959, and exempted approved tourist products from income tax for 15 years (tourism products are defined as any product created by a tourism project). The Act also grants customs duty and consumption tax waivers for the importation of supplies, equipment, and materials needed for the construction of a hotel. The Ministry of Commerce is responsible for the administration of the incentives under the Tourism Incentives Act.

St. Vincent and the Grenadines - WT/TPR/S/85/VCT

P. 22, paras. 100.101

Although there are no free zones currently in operation, there is legislation in this respect. The legislation is recent and is aimed at promoting the development of free zones in the near future; it declared a part of the Diamond Estate in the parish of St. George on the island of St. Vincent, as a free zone. The Export Free Zones Act No. 15 of 1999 grants the Port Authority the responsibility for administration and control of free zones. Enterprises producing either goods or services may operate in a free zone. The First Schedule of the Act lists activities that may be carried out in a free zone. These include **warehousing and storing**; manufacturing and assembly; trans-shipment; exporting; importing; and provision of services such as **banking, insurance, and professional services**.

Companies require an approval from the Authority to operate in a free zone. They must be incorporated locally in accordance with the Companies Act. Incentives include: exemption from import and export licensing requirements; total income tax relief in respect of profits made in manufacturing operations; total income tax relief with respect to international trading activities; exemption from the payment of customs duties on the importation of capital goods, consumer goods,

raw materials, component articles, or data to be used for an approved activity; duty free importation of articles included in the Third Schedule of the Export Free Zones Act for use in construction or repairs of premises inside a free zone; and exemption from the provisions of the Exchange Control Act. Enterprises operating in the free zone may not borrow from banks located in the customs territory of St. Vincent and the Grenadines.

P. 23, para. 105

Incentives exist in the form of tax holidays, import duty exemptions, repatriation of profits, and withholding tax exemptions. The incentives scheme is managed by the Ministry of Trade, Industry, and Consumer Affairs, while the St. Vincent and the Grenadines Development Corporation provides investment promotion services. Applications for incentive benefits are submitted to the Ministry, which decides on the level and type of concessions to be granted. The main beneficiaries of the incentives scheme are manufacturing enterprises and **hotels**.

P. 25, para. 110

The **Hotels Aid Act No. 16 of 1988** allows for full exemption from taxes on profits for hotels, apartments, and guest houses, as well as exemption from customs duties and consumption tax on articles of hotel equipment to equip and upgrade hotel property, service vehicles, material for the refurbishment, renovation or expansion of existing hotels, or for the construction of new hotels. The benefits are applicable if the hotel has at least five rooms, or if the expansion is of no less than five rooms. For the construction of new hotels, the period of income tax exemption is ten years for hotels of between five and 20 rooms; 12 years for hotels of between 21 and 34 rooms; and 15 years for hotels of 35 rooms or more. The period of income tax exemption for repairs and expansion is: nine years for hotels creating an addition of between five and nine rooms; ten years for hotels adding between ten and 35 rooms; and 15 years for expansions of more than 35 rooms. The length of the customs duty benefits is determined by Regulation.

P. 34, para. 167

Incentives granted to the **tourism** industry are detailed in the Hotel Aid Act No. 16 of 1988. Incentives are granted for the improvement by repair, renovation or replacement of existing facilities of a hotel. These incentives include complete or partial exemption from import duty and consumption tax on building materials and articles of hotel equipment imported or purchased locally for purposes stated above. Incentives are also offered for hotel expansion. Investors who may wish to add five or more guest rooms or apartments to an existing hotel can benefit from income tax exemption and duty free concessions on, among other things, construction materials and hotel equipment. The period of tax exemption is contingent on the number of additional rooms/apartments. The construction of a hotel with not less than ten guest rooms or apartments, or in the case of local investors, not less than five guest rooms or apartments, is eligible for exemption from income tax and duty-free concessions on buildings materials and hotel equipment. Advertising and promotional material related to the tourist industry may be imported free of customs duty and consumption tax. Duty-free concessions are also offered for the importation of other ancillary facilities related to the development of tourism, not necessarily linked to hotel development.

Gabon – WT/TPR/S/86

P. 89, para. 107

Tax facilities for **tourism**-related companies and enterprises participating exclusively in an approved project include exemptions from corporation tax (for companies) or personal income tax (individual entrepreneurs) during construction of the project and for the first eight years of operation. Additional tax facilities for such companies during the next eight years of operation include

exemption from corporation tax on half the taxable profits (companies) or personal income (individuals) and during the next three years of operation, the write-off of losses against profits. Tourism enterprises are also exempted from the property tax for six years after completion of their project and, at the end of that period, they benefit from a tax ceiling of 10 per cent of the rental value of their property, with an abatement of 80 per cent in the first year, 60 per cent in the second, 40 per cent in the third and 20 per cent in the fourth. Other tax advantages are also granted to tourism-related companies. In return, those companies and enterprises participating exclusively in an approved project undertake to give priority to employing Gabonese workers and to respect environmental protection legislation.

Cameroon - WT/TPR/S/87

P. 66, para. 74

Tourism activities are regulated by Law 98/006 of 14 April 1998. The Government's policy is aimed at further developing and promoting tourism. The Government hopes to attract 500,000 tourists by 2002, but has yet to outline a specific strategy to attain this goal. The National Tourism Council was established in April 1998 to advise the Government on measures to promote the development of tourism in Cameroon.¹³ Under Law 98/006, fiscal incentives could be granted to attract investment (domestic and foreign) in the sector.

United States – WT/TPR/S/88

P. 95, para. 47

[ship repair] The Federal Government provides direct support to the industry through the procurement of goods and services from shipyards and related industries to repair government-owned vessels. In the event that ships are repaired abroad, 50% *ad valorem* duty is imposed on vessels when re-entering the United States, based on the cost of equipment and non-emergency repairs obtained in foreign countries for U.S.-flag vessels. The duty is based on the cost of the repairs, and applied to the good. U.S.-owned foreign-flag vessels are not subject to the duty. Under the NAFTA, this duty was terminated. The OECD Shipbuilding Agreement (see below) would eliminate this duty for countries signatory to the Agreement.

Czech Republic – WT/TPR/S/89

P. 27, para. 46

The Czech Republic has changed its policy on foreign investment incentives progressively during the period under review. In May 2000, a package of incentives was approved, changing the previous policy of offering investment incentives on a case-by-case basis (subject to governmental approval), a major change from the "no incentives" policy during 1992-98.¹⁴ In addition to the foreign investment incentive package, foreign investors are offered a wide range of other incentives, such as grants and loans at interest rates below market rates (Chapter IV(3)). All investment incentives are equally available to foreign and domestic investors.

¹³ The Council was created under Law 98/006 of 14 April 1998. Decree No. 99/112 of 27 May 1999 established its organization and functions. The Council is composed of representatives from the Government and the private sector.

¹⁴ Changes to the incentive package include, *inter alia*, lowered investment threshold; allowed incentives to be applied to the expansion of production facilities already in operation (previously only newly founded companies with new production facilities qualified); and 40% of total investment must go into plant machinery.

P. 65, para. 7

Progress has been made in improving the health of the small **banks** as well as privatizing some large state-owned banks, but the cost of bank assistance has been substantial. In response to poor asset quality in the small banking sector, the central bank implemented in 1996-97 a programme of supervisory actions designed to encourage the banks to improve their situation (Consolidation Program II).¹⁵ As a result, several small banks were liquidated, merged or went into bankruptcy.¹⁶ To further address weaknesses in small banks, the Government approved in October 1996 a large-scale restructuring programme (Stabilization Program). As part of the programme, a government institution bought poor quality assets of the banks at book value. Liquidity crisis in the banks were also solved through loans as well as an increased coverage of the deposit insurance scheme. The cost of bank assistance during the period 1991-98 was estimated at the equivalent of 10.5% of GDP.

P. 71, paras. 32-34, 36 and 38

Progress has been made in liberalizing the **transport services sector** during the period under review. As in 1996, the sector portrays a mixed picture. While the Czech Republic has a relatively competitive trucking industry and a non-subsidized airline company, passenger railway services and, to a lesser extent, bus services require large amounts of transfers to cover their losses. Full harmonization of the Czech Republic's transport laws and legislation with the EU's *acquis communautaire* is planned for the end of 2002. Road transportation remained by far the most important mode of freight traffic transportation throughout the 1990s, accounting for at least 80% of the total in recent years. In 1999, 42% of imports were transported by road while 56% were transported by rail.

(ii) *Rail transport*

Within the framework of Act No. 9/1993 Coll. on Czech Railways, freight and passenger **railways** are owned and operated by the State through Czech Railways (ČD). Large amounts of funds (grants and subsidies) are transferred to ČD to cover losses from passenger transport. In early 2001, ČD's accumulated losses amounted to CZK 40 billion. The losses originate from passenger services. Passenger fares are regulated by the Government and subsidized in accordance with social obligations to provide mobility for the public. Subsidies on railway freights were abolished in January 1995. Fares for freight are now determined through negotiations with shippers.¹⁷ The Government allows in some instances access to tracks for companies wishing to provide their own rail transportation. Prices for access to tracks are set by the Ministry of Finance based on cost information supplied by ČD.

(iii) *Road transport*

The main laws related to **road transport** are Act No. 111/1994 Coll. on Road Transport and Act No. 304/1997 Coll. on Roads. Foreign investment is prohibited in road transport (passenger and freight).¹⁸ Nevertheless, the Czech Republic's trucking industry is relatively competitive. Truck transportation is undertaken by private carriers, with less than 1% of truck transportation undertaken by state-owned companies.¹⁹ Bus transportation is provided by private national companies, but, in

¹⁵ Consolidation Program I, implemented in 1991-93, was aimed at cleaning up the portfolios of former state-owned banks/organizations.

¹⁶ World Bank (1999a), Vol. 1.

¹⁷ World Bank (1999b), Vol. 2.

¹⁸ The regulation applies to the following for passengers: transit, "closed door" tours, picking up or setting down on an international journey, and transport within the country. It applies to the following for freights: transit, delivery on an international journey, collection on an international journey, return cargo where collection is authorised, return cargo where delivery is authorised, and transport within the country (OECD, 2000b).

¹⁹ World Bank (1999b), Vol. 2.

contrast to truck transportation, the State compensates the carrier (in case of public interest) for demonstrable loss incurred. Bus transport companies receive about CZK 2 billion annually. Transportation on international and long-distance routes is not subsidized. Fuel taxes on cars, trucks and buses contribute towards the cost of highway maintenance and construction.

(iii) *Internal waterway transport*

[...] Foreign investors are allowed to operate in inland **waterway freights**, including chartering activities. Licensing criteria include, *inter alia*, the approval by the investor's national authority to operate in its home country. In order to fly the Czech flag, vessels must be owned by a Czech party who must reside in the Czech Republic. Currently, no merchant ship is registered in the Maritime Register of the Czech Republic. There is only one national shipping company in operation (Czech Ocean Shipping). Although Act No. 61/2000 Coll. provides for the possibility of state aid, no such aid has so far been granted.

P. 74, para. 46

One state-aid programme specifically targets the **tourism** sector. Under the State Programme for Tourist Support, investors may receive grants up to 50% of investment costs for the development of spa-related activities. In addition, as in all sectors, investors in the tourism sector have access to the incentives offered under the Government's state aid programmes [(Chapter IV(3))].

Mauritius – WT/TPR/S/90

P. 72, para. 69

Fiscal incentives (duty and tax concessions and rebates) are granted to **hotel** promoters under the Hotel Management Scheme and the Hotel Development Scheme (Table AIII.4). In addition, the Development Bank of Mauritius offers concessionary interest rates on loans for the construction or upgrading of hotel facilities. The Government, through the Mauritius Tourism Promotion Authority (MTPA)²⁰, also promotes tourism in the major overseas markets: some Mau Rs 100 million were earmarked for tourism in the 1999/2000 national budget. In recent years, the Government has taken steps to encourage joint-promotion efforts from the public and private sectors. Other areas of public-private cooperation include trade fairs and international tourism exhibitions. [...]

P. 75, para. 80

Offshore **banks** are not subject to Mauritian taxes or domestic monetary policy measures.

P. 77, para. 93

In Mauritius, **telecommunications and postal services** have always been provided by separate bodies. In accordance with the 1933 Post Office Act (as amended), the Mauritius Post Office (MPO) operates as a Government Department under the portfolio of the Ministry responsible for Public Utilities. [...] The MPO receives subsidies from the Government. [...]

P. 78, para. 97

[Maritime transport] Mauritius has three shipping companies, of which one is owned by the State. The State-owned company exercises exclusive rights over freight and passenger shipping between Mauritius and Rodrigues; the prices of its services are subsidized by the Government. The two other

²⁰ The MTPA is a parastatal. Its main object is to promote Mauritius abroad as a tourist destination (Section 4 of the 1996 Mauritius Tourism Promotion Authority Act).

companies are jointly owned (joint-ventures) by Mauritians and foreigners, and their vessels mostly carry out regional trade. National vessels are entitled to a 50% discount from berthing fees. Shipping to Europe, the United States and the Asia-Pacific region is handled by foreign vessels. Mauritius does not participate in any cargo-sharing agreements.

WT/TPR/S/91 – Slovak Republic

P. 30, paras. 55-57 and 59

The Government's main priority is to attract investment into industry. The main sectors attracting investment within the next five years are expected to be **power engineering**, metallurgy, engineering, wood processing, chemical industry, electrical engineering, **information technologies**, **tourism**, textiles, clothing, footwear, and glass.

(iv) Incentives

In an attempt to increase foreign direct investment, the Slovak Government has enhanced financial incentives to foreign investors. More generous tax incentives were introduced in 1999 (Act No. 366/1999), and again in 2000 (Act No. 466/2000). The 1999 package granted foreign investors established before end-2001 with a full five-year tax holiday (extendable at a rate of 50% for another five years, subject to additional investment levels), provided investment in the venture exceeded €5 million and foreign equity was above 75%.²¹ The incentives apply to greenfield investments in the production of manufactured goods previously imported into Slovakia or not produced domestically or intended for export. For certain service industries, such as **hotels** and **passenger transport**, a lower investment threshold of €1.5 million applied. The incentives for businesses established after 2001 and up to end-2003 were changed slightly, especially by reducing the threshold for manufacturing goods to €4.5 million and the minimum foreign share to 60%. Other incentives include duty- and VAT-free imports of certain machinery and equipment, job-creation and training benefits, and opportunities to obtain low-cost land.

Investment legislation is currently being reviewed and additional incentives are expected to be introduced. The Government approved the new legislation in May 2001 (decision No. 424/2001) and it is currently being considered by the National Council. This will extend the full tax holiday to ten years, and further reduce the threshold to €2.35 million (and €1.65 in depressed regional areas with unemployment above 10%). At least 80% of the revenue must come from industrial production or from services.

[...] It is unclear whether the benefits of investment incentives outweigh their costs. These are typically not the most effective measures for attracting investment. While the economic rationale for incentives is generally based on the need to correct market failures, alternative policies attacking the cause of the problem are likely to be more efficient. Moreover, competition from neighbouring countries offering more generous incentives for FDI to obtain investment is likely to make their provision counterproductive. The revenue forgone from such incentives can be very large, and can end up transferring tax revenue to foreign investors and their governments, with little economic gain to the host country. Investors tend to be influenced by other factors, such as market potential, and political and economic stability, rather than investment incentives.

P. 100, paras. 93-94

[Financial services – banking] Before 1999, the three large state-controlled banks (VUB, SLSP, and IRB) suffered from political interference and poor management. As a result, they

²¹ For investment in regional areas with an unemployment rate exceeding 15%, the minimum level of foreign investment is €2.5 million.

accumulated large amounts of poor quality non-performing assets and became deeply insolvent. The Government, in cooperation with the National Bank, embarked on a comprehensive restructuring programme involving two basic operations, designed to reduce non-performing loans in these banks from 40% to 20% of assets. The first was a Sk 18.9 billion direct equity infusion provided by the National Bank through the state budget at end-1999. The second was a Sk 105 billion carve-out of bad assets, conducted in two stages, of Sk 74.1 million in December 1999 and Sk 30.9 million in June 2000. These loans were transferred to a new agency, the Slovenska konsolidacna (the Slovak Consolidation Agency - SC), and to the state financial institution Konsolidacna banka (the Consolidation Bank - KOB), and were replaced by loans to SC and KOB guaranteed by the Government. These operations have restored the capital adequacy ratio of these banks to levels above 8%, according to international standards.

A further measure supporting bank privatization was the conversion of the banks' state-guaranteed loans to SC and KOB into state bonds in January and March 2001. The bonds were issued with maturities of either five, seven or ten years, with a combination of fixed and floating interest rates. Interest is to be paid twice yearly, with the first payment due one year from the date of issue. The issuance of these bonds will assist the banks by providing assets that can be used to manage liquidity and other risks.

P. 107, paras. 122 and 124

[Transport] Only private carriers undertake truck transportation. Road transportation on international and long-distance routes is not subsidized. The Government has approved plans to privatize the Slovak Bus Transport Companies by divesting 49% of shares in the majority of companies by end-2001. It also intends to introduce regulations, during 2001, designed to improve the efficiency of state subsidies provided for bus transport. Subsidies are to be terminated on routes over 100 kilometres. Public tenders are also to be invited where subsidies exceed Sk 1 million annually.

[...] The state-owned Slovak Railways is heavily indebted and continues to operate at large losses, amounting to Sk 15 billion from 1993 to 1997. The railway network requires substantial investment to be modernized and extended. The Government's plans are currently concentrated on a gradual restructuring of Slovak Railways according to the Project for the Transformation and Restructuring of the Railways, approved in 2000. Slovak Railways is to be separated into two enterprises from 1 August 2001. Slovak Railways will maintain the railroad network, while all freight and passenger services will be transferred to a new 100% state-owned joint-stock company. The latter will also be split into passenger and freight operations and gradually privatized by 2005, involving both domestic and foreign participation. Government subsidies will cover only passenger services subject to fare regulation by the Government, and these subsidies will be reduced progressively through rationalization of loss-making routes and fare increases. Passenger rail fares were raised by 15% from February 2001. Freight rates have been deregulated and are no longer subsidized.

P. 108, para. 132

The Ministry of Economy administers the "Support Programme for **Tourism** Development" together with the state-owned Slovak Guarantee and Development Bank. The Bank also provides support to entrepreneurs, especially small and medium-sized firms, in the form of bank guarantees, up to 65% of justified costs. Further aid is provided within this Support Programme in the form of non-refundable financial assistance of up to Sk 4 million. State aid to the tourism industry amounted to Sk 29.2 million in 2000.²² It is estimated to be Sk 45 million in 2001.

²² State Aid Office (2001), p. 24.

WT/TPR/S/92 – Malaysia

P. 83, para. 52

[Financial services – banking] In 1998, the BNM introduced a programme to consolidate finance companies into fewer institutions; to this end, the Government provided incentives including an exemption from stamp duty and from real property gains tax, and tax credit amounting to 50% of the accumulated losses of banking institutions to be acquired.²³ The programme was extended in 1999 to all domestic banking institutions, and on 14 February 2000, the Government granted approval for the formation of ten banking groups, which were completed by the end of 2000.²⁴ [...]

WT/TPR/S/93 – Uganda

P. 46, paras. 74, 77-78

[...] The European Investment Bank-Uganda Apex Loan Scheme (section (3)(vi) is meant to address economic modernization more broadly, beyond just the export sector. Phase I of the programme (€15 million) was successfully implemented and phase II (€25 million) is under implementation. The investments financed under the programme relate to new projects and/or expansion, modernization, restructuring, and diversification of existing activities. Eligible activities include agri-industry, manufacturing, horticulture and flower growing, fishing/fish processing, mining and quarrying, **hotels and tourism, and other services such as garbage collection and disposal, and cleaning equipment for industries**. At the end of March 2000, 57 projects had been financed at a total cost of €25 million.

Investment incentives are not available for several types of businesses, namely wholesale and retail commerce, the personal services sector, public relations business, car hire service and operation of taxis, bakeries, confectioneries for the Uganda market only, postal services, and professional services.²⁵

WT/TPR/S/94 – Guatemala

P. 69, para. 64

Against the background of Guatemala's potential in geothermal and hydroelectric **energy**, the Government is undertaking particular efforts to increase the use of renewable energy. According to the authorities, a law to promote the development of renewable energy, which was under preparation at of mid-2001, provides for fiscal incentives to promote investment in the generation of renewable energy. In addition, the authorities planned to open an information and promotion centre on renewable energy in order to disseminate information, support feasibility studies, and co-finance projects in this area.

P. 85, para. 142

The authorities emphasized that the State does not provide **tourism services** nor any specific fiscal incentives for the tourist sector. However, they also noted that as of mid-2001 the Tourism Law of 1974 was being revised and that the reintroduction of sector-specific investment incentives was being considered. Support for micro- and small enterprises in the tourist sector is available through

²³ Bank Negara Malaysia (2001g).

²⁴ Accordingly, 51 of 54 existing banking institutions were consolidated into the ten banking groups, and 96% of the total assets of the domestic banking sector were consolidated.

the programme PYMETUR; this programme is sponsored by FUNDESA, a non-profit organization of business persons.

WT/TPR/S/95 – Pakistan

P. 110, para. 99

[Transport – shipping] Under the 1997 Merchant Shipping Policy, covering several areas (including the acquisition, registration, operation, and maintenance of ships), a 30% shipbuilding subsidy has been made available to Pakistani shipowners for the placing of orders for new vessels with national shipyards²⁶; vessels under this scheme must be registered in Pakistan and must not be sold to foreign investors before ten years of service under the Pakistani flag.²⁷ Under the 2001 Merchant Marine Policy, ships (including floating craft, tugs, dredgers, survey vessels) purchased or chartered by a Pakistani entity and flying the Pakistani flag may be exempt from payment of all import duties and surcharges until the year 2020; however, if any of these vessels are demolished within a period of five years from the date of purchase, the beneficiaries are liable for payment of the full duty applicable to ships purchased for demolition purposes. [...]

P. 111, para. 102

In the light of the world-wide expansion of the **information technology and software** market, since August 2000 Pakistan has pursued an information technology (IT) policy focused on: human resource development; infrastructure development; telecommunications; databases; software industry development for exports and local markets; and exponential increase in Internet use.²⁸ This policy has been implemented through several tax, financial, and regulatory incentives. These measures include: the elimination of import duties on most IT and telecommunication products (as of July 2000); income tax holidays for computer training (up to 2005), and export of computer software (for 15 years); exemption from sales tax and registration requirements upon importation of hardware by software companies; subsidized rental allowance for office facilities/space in Software Technology Parks and free Internet connections for public-sector universities; concessionary export finance (Chapter III(3)(viii)); a facility for software companies to retain 25% of their export earnings in foreign exchange in order to meet expenditures on the purchase of hardware/software, foreign travel, marketing, and hiring of consultants; and an exemption from minimum tax of 0.5% on remittances from software exports.²⁹ Several procedural barriers (e.g. processing of licence applications) have been lifted. Foreign investment is unrestricted.³⁰

WT/TPR/S/96 – Malawi

P. 33, paras. 88-89

Incentives are available to investors under the Investment Promotion Act (e.g. investment allowances and duty-free importation of raw materials used in manufacturing). New investments, both foreign and domestic, between US\$5-10 million have the option of either a five-year tax holiday or an indefinite company tax rate of 15% (instead of the standard rate of 30%); for investments above US\$10 million, a ten-year holiday may be chosen. The foreign investment share must be at least

²⁶ Shipbuilding is largely undertaken by the state-owned Karachi Shipyard and Engineering Works, which is also involved in ship repair, submarine and warship construction, and general engineering; another state-owned shipbuilder, the Pakistan Navy Dockyard, works exclusively for the Pakistani Navy (U.S. Commercial Service, 1999c).

²⁷ U.S. Commercial Service (1999c).

²⁸ Ministry of Science and Technology (2000).

²⁹ Pakistan Software Export Board (2000a); and Ministry of Finance (2000a).

³⁰ U.S. Commercial Service (1999a).

30%. No investor has as yet exceeded the minimum investment threshold to receive tax holidays. Although the Government may also declare certain "strategic" industries to be eligible for a tax holiday of five years and thereafter a company tax rate of 15%, no such activities have yet been declared by the Ministry of Finance and Economic Planning.

The Minister of Finance and Economic Planning also has discretion to rebate tariffs and surtaxes on imported inputs where to do so is considered within the "public interest" (section 52 of the Finance and Audit Act). Investment projects are considered eligible, and such rebates have been granted frequently to investors in, for example, hotel projects. The Government is currently introducing specific criteria and a point-scale rating system on which to apply these rebates as a means of limiting the discretionary element of the scheme. The criteria for granting rebates to investors are employment creation; capital injection; export potential; domestic value added; generation of net foreign exchange earnings; promotion of high technology transfer; creation of inter-industry linkages; and increasing the geographical spread of industries. The rebate share is determined according to a point system, with the maximum rebate set at 75%.³¹ The rebate extends for the first ten years of operation, and the point system slightly favours investment in manufacturing, agriculture, **tourism**, **transport**, and mining. Applications are made to the Malawi Revenue Authority, which makes recommendations to the Minister of Finance and Economic Planning based on the decisions of a Committee formed to review the application.³²

P. 87-88, paras. 90-91

Malawi Railways (1994) Ltd was formed in 1994 when **railway** and lake transport services were split to commercialize both operations for privatization. It was privatized in late 1999, under a concession agreement, initially for 20 years. The operator, an international consortium called the Central East African Railways Company Ltd, comprises CFM, a Mozambique railway and port company; Rail Development Corporation of the U.S.A.; and Edlow Resources Ltd. The Government retained ownership of the rail network and buildings, while the operator acquired the rolling stock. The Central East African Railway Company operates the Nacala rail link. Since Malawi Railways was privatized, freight tonnage has risen by 30%.

The operator is required, as part of the concession agreement, to continue providing passenger services under a personal service obligation (PSO). Government subsidies will be granted for a minimum of five years.

P. 90, para. 102

The Government recently introduced special **tourism** incentives, such as tax concessions. Investors of minimum specified amounts in designated tourism areas are to receive duty-free status on selected goods following the 2001/02 Budget. Hotel services are subject to a 10% service charge (of which 5% is retained by the Government, 4% by the hotels and 1% for training), and to the 10% surtax.

WT/TPR/S/97 - Mexico

P. 66-67, para. 175

Other tax concessions include: sector-specific concessions, for instance in favour of the **cinematography industry**, **air and maritime transport**, and agriculture, fishing and forestry; and

³¹ For example, the points awarded for export potential increase from "one" if 5% to 20% of production is exported to "five" if at least 85% is exported.

³² The Committee comprises the Malawi Revenue Authority, the Malawi Investment Promotion Agency, the Ministry of Finance and Economic Planning, and the Ministry of Commerce and Industry.

measures to promote technological development or more environmentally friendly equipment. A few of these fiscal advantages are contingent on meeting national-content requirements (e.g. exemption of the tax on vehicles), or are granted only if no domestic substitute is available (duty-free import of decontaminating equipment) [(Table III.9)].

P. 106, box IV.1, fourth para

In 1999, the IPAB intervened in two commercial banks – Banca Serfin and BanCreceer – to protect more than 3.5 million accountholders. In both cases, the IPAB prevented their bankruptcy by injecting resources for their recapitalization; shareholders lost the capital invested. Banca Serfin returned to the private sector in mid 2000, although the IPAB remained the largest creditor; in September 2001, BanCreceer was sold to Banorte, through public bid, for Mex\$1.6 billion (some US\$176 million).

WT/TPR/S/98 – Slovenia

P. 74, para. 35

Aware of the potential for development of the industry, and of the growing competition from neighbouring countries since the return to peace in the region, the Government of Slovenia has introduced a number of programmes to support the industry and improve the quality of local services. In 2000, a total of SIT 2 billion of budgetary funds were earmarked by the Government for **tourism** development; funds were also earmarked by the National Tourism Board for tourism promotion (SIT 1.2 billion), with a particular focus on European markets; financial incentives of up to SIT 1 billion were oriented for the improvement of the quality of services. [...]

WT/TPR/S/99 – Haiti

P. 64, para. 65

Measures to encourage investment in **energy** are essentially tax-related, in the form of reductions on taxable amounts and tax exemption in specific cases. Thus, duty-free treatment is granted for imports of capital goods and raw materials needed for exploitation and production during the set-up phase, with the exception of imports of petroleum products. As is the case for mining and quarrying, concessions for investment in the energy sub-sector are not governed by the Investment Code, but are negotiated between the State and the companies concerned.

P. 70, para. 91

Tourism projects are not governed by the Investment Code but by specific laws. In accordance with the provisions in force, any investment in tourism would be eligible *inter alia* for the following benefits, granted directly by the MEF on the basis of a reasoned opinion from the MT:

- Concession or rental of State land, and assistance from officials of the Department of Tourism;³³
- exemption from all import duties and taxes on construction materials, furnishings, kitchen, sanitary and electrical equipment, appliances, items and finishings used in hotel construction, renovation or expansion;

³³ The public domain is inalienable. It may not be sold but may be the subject of a concession. The Department provides technical assistance to tourism investors and assists them in their contacts with government services.

- five-year tax exemption as of the date of entry into operation, in the case of construction; and
- two-year tax exemption in the case of renovation leading to the creation of 30 permanent full-time jobs.

P. 125, para. 91

Significant steps have thus been taken since the early 1990s to strengthen the **banking** sector. [...] For the three public banks identified thus far as being weak, the Reserve Bank has recommended additional injections of capital by the Government to help them achieve the required minimum capital adequacy ratios. These and other recommendations discussed above are currently under consideration by the Government. [...] Fiscal measures, to allow banks to deduct up to 7.5% of their total income (previously 5%) against provisions made for bad and doubtful debts as well as to deduct up to 10% of their NPAs falling in the category of loss or doubtful assets (previously 5%) on the last day of the accounting year, were also announced.³⁴ [...]

³⁴ Ministry of Finance (2002b), Part B, paragraph 68.

P. 131, para. 105

Under the NTP 99, the licence issuing authority remains the Department of **Telecommunications**. [...] A range of incentives are also provided to encourage investment in the sector. These include amortization of licence fee, tax holidays of up to five years, rebate on subscription of shares/debentures, tax relief for financing through venture capital, and reduced rates of import duty on various telecommunications equipment.³⁵

P. 133, para. 109

[Construction] Road services are being improved, including through upgrading the present national highway infrastructure and developing new highways connecting major cities.³⁶ The National Highways Act, 1956 was amended in 1995 to allow participation by the private sector, which is being encouraged to invest through build, operate and transfer (BOT) schemes. Incentives for private-sector investment include tax holidays of up to ten years³⁷, and zero rates of import duty on construction equipment; FDI up to 100% is also permitted.³⁸

P. 135, paras. 114-115

In addition, to encourage exports of **software**, profits derived from software exports are exempt from income tax under Section 80HHE of the Income Tax Act, although the extent of these exemptions is being reduced gradually.³⁹ The Government has also created software technology parks, which are administered by an autonomous society (Software Technology Parks of India, STPI) under the Department of Information Technology, Ministry of Communication and Information Technology. The STPI provides state-of-the-art high speed data communication facilities and single window services to exporters. It has set up 24 centres, including 24 international gateways across the country. The parks, along with similar parks for computer hardware firms, provide infrastructure facilities, and other benefits such as exemptions from payment of income tax for a period of ten years (up to 2010) under Sections 10A and 10B of the Income Tax Act and exemption from payment of excise duties on inputs purchased in the domestic tariff area (DTA).⁴⁰ Foreign direct investment of up to 100% is permitted. All computer software companies established either in export-processing zones or as export-oriented units have the same liberal framework for imports and investment; as export-oriented companies, however, there may be certain export obligations in order to qualify for tax

³⁵ Equity held by non-resident Indians (NRIs), OCBs or International Funding Agencies will be counted as foreign equity (Ministry of Communications, 2002, p. iv).

³⁶ The National Highways Authority of India estimates that although India's national highway network is less than 2% of the country's total road network, it carries some 40% of total traffic (NHAI, "Road Network", [Online]. Available at: <http://www.nhai.org/roadnetwork.htm>, [4 April 2002]).

³⁷ Up to 100% for five years and 30% for the next five years, which may be availed of over a 20 year period (NHAI, "Government policy", [Online]. Available at: <http://www.nhai.org/govtpolicy.htm>, [4 April 2002]).

³⁸ Subject to total foreign equity limit of Rs 15 billion.

³⁹ Under Section 80 HHE of the Income Tax Act, computer software is defined as any computer program recorded on any disc, tape, perforated media or other information storage device or any customized electronic data or any product or service of similar nature, as notified, which is transmitted from India by any means. Exemptions under Section 80 HHE of the Income Tax Act are granted as follows: 80% of profits for the assessment year beginning 1 April 2001; 70% for the year beginning 1 April 2002; 50% for the year beginning 1 April 2003; 30% for the year beginning 1 April 2004; no deductions will be granted as of assessment year beginning 1 April 2005.

⁴⁰ Firms that manufactured computer software on or after 1 April 1981 in any free-trade zone, or on or after 1 April 1994 in any software or hardware technology park, or on or after 1 April 2001 in any special economic zone, are eligible for income tax holidays up to 31 March 2010. Key infrastructure facilities provided in the software parks include high speed data communication services.

exemptions. As at 1 April 2001, a total of 6,652 software units were registered with the STPI Centres; software exports by these units were valued at some US\$3.6 billion in 2000/01.⁴¹

WT/TPR/S/101 – Barbados

P. 23, paras. 18-19

A number of tax incentives are available for domestic and foreign investment under the Income Tax Act. Additional incentives cover capital allowances, dividend taxation, and loss carry-forwards.⁴² In addition, sector-specific legislation has been enacted for **offshore banking, trusts, insurance and other financial companies, as well as for shipping companies and hotels** (Chapter III(4)(iii)).⁴³

Foreign investment incentives are administered by the Ministry of Finance and the Ministry of Tourism, in coordination with the Barbados Investment and Development Corporation (BIDC). The BIDC also provides advisory services and other assistance to companies looking to establish businesses in Barbados. Applications for investment incentives are evaluated on the basis of a number of criteria, including local value added, net foreign exchange, potential export sales, and environmental impact. Foreign investment is not, however, subject to performance requirements.

P. 54, para. 108

The Government of Barbados is committed to actively supporting businesses, notably through the provision of tax incentives and, to a lesser extent, financial assistance. Assistance is available to companies in an array of sectors, ranging from agri-food and manufacturing to **tourism and financial services**. Proposals contained in the 2001 Financial Statement mentioned additional support for sugar and cotton producers, grants to improve technology, marketing and product quality in agri-food production, funding for **hotels and restaurants and other tourism-related industries**; and further financial assistance to the manufacturing sector. There are no available estimates of the overall budgetary cost of assistance to private and public commercial companies. According to the authorities, revenue loss from tax exemptions in 2000/01 amounted to BDS\$140 million or 2.7% of GDP.

P. 80, paras. 79-82

Tourism services are provided mainly by private operators, although the Government retains partial or full ownership of certain hotels. Government policy is to create an attractive environment for private investment. The Government also gets involved in the development of areas considered essential but unattractive to the private sector. For example, the Government has participated in the redevelopment of the former refinery site into a hotel project, and has also injected public funds in the rescue of small hotels.

The Ministry of Tourism is in charge of formulating tourism policy. The Barbados Tourism Authority is a statutory board responsible for marketing Barbados as a tourist destination. The Ministry of Tourism administers the Hotel Aids Act, which provides concessions to hotels during the construction phase and allows for capital expenditure to be written off against revenue for nine years

⁴¹ Software units established under the EOU/EPZ/STP schemes may sell up to 50% of the f.o.b. value of their exports in the domestic tariff area (DTA) (Ministry of Information Technology, undated, p. 5).

⁴² Lowtax.net online information. Available at: <http://www.lowtax.net/lowtax/html/jbsnews.html>; and Ministry of Economic Development online information. Available at: http://www.barbadosbusiness.gov.bb/miib/Legislation/Acts/Investment_acts.cfm.

⁴³ Ministry of Economic Development online information. Available at: http://www.barbadosbusiness.gov.bb/miib/Legislation/Acts/Investment_acts.cfm.

after the period of construction. Among other government support schemes, the Tourism Loan Fund of BDS\$30 million provides hotels with concessionary financing. The Small Hotels Investment Fund provides concessionary loans to properties with less than 75 rooms; some BDS\$500,000, or about 10% of the amount allocated to this fund, had been disbursed in February 2002.

The Ministry of Tourism announced a new bill in 2001 to stimulate investment in the tourism sector. The proposed legislation encompasses the entire hospitality industry, whereas the existing Hotel Aids Act 1967 focuses on concessions to hotels only. New provisions under the Draft Sustainable Tourism Bill include the right to import or purchase locally free of duties and taxes, building materials and a number of specified items. In addition, new concessions to qualifying tourism projects were to be added to the Income Tax Act. These differ from those currently made available under the Hotel Aids Act. They include a provision to allow investors to write off expenditure against revenue over a 15-year period, rather than the present ten years; the accelerated write-off of up to 150% of interest incurred on loans to invest in or upgrade inland hotels, historical, cultural or heritage assets.

To facilitate the opening of new air routes to Barbados, the Government announced in 2001 that it would make available an additional BDS\$20 million over the following three years; BDS\$6.5 million would be provided immediately. The funds were used to market Barbados as a destination in the cities that are the gateways to the recently established US Airways flight out of Philadelphia. In October 2001, as part of the National Emergency Programme, BDS\$30 million was released in support of the industry. Half of these funds were to be used in marketing support.

P. 82, paras. 87-90

Under the Shipping Incentives Act of 1982, **shipping companies** registered under the Barbados flag, when involved in the operation or leasing of ships, or in shipbuilding or repairs are entitled to a number of tax benefits. These include duty-free imports of ships and materials, exemption from tax for dividends paid to residents, reductions in taxes on dividends paid to non-residents and, at the Minister's discretion, full or partial exemption from taxes on profits. The Principal Registrar is based in London, with a subsidiary Registrar in Bridgetown. The Registry has had an ISO 9002-94 Quality certificate since March 1996.

To qualify for these benefits, ships must be registered under the Barbados Flag. Eligible ships must be: "foreign-owned", i.e. not owned by citizens of Barbados or by a company registered under the Companies Act; and either "foreign-going" vessels (see below) or pleasure yachts that do not carry passengers or cargo for hire or reward. There are currently 83 vessels registered under the Barbados flag. These include 35 cargo ships, 15 yachts, eight barges, and eight bulk carriers. [...]

The existence of bilateral taxation agreements together with the provisions described above results in particularly favourable opportunities for ships owned and operated by nationals of partner countries, who can obtain domestic tax benefits by operating through a Barbados shipping company managed and controlled from Barbados.

WT/TPR/S/102 – European Union

P. 59-60, paras. 166 and 120

No figures are available on subsidies granted by the 15 Member States, but the Commission has estimated that the category of "State aid" (see below) was €80 billion in 1999, amounting to 1% of EU's GDP.⁴⁴ For the period 1997-99, state aid averaged €90 billion annually, down by about 10%

⁴⁴ COM(2001)412.

from 1995-97.⁴⁵ **Rail transport** was the leading category on average (€ 31.5 billion annually), followed by manufacturing (€27.6 billion). [...]

In the wake of the events of 11 September 2001, which led the United States to make commitments to support **air transport service** providers, the Commission decided to continue the existing framework for state aid in the sector, with a few minor modifications (e.g., subsidizing increased insurance expenditure), but to propose the adoption of a new instrument "to react against unfair competition from subsidised third country airlines".⁴⁶ The instrument would allow for duties to be imposed on foreign air carriers equal to the amount of subsidies granted, and the procedures to do so would follow closely along the lines of the existing instrument for manufactured products (section (1)(xi)(b)). The proposed instrument is designed to fill a gap in the existing EU legislative framework to counter allegedly unfair practices in the air transport sector, noting that an instrument exists for unfair pricing practices in maritime transport; it should also be noted that countervailing procedures for subsidies in the services sector do not exist under GATS although the possibility of their negotiation is foreseen.⁴⁷

⁴⁶ European Commission Press Release IP/02/394. For background, see COM(2001)574.

⁴⁷ See Article XV of GATS.

**COMMUNICATION FROM THE EUROPEAN COMMUNITIES
AND THEIR MEMBER STATES**

Government Procurement of Services

The following communication has been received from the European Communities and their Member States with the request that it be circulated to the Working Party on GATS Rules.

I. INTRODUCTION

1. Within the framework of the negotiations under the mandate given by GATS Article XIII:2, the European Communities and their Member States (hereafter "the EC") hereby submits a contribution with proposals on a framework for rules for government procurement of services that could be developed, and on the benefits that could be drawn from them.

II. SIZE OF GOVERNMENT PROCUREMENT MARKETS

2. The OECD¹ estimated the size of total procurement for all levels of government at US\$ 5550.6 billion in 1998, roughly equivalent to 82.3% of world exports. Services represent a substantial part of government procurement (est. 60%). The world value of government procurement of goods and services, excluding defence-related expenditure and compensation of employees, was estimated at US\$ 2083 billion, equivalent to 7.1% of world GDP or 30.1% of world exports. Of this figure, OECD countries account for 86.1%. Non-OECD countries represent a mere 13.9 %, i.e. US\$ 287.7 billion. The largest opportunities therefore arise in the industrialised countries. Developing countries could thus particularly benefit from the opening up of government procurement of services and gain access to these large markets.

III. BENEFITS OF INCREASED COMPETITION IN GOVERNMENT PROCUREMENT

3. Improved conditions for import competition in government procurement play a crucial role in enabling public authorities to purchase services at the lowest cost, giving taxpayers value for money, improving the quality of government services and permitting better allocation of resources. Opening up competition to foreign services providers can also stimulate domestic industry, promote innovation and contribute to good governance. Conversely, policies to favour national or local services and/or services providers over those which are foreign have effects similar to other protectionist measures, introduce distortions that limit choice, increase prices and discourage economic efficiency. On balance, preferential price policies shift profits to domestic firms, but these benefits are ultimately offset by increasing procurement costs.

¹ *The Size of Government Procurement Markets*, Offprint from OECD Journal on Budgeting Vol.1, No.4, March 2002, ISBN 9264196307

4. On the export side, whereas GPA signatories have access to a significant part of world government procurement markets, countries that are not GPA parties – mainly developing countries - have no guaranteed access to these markets. Companies from non GPA countries thus suffer from their lack of access to procurement covered by the GPA.²

5. In some sectors, government procurement accounts for a small share of total domestic demand and preferential practices in procurement have therefore a limited impact on overall trade in services of these sectors. For certain sectors however, in which government procurement represents an important part of the market, the scope and effectiveness of market access granted under GATS commitments is greatly impaired by the existence of preferential practices in procurement (see the example of the construction services sector in Annex).

IV. RECOMMENDATIONS FOR A FRAMEWORK FOR GOVERNMENT PROCUREMENT OF SERVICES UNDER GATS

6. GATS Article XIII:1 exempts laws, regulations and requirements governing government procurement of services from the disciplines contained in GATS Articles II (Most-Favoured-Nation Treatment), XVI (Market Access) and XVII (National Treatment). GATS Article XIII:2 gives WTO Members a broad mandate to negotiate multilaterally on government procurement of services, under the GATS Agreement, which addresses international trade in services.

7. MFN and national treatment requirements are not sufficient to ensure equal treatment and non-discrimination in the area of government procurement. The experiences of the EC Single Market and of the GPA have shown that in order to ensure effective market opening, domestic procedural principles have to be developed.

8. The rules to be worked out for government procurement of services would therefore have to be complete enough to ensure competition, but they could at the same time offer flexibility to be acceptable to all and let developing countries implement national policies aimed at the development of certain services sectors, including the possibility to apply preferential prices policies.

9. With this objective in view, the EC proposes a framework that includes:

A. GENERAL RULES

10. GATS Article III general transparency obligations apply to government procurement of services, since the Articles of the GATS that do not currently apply to laws, regulations or requirements concerning government procurement, pursuant to GATS Article XIII:1, are GATS Articles II (MFN), XVI (Market Access) and XVII (National Treatment).

11. The EC suggests to examine which principles should be laid down as regards:

- (a) Transparency (e.g. public accessibility of domestic legislation, transparency of procurement methods and tendering procedures, bid periods, publication of calls for tenders, decisions on pre-qualification and contract awards, challenge procedures, protection of confidential information and language, limited tendering, negotiation periods and conditions). Consistency with the work under way in the Transparency

² The WTO Agreement on Government Procurement (GPA) sets forth rules for open and transparent bidding for services and construction work. It guarantees non-discrimination between foreign and domestic firms. The GPA is however a plurilateral agreement and applies only to Members that have specifically adopted it, mainly developed countries. Lack of flexibility of the GPA has been cited as a major reason for developing countries' choice not to join this plurilateral Agreement. The GATS could offer to these countries a much more flexible framework, enabling them to benefit from increased competition whilst keeping the possibility to implement national policies with domestic preferences.

Group should be ensured, through regular contacts and exchange of information about work in progress between this Group and the Working Party on GATS Rules.

- (b) the criteria for assessing bids and awarding contracts (how to achieve "best value for money" in government procurement?);
- (c) the application of the Most Favoured Nation treatment;
- (d) notification and statistical reporting requirements;
- (e) appropriate flexibility for individual developing countries in line with the principles set out in GATS Articles IV and XIX:2.

12. Guarantees regarding the challenge procedures, as stipulated in GATS Article VI (which applies to government procurement pursuant to GATS Article XIII:1), are essential to ensure effective enforcement of agreed rules. Members are invited to reflect on whether additional provisions, specific to challenge procedures regarding decisions linked to government procurement, are necessary and should be discussed in this framework.

B. SECTOR-SPECIFIC RULES

13. Some services sectors may present peculiarities that would justify specific rules or principles on, say, registration obligations, (pre-)qualification requirements / professional qualifications / technical capability, selection and award. The EC therefore suggests to carry out a sector by sector analysis, focusing first on those sectors where government procurement is significant and where WTO Members would have interests. Sectors that could be looked at, depending on Members interests, could include, *for instance*, computer and related services, construction services, engineering and architectural services, environmental services, catering services, building-cleaning services and travel agencies.

C. COMMITMENTS AS REGARDS ACCESS TO, AND NATIONAL TREATMENT IN RESPECT OF, GOVERNMENT PROCUREMENT OF SERVICES

14. As a further step, the EC suggests that each WTO Member should, besides the set of principles agreed, make commitments as regards access to, and national treatment in respect of, government procurement of services, with the possibility to choose which sectors to open, with – where necessary – limited restrictions on national treatment (e.g. price preferences), within the model of the current system of GATS schedules of commitments. This is not possible under the GPA where a sector either is not listed or has to follow GPA rules.

15. This would offer WTO Members, in particular developing countries, maximum flexibility to modulate the level of openness and liberalisation of their government procurement markets to their development needs and their national policy objectives. The possibility to open up government procurement markets progressively would allow time for WTO Members to establish the relevant regulatory framework where necessary. This would also mean that a Member taking no commitment as regards access to, and national treatment in respect of, government procurement markets, would have actually no additional obligation in these regards as compared to the present situation.

ANNEX

The example of the construction services sector

This annex is provided purely as an illustrative case. The Construction Services sector has been chosen as an example since government procurement has an important impact on this sector, but a similar case could be made for other services sectors.

1. The UNCTAD X Plan of Action³ states that UNCTAD should help developing countries in identifying the priority services sectors where liberalisation should take place and the main trade barriers that developing countries face in those sectors, especially those which limit developing country ability to export their services. Under this Plan of Action, the UNCTAD Secretariat produced a note on the "regulation and liberalisation of the construction services sector and its contribution to the development of developing countries"⁴, with a view to prepare the experts meeting of 23-25 October 2000⁵ devoted to that subject.

2. The outcome of these discussions underlines that the construction services sector in developing countries is a fundamental economic activity which permeates all sectors, draws on a large part of capital formation and provides the essential support for developing a national economy. Construction services are an important tool for development because of their role in building social and industrial infrastructure. They are an instrument for employment creation, a key infrastructure service and a tool for upgrading welfare. Companies from developing countries have increasingly entered into ad-hoc co-operation agreements with companies of developed countries, focused around specific projects. This provides opportunities for acquisition of experience and access to technology for developing country firms. Representatives of developing countries at the October 2000 UNCTAD experts meeting observed that in order to support the development of developing country firms' capacities, fair competition in the international markets for construction services should be ensured.

3. The above-mentioned UNCTAD papers also note that some developing countries have been exporting construction services successfully and have attained a certain competitive advantage, although they have had limited success in penetrating the markets of developed countries. Tightening credit conditions and accumulated debt are forcing companies, as in developed countries, to look for opportunities outside their domestic market, often through subcontracting. Representatives of developing countries at the October 2000 UNCTAD experts meeting underlined that government procurement practices are limiting exports of construction services from developing countries.

4. Construction services procured by government at all levels are indeed estimated to account for as much as half of the total demand for construction services. GATS Art. XIII:1 provisions thus exclude much of the trade in this sector from GATS disciplines. Government procurement practices, which discriminate in favour of domestic suppliers, have therefore a significant impact on trade in this sector.

5. Developing countries have not wished to participate in the GPA. This is based on the general perception that by opening their government procurement to international tendering they will permit foreign firms to capture a significant part of their domestic business, whilst it should be considered that the construction services so obtained would be provided at more competitive prices, thus

⁵ Report published on 18 December 2000 by UNCTAD under ref. TD/B/COM.1/32-TD/B/COM.1/EM.12/3

stimulating development and growth elsewhere in the economy, and that on other markets, export opportunities would be provided to their domestic construction industry.

6. UNCTAD thus recommends⁶ that specific commitments in the construction sector could be complemented by pro-competitive provisions addressed to measures either peculiar to the construction sector, or which were judged to have a negative impact on trade within the sector, such as transparency in government procurement policies. UNCTAD concludes that given the significance of government procurement in influencing trade in construction services, a sector-specific approach to this issue could be considered.

**COMMUNICATION FROM THE EUROPEAN COMMUNITIES
AND THEIR MEMBER STATES**

The following communication is circulated at the request of the European Communities and their Member States, to Members of the Working Party on GATS Rules.

MODAL APPLICATION OF AN EMERGENCY SAFEGUARD MEASURE

1. This note seeks to look into some issues related to the discussions of the Working Party on GATS rules on the basis of Article X of GATS, regarding a possible emergency safeguard measure (ESM) for trade in services, in particular in the light of the four modes of supply a service. The following comments are made without prejudice to a Community position on the desirability and feasibility of such a mechanism and should in no way be interpreted as meaning acceptance of an ESM.

I. STATE OF PLAY

2. Safeguard measures have been present in the goods area since 1947 (Article XIX of GATT 47). A safeguard is conceptually a straightforward instrument that applies to foreign goods crossing the border. It aims at protecting from fair trade the domestic industry, defined as follows: *'the producers as a whole of the like or directly competitive products operating within the territory of a Member, or those whose collective output of the like or directly competitive products constitutes a major proportion of the total domestic production of those products'*. (Article 4.1. (c) of the Safeguard Agreement). The main criterion therefore is the place of operation of the companies.

3. In services, there is no similar past history of safeguard measures. Designing such an instrument within the GATS framework is complicated among other things because of the four modes of delivery of a service in contrast to the single mode of trading goods under GATT.

4. Mode 3 has been the main subject of discussions in the Working Party on GATS Rules during the last year and several Members have concluded therefrom that they cannot apply a safeguard against foreign established companies (i.e. to mode 3). One should not, however, conclude from the above that the application of a safeguard measure in the three other modes of supply does not raise concerns. There is now a need to discuss in-depth these other modes and inter-modal relations as well, which have been neglected so far by the Working Party.

5. This note will consider the issue of applying a safeguard for each mode of supply individually and make preliminary comments as to whether it is technically possible to have a uniform set of rules applying across the four modes. This point was raised in the document submitted by Mauritius (JOB(01)/143, 24 September 2001).

II. APPLICABILITY OF A SAFEGUARD MEASURE TO THE FOUR MODES OF SUPPLY

A. MODE 1 - CROSS BORDER SUPPLY OF SERVICES

6. A service supplier located within the territory of a Member provides services into the territory of another Member. If the service supplier is a juridical person, it has the origin of the Member where it is located.

7. Some Members seem to consider that a safeguard for mode 1 does not present conceptual difficulties as this form of trade is at first sight very similar to what happens in the goods area.

8. The situation, however, is not that straightforward. In the goods area, it is feasible for customs officers to impose duties on identified goods and, therefore, to prevent them from crossing the border, where appropriate. There is, however, no similar proceeding for services: no customs officers identify services crossing the borders and services are not all embodied in a good. Services can be provided by sending a communication, written or not, via mail, phone, fax or Internet (e.g. professional services, travel agencies). Indeed, no Member can seriously consider stopping all incoming mail or communications: enforcing measures at the border therefore is not that simple for services.

9. This being said, a Member may well state that cross border supply of services into its territory is illegal, even though enforcement of such a prohibition is difficult, if not impossible, to implement. Governments would thus have to trust that companies act in accordance with their legislation. If, however, some companies breach this prohibition, trade would take place in practice but consumers would most likely lose the right to legal action against foreign services providers not fulfilling adequately their contracts. It remains to be seen whether this would have any impact.

10. Different sectors are likely to be affected in different ways. Financial services under mode 1 take place in the form of wholesale commercial banking, investment banking, private banking, insurance of large risks, reinsurance and financial information services. In telecoms, a Member could be tempted to use a safeguard in order to protect companies established within its territory from competition of companies operating from abroad. This could be the case because established companies invest in its terrestrial infrastructure while, for instance, satellite companies operating on cross border basis do not need to do so. In addition, all distribution activities, and in particular distance selling, could be affected as well as transport, and in particular maritime. It is worth noting that the above-mentioned sectors all have an infra-structural character and have close links with trade in goods. There is a need, therefore, to look at the implication of a safeguard measure in these services, and in particular on possible effects on trade in goods and development.

11. Acquired rights are not easy to identify and to evaluate. This is an important and difficult issue. Would operating prior to the date of implementation of the safeguard measure give rights to continue business? If so, a criterion might be whether the right to provide services under mode 1 was used by service suppliers before the safeguard measure is taken. In addition, would long term business relationships deserve particular consideration? Alternatively, would acquired rights be recognised only if previously formalised in contracts? In that context, an analysis of the provision on products 'en route' in Article XIII:2.(b) of GATT 1994 would be useful.

12. In addition to companies operating prior to the application of the measure, other service suppliers may be affected. This is the case for companies that operate in activities related to the sector directly concerned by the safeguards such as, for instance, for express delivery companies if a safeguard were taken in the field of air transport freight forwarding. In the goods area, downstream or upstream economic effects of a safeguard measure are disregarded, except for Members who apply a

public interest clause. In the GATS context, it is worth considering whether a different approach would be preferable, in particular given the lack of harmonised classification.

B. MODE 2 – CONSUMPTION ABROAD

13. A supplier provides services in the territory of a Member to a consumer of another Member. In this case, the precise origin of the service supplier is almost irrelevant, what matters is that the consumption occurs in a foreign country. As Mexico put it in its document (JOB(01)/67 of 9 May 2001), import takes place on a foreign market.

14. A safeguard measure for mode 2 would occur when a Member decides to reserve for its own industry (including foreign established companies) all domestic consumption of a service sector and consequently prevents its nationals from consuming similar services abroad (including from foreign subsidiaries of its domestically owned enterprises).

15. It is important to keep in mind that the difficulties which may be remedied by a safeguard measure must be sector specific and not across all activities of the economy. In the latter case, limitations are more likely to be linked to external financial difficulties of the Member, as defined in GATS Article XII, and any solution should be found in conformity with this provision.

16. Under these circumstances, the need for a safeguard mechanism to cover this mode of supply is not obvious. One may envisage cases similar to mode 1, in particular where mode 1/mode 2 distinction is not simple to draw (for instance, services provided on Internet). In addition, as for mode 1, enforcement will be difficult to ensure.

17. There is a need to clarify cases where a safeguard could be used in that mode of delivery. The most commonly cited sector under mode 2 is tourism, but it is difficult to imagine a case where preventing citizens from leaving the country to consume tourism services abroad would not result from financial difficulties or wider political reasons covered by the general exemptions in Article XIV and XIV bis.

18. Acquired rights: If a service supplier established in another Member has had for a number of years considerable share of its trade with customers originating in the Member invoking the safeguard, would it be denied all rights to pursue this business relation? If not, what is the meaning of acquired rights under mode 2? The situation is somehow similar to mode 1.

C. MODE 3 – COMMERCIAL PRESENCE

19. The service is supplied by the service supplier of one Member, through commercial presence in the territory of another Member. The origin of the supplier is the one of those natural or legal persons that control or own that supplier.

20. Mode 3 raises important practical difficulties, such as identification of domestic industry (given that determination of nationals who own and control large companies or financial holdings can prove difficult), standing of the complainant, representativity of the domestic industry.

21. In addition, under GATS, foreign-established companies¹ are not considered as part of domestic industry and can be treated less favourably than domestically-owned and controlled firms. However, most WTO Members are bound by their internal legislation and network of bilateral investment treaties, according to which they usually grant national treatment to foreign established

¹ 'Foreign established companies' mean companies established within the territory of a Member but owned or controlled by natural or juridical persons of other Members.

companies. Applying a safeguard measure to mode 3, that is against foreign established companies, conflicts therefore with such other sets of regulation. More importantly, some Members question the desirability of a safeguard mechanism applicable to mode 3, as this will scare foreign investors.

22. In that context, two options have been discussed: exclusion of mode 3 from the scope of any safeguard mechanism or exclusion limited to new entrants.

23. Full exclusion of mode 3 would be satisfactory to protect foreign investors, but would lead to some discrimination as using a safeguard in mode 1 would favour established companies vis-à-vis companies that provide services on a cross-border basis (same comments as for mode 1 - problem of cross mode competition). Here, the safeguard could then be used as an incentive to 'attract' investment and could distort trade flows. In addition, this will send a very negative signal to small and medium enterprises that cannot afford to establish a commercial presence in every export market and that operate on a cross border basis.

24. Protection of already established foreign companies: a safeguard would only be used against newcomers by preventing them from entering the domestic market. There is a risk that Members see this as an easy solution as it gives the impression of protecting adequately acquired rights. One should be cautious with this approach, as it does not seem to give the proper reply to the situation justifying a safeguard measure. If injury is caused by increase in supply of services under mode 3, new entrants cannot be responsible for this. Closing the market to newcomers will not correct insufficiencies in the market that, most likely, originate in a lack of sound regulatory framework, including competition authority, in the services sector concerned. On the other hand, this option may encourage domestic industry to lobby their government so as to use a safeguard to close the market once a limited number of foreign companies enter the market. In fact, the debate newcomers versus traditional operators is not new in the WTO context (see for instance Article 3(j) of the WTO Import Licensing Agreement, which states that, for the purpose of granting non-automatic licences, consideration shall be given to new importers.)

25. Acquired rights: different options have appeared (cf. communication from Mexico):

- (a) *Full protection*: companies established prior to the safeguard measure would not be affected. The level of protection needs to be clarified: would such companies be guaranteed full national treatment or treatment bound in the list of specific commitments of the Member invoking the safeguard?
- (b) *Protection limited to exercised rights*: companies established would not be forced to disinvest but they would not be allowed to expand their activities. The situation would be frozen and could create an imbalance in favour of the largest company on the market, as the other ones would not be allowed to compete to gain market share.

26. Link with BITs needs to be examined. If a Member has committed within a BIT to grant national treatment to foreign investment, then a safeguard might give the right to pursue the matter before the courts designated in the BIT as competent for solving disputes.

D. MODE 4 – MOVEMENT OF NATURAL PERSONS

27. The service is supplied by a service supplier of one Member, through presence of natural persons of a Member in the territory of another Member. The service supplier is either a natural or a juridical person. It could be a company sending employees abroad or a natural person providing services for his own account.

28. Most specific commitments made by Members in mode 4 currently concern entry of business visitors, intra-corporate transferees or contractual service suppliers. This means that natural persons transferred are all employees (or minority partners) of juridical persons. In such cases, mode 4 cannot be seen in isolation from modes 1 and 3: mode 4 supply of services is only authorised if there is market access under either mode 3 (for intra-corporate transferees and business visitors seeking to establish a commercial presence) or mode 1 (for contractual service suppliers and business visitors seeking to negotiate or conclude contracts). The service suppliers beneficiaries of the commitments are companies and not individuals and, similarly, injury suffered on the domestic market of the Member invoking the safeguard must be found on the whole service suppliers of the like service, within the territory of the market of that Member.

29. Some Members have made mode 4 commitments for independent professionals. In this case, however, there is a need to reflect on the definition of the domestic industry: would the domestic industry only include self-employed professionals or juridical persons as well?

30. In practice, a safeguard measure could take the form of a numerical limitation on entries of natural persons. It is probably one of the easiest safeguard measures to enforce, as Members control at their external borders entry of foreign natural persons (passport, visa, working permit). Here again, it is worth noting that the problems must be sector-specific and not be linked to a general approach taken by a Member on immigration or labour market policies applicable across all services sectors

31. Acquired rights: who are the beneficiaries of acquired rights under mode 4? What treatment would be granted to natural persons who are in the territory of the Member at the time a safeguard measure is taken? Would they be requested to leave the territory as soon as possible or would they be allowed to remain until the end of their contract? In the case of intra-corporate transferees, do acquired rights include the right to replace an expatriate once his posting has finished? In this case, one may consider that the service supplier has exercised its right to send an intra-corporate transferee and should be allowed to continue.

III. IS A UNIFORM SET OF RULES FOR ALL MODES OF SUPPLY POSSIBLE

32. More thought needs to be given to this question. These are only preliminary comments:

- (a) To preclude discussions of coverage of all modes would be premature for the following reasons:
 - (i) It seems difficult to separate completely a safeguard under mode 1 from mode 2.
 - (ii) Applying a safeguard to one mode only does not take into account reality of cross-mode competition and would create trade distortion:
 - A safeguard limited to mode 1 could be used as an instrument to 'encourage' foreign companies to invest in a given market in order to operate there. This would not be sufficiently attractive if the Member concerned has a small economy, but for large market, this could be an effective instrument, particularly detrimental to small and medium size enterprises as compared to large companies. On the other hand, a safeguard measure applied to modes 1 and 3 would lead to discrimination between companies of the same Member: a company that has established a commercial presence in the Member invoking a safeguard prior to the adoption of the measure may be authorised to pursue its activities while a company that would seek to invest after adoption of the same measure, or that provides the like services from the

territory of another Member, would be prevented from doing so and would lose the market. Again, this problem already exists in the goods area as companies producing within the territory of the Member invoking the safeguard are not affected by the safeguard measure and new investment is allowed (except if this is a circumvention issue). This deserves an assessment for services.

- (iii) At the same time, a measure should be limited to the action necessary to remedy the situation (does that mean only to the mode that is causing injury?)
 - (iv) Mode 4 is intrinsically linked either to mode 1 or mode 3 and cannot be treated in isolation to other modes of supply.
- (b) Some aspects do not appear mode-specific:
- (i) The situation justifying a safeguard;
 - (ii) The conduct of the investigation;
 - (iii) Notification to WTO;
 - (iv) Consultation;
 - (v) Compensation mechanism, if any;
 - (vi) Indicators of injury: domestic industry supplying like services should show injury. There is no argument for changing criteria depending on the mode of supply considered, as the affected industry remains the same: *the producers as a whole of the like or directly competitive services*.
 - (vii) Determination of domestic industry: the same service supplier may have different origins, depending on the mode of supply under which it has chosen to operate. Thus, a Brazilian subsidiary of a Community company, supplying services both in Brazil and Argentina, will be considered by Brazil as a Community company and by Argentina as a Brazilian company. This is not a problem because the safeguard may not be discriminatory. The major difficulty is about including or not foreign-established companies within the domestic industry but is there a reason to take a different approach, depending on the mode of supply considered?
- (c) Some elements call for mode-specific solution:
- (i) The most appropriate measure to remedy a situation justifying a safeguard;
 - (ii) Indicators and criteria for the purpose of measuring increase in supply of service;
 - (iii) Acquired rights: however, consistency should be maintained across modes of supply. For instance, if acquired rights are broadly defined for mode 3, for sake of consistency the same should apply for modes 1, 2 and 4.
-

COMMUNICATION FROM THE UNITED STATES

Desirability of a Safeguard Mechanism for Services:
Promoting Liberalization of Trade in Services

The following communication is circulated at the request of the United States to Members of the Working Party on GATS Rules.

1. The United States offers the following proposal with the goal of focusing discussion in the Working Party on the fundamental question of the desirability of a safeguards mechanism for services. In the event that the Working Party concludes that such a mechanism is desirable, this paper suggests several approaches to making safeguards feasible; that is, designing a safeguard that would genuinely help promote GATS goals. This proposal is without prejudice to our final position on the need for safeguards in the GATS.

I. DESIRABILITY AND FEASIBILITY OF SAFEGUARDS FOR SERVICES

2. The United States continues to believe that the Working Party has not adequately addressed the fundamental issue of whether a safeguard mechanism is desirable in the services context. Further, the numerous, disparate approaches suggested by Members (e.g. ASEAN, Mexico) serve largely to raise even more questions about how a safeguard could be applied in practice. A number of delegations have voiced the opinion that a safeguard in Mode 3 would be counter-productive in that it would threaten foreign direct investment and could lead to forced disinvestment. This group may also wish to consider whether similar disincentives exist in Modes 1, 2 and 4. The possibility of cancellation of a long-term contract to provide, for example, long-distance telephone services, or the forcible expulsion of visa-holders under Mode 4 might also give pause to would-be investors and traders.

3. Further, we believe that no Member has yet made a convincing case in favor of safeguards. The GATS was designed to provide Members with significant flexibility in designing their schedules. No Member has to schedule a commitment with which it is not comfortable. Allowing access to a safeguard above and beyond the inherent protections of the positive-list approach might run counter to the GATS goals of promoting more open services trade. To date, no Member has shown that the existence of a safeguard mechanism would enable that Member to make more extensive commitments to liberalization than it could make without one. The United States believes that this case should be convincingly demonstrated in order for the Working Party to determine that a safeguard is desirable. Accordingly, we invite Members favoring a safeguard to provide examples of the additional commitments they would be prepared to undertake were a safeguard made available.

A Safeguard Must Encourage Liberalization

4. A central purpose of the GATS is to encourage liberalization of trade in services. The purpose of a safeguard mechanism is, theoretically, to allow Members, by providing them with a measure of security, to undertake more extensive liberalization commitments than they might otherwise make. WTO Members have committed to liberalizing trade in services and are working toward that goal. Since Members plan to take steps to open trade in services, a safeguard mechanism would be desirable only if its existence gave members the necessary confidence to make deeper commitments than they might already plan to make. For example, if a Member has already recognized the inherent value in opening its services market to foreign investment, that Member might consider whether the availability of a safeguard might lessen this benefit by discouraging foreign investment and international trade in services.

II. QUESTIONS REGARDING A POTENTIAL SAFEGUARD MECHANISM

5. Without prejudice to the outcome of discussion in the Working Party on the desirability of a safeguards mechanism in the GATS, the United States submits the following questions and observations for Members' consideration:

A. SAFEGUARDS SHOULD NOT APPLY TO EXISTING COMMITMENTS

6. The GATS has been in effect for more than five years. During that time, Members have not had recourse to a safeguards mechanism. Indeed, many Members have continued to open their markets and broaden their commitments. Clearly, such a mechanism is not necessary for the protection of commitments made in Members' original schedules, or subsequently in the absence of a safeguard. To apply a safeguard to existing commitments could be seen as regressive and even counter to GATS goals. The first paper the Secretariat prepared for this Working Party (S/WPGR/W/1) notes that Members entered into their initial GATS commitments without recourse to safeguards and that a safeguard would be best discussed in the context of higher commitments. Indeed, the Secretariat suggested that "the justification for designing any new safeguard mechanism would be its contribution to future market opening." This question is echoed in a later Secretariat paper (S/WPGR/W/15) which asks whether it is more appropriate to consider safeguards in the context of governments being more forthcoming in their commitments. A 1997 submission from Hong Kong China (S/WPGR/W/18) notes that Members have already willingly bound themselves to commitments in the absence of a safeguard and asks whether, therefore, a safeguard should only be related to future commitments. Consistent with our views on the GATS goals of liberalizing services trade, the United States believes that any potential safeguard should only apply to new commitments made by Members after the safeguards mechanism takes effect *and* which are more significant than the Member would have made if it had not had recourse to a safeguard.

B. A POTENTIALLY USEFUL PRECEDENT IN AGRICULTURE AGREEMENT

7. We have noted in the past that the goods model may not be appropriate for services. However, this should not preclude us from looking for useful precedents in other WTO agreements. While by no means a perfect example, the Special Safeguard in the Agriculture Agreement offers a precedent for linking access to a safeguard to new, demonstrably liberalizing commitments.

8. Article 5 of the Agreement on Agriculture provided a special safeguard mechanism to Members, but there were three important conditions applied on the application of the safeguard. First, it is only available with respect to products having been designated in the Member's schedule as subject to the safeguards provision, and this eligibility was linked to the commitment to remove non-tariff measures. Second, specific triggers were established for implementing the safeguards, and establishment and implementation of the safeguard mechanism is scrutinized by the Committee on

Agriculture. Third, the special agricultural safeguard is of limited duration - only to be applied during the reform process and a number of countries have proposed termination in the current agriculture negotiations. When scheduling commitments, Members could consider whether these commitments might result in a sudden surge in imports that threatened domestic suppliers. If a Member believes its commitment was deep enough to pose a risk, the Member could schedule access to a safeguard. The "special agricultural safeguard" was directly linked to commitments undertaken by a Member which were recognized as being more liberalizing than the status quo - it is only available for products that were subject to the tariffication process which removed non-tariff measures. The United States has proposed a similar approach for services (S/WPGR/W/17) and we continue to believe that, if the working party determines that a safeguards mechanism is desirable, Members should schedule access to the mechanism based on new commitments which they feel to be particularly risk-prone and meritorious of special protection.

C. PREDICTABILITY IN APPLICATION

9. We have noted in the past that the presence of a safeguard mechanism, especially if available in Mode 3, could have a potentially chilling effect on investment. A scheduling approach would help to mitigate this negative impact. A potential investor would be able to see in advance whether a particular sector might be the subject of a safeguard action and could choose whether to take on this added risk. A non-specific, horizontal safeguard might, conversely, lead investors to conclude that the risk of sudden, unforeseen legal barriers renders a market unattractive. It would be unreasonable, and in many cases could amount to expropriation, to invite in a foreign investor and then require him to dismantle and remove his investment. Of course it might also be counter-productive for a country to dis-allow its own citizens from, for example, seeking legal advice from attorneys of a country in which they planned to do business. And the possibility of the instantaneous unilateral termination of a temporary visa could further deter foreign services providers. In short, the availability of a safeguard in any sector or mode of supply could have a deterrent effect on international trade in services and might therefore be seen as contradictory to GATS liberalization goals and to a Member's own economic interests. The transparency of a scheduled safeguard might help to mitigate these problems.

D. SAFEGUARDS LINKED TO LIBERALIZATION

10. In order for a Member to schedule access to a safeguard, the Member would need to demonstrate that access to the safeguard would enable that Member to schedule more significant liberalization commitments than would be possible in the absence of the safeguard. We offer the following examples for consideration and discussion:

- A Member offers to bind a commitment which is less liberal than existing practice, e.g. a Member currently allowing foreign executives a six-month temporary working stay binds a commitment allowing a three-month stay. Should this be seen as liberalization simply because there was no previous binding? If so, is it enough to merit access to a safeguard?
- A Member with no binding in a sector binds existing practice. In the first example, the Member would bind at six months. This might be seen as liberalization, but perhaps not significant enough to merit a safeguard since it does not seem to put the Member at any additional risk.
- A Member offers to bind a commitment that is broader than current practice. To use the same example, the Member which currently allows foreign service providers a six-month temporary working visit binds an offer permitting multiple entries and stays of up to one year. This would appear to represent a significant opening of the Member's services market and could be seen as risky enough to merit the special protection of a safeguard.

- It is also useful to consider market access and national treatment. For example, access to a safeguard could be limited to commitments of “none” in these areas.

11. We have argued that the scheduling nature of the GATS allows Members to include in their schedules access to safeguards-type protections. Should the Working Party agree on a structure for a safeguards mechanism, we would propose that this be the only safeguard to which Members would have access. If this group reaches consensus on the desirability of a safeguard and subsequently designs a feasible mechanism that promotes opening of markets, it would be confusing and ultimately counter-productive for Members to schedule ad hoc safeguards without regard for the agreed-upon structure. Additionally, when considering whether to schedule access to the safeguard, Members would benefit from considering whether existing access to relief under GATS Articles XXI and XII offers sufficient or more appropriate protections.

III. CONCLUSION

12. The United States has offered the foregoing proposal as an invitation to Members which feel the need for a safeguards mechanism to offer evidence that such a mechanism would promote the fundamental goals of the GATS. We continue to believe firmly that it should not be the role of this Working Party to promulgate rules that run counter to the over-arching objectives of the GATS. In sum, if we cannot delineate any direct connection between safeguards and liberalization of trade in services, we should consider whether it would be desirable to have such safeguards. Only when we have determined that safeguards will lead to more open services markets can we begin to address the methodology to definitively link a safeguards mechanism to concrete commitments to liberalize services markets.

Working Party on GATS Rules

- DRAFT -

**REPORT OF THE WORKING PARTY ON GATS RULES
TO THE COUNCIL FOR TRADE IN SERVICES**

1. Since its last annual report¹, the Working Party on GATS Rules has held five formal meetings. Minutes of the meetings are contained in documents (S/WPGR/M/30-34). In each meeting, the Working Party considered the three negotiating mandates: emergency safeguard measures (Article X); government procurement (Article XIII); and subsidies (Article XV).

**I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS
ARTICLE X**

2. At its meeting on 20 November 2000, the Working Party agreed to extend the negotiating mandate under Article X until 15 March 2002 (doc. S/C/W/184). This proposal was adopted by the Council for Trade in Services at its meeting on 1 December 2000.

3. Differing views continued to be expressed regarding the desirability and feasibility of an emergency safeguard mechanism (ESM) in services. Most discussions were held on the basis of the illustrative list of themes circulated by the Chairperson (Job No. 1979/Rev.1). The list includes issues such as situations justifying safeguard action, the definition of "domestic industry" and the issue of "acquired rights", the modal application of a safeguard mechanism, the concept of "like service", the identification of indicators and criteria for determining injury and causality, the possible forms of a safeguard measure, the questions of compensation and special and differential treatment, and relevant procedural matters. A number of delegations presented informal written contributions on specific aspects of a possible ESM. Moreover, a group of delegations presented an informal *Draft agreement on emergency safeguard measures for trade in services*, on 31 October 2000. All issues were examined in both formal and informal meetings.

4. The Working Party also discussed the organization of future work, keeping in mind the negotiating deadline of 15 March 2002. In July 2001, the Working Party requested the Chairperson to prepare, under his responsibility, a synopsis which would outline the current state of the discussion under the ten items identified in the Chairperson's Note, Job No. 1979/Rev.1. The synopsis was circulated on 7 August (JOB(01)/122) and is without prejudice to the questions of desirability and feasibility, nor to the form that a possible ESM might take. It presents, in a synthetic way, the main options proposed until July 2001, and indicates comments made by Members.

**II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS
ARTICLE XIII**

5. Discussions have continued on definitional issues as well as on possible multilateral disciplines in this area.

¹ S/WPGR/W/35, 3 November 2000.

III. NEGOTIATIONS ON SUBSIDIES UNDER GATS ARTICLE XV

6. The Working Party has continued to consider the need for, and possible scope of, disciplines on subsidies which may have trade-distortive effects. Delegations proceeded on the basis of the Chairperson's Checklist (Job No. 4519/Rev.1), and took up one item at each successive meeting. The fifth and last item was addressed in July. At that meeting, it was decided that the Checklist would remain on the table for the time being and that the five topics it contains would remain open for discussion.

Working Party on GATS Rules

**SUBSIDIES FOR SERVICES SECTORS
INFORMATION CONTAINED IN WTO TRADE POLICY REVIEWS**

Background Note by the Secretariat

Addendum

I. INTRODUCTION

1. The Working Party on GATS Rules, at its meeting of 7 July 2000, called on the Secretariat to continue monitoring Trade Policy Reviews (TPRs) for information concerning subsidies in services. More specifically, on 30 November 2000, the Secretariat was requested by the Working Party to prepare a new overview document concerning such subsidies, based on recent TPRs. While the previous document of 9 May 2000 (S/WPGR/W/25/Add.1) was based on 37 TPRs issued between January 1998 and April 2000, the present Note covers nine Reviews completed between May and December 2000. Relevant information has been included, in italics, in the overview table which was already contained in the May 2000-document.

2. As has been noted on past occasions, TPR-based information does not necessarily provide a comprehensive picture of Members' trade policies in any narrowly defined area. The selection of countries for review follows a schedule established by the Trade Policy Review Body and, thus, is not driven by issue-related considerations. Moreover, to be as relevant as possible within the TPR's overall mandate, the individual reports seek to focus on a country's main policy challenges and constraints; among these, services subsidies do not appear to have figured prominently to date. While many reports contain some information on such subsidies, no attempts have been made to assess their wider economic implications or any (distortive) effects on trade.

3. The subsidy definition generally used for Trade Policy Reviews is based on the definition contained in the WTO Agreement on Subsidies and Countervailing Measures. Accordingly, a subsidy is deemed to involve a financial contribution by a government or public body which confers a benefit. This covers assistance provided in the form of direct transfers of funds, including grants, loans and equity infusions; potential direct transfers of funds or liabilities, e.g. loan guarantees; government revenue foregone; supply of goods and services other than general infrastructure; purchase of goods; payments to funding mechanisms; or income and price support. As discussed in the initial Secretariat Note, it may be difficult in individual cases to identify the ultimate beneficiaries of a subsidy, which may include the direct recipients, downstream industries, or individual consumers.¹ Thus, given the infrastructural importance of many services sectors as providers of generally available inputs, it might

¹ For example, the provision of basic health services may be ensured through: (a) cost-free treatment in state-owned hospitals; (b) the extension of public funds to commercially independent hospitals; or (c) government-sponsored premiums for basic health insurance. While possibly conferring the same benefits to the same target group, such measures might be defined, respectively, as the provision of infrastructural services, subsidies for the health sector, social transfers and/or subsidies for insurers.

be necessary to look beyond the subsidized sector, e.g., communication or transport, and take into consideration the users of the services rendered.

4. As in the two preceding documents, the following types of assistance have not been included: (i) Exemptions from indirect taxes, in particular VAT, which are frequently intended to encourage consumption rather than production of a service; (ii) generally available support, for example in the context of regional development or research programmes; and (iii) company-internal cross-subsidization between monopoly and market-oriented activities in sectors such as telecommunications. By contrast, government financial interventions in the form of share purchases and similar equity transfers have been taken into account. This has drawn some criticism at the July meeting of the Working Party as such actions might have been driven by macroeconomic concerns and no particular service sector might have been targeted (S/WPGR/M/28). However, the Secretariat felt that it might be preferable, for the sake of consistency, to continue applying the above subsidy definition to the information contained in TPRs rather than introducing additional considerations case-by-case.

II. POLICY PATTERNS

5. The information contained in recent TPR reports largely confirms the sector pattern identified in the previous document: WTO Members tend to concentrate their services-related subsidies on three sectors, tourism, maritime transport and banking services. Concerning the measures used, the update confirms Members' strong reliance on tax incentives as compared to direct grants. This may reflect a preference in the political process for less obvious and, in terms of immediate disbursements, less "costly" forms of support. However, these observations are rather impressionistic in nature; for example, they may overrate developments in sectors that attracted particular policy attention at the time of reporting. As a general feature, it appears that areas such as financial services have been reviewed in more detail than, for instance, rail or road transport and professional services.

ANNEX

Content of Individual Trade Policy Reviews

Norway - WT/TPR/S/70

page 63, para. 142

The *Press Subsidies Programme* aims at promoting and maintaining a diversified press. Newspapers with one or more issues per week with an average circulation between 1,000-6,000 copies can apply for grants. Grants are also given to newspapers in an unfavourable market position and with an average circulation up to 80,000. The size of the grant is calculated on the basis of the individual newspaper's annual circulation.

page 103, para. 134

Through the Government Bank Investment Fund and the Government Bank Insurance Fund, the State retains a stake in Den norske Bank (DnB) and Christiania Bank og Kreditkasse (CBK), the major **commercial banks**. State participation in the banking sector increased at the beginning of the 1990s as the result of government intervention to rescue troubled banks after heavy losses required substantial injections of capital through the Government Bank Insurance Fund (GBIF). The Government thus became the major shareholder in CBK, DnB and Fokus Bank. [State participation in the sector has diminished significantly since.]

Poland - WT/TPR/S/71

page 66, para. 116

Activities in many sectors benefit from a range of investment-related tax concessions, as well as subsidized credit and loan guarantees. Loan guarantees, for example, are provided on investment loans extended for the purposes of maintaining existing infrastructure; for environmental protection; to privatized state-owned enterprises; and to introduce new technology resulting from research and development. ... The main sectors to benefit from these arrangements in recent years have been iron and steel, **transport**, food and agriculture, energy, **construction**, and pharmaceuticals.

page 67, para. 119

The **banking sector** has also received grants, loans, and tax incentives to encourage cooperative banks to restructure and to establish regional banks. The scheme is administered jointly by the Ministry of Finance and the National Bank of Poland.

page 112, para. 210

Privatization of the state-owned **railway** company (PKP) is planned. PKP has suffered large and increasing losses, estimated at Zl 1 billion in 1998, partly due to declining coal movements. [...] The restructuring programme provides for expenditure of Zl 1.65 billion annually [...]

European Union - WT/TPR/S/72

page 122, para. 94

The European **Banking** Federation filed a complaint to the Commission in December 1999 about the State guarantees for Germany's Landesbanks, and the Commission began a formal investigation.²

page 133, para. 123

According to the Commission, European companies suffer from relative financial fragility compared with their main competitors; in recent years the Commission has operated a "one-time-last-time" approach to state aid, which has paved the way for the restructuring and privatization of many of the state flag-carrier **airlines**. The conditions attached to aid have been strictly monitored and enforced and the Commission does not intend to permit further aid for restructuring purposes.³ It is estimated that from 1990 through 1996, flag carriers received support worth over US\$ 9 billion.⁴

page 136, para. 130

The considerable decline in the number of ships under national flags led the various Member States to initiate state-aid programmes in **maritime transport services**. In 1997, the Commission re-examined these programmes taking into account their fiscal implications. State aid may normally be granted only for ships registered under the national flag and can only be implemented to safeguard Community jobs, maintain seafaring know-how, and improve skills. Tax abatements for shipping companies are considered to be state aid and should be restricted to maritime transport activities.

page 140, para. 141

The MEDIA II Programme is a central component of the European **audio-visual** support programme, allocating ECU 45 million over five years in support of training of audio-visual professionals, and ECU 265 million on development of production projects and distribution of audio-visual products. MEDIA II will expire in December 2000. The proposed allocation for the future MEDIA Plus programme over five years is €50 million for training and €350 million for the development and distribution of projects.⁵

Republic of Korea - WT/TPR/S/73

page 88f, para. 132

Non-tax measures allegedly included subsidies through the financial market stabilization package (purchase of bad loans from **banks** by the state-owned Korea Asset Management Corporation (KAMCO); [...] and R&D in the **information and communication industries**.

² *Bulletin Quotidien Europe*, Nos 7652, 7644, 7633, 7621 and 7600.

³ For instance, the assistance of the French Government to Air France, authorized in 1994 and challenged by the Court of First Instance in response to complaints by European competitors, was confirmed by the Commission in July 1998 (European Press Release IP/98/682). Proceedings were also reopened in the cases of Olympic Airways, given that conditions of the 1994 State Aid Agreement were not being complied with. Furthermore, aid to TAP and Alitalia was allowed, despite, in the case of the latter, irregularities in compliance with the terms of the aid package (European Press Releases IP/98/135 and IP/98/495).

⁴ *The Economist*, 27 September 1997.

⁵ COM(1999) 658 final.

Table III.9
Main internal tax incentives in force relating to production and trade under the Special Tax Treatment Control Law (January 1999)

Target and stated objective	Designated activity and/or beneficiary	Measure	Expiry date
Small and medium-sized enterprises (SMEs) To reduce concentration of economic wealth by conglomerates and strengthen economic fundamentals.	SMEs involved in fishery, manufacturing, mining, construction, transportation, wholesale and retail, value-added (communication) network (VAN) business, research & development business, engineering, auto-repair, industrial waste or sewage disposal. [...]	Investment reserves for losses may be treated as losses in the calculation of income (up to 20% of the business assets).	31 December 2003
	Newly set SMEs established in rural areas or new capital venture technology-intensive firms established in designated areas to undertake mining, manufacturing, VAN business, research & development business, broadcasting, data processing & computer business, engineering, transportation and warehousing. [...]	Reduction of income or corporation tax by 50% for a six-year period.	31 December 2003
	SMEs involved in manufacturing, data processing and computer-related business, VAN, research & development business, broadcasting, data processing & computer business, engineering, transportation and warehousing. [...]	Reduction in corporate or income tax by 20%.	31 December 2003
Business restructuring To facilitate business restructuring, re-engineering and financial structure improvement.	[...]	Income tax deferral for the amount of investment in business assets of an individual firm converted into a corporation.	Undefined
	Livestock, fishery, mining, manufacturing, construction, transport all activities. Financial sector activities.	50% reduction on the special additional tax on capital gains from the alienation of assets of financial institutions.	31 December 2000
		Tax deductions for financial institutions purchasing and assuming assets and liabilities of another such institution.	Undefined
Balanced (regional) development To deal with pollution and traffic congestion in urban centres (mainly Seoul) by encouraging firms to move out of metropolitan areas.	[...]	Income or corporation tax reduction by 50% for a six-year period.	31 December 2000
	Hospitals in areas with inefficient or non-existent medical facilities.	Income or corporate tax reduction of the amount equivalent to 3% of the amount invested in assets for the new hospital for the taxable year of the date of completion.	
Value-added tax (VAT) related sectoral incentives	[...]		
	National housing construction.	VAT exemption.	Undefined

page 95, para. 138

As from 1999, industry-specific subsidies have also been made available to **culture-related industries**.⁶

page 163, Para. 124

To overcome the financing problems of Korean **shipping** companies, the authorities have announced plans to create a W 500 billion (US\$437.8 million) fund during the second half of 2000 to help cash-strapped shipping companies purchase vessels⁷; the programme (sponsored by Korea Shipowners Association) was being worked out in June 2000. The Shipping Industry Promotion Act, which promoted the development of the national fleet for the purpose of securing stable transport capacity, was to be eliminated as of July 1999, thus eliminating the legal basis for direct government support (including subsidies) to national shipping companies.⁸

Bahrain – WT/TPR/S/74

[No reference to service-related subsidies.]

Brazil – WT/TPR/S/75

page 107, para. 125

There has been a substantial transfer of public control to private entities, assisted by the Programme of Incentives to the Restructuring and Strengthening of the National Financial System (PROER).⁹ Under PROER, the Federal Government committed itself to financing 100% of the costs of restructuring provided that the state-owned **banks** were either privatized, converted into developmental agencies, or liquidated. In the event that none of these three alternatives was chosen, the Federal Government would provide only 50% of the restructuring costs, with the remainder to come from the States.

page 110, para. 141

In general no incentives are granted to the **insurance** sector. However, the tax on financial services (IOF) has been reduced to 0% for insurance operations in the agricultural sector, on mortgages (obligatory insurance), on export credit, and for satellites BRASILSAT I and II (launching and operations risks).¹⁰

page 114, para. 163

Maritime transport: The revenue from **transportation** of merchandise is exempt from the Social Integration Programme (PIS) and the Contribution for Social Security (COFINS).¹¹ The cost

⁶ Culture-related industries include producers of video programming, Internet bookstore start-ups, and producers of computer game software, music disks, and TV programming. A soft loans programme is expected to cover 500 firms and create 14,000 jobs (*The Korea Herald* [Online], 12 May 1999. Available at: <http://www.koreaherald.co.kr/> [30 September 1999]).

of freight for Brazilian exports and import is not taken into account in the calculation of import duties and export taxes if goods are transported in vessels registered in the Special Brazilian Registry (REB).

Japan – WT/TPR/S/76

page 65. Para. 112

In order to achieve various policy objectives, including investment in certain equipment to address environmental concerns and stimulate demand, Japan has a complex system of tax breaks ... The FY2000 amendment included special taxation measures, concerning public welfare, the energy sector, and **housing**.

page 107; para. 95

Under the regime ["International Ship Regime"], certain Japanese-flag ships are entitled to preferential tax treatment ...¹² According to the authorities, the International Ship Regime has no distortionary effects on trade in **maritime transport services**; it aims to place Japanese vessels on an equal footing for with those of other countries that provide preferential tax treatment for their ships registered.

Switzerland and Liechtenstein – WT/TPR/S/77

page 52, para. 92

The [Swiss] Confederation also grants subsidies in the form of: ... and direct grants and allowances for the development of **tourism** (about Sw F 3.6 million per year over 1997-01); and direct grants and allowances to monopoly suppliers of infrastructural services such as **railways and other public transport**. Financial assistance by the Swiss Confederation to suppliers of public transport services amounted to some Sw F 3.3 billion in 1996, Sw F 3.8 billion in 1997, Sw F 5.7 billion in 1998, and Sw F 3.8 billion in 1999.

Page 52, para. 93

The Government [of Liechtenstein] also provides financial support of some Sw F 500,000 per year for international **tourism** marketing activities, and of Sw F 12 million per year for **public transport**.

Page 91, Para. 72

Banking and fund management services (Switzerland): Cantonal tax incentives are available.

Page 104, para. 118

The Swiss Corporation for Hotel Credit has a working capital of SwF 118 million; it provides concessional loans (with subsidized interest rates at 2 percentage points below the normal rates) and credit guarantees to small and medium-sized companies investing in tourist areas. The Confederation

¹² These include tax breaks in ship-registration tax and local property tax.

allocated a credit of Sw F 18 million for the period 1997-01 (i.e. Sw F 3.6 million per year on average) to finance innovation and cooperation between **tourism** operators.¹³

Page 105, para. 120

Tourism: The Liechtenstein Government provides financial support of some Sw F 500,000 per year (on average) for marketing activities.

Canada – WT/TPR/S/78

Page 50f, paras. 181 and 185

Cultural Policy:

The Secretariat Report for Canada's 1996 Review contained an overview of the main trade-related instruments of support, often granted in combination, which include direct subsidies, tax incentives, foreign ownership restrictions (see document S/WPGR/W/25) and local-content requirements.¹⁴

The rules governing tax deductibility available to Canadian advertisers were changed to provide full deductibility in any periodical – as defined in the Foreign Publishers Advertising Services Act, regardless of the nationality of ownership – that includes at least 80% original or Canadian content. Canadian advertisers will receive half the deduction for ads placed in foreign periodicals under the de minimis exemption, as well as advertisements placed in magazines created by foreign investors that include less than 80% original or Canadian content. The authorities have stated that the policy does not discriminate among foreign suppliers. In December 1999, the Canadian Heritage Minister announced a three-year Can\$150 million fund to provide direct financial assistance to Canadian magazines.¹⁵

¹³ Arrêté fédéral finançant l'encouragement de l'innovation et de la coopération dans le domaine du tourisme de 1997 à 2001, 10 octobre 1997, Article 8. The annual allowance of Sw F 8 million, formerly granted by the Confederation to hotels and inns, was abolished in 1998.

Working Party on GATS Rules

DRAFT

**REPORT OF THE WORKING PARTY ON GATS RULES
TO THE COUNCIL FOR TRADE IN SERVICES**

1. In 2000, the Working Party on GATS Rules has held four formal meetings to date. Minutes of the meetings are contained in documents (S/WPGR/M/26-29). A fifth meeting is scheduled on 30 November 2000. In each meeting, the Working Party considered all three negotiating mandates: emergency safeguard measures (Article X); government procurement (Article XIII); and subsidies (Article XV). Written contributions, both formal and informal, made by delegations have supported the debate under the three items.

**I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS
ARTICLE X**

2. Differing views continued to be expressed regarding the desirability of an emergency safeguard mechanism (ESM) in services, but Members agreed to leave this question aside for the time being and to concentrate on feasibility issues. In order to structure the debate, the Chairperson circulated an illustrative list of themes which could usefully be discussed, without prejudice to the final outcome of the negotiations (Job No. 1979/Rev.1). The list includes issues such as the definition of "domestic industry" and the issue of "acquired rights", the modal application of a safeguard mechanism, the concept of "like service", the identification of indicators and criteria for determining injury and causality, the possible forms of a safeguard measure, the questions of compensation and special and differential treatment, situations justifying safeguard action and relevant procedural matters. All issues were examined in both formal and informal meetings. The Working Party also examined a Concept Paper which was introduced in March by Thailand on behalf of the ASEAN Members (S/WPGR/W/30). The Paper contains elements of a possible emergency safeguard mechanism in services.

3. The Working Party is also considering the extension of the negotiating deadline for this subject-matter, which is currently set for 15 December 2000.

**II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS
ARTICLE XIII**

4. Discussions have continued on definitional issues as well as on possible multilateral disciplines in this area.

III. NEGOTIATIONS ON SUBSIDIES UNDER GATS ARTICLE XV

5. The Working Party has continued to consider the need for and possible scope of disciplines on subsidies which may have trade-distortive effects. In March, Argentina and Hong Kong, China presented a communication discussing relevant issues and identifying a number of topics for further work (S/WPGR/W/31). At the request of the Working Party, the Chairperson circulated a Checklist of issues, whose purpose is to help to address in a more systematic manner relevant questions under

this agenda item (Job No. 4519/Rev.1). Members agreed to take up one item at each successive meeting. The first item on the list ("Definition of a Subsidy in Services (including relevance of the definition in the Agreement on Subsidies and Countervailing Measures")) was discussed in September.

COMMUNICATION FROM THE REPUBLIC OF POLAND

Response to the Questions Relevant to the Information Exchange Required
Under the Subsidies Negotiating Mandate

Supplement

With reference to document S/WPGR/W/16/Add.4, the following additional information is being circulated at the request of the delegation of the Republic of Poland to Members of the Working Party on GATS Rules.

This document covers subsidies supplied in the service sector in Poland in 1999 (supplement to the programmes notified in document S/WPGR/W/16/Add.4)

1. Loan from EFSAL fund

No assistance granted in 1999 to the service sectors.

2. Direct grants for extra charges to products and services

Grants for meals sold in milk bars	18.3 mln PLN
Grants for railway passenger domestic transport	537.7 mln PLN
Grants for passenger bus transport	148.2 mln PLN
Grants for publication of specialised school and university books	10.8 mln PLN

3. Assistance for restructuring of the banking sector

No assistance granted in 1999.

COMMUNICATION FROM POLAND

Emergency Safeguards Mechanism contained in Article 18 Act of 18 December 1998
on Foreign Exchange Law

Working Paper

This paper contains information on emergency safeguards mechanism, which exists in the Polish legislation. Its purpose is to contribute and facilitate the discussion in the Working Party on GATS Rules.

1. **Purpose** – when safeguard measures may be introduced:

In the event of an extraordinary risk to the stability and integrity of the financial system of the Republic of Poland – in particular in following situations:

- (i) if the foreign exchange reserves of the Republic of Poland decrease substantially;
- (ii) if the balance of payments equilibrium is disturbed, thus causing a direct risk to solvency of the Republic of Poland in relations with abroad;
- (iii) if the supply of money increases as a result of the inflow of capital from abroad to an extent and at the pace substantially hindering or preventing control over such money supply;
- (iv) if the stability and integrity of the monetary policy is directly threatened as a result of capital flow between Poland and abroad.

These special restrictions may be introduced by the Council of Ministers individually or jointly, and may apply to all or a certain category of entities, and to all or a certain kind of transactions.

2. **Duration:** up to six month.

3. **Forms of safeguard measures:**

- (i) the obligation imposed on residents to resale foreign means of payment to the entities indicated in such Regulation;
- (ii) the obligation to express pecuniary obligations and effect payments in foreign exchange abroad exclusively in convertible currencies;
- (iii) the obligation to obtain a foreign exchange permit to engage in foreign exchange operations which, pursuant to the provisions of this Act, are not subject to such obligation;

- (iv) restriction to the rights of the non-residents who are not engaged in economic activities to sell and buy foreign currencies and foreign exchange gold or foreign exchange platinum.

The terms "a resident" and "a non-resident" used above shall have the following meaning:

- (i) resident:
 - a) a natural person domiciled in Poland or a legal entity with its seat in Poland, as well as any other entity with its seat in Poland, capable of incurring obligations and acquiring rights on its own behalf;
 - b) Polish diplomatic offices, consular divisions and other Polish representative offices and special missions endowed with diplomatic or consular immunities and privileges;
- (ii) non-resident:
 - a) a natural person not domiciled in Poland or a legal entity not having its seat in Poland, or any other entity not having its seat in Poland, capable of incurring obligations and acquiring rights on its own behalf;
 - b) the person referred to in point (i) letter a) above, to the extent such person engages in activities abroad through its enterprise, branch or a representative office with its seat abroad;
 - c) branches and representative offices of persons and entities, referred to in letters a), b), having their seats in Poland, established pursuant to international agreements concluded by the Government of the Republic of Poland, unless such agreements provide otherwise;
 - d) foreign diplomatic offices, consular divisions, special missions and international organisations, as well as other foreign representative offices endowed with diplomatic or consular immunities and privileges pursuant to agreements, laws or commonly established international practice.

Up to date there was no need to introduce this mechanism in practice.

Working Party on GATS Rules

LIMITATIONS IN MEMBERS' SCHEDULES RELATING TO SUBSIDIES

Note by the Secretariat

Addendum

I. INTRODUCTION

1. At its meeting of 24 March 2000, the Working Party on GATS Rules requested the Secretariat to update document S/WPGR/W/13 in order to include subsidy-related limitations contained in schedules of specific commitments submitted since. To facilitate reading, the format of this Note is slightly different from the original, but the purpose remains the same and the information provided is not affected.

2. The following tables present subsidy-related entries which have been found in: (i) the commitments scheduled by Members following the extended negotiations on basic telecommunications, concluded on 15 February 1997, which are attached to the Fourth Protocol to the GATS; (ii) the commitments undertaken by Members in the extended negotiations on financial services, concluded on 12 December 1997, which are attached to the Fifth Protocol to the GATS; (iii) and the schedules of Members which have acceded to the WTO pursuant to Article XII of the WTO Agreement since 1 January 1996.

3. As in S/WPGR/W/13, it is worth recalling that the information contained in this Note is limited in at least two respects. First, only those entries that make explicit reference to subsidies and other forms of financial contributions or transfers of funds by the public authorities of a Member have been taken into account. A number of entries have been left aside, either because the precise nature of the measure was difficult to ascertain, or because the absence of an agreed definition of what constitutes a "subsidy" under the GATS would have resulted in problems of interpretation. In this regard, tax exemptions and other forms of fiscal incentives have not been included although they might imply a financial advantage. Secondly, it has to be kept in mind that subsidization may also occur in sectors or modes of supply for which no commitments have been undertaken. For obvious reasons, Members' schedules are silent on any such programmes.

I. NEGOTIATIONS ON BASIC TELECOMMUNICATIONS (FOURTH PROTOCOL)

(b) Bangladesh (GATS/SC/8/Suppl. 1, p. 2)

Modes of supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or subsector	Limitations on Market Access	Limitations on National Treatment	Additional Commitments
2. COMMUNICATION SERVICES C. <u>Telecommunication services</u> All Subsectors	[...]	(1,3) Certain subsidies and tax benefits may only be extended to national operators.	[...]

II. NEGOTIATIONS ON FINANCIAL SERVICES (FIFTH PROTOCOL)

(a) Republic of Korea (GATS/SC/48/Suppl. 3, p. 3)

Modes of supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or Sub-sector	Limitations on Market Access	Limitations on National Treatment	Additional Commitments
<p>ALL SECTORS INCLUDED IN THIS SCHEDULE (ALL SECTORS)</p> <p>The revisions in the ALL SECTORS section of this schedule only pertain to mode 3 of the ALL SECTORS commitments contained in the document GATS/SC/48/Suppl.1/Rev. 1.</p>	<p>(3) [...]</p>	<p>(3) [...]</p> <p>Eligibility for subsidies, including tax benefits, may be limited to companies which are established in Korea according to the pertinent laws.</p> <p>Unbound for research and development subsidies.</p>	<p>[...]</p>

(b) Republic of Slovenia (GATS/SC/99/Suppl. 1, p. 3)

Modes of supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or sub-sector	Limitations on market access	Limitations on national treatment	Additional commitments
I. HORIZONTAL COMMITMENTS			
ALL SECTORS INCLUDED IN THIS SCHEDULE	[...]	<p>[...]</p> <p><u>Subsidies:</u></p> <p>None, other than for branches established in the Republic of Slovenia by a foreign company. Eligibility for subsidies from the Republic of Slovenia may be limited to juridical persons established within the territory of the Republic of Slovenia or a particular geographical sub-division thereof. Unbound for subsidies for research and development. The supply of a service, or its subsidization, with the public sector is not in breach of this commitment.</p>	

III. COUNTRIES HAVING ACCEDED TO THE WTO SINCE 1ST JANUARY 1996

(a) The Republic of Bulgaria (GATS/SC/122, p. 3)

Modes of supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or subsector	Limitations on market access	Limitations on national treatment	Additional commitments
I. HORIZONTAL COMMITMENTS			
ALL SECTORS ¹ [...] Subsidies	[...]	[...] (1) (2),(3),(4) Eligibility to or availability of granting and availing of subsidies will be reserved for Bulgarian juridical persons or Bulgarian citizens, respectively. The supply of a service, or its subsidization, within the public sector is not in breach of this commitment.	

¹ Footnote omitted.

(b) Republic of Estonia (GATS/SC/127, p. 2)

Modes of supply: (1) Cross-border supply (2) Consumption abroad (3) Commercial presence (4) Presence of Natural Persons

I. HORIZONTAL COMMITMENTS			
All Sectors	[...]	1,2) Only Estonian taxpayers, i.e. those legal persons registered under Estonian Law and Estonian citizens are eligible for national subsidies of Estonia.	

(c) Qatar (GATS/SC/120, p. 3 and 4)

Modes of supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or sub-sector	Limitations on market access	Limitations on national treatment	Additional commitments
I. HORIZONTAL COMMITMENTS			
ALL SECTORS INCLUDED IN THIS SCHEDULE	[...]	[...] 3), 4) National services industries and services may have some kind of incentives and assistance, like industrial land blocks, easy financial loans, market research and marketing programmes including the organization of exhibitions or facilitating its taking part in Qatari pavilion in international fairs and exhibitions, with free or lowered costs, establishing of marketing centres (inside or outside the country), and/or granting discount on the prices of its advertising programmes in national TV and national advertising agencies and some other incentives alike.	
	[...]	4) [...] Housing and social programmes and some aspects of free health care, are limited to Qatari citizens.	

(d) United Arab Emirates (GATS/SC/121, p. 1)

Modes of supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or subsector	Limitations on market access	Limitations on national treatment	Additional commitments
I. HORIZONTAL COMMITMENTS			
ALL SECTORS INCLUDED IN THIS SCHEDULE	[...]	3) [...] (iii) Government subsidized services may only be extended to UAE nationals.	

(e) Jordan (WT/ACC/JOR/33/Add.2 – WT/MIN(99)/Add.2, p. 2)

Modes of supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or subsector	Limitations on market access	Limitations on national treatment	Additional commitments
A. HORIZONTAL COMMITMENTS			
All sectors included in this schedule		Regarding subsidies, modes (1), (2), (3) and (4) are Unbound.	

Working Party on GATS Rules

PATTERNS OF LIMITATIONS SCHEDULED UNDER MODE 2

Background Note by the Secretariat

A. INTRODUCTION

1. This Note responds to a request by the Working Party on GATS Rules at its meeting of 4 and 5 May 2000. It is intended to give an overview of the types of limitations which Members have entered in their schedules of specific commitments under mode 2. Given the Working Party's interest in illustrative examples of such limitations, an attempt has been made to identify broad patterns of exemplary cases, rather than giving an accurate account of individual entries. For the same reasons, no distinction has been made between limitations scheduled in the market access and national treatment columns.

2. The following overview seeks to capture and categorise all limitations scheduled under mode 2, although there may be doubts in individual cases about their relevance for this mode. Repetitive entries are particularly frequent; limitations may have been scheduled as applying to all four modes or, more often, to modes 1 and 2, which may reflect Members' difficulties in some cases to delimit precisely the respective scope of individual modes. The only omissions concern entries which have not been expressed in terms of limitations, but of entitlements (for instance, "soliciting is allowed"), one or two reciprocity-type clauses, as well as a few provisions of a very specific nature which proved difficult to interpret. All other entries have been treated the same way, regardless of whether they were confined to mode 2 or repeated under some or all other modes.

3. When the same limitation appears under various sectors or sub-sectors in a given schedule, it has been counted each time. Thus, the number of limitations indicated in square brackets refers to the measures and not to the Members actually maintaining them. Moreover, the figures should be considered only as rough estimates as quite a few entries are simply too vague to be categorised with certainty.

4. Finally, Members may have different legal interpretations of some of the limitations identified below (for instance in relation to GATS Articles VI or XI). However, the purpose of this Note is simply to reflect actual entries in schedules, regardless of their legal status.

B. HORIZONTAL LIMITATIONS

5. More than twenty Members have scheduled horizontal limitations under mode 2. As already noted, these limitations are not necessarily specific to mode 2, but often extend to mode 1 or even to all four modes of supply. Three main types of limitations have been found:

- (a) **Restrictions on transfers, payments or capital transactions abroad.** The implementing measures may take the form of a special authorization or a fee to be paid. Some countries have reserved the right to apply such measures across the board, others have limited it to specific types of financial operations. [9]

- (b) **Discriminatory subsidy regimes.** These limitations generally apply to the four modes of supply or have been entered only with respect to modes 1 and 2. [6]
- (c) **Discriminatory taxation of services provided from, or consumed abroad.** [4]

C. SECTORAL LIMITATIONS

6. More than sixty Members have scheduled sector-specific limitations under mode 2. The vast majority of these limitations are to be found in the area of financial services and to a significant degree in business services. In communication services, the most common limitation pertains to call-back restrictions. It is worth noting that some entries, including residence requirements, may amount in fact to a prohibition on the consumption abroad of the services concerned and, thus, be economically equivalent to scheduling "unbound".

1. **Business Services**

- (a) **Commercial presence or residence requirements.** Such limitations have been found in the sub-sectors of real estate services; placement and supply services of personnel; investigation and security services; and legal services. [10]
- (b) **Authorization and/or licensing requirement.** Relevant criteria include minimum qualification, local training or citizenship requirements. These limitations exist mainly in the areas of auditing services; scientific and technical consulting services (related to investigation and security services); R&D services on natural, social sciences and humanities; and services related to hunting. [9]
- (c) **Requirement that legal services be supplied by a natural person.** [6]
- (d) **Registration or notification requirements.** Relevant entries exist in rental/leasing services without operators (relating to aircrafts and ships), and in architectural services. [4]
- (e) **Discriminatory taxation.** Two such entries have been found for convention services. [2]
- (f) **Exclusions of services consumed abroad from insurance coverage.** Public medical insurance programmes do not cover costs of private medical services consumed abroad, including dental services and services provided by midwives and nurses. [2]

2. **Communication Services**

- (a) **Requirement to supply services only through a given network and/or operator, and under specified conditions.** Relevant limitations concern in general long-distance and international traffic and prohibitions of call-back services. [20]
- (b) **Licensing, authorization and registration requirement.** These limitations pertain to the installation and use of telecommunications equipment and networks, and the provision of telecommunication services. [3]
- (c) **Local establishment as a prerequisite for obtaining licenses or concessions.** [1]

3. Construction and Related Engineering Services

No limitations found.

4. Distribution Services

No limitations found.

5. Educational Services

- (a) **Exclusion of services supplied or consumed abroad from public support schemes.** [3]

6. Environmental Services

No limitations found.

7. Financial Services¹

- (a) **Licensing, registration and/or authorization requirements governing purchases and/or consumption of financial services abroad.** The activities subject to authorization or approval include, in particular, opening bank accounts, requesting loans, borrowing in foreign currency, purchasing "new financial products" such as derivatives, or purchasing unrefined gold. [39]
- (b) **Services consumed abroad may be subject to discriminatory taxation.** [20]
- (c) **Licensing, registration and/or authorization requirements for the foreign-based financial service provider.** The measures concerned may consist of an obligation on the foreign service supplier to be licensed or approved, be subject to regulatory supervision, or to have complied with relevant deposit requirements. [44]
- (d) **Requirement on the supplier to be locally established** (permanent residence or commercial presence). This category includes citizenship requirements or requirements that the supply of a service be undertaken jointly with established companies. [80]
- (e) **Limitations on compulsory insurance.** A number of entries provide that compulsory insurance (insurance of risks, motor vehicle third-party liability, for instance) have to be concluded with companies established in the territory of the Member and/or with authorized, exclusive or licensed suppliers. [12]
- (f) **Limitations on the quantity of services which can be supplied and/or consumed abroad.** Relevant measures may take the form of quantitative restrictions (for instance, only 25 percent of the risk can be covered by a non-resident insurer) or, more frequently, provisions that insurance can be contracted abroad only if no home country company is prepared to handle the risk in question. [27]

¹ Some entries of a prudential nature have been ignored for the purpose of this Note. However, the borderline between prudential measures and market access or national treatment limitations is not always clear and it could be argued that additional entries should have been disregarded in the present context (see in particular 7(c)).

- (g) **Restrictions on transfers, payments or capital transactions.** Three Members have scheduled limitations relating to exchange controls of various types. [3]

8. Health Related and Social Services

- (a) **Exclusions of medical treatment obtained abroad from insurance coverage.** This type of limitation may cover all types of medical services or be limited to private health services. [6]

9. Tourism and Related Travel Services

- (a) **Limitation on the amount of currency (local and foreign) that permanent residents are entitled to take abroad.** This foreign exchange restriction was entered by one Member with respect to "Hotels and restaurants, including catering". [1]
- (b) **Commercial presence requirement.** This type of limitation has been found with respect to for travel agencies and tour operators. [1]

10. Recreational, Cultural and Sporting Services

- (a) **Discretionary authorizations.** The relevant entry relates to "access to management functions in news agencies". [1]

11. Transport Services

- (a) **Requirement of commercial presence or (permanent) residence.** Such limitations have been scheduled with respect to some auxiliary services. [3]
- (b) **Authorization or registration requirements.** Such entries have been found with respect to maintenance and repair of vessels. [2]
- (c) **Prior notification requirements.** An entry of this type has been found for chartering of ships for "Internal waterways transport, rental with operators". [1]

Working Party on GATS Rules

SUBSIDIES FOR SERVICES SECTORS

INFORMATION CONTAINED IN WTO TRADE POLICY REVIEWS

Background Note by the Secretariat

Addendum

I. INTRODUCTION

1. To enhance information on subsidy programmes in the area of services, the Working Party on GATS Rules, at its meeting of 4 and 5 May 2000, requested the Secretariat to update a previous Note (S/WPGR/W/25, circulated on 26 January 1998) based on 31 Trade Policy Reviews (TPRs). While the initial document covered the period from January 1995 to December 1997, the current Note aims to extract similar information from the 37 TPRs published since.

2. Although this Note draws on information from all TPRs published from 1998 to present under the aegis of the WTO, it cannot claim to give a representative picture. First, the selection of countries for review does not reflect analytical purposes, but the country schedule established by the Trade Policy Review Body. Second, coverage and content of reports are largely determined by the availability of data as well as the Secretariat's assessment of country-specific review priorities at the time of drafting. The fact that some reports do not include subsidy-related information, therefore, does not necessarily point to the absence of such schemes in the countries concerned. Nevertheless, the TPR reports may be considered a reasonably reliable source of information in this area. They normally take into account not only material provided by national governments, but any additional information deemed relevant, including reports by international organizations and academic research papers. The factual accuracy of the individual reports has been checked by the country under review.

3. Reflecting data limitations and/or resource constraints, TPR reports have not always sought to trace the compound effects of various subsidies in individual sectors or to gauge their relative importance. Also, it has proved difficult to detail the underlying policy objectives of many programmes. For example, a particular support scheme may be social in nature or informed by industrial policy considerations, geared toward improving consumer welfare or upgrading sectoral performance, enhancing overall economic efficiency or simply shielding vulnerable domestic suppliers from import competition.

II. CONCEPTS AND DEFINITIONS

4. The subsidy definition generally used for Trade Policy Reviews is based on the definition contained in the WTO Agreement on Subsidies and Countervailing Measures. Accordingly, a subsidy is deemed to involve a financial contribution by a government or public body which confers a benefit. The TPR reports thus tend to cover assistance granted in the form of direct transfers of funds, including grants, loans and equity infusions; potential direct transfers of funds or liabilities, e.g. loan guarantees; government revenue foregone; supply of goods and services other than general infrastructure; purchase of goods; payments to funding mechanisms; or income and price support.

5. As noted before, the application of this definition to services sectors has not appeared to pose problems in principle. However, it may prove difficult in individual cases to identify the ultimate beneficiary of a subsidy, which may have been destined for downstream users rather than the immediate recipient. Exemptions from indirect taxes, in particular VAT, have generally been ignored for the purposes of this overview as such measures in many cases are aimed to support consumption rather than production of the service concerned. Some measures may have been intended primarily to promote public policy or infrastructural objectives. Given the infrastructural importance of many services sectors and their role as generally available inputs, it could thus be misleading to equate certain recipients, e.g., railways, with actual beneficiaries which might include any social or economic group relying on rail transport. Moreover, Members may use different terminology or have different demarcations between the public and private sectors.¹ The ambiguities arising from these factors no doubt affect cross-country comparability.

III. POLICY PATTERNS

6. Available evidence suggests that WTO Members tend to concentrate their services-related subsidies on three sectors: maritime transport, tourism, and financial services. This is consistent with patterns revealed in the previous compilation. Of the 37 Members covered in the TPR reports under study in this update, at least 12 have aided their maritime transport sector. This compares to the pattern found previously, where 23 of 44² Members covered by the TPRs were reported to have subsidized maritime transport. In the current sample, 22 Members have offered tourism subsidies; while the previous group had had 14 governments promoting investment in the hotel and tourism sector. For financial services, the current group of 37 has at least 8 Members offering subsidies (including measures applied in the wake of financial crises, which may be falling under the GATS' prudential carve-out for financial services). Of the Members covered by the previous Note, at least 10 had assisted their offshore banking sector or rescued ailing domestic banks. However, such findings may be influenced by the reports' focus on sectors where politically or economically important developments have been under way.³

7. The following Table confirms the high number of programmes for tourism. They are being operated mainly in developing countries. Possibly reflecting fiscal constraints, these programmes tend to rely on tax holidays and other fiscal advantages and do not normally provide for actual disbursements. Support schemes for transport and financial services, however, seem to exist across the full spectrum of WTO Members. Support policies favouring shipping companies have often used tax incentives. In financial services, a number of initiatives may have been *ad hoc* in nature, driven by the perceived need to prevent the imminent collapse of large banks, rather than influenced by longer-term policy strategies. A trend not previously apparent seems to be for governments to encourage the development of the financial services sector through tax incentives and/or offshore schemes.

¹ For example, the provision of basic health services may be ensured through: (a) cost-free treatment in state-owned hospitals; (b) the extension of public funds to commercially independent hospitals; or (c) government-sponsored premiums for basic health insurance. While conferring the same benefits to the same target group, such measures might be defined, respectively, as the provision of infrastructural services, subsidies for the health sector, social transfers and/or subsidies for insurers.

² Counting individually the EC Member States.

³ As a general feature, it appears that areas such as financial services have been reviewed in more detail than, for example, rail or road transport and professional services.

ANNEX

Content of Individual Trade Policy Reviews

As an update to the previous document, which had covered TPR reports from January 1995 to December 1997 (S/WPGR/W/25), the content of this Annex is directly taken, with some minor editing, from reports published since that time. References deal with subsidy programmes for individual services sectors. Not included is information on generally available subsidies, for example in the context of regional development or research programmes, and company-internal cross-subsidization between monopoly and market-oriented activities in sectors such as telecommunications. Reductions or exemptions on a value-added tax (VAT) or on other indirect taxes have for the most part been considered as consumer subsidies and have not been included.⁴ (Schemes exist, for example, to benefit consumption of medical, transport, or educational services.) Capital injections to financial institutions during a financial crisis have been listed as subsidies for a Member's financial services sector, regardless of the prudential carve-out for financial services in the Fifth Protocol to the GATS.

INDIA - WT/TPR/S/33 (1998)

pages 86-87, paras. 138, 140

To promote the development and exports of the **software** industry seven Software Technology Parks (STPs) and an Electronic Hardware Technology Park (EHTP) Scheme are in place... EHTPs and STPs are allowed zero duty on all imports, 100 per cent foreign participation, and tax holidays ... Data are not available on the amount of total forgone revenue attributed to these fiscal benefits.

page 92, para. 48

Other major recipients of total non-plan subsidies include the **railways**, for which subsidies have remained around 3 per cent since 1995/96.

page 93, Table III.19

Explicit (non-plan) subsidies, in part
(Rs million)

	1995/96	1996/97	1997/98 ^a

⁴ VAT exemptions applicable to the tourism sector, however, have been included as these are not likely to be targeted at the consumers.

page 96, para. 155

Section 80IA of India's Income Tax Act grants tax holidays for a period of five consecutive assessment years in a number of cases, including industrial undertakings, **hotels, ships**, the development and maintenance of any infrastructure facility, research and development, and the commercial production of mineral oil...

page 151, paras. 117, 118

For export industries, additional incentives, such as a five-year tax holiday, tax exemption on income from exports, duty-free imports of inputs and access to some imports on the restricted list through Special Import Licenses (SILs), are also provided. There is no ceiling on the amount of foreign equity participation in the **software** and hardware technology parks and export-processing zones (EPZs), or in 100 per cent export oriented units.

page 163, paras. 156, 158

The major Indian ports are organized as Port Trusts, i.e. semi-autonomous statutory entities with a non-profit objective organized under the Indian Ports Act, 1908 and the Major Ports Trust Act, 1963. In addition to infrastructure planning and construction, Port Trusts have the power to operate ship and cargo handling facilities and services (such as pilotage, cargo, storage and container stations) and to frame regulations. The Port Authorities have their own budgets, and can raise dues (tariffs are set individually for each port) and incur debts subject to government approval. The financial situation of the Port Trusts is mixed, with some ports requiring financial support, such as subsidies, concessional lending for some capital expenditures, or restructuring of debts. Since the **ports** do not pay taxes, even on their commercial activities, they have a negative impact on the Government's fiscal position.⁵

Another significant feature of the new guidelines on private-sector participation is that it opens up **port development** on build-operate-transfer (BOT), or similar schemes, for up to 30 years, relieving scarce public resources of the cost of financing. Financial incentives to port investors include a five-year tax holiday, a five-year tax concession period and, as an incentive to financial institutions who provide long-term finance, a deduction of taxable income derived from financing of investments provided that this amount is credited to a special reserve. Additional fiscal incentives are also being provided to encourage the development of port infrastructure. Several State Governments are going ahead with minor port projects involving the private sector.

page 166, para. 169

The National Telecommunication Policy, 1994 (NTP) states that "Private investment and association of the private sector would be needed in a big way to bridge the resources gap. Private initiative would be used to complement the Departmental efforts to raise additional resources, both through increased internal generation and adopting innovative means like leasing, deferred payments, BOT (build-operate-transfer), BLT (build-lease-transfer), etc.". In line with this policy, private [**telecommunications**] services providers have been extended fiscal benefits such as tax holidays, additional access to external commercial borrowing, etc.

page 170-71, para. 184 plus Box IV.4

Special incentives are offered to national and foreign investors in the **tourism** industry, including interest subsidy, income tax incentives, import concessions, and concessional licensing for

⁵World Bank (1995a).

imports of special items for the hotel industry (Box IV.4). Preferences in access to water and electricity are also extended to the industry.

Incentives in the tourism industry

Incentives to the tourism industry provided by the Central Government include:

- An interest subsidy of 3 per cent on loans from financial institutions is available to one-, two-, and three-star categories of hotel projects outside the metropolitan cities of Bombay, Calcutta, Delhi and Madras. A subsidy of 5 per cent is available to such hotel projects if they are in the travel circuits and destinations identified for intensive development in the National Action Plan for Tourism.
- Heritage hotels are eligible for the 5 per cent interest subsidy.
- As a fiscal incentive, 50 per cent of profits derived by hotels, travel agents and tour operators in foreign exchange are exempt from income tax. The balance of profits in foreign exchange is also exempt provided it is re-invested in tourism projects.
- Import of special items for the hotel industry is permitted subject to import entitlement. Concessional customs duty is charged for imports of specified goods required for initial setting up or substantial expansion of hotels. Moreover, the tourism sector can import at a concessional rate of duty under the Export Promotion Capital Goods (EPCG) Scheme.
- Announced in the 1997/98 Budget, new hotels located in a hilly area, rural area, place of pilgrimage, or a specified place of tourist importance, receive a tax deduction of 50 per cent of profits and exemption from expenditure tax. In respect of hotels located in other places, excluding the four metropolitan cities, the tax deduction is 30 per cent of the profits.

SOUTH AFRICA – WT/TPR/S/34 (1998)

page 130, para. 135

The Industrial Development Corporation (IDC) provides two financing schemes, at its prevailing interest rates, for the promotion of **tourism** in South Africa. Under both schemes, owners, members or shareholders are required to finance at least 40% of their total assets. Under the Eco-tourism Scheme, for projects in conservation areas, financing is normally provided in the form of loan facilities, and in risk participation, including equity, to promoters who are not in a position to provide sufficient equity capital. The General Tourism Scheme finances the renovation, refurbishment and extension of existing accommodation. The maximum IDC funding per project under this Scheme is limited to R 10 million, subject to the condition that turnover for accommodation represents at least 70% of the total turnover.

The following incentive schemes exist: Eco-Tourism Scheme, General Tourism Scheme, Business Loans for Retail Financial Intermediaries, Seed Loans for Retail Financial Intermediaries, Capacity building support for Retail Financial Intermediaries.

BOTSWANA – WT/TPR/S/35 (1998)

pages 47-48, paras. 51-53

The Financial Assistance Policy (FAP) is the most significant positive inducement for investment in Botswana. The policy was introduced in 1982, and substantially revised for the third time in 1995. It applies only to manufacturing, small-scale mining, mineral processing, agriculture other than beef production, and **tourism**, and to selected linking service industries (which supply the primary qualifying sectors)....

All FAP assistance is provided in the form of non-repayable grants. These grants are aimed at promoting the creation of self-sustainable enterprises, with the proviso that economic and/or social returns to Botswana are greater than the purely financial returns to the projects assisted. However,

qualifying businesses must have a reasonable chance of becoming financially viable. A project must therefore demonstrate a real economic rate of return to Botswana of at least 6%.

pages 65-66 (page 66 on LAN version), para. 73

The tourist industry is encouraged principally through financial assistance under the FAP; this may be in the form of capital grants, unskilled labour grants, or training grants. The total value of unskilled labour plus training grants, summed over a five-year period, should not be more than 50% of the domestic value added accruing to Botswana citizens over the period.⁶ In the tourism sector such assistance is available to hotels, motels, lodges, guest houses, tourist apartments, tourist camping sites, caravans, hunting camps, tented-camp safari and tour operators, urban tourism, horse back safaris, walk trails safaris and transport of guest travellers and tourists including travel agents.

LESOTHO – WT/TPR/S/36 (1998)

pages 69-70 (pages 71-72 on LAN version), para. 77

Lesotho mainly attracts South African tourists, for which it faces increasing competition from other African destinations. The Lesotho National Development Corporation (LNDC) has been promoting **tourism** actively and a number of hotels, mountain lodges and a national park have been developed. There were 417,000 visitors in 1992 (more than twice the 1988 figure). There has been an overcapacity in Maseru since the construction of the government-financed Lesotho Hilton. The occupancy rate was 30% in 1992, compared with 20% in the 1980s. The LNDC intends to develop a major ski-resort/casino complex in the Highlands Water Area Scheme.⁷

NAMIBIA – WT/TPR/S/37 (1998)

[No reference to service-related subsidies.]

SWAZILAND – WT/TPR/S/38 (1998)

[No reference to service-related subsidies.]

NIGERIA - WT/TPR/S/39 (1998)

pages 114-115, paras. 182-84, 187

Tourism in Nigeria does not yet attract large numbers of visitors or receipts (Chart IV.8). In order to develop this sector, the authorities have developed a new tourism policy and put in place a package of incentives to attract private sector investment in **tourism** development.

The authorities have also indicated the need to grant preferential credit and fiscal status to potential investors in tourism.

HUNGARY – WT/TPR/S/40 (1998)

pages 54-55 (pages 54-56 on LAN version), para. 72 and Box III.2 (part of)

A significant aspect of the tax system in this early phase was that foreign investors were treated more favourably than domestic entrepreneurs. Such "positive discrimination" was thought necessary to compensate foreign investors for what they perceived to be the relatively high risk of

⁶"Domestic value added" is defined as sales revenue minus tradeable inputs minus transfers to citizens.

⁷EIU (1997).

investing in an economy in the early stages of transition. Most of these preferences were abolished at the end of 1993, however, and any incentives are now largely accorded to domestic and foreign investors alike. Two notable exceptions involve the special deduction granted to companies with at least 30% foreign participation and the tax allowance for fully foreign-owned **offshore companies**. Although the last date for qualifying for this special deduction was the end of 1993, existing enterprises continue to enjoy the incentive for which they originally qualified until 2003. Fully foreign-owned offshore companies can still qualify for the tax allowance.

Box III.2: Tax incentives for investment, 1996, excerpts

(Ft million)

Incentive	Description	Amount
Incentive for offshore companies	This incentive, which was introduced on 1 January 1994, is available for offshore trading or service companies . A tax credit of 85% of the tax due, granted to offshore companies, was withdrawn and replaced beginning 1 January 1997 with a low rate of corporate income tax, i.e. 3%. Offshore companies are not entitled to any other tax incentives.	397

page 90, para. 71

Conscious that internationalization of the Hungarian economy, the rise in living standards, and the development of tourism are likely to result in future expansion of **air transport** activities, the Government and the industry have engaged in wide-ranging modernization of the sector. This involves, *inter alia*, the recapitalization of Malév, including the purchase and leasing of new aircraft, the expansion of the Budapest-Ferihegy airport (the only airport in Hungary capable of meeting international transport needs), and the transformation of the former Soviet military air-bases into domestic and cargo airfields.⁸ Recapitalization of Malév is considered to be essential if the national carrier is to compete internationally and is therefore a prerequisite for the complete opening of air transportation to foreign competition. While no direct subsidies are given to Malév, it does receive other forms of assistance, including a reduction in customs duties on spare parts and equipment as well as a tax exemption for fleet renewal.

AUSTRALIA – WT/TPR/S/41 (1998)

page 78, para. 115

Direct financial assistance is provided mainly in the form of sector-specific bounties and subsidies and also in the form of concessional loans, interest rate subsidies and government guarantees.⁹ In 1996/97, the highest percentage of budgetary financial assistance went to the manufacturing sector, which received almost 60% of total outlays, followed by primary production, **services**, and mining and energy, with 22%, 14% and 5%, respectively, of all assistance.¹⁰

page 138, para. 114

Despite financial assistance from the Government, the **shipping** sector has continued to decline. It is estimated that the total value of assistance through expenditure on capital grants and accelerated depreciation for the sector has been \$A 137 million over a ten-year period up to 1997. In addition, voluntary redundancy programmes for the sector cost the Shipping Industry Reform Authority (SIRA) an additional \$A 43 million.

⁸ A second terminal was completed at Budapest-Ferihegy airport in 1993. Further expansion is under way, involving the construction of a third terminal, which will be operated by a foreign-owned company.

⁹ Industry Commission (1997c).

¹⁰ Industry Commission (1997c).

JAMAICA - WT/TPR/S/42 (1998)

page 66, para. 66 and Table III.12

Some of the existing incentive schemes include measures aimed at encouraging exports, such as the Export Industry Encouragement Act (EIEA) and the Factory Construction Act, or to save or earn foreign exchange, such as the Jamaica Export Free Zones Act (Table III.12).

Investment incentives available in Jamaica

Sectors	Incentives	Requirements/conditions	Concessions
...			
Information Processing	Jamaica Export Free Zone Act	All transactions must be conducted in US\$. Company cannot sell in domestic market more than 15% of production.	Exemption from import duties on raw materials and machinery. Duty relief on raw materials and capital goods in perpetuity. Possibility of single-entity free zones.
...			
Film	Motion Picture Encouragement Act	Must be recognized producer.	Income tax relief for nine years. Duty-free importation of machinery and equipment.
Tourism	Hotel Incentives Act	Must contain at least ten bedrooms and facilities for meals	Income tax relief for nine years. Duty-free importation of building materials and furnishings.
	Resort Cottages Incentives Act	Articles must be used for the construction and equipment of resort cottages.	Income and dividends tax relief for ten years. Duty-free importation of articles used in construction of resort cottages.
All industries			
...			
	International Finance Companies (Income Tax Relief) Act ^b	To encourage establishment of offshore banking facilities.	Income tax relief on profits and capital gains. National treatment not applicable.
	Shipping Incentives Act ^c	Vessels must be owned by local companies (state owned).	Relief from income tax and import duties for ten years.
...			

- a Extension to services to be implemented.
- b Currently not in use.
- c Under amendment
- d Suspended.

page 73, para. 89

The National Investment Bank of Jamaica (NIBJ) has a debt restructuring programme to provide companies registered in Jamaica with financing of up to 50% of the debt to be restructured, to a maximum of J\$50 million per company. The balance of the debt is expected to be restructured by the creditor bank, in the form of an interest rate reduction, a write-off, or by rescheduling. Funds are provided at a rate based on NIBJ's cost of funds, for a maximum period of seven years. The sectors targeted under this programme include agriculture, manufacturing, mining, **tourism, information technology, entertainment and infrastructure.**

page 74, para. 97 (see also page 115, paras. 103, 104)

There are also a number of sector-specific incentive programmes that grant tax and import duty relief, such as the **Hotel Incentives Act, the Resort Cottages Incentives Act, the Shipping Incentives Act, the Motion Picture Encouragement Act**¹¹, the Cooperatives Societies Act. Under these Acts, tax incentives include investment allowances up to 40% for plant and machinery and a five-year period to carry forward tax losses (carry forward of losses now applies across the board). In the case of free zones, income from qualifying activities is indefinitely exempt from tax.

page 120, para. 119

Among specialized development financial institutions, the National Development Bank, owned by the Government, provides medium and long-term financing to businesses (particularly manufacturing and **tourism**) through commercial banks. Funding is provided through the National Industrial Bank of Jamaica (NIBJ) (Chapter III(4)(i)), the European Investment Bank, the Caribbean Development Bank, and through bond issues of the Bank of Jamaica..... The Trafalgar Development Bank provides medium and long term financing to productive enterprises in the private sector; its activities are concentrated on the foreign exchange loan market. Around half of the loans disbursed are directed to manufacturing, with agriculture, tourism and mining following at a certain distance.....¹²

page 125, para. 136

Shipping services are provided by over 30 shipping lines. Jamaican shipping companies may benefit from the incentives included in the Shipping Incentives Act, by which they are exempt from income tax and from import duties for a period of ten years after their establishment.

MALI - WT/TPR/S/43 (1998)

[No reference to service-related subsidies.]

TURKEY - WT/TPR/S/44 (1998)

pages 68-70, paras. 92-93 and Table III.17

Until 31 December 1993, export income was exempted from the payment of corporate income tax... The reduction, which had been progressively reduced, was 20% and limited to the following activities; (i) revenue earned abroad and brought to Turkey from services such as **repairs**, and **construction** facilities; and (ii) producer-exporter companies' revenue from exports of industrial products above US\$250,000 a year.

Exporters can take advantage of a large number of export credit schemes, operated by the Export Credit Bank of Turkey (Turk Eximbank)...

¹¹The Motion Picture Industry (Encouragement) Act provides recognized motion picture producers the right to import into Jamaica any plant, equipment, machinery and materials for the building of studios or for use in motion picture production free of customs duty, additional stamp duty and general consumption tax, provided the goods cannot be manufactured domestically [*footnote moved from page 113, para. 97*].

¹²Loans by the Trafalgar Development Bank outstanding in 1996 reached J\$1.29 billion, compared to J\$2.64 billion for the National Development Bank, and J\$1.19 billion for the Agricultural Credit Bank. See: BOJ Annual Report 1996, p.p.22-26.

Key features of the export credit and guarantee programmes, June 1998, in part

Scheme	Eligibility	Conditions	Amount of credit
8. <u>Tourism Marketing Credit Programme</u> ^e	Tourism companies selected by Ministry of Tourism and those attracting more than US\$1 million worth of currency to Turkey annually	Interest rate: 75% Maturity maximum 180 days Maximum 40% of project cost and TL equivalent of US\$500,000	1997: US\$15 million
11. <u>Overseas Chain Stores Investment Credit Programme</u> ^e	Turkish entrepreneurs' overseas investments for the establishment of shopping malls and chain stores	Interest rates: determined specifically for each project Maturity maximum 7 years Maximum 75% of investment amount if local content is 50% or more, otherwise 60%	1997: US\$8 million
14. <u>Project Credits Programmes</u> ^h	Foreigners buying Turkish goods and services , min. 50% domestic content	Interest rate: depends on the countries' relative credit risk standing and is calculated in relation to LIBOR Maturity 2 years or more Deferred payments Maximum 85% of the goods and services provided from Turkey	1977: US\$113 million

e Programme introduced after 1993.

h Buyers Credit and Guarantee Programme was renamed Project Credits Programme; mostly project financing is provided under this programme.

Source: Government of Turkey.

page 73, paras. 101-103

With the objective of promoting export-oriented investment and production, the Government of Turkey has established ten free zones. The enterprises established in the zones are active in a wide range of areas, including high-technology investments, leather products, and storage facilities.¹³ A new initiative is the **Istanbul Stock Exchange International Securities Market Free Zone**, which commenced operation in the first half of 1997. Its main objective is to create an international finance centre operating in the field of stock purchases/sales, stock barter, maintenance and other transactions within the body of the Istanbul Stock Exchange.

A wide range of financial benefits are extended to the free zones. These include, *inter alia*, ...exemption from corporate, income and value-added taxes.

page 80, para. 122

To qualify for the general investment aid programme, potential investors have to apply for an investment incentive certificate, which is non-transferable. Any investment project, whether foreign or domestic, receives the same treatment....¹⁴ In addition to the geographical location, priority is given to **infrastructure services, tourism, yacht and shipbuilding sectors**. Where the investment is not realized as foreseen by the incentive, the funds are returned with interest.

page 139, para. 127

Special tax incentives are provided to Turkish investors in the **maritime** sector. Incentives include: an income tax of only 10% on the wages of the seafarers during international voyages; and

¹³ Those in operation include Aegean, Antalya, Erzurum Eastern Anatolia, Istanbul Ataturk Airport, Istanbul International Stock Exchange, Istanbul Leather, Mardin, Menemen Leather, Mersin, and Trabzon.

¹⁴ However, the administration differs: foreign investment applications are handled by the General Directorate of Foreign Investment, while domestic investor applications are handled by the General Director of Incentive and Implementation.

the book profit resulting from sale or loss of a vessel can be deducted from the purchase price of the same kind of replacement vessel within three years and after deducting the realized depreciation amount.

pages 143-44, paras. 153-54

The Turkish Government has played an active role in the **tourism** sector. It grants incentives for tourism investments (Box IV.4) in accordance with the Tourism Encouragement Law... Investors in the tourism sector have priority in incentives granted under the general investment aid programme.

page 145, Box IV.4

Incentives offered only to the tourism industry

Special incentives are offered to national and foreign investors for investment in the construction and management of tourist facilities (Law No. 2634 on the Encouragement of Tourism). Investors with a Tourism Operation Certificate issued by the Ministry of Tourism may benefit from the following incentives:

- corporate income tax exemptions (temporary measure): maximum 20% of the foreign exchange earnings of tourist establishments is deducted from the total gross profit subject to taxation;
- the Central Bank of Turkey provides up to 20% of fixed investment costs in cash;
- a property tax exemption for five years (temporary measure);
- the allocation of public land for the construction of tourist facilities on long-term lease;
- permission to employ foreign personnel and artists (up to 20% of the total personnel);
- discount rates on water, electricity and gas prices;
- priority in allocation of telephone, fax and telex lines; and
- foreign exchange retention quotas: a percentage of foreign exchange earned by tourist establishments may be retained by the investors and used for essential imports required for operation.

SOLOMON ISLANDS – WT/TPR/S/45 (1998)

page 35, para. 73

Tourist development projects are entitled to special additional incentives. These include a set five-year tax holidays; 50% outright deduction in the first year for capital expenditures (excluding land), and 5% annually thereafter; 50% write-off for the costs of vessels built locally for tourism; and duty-free import of capital equipment and materials for two years.

page 94, para. 121

Although the Government has no direct interests in tourism resorts following the privatization of the Mendana Hotel, it encourages private development by offering various tax concessions. The Foreign Investment Board may grant income tax incentives permitted under the Income Tax Act. These include a five-year tax holiday on **tourist hotels and resorts** (subject to minimum bedroom number requirements of 300 and 50, respectively), and other tourist-oriented projects. Approved projects may also depreciate capital expenditure over two years, and write off overseas promotion at a rate of 150%. The same benefits apply to expenditure on expansion and renovation of eligible resorts incurred from 1 January 1989.

page 95, para. 127

An important priority for the Government is to develop inter-island **shipping services**. It has indicated that it would consider either subsidizing non-commercial routes, or licensing by tender unprofitable routes to private operators.

BURKINA FASO – WT/TPR/S/46 (1998)

[No reference to service-related subsidies.]

ARGENTINA – WT/TPR/S/47 (1998)

page 87, para. 151

Fiscal incentives are available for specific production projects in agriculture, livestock and industry and for **tourism services**; industrial projects can enjoy benefits until the end of 2005.¹⁵ The authorities indicated that no new projects are being approved. The benefits consist of tax breaks through credit bonds for amounts equivalent to the capital invested in the project, or, from December 1994, of VAT credit certificates equivalent to the VAT paid to suppliers of raw materials and semi-manufactures.

page 139, para. 158, 160

Following legislative reforms aimed at promoting the local **film industry**, in October 1994 the Argentine Film Law was amended to include: a 10% tax on the rental and sale of home video; a 10% tax on the sales price of all tickets for the screening of films; the obligatory exhibition and remuneration of national short subject films (to be implemented); and an authorization to the Argentina Film Institute to oversee the compulsory local processing, dubbing, and sub-titling of foreign films.¹⁶ ... Since 1995, 50% of the tax revenue from film-related activities has been used to subsidize domestic film production.¹⁷

page 142, para. 174

To provide some stimulus to the [**construction**] sector, the Government launched a 1995-99 investment programme, but this has not yet been implemented because it contains fiscal and financial constraints. Further measures included fiscal incentives (including a reduced VAT rate levied on new houses), a 1996 credit programme (with securitized mortgages), and credits from the state-owned National Mortgage Bank, (BHN) with longer maturities and lower interest rates, estimated be worth US\$850 million in 1996 and US\$1.1 billion in 1997.¹ In 1997, a mortgage insurance mechanism was under consideration to enable the finance of 95% of the new house value.

¹⁶ Law 17741, 14 May 1968 was amended by Law 24377, 28 October 1994.

¹⁷ Decree 815/95, 14 June 1995.

TRINIDAD & TOBAGO - WT/TPR/S/49 (1998)

page 53, para. 65

Under the Corporation Tax Act, an export allowance, in the form of a tax credit, is granted to locally incorporated companies for exports to non-CARICOM countries of locally manufactured or produced goods, **services**, and agricultural products.¹⁸ Branches of foreign corporations are not eligible for this allowance. The tax credit covers the profits on the proportion of exports sales to total sales so that profits on exports are effectively tax exempt. In 1996, export-allowance claims amounted to TT\$18 million (US\$3 million), implying a forgone revenue of TT\$6.3 million (US\$1.1 million) at the 35% corporate tax rate. In 1997, under the Finance Act, this allowance was expanded to include services connected with the building industry (architectural, engineering, etc.). The Minister of Finance has declared that this export allowance will be eliminated by 1 January 2000.

page 56, para. 78

With the aim of stimulating job creation and investment in distressed areas of the country, the Ministry of Trade and Industry has proposed an Enterprise Zones Programme. The Programme has not yet been legislated. To qualify as an Enterprise Zone an area must have an unemployment rate at least 50% above the national average or a poverty rate exceeding the national average.... Activities qualifying for the zones are assembly, manufacturing, agricultural and agro-processing, research and development, **information processing, telecommunication and financial services**.... Investors in the Enterprises Zones who invest at least TT\$50,000 and employ at least two persons are entitled to tax incentives. Such incentives include a tax credit of TT\$3,000 for each new employee and TT\$3,000 for each TT\$50,000 of investment, altogether not exceeding TT\$50,000, provided at least 50% of the new employees are zone residents.¹⁹

page 58, paras. 84-85

Sector-specific investment incentives are available under different legislation. The **Hotel Development Act** provides investment incentives to hotel owners and hotel operators which include a tax holiday for a period of five to ten years as well as customs and excise duty exemption on building materials and articles of hotel equipment to be used exclusively in connection with the construction and equipping of a hotel project. The Ministry of Tourism has discretion on the granting of concessions based on the size and cost of the hotel project.

page 60, paras. 92-93

The Venture Capital Investment Programme, which is governed by the Venture Capital Act of 1994 and the Venture Capital Regulation of 1996, was launched in 1996 to mobilize equity financing for small and medium-sized enterprises involved in agriculture, **tourism**, manufacturing **and non-financial services**. Under the programme, investors (individuals or corporations) in registered venture capital companies²⁰ are eligible for a tax credit of 35% of the amount invested. By early 1997, three venture capital companies were registered under the programme.²¹

¹⁸The export allowance is calculated as follows: Export allowance = (Export sales/Total sales) x Total sales profit.

¹⁹Ministry of Trade and Industry, 1996.

²⁰Individuals and companies interested in establishing a venture capital company must become incorporated under the Companies Act and have at least TT\$50,000 in paid up capital and an authorized capital of between TT\$5 million and TT\$20 million. The venture capital company must raise at least TT\$500,000 in paid up capital and begin making equity investment within 12 months of its registration.

²¹Forde and Joseph *et al.* (1997).

Concessionary financing is available from development banks to some sectors. Credits at preferential rates may be obtained from the Agricultural Development Bank (ADB) for the agricultural sector and from Development Finance Limited (DFL) for the manufacturing, **tourism**, agro-processing and industrial services sectors...²²

page 101, para. 116

With a view to encouraging the development of the **hotel industry**, the Hotel Development Act was enacted in 1963 and subsequently amended to provide incentives to hotel owners and operators. These incentives include: a tax holiday for a period of five to ten years; an accelerated depreciation for equipment owned by the hotelier; a capital allowance in respect of approved capital expenditure; carry-over of losses incurred by owners and/or operators during the tax holiday period; and tax exemption on dividends accruing to the owner/operator.

URUGUAY – WT/TPR/S/50 (1998)

pages 50-51, paras. 108-109

Law No. 15.921 of 17 December 1987 and Decree No. 455/988 of 8 July 1988, which regulate the operation of the free-trade zones, allow storage and warehousing, manufacturing, **financial institutions, data processing** and other activities that the Executive deems beneficial to the country's economy (Article 2). However, companies established in a free trade zone are not allowed to undertake manufacturing, commercial or service activities outside the free zones (Article 14), that is, separate companies have to be established to conduct operations outside the zone. The free zones are administered, supervised and controlled by the Ministry of Economy and Finance, through the Directorate of Free Zones (Article 5).

page 95, para. 111

The [**tourism**] sector is eligible for incentives provided under the Industrial Promotion Law of 1974.²³ The benefits, which include tax and duty exemptions, are granted through the Ministries of Tourism and of Economy with the approval of the Ministry of Industry, Energy and Mining.²⁴ Incentives are provided mainly for investment in tourism resorts, equipment, renovation and amelioration of existing facilities.

INDONESIA – WT/TPR/S/51 (1998)

page 118, Box IV:5

Bank restructuring in Indonesia

...

Another aspect of the Government's policy in the sector is to restore the confidence of depositors and creditors in the banking system. The Government has already announced that it would provide a full guarantee to all depositors and creditors of locally incorporated commercial banks. In addition, it has created the Indonesian Bank Restructuring Agency (IBRA), an institution responsible for the supervision and the restructuring of ailing **banks**. The Agency also exercises a preventive role in detecting bank failures.

...

Source: WTO Secretariat, based on information provided by the Government.

²²These two development banks were established as wholly government-owned institutions in the late 1960s and early 1970s, respectively, to encourage the development of capital markets and of targeted economic sectors. Private capital was injected in both banks in the late 1980s, after which their lending has become less concessional, with interest rates more in line with market rates.

²³ Law No. 14.178, 28 March 1974.

²⁴ The Ministry of Tourism was created in 1986 to promote this industry (Law No. 15.851, 24 December 1986).

HONG KONG, CHINA - WT/TPR/S/52 (1998)

page 40, para. 60

With the exception of income from certain **international shipping** services, which are tax exempt, profits (total income minus total deductions) derived from trading, professional or business activities in Hong Kong are subject to statutory tax rates of 16% in the case of corporations and 15% for unincorporated businesses.

page 75, para. 38

There are no publicly owned **banks** in Hong Kong. However, in August 1998, in an attempt to stabilize share prices on the Hong Kong Stock Exchange, the Hong Kong Monetary Authority (HKMA) purchased shares in several companies, including nearly a 9% stake in the Hong Kong and Shanghai Banking Corporation (HSBC) Holdings, the Hong Kong-based international banking group, which accounts for some 30% of the benchmark Hang Seng Index.

page 87, para. 83

According to the authorities, Hong Kong has no market access restrictions or exceptions to MFN treatment for shipping service. The only exception to national treatment pertains to the international operations of ships registered in Hong Kong; the income for owners of these ships derived from cargo uplifts or towage operations in Hong Kong or elsewhere is exempt from Hong Kong's profits tax.²⁵ Such an exemption constitutes tax relief for the export of **shipping** services.

CANADA - WT/TPR/S/53 (1998)

page 59, para. 79

The Export Development Corporation also has equity participation in Exinvest, incorporated in 1995 to establish or invest in corporations, partnerships, joint ventures or other incorporated bodies that provide financial support to sales for goods and **services**.

²⁵The Government estimates that HK\$28 million in tax revenue were forgone per annum as a result of this exemption.

The two largest beneficiaries of budgetary appropriations in 1996/97 were the Canada Mortgage and Housing Corporation and the Canadian **Broadcasting** Corporation, totalling together nearly Can\$3 billion.....²⁶

Cultural industries are also the focus of several assistance programmes, including book writing and publishing, film and video production, film distribution, and the "cultural milieu" in general.

page 73, para. 124

According to a report released in March 1998, current and capital expenditures deemed eligible for federal SR&ED tax incentives increased from Can\$4.5 billion in 1988 to Can\$6.9 billion in 1992 and, in the case of smaller CCPCs, from Can\$0.7 billion in 1988 to Can\$1.4 billion in 1992.²⁷ ...Manufacturing, **communication services**, **wholesale trade** and the **real estate finance** sectors accounted for 91% of the value of SR&ED tax credit claims.

page 105, paras. 85, 87-88

Assistance is provided to the **audiovisual** sector through direct subsidies, tax incentives, copyright remuneration, local-content requirements (mainly in the form of broadcasting quotas) and foreign-ownership restrictions.²⁸

²⁶According to Article 2 of the SCM Agreement, only the subsidies that are specifically provided to an enterprise or industry or group of enterprises or industries are notifiable.

²⁷Finance Department and Revenue of Canada, Release Evaluation of Federal Income Tax Incentives for Scientific Research and Experimental Development, <http://www.fin.gc.ca/newse98/98-031e.html>.

²⁸For details, see WTO (1996a), Chapter IV(5)(v).

The Canadian Film or Video Production Tax Credit, introduced in 1995, provides a refundable tax credit for film producers meeting Canadian-content requirements.... The Government introduced in 1997 the Film or Video Production Services Tax Credit, which consists of a refundable tax credit to film production services corporations of up to 11% of eligible labour expenses. This tax credit is intended to allow film producers, both domestic and foreign, employing Canadians for production services performed in Canada, to qualify for assistance. The scheme is expected to provide approximately Can\$55 million per year in direct benefits to the film industry.

page 107, Table IV.8

Main federal support measures for audiovisual services, 1997-98

Sector	Direct financial assistance (incl. grants, funds to agencies, etc.)	Tax measures	Local-content requirements	Foreign investment provisions
Broadcasting	Canadian Television Fund CTF): Can\$200 million (including Can\$50 million contribution from Telefilm Canada and Can\$50 million contribution from private sector). CBC radio/TV appropriation: Can\$858 million.	Income Tax Act disallows an eligible business deduction expenses for advertising placed on non-Canadian stations.	60% of Canadian content for conventional TV (private licensees must show 50% Canadian content in prime time; public licensees must show 60% Canadian content in prime time). Pay, speciality TV and pay-per-view services have varying Canadian-content requirements. 30% Canadian content for radio broadcasts (music) ^a . French-language radio: 65% of vocal popular music must be in French. Cable TV: majority of channels received by the subscriber must be Canadian.	Ownership limitations of 20% of the licensee company and 33.3% of the holding company.
Film and video	Telecom budget: Can\$210 million (includes government appropriation, returns on investment, and Can\$50 million contribution to CTF). National Film Board appropriation: Can\$57.3 million.	Canadian Film or Video Production Tax Credit; and Film or Video Production Services Tax Credit.		Investments must meet "net benefit to Canada" requirement of the Investment Canada Act both for new business and acquisition of existing businesses.
Sound Recording	Sound Recording Development Program: Can\$9.45 million		Music productions must fulfil specified criteria to qualify as Canadian works.	Investments must meet "net benefit to Canada" requirement of the Investment Canada Act both for new businesses and acquisition of existing businesses.

a This requirement will be raised to 35% in 1999.

page 55, para. 109

Tax exemptions are also provided for investments outside the Old Valley and under the New Communities Law, or for investments made in certain sectors such as **tourism**.

page 97, para. 110 and Table IV.9

Around 25% of Egypt's international trade is carried by **ships** flying the national flag. Egypt provides a number of incentives for companies flying the national flag, including up to 75% discount on supplies and the use of infrastructure owned by the General Authority for Ports; up to 50% discount on service charges by the General Authority of Red Sea Ports, for vessels using Safaga Port; and discounts on agency fees and use of ports for a period over 48 hours.

Investment incentives in the tourism industry

Scheme	Exemptions or concessions
Taxes	All tourist establishments except restaurants are exempt from paying taxes for 5 years in Cairo; 10 years in remote areas; and 20 years in El Wady El Gedeed and Toshka areas under the Law of Investment Guarantees and Incentives (8/1997). Rebuilding and expansion activities of tourist-related premises are exempt from taxes on 50% of income. Law 93 of 1996 allows a reduction up to 75% of fees for tourist and passenger ships entering Egyptian ports.
Customs duty	Under Decree 11 of 1996, there appears to be a 5% rate of customs duty on all imported equipment, except for restaurants. Imported limousines by tour operators are exempt from duty. Motor vehicles for public transport imported by tourist resorts established in remote areas appear to receive duty reductions of 5%. Alcoholic beverages may be imported by hotels at a rate of 300% duty. ^a
Land acquisition/development	... Low interest loans are provided to developers for infrastructure services, by the Tourism Development Authority. Law 72 of 1996 allows the expansion of tourist facilities and exemptions for tourist projects. The Tourism Development Authority offers land to private developers for a nominal rate of US\$1 per square metre in designated tourist areas.

^a MFN rates on alcoholic beverages range from 1,200% for beer to 3,000% for spirits.

UNITED STATES - WT/TPR/S/56 (1999)

page 82, para. 110

Eximbank is responsible for assisting the export financing of U.S. goods and services through a variety of loan, guarantee, and insurance programmes.²⁹ It guarantees both working capital loans for U.S. exporters and the repayment of loans by foreign purchasers of U.S. goods and services. In addition, the Federal Credit Insurance Agency (FCIA) an affiliate of the Eximbank, the Federal Government's general trade finance agency, provides credit insurance to cover the risk of non-payment by foreign buyers for political or commercial reasons. The bank does not compete with commercial lenders but rather supplements conventional lending, assuming risks that commercial banks cannot take on. Eximbank programmes have minimum acceptance levels and varying coverage for foreign content included in U.S. manufactured and produced items. The Eximbank is required to 'set aside' up to 10% of its operations for small businesses. It must also review the environmental impact of transactions requesting financing. Moreover, Eximbank is required to provide financing for U.S. goods and **services shipped on U.S. vessels**.³⁰

page 99, para. 162

...The corporate tax is also used as an instrument of government policy; that is, it embodies tax relief measures that assist some activities or industries relative to others. Among the main forms of tax relief accorded to companies are accelerated depreciation, deferral of income from controlled foreign corporations, reduced corporate tax rates, tax credit for corporations receiving income from doing business in U.S. possessions, exclusion of income of foreign sales corporations, and a credit for increasing research activities.... Tax expenditures are recognized as an alternative to other government policy instruments, such as direct expenditures and regulations. They are estimated to cost the Federal Government billions of dollars in lost tax revenues; such measures are aimed in particular at sectors (such as **small life insurance company** deduction, deferral of tax on **shipping** companies, excess bad debt reserves of **financial institutions**.)

page 106, para. 180

The Maritime Administration (MARAD) has provided financial assistance to U.S. **shipowners** through the Federal Ship Financing Programme (Title XI) and the Capital Construction Fund (CCF) programme.³¹ Title XI provides for federal government guarantees of private sector financing or refinancing obligations for the construction or reconstruction of U.S. flag vessels in U.S. shipyards. These financing guarantees are also available to foreign shipowners.

BOLIVIA – WT/TPR/S/57 (1999)

page 32, para. 22

Under the Temporary Import Regime, the payment of import duties and internal taxes is suspended for goods entering Bolivia for a limited period and for a defined use.³² Permits for temporary entry are issued for a 90-day period, which may be extended once, under certain

²⁹As notified to the WTO (WTO document G/SCM/N/38/USA, 19 November 1998).

³⁰<http://www.exim.gov/mover.html> [4 August 1998].

³¹The United States has not ratified the OECD Shipbuilding Agreement concluded in 1994, which is meant to eliminate all direct and indirect support and to combat injurious pricing practices. Provisions are made for a standstill on existing subsidy levels and on new measures of support during the intervening period, but allow for the continuation of previously committed aid subject to certain conditions.

³²Supreme Decree No. 24440, 13 December 1996.

conditions. Goods benefiting from this regime include ... machinery and equipment for **repair; equipment and apparatus for scientific, sport or cultural events...**

ISRAEL – WT/TPR/S/58 (1999)

page 26, para. 33

Israel has a number of laws to encourage foreign investment. The incentives include, *inter alia*, investment grants, tax breaks (rebate on profit tax), research and development support, wage financing, and training support.³³ The incentives offered depend on the location of the company as well as on the type of industry (preference is given to industrial, **tourism** and agricultural projects).

page 39, para. 29

Concessional duties on imports are granted within the framework of several schemes.... **Performing troupes of artists and entertainers**, and petroleum companies are also allowed to import duty free.

page 115, para. 132

The Government has played an active role in the **tourism** sector. Investors in tourism are eligible for government incentives under the framework of the Encouragement of Capital Investments Law of 1959. An approved investor may choose between a capital incentive package in the form of a grant equivalent of up to 24% of the investments in fixed assets, tax exemption and tax deduction, or an enhanced tax-incentive package; the benefits are contingent on the location and the size of the investment. The total cost of the scheme in 1998, excluding forgone revenue, was NIS 243 million.

PHILIPPINES - WT/TPR/S/59 (1999)

page 59, para. 91

The basic system of incentives is defined in and regulated by the Omnibus Investment Code. The Code provides for investment incentives made under the Philippines Investment Priorities Plan (IPP), which includes a list of promoted areas of investment eligible for Government incentives, and incentives granted to export-oriented enterprises, regardless of whether they fall within the IPP.... In early 1999, the IPP list includes, as priority investment areas, *inter alia*, industries that are undergoing industrial adjustments (e.g. chemical products and engineered products and components) ...**infrastructural services, transport carriers**, social and housing projects, motor vehicles and components, **tourism**, and research and development activities.

ROMANIA - WT/TPR/S/60 (1999)

[No reference to service-related subsidies.]

NICARAGUA - WT/TPR/S/61 (1999)

pages 38-39 , para. 24

Nicaragua's scheme for the concessional entry of imports was revised substantially in 1997 when new tax legislation was introduced; further adjustments were made in 1999.³⁴ Changes were both to reduce tax evasion, by specifying those items that are exempt from tax payments, and to

³³ Government-guaranteed loans were eliminated in January 1997.

³⁴ Law 257, 4 June 1997; and Law 303, 24 March 1999.

abolish administrative discretion in making exceptions to the law or granting tariff exemptions. At present, duty-free imports include... imports relating to the **construction of hotels and entertainment centres**.

page 93, para. 120

Fiscal incentives available since 1960 to investors in new **tourism**-related facilities (i.e. hotels, entertainment centres) were expanded in 1999.³⁵ These incentives now include tax reductions on capital (100%) and income (from 80% to 100% depending on the location) for a ten-year period (renewable if new works are undertaken); duty- and tax-free import or purchase of all construction-related contracts, related material, machinery, and equipment; exemption from municipal taxes; sale of state-owned land (payment in money or shares), or land concessions from 20 to 99 years (as from 1999); tax breaks on real estate tax for a ten-year period (as from 1999); and tax breaks to financial institutions on earnings from loans for tourism projects (as from 1999). In recent years, 34 projects benefiting from these incentives are to invest US\$128 million, build 1,392 hotel rooms and create 1,940 jobs.

PAPUA NEW GUINEA - WT/TPR/S/62 (1999)

page 61, para. 37

Imports of aircraft and parts by a PNG registered company with a PNG **airline** operator's licence are duty free. Similarly, a PNG registered **shipping** company may import all ships duty free, including boats, ferries, tankers, and fishing vessels but not pleasure craft. Registered PNG companies may also import marine engines and outboard motors of up to 40 hp duty free.

page 121, para. 160

Air Niugini is also the only licensed "first level" domestic **air carrier** operating regular flights to major centres. This monopoly situation, together with price control based on uniform pricing practices, results in high cost services. Other airlines may operate but not in direct competition with the national carrier. Air Niugini has had difficulties trading profitably and has accumulated government-guaranteed debts; it recently received a further injection of government funds.

THAILAND – WT/TPR/S/63 (1999)

page 54, para. 70

Important increases have taken place in credit commitments under the Merchant Marine Financing, which is a credit of up to seven years extended to domestic merchant marine businesses to finance the purchase of new or used ships. The objective is to help develop the Thai **shipping** sector in order to lessen dependence on foreign vessels and alleviate Thailand's current account deficit. Nearly B 4 billion of credit commitments had been made under this programme at the end of 1998, up from B 13 million in 1995. The scheme is believed to have increased the share of merchant ships that fly the Thai flag from 0.44% in 1995 to 9.43% in 1998.

page 104, paras. 115-117

Since the 1995 Review, Thailand's banking sector has been hit by a widespread crisis that has undermined the financial system; the number of financial companies fell from 91 at the end of 1996 to 36 at the end of August 1998, and is expected to decrease to 24 after the current programme of

³⁵ Decree 520, published on 13 August 1960, and its amendments; and BCN (1998b).

consolidation is terminated; the number of banks will decrease from 15 to 13 at the end of the consolidation process. Moreover, four of the remaining **banks** have received Government intervention in the form of large injections of public funds through debt-equity swaps. These four banks are currently being privatized without any restriction on foreign ownership.

In 1996, the Bank of Thailand agreed to bail out two major **financial institutions**, Finance One Company and Bangkok Bank of Commerce. In late 1997, the Government, through the Financial Institutions Development Fund (FIDF), injected a large amount of money into financial institutions to provide liquidity.³⁶ After the Government accepted the International Monetary Fund's rescue package, the FIDF was entrusted to provide a (blanket) guarantee of the deposits and liabilities of the remaining financial institutions in order to restore confidence.

The new prudential requirements have posed an additional burden on financial institutions in their attempts to find foreign or local partners, raise capital through public offering, and thus achieve the Government's objective of private-sector-led recapitalization. On 14 August 1998, in response to these problems, the Government announced a package of capital support measures to restructure the financial sector, including the provision of public funds to recapitalize remaining financial institutions.

page 106, Box IV:1

International Banking Facilities

Off-shore banking was launched in Thailand with the establishment of the Bangkok International Banking Facilities (BIBFs) in March 1993... The operations of the International Banking Facilities include: taking deposits or borrowing in foreign currencies from abroad; lending in foreign currencies in Thailand (out-in lending) and abroad (out-out lending), non-baht cross-currency foreign exchange transactions; discounting bills or providing guarantees against any debts denominated in foreign currencies to persons residing abroad; undertaking financial transactions that involve international trade in cases where buyers and sellers reside abroad; seeking loans from foreign sources; and acting as fund managers in arranging loans. In addition, IBFs can engage in other investment banking services such as provision of financial information; undertaking investment feasibility studies; financial advisory services; advisory services for business acquisition and take-over or mergers; and arranging or underwriting debt instruments for selling abroad.

The authorities granted the following privileges to IBFs: a reduction in the corporate income tax rate from 30% to 10%; exemption from special business tax (including municipal tax), which is currently at 3.3% of total turnover; and exemption from withholding tax on interest income from deposits or lending for out-out transactions with non-Thai residents; exemption from stamp duties; and reduction of withholding tax from 15% to 10% on interest on foreign loans for countries that have a double-taxation agreement with Thailand. Provincial International Banking Facilities (PIBFs) are granted the same tax concessions.

KENYA – WT/TPR/S/64 (1999)

pages 45-46, para. 89

Several incentive schemes (e.g. tax holidays, remission and refunds of import duties, accelerated depreciation, and investment allowance) are in place to encourage investment in Kenya (Chapter II(3)(ii)). More specifically, import duties on inputs used in the manufacture of certain specified products are fully or partially remitted (section (2)(iii)(e)). An investment allowance (deduction of up to 60%) is provided in the manufacturing and **hotel** sectors. VAT paid on inputs used in business activities of registered companies is refunded.³⁷

³⁶ Nidhiprabha (1998), p. 309. In order to finance this expenditure, B 400 billion of bonds had been issued in January 1999 (in March 1999, one dollar was worth approximately 36 baht).

³⁷ Companies with combined turnover of taxable goods and services exceeding KSh. 2 million per year must be registered for VAT purposes.

page 79, para. 108

With the exception of **passenger fares and services** provided in distant parts of the country, other railway freight services are not subsidized.

ICELAND – WT/TPR/S/65 (2000)

page 99, para. 146

The **tourism** sector has been one of the fastest growing industries in recent years.... Private firms play a leading role in the tourist industry, but the State also participates through the Ministry of Communications, the National Tourist Board, Ferðamálaráð Íslands, and a special loan fund....

TANZANIA – WT/TPR/S/66 (2000)

page 16, paras. 32-33

Businesses that are identified as priority sectors may import capital goods at the rate of 5%. The 12 priority sectors for the purposes of investment promotion are: ...**air aviation; ...commercial, development, and micro-finance banks;...tourism and tour operators; and radio and television broadcasting.**

Both the lead and priority sectors also benefit from deferment of value-added taxes until the investment commences operations. Additionally, a tax holiday is granted for the first five years; and a capital allowance deduction in the years of income of 100% is also granted.

page 17, para. 39 and Table II.3

Table II.3 contains the minimum investment capital required by the Government of Zanzibar for coverage under the Investment Act. All capital goods brought in during the start-up of an investment are assessed a zero rate of duty, but a service charge of 5% of the duty payable is levied. The Minister responsible for investment has the discretion to grant tax holidays of between one and five years...

Minimum investment levels for Zanzibar
(US\$ '000 and T Sh)

Project sector	Proposed capital	
	Foreigners (US\$ '000)	Citizens (T Sh '000)
Hotel ^a	4,000	300,000
Tour operator & related services	100	14,500
Agriculture	200	29,000
Fisheries	1,000	12,000
Industries	400	50,000
General business ventures & trading	350	50,000
Services	150	22,000

^a Quality hotel projects of up to ten bedrooms are also encouraged. An average investment of US\$30,000 per room is required and will be considered as minimum investment for such projects.

Source: Zanzibar Investment Promotion Agency.

page 19, para. 49

Zanzibar also passed legislation in 1998 establishing a Free Port Authority. The Authority is seeking to establish Zanzibar as a regional **distribution** centre, with packaging and minimal processing facilities. The authority has sheds for lease, as well as land for lease on which to build such sheds. Plans call for a "bonded warehouse" operation: at least 80% would be for the export market with the remaining 20% permitted onto the local market, subject to local tariffs. Investment

incentives for this free port operation are essentially identical as for the EPZs, except that such operations are eligible for a 20-year tax holiday.

SINGAPORE – WT/TPR/S/67 (2000)

page 72, para. 118

Like several other countries in the region, Singapore makes extensive use of tax incentives to encourage investment in certain activities and sectors. Tax incentives, which apply equally to foreign and local companies, have been an important tool in implementing the Government's development policy since independence. Initially set up to encourage labour-intensive industrial development under the Pioneer Status award, currently tax incentives are used to encourage foreign direct investment (FDI) in high-technology sectors, and skills development and training activities.... Most other programmes grant tax exemptions or tax concessions for companies investing in **high-technology industries or services**, or providing high-skill employment opportunities for Singaporeans.

page 98, Box IV:1

Offshore banking in Singapore

...

Offshore banking became permissible in Singapore in 1973 with the creation of the first ACU, as part of an effort by the Government to develop Singapore into an international financial centre. The growth of offshore banking has been aided, in part, by Government incentives. These include a concessional tax on profits (10% compared with the standard rate of 27%). In addition, ACUs are not subject to reserve and liquidity requirements.

...

Source: International Monetary Fund (1995), *Singapore: A Case-study in Rapid Development*, Occasional Paper 119; and Monetary Authority of Singapore (1999), *Annual Report 1998/99*.

pages 100-101, para. 50 and Table IV.4

In addition to regulation, the MAS has an important role in developing Singapore into an international financial centre by providing incentives for **banks and financial institutions** to invest in certain activities (Table IV.4). The incentives include concessional corporate tax rates of 10%, compared with the standard rate of 26%, and tax holidays for a number of activities. In recent years, particular emphasis has been placed on developing Singapore as the premier fund management hub over the next decade.³⁸ In offering these incentives, national treatment is extended to all foreign investors.

³⁸ Republic of Singapore (1998c).

Incentives offered by the Monetary Authority of Singapore

Scheme	Eligibility	Incentive
Operational headquarters (OHQ) incentives	Financial institutions providing management and other approved headquarters related services to subsidiary, associated or related companies in other countries	Concessional corporate tax rate of 10% for five to ten years (renewable) for income from providing qualifying OHQ services to approved network. Tax exemption for dividend income from approved network companies and on dividends distributed from the OHQ for five to ten years (renewable).
Double deduction for R&D expenditure	Eligible financial institutions engaged in R&D	Double deduction for qualifying R&D expenses against income.
Tax incentive for Asian Current Unit (ACU) income	Banks and merchant banks	Concessional tax rate of 10% on income derived from offshore ACU activities with non-residents and other qualifying financial institutions in Singapore.
Tax exemption scheme for fund management	Fund management	Investment income of foreign investors exempt from tax; fund managers managing at least S\$5 billion of foreign investors' funds given a five to ten year tax holiday (renewable on a case-by-case basis) on their fee income. Other fund managers taxed at a concessional rate of 10% on fee income.
Tax incentive scheme for approved trustee companies	Trustee or custodian services	Income from these activities provided to non-resident beneficiaries taxed at 10%; investment income from the trusts exempt from tax.
Tax incentive scheme for bond market activities	Bond market players	Tax holiday for fee income from arranging, underwriting and distributing qualifying debt securities; interest income qualifying from debt securities paid to financial institutions and corporations in Singapore taxed at 10%; interest from qualifying debt securities payable to non-residents exempt from withholding tax; income from trading in debt securities taxed at 10%.
Tax exemption scheme for syndicated facilities	Banks, merchant banks and approved securities companies	Tax exempt for income from arranging, underwriting and participating in syndicated credit, guarantee and debt facilities which are arranged in Singapore and for which proceeds are used outside Singapore.
Tax incentive scheme for transactions in foreign securities	Banks, merchant banks and securities companies	Income from transactions in foreign securities and related services taxed at 10%. Income from arranging and underwriting initial public offerings of foreign currency denominated shares on the Singapore Stock Exchange and from transactions in foreign securities listed on the Stock Exchange exempted from tax.
Tax incentive scheme for foreign securities lending and borrowing	Banks, merchant banks and securities companies	Concessional tax rate of 10% on net income from loans of foreign securities to eligible parties and to income from arranging such loans. Withholding tax exemption on loan fee or manufactured dividend or interest paid to non-residents.
Tax incentive for credit rating agencies	Credit rating agencies	Concessional tax rate of 10% for five years on income from providing credit rating services with respect to the issue of foreign securities in Singapore.
Tax incentives for finance and treasury centres (FTC)	Corporate treasury centres	Concessional rate of 10% on fee income received from the provision of financial and treasury services to approved network companies and income from conducting trading and other treasury activities on FTC's own account. Interest paid on foreign currency denominated loans from network companies and banks outside Singapore and on foreign currency denominated bonds issued by the FTC may also be exempt from withholding tax.
Tax incentive for offshore insurance business	Insurance companies	Concessional tax rate of 10% on income from writing offshore insurance business.
Incentives in new technology schemes for insurers	Insurance companies	Grants may be made for training staff in new and specialized lines of risks, reinsurance or captive insurance business.

Source: Singapore authorities.

page 111, para. 84

Singapore Airlines (SIA) is the national airline and is publicly listed. The Government holds a majority share of 53.8% through its holding company, Temasek Holdings. SilkAir, a wholly owned subsidiary of Singapore Airlines, operates to short-haul, secondary points in the region... A tax incentive administered by the TDB is available for **aircraft leasing companies** on income derived from offshore aircraft leasing. Approved companies, which need to apply to the TDB for this incentive, may also depreciate aircraft bought during the incentive period over 20 years, instead of five years.

page 114, para. 98

In an effort to keep Singapore attractive to ships and to keep costs competitive as a premier hub port, the MPA introduced a concession of 20% on port dues to all container vessels (excluding long-staying ships) from May 1996. The concession was extended up to 2000. In addition, a tax exemption is provided by the Trade Development Board for approved international **shipping** companies (Chapter III(3)(vi)). A number of steps have also been taken to improve port management and accommodate efficiently the growing number of ships calling at Singapore.

page 118, para. 110

The IDA actively supports the development of Singapore's communication network and infrastructure. Under its Development Grant Scheme, the IDA provides assistance to encourage the local **telecommunications** industry to upgrade its network infrastructure; to encourage research and development in advanced telecommunications; and to encourage the development of enhanced capabilities and innovative services.³⁹ All companies registered in Singapore may apply for the grants and must meet one of two criteria.⁴⁰ The IDA has made available over S\$250 million for the industry thus far under this programme.

page 123, para. 128

The Singapore Tourism Board will also develop its role as a one-stop agency for **tourism** development, offering updated information on industry development and incentives for investors in the industry.

BANGLADESH - WT/TPR/S/68 (2000)

page 69, para. 138

Items included in the "Crash Programme" also have access to various facilities, including soft loans at a concessional interest rate, and assistance for market exploration and securing joint-venture partners. The current crash programme includes ... **engineering consultancy** and **services**...

PERU - WT/TPR/S/69 (2000)

page 49, para. 124

Incentives to promote **port services** take the form of exemptions from import duties and domestic taxes granted to merchandise entering "centres for export, transformation, industry, commercialization, and services" – CETICOS – through the ports of Ilo, Matarani or Paita. Merchandise imported under the transit regime from any other entry point may also benefit from this exemption provided it is re-exported or exported after transformation in the CETICOS through one of the above-mentioned ports.

³⁹ Generally up to 50% of the qualifiable direct project costs are provided by the IDA, with co-financing provided by the recipient. The projects range, on average, between one and three years.

⁴⁰ The criteria are: to foster the strategic development of info-communication and postal infrastructure and services and enhance the competitiveness of Singapore as a global and regional business hub; and to foster innovation and advancement of technology and enhance the capability, efficiency and quality of info-communication services (Telecommunications Authority of Singapore (undated (a))).

page 50, para. 132

Most exonerations affecting the general sales tax (IGV) and the excise tax (ISC) were consolidated in Supreme Decree No. 055-99-EF of 15 April 1999. Under this Decree, in addition to the exonerations affecting imports and those applied in CETICOS, certain activities are exempted from the IGV or the ISC. Activities exempt from the IGV are industrial enterprises located on the Peruvian border; financial institutions in the process of winding up; as well as lodging and food services rendered by firms established in Peru by foreign-based **tourist operators**. The importation or sale of residual fuel or diesel to power generating and distributing firms are exempt from the ISC.

page 80, para. 75

A special investment fund (FITEL) has been created to promote universal access [to **telecommunications**] through private investment in regions where demand does not otherwise make such investment profitable. The fund, administered by OSIPTEL, is financed through a contribution from all enterprises in the sector, equivalent to 1% of their sales during the previous month, which at the end of 1999 had reached an accumulated value of US\$44 million. FITEL monies are used to subsidize concessions granted through public bids to operate services in rural areas; these concessions are granted to the enterprise that makes the lowest bid for a subsidy to supply the service in question.

Working Party on GATS Rules

**INTER-AGENCY TASK FORCE ON STATISTICS OF
INTERNATIONAL TRADE IN SERVICES**

PROGRESS REPORT, MAY 2000

Background Note by the Secretariat

Responding to a request from the Working Party on GATS Rules, at its meeting of 4-5 May 2000, this Note briefly describes past and future work of the *Inter-Agency Task Force on Statistics of International Trade in Services*. The special focus is on work on the *Manual on Statistics of International Trade in Services* and short-term prospects in this area. The Annex provides a short overview of the Manual. More detailed information, including the draft Manual itself, is available in the Secretariat.

I. MAJOR ACHIEVEMENTS

In 1994, following requests from GATT and UNCTAD representatives, the United Nations Statistical Commission decided to establish the *Inter-Agency Task Force on Statistics of International Trade in Services* (Task Force), with the following major objectives:

- (i) to strengthen co-operation between international organizations in the area of trade in services statistics, and to liaise with other agencies or groups involved in it;
- (ii) to promote the development of international concepts and definitions and classifications for trade in services statistics; and
- (iii) to improve the availability, quality and comparability of trade in services statistics collected at international level.

The Task Force is convened by the Organisation for Economic Co-operation and Development (OECD) and consists of members of the Statistical Office of the European Communities (EUROSTAT), the International Monetary Fund (IMF), the United Nations Statistics Division (UNSD), the United Nations Conference on Trade and Development (UNCTAD), the World Bank, and the WTO Secretariat.

From the outset, it was agreed that the Task Force would focus on the statistical requirements of GATS. However, given the huge gap between these requirements and available statistical data, concepts and practices, the Task Force considered its work as a long-term exercise.

It first examined the activities and requirements of international institutions in this field, and especially those of the WTO. It then analysed existing gaps between statistical frameworks and statistical needs, and the extent to which a new statistical framework could contribute to closing these gaps.

At its fifth meeting, in May 1996, the Task Force decided to develop a conceptual framework and classifications for statistics on trade in services to be published in a *Manual on Statistics of International Trade in Services* (Manual). The objective was to meet requirements of GATS as far as possible, while ensuring compatibility with existing statistical systems, especially the 5th edition of the Balance of Payments Manual (BPM5) and the System of National Accounts (SNA 1993), and without creating excessive additional burden on reporting countries. It was also decided that the Manual's guidelines should be suitable for a phased implementation (i.e. countries could implement the guidelines flexibly and progressively, according to, *inter alia*, their own requirements).

An outline was prepared, and provisional drafts were produced, calling on both external consultants and contributions from Task Force Members. These drafts were also reviewed by national representatives at several meetings of the United Nations and OECD.

The first complete draft of the Manual (5 November 1999) was circulated by the U.N. and the IMF to national statistical institutions and Central Banks of their member countries as part of a world-wide review, and made publicly available on the OECD's web pages¹. Over 60 National Statistical Offices, Central Banks and National Economic Institutes responded with comments to the Task Force by the end of January, 2000. A vast majority of respondents warmly welcomed the Manual. They recognized its positive impact on statistics of trade in services, as well as its usefulness as a guide for the improvement of statistical compilation systems. The phased approach recommended in the Manual was found to be particularly appropriate. However, many respondent countries noted that collection of additional statistical data would imply additional burden on compilers and on their financial resources. A vast majority of them stressed that they would be able to implement the advanced requirements only in the long term. In a number of cases, statistical offices were unaware of the needs of their national trade negotiators.

At its tenth meeting, in February 2000, the Task Force reviewed the countries' comments and decided on the appropriate modifications to the draft Manual.

II. FUTURE WORK AND PROSPECTS

Members of the Task Force are now redrafting the *Manual* to take account of comments received as a result of world-wide consultations with a range of statisticians and users of statistics, including balance of payments compilers, national accountants, compilers of data on employment and income, classifications experts, statisticians responsible for the compilation of data on production and/or use of services, and trade negotiators. This next draft of the *Manual* will be discussed at a meeting of UN experts in July 2000. Following this meeting, and after further redrafting as appropriate, the *Manual* will be translated into the official languages of the United Nations (French, Spanish, Russian, Arabic, and Chinese as well as English) before being presented to the United Nations Statistical Commission for its approval in 2001. Following this approval, the *Manual* will be co-published by the European Communities, IMF, OECD, UN, UNCTAD and WTO.

¹ [http://www.oecd.org/std/serv\(99\)2.pdf](http://www.oecd.org/std/serv(99)2.pdf).

The Manual represents a considerable progress in the area of statistics on trade in services, and in particular, it provides for:

- a much more detailed classification than currently available (BPM5) for the compilation of trade in services between residents and non residents;
- concepts and definitions for FATS statistics (GATS mode3);
- a classification for FATS statistics; and
- clarification and guidelines on the statistical treatment of GATS' mode of supply;

However, it should be noted that the first version of the Manual will be only a first step towards fulfilling GATS' statistical needs. First, the Manual's classifications still lack considerable detail with regard to requirements arising from negotiations (ultimately, the detail of the Central Product Classification would be needed). Second, availability of data broken down by partner countries is expected only for major items in the classifications. Third, although partial guidelines on the statistical treatment of GATS' modes of supply are given, it is not expected that countries would be able to compile complete statistics by mode on supply in the foreseeable future. Finally, implementation of the Manual will likely take some time, even for countries with advanced statistical compilation systems. Successful implementation will depend on efforts by national statistical agencies and Central Banks, and, above all, on the willingness of governments to provide the necessary resources.

ANNEX

Overview of the Manual on Statistics of International Trade in Services

The first *Manual on Statistics of International Trade in Services (Manual)* is being prepared by the Interagency Task Force authorized by the United Nations Statistical Commission on Statistics of International Trade in Services (the Task Force) to meet the needs of a variety of producers and users of statistics on international trade in services. These include in particular statistical compilers, but also governments and international organizations that must use statistical information in connection with international negotiations pertaining to trade in services, and also businesses and others that wish to assess developments in international services markets. A particular impetus for the preparation of a separate manual on statistics of international trade in services has been the recent tendency for trade agreements to cover services as well as goods, and the need for statistics both to guide the negotiations relating to these agreements and to monitor the outcomes.

The *Manual* describes the four modes through which services may be traded under GATS. While the *Manual* features important new areas in the field of international services statistics, it does so by building upon, rather than by modifying, internationally agreed standards for statistical compilation. It provides a framework and a set of recommendations that will allow for the provision of a range of statistics on international trade in services. These recommendations are summarized in Chapter 1 and elaborated on in the remainder of the *Manual*. Chapter 2 proposes the framework and describes its links to existing international standards and frameworks. Chapter 3 focuses on the compilation of statistics relating to resident-nonresident trade in services, building on the balance of payments framework described in the fifth edition of the *Balance of Payments Manual (BPM5)*. Chapter 4 recommends standards for compiling statistics on “foreign affiliates trade in services”, or FATS, drawing to a considerable extent on the concepts and definitions of the *System of National Accounts 1993 (1993 SNA)*.

The *BPM5* framework contains, inter alia, recommendations for the definition, valuation, classification, and recording of resident-nonresident trade in services. By building on this framework, the *Manual* recommends extending the *BPM5* classification of transactions by type of service to provide more detail through the Extended Balance of Payments Services (EBOPS) classification. While not yet complete, a draft correspondence table showing the relationship between the EBOPS classification and version 1.0 of the Central Product Classification is included as an annex to the *Manual*. This table assists in the provision of clear definitions of the various components of the EBOPS classification. Except for the treatment of *construction services* (discussed in subsection 3.8.4 of the *Manual*), the recommendations contained in the *Manual* are consistent with *BPM5*. Thus, a country’s balance of payments statistics will provide many of the data that are needed to implement the recommendations relating to the measurement of resident-nonresident trade in services. Recommendations are made in the *Manual* on the attribution of resident-nonresident transactions across the modes of supply.

As well as providing services by way of trade between residents and nonresidents of an economy (measured in balance of payments statistics), an economy may also supply services internationally through the activities of foreign affiliates abroad. The *Manual* recognizes this in its discussions on and recommendations for FATS statistics, which comprise the major part of the third mode of supply, commercial presence. Included are recommendations on (1) the selection of foreign affiliates to be covered (which follows the definition of foreign-controlled enterprises used in the *1993 SNA*); (2) the attribution of FATS statistics (including a discussion on attribution by activity and by product); and (3) the variables to be compiled. While this is a less well-developed area statistically than the balance of payments statistics, some FATS statistics for foreign-owned affiliates

in the compiling economy may be found in, or derived from, existing statistics on domestic production, including national accounts statistics based on the recommendations of the *1993 SNA* .

The recommended basic FATS variables discussed in this draft of the *Manual* are: number of enterprises, sales (turnover) and/or output, employment, value added, and exports and imports of goods and services. Additional FATS variables identified are assets, compensation of employees, net worth, net operating surplus, gross fixed capital formation, taxes on income, and research and development expenditures. The definitions of these variables are drawn from the *1993 SNA*.

The final area in which the *Manual* moves beyond existing statistical frameworks is in the area where enterprises producing services in one country employ individuals who are residents of another country (in the *BPM5* and *1993 SNA* sense) on a short-term basis. While some limited data are available from balance of payments statistics, there is a need for further development of statistics related to employment and income of foreign nationals. However, this area, which is part of the fourth mode of supply (presence of natural persons), is still under discussion by the Task Force, so there is relatively little discussion on, or recommendation for, compiling relevant statistics included in the current draft of the *Manual*.

The *Manual* proposes a phased approach to implementation, so that countries, including those that are beginning to develop statistics on international trade in services, can implement these developments gradually and begin to structure available information in line with this new international standard framework. The sequence of elements, as suggested, takes into account the relative ease that many compilers may find in their implementation. However, the order is quite flexible, so that countries can meet the priority needs of their own institutions. Full implementation - to be seen as a long term goal, would represent a considerable increase in the detail of information available on trade in services.

COMMUNICATION FROM ARGENTINA AND HONG KONG, CHINA

Development of Multilateral Disciplines Governing Trade Distortive Subsidies in Services

The following communication is circulated at the request of Argentina and Hong Kong, China (HK,C) to Members of the Working Party on GATS Rules. This paper is submitted without prejudice to the authors' positions in the WTO on this matter.

Article XV of GATS mandates Members to enter into negotiations with a view to developing multilateral disciplines which would avoid the distortive effects that subsidies in services may have on trade in services. The negotiations shall take account of the needs of developing country Members. Singularly little progress has been made on this area of GATS rule making in the last five years. This paper aims to move the debate forward. It first considers the (inadequate) data that exists on subsidies in services and on their prevalence and distortiveness. It then suggests ways to improve the available data. Finally it postulates what sorts of principles might need to be addressed and discusses a number of areas which might be fruitful in pursuing disciplines.

I. BACKGROUND

2. A useful starting point is the two notes prepared by the Secretariat in 1996 and 1998 in response to requests by the Working Party on GATS Rules. The first Note, circulated on 20 May 1996 as S/WPGR/W/12, described subsidy provisions relating to trade in services that existed in regional trade agreements notified at that time. The second Note, circulated on 26 January 1998 as S/WPGR/W/25, presented some empirical evidence of subsidy programmes in services, based on WTO Trade Policy Reviews (TPRs).

3. The information in S/WPGR/W/25 offers some tentative insights into Members' subsidy practices in services. It permits an examination of the negotiating challenges facing the development of such disciplines, and the potential economic benefits that could be derived from such disciplines through reduced distortion of international trade.

A. ANALYSIS OF TRADE POLICY REVIEWS

4. S/WPGR/W/25 covered subsidy programmes reported by Members within the context of the 31 TPRs carried out between 1995 and the end of 1997. The reviews cover 30 Members, including 17 developing country Members and 13 developed country Members (counting the European Community as one). The Secretariat pointed out that the results have to be treated with caution, since they depended largely on the efforts made by the respective governments to collect and report information about national or sub-national subsidies in services. We would say that the data needs to

be considered with considerable caution, since it is apparent that some Members had discounted altogether subsidies in certain important areas (see para.5 below). Nevertheless while the data is only indicative, some insights can be derived.

5. Evidence cited in S/WPGR/W/25 suggests that subsidies may be concentrated in certain sectors, for example: audio-visual services, air and maritime transport, tourism and banking services. The note indicates a number of interesting features of each of these sectoral subsidies. The programmes in tourism, for example, appear to be operated primarily by developing Members and rely mainly on tax holidays and other fiscal advantages rather than on cash benefits. In contrast, the audio-visual sector appears to be subsidised more by developed Members. A significant number of both developed and developing Members subsidise air and water transport. 9 Members reported subsidising banking (though the authors understand that several Members which have provided such subsidies did not report them). Only 4 governments reported providing subsidies for health and education activities, only 3 reported providing subsidies for telecommunications, and only 2 reported providing subsidies for energy production. However, these low levels beg the question of whether or not all subsidies were being reported or identified. Indeed, there is some evidence that sectors such as insurance, postal services, construction, research and development services and advertising, may be subsidised.

6. While the information provided in S/WPGR/W/25 is very sketchy, some pointers might be drawn. First, direct subsidising of exports of services seems not to be very prevalent¹. This could be a reflection that Members are more concerned about the protection of domestic industries than the enhancement of international competitiveness of those industries. Secondly, domestic subsidies that potentially distort international trade also seem to be mainly concentrated in a few sectors. While the Secretariat note sheds only limited light on the objectives of these sectoral subsidies, one might postulate that they respond to challenges specific to the individual services sectors and, in many cases, serve non-economic policy objectives. For example, in land transport, subsidies are frequently targeted at a number of externalities, including the environmental benefits associated with the greater use of public as against private transport, the desire to maintain public transport in thinly populated areas, the conversion of state-owned transport systems into privatised firms, and the achievement of various national security objectives. In audio-visual services, subsidies are provided to preserve national culture, and to support the arts in general. Health and education are subsidised both to promote social stability and social mobility.

B. SUBSIDIES RULES IN REGIONAL TRADING ARRANGEMENTS

7. Additional insights into possible approaches to the development of multilateral disciplines might be obtained from the information provided in S/WPGR/W/12 on the subsidy disciplines in services contained in existing regional trade agreements. S/WPGR/W/12 indicates that only a few of such agreements contains provisions on subsidies. Article 11 of the Australia-New Zealand Closer Economic Relations Trade Agreement (ANZCERTA) states the “*Member States shall not introduce new, or expand existing, export subsidies, export incentives and other assistance measures having a direct distorting effect on trade between them in service and shall work towards the elimination of any such measures by June 30, 1990*”. Article 92 of the EC Treaty states that unless otherwise provided “*any aid granted by a Member State or through State resources in any form whatsoever which distorts or threatens to distort competition favouring certain undertakings or the product of certain goods, shall in so far as it affects trade between Member States, be incompatible with the common market*”. Article 93 provides the Commission with the authority to instruct the Member State concerned to abolish or alter a state aid. The Note also includes that Article 92 has been applied in certain services sectors, including air transport and banking.

¹ However, subsidised export credits, guarantees and insurance programmes do seem to occur in some sectors, for example construction

8. Existing regional trade agreements (as at 1996) thus provide two separate approaches to the issue of subsidies in services-elimination/prohibition of export subsidies (Australia/New Zealand), and a general obligation to avoid state aid that distorts international competition. Implementation of the latter obligation within the European Community has been accompanied by a great deal of guidance by the Commission on a sector by sector basis, as provided for in Article 93 of the EC Treaty.

II. POSSIBLE AVENUES FORWARD

A. ADDITIONAL DATA

9. It is clear from the foregoing that there is a great shortage of reliable data. It is therefore important that Members endeavour to complete the subsidies questionnaire. In this regard, it is also suggested that Members could bring forward any specific subsidy related problem or situation they may have encountered or identified in foreign markets, particularly in relation to subsidies with an import substituting or export enhancing effect. However, there are other areas which we would also pursue to improve our data. The authors propose that:

- (a) The Secretariat be asked to update S/WPGR/W/25, to include the TPR material on Members reviewed in 1998 and 1999. Some 32 Members were reviewed in the period, and this should considerably enhance the data that can be drawn from this source.
- (b) The Secretariat be asked to update W/WPGR/W/12 to cover new RTAs notified since 1996. As more of the recent RTAs have had a service component, there could be more material on subsidies here.
- (c) The Secretariat be asked to undertake an analysis of the subsidies scheduled in Members specific commitments (SCs), both to take further S/WPGR/W/13 and to update the paper for the Basic Telecommunications and Financial Services Commitments made since the paper was done. As S/WPGR/W/9 points out, where SCs have been undertaken in the national treatment (NT) column, Members maintaining subsidies must either enter them or bring them into conformity with the NT provisions. Thus an analysis of the SCs should provide some additional data.
- (d) The subsidies question should be kept in mind when undertaking the MFN Exemption Review, as it appears some Exemptions are related to subsidies.
- (e) The Secretariat be asked to do more research on:
 - (i) the implementation of the disciplines on export subsidies in the ANZCERTA agreement (i.e. the prohibition of new export subsidies). How was this implemented and have there been any cases?
 - (ii) the "jurisprudence" on the application of the EEC rules on state aid as regards services sectors. The paper could also include some information on the guidelines on state aid developed by the European Commission regarding certain services sectors (e.g. maritime transport)

This background material would help in the discussion suggested under paragraph 10(d) of this paper.

- (f) The Secretariat be asked to do factual research into the work of other relevant international bodies/institutions in the area of subsidies in services or related to services sectors.

B. POLICY ISSUES FOR CONSIDERATION

10. There are many important policy issues that need to be addressed when considering any subsidy disciplines. In this regard, S/WPGR/W/9 of 1996 remains a valuable source of background material and of identifying the issues we need to tackle. The below focus on five issues:

(a) Factors to be considered in developing any subsidies disciplines?

It would be useful to consider what sort of basic elements should be considered when developing any subsidy disciplines. These would probably point the way to the issues that need to be addressed. The following would seem to need to be considered in developing elements for subsidies disciplines:

- questions of **MFN and NT**
- issues relating to the problem of **Mode specificity** and “**like services**”
- **territorial application**: the question of Mode 3 versus modes 1 and 2
- transparency
- whether the concept of “**necessity**” has a role
- whether the concept of “**least trade restrictiveness**” has a role
- **trade distortive effects**, as set out in Art XV
- the **remedies**, if any, including countervailing measures, that we would wish to contemplate.

- possible exceptions
- timeframes for elimination
- flexibility for developing and least developed country Members.

Some of these elements are discussed below.

(b) Social objectives of subsidy programmes

Subsidies in many areas have a very high social objective, for example in health, education and social welfare . Indeed many Members, certainly for the purposes of TPRs, do not seem to view such as a “*financial contribution by a government..... which confers a benefit*”. In such circumstances, how should they be dealt with? Some ideas, not necessarily mutually exclusive, might be:

- (i) creation of a “green box” concept in services for allowable subsidies.
- (ii) moving towards a position where any subsidies had to be undertaken on an NT basis.
- (iii) introduction of a requirement to spell out the specific objectives of the subsidy, and a necessity test on whether its method of implementation was the least trade restrictive available.

(c) Should countervailing action be a part of any disciplines?

Article XV:1 of GATS mandates that the negotiations shall address the appropriateness of countervailing measures. S/WPGR/W/9 flagged up the problems with considering countervailing measures as a remedy against subsidies. It can be argued that use of countervailing measures would be inappropriate in the context of services and that other remedies would be more appropriate. Art 4 of the Agreement on Subsidies and Countervailing Measures provides some ideas.

(d) A gradual approach to elimination or reduction of subsidies?

It can be argued that the way to deal with subsidies is not through an (aggressive) approach, such as countervailing measures but rather on a gradual basis, possibly by a similar approach to that in agriculture and TRIMS : ie. a programme under which Members agree: to cap the current levels of subsidies; and to reduce their subsidies (in a range of sectors to be agreed multilaterally). Discussion of the experiences of New Zealand and Australia on the prohibition of new and expanded export subsidies and the elimination of existing export subsidies might be instructive- as might discussion of the experience of the EU in containing and reducing state aid that distorts international competition

(e) Does national treatment overcome many subsidies problems?

As flagged up in Secretariat paper S/WPGR/W/9 and Hong Kong, China's response of the Questionnaire S/WPGR/W/16/Add 3, a high degree of commitments in the NT column would go a long way in reducing the adverse trade effects of subsidies. In this regard it is necessary to consider the interaction of Modes 3 with modes 1 and 2 and the question of the extent of NT across modes of supply and outside the territorial jurisdiction of a Member. The distinction between the "service" and the "service supplier" is important here. The recent Chair's Note Job No 782 also deals with this issue.

(f) Sectoral versus horizontal approach

The available data suggests that subsidies are concentrated in certain sectors. A possible way to tackle matters is thus through a sectoral approach. We have achieved some disciplines on subsidies through the Basis Telecoms Reference Paper. It is possible that the dual track approach (i.e. pursuing the development of Article XV disciplines and exploring the possibility of sectoral disciplines in parallel) is likely to be the most effective.

11. Through this paper the authors hope to stimulate debate and to move the discussion forward so that good progress can be made in 2000.

COMMUNICATION FROM ASEAN

Concept Paper: Elements of a Possible Agreed Draft of Rules on
Emergency Safeguard Measures for Trade in Services (GATS Article X)

The following communication is circulated at the request of ASEAN to Members of the Working Party on GATS Rules.

This paper is an attempt by the ASEAN Members of the WTO, namely Brunei Darussalam, Indonesia, Malaysia, Myanmar, Philippines, Singapore and Thailand, to conceptualize a number of technical issues related to the topic. It does not necessarily reflect the official positions of the ASEAN Members on these issues.

I. Introduction

1. This paper is submitted to the Working Party on GATS Rules for consideration and discussion, without prejudice to individual Members' respective positions. As such, it is intended to reflect the feeling of a number of Members that a *standard set of rules* for the application of ESMs in services may be agreed upon by all Members on the basis of the following elements.

II. Object and Purpose of the Rules

2. The object and purpose of such rules would be, inter alia, to *clarify, implement, and reinforce* the object and purpose of the GATS, including that of:

- 2.1 recognizing the right of Members, particularly of developing countries, to regulate the supply of services within their territories in order to meet national policy objectives;
- 2.2 facilitating the increasing participation of developing country Members in trade in services and the expansion of their service exports including, *inter alia*, through the strengthening of their domestic services capacity and its efficiency and competitiveness;
- 2.3 allowing structural adjustment of the domestic service industry of Members, in particular that of developing countries, with a view to enhancing competition in the area of services, and facilitating the development of the services industry of developing countries which are essential to their national economic development programmes.

III. Definitions¹

3. *Emergency safeguard measure* is understood to mean “actions taken by a Member on the supply or consumption of a service of another Member with a view to temporarily withdrawing or modifying its GATS specific commitments in order to temporarily safeguard its domestic industry against serious injury or threat thereof.”

4. *Service of another Member* is understood to mean “a service supplied:

4.1 from the territory of that other Member into the territory of the Member intending to apply an emergency safeguard measure;

4.2 in the territory of that other Member to the service consumer of the Member intending to apply an emergency safeguard measure;

4.3 by a service supplier of that other Member, through commercial presence in the territory of the Member intending to apply an emergency safeguard measure²;

4.4 by a service supplier of that other Member, through presence of natural persons of a Member³ in the territory of the Member intending to apply an emergency safeguard measure”.

5. *Domestic industry* is understood to mean⁴:

Option 1

“Suppliers as a whole of the like or directly competitive⁵ services operating within the territory of the Member intending to apply an emergency safeguard measure, or those whose collective output of the like or directly competitive services constitutes a major proportion of the total domestic supply of those services”.

OR

¹ Should there be inconsistency between the definitions herein contained and those provided under GATS Article XXVIII, the definitions herein shall prevail to the extent relevant to the application of ESMs.

² The Working Party needs to discuss further the issue of foreign companies (juridical persons of another Member as defined in accordance with GATS Article XXVIII) already established through commercial presence within the territory of the Member applying ESMs at the time of entry into effect of the ESMs.

ASEAN is of the view that, in order to achieve progress in this area, the Members should arrive as soon as possible at a common understanding on a number of key issues related to the application of ESMs in the context of mode 3, which are raised in the ANNEX to this Paper.

³ See definition in Article XXVIII (k)

⁴ This definition is based on Article 4.1 of the Anti-Dumping Agreement and Article 4.1 of the agreement on safeguards.

⁵ “Like or directly competitive services” may be defined as “services which are similar in nature and are supplied to consumers for the same end-purposes”. This is indeed only one of many possible definitions of this concept. An in-depth discussion and study by the Working Party may be needed. GATT practices under Articles III, VI and XIX may be referred to, but they remain vague. Also, one may refer to discussions in the Council for Trade in Services under the E-Commerce agenda item.

Option 2

“Suppliers as a whole of the like or directly competitive services who are natural persons or juridical persons⁶ of the Member intending to apply an emergency safeguard measure, or such natural persons/juridical persons of the invoking Member whose collective output of the like or directly competitive services constitutes a major proportion of the total domestic supply of those services”.

6. *Serious Injury* is understood to mean⁷ “a significant overall impairment in the position of a domestic industry that is determined in accordance with the criteria and indicators for the determination of serious injury referred to in Paragraph 13 below”.

7. *Threat of Serious Injury* is understood to mean “serious injury that is determined to be clearly imminent, in accordance with the criteria and indicators for the determination of serious injury referred to in Paragraph 13 below.”

IV. Conditions of application

It is understood that:

8. ESM may be applied to a service of another Member only if the applying Member has determined, pursuant to the rules contained herein, that there is an emergency situation resulting from an *increase in supply or consumption* of such service, in absolute terms or relative to domestic supply or consumption of such domestically supplied service, and under such conditions as to cause or threaten to cause serious injury to the domestic industry that supplies like or directly competitive services.

9. ESM shall be applied only to the extent and within a period of time⁸ necessary to prevent or remedy the serious injury or the threat thereof *and* to facilitate adjustment of the domestic industry concerned.

10. ESMs shall be applied only where serious injury or a threat thereof has been determined pursuant to an investigation referred to in Part V below.

[11. ESM shall be applied to a service on an MFN basis, irrespective of its mode of supply.]⁹

V. Determination of Serious injury or Threat Thereof

It is understood that:

12. The determination of serious Injury or threat thereof shall be carried out pursuant to an investigation to be conducted by the competent authorities of the Member intending to apply an emergency safeguard measure, at the request of its domestic industry¹⁰. A determination of the existence of a threat of serious injury shall be based on facts and not merely on allegation, conjecture or remote possibility.

⁶ Natural and juridical persons as defined by GATS Article XXVIII (k), (l), (m), and (n).

⁷ This definition is based on Article 4.1 of the agreement on safeguards.

⁸ See Section VIII below.

⁹ The inclusion of this Paragraph is pending resolution of the issues raised in Section B of the ANNEX.

¹⁰ Members should agree upon procedural rules in the conduct of ESM investigation similar to those in Article 3 of the Agreement on Safeguards.

13. In the investigation, the competent authorities shall¹¹:
- 13.1 examine all relevant indicators and sources of information relating to the volume of supply or consumption of the service of another Member concerned, in order to demonstrate an increase in this supply or consumption; and
 - 13.2 evaluate all relevant criteria of an objective, quantifiable nature having a bearing on the situation of the domestic industry concerned, in order to demonstrate the existence of a serious injury or threat thereof; and
 - 13.3 demonstrate, on the basis of several injury criteria, that there is evidence of a causal link between increased supply or consumption of the service of another Member and serious injury or threat thereof.¹² When factors other than increased supply or consumption of a service of another Member are causing serious injury to the domestic industry at the same time, such injury shall not be attributed to increased supply or consumption of such service.

VI. Applicable Measures

It is understood that¹³:

14. Where serious injury or threat thereof has been determined pursuant to an investigation referred to in Part V above, the Member concerned may, with regard to a service of another Member, apply safeguard measures only to the extent necessary to prevent or remedy serious injury or threat thereof and to facilitate adjustment. The applicable measures shall include any or a combination of the following:

- 14.1 temporary withdrawal or modification of specific commitments undertaken pursuant to GATS Article XVI;
- 14.2 temporary withdrawal or modification of specific commitments undertaken pursuant to GATS Article XVII¹⁴;
- 14.3 temporary withdrawal or modification of additional commitments undertaken under GATS Article XVIII¹⁵.

¹¹ This is based on Article 4.2 of the Agreement on Safeguards and Article 3 of the Anti-dumping Agreement. Alternatively, this provision may contain all the details on the relevant indicators and criteria. For example, the contents of Job 5294/Rev.1 may be incorporated in the text or included as a footnote.

¹²The factual information used as basis must cover a certain period of time to be specified.

¹³The question as to whether the applicable measures should be mode-specific will depend on how the issues in the ANNEX are resolved.

¹⁴ The issue of subsidies as ESM should be dealt with under this provision.

¹⁵The issue of special considerations for regulatory disciplines should be dealt with under this provision.

VII. Compensation (Level of Commitments)¹⁶

It is understood that:

15. A Member intending to apply the ESM shall endeavour to maintain a substantially equivalent level of specific commitments to that existing under the GATS¹⁷ between it and the Members of which service suppliers would be affected by such a measure.

16. To achieve this objective, the Members concerned may agree on adequate means of compensation relating to trade in services for the adverse effects of the measure on their trade in services. If no agreement is reached within a certain period of time¹⁸, the Member of which service suppliers are affected shall be free to suspend the application to the Member applying the ESM of substantially equivalent level of specific commitments under the GATS, the suspension of which the Council for Trade in Services does not disapprove.

17. The right of suspension referred to in Paragraph 16 shall not be exercised for the first three years that an ESM is in effect, provided that the ESM has been taken as a result of an absolute increase in supply or consumption of a service and that such ESM conforms to the rules contained in this paper.

VIII. Duration¹⁹

It is understood that:

18. A Member shall apply ESMs only for such period of time as may be necessary to prevent or remedy serious injury and to facilitate adjustment. The period shall not exceed x years, unless it is extended under Paragraph 19.

19. The period of application of an ESM may be extended only after a new investigation, made pursuant to a request by the domestic industry concerned, determines that the ESM continues to be necessary to prevent or remedy serious injury *and* that there is evidence, based on objective criteria, that the domestic industry concerned is adjusting. The total period of application of an ESM including the period of application of any provisional measure, the period of initial application and any extension thereof, shall not exceed x years.

20. In order to facilitate adjustment in a situation where the expected duration of an ESM is over one year, the Member applying the measure shall progressively liberalize it at regular intervals during the period of application. If the duration of the measure exceeds three years, the Member applying such a measure shall review the situation not later than the mid-term of the measure and, if appropriate, withdraw it or increase the pace of liberalization. A measure extended shall not be more restrictive than it was at the end of the initial period, and should continue to be liberalized.

21. No ESM shall be applied again to a service that has been subject to such a measure, for a period of time equal to that during which such measure had been previously applied, provided that the period of non-application is at least two years.

¹⁶ This is based on GATT Article XIX:3 and Article 8 of the Agreement on Safeguards.

¹⁷ the wording of GATS Article XXI:2(a) may be referred to as model.

¹⁸ To be determined by the Members.

¹⁹ This is based on Article 7 of the Agreement on Safeguards

IX. Provisional Measures²⁰

It is understood that:

22. A provisional ESM may be applied by a Member in critical circumstance where delay would cause damage which would be difficult to repair, and pursuant to a preliminary determination of serious injury. This provisional measure shall be of a limited, non-renewable, period of application with the sole purpose of allowing the Member concerned to temporarily stabilize the situation pending the result of an investigation.

X. Consultation, Transparency, and Notification

It is understood that:

23. A Member intending to apply or extend an ESM²¹ shall provide adequate opportunity for prior consultations with those Members of which service suppliers have a substantial interest in the matter, with a view to, *inter alia*, reviewing the information notified under Paragraph 26, exchanging views on the measure and reaching an understanding on ways to achieve the objective set out in Paragraph 15.

24. Each Member shall publish promptly and, except in critical circumstances, at the latest by the time of their entry into force or their effective date, all relevant laws, regulations and administrative measures and procedures relating to the application of an ESM, including the results of an investigation.

25. Each Members shall respond promptly to all requests by any other Member for specific information on any of their laws, regulations and administrative measures and procedures of general application, as well as those relating to the application of an ESM.

26. A Member shall immediately notify the Council for Trade in Services upon:

- 26.1 initiating an investigation;
- 26.2 making a finding of serious injury or threat thereof;
- 26.3 taking a decision to apply a provisional ESM;
- 26.4 taking a decision to apply or extend an ESM.

A Member shall also immediately notify the results of consultations, reviews, as well as of compensation and proposed suspensions of commitments to the Council for Trade in Services .

27. Members shall notify promptly the Council for Trade in Services of their laws, regulations and administrative measures and procedures relating to ESMs as well as any modification made to them.

²⁰ This is based on Article 6 of the Agreement on Safeguards

²¹ This provision shall not apply to provisional ESMs.

XI. Developing Countries²²

It is understood that:

28. ESMs, provisional or otherwise, shall not be applied against the supply of a service or a service supplier of a developing country Member if its share of the total supply of the service concerned in the territory of the Member intending to apply the measure does not exceed a certain proportion to be specified.

29. Option 1

A developing country Member shall have the right to extend the period of application of an ESM for a period of up to x years beyond the maximum period referred to in Paragraph 18 above.

OR

Option 2

A developing country Member shall have the right to extend the period of application of an ESM for a period of up to x years beyond the maximum period referred to in Paragraph 18 above. It shall also be exempt from obligations referred to in Paragraphs 15 and 16 above.

XII. Surveillance

30. Members may agree to set up a mechanism of surveillance by an appropriate forum along the lines of Article 13 of the Agreement on Safeguards.

XIII. Dispute Settlement

It is understood that:

31. The provisions of the Understanding on Rules and Procedures Governing the Settlement of Disputes shall apply to disputes arising under these rules.

XIV. Review

It is understood that:

32. These rules shall be reviewed by the Members x years after its entry into force. The review shall be completed within x years .

²² This is based on Article 9 of the Agreement on Safeguards

ANNEX

Mode 3, Domestic Industry Definitions & Issues Relating to Acquired Rights

1. The application of emergency safeguard measures in the context of mode 3 raises several important issues both in respect of Members' existing MFN and National Treatment obligations as well as the specific mandate contained in Article X of the GATS. It would be important for Members to address these issues as they will be central to their efforts in formulating an appropriate and effective safeguard mechanism.

2. Suggested below are several questions, answers to which should assist Members thinking on (a) the appropriate safeguard measures in respect of mode 3; (b) their impact on MFN, national treatment commitments, and other modes of supply; (c) the appropriate definition of domestic industry for the purposes of, inter alia, safeguards petitions as well as injury determination; and (d) the issue of acquired rights. They are not intended to be exhaustive nor to be suggestive of the positions that Members may take on these issues.

A. Mode 3 Safeguards

3. Should a safeguard measure be applied to only new foreign entrants? What if injury is primarily being caused by already established foreign suppliers? Should a Member have the right to invoke a safeguard measure in respect of such suppliers? Should not an effective safeguard mechanism provide for such a course of action?

B. Impact on National Treatment, MFN & Supply Modes

4. Assuming it is decided that Members will have the right to take safeguard action against already established foreign suppliers. This would in effect allow a Member to discriminate against established foreign suppliers for safeguard purposes. Such discrimination may be inconsistent with the national treatment commitments of the invoking Member. It may also run foul of bilateral investment protection agreements that Members may be party to. Should it thus be sanctioned? But again presumably any safeguard measure would result in a temporary withdrawal or modification of a Member's commitment (be it market access, national treatment or an additional commitment). Why should national treatment commitments in mode 3 be excluded from such temporary withdrawals or modifications? Would such an exclusion modify "the conditions of competition" against service suppliers making use of the other modes of supply?

5. Assuming that it is decided that Members will not take safeguard action against already established foreign suppliers. Would this not be inconsistent with a Members' MFN obligation¹ vis-à-vis new entrants? If so, why should adherence to a fundamental principle such as MFN be made secondary to protecting the rights of already established foreign suppliers? As the MFN obligation is a horizontal commitment and is not dependant on scheduling, should it not be sacrosanct even in the context of a safeguard situation?

6. But is there really a problem of MFN? It could be argued that in targeting only new foreign entrants, there is no discrimination on the basis of nationality and hence no violation of MFN. A distinction is made only on the basis of the particular situation of the foreign supplier i.e. whether the foreign supplier is already established or not. Thus for example, suppliers from Member X already

¹ Assuming that the invoking Member has not claimed an MFN exemption in respect of the affected sector - in which case the issue would not arise at all.

established in the invoking Member Y will not be subject to a safeguard measure, but new entrants from X would be subject to such a measure as would new entrants from Member Z. Given the equal discrimination against new entrants from X and Z, there is no violation of MFN.

7. Nevertheless, under this latter scenario, is there a de-facto violation of MFN? This could possibly be argued by the new entrant from Z.

8. Another issue relating to MFN treatment is the relationship between the existing MFN exemptions of Members and the invocation of a safeguard measure. Assume that under an MFN exemption claimed by Member A, it is able to extend preferential treatment to Member B. Also now assume that A is faced with an emergency situation in respect of the concerned sector and is forced to impose a safeguard measure to restrict imports. Does A have the right to continue to provide preferential treatment to B under its MFN exemption and thus exempt B from the safeguard measure?

9. Article X specifically states that the “multilateral negotiations on the question of emergency safeguards measures (be) based on the principle of non-discrimination”. Safeguard measures targeted against already established foreign suppliers may run foul of the invoking Member’s national treatment commitments. Similarly a carve-out for such suppliers may run foul of the Member’s MFN obligation. It would appear that whatever position Members take on this issue, we may not be able to satisfy the principle of non-discrimination. How should we get around this problem?

C. Domestic Industry Definitions

10. The definition of domestic industry for the purposes of safeguard petitions and injury determination will be dependant on the position that Members take on actions against already established foreign suppliers. Should domestic industry constitute both national suppliers as well as established foreign suppliers? Or should it constitute only national suppliers so as to allow Members to cushion injury caused to national suppliers by established foreign suppliers? If domestic industry were to be defined as comprising both types of suppliers could not a situation arise where established foreign suppliers² attempt to keep out other foreign entrants by seeking safeguard action? This scenario may be particularly insidious; although similar competition concerns could arise even if domestic industry were to be defined as comprising national suppliers.

D. Acquired Rights

11. The issue of acquired rights has also been raised in the Working Party’s discussion of safeguard measures in mode 3. It has been suggested that any safeguard mechanism should protect acquired rights and exclude the possibility of disinvestment. This may be an important principle to maintain but much would depend on how acquired rights are defined.

12. Take for example a narrow definition based on ownership such as that provided for in Articles XXVIII(m) and (n). Members may categorically exclude safeguard actions that result in disinvestment. Thus, established foreign suppliers would still be allowed to retain their current equity holdings. But could a Member freeze the status quo as a form of safeguard action, preventing any increase in equity holdings? Would this be still consistent with protecting acquired rights as defined by ownership? Could a Member withdraw or modify national treatment commitments in respect of established foreign suppliers if these do not impact on ownership (and acquired rights as so defined)?

13. The flipside would revolve around a broader definition of acquired rights. Could acquired rights, for instance, be defined both in terms of ownership as well as the rights accruing from being

² By virtue of accounting for a major proportion of the total domestic supply of the concerned services.

granted permission to operate within a Member's territory. The latter rights would include for instance national treatment. If so defined, would the protection of acquired rights prevent Members from withdrawing or modifying national treatment commitments as a safeguard action against established foreign suppliers?

14. There is also the issue of acquired rights and compensation. Assume that an invoking Member agrees to compensate affected Members with a "substantially equivalent level" of market access in mode 3 in respect of another sector other than the affected one. Can the invoking Member withdraw such compensation upon the termination of the safeguard measure? If so, would this be an acceptable impact on commercial presence and acquired rights however defined.

Working Party on GATS Rules

Original: English

COMMUNICATION FROM THE REPUBLIC OF POLAND

Response to the Questions Relevant to the Information Exchange Required Under the Subsidies Negotiating Mandate

Addendum

The following communication is being circulated at the request of the delegation of the Republic of Poland to Members of the Working Party on GATS Rules.

All data concerning the amounts of subsidies contained herein is given in New Polish Zlotys (PLN)¹.

The responses cover subsidies applied in the services sector in Poland in the period of 1997 – 1998.

¹ The average exchange rate between New Polish Zloty and US Dollar was:

1 PLN = 0.308 USD in 1997,

1 PLN = 0.286 USD in 1998.

I. LOAN FROM EFSAL FUNDS

1. Characteristics of the programme

Support of businesses involved in restructuring or liquidation processes, especially those located in the regions particularly endangered with unemployment, through:

1. Provision of resources (loans) for restructuring investments and for "hedging" purposes (grant for allowances for personnel dismissed due to group reductions, pension and retirement allowances, remuneration for unused annual leaves, compensations for shortened notice of termination).
2. Support of buyout by the Industrial Development Agency (IDA) the outstanding debts from banks provided that the bank is not involved in conciliatory proceedings pursuant to the law of 3 February 1993 concerning financial restructuring on enterprises and banks and changing some laws (Journal of Laws No. 18, item of 1996, No. 52, item 235, No. 106, item 496, No. 118, item 561 of 1997, No. 98, item 603, No. 141, item 943) and buyout of the claims of the debtor's providers (the amount of the debts bought out by the IDA must represent 10 per cent of the total amount of the debtors liabilities, however can not be less than PLN 100 000 – or the sum of these liabilities represents 20 per cent of the total amount of the debtor's liabilities).

The following entities are eligible for the assistance, which can be granted only once:

- state owned enterprises;
- companies which stock is owned by the Treasury;
- companies which stock is owned by the Treasury and the employees (farmers, fishermen);
- companies which stock is owned by the Treasury and other organisational units and natural persons, where the liabilities were converted into stocks (shares) pursuant to conciliatory agreements reached with the banks according to the procedures determined by the law of 13 February 1993 concerning financial restructuring on enterprises and banks and changing some laws – for the "hedging" purposes only;
- companies which stocks have been contributed as a share in Sugar Partnerships, as long as their stock is held by the Treasury, Sugar Partnerships, employees and sugar beets producers, or when the Treasury is the only shareholder.

The entities requesting the EFSAL assistance must submit an application that *inter alia* includes information concerning their current economic and financial standing as well as their financial standing during the preceding years, forecasts for the coming years, the programme of short, medium and long term actions, SWOT analysis and:

- restructuring or liquidation programme;
- a copy of the application submitted to the relevant minister concerning transformation of their enterprise into a company whose stock is held exclusively by the Treasury, and in case of companies - information of the forecasted date of making the stocks of the Treasury publicly available;

- information concerning the legal status of the real estate: buildings and land;
- opinions of: financing bank, Tax Office;
- standpoint of the principal borrowers concerning the debts restructuring;
- information on the effects of the actions aimed at obtaining financial resources from other sources;
- the programme for making the unnecessary assets productive;
- proposals related to restructuring, employment and wages freeze agreed with the trade unions.

The conditions of the loans awarded within the Ist Tranche were more advantageous compared to commercial loans – the interests rate from 1/3 to 0.8 of the refinanced credit rate (mostly 0.5), the maturity periods were from 2 to 6 years, and the repayment grace period was in most cases 1 year, the principal repayment – quarterly and the interests monthly. According to the recommendations of the World Bank, the loans awarded within the IInd Tranche are less advantageous (the interests rate may not be lower than the WIBOR rate).

The decision concerning allocation of the resources is made by the Minister of Finance (up to PLN 2 million in case of a loan and up to PLN 0.5 million in case of a grant). The assistance that exceeds these amounts is allocated by the decision of the Council of Ministers.

2. Policy objectives of the programme

Support of enterprise restructuring and provision of "hedging" in case of the liquidation, when it is impossible to obtain resources for these purposes from other sources.

3. Availability of the programme to the services sector vs. goods sector

No special rules.

4. Form of the subsidy

Grant (exclusively for the "hedging" purposes) and investment loan.

5. Sectors eligible under the subsidy

Among services sector : typography, transport, construction, heating supply.

6. Eligibility criteria

See point 1.

7. Calculation of the subsidy

No fixed rules. The amount of the subsidy depends on the proposed restructuring or liquidation programme described in the application for the support from EFSAL funds.

8. Time Limits

The agreement between the International Bank for Reconstruction and Development and the government of Poland assumed extending of adaptation loans for the enterprises and financial sector in three tranches:

Ist Tranche – USD 125 million;

IInd Tranche – USD 100 million;

IIIrd Tranche – USD 125 million.

The Ist tranche (being an equivalent of USD 125 million) amounting to PLN 282.4 million – was made available in 1994. The IInd tranche (being an equivalent of USD 100 million) amounting to PLN 261.9 million – was received by the Treasury in April 1995.

Approximately 86 per cent of the EFSAL funds was consumed by the end of 1998.

The Polish Side has resigned from applying for the IIIrd tranche of EFSAL resources.

9. Disciplines assumed under the regional agreements

Pursuant to Art. 63 of the Europe Agreement establishing an association between Poland and the EC, any public aid which distorts or threatens to distort competition by favouring certain undertakings or the production of certain goods is incompatible with the proper functioning of the Agreement, insofar as it may affect trade between the Community and Poland. However during the first five years after the entry into force of this Agreement, Poland shall be regarded as an area where standard of living is abnormally low or where there is serious underemployment and any public aid granted to promote the economic development may be considered to be compatible with the EU common market. The Association Council shall, taking into account the economic situation of Poland, decide whether that period should be extended by further periods of five years.

10. Amount of assistance granted

In 1997 the total assistance provided amounted to PLN 75.5 million, including: grants – PLN 12.8 million, and loans – PLN 62.6 million. Within that, support for service sectors constituted:

- transport – PLN 7.2 million in loans
- typography – PLN 1.9 million in loans
- construction – PLN 1.4 million in grants, PLN 4.0 million in loans

In 1998 the total assistance provided amounted to PLN 53.6 million, including: grants – PLN 14.7 million, and loans – PLN 38.8 million. Within that, support for service sectors constituted:

- transport – PLN 3.0 million in grants, PLN 8.4million in loans
- construction – PLN 0.2 million in grants, PLN 2.0 million in loans
- heating supply – PLN 2.0 million in loans

11. Effects on trade

The programme does not directly impact the foreign trade.

II. DIRECT GRANTS FOR EXTRA CHARGES TO PRODUCTS AND SERVICES

1. Characteristics of the programme

I. Grants for the meals sold in milk bars

The businesses conducting the activities included in the scope of the regulation receive grants within the limits determined by the budget law. The businesses may obtain grants for the meals sold in milk bars after fulfilment of the criteria:

- They run milk bars, defined as self-service, non-alcoholic, catering enterprises for public, which sell meals produced of milk, dairy and vegetable products used to prepare regular meals.
- The above-mentioned milk bars apply margin not exceeding 25 per cent of the value of used food products.
- They maintain quantitative-qualitative ledgers of the food products used for preparing the meals in the milk bars.

II. Grants for railway passenger domestic transport

Direct grants for railway passenger transport were awarded for the transport: within urban agglomeration, regional (local), inter-regional (long distance) by means of regular passenger trains, speeded-up trains, excluding passenger transport by means of express, Inter-City, Euro-City and Euronight (hotel) trains in domestic and international communication. The regulation of the Minister of Finance promulgated annually, beside setting the level of the grant rates, determines the scope of subsidies for railway transport and sets the conditions to be met by the carriers in order to obtain grants for transport services they provide. In 1997 these issues were regulated by the Minister's of Finance regulation of 31 July 1997 on setting the rates of direct grants for passenger railway and bus transport (Journal of Laws No. 94, item 574).

In order to obtain the grants the carriers had to fulfill all the following conditions:

- Provide transport services in accordance with the trains schedule;
- Apply tariffs not exceeding the official prices determined by the Minister of Transport and Maritime Economy, and the tariffs or price-lists set by the carriers according to the provisions of the law of 15 November 1984 – Transport Law (Journal of Laws of 1995 No. 119, item 575 and of 1997 No. 23, item 117, No 96, item 591, No. 101, item 629, and No. 141, item 942).
- To accept as valid rights of some persons to enjoy free or reduced price tickets as provided by the law of 20 June 1992 concerning the rights to free and reduced price tickets for public transport (Journal of Laws No. 54, item 254, of 1994 No. 40, item 150, No. 80, item 368, No. 113, item 547 of 1995 r. No. 50, item 261 and of 1996 r. No. 100, item 460).
- To submit a list of the subsidised transport units to the Minister of Transport and Maritime Economy and obtain confirmation of including these units in the aggregated amount of the grant for the given fiscal year, in order to determine rate of the subsidy.

III. Grants for passenger bus transport

Grants for bus passenger transport were awarded for the regular domestic inter-city transport. In order to obtain the grants the carriers had to fulfil all the following conditions:

- Provide transport services in accordance with the buses schedule agreed by all the carriers during the district schedule conferences;
- To apply official prices for regular domestic bus transport, as determined by the Minister of Transport and Maritime Economy in consultation with the Minister of Finance;
- To accept as valid the same persons rights to enjoy free or reduced price tickets according to the provisions of the law of 20 June 1992 concerning the rights to free and reduced price tickets for public transport;
- To submit a list of the subsidised transport units to the Minister of Transport and Maritime Economy, and those who organise transport within the Viovodship of Katowice to the Voivod of Katowice, and obtain confirmation of including these units in the aggregated amount of the grant for the given fiscal year, in order to determine rate of the subsidy.

IV. Grants for publication of specialised school and university books

These grants are awarded for publishers of school and university books:

- for teaching specialised subjects in vocational schools;
- for schools of national minorities;
- for special schools;
- for university books.

The above-mentioned grants may be awarded for the publication of the books approved for use in schools, therefore fulfilling the education programme requirements. The Minister of National Education determines the list of the approved and recommended books for use in schools. The books subsidised by the grants are published in small number of copies, which increases the publication costs. Without the above-mentioned grants the publishing houses would be scarcely interested in publishing the books the demand for which is limited.

The Ministry of National Education evaluates the applications of publishers willing to obtain the above-mentioned grants. The specimen of the application form is included in the ordinance of the Minister of National Education of 27 August 1992. The grants are awarded to the publishers of the school and university books on the basis of rates for the printed sheet. The Minister of National Education annually determines the rates of grants for school and university books.

2. Policy objectives of the programme

Lowering the prices of domestic passenger transport, meals sold in milk bars, specialised school and university books in order to provide increased accessibility of some services to specific social groups.

3. Availability of the programme to the services sector vs. goods sector

Programme applies to services sector only.

4. Form of the subsidy

Grants from the state budget.

5. Sectors eligible under the subsidy

See point 1.

6. Eligibility criteria

See point 1.

7. Calculation of the subsidy

See point 1.

8. Time limits

The value of the grants is set in the state budget every year.

9. Disciplines assumed under the regional agreements

Pursuant to Article 63 of the Europe Agreement establishing an association between Poland and the EC, any public aid which distorts or threatens to distort competition by favouring certain undertakings or the production of certain goods is incompatible with the proper functioning of the Agreement, insofar as it may affect trade between the Community and Poland. However during the first five years after the entry into force of this Agreement, Poland shall be regarded as an area where standard of living is abnormally low or where there is serious underemployment and any public aid granted to promote the economic development may be considered to be compatible with the EU common market, The Association Council shall, taking into account the economic situation of Poland, decide whether that period should be extended by further periods of five years.

10. Amount of assistance granted

In 1997 the grants under this scheme amounted to PLN 928.4 million and were awarded for:

	<u>In millions of PLN</u>
Meals sold in milk bars	13.9
Passenger domestic railway transport	710.0
Passenger inter-city bus transport, including grants for inter-city connections in the urban agglomeration of Katowice organised (delegated) by local governments, and municipal associations	193.4
Publication of specialised school and university books	11.0

In 1998 the grants under this scheme amounted to PLN 752.6 million and were awarded for:

	<u>In millions of PLN</u>
Meals sold in milk bars	17.0
Passenger domestic railway transport	560.0
Passenger inter-city bus transport, including grants for inter-city connections in the urban agglomeration of Katowice organised (delegated) by local governments, and municipal associations	164.0
Publication of specialised school and university books	11.6

11. Effects on trade

Considering the purposes of the programme, there are no effects on the foreign trade.

III. ASSISTANCE FOR RESTRUCTURING OF THE BANKING SECTOR

1. Characteristics of the programme

- (i) Treasury bonds for increasing the capital of Bank Gospodarki Zywnosciowej S.A (BGZ) and regional banks and for restructuring of claims of the cooperative banks

Pursuant to the provisions of the law of 3 February 1993, the BGZ obtained the Treasury bonds amounting to PLN 1 622.4 million for increase of the bank's own capital. According to the conditions of the issue of the Treasury bonds the buy-out of the bonds (issued in 1994) will take place by the year 2009.

At the same time, within the issue of 1994 and pursuant to the provisions of the Minister's of Finance ordinance of 2 June 1995 concerning the proportion of the split of the Treasury bonds for restructuring of claims, between the regional banks and associated cooperative banks (Journal of

Laws No.64, item 330), part of the bonds amounting to PLN 45 million was earmarked for increasing the reserves of the regional banks established according to the provisions of the above-mentioned law of 24 June 1994. Since 1995 the bonds have been transferred to the successively emerging regional banks.

The Treasury bonds are also earmarked for restructuring of the claims of cooperative banks associated with the regional banks. Pursuant to the provisions of the law of 24 June 1994 and the provisions of the Minister's of Finance ordinance of 2 June 1996, the Treasury bonds of the value that on the day of the issue was over PLN 251 million were earmarked for that purpose.

According to the conditions of the Treasury bonds issue, the buy-out of the bonds (issued in 1994) will take place successively within the period 1996-2009.

(ii) The refundable assistance for cooperative banks implementing the repair programmes

According to the resolution adopted by the Parliament on 12 July 1995 concerning support of the repair processes carried out by cooperative banks, the amount of PLN 40 million was earmarked for refundable assistance to the cooperative banks taking over other cooperative banks being in crisis.

The National Bank of Poland in consultation with the Ministry of Finance provides this assistance within the limits of the earmarked funds by respective decrease of the portion of profits paid to the state budget.

(iii) Tax incentives for cooperative banks establishing regional banks

The provisions of the ordinance of the Minister of Finance concerning abstaining from income tax collection from some cooperative banks, granted additional financial support to the cooperative banks.

Moreover, by the virtue of the Minister's of Finance ordinance of 4 July 1996 (Polish Monitor No. 42, item 406) the collection of the taxes from BGZ S.A, regional banks and cooperative banks on income related to the Treasury bonds destined for restructuring of cooperative banking sector, was also abstained. The overall financial results of the above-mentioned ordinance are estimated to reach PLN 620.4 million by the year 2009.

2. Policy objectives of the programme

Restructuring of the banking sector.

3. Availability of the programme to the service sectors vs. goods sectors

Programme applies to service sector only.

4. Form of the subsidy

Grants, loans, tax incentives.

5. Sectors eligible under the subsidy

Banking sector.

6. Eligibility criteria

(i) The process of reconstruction of the co-operative banking sector continued throughout the year of 1997 according to the provisions of the law of 24 June 1994 concerning restructuring of cooperative banks and Bank Gospodarki Żywnościowej (*Food Economy Bank*) and change of some other laws (Journal of Laws No. 80, item 369, of 1995 No. 142, item 704, of 1996 No. 106, item 496, and of 1997 No. 121, item 770, No. 140, item 939). The programme was aimed at creation of three-tier co-operative banking group that would include local cooperative banks, regional banks and national bank. The undertaken actions resulted with establishment of all 9 regional banks predicted by the law. In 1997, pursuant to the provisions of the above-mentioned law, the regional banks obtained the Treasury bonds totalling PLN 69.3 million (according to the bond's value on the day of the issue), including PLN 36.3 million earmarked for restructuring of the claims of the associated cooperative banks and PLN 33.0 million for increase of the capital reserves of the regional banks. Together – including the treasury bonds transferred to the banks in the period of 1995-1996 – the regional banks obtained the Treasury bonds totalling PLN 194.4 million, of which PLN 131.4 million was earmarked for claims restructuring and PLN 63.0 million for capital reserves increase.

(ii) Refundable assistance for cooperative banks implementing the repair programmes

In 1997 within the limits of the earmarked funds, the National Bank of Poland in consultation with the Ministry of Finance provided the assistance totalling PLN 9.8 million to 5 cooperative banks.

In the period 1995-1997 such assistance totalling PLN 39.8 million was provided to 31 cooperative banks.

Moreover, according to the resolution adopted by the Parliament on 11 January 1996 concerning the assumptions of the financial policy for 1996, NBP has earmarked the amount of PLN 40 million for refundable assistance to support the banks taking over other cooperative banks being in crisis. In 1997, NBP in consultation with the Minister of Finance provided assistance totalling PLN 25.7 million to 15 banks out of the resources earmarked for this purpose and not consumed in 1996.

Altogether, from the resources earmarked for support of the cooperative banking sector and in connection with the resolution of 11 January 1996, the assistance totalling PLN 36.7 million was provided to 21 banks.

In attempt to further support the process of cooperative banks restructuring and implementing the Parliament resolution of 24 January 1997 concerning the assumptions for the financial policy for the year 1997, NBP has decided to earmark the next tranche of the assistance of PLN 20 million. Within the limits of these resources, in 1997 NBP in consultation with the Minister of Finance has provided the assistance amounting to PLN 9.6 million to 7 banks.

(iii) Tax incentives for the cooperative banks

The ordinance of the Minister of Finance concerning abstaining from income tax collection from some cooperative banks (Polish Monitor No. 5, item 39), granted additional financial support to the cooperative banks. According to the provisions of the ordinance the abstaining regarded the following:

- 70 per cent of the income tax due for 1996 of the cooperative banks that establish new regional banks according to the provisions of the law of 24 June 1994 concerning restructuring of cooperative banks, BGZ and change of some other laws;

- the income tax due for the year 1997 from the remaining cooperative banks up to the equivalent of 70 per cent of the tax due for 1996.

The condition making possible to use this abatement was to transfer at least 80 per cent of the 1996 balance surplus to the undivided fund of cooperative banks' resources and transfer all the means obtained due to the abstained taxes.

The estimated outcome of implementation of the above-mentioned ordinance is for the 1996 budget – approximately PLN 50 million and for 1997 budget – about PLN 23 million.

The support actions undertaken in the period of 1994-1997 implemented *inter alia* in the form of tax abatements or Treasury bonds for restructuring, contributed to improvement of the financial standing of the cooperative banks.

It was reflected by increase of net equity, total receivables and improvement of the solvency ratio of the cooperative banks as well as by decrease of the general losses of these banks.

7. Calculation of the subsidy

No fixed rules. The amount of the subsidy depends on the restructuring programme and is decided by the Minister of Finance acting in agreement with the National Bank of Poland (see also point 5).

8. Time limits

According to the conditions of the Treasury bonds issue, being the main component of the assistance provided within the scope of the above-mentioned programme, the buy-out of the bonds will be terminated in the year 2009.

9. Disciplines assumed under the regional agreements

Pursuant to Article 63 of the Europe Agreement establishing an association between Poland and the EC, any public aid which distorts or threatens to distort competition by favouring certain undertakings or the production of certain goods is incompatible with the proper functioning of the Agreement, insofar as it may affect trade between the Community and Poland.

However during the first five years after the entry into force of this Agreement, Poland shall be regarded as an area where standard of living is abnormally low or where there is serious underemployment and any public aid granted to promote the economic development may be considered to be compatible with the EU common market. The Association Council shall, taking into account the economic situation of Poland, decide whether that period should be extended by further periods of five years.

10. Amount of assistance granted

In 1997 the assistance provided to the cooperative banking sector totalled approximately PLN 137.5 million, including the assistance provided in the form of:

- Treasury bonds earmarked for restructuring of the cooperative banks and newly established regional banks – PLN 69.3 million;
- loans extended by NBP – PLN 45.2 million; and
- tax incentives – PLN 23 million.

In 1998 no state aid granted for restructuring the banking sector.

11. Effects on trade

The programme does not directly impact the foreign trade.

Working Party on GATS Rules

ISSUES FOR FUTURE DISCUSSIONS ON EMERGENCY SAFEGUARDS

Note by the Secretariat

Revision

1. The Secretariat has produced this second revision of an earlier Note on safeguards-related issues, initially dated 20 November 1998, at the request of the Working Party on GATS Rules. The revision is intended to incorporate points raised at the Working Party's meetings of 19 May, 21 June and 27 July 1999. Like the two previous versions, it considers, first, alternative forms that a safeguard mechanism under the GATS may take and then elaborates on various conceptual issues. For ease of reference, any substantive changes over the first revision are indicated in italics.

I. ALTERNATIVE FORMS OF A SAFEGUARD MECHANISM

2. Members have suggested several alternative forms for a possible safeguard mechanism under the GATS. One view has been to model it closely on the mechanism in the goods area. Such a mechanism could include quantitative criteria and procedural restraints. The applicability of concepts in the Agreement on Safeguards (AS) to the GATS context has been discussed in a previous Note by the Secretariat (S/WPGR/W/8).

3. A second view has been to include safeguard-type provisions for specific sectors in a Member's schedule of specific commitments (this view has been expressed in a Communication from the United States, S/WPGR/W/17). Rules may still need to be developed for Members who include such safeguard-type provisions in their schedules. It has been suggested that such rules - general, sector-specific or mode-specific - could include the requirement that a Member including a safeguards-type provision in its schedule in a given sector must combine it with a commitment to liberalization in that sector. The extent of liberalization which would justify inclusion of a safeguard provision would presumably be determined through negotiations. Concerns have been voiced, however, that the ability to negotiate the inclusion of safeguards may depend on bargaining power, thus disadvantaging small economies; that it could prove conceptually and politically difficult to identify sectors where "unforeseen circumstances" are likely to occur or otherwise earmark potential areas for safeguard action; and that there is no legal basis in the GATS to underpin a conditional and/or sector-specific approach to safeguards.

4. A third model is contained in Article 5 of the Agreement on Agriculture. The relevant provision does not require injury to domestic industry as a basis for safeguard action. Actions are triggered by import volume increases or import price reductions, and permit the imposition of additional duties up to specified limits. The volume trigger, which leads to the non-discriminatory application of additional duties, is sensitive to the degree of import penetration, while the price trigger, which may result in additional duties on a consignment-by-consignment basis, is related to certain base-year prices in domestic currency. There have been doubts, however, whether such intense data requirements could be met in services. On the other hand, it has been argued that data problems also exist in the area of goods; they should not prevent the development of a mechanism

which is sufficiently flexible in terms of quantitative evidence and includes appropriate procedural constraints.

5. A fourth alternative could be modelled on Article 6 of the Agreement on Textiles and Clothing which provides for a transitional safeguard mechanism for products not yet integrated into GATT 1994 and not subject to restriction. Special treatment is envisaged when applying safeguards against small exporters, least-developed countries, wool producers, outward-processing trade and cottage industries. Members need to demonstrate that a particular product is being imported from the country in question in such increased quantities as to cause serious damage, or threat thereof, to the domestic industry producing like and/or directly competitive products. The safeguard is applied selectively to particular exporters. It has been argued, however, that this seems to contravene the non-discrimination principle enshrined in Article X of GATS and imply significant data requirements.

6. Recent discussions have focused on the pros and cons of horizontal sector-specific versus safeguards. A conceptual distinction has been made in this context between those sector-specific safeguards, which would be negotiated case-by-case for inclusion in schedules (possibly based on some commonly agreed principles), and others which would be made generally available. In addition to the reservations mentioned above (para. 4), it has been noted that the parallel existence of sectoral safeguard variants could lead to fragmentation of the system and affect transparency. *More fundamentally, a point has also been made that the use of a sector-specific concept would presuppose the existence of some advance information on the nature and scope of future emergency situations; however, Article X envisaged an ex-post mechanism to cope with unforeseen circumstances which might arise over time.* A horizontal mechanism, based on generally applicable criteria, would be available to all Members whenever the situation in a given sector and, possibly, mode of supply meets the relevant criteria. However, apart from questions concerning desirability, doubts have been expressed whether such a broad-based mechanism could be made subject to effective disciplines (see also Section II.5). The idea has also been discussed that a safeguards mechanism conceived for general application might be made available only in sectors considered prone to crises situations. The selection of such sectors, however, might prove difficult and could unduly affect trade and investment decisions.

7. *It appears that delegations favouring a sector-specific mechanism also recognize the need or usefulness of some commonly accepted principles ("hybrid approach"), while delegations endorsing a horizontal, generally available mechanism have expressed doubts about the need for sectoral variants without, however, precluding such a possibility at present. The idea has also been raised that, presuming the existence of a horizontal safeguards mechanism, Members might be free to forgo its use in individual areas by way of an Additional Commitment under Article XVIII, and that it might be possible to link the availability of such a mechanism to the quality of commitments scheduled under Articles XVI and XVII; the dividing line between the two concepts might thus be less sharp than initially conceived. However, these considerations have not drawn strong interest among Members.*

8. *Several participants have endorsed the view that it might be more efficient for the time being not to further discuss basic conceptual issues but, rather, focus on common principles which might need to underlie any safeguard mechanism, whether horizontal or sector-specific in nature. Examples of such common principles – MFN-basis, advance notice, temporary application, degressivity, clear specification of measures envisaged, protection of "acquired rights" of established suppliers, etc. - can be found in written submissions from Hong Kong, China (S/WPGR/W/26, 10 February 1998) and the United States (S/WPGR/W/17, 13 March 1997).*

II. LIST OF ISSUES FOR FUTURE DISCUSSIONS

1. Definition and scope of safeguards in services

- Active subject: who applies the safeguard? E.g. government, professional associations, central banks

9. Safeguards would normally be applied by a Member. It is conceivable that the responsibility for action is delegated to a particular agency. Under the GATS, measures by Members are defined broadly to include measures taken by central, regional or local governments, as well as non-governmental bodies in the exercise of powers delegated by the government. Governments can, therefore, be held accountable in the WTO for decisions or actions affecting trade in services by non-governmental bodies, which exercise delegated powers. This may be relevant if such bodies were to have responsibility for the administration of safeguard action. Another view is that safeguard actions should be taken only by governments, thus excluding agencies with delegated powers.

- Passive subject: to whom is it applied? Country, industry of a country, specific company

10. There are two related aspects of this question: first, on whose behalf is safeguard action taken and second, against whom such action is taken. In the goods case, safeguard action is taken on behalf of a domestic industry - defined to mean the producers as a whole of the like or directly competitive products operating within the territory of a Member, or those whose collective output of the like or directly competitive products constitutes a major proportion of the total domestic production of those products. In the Working Party, one view has been that the goods precedent should be followed, and safeguard action be taken to protect all domestically established suppliers – *possibly including natural persons* - of like or directly competitive services, regardless of *nationality*, ownership and control. According to this view, it would not be desirable to use, for the purpose of safeguard action, the relevant definition in GATS Article XXVIII.

11. Another view has been that safeguard action should be available to protect the national industry, which is understood to mean all natural and juridical persons of the Member taking the measure who supply like or directly competitive services. According to this view, the distinction between national and foreign entities should be based on the relevant definition in GATS Article XXVIII. While it has been argued that some Members' domestic legislation would not allow for such a distinction to be made, it has also been noted that there would be no obligation to introduce it. *There seems to be agreement that any safeguards action would presuppose that the suppliers seeking protection account for a significant share ("a major proportion") of the industry concerned.*

12. The response to the second aspect of the question, concerning against whom safeguard action is taken, depends on the response to the first aspect. Thus, it would seem that measures could either be taken against suppliers of the like or directly competitive products located outside the territory of the relevant Member, or also against foreign suppliers of such products located in the territory of the Member. Two observations are relevant. First, even Members who wish to make a distinction within the class of domestically established suppliers on the basis of nationality have stated that "acquired rights" of foreign suppliers should be respected, and measures which force disinvestment must not be taken. (It would be necessary to examine closely what is meant by the protection of acquired rights and whether this would be consistent with MFN.) Second, given the Article X requirement that any emergency safeguard measures be "based on the principle of non-discrimination", it is clear that safeguard action must be applied on an MFN basis to all foreign services and service suppliers.

- Objective: What is covered? All kinds of services? Which sectors? Which modes of supply?

13. One view has been that a general safeguard provision under Article X would need to cover all services and sectors. Another view has been that safeguard action should only be available for certain sectors where it is possible to produce adequate quantitative evidence (see also paras. 6 and 7).

14. With regard to modes, it has been argued either that safeguard actions be taken with respect to all modes of supply or that it would be for the invoking Member to decide on the modal coverage, based on the policy objectives involved. It has been noted that mode-specific safeguard action could create economic distortions, and that such action might not be effective since it could be circumvented by foreign suppliers switching to unrestricted modes. However, other delegations felt that this possibility was remote since switching between modes might imply significant costs. Moreover, it might be counterproductive to target all modes; for instance, if the purpose of safeguard action was to prevent unemployment, it would be unreasonable to restrict new investment or take action against locally established foreign firms. *The idea has also been raised that safeguard actions under certain modes should be given priority over others; for example, measures under modes 3 and 4 might be taken only after measures under modes 1 and 2 had proven ineffective.*

2. Situations justifying application

- Type of injury

15. One view is that Article XIX of GATT 1994 and of the Agreement on Safeguards are relevant precedents. The determination of whether increased imports have caused or are threatening to cause serious injury to domestic industry should be made by employing, mutatis mutandis, the rules provided for in Article 4:2(a) and 4:2(b) of the Agreement on Safeguards:

"(a) In the investigation to determine whether increased imports have caused or are threatening to cause serious injury to a domestic industry under the terms of this Agreement, the competent authorities shall evaluate all the relevant factors of an objective and quantifiable nature having a bearing on the situation of that industry, in particular, the rate and amount of the increase in imports of the product concerned in absolute or relative terms, the share of the domestic market taken by increased imports, changes in level of sales, production, productivity, capacity utilisation, profits and losses, and employment.

(b) The determination referred to in the subparagraph (a) shall not be made unless this investigation demonstrates, on the basis of objective evidence, the existence of the causal link between increased imports of the product concerned and serious injury or threat thereof. When factors other than dramatic increased imports are causing injury to the domestic industry at the same time, such injury shall not be attributed to increased imports."

16. It might be appropriate to substitute the notion of "consumption of foreign services" for "imports" to cover supply through each of the four modes; Members also need to consider whether the reference to "domestic industry" should be replaced by "national industry". *Moreover, a point has been made that, given the scope of the GATS, not only industries (i.e. juridical persons), but natural persons as well might qualify for safeguards protection.*

17. Another view is that it might be difficult in the area of services, given the state of statistics, to demonstrate injury and show that it is caused by increased imports. However, data problems in the goods area had not prevented the creation of anti-dumping and similar mechanisms, which rely heavily on empirical information. *While individual injury indicators might not be reliable, the combination of various indicators might provide a reasonably comprehensive picture. Some delegations have noted that it would be inappropriate to aim at the same standard of evidence as in criminal-law cases. Others feel, however, that (excessive) flexibility could prove a double-edged sword and open the door for abuse.*

- Additional considerations

18. It has been suggested that any safeguard action should take into account the wider public interest, and not only industry-specific considerations. Article 3 of AS could be used in this regard. However, it might be necessary to clarify the concept of "public interest" which, according to one view, seems to allow for too much leeway at present.

19. *The question has also been raised if factors not directly related to trade should be taken into account by the investigating authority. There seems to be a general view that macro-economic disruptions and other problems of an economy-wide nature would not justify the use of safeguards in individual areas. This is commensurate with Article 4:2(b) of AS which stipulates that "when factors other than increased imports are causing injury ... at the same time, such injury shall not be attributed to increased imports". It appears, however, that an additional aspect may warrant further discussion: the possibility that government regulation in individual sectors – e.g. universal service obligations – impinged on an industry's ability to adjust to sudden increases in foreign supplies. Given the interplay of economic and social policy objectives and the role of regulation in many services areas, such situations are more likely to arise in services than in merchandise trade. Would it be desirable and technically possible to separate such from other genuinely import-(or investment-)related developments? How could vested interests within administrations be prevented from downplaying adverse effects associated with domestic regulation? Could this result in situations where internal regulatory problems and distortions are solved at the expense of foreign supplies?*

- Relevant circumstances

20. To facilitate for future work, it might be helpful to develop a clearer idea of the circumstances justifying safeguard action. *Reference has been made to the concept of "unforeseen developments", enshrined in Article XIX of the GATT, but not explicitly repeated in the Agreement on Safeguards. According to one view, this is a legally meaningful and viable concept, despite the degree of subjectivity involved. According to another view, there is no need for such a concept as the occurrence of "serious injury" already implies a drastic change in trading conditions which had not been foreseen at the time the commitments were made. Other participants have expressed doubts whether the notion of unforeseen developments was sufficiently precise to prevent abuse and stressed the need for objective tests of emergency situations, based on readily available information or standard practice. The list of indicators contained in an informal submission by Venezuela (Job No. 2860, dated 17 May 1999) has been widely considered a useful basis for future discussion; the Secretariat was requested to use it as starting-point for a working document listing any conceivable indicators proposed by Members and the comments made in the Working Party. It has also been stressed, however, that such work needed to be complemented by the examination of hypothetical safeguard situations for all four modes of supply in order to further explore the relevance of individual concepts and indicators.*

3. Temporary or provisional measures – periods of application

21. Members seem to agree that any safeguard measure must be temporary. There is also a view that any safeguard measure should be progressively liberalized during the period of application. Article 7 of the AS dealing with Duration and Review of Safeguard Measures may be relevant. This provision contains detailed rules on the length of time for which safeguard measures might be applied, and the interval that must elapse before a new safeguard measure may be introduced on a product that has previously been the subject of safeguard action. It has been suggested to pay particular attention to the principle of adjustment in defining terms and modalities of safeguard action.

22. With regard to provisional safeguard measures, it may be useful to consider Article 6 of the AS which permits the adoption of such measures in "critical circumstances where delay would cause

damage which it would be difficult to repair ... pursuant to a preliminary determination that there is clear evidence that increased imports have caused or are threatening to cause serious injury”.

4. Compensation

23. One view is that Article 8 of the AS could be used as a model. Reservations have been expressed, however, in regard of certain definitional uncertainties and difficulties in determining the level of compensation. Another view is that the need for compensation could be made contingent on the type of adjustment envisaged and the nature of the services-industry involved. *For example, degressive application might require less, if any, compensation.*

24. *Recent contributions have referred to, on the one hand, the role of compensation as a potential deterrent against protectionist abuse. On the other hand, it has also been noted that a compensation requirement could render the invocation of (temporary) safeguards too burdensome for Members – in combination with additional procedural constraints – and, thus, create a bias in favour of (permanent) modifications of commitments under Article XXI. Since the underlying economic challenges are essentially different - sudden import surges versus longer-term changes in competitive conditions – other delegations indicated that they would not consider this to cause problems in practice. Reference has also been made to the concept of special and differential treatment of developing countries.*

5. Applicable procedures

25. No detailed views have been expressed, but it seems obvious that an investigation would be required. Article 3 of the Agreement on Safeguards dealing with investigation has been suggested as a starting point. This provision stipulates that a safeguard measure may only be applied following an investigation, and prescribes the procedures that must be followed. For the determination of injury, the concepts contained in Article 4.2(a) of the AS have been proposed as relevant. The causality requirement in the area of goods, i.e. Article 4.2(b) of the AS, could be translated into the services context, provided some key terms were modified. The Agreement on Implementation of Article VI of GATT (Antidumping Agreement) has been cited as an approach which provided for the necessary flexibility in injury determinations, allowing for action based on "best information available" and for the possibility of consultations with affected Members during an investigation.

26. While concerns have been expressed that available information might be subject to confidentiality constraints, it has also been noted that similar constraints have not proved a problem in antidumping or safeguards cases for goods (Article 3:2 of AS specifies the treatment of confidential information). *Moreover, confidentiality might not prove a critical issue: the burden of proof laid with the invoking party who would have access to the information required.*

6. Applicable measures. National treatment and non-discrimination principles

27. There seems to be agreement that safeguard actions should only be applied to the extent necessary to prevent or remedy serious injury and to facilitate adjustment, as is required by Article 5 of the AS. Safeguard actions could take the form of temporary market access restrictions or temporary suspension of the national treatment principle. While it has been suggested that measures could also take the form of foreign exchange restrictions and limitations on the movement of capital, this may raise questions of consistency with GATS Article XI. *No delegation has ruled out the possibility that Additional Commitments under Article XVIII might also be suspended in safeguard situations; a point has been made, however, that the suspension of regulatory disciplines, including those under the telecom Reference Paper, might not be a suitable or desirable course of action. The discussion on whether certain types of measures (e.g. subsidies) should be deemed preferable to others (e.g. quotas) has not yet led to clear conclusions. While the advantages of price-based measures – more transparent, less distortive and disruptive – have been stressed by some delegations, others have noted that quota-*

type restrictions tend to have shorter implementation periods and are able to produce immediate results. The ongoing negotiations under Article XV might help to further clarify subsidy-related questions.

28. Some of the issues discussed under other items, such as those pertaining to the modal application of safeguard action, are also relevant.

7. Notification and Transparency

29. Members have emphasized the need for transparency and advance notification, but no specific discussion has taken place. The relevant elements of the AS include: Article 3 on Investigation which requires public notice to interested parties, public hearings and publication of findings; Article 12 on Notification and Consultation which requires notification to the Committee on Safeguards at each stage on initiation of an investigation, finding serious injury, and taking a decision to apply measures, as well as giving Members with substantial export interest in the product an opportunity for prior consultations; and Article 13 on Surveillance which establishes the Committee on Safeguards with responsibility *inter alia* for monitoring the implementation of the AS.

8. Special and differential treatment

30. Some Members have suggested that there should be special and differential treatment for developing countries. Article 9 of the AS dealing with Developing Country Members may be relevant. This provision stipulates that safeguard measures shall not be taken against a product originating in a developing country Member as long its share of imports of the product concerned in the importing country does not exceed certain threshold levels. The provision also allows developing countries greater flexibility with respect to the length of time for which safeguard measures might be applied, and the interval that must elapse before a new safeguard measure may be introduced on a product that has previously been the subject of safeguard action.

(99-3105)

Working Party on GATS Rules

Original: English

COMMUNICATION FROM HONG KONG, CHINA

Response to the Questions Relevant to the Information Exchange Required Under the Subsidies Negotiating Mandate

Addendum

The following communication is being circulated at the request of the delegation of Hong Kong, China to Members of the Working Party on GATS Rules.

EXPLANATORY NOTE

I. INTRODUCTION

1. Attached to this note is the response of Hong Kong, China to the Questionnaire on Subsidies (S/WPGR/W/16). Below we set out the scope of the response and highlight some key issues which have emerged in our consideration of the issue.

II. SCOPE OF RESPONSE

2. For the purpose of its response to the Questionnaire on Subsidies (S/WPGR/W/16), Hong Kong, China relies on the definition in para. 1.1 of the Questionnaire but has not included details on the financial contributions made by the government or public bodies in pursuit of *legitimate social welfare objectives* since it is the recognised responsibility of any government to provide a range of social services to the public. For transparency sake, we would like to point out that the government does maintain certain social welfare programmes, and it does so primarily through subventions to organisations to undertake such activities as provision of public housing, hospitals, education, vocational training and retraining and social welfare services. The government directly provides some of the services in these areas, such as out-patient medical clinics and a limited number of schools and social welfare facilities. There is a healthy private sector in these fields, where demand for services over and above, or different from, those provided by the government is found.

3. For the avoidance of doubt, Hong Kong, China would like to highlight that government expenditure on services supplied in the *exercise of governmental authority* (i.e. any service which is supplied neither on a commercial basis nor in competition with one or more service suppliers) falls outside the scope of the questionnaire because in accordance with the definition of Article I(3)(b) of GATS, "services" includes any service in any sector except services supplied in the exercise of governmental authority.

4. In assessing whether any *benefit* has been conferred on the recipients, as required by para. 1.1(b) of the Questionnaire, reference has been made to Article 14 of the Agreement on Subsidies and Countervailing Measures.

III. ISSUES WORTHY OF CONSIDERATION

5. It is already a requirement under the GATS to schedule any subsidies which may be given, if they fall within the measures listed in article XVI or contravene Article XVII. Subsidies granted on a national treatment basis (and which do not infringe Article XVI) are thus not schedulable.

6. Hong Kong, China notes that in general, subsidies which are administered on a *national treatment* basis are likely to have less trade distortive effects. However, it could also be argued that subsidies provided on a national treatment basis to all firms established within the territory of a Member but not overseas service suppliers (Mode 3) would have trade distortive effects under Modes 1 and 2. The question of *mode specificity* of disciplines is a complex one as the effects of a subsidy could spill over from one mode to another.

7. A related question is whether a Member is obliged to give national treatment to suppliers outside its *territorial jurisdiction*. The Scheduling Guidelines (MTN:GNS/W/164) state not. But the trade distortive effects of subsidies in this regard are unclear.

8. For transparency sake, Hong Kong, China has included in its return details of financial contributions from the government which are provided on a national treatment basis. Indeed, all the subsidies listed in our response are granted on a national treatment basis (insofar as Mode 3 is concerned). It is suggested that the questions of *trade distorting effects* and *mode specificity* of subsidies should be further discussed at the Working Party.

9. The response submitted is without prejudice to Hong Kong, China's future negotiating position in the WTO. Hong Kong, China may amend its response in the light of further discussions in the Working Party that may clarify the scope of subsidies in services and the type of measures that members seek to address.

RESPONSE BY HONG KONG , CHINA TO THE QUESTIONNAIRE ON SUBSIDIES

1. *Please identify any subsidy programmes related to trade in services, with a brief description of each programme.*

The following are possible subsidies that are caught by the working definition adopted by Hong Kong, China as set out in the explanatory covering note. They may not be regarded as subsidies if further parameters are added to the definition of "subsidies" (e.g. "specificity").

- (a) Stamp duty remission program for regional derivative warrants and convertible bond: stamp duty is waived for trading of these products on the Stock Exchange of Hong Kong Limited (SEHK).
- (b) Stamp duty exemption for stock lending and borrowing: stamp duty is exempted for lending and borrowing stocks of companies listed on the SEHK.
- (c) Stamp duty exemption for hedging transactions by stock options market makers: the stock transactions for hedging purposes undertaken by market makers issuing stock options in SEHK are exempted from stamp duty.
- (d) The Government has provided a revolving loan facility of HK\$100 million to the Hong Kong Tourist Association (HKTA) for the setting up of an International Events Fund. The aim of which is to provide the necessary seed money to support the staging of some 50 major international events in a period of 5 years. The HKTA may draw down the loan within a period of 5 years from the date of the first draw down. The HKTA has to pay a simple 5% annual interest on the outstanding amount of the loan.
- (e) The Services Support Fund (SSF) was established in July 1996 with an allocation of HK\$50 million from Government to provide financial support to projects which would benefit the further development, and increase the competitiveness, of Hong Kong's service sector. Such projects should be non-profit-making in nature, except for the projects' long-terms self-sufficiency. The Fund has so far supported a total of 27 projects and the Government has recently approved an increase of commitment of \$50 million for the Fund.

2. *Please state the policy objectives underlying the use of each subsidy.*

- (a) To encourage the development of the market of regional derivative warrants and convertible bonds in Hong Kong.
- (b) To encourage the development of the market of stock borrowing and lending in Hong Kong.
- (c) To encourage the development of the market of stock options in Hong Kong.
- (d) To attract more international events to stage in Hong Kong and in turn enhance the attractiveness of Hong Kong as a tourist destination.
- (e) To support the growth of the service industries and to enhance their competitiveness.

3. *Please indicated the availability, in the case of your country, of information necessary to distinguish subsidies to services from subsidies to goods, e.g. when a company produces both goods and services.*

Nil.

4. Please indicate the form of each subsidies (e.g. tax concession, loan, grant, etc.).

(a) - (c) : In the form of waiving of stamp duty.

(d) The International Event Fund aims to provide different types of financial support to event organisers, including (i) upfront equity infusion; (ii) loan, which may be at commercial rate, concessionary rate of interest-free; (iii) grant; and (iv) in-kind assistance such as implementing umbrella publicity and marketing programs to boost the events' publicity and ticket sale.

(e) In the form of grants or loans.

5. Unless previously indicated, please state which sectors are eligible under the subsidy and/or the estimated number of enterprises which are eligible under the subsidy.

(a) The stamp duty would have been payable by all investors in regional derivative warrants and convertible bonds. Hence, the scheme directly benefits all investors, both local and overseas, in regional derivative warrants and convertible bonds.

(b) Stock lenders and borrowers, who are essentially brokerage houses and institutional investors.

(c) Market makers for stock options.

(d) The Government provides a loan to the HKTA, which manages the International Events Fund. Event organisers could apply for funding support under the Fund. We expect that the Fund will be used to support the staging of some 50 major international events in Hong Kong. **The Fund is not targeted at any specific sectors or enterprises.**

(e) Service support bodies, trade and industry association, education and research institutions and professional bodies can apply for financial support for undertaking projects which meet the funding criteria. Private companies can also apply but they must demonstrate that the relevant projects would be non-profit-making and would meet the funding criteria for the Fund. **The Fund is not targeted at any specific sectors or enterprises.**

6. Please indicate the eligibility criteria for subsidies (location, nationality, destination of output or any other condition).

(a) All investors, local and overseas, in regional derivative warrants and convertible bonds are entitled to the stamp duty exemption.

(b) All stock borrowers and lenders (local and overseas) who are essentially brokerage houses and institutional investors.

(c) Market makers (local and overseas) for stock options.

(d) The HKTA, in consultation with the Steering Committee of the Fund, will take into consideration criteria such as the soundness of the event proposal, the potential in generating world-wide media coverage, the appeal to overseas audience, the compatibility with Hong Kong's tourism business cycle, the appeal to commercial sponsors, the credentials of the organisers applying for financial support, as well as the overall financial position of IEF. There is no restriction on the nationality of the applicant.

(e) *See Annex*

7. Please indicate how the subsidy is calculated (e.g. on production, on exports, on a fixed or fluctuating basis, etc).

(a)-(c) : 0.25% of the consideration of the transaction.

(d) There is no fixed formula. When considering the level of funding support to be provided to event organisers, the factors set out in paragraph 6(d) above will be taken into consideration.

(e) Under the SSF, the amount of the funding support requested have to be clearly set out and itemised in the applications. The applicant organisations must also provide detailed explanation and justification for the projects. The applications would be carefully assessed by an SSF Vetting Committee which would make recommendations to the Director-General of Industry. In considering whether funding support would be given, the Committee would take into account whether the proposed budget is reasonable and realistic, the benefits that such a project will bring to the service sector and the technical and management capability of the applicant organisation.

8. Please specify any time limits attached to the subsidies described above.

(a)-(c) : no time limit.

(d) The HKTA has to repay all outstanding loan together with the outstanding interests accrued by the end of the 5 years credit period.

(e) There is no specific time limits attached to the projects to be funded by the SSF. However, in considering a project proposal, due consideration will be given to whether the schedule of implementation of the proposed project is well-planned and the duration reasonable. Based on past experience, the duration of most SSF funded projects ranges from 1-2 years.

9. Please indicate any subsidy disciplines already assumed in the context of regional agreements.

Nil.

10. Where such information is available, Members may wish to indicate:

- **subsidy per unit or total annual subsidy outlays in respect of each subsidy granted;**

(a) HK\$2,031,504 in 1997

(b) Data not available¹.

(c) HK\$284,239,484 from 1 June 1996 to 30 November 1997.

(d) Data not available.

(e) Regarding the projects approved so far, the average funding support for each project is HK\$1.83 million.

¹ Reporting on stock borrowing and lending is by the number of transaction, not by traded value, hence no information on the amount of stamp duty exempted.

- *statistical data indicating the impact of subsidies on trade in services in the sectors or activities concerned.*
 - (a) Regional derivative warrants and convertible bonds were first introduced in Hong Kong in April 1997, the same month when stamp duty exemption was granted on such trade. Since its introduction, there have been 17 regional derivative warrants listed on the SEHK with an average daily turnover of \$20.8 million, or 0.2% in terms of the total turnover of the Exchange. There has been no regional convertible bond listed on the SEHK yet.
 - (b) Since the introduction of the stamp duty exemption, the number of transaction of local stock lending and borrowing has grown substantively. In 1994, the number of transaction reported was 1,245 and in 1997, the figure grew to 20,048, representing growth of about 1,500 times.
 - (c) The stamp duty exemption on stock option trading was effective at the same time when the first stock option was launched in September 1995. Since then, the number of stock options has grown from 1 to 17 with turnover in terms of number of contracts traded grown by 48% over the same period.
 - (d) Data not available.
 - (e) Data not available.

ANNEX

Eligibility Criteria for Services Support Fund (SSF)

1. Funding support will be provided for projects which are beneficial to the overall development of Hong Kong as a service centre or which constitute to the further development of one or more service industries, such as by enhancing international competitiveness or domestic capacity for production.
 2. The benefits must accrue to one or more service industries as a whole, and not just to a single private company or consortium of private companies.
 3. Projects to be funded should be non-profit-making except for the purpose of long-term self-sufficiency.
 4. Funds will not be provided for the creation of civil service posts.
 5. In considering a proposal, due consideration will be given to -
 - (a) the benefit that it will bring to the service sector;
 - (b) whether there is a demonstrated need for the proposed project;
 - (c) the technical and project management capability of the applicant institution/organisation;
 - (d) whether the proposed project's schedule of implementation is well-planned and the duration reasonable;
 - (e) whether the proposed budget is reasonable and realistic;
 - (f) whether there is or likely to be a duplication of the work currently carried out by other organisations; and
 - (g) if recurrent expenditure will be incurred (e.g. manpower costs and other administrative expenses), whether the proposed project has a potential of becoming self-sufficient after a certain period of time.
 6. There is no restriction on the nationality or place of incorporation of the applicant.
-

Working Party on GATS Rules

ISSUES FOR FUTURE DISCUSSIONS ON EMERGENCY SAFEGUARDS

Note by the Secretariat

Revision

1. The Secretariat has prepared this revision of an earlier Note, dated 20 November 1998, at the request of the Working Party on GATS Rules. The revision takes into account the discussion of safeguard-related issues which took place in the Working Party's meetings of 1 December 1998, 19 February 1999 and 16 April 1999. For ease of reference, any substantive changes over the initial version are indicated in italics.

2. The paper considers first, alternative forms that a safeguard mechanism under the GATS may take. It then elaborates on issues for further discussion, building on an outline submitted by Venezuela (Job No. 5412, dated 14 October 1998), contributions by Members in Working Party meetings, and the precedent in Article XIX of GATT 1994 and the Agreement on Safeguards.

I. Alternative forms of a safeguard mechanism

3. Members have suggested several alternative forms for a possible safeguard mechanism under the GATS. One view has been to model it closely on the mechanism in the goods area. *Such a mechanism could include quantitative criteria and procedural restraints.* The applicability of concepts in the Agreement on Safeguards (AS) to the GATS context has been discussed in a previous Note by the Secretariat (S/WPGR/W/8).

4. A second view has been to include safeguard-type provisions for specific sectors in a Member's schedule of specific commitments (this view has been expressed in a Communication from the United States, S/WPGR/W/17). Rules may still need to be developed to be followed by Members who include such safeguard-type provisions in their schedules. It has been suggested that such rules - general, sector-specific or mode-specific - could include the requirement that a Member including a safeguards-type provision in its schedule in a given sector must combine it with a commitment to liberalization in that sector. The extent of liberalization which would justify inclusion of a safeguard provision would presumably be determined through negotiations between the concerned Member and its trading partners. *Concerns have been voiced, however, that the ability to negotiate the inclusion of safeguards may depend on bargaining power, thus disadvantaging small economies; that it could prove conceptually and politically difficult to identify sectors where "unforeseen circumstances" are likely to occur or otherwise earmark potential areas for safeguard action; and that there is no legal basis in the GATS to underpin a conditional and/or sector-specific approach to safeguards.*

5. A third model is contained in Article 5 of the Agreement on Agriculture. The relevant provision does not require injury to domestic industry as a basis for safeguard action. Actions are triggered by import volume increases or import price reductions, and permit the imposition of additional duties up to specified limits. The volume trigger, which leads to the non-discriminatory application of additional duties, is sensitive to the degree of import penetration, while the price trigger, which may result in additional duties on a consignment-by-consignment basis, is related to certain base-year prices in domestic currency. *There have been doubts, however, whether such intense data requirements could be met in services. On the other hand, it has been argued that data problems also exist in the area of goods; they should not prevent the development of a mechanism*

which is sufficiently flexible in terms of quantitative evidence and includes appropriate procedural constraints.

6. A fourth alternative could be modelled on Article 6 of the Agreement on Textiles and Clothing which provides for a transitional safeguard mechanism for products not yet integrated into GATT 1994 and not subject to restriction. Special treatment is envisaged when applying safeguards against small exporters, least-developed countries, wool producers, outward-processing trade and cottage industries. Members need to demonstrate that a particular product is being imported from the country in question in such increased quantities as to cause serious damage, or threat thereof, to the domestic industry producing like and/or directly competitive products. The safeguard is applied selectively to particular exporters. *It has been argued, however, that this seems to contravene the non-discrimination principle enshrined in Article X and imply significant data requirements.*

7. *Recent discussions have focused on the pros and cons of sector-specific versus horizontal safeguards. A conceptual distinction has been made in this context between those sector-specific safeguards which would be negotiated case-by-case for inclusion in schedules and those which would be based on some commonly agreed principles. In addition to the reservations mentioned above (para. 4), it has been noted, however, that the parallel existence of several safeguard variants could lead to fragmentation of the system and affect transparency. A horizontal mechanism, based on generally applicable criteria, would be available to all Members whenever the situation in a given sector and, possibly, mode of supply meets the relevant criteria. However, apart from questions concerning desirability, doubts have been expressed whether such a broad-based mechanism could be made subject to effective disciplines (see also Section II.5). The idea has also been discussed that a safeguards mechanism conceived for general application might be made available only in sectors considered prone to crises situations. The selection of such sectors, however, might prove difficult and could unduly affect trade and investment decisions.*

II. List of issues for future discussions

1. Definition and scope of safeguards in services

- Active subject: who applies the safeguard? E.g. government, professional associations, central banks

8. Safeguards would normally be applied by a Member. It is conceivable that a Member may delegate the responsibility for action to a particular agency. Under the GATS, measures by Members are defined broadly to include measures taken by central, regional or local governments, as well as non-governmental bodies in the exercise of powers delegated by the government. Governments can, therefore, be held accountable in the WTO for decisions or actions affecting trade in services by non-governmental bodies, such as those regulating particular service sectors, which exercise delegated powers. This may be relevant if such bodies were to have responsibility for the administration of safeguard action. *Another view is that safeguard actions should be taken only by governments, thus excluding agencies with delegated powers.*

- Passive subject: to whom is it applied? Country, industry of a country, specific company

9. There are two related aspects of this question: first, on whose behalf is safeguard action taken and second, against whom such action is taken. In the goods case, safeguard action is taken on behalf of a domestic industry - defined to mean the producers as a whole of the like or directly competitive products operating within the territory of a Member, or those whose collective output of the like or directly competitive products constitutes a major proportion of the total domestic production of those products. In the Working Party, one view has been that the goods precedent should be followed, and safeguard action be taken to protect all domestically established suppliers of like or directly

competitive services, regardless of ownership and control. According to this view, it would not be desirable to use, for the purpose of safeguard action, the relevant definition in GATS Article XXVIII to determine what constitutes national industry.

10. Another view has been that safeguard action should be available to protect the national industry, which is understood to mean all natural and juridical persons of the Member taking the measure who supply like or directly competitive services. According to this view, the distinction between national and foreign entities should be based on the relevant definition in GATS Article XXVIII. *While it has been argued that some Members' domestic legislation would not allow for such a distinction to be made, it has also been noted that there would be no obligation to introduce it.*

11. The response to the second aspect of the question, concerning against whom safeguard action is taken, depends on the response to the first aspect: all those who do not benefit from such action would suffer its consequences. Thus, it would seem that safeguard action could either only be taken against suppliers of the like or directly competitive products located outside the territory of the Member taking such action, or also against foreign suppliers of such products located in the territory of the Member. Two observations are relevant. First, even Members who wish to make a distinction within the class of domestically established suppliers on the basis of nationality have stated that "acquired rights" of foreign suppliers should be respected, and measures which force disinvestment must not be taken. (It would be necessary to examine closely what is meant by the protection of acquired rights and whether this would be consistent with MFN.) Second, given the Article X requirement that any emergency safeguard measures be "based on the principle of non-discrimination", it is clear that safeguard action cannot be selective, but must be applied on an MFN basis to all foreign services and service suppliers.

- Objective: What is covered? All kinds of services? Which sectors? Which modes of supply?

12. One view has been that a general safeguard provision be created under Article X which would cover all services and sectors. Another view has been that safeguard action should only be available for certain sectors where it is possible to produce adequate quantitative evidence.

13. With regard to modes, it has been argued either that safeguard actions be taken with respect to all modes of supply or *that it would be for the invoking Member to decide on the modal coverage, based on the policy objectives involved.* The argument has been advanced that mode-specific safeguard action could create economic distortions, and that such action may not be effective since it could be circumvented by foreign suppliers switching to unrestricted modes. *However, this possibility should not be overestimated as switching between modes may imply significant costs.* The other view is that action can only be taken with respect to certain modes. The argument is that it may be counterproductive to target all modes; for instance, if the purpose of safeguard action is to prevent unemployment, it may not make sense to restrict new investment or to take action against locally established foreign firms. The issues discussed under the previous item may also be relevant.

2. Situations justifying application. Type of injury.

14. One view is that we should follow the precedent of Article XIX of GATT 1994 and of the Agreement on Safeguards. The determination of whether increased imports have caused or are threatening to cause serious injury to domestic industry should be made by employing, mutatis mutandis, the rules provided for in Article 4:2(a) and 4:2(b) of the Agreement on Safeguards:

- "(a) In the investigation to determine whether increased imports have caused or are threatening to cause serious injury to a domestic industry under the terms of this Agreement, the competent

authorities shall evaluate all the relevant factors of an objective and quantifiable nature having a bearing on the situation of that industry, in particular, the rate and amount of the increase in imports of the product concerned in absolute or relative terms, the share of the domestic market taken by increased imports, changes in level of sales, production, productivity, capacity utilisation, profits and losses, and employment.

- (b) The determination referred to in the subparagraph (a) shall not be made unless this investigation demonstrates, on the basis of objective evidence, the existence of the causal link between increased imports of the product concerned and serious injury or threat thereof. When factors other than dramatic increased imports are causing injury to the domestic industry at the same time, such injury shall not be attributed to increased imports."

15. It may be deemed appropriate to substitute the notion of "consumption of foreign services" for "imports" to cover supply through each of the four modes; it would also need to be considered whether references should be to "domestic industry", as above, or to "national industry".

16. The other view is that it is likely to be difficult in the area of services, given the state of statistics, to demonstrate injury and show that it is caused by increased imports. *However, it has been noted that data problems in the goods area had not prevented the creation of anti-dumping and similar mechanisms, which rely heavily on empirical information.*

17. It has also been suggested that any safeguard action should also take into account the wider public interest, and not only industry-specific considerations. *Article 3 of SA could be used in this regard. However, it may be necessary to clarify the concept of "public interest" which, according to one view, seems to allow for too much leeway at present.*

18. *To facilitate for future work, it might be helpful to develop a clearer view of the circumstances justifying safeguard action; it has been noted that mere reference to "unforeseen developments" may not be sufficiently precise.*

3. Temporary or provisional measures – periods of application

19. Members seem to agree that any safeguard measure must be temporary. There is also a view that any safeguard measure should be progressively liberalized during the period of application. Article 7 of the AS dealing with Duration and Review of Safeguard Measures may be relevant. This provision contains detailed rules on the length of time for which safeguard measures might be applied, and the interval that must elapse before a new safeguard measure may be introduced on a product that has previously been the subject of safeguard action. *It has been suggested to pay particular attention to the principle of adjustment in defining terms and modalities of safeguard action.*

20. With regard to provisional safeguard measures, it may be useful to consider Article 6 of the AS which permits the adoption of such measures in "critical circumstances where delay would cause damage which it would be difficult to repair ... pursuant to a preliminary determination that there is clear evidence that increased imports have caused or are threatening to cause serious injury".

4. Compensation

21. *One view is that Article 8 of the AS could be used as a model. Reservations have been expressed, however, in regard of certain definitional uncertainties and difficulties in determining the level of compensation. Another view is that the need for compensation could be made contingent on the type of adjustment envisaged and the nature of the services-industry involved. Reference has been made to the concept of special and differential treatment of developing countries.*

5. Applicable procedures. Investigation of injury. E.g. statistics, income-tax and VAT declarations, growth of the bound sector

22. No detailed views have been expressed, but it seems obvious that an investigation would be required. Article 3 of the Agreement on Safeguards dealing with investigation *has been suggested as a starting point*. This provision stipulates that a safeguard measure may only be applied following an investigation, and prescribes the procedures that must be followed. *For the determination of injury, the concepts contained in Article 4.2(a) of the AS have been proposed as relevant. The causality requirement in the area of goods, i.e. Article 4.2(b) of the AS, should be translated into the services context, provided some key terms were modified. The Agreement on Implementation of Article VI of GATT (Antidumping Agreement) has been cited as an approach which provided for the necessary flexibility in injury determinations, allowing for action based on "best information available" and for the possibility of consultations with affected Members during an investigation.*

23. *Indicators to be used in establishing injury might include: losses experienced by domestic suppliers; decline in capacity utilisation; capacity reductions; decline in sales; declining productivity; reduction in prices or changes in the price structure; declining number of domestic suppliers; and shrinking employment. An increase in foreign supplies would be reflected in: tax declarations (e.g. for sales taxes); indicators related to financial transactions; statistics maintained by competent professional associations or regulators (including information on market shares or number of foreign professionals); capital flows; and revenue figures. For the determination of causality, data series (performance before and after market entry) could be used in the same way as in the goods area; the burden of proof would rest on the invoking party. It has been noted that any type of administrative information might be used; the standard of proof in such instances would not need to be as high as in penal cases.*

24. *While concerns have been expressed that such information, if it were available, would be subject to confidentiality constraints, it has also been noted that similar constraints have not proved a problem in antidumping or safeguards cases for goods. Article 3:2 of SA specifies the treatment of confidential information.*

6. Applicable measures. National treatment and non-discrimination principles

25. There seem to be agreement that safeguard actions should only be applied to the extent necessary to prevent or remedy serious injury and to facilitate adjustment, as is required by Article 5 of the AS. Safeguard action could take the form of temporary market access restrictions or temporary suspension of the national treatment principle. While it has been suggested that measures could also take the form of foreign exchange restrictions and limitations on the movement of capital, this may raise questions of consistency with GATS Article XI. *It is conceivable that safeguard actions involve the temporary suspension of other obligations, resulting for example from additional commitments under Article XVIII, but no detailed views have been expressed so far. Similarly, there has been no in-depth discussion of whether specific types of measures (e.g. subsidies) should be deemed preferable to others (e.g. quotas). However, the possibility has been raised of limiting the scope of safeguard actions only to measures falling under Article XVI.*

26. Some of the issues discussed under other items, such as those pertaining to the modal application of safeguard action, are also relevant.

7. Notification and Transparency

27. Members have emphasized the need for transparency and advance notification, but no specific discussion has taken place. The relevant elements of the AS include: Article 3 on Investigation which requires public notice to interested parties, public hearings and publication of findings; Article 12 on Notification and Consultation which requires notification to the Committee on

Safeguards at each stage on initiation of an investigation, finding serious injury, and taking a decision to apply measures, as well as giving Members with substantial export interest in the product an opportunity for prior consultations; and Article 13 on Surveillance which establishes the Committee on Safeguards with responsibility *inter alia* for monitoring the implementation of the AS.

8. Special and differential treatment

28. Some Members have suggested that there should be special and differential treatment for developing countries. Article 9 of the AS dealing with Developing Country Members may be relevant. This provision stipulates that safeguard measures shall not be taken against a product originating in a developing country Member as long its share of imports of the product concerned in the importing country does not exceed certain threshold levels. The provision also allows developing countries greater flexibility with respect to the length of time for which safeguard measures might be applied, and the interval that must elapse before a new safeguard measure may be introduced on a product that has previously been the subject of safeguard action.

Working Party on GATS Rules

**INTERPRETATION OF PROCUREMENT-RELATED PROVISIONS IN GATT
POSSIBLE APPLICATION TO ARTICLE XIII OF GATS**

Background Note by the Secretariat

1. This Note has been prepared in response to a request by the Working Party on GATS Rules at its meeting of 19 February 1999. It provides background information on the interpretation of GATT provisions on government procurement, which are similar to those contained in Article XIII:1 of GATS. The purpose is to assist the Working Party in its discussion regarding the transactions that might be considered to constitute procurement of services. In preparing this Note, the Secretariat has drawn on GATT/WTO documents and publications, which delegations might want to read in parallel, particularly the Guide to GATT Law and Practice. However, this Note should not be regarded as an exhaustive or authoritative interpretation of GATT or GATS provisions.

I. RELEVANT PROVISIONS

2. In excluding government procurement of services from the application of Articles II, XVI and XVII of the GATS, Article XIII:1 refers to "... *procurement by governmental agencies of services purchased for governmental purposes and not with a view to commercial resale or with a view to use in the supply of services for commercial sale...*" (emphasis added). The Agreement contains no further definition of these terms, nor has any interpretation been provided by competent WTO bodies. However, the interpretation given to similar provisions under GATT might provide some useful guidance.

3. Under Article III:8(a) of GATT, government procurement is exempt from the principle obligation to national treatment with regard to internal taxation and regulation. The Article refers to "...procurement by governmental agencies of products purchased for governmental purposes and not with a view to commercial resale or with a view to use in the production of goods for commercial sale..." (emphasis added).

4. The two provisions not only fulfil a similar function, namely to exclude government procurement from the application of certain disciplines of the Agreements concerned, but are also formulated in almost identical terms. Given this concordance, one could reasonably assume that Article III of GATT served as a model for the drafting of Article XIII of GATS.

5. An additional reference to government procurement is contained in Article XVII:2 of GATT.¹ It exempts government procurement from the disciplines imposed by Article XVII:1 in respect of State Trading Enterprises, stating that these disciplines "...shall not apply to imports of products for immediate or ultimate consumption in governmental use and not otherwise for resale or use in the

¹ GATT Article XVII:2 "The provisions of paragraph 1 of this Article shall not apply to imports of products for immediate or ultimate consumption in governmental use and not otherwise for resale or use in the production of goods* for sale. With respect to such imports, each contracting party shall accord to the trade of the other contracting parties fair and equitable treatment...."

production of goods* for sale..." (emphasis added). Although the purpose of these provisions is similar to those contained in Articles XIII:1 (GATS) and III:8 (GATT), it uses different language to define the excluded procurement transactions. Thus, rather than "governmental purposes", reference is made to "immediate or ultimate consumption in governmental use". The second defining element used in GATT Article III (commercial resale/use) is retained in principle in Article XVII:2, except for the word "commercial".

II. INTERPRETATIONS

A. "GOVERNMENTAL PURPOSES" VERSUS "GOVERNMENTAL USE"

Drafting history

6. Since the exceptions of Article III:8(a) and XVII:2 are part of the same legal framework, the question arises as to the reasons for such differences. Are they intended to establish different criteria for procurement transactions in the two areas or have the relevant terms ("governmental purposes" and "governmental use") been considered equivalent at the time of drafting?

7. As to the drafting history of Article XVII, it has been noted that "at Havana, paragraph 2 of the Geneva Draft Article 30 [it corresponds to paragraph 2 of GATT Article XVII] was amended, (1) to conform the language to the wording of Article 18:8(a) [corresponds to Article III:8(a) of GATT] to avoid difficulties of interpretation and (2) to extend the "fair and equitable treatment" rule to also cover "the laws and regulations and requirements referred to in paragraph 8(a) of Article 18".² This seems to suggest that, originally, the two provisions were meant to refer to the same type of government procurement. In the same vein, John Jackson concludes that "the government procurement exception [for state trading enterprises] was intended to be virtually the same as that expressed in Article III, paragraph 8(a), but the wording diverged when the Havana changes were picked up in GATT Article III but not in Article XVII, although the Havana changes were stated to be non-substantive."³

8. The drafting history of Article III:8(a) recounts that it had been agreed at Havana that "paragraph 5 [III:8] was an exception to the whole of Article 18 [III]". It has been noted that "the Sub-Committee had considered that the language of paragraph 8 would except ... laws, regulations and requirements governing purchases effected for governmental use where resale was only incidental". Subsequently, during discussions at Havana "it was stated that paragraph 8 had been redrafted... specifically to cover purchases made originally for governmental purposes and not with a view to commercial resale, which might nevertheless later be resold..." (emphasis added).⁴

Accession Working Parties

9. The report of the Working Party on Accession of Venezuela notes that, in relation to purchases by State enterprises, some members had questioned whether buy-national provisions were consistent with Articles XVII and III of the General Agreement. "A member added that in order to conform with Article III obligations the preference...should only be applied to imports by the State for its own consumption and not to imports by enterprises engaged in normal commerce..." (emphasis added). It is worth noting that in this context "consumption" is used instead of "purposes". The representative of Venezuela stated that "... Decree 1182 [buy national provision] will be brought into conformity with Article III of the General Agreement... its application to purchases other than those for ultimate consumption in governmental use would not deny the benefits of Article III to imports of

² GATT, Analytical Index: Guide to Gatt Law and Practice, p. 485.

³ Jackson, John; *World Trade and the Law of Gatt*, Boos-Merrill Company, 1969; pp. 291 and 359.

⁴ GATT, Analytical Index: Guide to Gatt Law and Practice, p. 190.

other contracting parties..." (emphasis added). It seems that in this context the definitions of government procurement contained in the two GATT Articles were used interchangeably to cover acquisitions by the government "for its own consumption and not for normal commerce".⁵

Panel reports

10. The non-adopted 1992 Panel Report on "United States - Procurement of a sonar mapping system", in addressing relevant provisions of the Agreement on Government Procurement (AGP), also referred to terms contained in Articles III:8 and XVII:2 of GATT.⁶ The issue at hand was whether an acquisition by a private company, in connection with a contract between this company and a governmental entity, constituted government procurement under the AGP or private procurement subject to GATT disciplines. While the AGP did not define "government procurement", the Panel noted that its Article I referred to "such methods as purchase or as lease, rental or hire-purchase, with or without an option to buy". Since all these methods were means of obtaining the use or benefit of a product, the Panel considered that the word "procurement" could be understood accordingly.⁷

11. Attempting to clarify scope and coverage of "government procurement" in the AGP, the Panel looked at references contained in the GATT. Thus, its attention was drawn to the terms "procurement by governmental agencies of products purchased for governmental purposes" [Article III:8(a)] and "products for immediate or ultimate consumption in governmental use" [Article XVII:2].

12. In this respect, the Panel observed that "the emphasis [of GATT provisions] on the concepts of 'governmental use', 'governmental purposes', and 'procurement by government agencies' supported its [i.e. the Panel's] own understanding of the concept of government procurement." The Panel thus felt that in considering any particular case, the following characteristics, none of which alone could be decisive, provided guidance as to whether transactions should be regarded as government procurement within the meaning of Article I:1(a) of GPA: payment by government, governmental use of or benefit from the product, government possession and government control over the obtaining of the product.

13. Although the Panel did not elaborate further on the definition of "governmental use" and "governmental purposes", it found a consistent, mutually supportive, relationship between them and its own characterization of government procurement. In considering the specifics of the case, the Panel noted that the US governmental entity "...would also enjoy the benefits of the system's purchase - Antarctic research and the preparation of seabed maps - which were clearly for government purposes, and the Government can thus be regarded as the ultimate beneficiary of the system...".

B. "COMMERCIAL RESALE" AND "USE IN THE PRODUCTION OF GOODS FOR COMMERCIAL SALE"

14. According to the drafting history of Article III, while paragraph 8(a) of Charter Article 18 on national treatment was revised at Havana by adding the word "commercial" before "resale" and "sale", and this change was brought into Article III of the General Agreement in 1948, parallel changes which had been made to paragraph 2 of Article 29 (on government procurement) were not brought over into the paragraph 2 of Article XVII.⁸

⁵ Accession of Venezuela, Report of the Working Party, L/6696, adopted on 11 July 1990, paras. 68-71.

⁶ GPR.DS1/R, dated 23 April 1992 (not adopted).

⁷ GATT, Analytical Index: Guide to Gatt Law and Practice, p. 192.

⁸ *Ibidem*, p. 193.

15. Reportedly, the change was made to cover cases in which governments had received tied loans to purchase equipment from the country granting the loan, and which might resell such equipment later to private entities. The new wording was intended "...to cover purchases made originally for governmental purposes and not with a view to commercial resale, which might nevertheless later be sold."⁹ Thus, it seems that the word "commercial" was introduced to ensure the continued application of the national treatment exemption to procurement of goods which are sold after use.

⁹ *Ibidem*, p. 190.

Working Party on GATS Rules

ISSUES FOR FUTURE DISCUSSIONS ON EMERGENCY SAFEGUARDS

Note by the Secretariat

1. This paper was requested by the Working Party on GATS Rules in its meeting of 6 October 1998. The paper considers first, alternative forms that a safeguard mechanism under the GATS may take. It then elaborates on the list of issues identified in the outline submitted by Venezuela (Job No. 5412, dated 14 October 1998), drawing upon the submissions made by Members and the precedent in Article XIX of GATT 1994 and the Agreement on Safeguards.

I. Alternative forms of a safeguard mechanism

2. Members have suggested several alternative forms for a possible safeguard mechanism under the GATS. One view has been to model it closely on the mechanism in the goods area. The applicability of concepts in the Agreement on Safeguards (AS) to the GATS context has been discussed in a previous Note by the Secretariat (S/WPGR/W/8).

3. A second view has been to include safeguard-type provisions for specific sectors in a Member's schedule of specific commitments (this view has been expressed in a Communication from the United States, S/WPGR/W/17). Rules may still need to be developed to be followed by Members who include such safeguard-type provisions in their schedules. It has been suggested that such rules - general, sector-specific or mode-specific - could include the requirement that a Member including a safeguards-type provision in its schedule in a given sector must combine it with a commitment to liberalization in that sector. The extent of liberalization which would justify inclusion of a safeguard provision would presumably be determined through negotiations between the concerned Member and its trading partners.

4. A third view has been to use the model in Article 5 of the Agreement on Agriculture. This Article deals with Special Safeguard Provisions which are triggered by import volume increases or import price reductions, and permit the imposition of additional duties up to specified limits. The volume trigger is sensitive to the degree of import penetration, while the price trigger is related to certain base-year average prices in domestic currency. The volume trigger leads to the non-discriminatory application of additional duties, whereas the price trigger leads to additional duties fixed on consignment-by-consignment basis. It is notable that the provision does not require injury to domestic industry as a basis for safeguard action.

5. A fourth view has been to use the model in Article 6 of the Agreement on Textiles and Clothing. This Article deals with a transitional safeguard mechanism which has been established for products not yet integrated into GATT 1994 and not subject to restriction. This safeguard is applied selectively to particular exporters. Safeguards may be maintained for a maximum of three years. Special treatment is envisaged when applying safeguards against small exporters, least-developed countries, wool producers, outward-processing trade and cottage industries. It is notable that this provision requires a Member to demonstrate that a particular product is being imported into its territory in such increased quantities as to cause serious damage, or threat thereof, to the domestic

industry producing like and/or directly competitive products; and that the damage can be attributed to imports from the country in question.

II. List of issues for future discussions

6. The italicised headings below have been taken from the outline submitted by Venezuela (Job No. 5412, dated 14 October 1998).

1. *Definition and scope of safeguards in services.*

- *Active subject: who applies the safeguard? E.g. government, professional associations, central banks.*

7. Safeguards would normally be applied by a Member. It is conceivable that a Member may delegate the responsibility for action to a particular agency. Under the GATS, measures by Members are defined broadly to include measures taken by central, regional or local governments, as well as non-governmental bodies in the exercise of powers delegated by the government. Governments can, therefore, be held accountable in the WTO for decisions or actions affecting trade in services by non-governmental bodies, such as those regulating particular service sectors, which exercise delegated powers. This may be relevant if such bodies were to have responsibility for the administration of safeguard action.

- *Passive subject: to whom is it applied? Country, industry of a country, specific company.*

8. There are two related aspects of this question: first, on whose behalf is safeguard action taken and second, against whom such action is taken. In the goods case, safeguard action is taken on behalf of a domestic industry - defined to mean the producers as a whole of the like or directly competitive products operating within the territory of a Member, or those whose collective output of the like or directly competitive products constitutes a major proportion of the total domestic production of those products. In the Working Party, one view has been that the goods precedent should be followed, and safeguard action be taken to protect all domestically established suppliers of like or directly competitive services, regardless of ownership and control. According to this view, it would not be desirable to use, for the purpose of safeguard action, the relevant definition in GATS Article XXVIII to determine what constitutes national industry.

9. Another view has been that safeguard action should be available to protect the national industry, which is understood to mean all natural and juridical persons of the Member taking the measure who supply like or directly competitive services. According to this view, the distinction between national and foreign entities should be based on the relevant definition in GATS Article XXVIII. It has been noted, however, that individual Members were not obliged to make this distinction when taking safeguard action.

10. The response to the second aspect of the question, concerning against whom safeguard action is taken, depends on the response to the first aspect: all those who do not benefit from such action would suffer its consequences. Thus, it would seem that safeguard action could either only be taken against suppliers of the like or directly competitive products located outside the territory of the Member taking such action, or also against foreign suppliers of such products located in the territory of the Member. Two observations are relevant. First, even Members who wish to make a distinction within the class of domestically established suppliers on the basis of nationality have stated that "acquired rights" of foreign suppliers should be respected, and measures which force disinvestment must not be taken. (It would be necessary to examine closely what is meant by the protection of acquired rights and whether this would be consistent with MFN.) Second, given the Article X

requirement that any emergency safeguard measures be "based on the principle of non-discrimination", it is clear that safeguard action cannot be selective, but must be applied on an MFN basis to all foreign services and service suppliers.

- *Objective: What is covered? All kinds of services? Which sectors? Which modes of supply?*

11. One view has been that a general safeguard provision be created under Article X which would cover all services and sectors. Another view has been that safeguard action should only be available for certain sectors where it is possible to produce adequate quantitative evidence.

12. With regard to modes, one view has been that safeguard action be taken with respect to all modes of supply. The argument has been advanced that mode-specific safeguard action could create economic distortions, and that such action may not be effective since it could be circumvented by foreign suppliers switching to unrestricted modes. The other view is that action can only be taken with respect to certain modes. The argument is that it may be counterproductive to target all modes; for instance, if the purpose of safeguard action is to prevent unemployment, it may not make sense to restrict new investment or to take action against locally established foreign firms. The issues discussed under the previous item may also be relevant.

2. *Situations justifying application. Type of injury.*

13. One view is that we should follow the precedent of Article XIX of GATT 1994 and of the Agreement on Safeguards. The determination of whether increased imports have caused or are threatening to cause serious injury to domestic industry should be made by employing, *mutatis mutandis*, the rules provided for in Article 4:2(a) and 4:2(b) of the Agreement on Safeguards:

- "(a) In the investigation to determine whether increased imports have caused or are threatening to cause serious injury to a domestic industry under the terms of this Agreement, the competent authorities shall evaluate all the relevant factors of an objective and quantifiable nature having a bearing on the situation of that industry, in particular, the rate and amount of the increase in imports of the product concerned in absolute or relative terms, the share of the domestic market taken by increased imports, changes in level of sales, production, productivity, capacity utilisation, profits and losses, and employment.
- (b) The determination referred to in the subparagraph (a) shall not be made unless this investigation demonstrates, on the basis of objective evidence, the existence of the causal link between increased imports of the product concerned and serious injury or threat thereof. When factors other than dramatic increased imports are causing injury to the domestic industry at the same time, such injury shall not be attributed to increased imports."

14. It may be deemed appropriate to substitute the notion of "consumption of foreign services" for "imports" to cover supply through each of the four modes; it would also need to be considered whether references should be to "domestic industry", as above, or to "national industry".

15. The other view is that it is likely to be difficult in the area of services, given the state of statistics, to demonstrate injury and show that it is caused by increased imports.

16. It has also been suggested that any safeguard action should also take into account the wider public interest, and not only industry-specific considerations.

3. *Temporary or provisional measures.*

17. Members seem to agree that any safeguard measure must be temporary. There is also a view that any safeguard measure should be progressively liberalized during the period of application. Article 7 of the AS dealing with Duration and Review of Safeguard Measures may be relevant. This provision contains detailed rules on the length of time for which safeguard measures might be applied, and the interval that must elapse before a new safeguard measure may be introduced on a product that has previously been the subject of safeguard action.

18. With regard to provisional safeguard measures, it may be useful to consider Article 6 of the AS which permits the adoption of such measures in “critical circumstances where delay would cause damage which it would be difficult to repair ... pursuant to a preliminary determination that there is clear evidence that increased imports have caused or are threatening to cause serious injury”.

4. *Applicable procedures. Investigation of injury. E.g. statistics, income-tax and VAT declarations, growth of the bound sector.*

19. No detailed views have been expressed, but it seems obvious that an investigation would be required. Article 3 of the Agreement on Safeguards dealing with investigation may be relevant. This provision stipulates that a safeguard measure may only be applied following an investigation, and prescribes the procedures that must be followed.

5. *Applicable measures. National treatment and non-discrimination principles.*

20. There has been limited discussion of measures. There would seem to be agreement that safeguard action should only be applied to the extent necessary to prevent or remedy serious injury and to facilitate adjustment, as is required by Article 5 of the AS. Safeguard action could take the form of temporary market access restrictions or temporary suspension of the national treatment principle. It is also conceivable that safeguard action may involve the temporary suspension of other obligations, such as those arising from additional commitments undertaken under Article XVIII. While it has been suggested that measures could also take the form of foreign exchange restrictions and limitations on the movement of capital, this may raise questions of consistency with GATS Article XI.

21. Some of the issues discussed under other items, such as those pertaining to the modal application of safeguard action, are also relevant.

6. *Periods of application or time-limits.*

22. See the discussion under item 3 above.

7. *Transparency.*

23. Members have emphasized the need for transparency but no specific discussion has taken place. The elements of the AS which are relevant include Article 3 on Investigation which requires public notice to interested parties, public hearings and publication of findings; Article 12 on Notification and Consultation which requires notification to the Committee on Safeguards at each stage on initiation of an investigation, finding serious injury, and taking a decision to apply measures, as well as giving Members with substantial export interest in the product an opportunity for prior consultations; and Article 13 on Surveillance which establishes the Committee on Safeguards with responsibility *inter alia* for monitoring the implementation of the AS.

8. *Notifications.*

24. Members agree that there should be advance notification. Article 12 of the AS dealing with Notification and Consultation, mentioned above, may be relevant.

9. *Special and differential treatment.*

25. Some Members have suggested that there should be special and differential treatment for developing countries. Article 9 of the AS dealing with Developing Country Members may be relevant. This provision stipulates that safeguard measures shall not be taken against a product originating in a developing country Member as long its share of imports of the product concerned in the importing country does not exceed certain threshold levels. The provision also allows developing countries greater flexibility with respect to the length of time for which safeguard measures might be applied, and the interval that must elapse before a new safeguard measure may be introduced on a product that has previously been the subject of safeguard action.

Working Party on GATS Rules

DRAFT

**REPORT OF THE WORKING PARTY ON GATS RULES
TO THE COUNCIL FOR TRADE IN SERVICES**

1. The Working Party on GATS Rules held five formal meetings in 1998. In each meeting, the Working Party considered all three negotiating mandates: emergency safeguard measures under Article X, government procurement under Article XIII and subsidies under Article XV.

Negotiations on emergency safeguard measures under Article X of the GATS

2. Differing views have been expressed by Members with regard to the desirability of developing an emergency safeguard mechanism under the GATS. Substantive discussions are continuing on the subject without prejudging the position of any delegation in respect of the desirability, feasibility or form of any possible emergency safeguard mechanism.

3. In recent meetings, the Working Party has focused on four key questions identified by the Chairperson in an informal note (dated 3 June 1997): (i) On whose behalf would emergency safeguard action be taken? (ii) In what circumstances would emergency safeguard action be taken and what would be the purpose of such action? (iii) What approach should be adopted in respect of injury/adverse effects, and the relevant causal link between injury/adverse effects and commitments under the GATS? (iv) What measures would be taken under the emergency safeguard mechanism? Are some measures deemed more suitable than others?

4. The delegation of Hong Kong, China, made a submission suggesting some broad principles that might be included as part of any safeguard mechanism (circulated as S/WPGR/W/26). The Chairperson circulated an informal note (dated 16 September 1998) containing responses, not necessarily agreed, to the above four questions. The questions raised in this note were discussed during an informal brainstorming session on 1 October 1998 and in subsequent meetings. The delegation of Venezuela made an informal submission (dated 14 October 1998) listing issues for the organization of future discussions on emergency safeguards. The Secretariat prepared a paper (S/WPGR/W/27) describing, first, alternative forms that a safeguard mechanism under the GATS may take and then elaborating on the list of issues identified in the submission from Venezuela.

Negotiations on government procurement under Article XIII of GATS

5. Costa Rica submitted a response to the questionnaire on national procurement regimes (S/WPGR/W/11/Add.22), adding to the twenty-one responses received during 1997. An indicative tabulation relating questionnaire responses to possible elements of multilateral disciplines, presented in a note from the Chairperson (dated 21 February 1997), has formed the basis for a structured consideration of these elements. In recent meetings, discussion has focused on the scope and coverage of any disciplines on government procurement on the basis of a non-paper submitted by the European Communities and Their Member States (dated 13 February 1998). In this context, the issue of how concessions should be treated has received particular attention. Members have emphasized

the need for the Working Party to continue to coordinate work with the Working Group on Transparency in Government Procurement .

Negotiations on subsidies under Article XV of GATS

6. Delegations expressed the need to continue the technical analysis of subsidies related to trade in services. To this end the Secretariat prepared a note presenting information on the subject contained in WTO Trade Policy Reviews (circulated as S/WPGR/W/25). The Chairperson circulated an informal note (dated 3 April 1998) to facilitate identification of the circumstances in which subsidies may cause trade distortions. Discussion on the relevant conceptual and legal issues is continuing even as efforts are being made to advance the information exchange.

Working Party on GATS Rules

Original: Spanish

COMMUNICATION FROM COSTA RICA

Reply to the Questionnaire on Government Procurement of Services

Addendum

The following communication is being circulated at the request of Costa Rica to members of the Working Party on GATS Rules.

I. EXISTING PROCUREMENT REGIMES

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

In Costa Rica, government procurement covers all contracting activities conducted by public entities. This includes not only procurement of all types of goods and services, but also the construction of public works, concessions for government facilities, public services management concessions, public works concessions (governed by a special law) and the sale and leasing of government property.

Administrative structure

2. How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

Each institution administers its own procurement activity. Only in the case of the Executive are the activities centralized in one unit, the National Supply Unit of the Ministry of Finance, although a plan for the decentralization of the Ministries is currently being introduced.

Laws and regulations in force

3.(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

With respect to government procurement, Article 182 of the Constitution stipulates that:

"Public works contracts concluded by the State, the municipalities and the autonomous institutions, procurement using funds from such entities, and the sale or lease of goods belonging to them shall be put out to tender, in accordance with the law as to the amount concerned."

The laws enacted in the light of the above constitutional provision are: the Law on Government Procurement (Law No. 7494 of 2 May 1995) which came into force on 1 May 1996, and the Regulation to the Law on Government Procurement (Executive Decree No. 25038-H), published in the Official Journal of 28 March 1996.

This Law on Government Procurement governs the procurement activities of:

- Executive organs;
- the Judiciary;
- the Legislature;
- the Supreme Court of Elections;
- the Office of the Comptroller-General of the Republic;
- the Office of the Ombudsman;
- the decentralized territorial and institutional sector;
- public enterprises (the majority of whose share capital is not in private hands);
- non-State public entities with more than 50 per cent public financing.

Other laws relating to procurement by public entities are:

- Organic Law of the Central Bank of Costa Rica, Article 171 of which regulates the procurement activities of State commercial banks and the Central Bank itself. According to this Article, each bank must issue its own procurement regulations, which must be approved by the governing board and by the Office of the Supervisor of Financial Entities;
- Municipal Code as regards certain regulations, in particular those concerning the sale and donation of municipal property;
- General Law on Public Works Concessions and the Regulations thereto, which regulate public works procurement;
- National Emergency Law, which regulates the action to be taken when a national state of emergency is declared;
- Law on Labour Corporations and Regulations thereto, developed to facilitate the shifting of personnel from the public sector to the private sector for the performance of auxiliary services;
- Law on Hydrocarbons and Regulations thereto, which regulate the procedures for granting concessions for mining and extraction of hydrocarbons;
- Law on Passenger Transport against Payment, which establishes the procedures for granting concessions in that sector and in the taxi transport sector;
- Precedents established by the Office of the Comptroller-General of the Republic, which is the administrative entity responsible for issuing guidelines for the interpretation of regulations in that area.

3.(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

The Costa Rican regime does not distinguish between the procurement of goods and services. The procedures are the same, as are the rules to determine the appropriate procedures.

Procurement procedures applied

4.(a) What procedures are followed in the procurement process?

The procurement procedures applied in Costa Rica are:

- (i) Public or open tender, in which any interested person may participate;
- (ii) tendering by registration, in which any interested person may submit a bid whether invited to do so or not provided that person appears in the register of bidders held by each institution at the time of opening of the tender;
- (iii) selected tendering, in which, as in the case of tendering by registration, any interested party appearing in the register of bidders prior to the opening of the tender may submit a bid, whether or not directly invited to participate;
- (iv) single tendering, under which the government may directly select the bidder after examining the prices and sometimes considers only one supplier;
- (v) Auctioning, essentially an oral procedure used for the sale or leasing of government property.

4.(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

The use of tendering procedures depends on the ordinary annual budget of the institution concerned and the estimated value of the specific transaction. The public sector is divided into ten categories of entities according to budget. For each category, a threshold is established for the use of open tendering together with the amounts below which each of the other procedures may be used. In certain specific cases, the law expressly indicates that only open tendering may be used.

4.(c) What are the time-limits for the submission of bids?

In the case of open tenders, the time-limit for the submission of bids is 30 working days for public works contracts or contracts involving goods or services that are imported or to be imported, and 15 working days for all other types of goods and services.

In the case of tendering by registration, the time-limit for the submission of bids is ten working days, regardless of the nature of the procurement.

For selective tender procedures, the time-limit is three working days.

No time-limit has been set for single tendering.

In the case of auctioning, the minimum time-limit between the publication of the invitation to tender and the date of the auction itself is ten working days.

In the case of open tenders for public works concessions, the time-limit is 60 calendar days.

Publicity for inviting tenders

5.(a) How are intended procurements publicized? Are invitations to tender published? If so, where, and in what languages?

In the case of open tenders, publication of the call to tender is mandatory in the Official Journal and optional in newspapers with national or international circulation.

In the case of tendering by registration, if there are more than ten registered bidders the government may decide to publish the invitation in the Official Journal or to invite the bidders directly. If there are less than five bidders registered, publication in the Official Journal is mandatory. In either case, the administration may choose to publish the notice of invitation to tender in newspapers with national or international circulation, but not in lieu of publication in the Official Journal.

In selective tender procedures, publication of calls to tender in the Official Journal is not mandatory. As in the case of tendering by registration, notices can be published in national newspapers.

Notices or invitations are published in Spanish, which is the official language.

5.(b) Do the extent and form of publicity differ according tendering procedures applied and/or the value of the procurement?

They do differ - see above.

5.(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

The following details are required to be published in the invitation:

- Identification of the procuring administration;
- type and number of the tender;
- brief but clear description of the procurement;
- identification of the office providing information;
- cost of the tender documentation and where it can be obtained;
- date, time-limit and address for the submission of bids.

5.(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set.

The government may provide the documentation free of charge or may charge for the reproduction of the documents, depending on the procurement and the scope and complexity of the tender conditions.

5.(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

Electronic means have not so far been used to advertise procurement opportunities.

Requirements laid down for possible suppliers**6.(a) Are there registration, residence or other requirements for potential suppliers?**

For certain types of procedures (tendering by registration, selective tendering and single tendering) potential bidders must enter their names in a register in order to submit a tender. However, registration may take place once the proceedings are already underway. As regards residence, there are no requirements except in the case of public works concessions. In Costa Rica, any foreign company may conduct business provided it does so in conformity with the laws in force.

Article 108 of the Law on Government Procurement stipulates that "Each institutional supply agency shall keep a register of suppliers interested in participating in government procurement procedures (...). To enter such registers, potential participants must establish with the administration their natural or legal personality, their nationality, the authority of their representatives and the nature of their intended participation (as direct suppliers or as intermediaries)."

Under Article 5.4 of the Regulations to the Law on Government Procurement, a foreign bidder may participate through a representative of foreign firms. The bidder must so state expressly in the original proposal. Representatives of foreign firms may participate directly on behalf of a third party if they can provide reliable proof of their status as representatives by supplying a certified copy of the representation contract. Moreover, all forms of representation recognized by common law are permitted. The tender conditions set forth the requirements for domestic and foreign bidders to establish certainty with respect to their existence, representation and capital stock.

Finally, it should also be noted that Article 366 of the Commercial Code states that all foreign firms may conduct their business freely in Costa Rica through distributors, concessionaires, agents or factors and representatives of foreign companies, either Costa Rican or foreign, with the exception of agencies and branch offices of foreign companies whose products are made in Costa Rica, which may directly and freely distribute and represent their own products and products of duly certified Central American origin.

For public works concessions, there are specifications for foreign participating countries, which are required, before signing a contract, to submit a declaration sworn before a notary in which they irrevocably undertake to comply with the requirements of Article 8, paragraph 4 of Law No. 7404 which stipulates that: "If the contract is awarded to a foreign legal person, that person must transfer its head office to Costa Rica before signing the contract. If such legal person should decide not to transfer its head office, it must set up a domestic joint stock company in which it has full ownership, to act as a concessionaire. The shares of the concessionaire must be registered."

It is also important to note that according to Article 14 of the said Law, all conditions being equal, priority is given to nationals. This Article states that where a possible concessionaire does not intend to construct the public works directly, but rather to sub-contract the work to another company, preference will be given to bids which indicate that sub-contracted work will be carried out by domestic companies.

The sworn declaration and the contract must be signed by a person authorized to conclude contracts and enter into commitments on behalf of the company, who must prove such status by presenting an authentic act, issued in accordance with the laws of his country of origin and authenticated by the Consul of Costa Rica and the Ministry of Foreign Affairs. The certificate showing that the company has been duly constituted in its principal place of business must also be authenticated through the same channels.

The purposes of the company, whether Costa Rican or foreign, must expressly include the performance of public works concessions. The company is asked to ensure that the social pact defines the social conditions and grants the necessary authority to conclude, perform and comply with the contract in all its details, and assume the legal and economic responsibilities attached thereto *vis-à-vis* the government and *vis-à-vis* third parties. This social pact must extend at least ten years beyond the concession.

6.(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of intended procurement?

The Law on Government Procurement and the Regulations thereto provide for two types of guarantees. The first is a participation guarantee, which may be from 1 to 5 per cent of the amount of the procurement as defined in the tender conditions. This gives the offer legitimacy, and permits any errors that are rectifiable to be corrected. The exact amount is set by the government, and is determined by the complexity of the procurement and the need to protect against any damage that could be caused by breach of contract on the part of the bidder. If the amount has not been mentioned in the tender conditions, the minimum amount mentioned above is applied. The government may also establish a fixed guarantee amount (in cases where the amount cannot be determined or where no expenditure is involved for the government). For further details, see Article 33 of the above-mentioned Regulations.

This guarantee is required for open tendering and tendering by registration, and may or may not be required for the other procedures.

It is also possible to establish a so-called floating guarantee, which backs the same bidder in several tender procedures (Article 34 of the above-mentioned Regulation).

The second guarantee is a performance guarantee, and represents 5 to 10 per cent of the contract amount, as must also be specified in the tender conditions. It is used to compensate for any damages or prejudice attributable to the contractor. If there is a penalty clause for delay, the guarantee may only be enforced if the contractor refuses to cancel the amount in question.

The performance guarantee is required for open tendering and tendering by registration, and is optional for the other procedures. It must be specified in the tender conditions, failing which it is understood to represent 5 per cent. If the tender conditions do not specify the time-limit for providing the guarantee, that limit is understood to be ten working days following the signature of the act. The government may also establish fixed amounts (see Articles 34 and 35 of the above-mentioned Regulation).

Three types of guarantee are required for public works concessions: a guarantee of participation in the open tendering procedure, a performance guarantee for the construction of the works, and a performance guarantee for the operation of the works.

The participation guarantee is intended to ensure the seriousness of the bid until the corresponding public instrument has been signed and the next guarantee deposited. Its value varies from 1 to 5 per cent depending on the amount allocated in the bid to the construction of the new works or to the repair, extension, preservation or renovation of the already existing public works.

The performance guarantee amounts to 5 per cent of the cost allocated in the bid to the construction of the new works, or of the cost of the repair, extension, preservation or renovation of the already existing works. Subject to authorization by the Office of the Comptroller General and to the

conditions expressly set forth in Article 28 of the Regulations to Law No. 7404, it is possible to demand a higher percentage. Unless otherwise indicated in the tender conditions, it is understood that the guarantee must be deposited within 30 working days following the date of the public act to be signed.

The performance guarantee for the operation of the works must be deposited within ten working days following the date of handing over of the works to the full satisfaction of the government. The amount is fixed by the government, and consists of a percentage based on the average annual expenditure deemed necessary to look after, repair and maintain the goods in question.

6.(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

The registers of suppliers do not address aspects such as the financial capability or experience of the enterprise. They contain more general data on potential bidders such as, for example, their address, ownership, representatives and company origin.

These lists must be updated at least once a year, but any interested party may ask to be included in the appropriate register at any time subject to the requirements laid down by the institution concerned.

The financial capability of a firm tends to be evaluated during the review of the bids in conformity with the tender conditions. Article 45 of the Regulations to the Law on Government Procurement stipulates that "The tender conditions must contain at least the following: ... precise indication of the documents to be submitted for the evaluation of the suitability of the bidder from the economic, technical or other point of view when the nature or complexity of the transaction so warrants."

Criteria for assessing bids and awarding contracts

7.(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

Following the criteria indicated in the tender documents, the tender is awarded to the bid which on balance is deemed to be the most suitable.

In the case of open tendering, Article 56, paragraph 2 of the Regulations of the Law on Government Procurement stipulates that the government must study and assess the bids in the light of the conditions and specifications contained in the tender conditions and the relevant regulations. Bidders that fail to meet basic tender conditions or that are in breach of the relevant legal provisions in any significant way are excluded from the procedure. As stated in Article 56, paragraph 3 of the Regulations, bids in which the price is unacceptable must also be rejected.

The Regulations to the Law on Government Procurement (Article 45.1.10) also state that the tender conditions must contain a description of the system for the evaluation and comparison of bids, expressly indicating the factors to be considered, the degree of importance of each such factor in the overall comparison of bids and the method of evaluating and comparing bids in relation to each factor.

Once the bids that are eligible from the legal, financial and technical point of view have been selected, the government proceeds to their qualification, seeking to determine, in accordance with the tender conditions, which bid is most likely to satisfy the public interests pursued.

For tendering by registration and selective tendering procedures, the Regulations state that the government must apply the rules and principles of public tendering, particularly with respect to the conditions governing selection and award, to the extent that they are compatible with each individual tendering procedure.

In the case of public works concessions, the government must appoint an Assessment Commission for each procedure. This Commission is responsible for analysing and evaluating the bids. This involves carefully checking the bids against the conditions and specifications contained in the tender documents and comparing in accordance with the methodology defined therein. The rejection of bids on the grounds that they are not in line with the estimates reached by the government in previous studies is prohibited.

The analysis should make it possible to establish which bid or bids are most conducive to the general interest bearing in mind the nature of concessions and the particular characteristics of the works or services concerned.

Substantive criteria such as the price of the goods or services, quality, the supplier's record, after-sales service or any other element considered in the award must be duly indicated in the tender conditions, which must specify the criteria used and the weight given to each one of them.

7.(b) Is procurement subject to any offset provisions, such as local content, technology transfer or counter-trade requirements?

There are no offset measures.

7.(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

No preference is given to any particular enterprises or group of enterprises. One of the underlying principles of government procurement in Costa Rica is the principle of non-discrimination.

7.(d) Do the procurement criteria differ according to sector or region of the economy?

There is no difference according to sector or region of the economy.

7.(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

The extent of discretion consists simply in the possibility of defining the factors and parameters which form the system of qualification for a particular tender and their weight or influence in a specific case. Once this has been defined, the government no longer has any discretion, since a properly- structured and well-balanced evaluation system must inevitably lead to the selection of the best bid, which is the one that achieves the highest rating.

Disclosure of bids received and contracts awarded

8.(a) How are tenders received, registered and opened?

Tenders are received by the office responsible for conducting the procurement proceedings (usually the supply department of that office) up to the established time-limit for submission, in a sealed envelope. Once the time-limit has elapsed, the envelopes are opened, in the presence of the interested parties and their representatives if they so wish. An official record is drawn up known as

the Tender Protocol, containing a confirmation of the bids received, a description of their basic aspects and such observations as may be made by those present.

8.(b) Are entities required to publish details of contracts awarded and/or notify unsuccessful tenderers?

In Costa Rica, the responsible institutions are required to inform the participants (not only the successful tenderer) in a particular procurement procedure of the results of the tender through the same channels used to transmit the invitation to tender. In other words, if the invitation was published in the Official Journal, the award must also be published in the Official Journal; if, on the other hand, the invitation was transmitted directly, the award is also communicated directly.

8.(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

There is no obligation for the government to communicate or publish the reasons why a bid was rejected or why it was not selected in a particular case. However, the interested parties may learn of the reasons by consulting the administrative file of the case, which is open to the public.

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of "domestic" in relation to domestic services and suppliers.

Most-favoured-nation treatment

In Costa Rica, the most-favoured-nation principle is applied to all legislation in the field of government procurement, subject to the following reservations and observations:

- (i) *The most-favoured-nation principle is subject to the principle of reciprocity.*

Article 5 of the Law on Government Procurement states that as a matter of general principle, government procurement procedures shall respect the principle of equality of participation of all potential bidders. It also states that the Regulations to the Law and the provisions governing the specific procedures for each case shall not include any rule that hinders free competition between potential bidders.

According to this same provision, the participation of foreign bidders is governed by the principle of reciprocity, according to which they are treated in the same way as Costa Ricans are treated in their country of origin. Article 5 of the Regulations to the Law stipulates that foreigners shall be denied participation advantages if Costa Ricans are not granted such advantages in the bidder's country of origin. In order to help to establish this reciprocity, the Law stipulates that the government may request a potential bidder to provide proof of any aspects it deems relevant as a condition for participating in the tender.

- (ii) *Most-favoured-nation treatment with respect to the selection of bids is granted for the countries of Central America and Panama in the case of goods, and to Mexico in the case of services. This is done pursuant to agreements concluded with those countries*

and without prejudice to the application of the most-favoured-nation principle to other countries with which reciprocity can be demonstrated.

Article 12 of the Industrial Production Incentives Law (Law No. 7017 of 16 December 1985) states that "in any procurement by the Government of the Republic, autonomous institutions, semi-autonomous institutions, municipalities or any other official entities, preference shall be given to products manufactured by the domestic industry where the quality is comparable, the supply adequate and the price equal to or less than that of imported goods."

This provision also applies to the countries of Central America pursuant to Article III (establishing the principle of national treatment) of the General Treaty on Central American Economic Integration, and to Mexico pursuant to Article 12.4 (National Treatment and Non-Discrimination) of the Free Trade Agreement between Costa Rica and Mexico (Law No. 7474 of 20 December 1994) and Panama, pursuant to Article 12 (National Treatment) of the Free Trade and Preferential Exchange Agreement (Law No. 5252 of 31 July 1973).

Similarly, where there is proof of reciprocity, the law permits the granting of national treatment to countries which apply that principle to bids from Costa Rica.

(iii) *An exception is made to the principle of national treatment in the case of the subcontracting of domestic construction companies when the bidder for a public works concession does not plan to build the works itself.*

In such cases, as will be seen, preference is given to domestic construction companies. Article 14 of the Law on Public Works Concessions states that in the selection of a concessionaire, where the potential concessionaire does not intend to build the public works itself preference will be given to bids which indicate that the work will be done with subcontracted domestic enterprises.

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

In Costa Rica there are two possible procedures for challenging an award: remedy of review and appeal. The two remedies are mutually exclusive, and no distinction is made between nationals and foreigners with respect to their use. In other words, the national treatment and most-favoured-nation principles are fully applied. The choice of remedy depends on the amount of the challenged award and the budget of the institution that organized the tender. There is also a difference in the amount required to appeal public works contracts and other contracts.

Remedies of review and appeals must be submitted in writing and must contain the reasons for the appellant's challenge together with the relevant evidence, signed by the legal representative of the challenging bidder.

Either of the remedies has a suspensive effect on the award.

If the amount of the challenged award does not warrant an appeal, the challenging party should file a remedy of review. This remedy should be filed with the institution that organized the tender, which is responsible for hearing and settling the case.

The remedy must be filed within five working days following the communication of the award, and is notified to the successful bidder. Following such notification, there is a time-period of 15 working days to settle the case.

Appeals are submitted to the Office of the Comptroller-General of the Republic within ten working days following the publication of the notice of award in the Official Journal. The Office of the Comptroller must grant the parties concerned at least two hearings, and must resolve the appeal within a period of 40 working days, extendable by 20 additional working days where necessary to collect evidence that could not be obtained within the initial time-limit.

In the case of both remedies of review and appeals, the final decision marks the exhaustion of administrative remedies, and may only be reviewed through judicial channels.

II. MEMBERSHIP OF PLURILATERAL, REGIONAL AND/OR BILATERAL AGREEMENTS

11. Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.

Yes, Costa Rica is party to the General Treaty on Central American Integration, Article 3 of which establishes the applicability of the principle of national treatment with respect to goods.

Similarly, the Free Trade and Preferential Exchange Agreement with Panama (Law No. 5252 of 31 July 1973) contains a provision (Article XII) on national treatment with respect to goods.

Finally, the Free Trade Agreement concluded between Costa Rica and Mexico (Law No. 7474 of 20 December 1994) contains a chapter specifically devoted to government procurement (Chapter XII).

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12.(a) Please provide statistics (if available) on the number and value of services procurement:

- **On both an aggregate and sectoral basis;**
- **by origin of services and suppliers.**

12.(b) Please provide statistics (if available) on the:

- **Share of services procurement in total procurement;**
- **share of procurement of each service in total domestic output of the service;**
- **share of procurement of each service in total domestic consumption of the service.**

Updated statistical information will be supplied to the WTO Secretariat at a later date.

Working Party on GATS Rules

COMMUNICATION FROM HONG KONG, CHINA

Emergency Safeguard Measures:
A way forward on the Possible Principles

The following communication is circulated at the request of Hong Kong, China to Members of the Working Party on GATS Rules

Background

1) The purpose of this paper is to suggest some broad principles Members might wish to see included as part of an Emergency Safeguard Measures (ESM) agreement or mechanism. The paper does not seek to pre-empt any decision on whether or not an ESM is necessary. Nor does it suggest that work should not be undertaken in parallel to examine the very real practical problems there would be in introducing an ESM.

Broad Based Principles

2. The idea behind this paper is that it should be possible to consider, separately from the issue of whether or not Members support an ESM in GATS, many of the basic principles that would need to be included in any ESM. These principles are drawn from existing WTO Agreements, noticeably the GATT Safeguard Agreement. The ideas are also taken from a previous paper for the WP on GATS Rules submitted by Hong Kong, China (HKC) and circulated as S/WPGR/W/18 on 16 May 1997.

3. It is suggested that there are, at least, nine key principles we should discuss, as set out below. We have noted in brackets the linkages we see between several of the principles and the four questions posed by the Chairman.

General Principles

- (i) an ESM should be applied on an **MFN** basis;

- (ii) an ESM should represent the **minimum measure** necessary to adopt in order to tackle the problems arising from an emergency situation;
- (iii) an ESM should be **time-bound** and should be removed as soon as circumstances return to normal;
- (iv) there should be **sufficient advance notice** to inform other Members of the proposed ESM action;
- (v) Any ESM Agreement would **be subject to Article XXIII** (dispute settlement);

Operational Principles

- (vi) initiation of an ESM should be based on **objective and well-defined criteria**. (Q.2 - under what circumstances);
 - (vii) the measure to be taken under the ESM should be **clearly specified** (i.e. the remedial action to be taken). (Q.4 - what measures);
 - (viii) the relationship of the proposed ESM to the **public policy concern** which it is seeking to remedy should be spelt out. (Q.1 and Q.2 - on whose behalf and under what circumstances);
 - (ix) it should be clearly shown that a proposed ESM will **remedy the injury identified**. (Q.1 and Q.3 - on whose behalf and concept of injury);
4. As regards (i), this is, it is hoped, not a matter that needs further elaboration.
 5. As regards (ii), it will be necessary to ensure that any ESM is not open to abuse and only does the minimum necessary to tackle the problem. Deciding relevant reference points could however be problematic, in view of the four modes of supply and - arguably - the faster rate of change inherent in many services industries compared to goods. Thus reference to the average level of employment / market penetration / imports etc. over the previous three years (as in the GATT Safeguard Agreement), might not be appropriate.
 6. As regards (iii), as a principle it seems clear the ESM would need to be time bound.
 7. As regards (iv), it will be necessary to establish some detailed rules about advance notice of the various key stages of an ESM action, including the need to afford adequate opportunity for prior consultation with affected parties. Consideration will also need to be given to the idea of a provisional ESM. But as a concept the idea of sufficient advance notice appears sound.
 8. As regards (v), that the ESM be subject to the Article XXIII should, it is hoped, be not a matter of controversy.
 9. As regards (vi), while it may be very difficult to identify the criteria in some of the services areas, it seems only reasonable and logical that such should be **objective and well defined**. It is suggested that they need not be standard across the board criteria (e.g. "a 20% drop in profits/sales/employment"). But whatever criteria are cited, they should be objective and well defined.

10. As regards (vii), it will surely be necessary to set out clearly what measures are proposed to counter the perceived problem. It is only through such that (other) Members or a Panel will be able to gauge the appropriateness and balance of the measure.

11. As regards (viii), it is suggested that the Member initiating the ESM should spell out clearly what the public policy concern it is seeking to address is. This type of principle is suggested because the nature of an emergency situation in services could be very different from those encountered on the goods side. Emergencies in goods are limited to a product and domestic industry producing like or directly competitive products. In services the position may not be so clear cut.

12. As regards (ix), given the four modes of supply and the, possibly, less direct relationship between the cause and effect in services than in goods, it is suggested that a Member initiating an ESM should be required to show that the measure proposed will indeed remedy the problem.

13. With the above as the basic principles, any emergency safeguard agreement should be on a sound footing. In addition to discussing the above, we also need to conduct further discussions on the detailed operation of the principles.

Working Party on GATS Rules

SUBSIDIES FOR SERVICES SECTORS

INFORMATION CONTAINED IN WTO TRADE POLICY REVIEWS

Background Note by the Secretariat

I. INTRODUCTION

1) Government assistance for individual economic activities may be granted in many different forms and for a variety of purposes. Responding to a request by the Working Party on GATS Rules (WPGR), this Note presents some empirical evidence, based on 31 WTO Trade Policy Reviews, of subsidy programmes for services sectors.¹ The Note thus focuses on a particular policy instrument - financial support - whose use may be accompanied by a variety of other measures, such as regulated prices and access conditions.

2) Given the dearth of empirical information, TPR reports have not always been able to identify the interaction of such measures in individual cases or gauge their relative importance. Similarly, it has proven difficult to detail the underlying objectives of various programmes which, for instance, may be social in nature or be informed by industrial policy considerations. (A particular support scheme may be intended mainly to improve consumer welfare, upgrade sectoral performance, enhance overall economic efficiency, or simply shield vulnerable domestic suppliers from import competition.) Given the infrastructural importance of many services sectors and their rôle as generally available inputs, it could be misleading in individual cases to equate the recipients, e.g. railways, with actual beneficiaries which may include any social or economic group relying on rail transport.

3) Although this Note is based on all Trade Policy Reviews conducted since 1995 under the aegis of the WTO, it cannot claim to give a representative picture. First, the selection of countries for review does not reflect any analytical purposes,

¹ Pursuant to the TPR's mandate, the four largest entities in world trade are to be reviewed every two years. The European Union was thus covered twice during the relevant period.

but the country schedule established by the Trade Policy Review Body. Second, coverage and content of reports are largely determined by the availability of data, which in turn depends on government co-operation, as well as the Secretariat's assessment of country-specific review priorities at the time of drafting. The fact that some reports do not include subsidy-related information, therefore, does not necessarily point to the absence of such schemes in the countries concerned. Nevertheless, the TPR reports can be considered a reasonably comprehensive source of information in this area. They normally take into account not only material provided by national governments, but any additional information deemed relevant, including reports by international organizations or academic research papers. The factual accuracy of the individual reports has been checked by the country under review. The Secretariat is not aware of any other mechanism which would subject a similarly wide range of countries, regardless of geographic location and level of development, to independent review.

II. CONCEPTS AND DEFINITIONS

4) *The subsidy definition generally used for Trade Policy Reviews is based on the definition established by the WTO Agreement on Subsidies and Countervailing Measures. Accordingly, subsidies are deemed to involve a financial contribution by governments or public bodies which confers a benefit. The TPR reports thus cover assistance granted in the form of direct transfers of funds, including grants, loans and equity infusions; potential direct transfers of funds or liabilities, e.g. loan guarantees; government revenue foregone; supply of goods and services other than general infrastructure; purchase of goods; payments to funding mechanisms; or income and price support.*

5) *The application of this definition to services producers has not appeared to pose problems in principle. However, it may prove difficult in many services areas to identify the ultimate beneficiary of a subsidy, given that support may have been destined for downstream users rather than the immediate recipient. Moreover, some measures may have been intended primarily to promote public policy or infrastructural objectives.² The resulting ambiguities, in turn, could affect cross-country comparability.*

III. POLICY PATTERNS

6) *Available evidence suggests that WTO Members tend to concentrate their services-related subsidies on four sectors: audiovisual services, air and maritime transport, tourism, and banking. Of the 44 countries (including the individual EU member States) which have been reviewed under WTO provisions, at least 17 have aided their audiovisual industries; 14 have sought to promote investment in their hotel and tourism sector; 13*

² For example, the provision of basic health services may be ensured through: (a) cost-free treatment in state-owned hospitals; (b) the extension of public funds to commercially independent hospitals; or (c) government-sponsored premiums for basic health insurance. While conferring the same benefits to the same target group, such measures might be defined, respectively, as the provision of infrastructural services, subsidies for the health sector, social transfers and/or subsidies for insurers.

have supported their national airlines and a large number seems to have subsidized maritime transport (Table). At least 10 Members have assisted their offshore banking sector or rescued ailing domestic banks. It is worth recalling, however, that these findings may be influenced by the reports' focus on sectors where politically or economically important developments are under way.³

7) A closer look at the Table also reveals certain country-sector clusters. While the development of audiovisual industries has proved an important concern for several industrial countries (including Canada and EU Member States), programmes for hotel and other tourism sectors are being operated mainly in developing countries. Possibly reflecting fiscal constraints, these programmes rely mainly on tax holidays and other fiscal advantages and do not normally provide for actual disbursements.

8) Support schemes for transport and financial services seem to exist across the full spectrum of WTO members. A number of initiatives may have been ad hoc in nature, driven by the perceived need to prevent the imminent collapse of large banks, rather than the result of longer-term policy planning. Reflecting the emergency character of many aid packages for banks, governments have frequently resorted to equity injections and, at least on a temporary basis, acquired shares. By contrast, support policies favouring national airlines or shipping companies have more often relied on tax incentives.

³ As a general feature, it appears that areas such as telecommunications, financial or audiovisual services have been reviewed in more detail than, for example, rail or road transport and professional services.

Subsidies for individual services sectors - information from TPR Reports, 1995 to 1997

ANNEX

Content of Individual Trade Policy Reviews

The content of this Annex is directly taken, with some minor editing, from individual TPR reports published since January 1995. All references deal with subsidy programmes, past or present, for individual services sectors. Not included is information on generally available subsidies, for example in the context of regional development or research programmes, and company-internal cross-subsidization between monopoly and market-oriented activities in sectors such as telecommunications.

(i) Costa Rica (1995)

*Since 1985 fiscal incentives, available to **hotels, air and water transport, tourist agencies** and **car rental** companies, have been granted. The extent of the incentives depends on the balance-of-payments situation, the utilization of domestic inputs, the impact on employment and regional development, etc.*

Since 1985, incentives for tourist development have been granted on the basis of tourism contracts between the Costa Rican Tourist Institute and interested companies. These must be engaged in tourism-related activities and meet specific criteria ... In 1992, the fiscal incentive consisting of the deduction from the revenue tax up to an amount equivalent to 50 per cent of the sum invested in shares of any company having concluded a tourism contract, was suppressed. At present firms engaged hotel services, water and air transport of tourists, tourism activities and car hire and which have concluded a tourism contract benefit to different extends from certain permanent incentives which include tariff and internal tax concessions, reductions on equipment and parts, and accelerated depreciation of assets.

(ii) Côte d'Ivoire (1995)

*Since 1959, the Investment Code had ... granted **hotel companies** particularly advantageous tax conditions.*

(iii) Mauritius (1995)

*Like other industries eligible for tax incentives, **hotels** benefit from a 15 per cent corporate tax rate and dividends are tax free for ten years from the start of operations. A one-time exemption of customs duties on the importation of approved equipment is permitted to holders of hotel development certificates. ... Tour operators and car rental agencies are granted a 60 per cent duty concession on air-conditioned buses. The Development Bank of Mauritius offers concessional interest rates on loans for the construction or upgrading of hotel facilities. **Shipping companies** are exempt from corporate tax; the crew pays no income tax and there is no import duty on the purchase of ships. The Mauritius Shipping Corporation has reserved freight and passenger shipping between Mauritius and Rodrigues to a State-owned ship; rates are subsidized to ensure that prices of goods destined for Rodrigues are not inflated by high transport costs.*

*Offshore **banks**, for which legislation came into force on 1 January 1989, are not subject to Mauritian Export Service Zone enterprises, which must have 70 per cent local*

participation, include such services as accountancy, law, medicine, international marketing, quality control, preshipment services, civil engineering, re-insurance, trans-shipment and entrepôt trade. The incentives mainly consist of duty exemptions on imported equipment, ...

As part of its diversification strategy Mauritius has also developed a legal and regulatory infrastructure for offshore activities, defined as those that do business with non-residents and in foreign currencies. These include **offshore banking** and **other financial services**, e.g. insurance, **fund management**, [aircraft] **leasing** and **international data processing**. ... Offshore businesses pay no taxes, although they may elect to do so, and their non-resident staff are entitled to a 50 per cent income tax credit. Office equipment may be imported duty free.

(iv) Sri Lanka (1995)

Ample incentives are available to firms exporting a majority share, typically 90 per cent, of their production. The sectoral focus is on areas such as **tourism** and other services industries ... Specific incentives such as income-tax concessions are available in selected sectors, subject to minimum commitments.

(v) Thailand (1995)

The investment incentives offered by the Board of Investment (BOI) are applicable to a significant number of services activities, including aspects of **tourism** and transport services. BOI investment incentives are offered to the tourism industry for hotel projects with 100 or more rooms, provided they are located in Zone 2 or 3, and such tourist promotion services as ocean marinas and tour boats. BOI investment incentives are also available for such transport-related activities as international **maritime transportation**, **air transportation services** and **pipeline transport**. [An Annex Table lists the following services as eligible for investment promotion: Mass transit systems; communication services via satellite; telephone services; pipeline transport, cable car services; international maritime transportation; loading/unloading facilities for sea transport; ferryboat or high-powered ship services; tourist promotion services; air transportation services; hotels; disinfection services for products or produce; refuse, industrial waste, or water disposal services; transportation of hazardous chemicals; educational institutes or vocational training centres; hospitals; Thai motion picture production or related services.]

(vi) Uganda (1995)

Transportation, construction, telecommunications, banking and **tourism** are listed as priority areas under the Investment Code [foreign investments in these sectors are eligible for tax holidays, duty drawbacks and the free transfer of funds.]

(vii) Brazil (1996)

A Participation Scheme operated by the National Development Bank (BNDESPAR) has the basic function to provide financial resources, through equity participation, to priority projects agreed with enterprises. Its equity participation is deemed to be temporary and in all cases to cover only a minority share. In May 1996,

*BNDESPAR's portfolio was estimated at US\$7 billion, covering more than 162 enterprises mainly in electricity, petrochemicals, pulp and paper, **commercial banks** and mining. There are individual programmes for ... development of **capital markets, commerce***

(viii) Canada (1996)

*Financial support for **cultural services**: ... grants provided by federal and provincial governments amounting to Can\$5.8 billion, or slightly less than 1 per cent of GDP, in fiscal year 1993/94. Over half of total federal spending on culture is destined for broadcasting, benefiting in particular the 59 radio and 31 television stations operated by the Canadian Broadcasting Corporation (CBC). The Federal Government also funds Telefilm Canada and the National Film Board, two State-owned institutions mandated to promote production and distribution of Canadian films.*

Government spending on culture and national heritage, FY 1993-94

Note: Figures may not add up to totals due to rounding....Not available.

a Includes estimated expenditure of school libraries.

bIncludes expenditure that cannot be broken down by function, such as financial support for cultural facilities, centres, festivals, municipalities, cultural exchange programmes and arts organizations.

c Includes expenditure related to heritage cultures.

dIncludes only grants and contributions by Human Resources Development Canada related directly to training and employment development in the cultural sector.

e Includes inter-governmental transfers of about Can\$351 million.

(ix) Colombia (1996)

The Foreign Trade Bank of Colombia (BANCOLDEX) provides credit facilities, in pesos or U.S. dollars, on preferential terms for firms operating in the free zones, including **tourism** zones. These credits are intended to cover fixed investment, technology or infrastructure projects. The amount of credit can be as much as the net value of exports for a period not exceeding 10 years. Grace periods vary from 2 to 5 years. Interest for loans in pesos is set at the prevailing rate for fixed-term deposits.

A new tourism law is under preparation. ... This programme is to include the establishment of a Tourism Promotion Fund, fiscal incentives, etc. as well as the opening of promotion offices abroad. Since 1994 tourism-related free zones have been created as an incentive to attract investment to the sector.

(x) Czech Republic (1996)

Support in the form of grants and interest subsidies is given by the Energy Agency, acting on the authorization of the Ministry of Industry and Trade, for ... **energy advisory services**.

The central Government provides grants and interest subsidies for the operating losses of the State **railway**, subsidies to **bus companies** in respect of concessionary fare schemes, and subsidies to the national **airline** covering interest costs of the leasing of technical equipment. These subsidies amounted to K_ 5.77 billion for rail transport,

K 1.24 billion for road transport and *K* 0.16 billion for air transport. Some of these subsidies will be gradually eliminated, in accordance with price deregulation, and the air transport subsidies are expected to be eliminated at the end of 1997.

Revenue from privatization is used to subsidize interest on loans for the privatization of **health care** facilities (except pharmacies). •Health• loans are granted at interest rates some six percentage points below the commercial rate, and for an eight-year term rather than the four-year term common in Czech commercial lending.

(xi) Dominican Republic (1996)

Since the structural reform programme began in 1990, there have been no specific sectoral incentives for enterprises in the services sector, except that, under special contracts with the Government, enterprises providing **telecommunication services** are exempt from tax on profits.

(xii) El Salvador (1996)

No reference to government assistance for services sectors.

(xiii) Republic of Korea (1996)

The Small Business Administration (SBA), established in February 1996, provides technical advice, assists in labour supply, grants financial support, aids rural SMEs and helps to modernize **distribution**.

(xiv) Morocco (1996)

According to several publications, the [investment] codes grant exemptions from customs and taxes on imported capital goods, loans on preferential terms and special advantages for the acquisition of land for the construction of **hotels**. It has also been decided recently to reschedule the debt of hoteliers and reduce VAT in the sector. The Government grants a reduction of interest rates on certain credits for investment in the sector and spends approximately 150 million dirhams yearly in promoting tourism.

An offshore finance market has been established in Tangier for banks and companies dealing in portfolio management and acquisition of holdings. ... Offshore **banks** are exempt from registration fees and stamp duty on the official documents establishing their charters, increase in capital and acquisition of business premises. They are also exempt from VAT on capital goods and equipment necessary for their activities and from import duties and taxes on equipment, moveable property and capital goods needed for their operations. Dividends distributed to shareholders, interest on customer deposits and investments, and interest on loans from offshore banks are also exempt from all charges.

(xv) New Zealand (1996)

The Government has assumed responsibility for that portion of the debt resulting from refinancing of the NZ **Railways** Corporation (NZRC) ... In 1990, the Crown

accepted responsibility for loans totalling \$1.1 billion; NZRC, which owns leases for railway tracks and is not engaged in rail operations, remains under Crown ownership.

Traditionally, the Government was directly involved in most areas of **insurance**, often through government-backed mutual and life insurance funds.

(xvi) Norway (1996)

In 1991, to stem the [banking] crisis, the Government established the Government Bank Insurance Fund and, through successive capital injections from this and the Government Bank Investment Fund, became sole or majority shareholder in the three largest **commercial banks**. ... The total value of bank support during the period 1989 to 1993 amounted to some NKr 30 billion, or somewhat under 5 per cent of annual GDP; capital injections during the period 1991-93 from the Insurance Fund alone totalled some NKr 16.2 billion. The authorities estimate that they will be able to recover at least the major part of the public support by re-privatization of the banks temporarily taken over by the State, and from the proceeds of the assets absorbed. [Wilse (1995) notes that •The Government and the Storting have stated that the activities of [the Insurance Fund] shall be of limited duration. The Fund's varying participation in the banks either directly or through the banks• own guarantee funds must be gradually phased out once the banking crisis is behind us and deposit insurance can again be based on capital generated by the banks. •]

In order to facilitate the recruitment to the Norwegian fleet, a tax reimbursement scheme was introduced in 1993. Parliament allocated NKr 340 million to the scheme for 1995. The scheme is subject to a number of constraints, the main one being that the **shipping** industry should also contribute an equivalent amount. The tax reimbursement scheme applies to seafarers employed on ships registered in the ordinary Norwegian register, NOR, and who are liable to Norwegian taxation. It also encompasses seafarers on ships in the NIS register if the entire mandatory crew is subject to Norwegian taxation.

The principal subsidy schemes to support Norwegian culture in the **audiovisual sector** are subsidies for the production of films and television programmes and licence fees to the Norwegian Broadcasting Corporation, the main public service broadcaster. ... Subsidies to films are awarded in the form of grants, on the basis of applications. Grants are primarily intended for the production of feature length films and documentaries of special value. In principle, only independent film producers may submit applications for grants. The producer must finance at least 10 per cent of the total production costs. The total sum granted in 1995 was NKr 160 million. ... The two other modes of support for Norwegian feature film are production support and box office bonuses. Production support is awarded selectively and is intended principally to provide a source of funding for films of artistic aspiration.

(xvii) Singapore (1996)

The Approved **Aircraft Leasing** Scheme administered by the Trade and Development Board, was introduced in 1995 to encourage aircraft operating lessors to establish an operations base in Singapore. Under the Scheme, approved companies enjoy a concessionary tax rate of 10 per cent on income derived from offshore leasing operations. The concession is for a five-year period and may be extended thereafter.

(xviii) Switzerland (1996)

Agriculture and some monopoly suppliers of **infrastructural services** have long benefited from high subsidization. ... Apart from these areas, however, there is no evidence of significant sector-specific assistance.

(xix) United States (1996)

No reference to government assistance for services sectors.

(xx) Venezuela (1996)

The Income Tax Law of 1994 grants new investors in ... **tourism** an income tax rebate equivalent to 20 per cent of new investment, excluding land, undertaken within five years following the entry in force of the law.

The Law of Tourism grants authorized operators certain fiscal advantages and preferential rates for public services. Entitlement to such benefits requires the payment of a fee to support the Tourist Capacitation and Promotion Fund; the Fund also receives a share of the revenue from privatization. [The Fund ... is charged, among other things, with training tourist professionals and the promotion of the sector, both in Venezuela and abroad.]

A major crisis finally erupted in 1994, when the authorities were compelled to nationalize or close about one-third of the 47 **banks** in operation ... The direct fiscal cost in terms of spending to recapitalize or support ailing institutions or to pay depositors has been estimated at some US\$9 - 11 billion, or some 13 per cent of GDP.

(xxi) Zambia (1996)

There are deductible allowance for •wear and tear• of buildings and equipment in the farming, manufacturing and **tourism** sectors. ... Zambia also receives some funding from the EU for the development of tourism, as a non-traditional export, under the Export Development Programme.

Following the liquidation of the United Bus Company, a State-owned enterprise, the Government suspended the customs duty on imported buses from 1994 to 1995.

(xxii) Benin (1997)

The Investment Code ... provides for three preferential regimes, A, B and C, a special regime, and an ordinary law regime. ... The special regime is accorded to enterprises providing services in the fields of **health, education** and public works, and to cottage industries. It grants certain tariff reductions, but (in principle) does not entail tax exemptions.

(xxiii) Chile (1997)

In 1994, the Government implemented another programme to promote development in the Province of Arauco and the communes of Lota and Coronel which

belong to the Province of Concepción. This programme includes four distinct schemes. ... The fourth scheme promotes ... **tourism**, ...

In general, no subsidies are granted to enterprises that supply transport services. Subsidies are only granted to **transportation** services operate in isolated areas, where the State has a responsibility to provide public transportation. ... Maritime transportation services are not subsidized, with the exception of **coastal transportation** to isolated areas where there is not enough demand to justify the existence of a regular shipping service. In such cases the Government ensures the provision of transportation at a subsidized rate. Subsidies are allocated by the relevant ministry through a public bid, and are administered by the authorities of the region concerned.

(xxiv) Cyprus (1997)

In July 1996, the Government announced a three-year plan to upgrade the **tourism** industry, including interest subsidies for improvements in existing establishments, encouragement of investment in infrastructure, and exemptions from import duties on hotel equipment for renovation.

The term **•offshore enterprises•** refers to any legal entity whose beneficial ownership and business activities lie outside the country of registration. Such enterprises can only derive income from abroad. ... Profits on offshore business managed from Cyprus are taxed at 4.25 per cent; those controlled from abroad are completely tax exempt. ... Since the introduction of the first incentives in 1975, aimed at increasing foreign demand for **banking, legal, accounting and telecommunications services**, over 26,000 offshore enterprises have registered in Cyprus. The most important such activities, as measured by employment, are **trade, marketing and distribution; ship management and maritime services; business and engineering consultancy; publishing; banking; insurance and financial services**.

Incentives to register ships in Cyprus include low registration fees and a completely tax-free status for **shipping** companies. This includes exemption from tax on profits and dividends, capital gains tax on the sale of ship or shares, income tax on crew wages, stamp duty on deeds and estate duty. Domestic shipping companies are eligible for preferential tax treatment through a 30 per cent reduction of the annual tonnage tax if the ships are operated by a Cypriot ship management company. Additional refunds of this tax are paid relative to length of employment of Cypriot nationals on the vessels.

(xxv/xxvi) European Union (1995 AND 1997)

1995 REVIEW

The Commission's 1993 Competition Report notes that **•the liberalization of financial and postal services** continued to generate complaints from private competitors of state-owned banks and postal administrations, concerning, among other issues, injections of public funds in the context of privatizations. A recent rescue operation by the French Government of Credit Lyonnais highlights the problems involved.

Various member States grant assistance to **shipping** lines established in their territories and flying the national flag ... The support schemes are generally intended to

compensate the cost differential associated with national registration. ... The guidelines are currently being revised with a view to their strengthening.

1997 REVIEW

*Certain services sectors, in particular those where State involvement and support has traditionally been high, are subject to specific guidelines. The Commission put in place a set of rules for **air transport services** in 1994, following the report of a group of •wise men• in 1992 and the injection of large subsidies in some main European carriers in the period 1991-94. [Large State subsidies were granted from 1991 to 1994 to Sabena, Air France, Olympic Airways, TAP, Air Lingus and Lufthansa.] Under the new guidelines in 1996, the Commission cleared a Ptas 87 billion rescue plan for Iberia, but rejected a proposed Lit 1,500 billion capital injection into Alitalia. Commission guidelines for the examination of State aid to Community shipping lines have recently been adopted.*

The Community framework on State aid to the transport sector has come under criticism in recent years. In view of the increasing level of market deregulation (in particular, in air transport), market participants have voiced concerns about the potentially negative effects of State aid for the growing number of competitors. In spite of the •one time, last time• principle, they criticize the persistence of State aid awarded to various airlines (Iberia, Aer Lingus, Air France, Olympic, Alitalia). In 1995-96, more than 100 cases of State aid were examined by the Commission in the transport sector.

*Public support to the **audiovisual sector** ... is provided in the form of direct subsidies, reimbursable loans, tax incentives and local-content requirements. Policy at the EU level is aimed at providing support to the industry, encouraging private investment, and the broadcast of European works.*

The Community provides financial support for the development and distribution of European audiovisual work through the Media II programme (ECU 265 million over a period of five years, starting in 1996). Over the same period, Media II will also provide training for audiovisual professionals with support of around ECU 45 million from the European Commission. In order to increase private participation in the sector, the Commission has proposed establishing a five-year ECU 60 million, European Guarantee Fund, which would provide a guarantee for investors in cinema and television production. The proposal is based on the experiences of several Member States that provide similar national guarantee instruments. The Guarantee Fund would complement the Media II programme by focusing primarily on the financing of European cinema and television films.

(xxvii) Fiji (1997)

*The Fiji Development Bank, which was established in 1967, provides long-term finance to the private sector at preferential rates. ... Loans to the industrial and commercial sector totalled F\$173.4 million, with manufacturing and **tourism** holding 24.5 per cent and 17.8 per cent of the amount, respectively.*

Projects for approved hotel buildings or expansion may be entitled under the Hotels Aid Act to receive an investment allowance, from the Ministry of Tourism and Civil Aviation. In addition to normal depreciation, 55 per cent of approved capital expenditure (excluding cost of land) may be set-off against the hotel owners• taxable

*income. A cost write-off of 55 per cent may be allowed by the Minister of Tourism and Civil Aviation to a taxpayer for support-projects in the tourism sector such as tourist vessels. All contributions to promotion and marketing activities that are organized and/or approved by the FVB are given a 150 per cent tax allowance. If approved by the Fiji Trade and Investment Board and the Ministry of Tourism and Civil Aviation, the Fiji Development Bank may grant preferential rate loans up to F\$200,000 to indigenous Fijians in the tourism sector. The Five Star Hotel Incentives, for which a hotel must have at least 200 rooms and a minimum investment of F\$40 million, include the following: a 20-year tax holiday period; losses to be carried forward to six years; duty-free entry of all capital equipment, plant and machinery; and a 100 per cent write-off on all capital expenditure in any one year during a period of eight years. Since January 1996, the Government has provided concessionary fiscal duties to assist **inter-island shipping**, fishing and tourist vessels ...*

(xxviii) *Malaysia (1997)*

*One of the most striking features of Malaysia's industrial policy is the pervasiveness of various incentives, particularly tax incentives, aimed at the [...] and **tourism** sectors. ... Furthermore, in a move to promote exports of services from Malaysia through the facilitation of a regional headquarters function, approved operational headquarters are subject to a statutory corporate tax rate of 10 per cent instead of the normal rate of 30 per cent.*

*In addition to incentives to promote Malaysian ownership, tax incentives are available to the **insurance sector**. [Tax reductions and exemptions were also provided to encourage the development of the insurance industry which has the potential to contribute to growth and mobilise long-term savings to support the nation's industrialisation drive. (Bank Negara Malaysia, 1996b.)] Some of these incentives are conditional upon local ownership of the companies. ... Since the 1994 year of assessment, a double deduction had been granted for freight charges paid to a Malaysian incorporated **shipping** company for transportation on board a Malaysian ship. This double deduction has been withdrawn effective 1 January 1997 (year of assessment 1998). The income of a shipping company, derived or deemed to be derived from the operations of Malaysian ships, is exempt from income tax. Dividends distributed from the income of a shipping enterprise to shareholders are also exempt from tax. The shipping industry is also assisted through the Shipping Fund. [The Malaysian Shipping Finance Fund was established on 30 October 1992 to increase shipping capacity and to carry Malaysia's cargo, as a measure to overcome the problem of a deficit in the services account of Malaysia's current account. The Fund consist of a RM 500 million Ship Financing Facility and a RM 200 million Shipping Venture Facility which are both allocated through the offices of the Bank Negara Malaysia. An additional RM 300 million is provided by the private sector.]*

*Investors can apply for tax incentives through the offices of the Malaysian Industrial Development Agency. [Establishment, expansion and modernization of **hotels** and **tourist projects** designated by the Malaysian Industrial Development Agency as promoted activities are eligible for consideration of pioneer status and investment tax allowance under the Promotion of Investment Act 1986. Other tax incentives for the tourism industry ... include an initial industrial building allowance of 10 per cent and a subsequent annual allowance of 2 per cent, plus a double deduction for training and promotional expenditure. ... In addition, local companies organizing conferences*

bringing in at least 500 foreign participants are also to be given income tax exemptions up to the year 2000.] Furthermore, a Special Fund for Tourism is administered by the Bank Negara Malaysia; applications are to be made through commercial banks.

(xxix) Mexico (1997)

*Assistance is used to support the development of priority activities of general interest, and to provide basic goods and services at prices below their market level or production cost. Government assistance amounted to some 30.1 billion pesos (about US\$3.9 billion) during 1996; the main support was provided through [...]and] the national **railway** company, which was granted 2,073 million pesos to cover its operational deficits.*

*The Government acted swiftly with a number of measures to avoid a collapse of the **banking** sector. As an immediate short-term measure, the Government announced in January 1995 a scheme to recapitalize banks with capital ratios below the 8 per cent stipulated minimum. Since then several programmes to support debtors and banks have been provided: restructuring of loans which are basically sound (UDI scheme) ...; debt relief to various small debtors ... in the form of interest subsidy and the possibility of restructuring under the UDI scheme; reduction of the financial burden of mortgage debtors in the form of additional resources for restructuring under the UDI scheme ...; assistance to private toll road concessionaries who faced financial problems due to substantive decline in highway traffic as well as increased cost of debt service in the form of debt restructuring and interest rate swap arrangements; ...; programmes to support banks: a capitalization programme with the aim of raising the capitalization level of banks through ... assistance in domestic currency to banks and small financial institutions to address solvency and liquidity problems.*

(xxx) Paraguay (1997)

*Since 1989 a regime of investment incentives has been operated by the Ministry of Industry and Trade. These incentives, ... were extended in 1994 to cover **transport, warehousing, health, mass media, telecommunications and tourism-related construction projects** (mainly hotels and shopping centres/malls) and, most recently, in 1996 to include **educational projects**. Incentives, valid for a period of five years, include exemptions from taxes for the creation of enterprises; tariffs on imports of capital goods, raw materials and inputs anticipated in the investment project; taxes and charges on foreign loans; a temporary exemption of 95 per cent of the corporate earnings tax; and tax exemptions on rents, royalties, patents, etc. These incentives can be extended up to ten years where investment is due to repatriation of capital or destined to regions determined by the Technical Secretariat for Planning ... Between 1989 and 1996, these incentives were used by 3,195 enterprises, creating 76,206 jobs and generated total investments of around US\$2 billion (¢4.1 trillion), a third of which was foreign investment. Most of the investment took place in manufacturing (food, tobacco, textiles, chemicals) and services (warehouses, construction, transportation).*

*In May 1995, the Central Bank of Paraguay (BCP) had to intervene in the operations of several **financial institutions** including four commercial banks, ten finance houses, two savings and loan associations and two private pension schemes which were undergoing a liquidity crisis. In general, BCP's intervention consisted of: taking over the*

management of institutions with problems; providing financial resources for the continuation of their operations; ... Financial assistance to four banks led to the largest monetary expansion in the history of Paraguay, equivalent to 4 per cent of GNP. ... between mid-1995 and March 1996, emergency measures, comprising a 15-year loan of up to US\$100 million, deferred interest payments and tax holidays, were effected to rescue the four banks whose operating licences were finally withdrawn. By February 1996, the BCP had provided credit of US\$391 million, 80 per cent of which had been channelled to the above-mentioned four banks to repay depositors and foreign debts. In early 1997, plans were being made to rescue four more banks using deposit funds from the State-owned Institute of Social Security.

(xxxi) Japan (1997/98)

*Hotels registered under the Law to Maintain International **Tourist Hotels** may receive tax preferences to maintain their facilities.*

Working Party on GATS Rules Original: French

COMMUNICATION FROM TURKEY

Response to the Questionnaire on Government Procurement of Services

Addendum

The following communication is circulated at the request of Turkey to members of the Working Party on GATS Rules.

I. *EXISTING PROCUREMENT REGIMES*

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

Government procurement means the purchase/sale of goods and services (including transport and construction) by institutions financed from the general budget or having a joint budget and by local authorities. Government procurement is governed by Law No. 2886 on Government Procurement.

Administrative structure

2. How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

In general, government procurement activities are decentralized. Each public service issues an invitation to tender for its own needs in accordance with the Law on Government Procurement.

While there is a centralized procurement body, the State Supply Office (DMO), which has its own budget, government entities are not obliged to use this agency for their own needs.

Laws and regulations in force

3.(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

-Law on Government Procurement: governs entities financed from the general budget or having a joint budget and local authorities;

-Public enterprises, funds, entities with circulating capital and institutions with their own budget have their own regulations; however, these regulations have provisions similar to those of the Law on Government Procurement;

-Government Procurement Circular: lays down the principles that apply in this area and it is published every year by the Ministry of Finance;

-Acceptable value notice: lays down the principles that apply for construction, and is published every year by the Ministry of Construction and Housing.

3.(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

The Law on Government Procurement does not distinguish between goods and services procurement.

Procurement procedures applied

4.(a) What procedures are followed in the procurement process?

Five procurement procedures are applied:

1. Selective tendering procedure;

2. limited open tendering procedure;

3. open tendering procedure;

4. negotiated procurement;

5. direct competition procedure.

4.(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

Selective tendering is the normal procedure, but other procedures are used according to the value of the procurement:

-Open tendering for contracts not exceeding TL 25 billion;

-negotiated procurement procedure for contracts not exceeding TL 1.5 billion.

4.(c) What are the time-limits for submission of bids?

The minimum time-limit for submission is ten days from first publication. In some circumstances where publication is not required, the submission time-limit may be lengthened or shortened by the procuring entity.

Publicity for inviting tenders

5.(a) How are intended procurements publicized? Are invitations to tender published? If so, where, and in what languages?

Regardless of the estimated value of the intended procurement, it must be advertised in a local newspaper.

-Procurement for an estimated value of over TL 7 billion must also be publicized in the daily newspapers of major towns or cities with a minimum time-limit of ten days.

-Procurement for an estimated value of more than TL 21 billion must be published in the Official Journal with a minimum time-limit of ten days. In general, these public notices are in Turkish. (The thresholds of the estimated values in TL may vary from year to year.)

5.(b) Do the extent and form of publicity differ according to tendering procedures applied and/or on the value of procurement?

In the case of negotiated procurement and limited open tendering, publication is not mandatory. In cases where publication is required, the content and conditions of publication are similar.

5.(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

The following details of the intended procurement are published:

- Object, value and place of intended procurement;*
- conditions and place for obtaining the bidding form and its annexes;*
- procedure, place and date of award;*
- if necessary, estimated value and amount of provisional security;*
- documents required from suppliers;*
- date, time-limit and place for submission of bids.*

5.(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set?

Payment of a fee for obtaining the tender documents and the amount involved are a matter decided by the procuring entity concerned.

5.(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

Electronic means are not normally used to advertise procurement opportunities.

Requirements laid down for possible suppliers

6.(a) Are there registration, residence or other requirements for potential suppliers?

Potential suppliers must have:

-Legal residence in Turkey;

-a notification address in Turkey.

6.(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

In the case of tendering in the construction area, potential suppliers are requested to provide information on their financial situation and references on work previously performed.

6.(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

In the construction area, potential suppliers must prequalify in terms of their capability with respect to the tender concerned. The criteria applied to determine such capability are published each year in a notice. Institutions use these criteria to select potential suppliers for different tenders.

A list of approved suppliers does not exist.

Criteria for assessing bids and awarding contracts

7.(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

In general, the criterion followed in the award of tenders is that of the most attractive bid in terms of price. In the case of construction, the most attractive bid in terms of price is the least expensive price.

7.(b) Is procurement subject to any offset provisions, such as local content, technology transfer or countertrade requirements?

In general, tender invitations do not contain conditions of this kind.

7.(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

Preference cannot be given to particular enterprises or groups of enterprises.

7.(d) Do the procurement criteria differ according to sector or region of the economy?

In the case of major public works of a particular nature, the procurement criteria may differ.

7.(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

The purchasing authority has no margin of choice or discretion in favour of certain potential suppliers.

Disclosure of bids received and contracts awarded

8.(a) How are tenders received, registered and opened?

In general, tenders are received unopened. In the case of negotiated procurement, tenders may be received registered or by declaration.

8.(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

The successful tenderers are made known only in the case of tenders for construction work of a value exceeding TL 500 billion. Unsuccessful tenderers are not made known.

8.(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

During the meeting of the Award Commission unsuccessful tenderers are told the reasons why their bid was rejected. Likewise, if unsuccessful tenderers so request in writing, they are also given the reasons why they were not selected.

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of •domestic• in relation to domestic services and suppliers.

The Law on Government Procurement does not establish a legal definition of •domestic supplier•. Nevertheless, a decision of the Council of Ministers is

required for a government authority to be able to give preference to a domestic supplier.

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

Parties may lodge complaints and appeals against the award of a contract initially with the government authority that issued the invitation to tender. Where the latter does not accept the complaint or appeal, an action may be brought against it.

Working Party on GATS Rules

EXAMPLES OF SITUATIONS IN WHICH EMERGENCY
SAFEGUARD ACTION MAY BE TAKEN

Note by the Secretariat

I. INTRODUCTION

1) In order to assist the Working Party on GATS Rules in its deliberations on an emergency safeguard mechanism under Article X of the GATS, the Secretariat was asked to provide hypothetical or, if available, empirical examples of situations pertaining to services trade in which emergency safeguard action may be taken.

2) In responding to the Working Party's request, the Secretariat was confronted with a problem. To establish whether a situation, hypothetical or real, qualifies as one in which safeguard action should or may be taken, it is necessary to have certain criteria. However, it is in order to determine what such criteria may be that examples have been sought by the Working Party. To overcome this problem of circularity, and so as not to preempt the result of further discussions, the Secretariat took a pragmatic approach which is not based on any particular *a priori* definition of safeguard situations. Rather, the following examples seek to capture a wide-range of situations, *other than those covered by existing GATS provisions dealing with exceptional circumstances*,¹ which might be potential candidates for emergency safeguard action.

3) There seems to be a certain degree of agreement that safeguard measures should be taken only if, as a result of *unforeseen developments* and of the effect of the obligations incurred by a Member under the GATS, imports of services take place in such increased quantities and under such conditions as to cause or threaten serious injury to national/domestic suppliers of like or directly competitive services. Furthermore, there seems to be agreement that measures should be *temporary*.

4) The Informal Note by the Chairman of 3 June 1997 identified four key questions concerning a possible emergency safeguard mechanism. As requested by the Working Party, this note focuses only on the second question, concerning the circumstances in which safeguard action could be taken. One of the other questions that the Working Party needs to deal with concerns on whose behalf safeguard action could be taken, i.e. domestic

¹These include Articles III bis, XII, XIV, XIV bis and Paragraph 2 of the Annex on Financial Services.

suppliers, regardless of nationality, or only national suppliers.² This issue, and the related issue of how like or directly competitive services and service suppliers would be defined, is not discussed in this paper, and the term •domestic industry• is used to refer to the intended beneficiaries of safeguard action. The paper also does not discuss the approach that could be adopted (conceptual and empirical) to demonstrate injury/adverse effects, and to establish a causal link with increases in imports attributable to GATS commitments. The final question pertaining to remedies is only addressed to the extent that seemed directly relevant to the circumstances in which safeguard action could be taken.

5) The next Section provides examples of circumstances in which domestic industry may suffer injury. It illustrates the difficulty in establishing a causal link with increased imports when other contributing factors are present, and also raises the question of whether the nature of underlying factors should be relevant in determining the permissibility and the form of safeguard action. Section III takes a closer look at the notion of unforeseen developments and asks how far it is possible to make the notion legally meaningful. Section IV provides examples of the possible grounds for, and forms of, safeguard action and discusses the possibility of incorporating certain economic criteria in these determinations. Finally, Section V illustrates the distinction between government objectives which could be foreseen, and therefore seem to be candidates for *ex ante* scheduling, and those which seem more appropriately to be the basis for *ex post* safeguard action.

II. CIRCUMSTANCES IN WHICH DOMESTIC INDUSTRY MAY SUFFER INJURY

6) At one level, it is easy to construct examples. One could pick any industry, say the domestic basic telecommunications sector, and consider a large increase in imports of foreign services (say, call-back services) which cause injury, reflected in significantly reduced profits, output and employment. Similar examples could be constructed for other industries but this would probably not help greatly to advance the current discussion. In order to create more illuminating examples, it may be necessary to look deeper at the reasons for the increase in imports.

7) For expositional purposes it may be useful to distinguish between:

- developments which are primarily domestic in origin; and
- developments which are primarily foreign in origin.

Developments which are primarily domestic in origin

8) Consider the following examples of situations in each of which there is likely to be an increase in imports and injury to domestic industry, but the underlying factors differ. The examples are presented roughly in order of •increasing exogeneity•, i.e. in order of diminishing responsibility of domestic industry and domestic government for the difficulties:

- (i) Management errors in, say, business services lead to significant increases in the costs of production and hence prices of services, as well as deterioration in their

²A distinction can be made between •domestic• suppliers, which would include all suppliers located in a Member's territory, and •national• suppliers who are *either themselves nationals or owned by nationals of the Member concerned.*

quality; or in the telecommunications or banking sector, firms fail to invest in new technologies, which hurts their competitiveness.

- (ii) Huge domestic wage increases outpace increases in labour productivity in a particular sector and push up production costs, and firms are not allowed to hire foreign workers.³ Or strikes disrupt production in a particular sector.
- (iii) Government policies directly affect the competitiveness of firms: e.g. banks are forced to make bad or subsidised loans to failing industries or depressed regions; radio stations are induced to broadcast several hours of socially desirable but unpopular programmes, which do not interest advertisers.
- (iv) Government policies indirectly affect the competitiveness of firms: e.g. a sudden tightening of monetary policy leads to an increase in interest rates and appreciation of exchange rates.⁴
- (v) Domestic preferences shift towards foreign services or to services in which foreign service suppliers have a comparative advantage.⁵ There could, for instance, be an evaporation of trust in national educational institutions or national hospitals following certain isolated scandalous developments. Or there could be a sudden shift in preferences for foreign entertainers or audiovisual services.
- (vi) Adverse political or natural shocks affect firms: e.g. civil disorder or earthquakes lead to the damage of domestic industry; or, less dramatically, bad weather hurts the tourist industry.

9) Most negative domestic shocks are themselves responsible for injury to firms. But it could be argued in some cases that it is the surge in imports, consequent upon the worsened competitiveness of domestic firms, that is ultimately responsible for injury to the industry. For instance, increased wages may be the source of the problem for the domestic industry, but it is the ability of national consumers to substitute cheaper foreign services for more expensive domestic ones which ultimately leads to injury.

10) Notably, the Agreement on Safeguards, states in Article 4.2(b) that •When factors other than increased imports are causing injury to the domestic industry at the same time, such injury shall not be attributed to increased imports.•⁶ The examples in this Section

³Certain shocks may affect domestic firms more than foreign firms because inputs are non-tradable, either naturally or because of policy. Skis-slopes are an example of a naturally non-tradable input, while restrictions on international labour mobility are an example of policy-induced non-tradability.

⁴See footnote 3 above. In this case, it is the segmentation of capital markets which makes domestic firms excessively vulnerable to domestic interest rate increases.

⁵It could also be that foreign preferences shift dramatically away from national suppliers.

⁶It may be relevant that the Agreement on Implementation of Article VI of GATT 1994, in Article 3.5 states that •The authorities shall also examine any known factors other than the dumped imports which at the same time are injuring the domestic industry, and the injury caused by these other factors may not be attributed to the dumped imports. Factors which may be relevant in this respect include, *inter alia*, the volume and prices of imports not sold at dumping prices, contraction in demand or changes in the patterns of consumption, trade-restrictive practices of and competition

highlight the problems that may arise in establishing a causal link between injury to industry and increased imports even when the fact of such increase is not in dispute.

11) Several further questions arise:

Should the reasons which contribute to the increase in imports be relevant in determining the permissibility or the form of safeguard action, or should attention be restricted to the increase in imports *per se* regardless of the underlying reasons?⁷

If the underlying reasons for increase in imports are deemed to be relevant, then further questions arise:

To what extent should safeguard action be used to remedy failings intrinsic to the domestic industry itself, such as poor management?

To what extent should governments be allowed to offset through safeguard action the adverse effects on domestic firms of direct and indirect policy interventions? Should they be required to modify the problem-causing policies themselves as a condition for safeguard action? In this context, should a distinction be made between policies which have economy-wide effects, and those which have industry-specific effects?

To what extent should governments be able to use safeguard action to insure domestic industry against the normal rough and tumble of free markets, caused by factors such as a shift in preferences or changes in the weather?

Developments which are primarily foreign in origin

12) In the above examples, increased imports were a consequence of certain domestic developments, and it was difficult to establish whether injury was attributable to increased imports alone. It is the foreign supplier performance-enhancing developments which may provide more straightforward examples. But there may be reason to distinguish between developments which are deemed •fair• and others which are not.

•Fair• trading developments

(i) *Foreign technological innovations* make newer, better or cheaper foreign services available. For instance a foreign supplier provides new patented telecommunication services which affects the profitability of domestic suppliers. If the innovation will eventually become nationally available, then the difficulties are temporary. If however, the innovation will not be accessible for the economically meaningful future, then domestic industry may cease to be viable.

(ii) Foreign service suppliers have exclusive access to *inputs which become cheaper*. Or foreign service suppliers in a sector benefit from improvements in

between the foreign and domestic producers, developments in technology and the export performance and productivity of the domestic industry.

⁷In the goods context, the question of establishing a causal link between injury and increase in imports in the presence of other contributing factors has been addressed, but no further distinction has been made between the underlying causes for the increase in imports.

complementary infrastructure, such as better road access to tourist resorts, or enhanced airport or port capacity facilitating multi-modal transport.

(iii) Effective advertising by foreign service suppliers induces large *shifts in demand* towards their services. This could happen in any sector. e.g. audiovisual, tourism or financial services.

Some questions mirror the ones raised in the previous section:

To what extent should governments be able to use safeguard action to insure domestic industry from the uncertainty inherent in free markets, caused by factors such as a changes in technology, input prices and consumer preferences?

To what extent should governments be able to use safeguard action to protect domestic industry from the adverse consequences of restrictions which deprive it of access to cheaper foreign inputs?

•Unfair• trading developments

(iv) *Foreign governments provide assistance* to foreign suppliers who sell to the domestic market. This could most explicitly take the form of new subsidies or tax exemptions by another Member.

Should issues which relate to the appropriateness of countervailing measures be taken up under Article XV or can they also provide a case for safeguard action - at least while Article XV disciplines are being developed?

(v) Foreign service suppliers indulge in *anti-competitive practices*. For instance, they use profits from protected domestic markets to finance an expansion in low-priced exports.

Certain practices of monopoly and exclusive service suppliers can already be addressed under Article VIII of the GATS. Should other issues which relate to anti-competitive practices be dealt with, for instance, by strengthening Article IX of GATS which deals with business practices, or can they also provide a case for safeguard action?

More fundamentally, should Article X deal, as does GATT Article XIX, with fair trading practices to which there must be an MFN-based response (already built into Article X), or should its scope be expanded to deal with unfair trading practices to which there may be a non-MFN response?

III. UNFORESEEN DEVELOPMENTS

13) It may not be easy to determine what could constitute unforeseen developments. In the area of goods, this term has been interpreted (though without consensus) to mean developments after the negotiation of a tariff concession which it would not be reasonable to expect that the negotiators of the country making the concession could and should have foreseen at the time when the concession was negotiated.⁸ Unfortunately, the only recorded application of this interpretation did not lead to a clear result.⁹ The interpretation has also been characterised as unduly widening the scope of the escape clause and rendering tariff concessions less stable.¹⁰ The need for follow up review of Article XIX language with a view to obtaining greater stability of trade concessions was noted in a 1963 GATT report.¹¹ It is notable that the Agreement on Safeguards, while defining in Article 1 safeguard measures as those provided for in Article XIX of GATT 1994, does not contain any mention of the term unforeseen developments.

14) One argument could be that it is unduly difficult and not particularly fruitful to try and verify that a development was indeed foreseen. The question is:

Is it feasible to develop criteria to determine whether circumstances were in some objective sense foreseeable? Is the notion to be a permissive one in which all benefit of doubt goes to the party invoking it or is it possible to make judgements on what could reasonably have been foreseen?

For instance, any of the examples cited above could be unforeseen either because of poor foresight or because they were genuinely impossible to foresee. However, it may be the case that certain changes in policy, such as a tightening of monetary policy, should have been foreseen, perhaps because it was known that the government would respond to inflationary problems. Or, it may be well known that certain markets, such as fashion designing, are characterised by high variations in demand conditions.

⁸See page 4 of the Report of the Intersessional Working Party on the Complaint of Czechoslovakia Concerning the Withdrawal by the United States of a Concession under the Terms of Article XIX (GATT/CP/106, 27 March 1951).

⁹The same Working Party, except the representative of the United States, first agreed with the Czechoslovak representative that the fact that hat styles had changed did not constitute an unforeseen development within the meaning of Article XIX (page 5). But then the Working Party, with the exception of the Czechoslovak representative, agreed that the degree to which the change in fashion affected the competitive situation, could not reasonably be expected to have been foreseen by the United States authorities in 1947, and that the conditions of Article XIX that the increase in imports must be due to unforeseen developments and to the effect of the tariff concession can therefore be considered to have been fulfilled (page 6).

¹⁰One GATT expert writes, "As one reviews this remarkable GATT report on Article XIX, it appears quite clear that the result of the findings made was to greatly extend the scope of the escape clause and render it available for invocation in a wide variety of situations. It almost appears that a mere rapid increase in the proportion of imports to the domestic production would make invocation of Article XIX justifiable, especially when all benefit of doubt goes to the party invoking it. The net result is to render tariff concessions and other GATT obligations less stable." (See page 563 of J.H. Jackson, *World Trade and the Law of GATT*, Bobbs-Merrill Company, Inc., Indianapolis, Kansas City, New York, 1969.)

¹¹See page 3 of the Report of the Working Party on Procedures for Tariff Reductions (L/2002, 30 April 1963).

Would it be possible and useful to distinguish between sectors where significant variations in demand and supply are part of normal business conditions and others where they are not?

IV. EXAMPLES OF POSSIBLE GROUNDS FOR, AND FORMS OF, SAFEGUARD ACTION

15) The clearest case for safeguard action is based on the need to facilitate economic adjustment. Increased imports, even when they contribute to an increase in the aggregate welfare of the society, may adversely affect the interests of certain groups, such as those whose skills are specific to the import competing industry. The social costs of adjustment may be lower if the import-competing domestic firms are given time to adjust, either by improving their competitiveness or by moving resources into other areas of production. The role of safeguard action is thus to provide temporary relief in order to make possible gradual rather than abrupt adjustment.

16) What are the circumstances which make safeguard action necessary and desirable? Even if the shock to domestic industry is temporary, private enterprises may still not be equipped to weather the storm. For instance, they could be subject to constraints which force them to behave myopically -for instance, capital market imperfections, which limit the ability of firms to borrow. If the shock is permanent, and domestic industry is no longer viable, there may still be a reason to ensure the continued operation of private enterprises for a certain period. That is, there may exist positive externalities, i.e. benefits for society which private firms do not take into account. An example could be the social benefits from preventing instantaneous layoffs of relatively immobile factors of production.

Is the fact of injury caused by increased imports a sufficient condition for safeguard action, or should there be additional conditions? For instance, should Members be required to demonstrate the existence of market imperfections and/or positive externalities which make safeguard action necessary and desirable?¹²

17) It is evident that services like transport, telecommunications and financial services play an important infrastructural role in the economy. For instance, the sudden availability of cheap imported transport services may provide a huge benefit to domestic consumers and goods exporters even as they injure the domestic transport industry. Even though the economy as a whole may benefit from cheaper imports, it is well-known that governments are subject to strong pressures for safeguard action from the injured industry, and that countervailing pressures from user industries or consumers tend to be relatively weak.¹³ The question arises whether there might be reason to create multilateral disciplines to ensure a more balanced appraisal of the case for safeguard action.

¹²No such conditions are imposed in the goods context, but Members may not wish to limit themselves to the goods precedent.

¹³In recognition of this problem, the Agreement on Safeguards, in Article 3:1 stipulates that the investigation shall include reasonable public notice to all interested parties and public hearings or other appropriate means in which importers, exporters and other interested parties could present evidence and their views, including the opportunity to respond to the presentations of other parties and to submit their views, *inter alia*, as to whether or not the application of a safeguard measure would be in the public interest. However, in substantive terms, it is still injury to industry, rather than national welfare more generally, which would seem to be the basis for action.

Should safeguard action be justified only by the need to protect a particular industry from injury, or should the justification be based on a wider view of national welfare? Should the inclusion of a •public-interest• clause be left to the discretion of individual Members?

18) Even though safeguard actions may be justified, restrictions on imports may not provide a solution in response to certain shocks, and may not be the most desirable instruments even when they do provide a solution. For instance, say the domestic health industry is in difficulty, direct support may be a more suitable instrument than import restrictions, provided that the necessary resources can be raised through non-distortionary means. While both measures may help the industry, import restrictions hurt consumers by leading to an increase in prices, which can be avoided through direct assistance. However, import restrictions may violate market access commitments while direct assistance may well be inconsistent with a Member's national treatment commitments.

Should there be a presumption in favour of economically superior instruments of safeguard action?¹⁴

V. EXAMPLES OF OBJECTIVES WHICH CAN BE REFLECTED IN SCHEDULES

19) It could be argued that even if the causes of injury cannot be anticipated, the negative effects that would prompt government intervention are sometimes known in advance. That is a government may be able to see what declines in output, or increases in unemployment would induce it to act. Now in the GATS there is significant scope for *ex ante* scheduling of limitations, in a way that there is not in the goods context. In the goods context, Members make commitments on a single dimension, i.e. the tariff, and there is no possibility of including, for instance, limitations relating to national share of output. But there is greater scope in the GATS for a Member to write into its schedule certain circumstances that would trigger government intervention. This is for instance what Mexico has done in the financial services chapter of NAFTA.¹⁵ Thus, the desire to maintain a certain national share of output, employment or assets in certain sensitive sectors would seem to be typical candidates for *ex ante* scheduling rather than *ex post* safeguard action. To not include such elements in schedules, but to invoke them as a basis for safeguard action, may have the effect of inflicting avoidable uncertainty on the market participants - the very thing that the GATS is designed to prevent.

20) It may, however, be the case that even though a Member is reconciled to reductions in national output and employment in a particular industry, the *speed* at which this is happening (due to a rapid increase in imports) imposes a high social cost. This could form the basis for temporary safeguard action to facilitate *more gradual adjustment*, as

¹⁴Article 5 of the Agreement on Safeguards stipulates that Members should choose measures most suitable for the achievement of objectives such as prevention or remedying serious injury and facilitation of adjustment.

¹⁵Thus, Annex 1413.6 Section B of NAFTA provides that if the sum of authorized capital of foreign commercial bank affiliates reaches 25 per cent of the aggregate capital of all commercial banks in Mexico, Mexico may request consultations with the other NAFTA parties on the potential adverse effects arising from the presence of commercial banks of other parties and the possible need for remedial action, including further temporary limitations on market participation.

discussed in the previous section. Alternatively, a Member may change its mind, and decide after making a commitment that it would like to maintain a national share of output or employment. Even though this permanent change in policy would ideally take the form of a modification of commitments under Article XXI, emergency safeguard action may still be needed as an interim measure while the Article XXI-process is completed, for instance if there is a sudden flood of imports which threatens to drive domestic industry out of business.

21) If it is accepted that the only objective of safeguard action should be making more gradual adjustment possible, then ensuring that safeguard action is temporary may be the key discipline. This would ensure that intervention serves only to help industry deal with either temporary shocks, such as a brief surge in imports, or facilitates adjustment in response to permanent shocks, such as a fundamental shift in comparative advantage.

If it can be ensured that intervention is temporary and not (frequently) repeated, how much need is there to establish criteria which would be difficult to enforce, such as those which seek to establish whether or not events were foreseen?

22) Finally, the key question may be posed thus:

When should objectives be built *ex ante* into the schedules and not be the basis for safeguard action, and when should more liberal commitments be scheduled with the scope for *ex post* safeguard action?

The former option has the virtue of creating a more certain environment for both domestic and foreign suppliers, but the disadvantage of perhaps leading to excessively cautious, and therefore less liberal scheduling. The attractiveness of the latter option will depend strongly on the ability to devise adequate procedural disciplines which prevent abuse of the safeguard mechanism and ensure that the security created by GATS commitments is not undermined. On balance, Members may feel that motives for intervention in certain sectors (or certain modes) are more appropriately the subject of *ex ante* scheduling and that in certain sectors (or with respect to certain modes) there is greater scope for developing enforceable procedural disciplines on safeguard action - for instance, because of greater availability of statistics.

Working Party on GATS Rules

COMMUNICATION FROM CUBA

Response to the Questions Relating to an Emergency
Safeguard Mechanism in GATS

Addendum

The following communication is being circulated at the request of Cuba to members of the Working Party on GATS Rules.

It has been requested that these replies be circulated to members of the Working Party on GATS Rules together with the observation that they are intended to contribute to the discussion and analysis for evaluating the possibility of applying safeguards to trade in services, and should not prejudice Cuba's position on this matter or be interpreted as representing its position.

1. What is the justification and purpose of an emergency mechanism under GATS?

The question of what a safeguard mechanism would be for involves the following considerations:

(a) Would an emergency safeguard for services be intended to deal with the kind of situation foreseen in Article XIX of GATT - that is, a temporary threat to a domestic industry arising from increased imports? Would it have any other objective?

Yes, an emergency safeguard for services would be intended to deal with situations involving a temporary threat to domestic industry arising from increased imports of services or from the existence of services which, owing to their

higher quality, their lower price or their volume and variety, are more competitive than domestic services.

This means that safeguards could be applied in response to a temporary threat to the domestic industry caused by services provided under any of the existing modes of supply for trade in services.

(b) Are existing •safeguard• mechanisms in GATS, notably those contained in Article XII and Article XIV, sufficient to address any difficulties governments might encounter as a consequence of their GATS commitments? Similarly, does Article XXI provide an adequate vehicle for reversing or modifying scheduled commitments in the event of unanticipated difficulties?

We do not consider the existing •safeguard• mechanisms or instruments contained in Articles XII, XIV, XIV-bis and XXI of GATS sufficient to address any difficulties governments might encounter as a consequence of their GATS commitments since, for example, the mechanism contained in Article XII (Restrictions to Safeguard the Balance of Payments) does not allow the adoption or maintenance of restrictions for the purpose of protecting a specific service sector. Moreover Article XXI, while it provides a suitable instrument for withdrawing or modifying commitments in the schedules in case of unforeseen difficulties, provides that this can only be done after three years have elapsed from the date on which the commitment entered into force, and does not therefore permit the application of a safeguard in response to an emergency. Consequently, we consider that the mentioned GATS provisions should be reinforced with an emergency safeguard mechanism which would also provide an efficient instrument for applying such measures wherever necessary, as in the case of the Agreement on Safeguards with respect to trade in goods.

(c) Does the nature of commitments undertaken in GATS - whereby Members may choose whether to schedule a sector, and may also condition market access and national treatment with respect to commitments that are made - obviate the need for safeguards? Or would it be more appropriate to think in terms of the idea that the existence of a safeguard would allow governments to be more forthcoming with respect to their scheduled commitments?

The nature of the commitments undertaken in GATS whereby Members may choose whether to schedule a sector and may also condition market access and national treatment with respect to commitments that are made does not obviate the need for the safeguard mechanism, which would ensure that a State may apply emergency safeguards to a sector of the economy which is not included in its Schedule of Specific Commitments where such sector is temporarily threatened. Indeed, the very existence of this mechanism could serve as an incentive for States to be more forthcoming in scheduling their commitments, since they would have the possibility of resorting to one of these measures where necessary, regardless of what they have included in their schedules.

(d) What would be the economic objective of a safeguard - to protect production, investors or employment? Would it protect all domestic production, or

only that part of production attributable to national suppliers? Would it aim to protect investment by nationals, or all domestically-based investments? What would be the objective of allowing departures from national treatment under modes 3 and 4? Is the distinction between establishment rights per se and post-establishment operations relevant in relation to possible safeguard measures under modes 3 and 4?

The economic objective of a safeguard would be to protect domestic production in its entirety, i.e. domestic supply of services, including both domestic suppliers and foreign suppliers established in the country through commercial presence or the movement of natural persons, and which, since they operate within the country, must also be protected by the State in question from any temporary threat caused by a service supplier from another State.

The objective of allowing departure from national treatment under modes 3 and 4, i.e. of applying safeguards to foreigners established in the national territory through commercial presence or movement of natural persons, would be to prevent them from endangering domestic suppliers in the strict sense of the term, in other words suppliers from the country in question, owing their competitiveness in the domestic services market, and in cases where any of the measures referred in Article XIV of the GATS proves necessary (see the reply to question 1(b)).

Yes, the distinction between establishment rights per se and post-establishment operations is relevant in relation to possible safeguard measures under modes 3 and 4, including in cases where a safeguard measure applied to mode 3 has a significant influence on mode 4, since the application of such measures would be possible both at the time of establishment in the territory of the country of foreign natural or juridical persons as well as following their establishment, i.e. in the course of subsequent operations.

(e) Would a safeguard mechanism need to contemplate special provisions for developing countries or does the concept of progressive liberalization offer adequate leeway in this respect?

We think that it would be appropriate for the safeguard mechanism for trade in services to include special provisions for developing countries like those established for trade in goods, with particular attention, as appropriate, to the least-developed countries, in accordance with their trade development and financial needs. These provisions should cover the possible need to apply the mechanism in reinforcement of the developing country provisions contained in Article IV of the GATS, which stipulate that the participation of developing countries in world trade shall be facilitated in accordance with their domestic services capacity and its efficiency and competitiveness, and market access in sectors and modes of supply of export interest to them liberalized.

The establishment of special provisions for the developing countries within the safeguard mechanism would make it possible to develop a concrete definition of uniform treatment for all developing country members in the application of safeguards. Indeed, a progressive liberalization clause, as contained in Part IV of

the GATS, would leave it up to each country to determine voluntarily the differentiated treatment to be applied in accordance with its national policy, and could undermine the application of policies consistent with the principles of the WTO itself.

The adoption of special provisions for developing countries within the safeguard mechanism would ensure that safeguards were implemented in accordance with the level of development of the Member countries.

(f) Is there anything intrinsic to service transactions, such as intangibility, simultaneity of production and consumption, or the need for physical proximity between the producer and the consumer, which makes (some) services transactions different from goods transaction in ways that might influence arguments as to the necessity or utility of safeguard measures in services?

No, these features have no bearing on the necessity or utility of safeguard measures in services. As with trade in goods, what determines the necessity or utility of emergency safeguard measures in services is a temporary threat to the domestic industry. Features intrinsic to trade in services could have a significant influence on the type of safeguard measures to be applied and on the specific regulations governing their imposition, but never on the necessity or utility of emergency safeguard measures in services. Indeed, such measures are necessary, in fact essential, in addressing an obvious temporary threat to the domestic industry.

(g) Is anything intrinsic to services markets, such as the role and importance of regulatory regimes, standards and certification requirements, which makes services markets different from goods markets in ways that might influence arguments as to the necessity or utility of safeguards measures in services?

While regulatory regimes, standards and certification requirements have no bearing on the necessity or utility of safeguard measures in services, where there are international agreements governing certain service activities they could influence the specific regulations to be established by the WTO for the safeguard mechanism, since such agreements must be consistent with the WTO regulations. Thus, a thorough revision of general international standards for the various service activities is required in order to eliminate any inconsistencies among them.

It should also be borne in mind that the violation of already existing international standards for the different service activities could cause a temporary threat to the domestic industry of a Member country and necessitate the application of emergency safeguard measures, a fact which underscores the need to establish a mechanism governing the implementation of such measures within the context of the WTO.

(h) Is anything intrinsic to the role of services in the economy, such as their important support and infrastructure role, which makes services markets different from goods markets in ways that might influence arguments as to the desirability of safeguards measures in services?

The role of services in the economy and their important support and infrastructure role have no bearing on the desirability or necessity of emergency safeguard measures in that area (which are dictated solely by a temporary threat to the domestic industry caused by a service supplier from another Member country), although they do influence the nature of such measures: for example, financial services, which influence all branches of the economy through their potential horizontal effect, could influence the type and form of safeguard measures and the conditions governing their application.

(i) Do Members maintain any emergency safeguard measures in national legislation? If so, what are these measures and how are they implemented?

Cuba's national legislation does not yet provide for emergency safeguard measures.

2. What criteria might be brought to bear in determining when an emergency safeguard measure may be justified?

(a) What, in terms of GATS, is the equivalent of increased imports under Article XIX of GATT? In mode 1, the cross-border flow of services may be similar to the import of goods, but the situation is quite different under other modes. How should the possibility of safeguards be triggered in these circumstances?

In terms of trade in services under GATS, the equivalent of increased imports under Article XIX of GATT would be the increase in the cross-border flow of services to a Member country from another Member country. Thus, mode 1 calls for action similar to the existing emergency safeguard measures for trade in goods in case of a temporary threat to the domestic service industry.

In mode 2, the safeguard mechanism could be triggered on the basis of pre-established objective criteria for determining that domestic consumption in a given service sector has dropped significantly as a result of an increase in consumption abroad in the same services sector, as reflected, for example, in an unusual flow of foreign exchange out of the country for that purpose.

In modes 3 and 4, safeguard measures would be introduced, or the safeguard mechanism triggered, through the legislation governing quantitative and qualitative restrictions on the establishment and subsequent operation in the country of natural and juridical persons involved in the supply of a given service, since they could pose a threat to the domestic service industry owing to the competitiveness.

(b) How should serious injury be determined? Injury to whom or what?

Serious injury is defined as a significant overall impairment of a domestic service industry to the benefit of one or more foreign service suppliers established in the country whose domestic industry is affected.

The injury to the domestic service supplier and to the balance of payments of the country in which the service is consumed is in itself quantifiable.

For domestic service suppliers, serious injury will be considered to have taken place if there is a considerable drop in demand for the service they supply, reflected in a considerable decrease in earnings resulting from the supply of such service, or if there has been a significant diversion of domestic consumption of the service towards a foreign supplier.

In the case of modes 3 and 4, the injury is also reflected in the balance of payments of the country in which the service is consumed, provided the net effect for its economy is negative, through a significant increase in remittances of profits to the country of origin of the foreign suppliers established in the country where the service is consumed.

(c) What standards would be required to determine that increased competition from foreign sources caused injury to the national industry?

The standards required to determine that increased competition from foreign sources caused injury to the national industry would be: a decrease in the volume of domestic services and, ultimately, in the earnings resulting from the supply of such services; and conversely, an increase in the volume of services and in the earnings of one or more foreign service suppliers.

(d) How would the national industry be defined for the purpose of determining injury?

The national industry would be defined as: •the domestic suppliers as a whole of like or directly competitive services operating within the territory of a Member, or those whose collective supply of like or directly competitive services constitutes a major proportion of the total domestic supply of those services•.

In this connection, domestic suppliers must be understood to mean suppliers that are domestic in the strict sense of the term as well as foreign suppliers established in the national territory in the case of modes 3 and 4.

(e) Should a link be established between the nature of a specific commitment in a particular sector, including in relation to limitations on market access and national treatment, and the availability of a safeguard measure? In other words, should the availability or nature of a safeguard be restricted where limitations have been inscribed?

There should not necessarily be any restrictions on the availability of a safeguard measure when a State has included limitations on market access and national treatment in its Schedule of Specific Commitments, since this could leave defenceless a Member that needs to apply an emergency safeguard measure in response to a temporary threat to its domestic service industry regardless of what is included in its Schedule.

(f) What measurement and identification problems arise in services that might complicate the development of a safeguard instrument, and how should they be dealt with?

The problems that might complicate the development of a safeguard instrument in services would be the lack of an international register for the classification of services and the difficulty in determining the possible methods for measuring injury to a domestic service industry owing firstly to the lack of compatible statistics for domestic industries among Member countries, and secondly to the difficulty of identifying precisely the foreign service suppliers directly causing the injury.

3. What form might a safeguard mechanism for services take?

(a) What type of measure should be applied? Would taxes, foreign exchange restrictions, other quantitative limitations, or regulatory restraints be suitable as safeguard measures?

While the measures to be applied would generally be quantitative, qualitative measures would also be possible. Quantitative restrictions, generally speaking, would consist in restrictions on the volume of services, on the number of service suppliers, on the total number of natural persons that can be employed in a given service sector or that a service supplier may employ, and on foreign equity participation. Measures could also be introduced to restrict or lay down the specific types of juridical persons that may supply a service. In the latter case, the possible types of services that could be supplied would be restricted.

Where it is necessary to resort to an emergency safeguard in services, practical measures could include, specifically, foreign exchange restrictions and other quantitative limitations.

(b) What would be the implications of different modes of supply for the kind of measures employed?

A given mode of supply would call for specific measures according to its particular characteristics. In other words, where it is necessary to apply an emergency safeguard in services, the mode of supply determines the type of measures to be taken.

For example, in mode 1, the volume of services could be restricted and/or exchange measures applied.

Mode 2 poses the greatest problem as to the type of measure to be applied, since its intrinsic features limit the options. In this case, we consider that measures would have to be decided on the basis of reciprocal treatment.

In modes 3 and 4, in addition to limiting the volume of services and/or imposing foreign exchange measures, it would also be possible to limit the number

of service suppliers, the total number of natural persons that could be employed in a given service sector or that a service supplier may employ, and foreign equity participation, and to restrict or lay down the specific types of juridical persons entitled to supply a service.

(c) *Would there be circumstances in which the application of a safeguard measure in respect of one mode of supply would provoke a demand for comparable measures in relation to other modes at the same time?*

There may be circumstances in which the application of a safeguard measure in respect of one mode of supply would provoke a demand for comparable measures in relation to other modes at the same time. In such cases, appropriate measures could be applied in respect of effects in each mode of supply attributable to a common cause.

(d) *Should safeguards be applied on a non-discriminatory basis in all circumstances?*

Emergency safeguard measures should always be applied on a non-discriminatory basis to •producers• of services that cause a temporary threat to the domestic industry in question. Emergency safeguard measures are designed to be applied to all service suppliers that cause a temporary threat to the domestic services industry.

(e) *How quickly would it be possible for a Member to take a safeguard measure? Would the notion of •critical circumstances•, as developed in the Agreement on Safeguards, apply in the services area?*

Where it has been determined that there is a temporary threat to the domestic industry in services, a Member may find it necessary to apply an emergency safeguard on the basis of the notion of •critical circumstances• as developed in the Agreement on Safeguards. Indeed, the provisions governing emergency safeguards with respect to trade in goods are perfectly applicable to trade in services.

(f) *What should be the duration of any safeguard measures adopted?*

The duration of any given emergency safeguard would depend on the time needed to prevent or repair the serious injury and to make the necessary adjustments. The basic criteria for determining the maximum period of application of a measure in a given situation cannot be fixed in advance.

(g) *Would safeguard measures be made degressive during their period of application?*

Not necessarily. However, a degressive scale could be applied, extending to trade in services the policy applied to trade in goods under Article XII, paragraph 2(b) of the GATT, which stipulates that:

•Contracting parties applying restrictions (...) shall progressively relax them as such conditions improve, maintaining them only to the extent that the conditions specified in that subparagraph still justify their application. They shall eliminate the restrictions when conditions would no longer justify their institution or maintenance under that subparagraph. •

(h) Would a Member taking a safeguard action be required also to adopt adjustment measures?

A Member taking an emergency safeguard action should adjust the measure progressively as the causes for its application diminish. At the same time, and in order to help to eliminate the said causes, the sectors benefiting from such safeguard measures should make the adjustment that would allow them to compete once again with foreign suppliers and to ensure that the measures are not used for protectionist purposes.

(i) Would the application of safeguard measures be accompanied by compensatory adjustments in the schedule of the Member taking the measure?

No, we do not think that they should be incorporated in the Schedule of Commitments.

Working Party on GATS Rules

COMMUNICATION FROM PERU

Emergency Safeguards

The following communication is being circulated at the request of Peru to members of the Working Party on GATS Rules.

The delegation of Peru attaches great importance to emergency safeguards for services as a useful instrument for countering the possibly negative effects of the liberalization of trade in services. In this connection, we consider that a multilateral discipline on this issue would encourage many Members of the WTO - particularly developing countries - to participate actively in the next round of negotiations for the year 2000. Moreover, in view of the role played by services in the overall functioning of the economy and in the development process, we believe that a general emergency safeguard mechanism, whose implementation would not depend on sectoral liberalization commitments and which would not necessarily be restricted by such commitments, would be the most appropriate.

1. On whose behalf would emergency safeguard action be taken?

There appears to be a consensus that the beneficiary of an emergency safeguard would depend on the mode of supply to which the safeguard applies, as is explained in the chairperson's note of 1 May 1997.

Another issue is the relevance of the definition of domestic industry and national industry. In Peru, according to the domestic legislation in effect, the words "domestic industry" would include industries established in Peru, whether they are owned by nationals or foreigners.

2. In what circumstances would emergency safeguard action be taken and what would be the purpose of such action?

We agree with delegations which consider that an "unforeseen development" would be a reason for the adoption of an emergency safeguard. The measure should be time-bound and it should be applied on a non-discriminatory basis. In any event, the purpose of

such a measure would be to remedy any situation that arose as a result of commitments under the GATS.

It is also obvious that any general emergency safeguard would not be designed to deal with the situations included in Articles XII of the GATS (balance-of-payments difficulties), XIV (measures taken for reasons of public order or morals, security, public health *inter alia*) and XXI (modification of schedules), and with unforeseen developments such as those listed by Peru in 1989 (document MTN.GNS/W/74), namely, protection of consumers and the physical infrastructure, prevention of dominant market positions, or other practices identified more recently.

In other words, we believe that a safeguard measure for services should be more than a simple extrapolation of safeguards such as those provided for trade in goods. We therefore consider that a safeguard measure for services should be broader and should not be restricted to covering the case of injury or threat of injury due to an unforeseen increase in imports, because in the case of services this could only theoretically apply to mode 1, as other delegations have already remarked.

3. What approach should be adopted in respect of injury/adverse effects, and the relevant causal link between injury/adverse effects and commitments under the GATS?

In the case of emergency safeguards provided to counter injury or threat of injury, it is essential to lay down objective criteria for assessing injury, for example, impact on volume of sales, market share, profits, employment levels.

4. What measures would be taken under the emergency safeguard mechanism?

The measures would depend on the mode of supply. In any event, depending on the mode of supply, the measures should not be limited to market access measures but should also cover temporary suspension of the national treatment principle.

Working Party on GATS Rules

COMMUNICATION FROM PERU

Reply to Questionnaire on Government Procurement of Services

Addendum

The following communication is being circulated at the request of Peru to members of the Working Party on GATS Rules.

I. EXISTING PROCUREMENT REGIMES

1. Definition

1. **What is the definition of government procurement employed in completing this questionnaire?**

The Peruvian legislation defines government procurement as a technical supply process consisting of a combination of technical, administrative and legal measures intended to procure for the public sector entities which make up the central government the ownership or use of or access to goods and services and the execution of public works. •Non-personal services• means an activity or work carried out by an individual or corporate body not forming part of the public entity wishing to procure the services, in exchange for economic compensation, in order to meet an intangible need.

Administrative structure

2. **How are government procurement activities administered? To what extent are procurement activities centralized?**

In general, the public-sector purchasing activities of the central government are decentralized since each entity is responsible for its own institutional purchasing processes, including the procurement of goods and services and the construction of public works

(awarding public works contracts), through its corresponding Administration (Supply) Office.

Laws and regulations in force

3.(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

The basic legislation is as follows:

-Political Constitution, Article 76: The execution of works and the procurement of supplies using public funds or resources shall be subject to contract and public tender, as shall the purchase or disposal of goods. Services and projects on the scale and for the amounts indicated in the Budget Act are procured by public competition. The law establishes the procedure, the exceptions and the respective responsibilities;

-Law No. 26703, State Budget Management Act;

-Law No. 26706, the Public Sector Budget Act for 1997 whose Article 6 establishes the amounts applicable to public tenders, public competition based on prices, public competition based on merit, and direct allocation (1 US dollar equals approximately 2.6 soles, July 1997);

(a)Purchase of goods and services:

-Public tender, if the unit cost or total value is more than 700,000 soles;

-public competition based on prices, if the unit cost or total value is between 200,000 and 700,000 soles;

-direct allocation, if the unit cost or total value is less than 220,000 soles.

(b)Procurement of non-personal services for studies, advice, consultancy, expertise, external audits, inspection and supervision:

-Public competition based on merit, if the total cost is more than 200,000 soles;

-direct allocation, if the cost is not more than 200,000 soles.

(c)Public works procurement:

-Public tender, if the total cost is more than 1,800,000 soles;

-public competition based on prices, if the total cost is between 600,000 and 1,800,000 soles;

-direct allocation, if the unit cost or total value is less than 220,000 soles.

•Decree Law No. 25565 establishing the public tender and competition system •Tender Process Evaluation• and Supreme Decree No. 133-92-EF, establishing the corresponding regulations.

- Supreme Decree No. 065/85/PCM adopting the Single Regulations on the Procurement and Provision of Non-Personal Services (RUA).
- Law No. 23350, Article 167, Budget Act 1982, giving effect to the Single Regulations on Public Works Tenders and Contracts (RULCOP), adopted by Supreme Decree No. 034-80-VC (21/11/80).
- Law No. 26143, Article 19, adopting the Law establishing a Higher Council of Public Works Tenders and Contracts.
- Legislative Decree No. 710 regulating the award of public works contracts in public tender proceedings.

3.(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

The Peruvian Government procurement regime distinguishes between:

- Procurement of goods and services;
- procurement of public works.

Procurement procedures applied

4.(a)What procedures are followed in the procurement process?

For both purchases of goods and services and the procurement of public works the following procedures are applied:

- Public tender or public competition. Procedures characterized by free competitive bidding starting from a certain monetary reference value established by the Annual Budget Act.
- Selective tender (direct allocation). An exceptional procedure under which the procuring entity invites bids from a limited number of suitable suppliers.

4.(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

On 21 June 1992, Decree Law No. 25565 established the tender and competition system known as •International Tender Process Evaluation•. Under this Law, public sector bodies and state enterprises can entrust Specialized Entities with the organization and implementation of: (a) public tenders for the procurement of goods and services and the execution of works; (b) competitions based on merit for the awarding of consultancy, supervision, expertise, study, advice and inspection contracts. These procedures are governed by the administrative documentation prepared by the procuring bodies in coordination with the Specialized Entity. They are not subject to the general rules and regulations described in the reply to question 3.

The following are Specialized Entities: (a) international organizations with agencies specialized in providing the service to which Decree Law 25565 relates, including the United Nations; (b) multilateral credit institutions and government agencies with departments specialized in providing the service to which Decree Law 25565 relates; (c)

reputable and reliable international consulting and advisory entities, public or private, which offer the services mentioned in Decree Law 25565.

4.(c) What are the time-limits for the submission of bids?

The following periods have been established for purchases of goods and services:

10 days for public competition; 15 days for public tender; 30 days for international tender.

For the procurement of public works the following periods have been established:

15 days for public competition; 15 days for public tender when equipment available on the local market is involved; 30 days for public tender when equipment and accessories must be imported; 45 days for international tender.

Publicity for inviting tenders

5.(a) How are intended procurements publicized? Are invitations to tender published? If so, where, and in what languages?

Invitations to participate in tender procedures and public competition for purchases of goods and services known as *•Avisos de Convocatoria•* are published in Spanish in the Official Journal and in a national newspaper with a large circulation on two consecutive days, in accordance with the following schedule:

-10 days before the date of receipt of bids, for public competition;

-15 days before the date of receipt of bids, for public tender;

-30 days before the date of receipt of bids, for international tender.

In the case of public works procurement, invitations in Spanish must be published on at least two consecutive days in the Official Journal and in a local newspaper with a large circulation and broadcast over the radio. The following periods are allowed for the submission of bids:

-45 calendar days for tenders with financing and/or international tenders;

-30 calendar days for tenders for works requiring the importation of equipment and accessories;

-15 calendar days for tenders involving equipment available on the local market.

5.(b) Do the extent and form of publicity differ according to tendering procedures applied and/or the value of the procurement?

Public tenders and public competitions are published in the same way, in the Official Journal and in a national newspaper with a large circulation. Only in the case of direct allocation (at least three bidders invited) is there no publicity.

5.(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

The invitations to tender generally include the following information:

- The inviting entity;
- the description and identification number corresponding to each competition or tender;
- the basic characteristics of the goods or non-personal services to be purchased, or the tender system and the description of the works, as appropriate;
- where appropriate, the time and place of delivery or supply of goods or provision of services;
- the offices at which the documentation can be obtained and consulted and their address;
- the reference sum or estimate;
- the price of the documentation;
- the place and time for the receipt of bids;
- where appropriate, the financing entity.

5.(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set.

The administrative tender documents and technical specifications for purchases of goods and services, containing all the necessary information, have a cost calculated in terms of the expenses incurred by the procuring entity. The selling price may not exceed 0.2 per cent of the amount specified by law for the type of procurement in question.

Where public works procurement is concerned, the cost of the documentation varies with the contract sum.

5.(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

Not used in Peru.

Requirements laid down for possible suppliers

6.(a) Are there registration, residence or other requirements for potential suppliers?

In the case of the purchase of goods and services, the supplier may be any individual or reputable corporate body operating under the law, whether established in the country or abroad. Suppliers do not have to be registered in order to participate in public-sector tender and competition procedures.

To participate in public works tender procedures and to be eligible for public works contracts, individuals or corporate bodies must be resident in Peru and previously enrolled in the national register of public works contractors administered by the Higher Council of

Public Works (CONSULCOP). It should be pointed out that public tender procedures are open to any type of bidders, whether domestic, foreign or joint.

6.(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

For suppliers to participate in public sector purchases of goods and services the following are required:

- Cover letter;
- customer portfolio;
- business record;
- letter of guarantee or unconditional, instantly payable cashier's cheque made out to the procuring public entity;
- sworn declarations to the effect that the potential supplier:
 - does not have pending any lawsuit involving the State;
 - has not been declared bankrupt;
- is not a public official or employee nor a spouse or relative up to the fourth degree of consanguinity and the second degree of relationship by marriage.

As indicated in the reply to the previous question, in the case of public works procurement, the contractor must be enrolled in the above-mentioned register. He is issued with a certificate of enrolment valid for one year, which must be regularly renewed. Individuals and corporate bodies applying for enrolment in the register must: (a) have the legal capacity to enter into a contract, (b) have at least one year's experience in carrying out public works in the country, (c) have the necessary technical skills, be credit worthy and have an adequate organization. If these requirements are satisfied, CONSULCOP will register the contractors, fixing their public works contracting capacity at an amount equivalent to 50 times their paid-up capital and free reserves expressed in millions of soles. Where capital in foreign currency is involved, its equivalent in soles is determined. CONSULCOP maintains an up-to-date file in which it records all the data relating to each of the contractors enrolled, on the basis of the documents which the latter regularly submit and those which both the procuring entities and the contracting entities are required to submit every month.

6.(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any regularly reviewed/updated?

With respect to the purchase of goods and services, Legislative Decree No. 717 (10.11.91) abolished the procedure of enrolment in a Single Register of Suppliers. The public entities annually review or update lists of disqualified suppliers.

Where public works procurement is concerned, there exists a National Register of Public Works Contractors consisting of the Register of Domestic Contractors, the Register

of Foreign Contractors and the Register of Joint Contractors. The enrolment requirements are detailed in the reply to the previous question.

Criteria for assessing bids and awarding contracts

7.(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers? For instance, whether obtaining the best value for money spent is the aim and whether criteria other than price are taken into account.

In the case of the purchase of goods and services, the criteria for assessing bids include technical considerations (quality, quantity) and economic considerations (price, installation costs, transport costs, tools and other operating costs, statutory taxes, discounts, and price basis where multiple deliveries are concerned). The awarding committee selects, among the acceptable bids submitted, the most advantageous for each type of goods or services. Other things being equal, the lowest bid is given preference. The bid qualification criteria and the corresponding points are indicated in the administrative tender or competition documents, so that all the potential suppliers are aware of the criteria in advance.

As regards public works procurement, the procuring entities must award the contract to the lowest bidder, taking into account, in addition to the price indicated in the bid, other factors such as the proposed completion time relative to that indicated in the documentation. The bid qualification criteria and the corresponding points are included in the administrative public tender or competition documents, so that all the potential suppliers are aware of the criteria in advance. If two or more bidders obtain the same score, the successful bidder is determined by drawing lots.

7.(b) Is procurement subject to any offset provisions, such as local content, technology transfer or counter trade requirements?

Public sector purchases are not subject to any offset provisions.

7.(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

There are no preferences.

7.(d) Do the procurement criteria differ according to sector or region of the economy?

They differ only in relation to the amounts to which public tenders, public competitions based on price and merit, and direct allocation are subject, which increase according to the region.

7.(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

The purchasing entity has a margin of discretion only with respect to the allocation of points for each qualifying factor, in accordance with the product to be purchased. This procedure is described in the administrative tender documents and is known to all the bidders before they tender.

Disclosure of bids received and contracts awarded

8.(a) How are tenders received, registered and opened?

The bidders publicly deliver their respective bids to the Chairman of the awarding committee in closed and sealed envelopes. In this same ceremony the envelopes are opened and the contents read out, so that all the bidders are aware of them.

8.(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

In the case of the purchase of goods and services, once the award has been made, the Chairman communicates the results to the participating bidders. He also notifies the successful bidder who has a maximum of 5 days to sign the corresponding contract. The results of the tender process are published, once only, in the Official Journal and in the newspaper with the largest circulation in the corresponding departmental jurisdiction, within three days of the event.

Where public works procurement is concerned, once the contract has been awarded, a notice is published in the Official Journal containing: (a) the name of the successful bidder and the amount of his bid, (b) the number of bidders who participated, and (c) the amount of the estimate.

8.(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

The legislation in force does not require the publication of the reasons why bids have been rejected. However, if a bidder (tenderer) so requests, he will be supplied with a copy of the minutes containing this information. Where public works procurement is concerned, the legislation requires the procuring entity to display, in its offices, a notice containing a list of all the bidders present, the amounts of their bids and the bids rejected.

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of 'domestic' in relation to domestic services and suppliers.

There are no laws, regulations, procedures or practices which accord preferential treatment to foreign goods, services, public works and/or suppliers.

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

Details could include:

-Institutional status: whether challenges are heard by an administrative tribunal, a court or any other review body;

-time-limits for complaints/appeals;

-type of remedy, if any, that may be granted.

In the case of purchases of goods and services, bidders may submit complaints and challenges at any time during the process. Administratively, the following proceedings are possible:

Complaints against irregularities or flaws in the proceedings. Submitted in writing to the Head of Administration of the purchasing entity. Must be dealt with within 3 (three) days. The complaint does not halt or delay the awarding of the contract and the interested party is notified of the result.

Challenges may be made against the decisions of the Awarding Committee or, in the case of direct allocation, against the decisions of the Head of the Supply Directorate. Challenges may be based on the following: (a) improper application of the laws and regulations, (b) blatant discrimination against the supplier, (c) non-compliance with the administrative tender documents or technical specifications, (d) other.

The remedies include:

Reconsideration. Must be dealt with by the Awarding Committee within 3 days.

Appeal. Must be dealt with by the second-ranking official of the purchasing entity within 5 days.

Review. Must be dealt with by the Departmental Awarding Committee responsible for the tender within 8 days.

Challenges halt only the awarding of the item or items questioned.

Where public works procurement is concerned, a challenge can only validly be made from the day following the publication of the award in the Official Journal. The remedies available are:

Reconsideration. Must be dealt with by the procuring entity within six days. If the matter is not dealt with within this period, the challenger may assume that his challenge has been denied and may initiate the review procedure.

Review. Must be dealt with by the Higher Tribunal of Public Works Tenders and Contracts, at the highest administrative level, within four days.

Apart from administrative channels, the parties may resort to arbitration or the courts. Thus, in any stage of the process, the parties may submit the dispute to arbitration. On the other hand, the decisions of the Higher Tribunal of Public Works Tenders and Contracts can only be challenged judicially before the competent division of the Higher Court of Lima within 15 working days of the notification or publication of the decision. In their turn, the decisions of this court may be challenged in the Administrative Division of the Supreme Court of the Republic.

II. MEMBERSHIP OF PLURILATERAL REGIONAL AND/OR BILATERAL AGREEMENTS

11. Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procedure? If so, please describe the relevant provisions.

No.

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12.(a) Please provide statistics (if available) on the number and value of services procurements:

- **on both an aggregate and sectoral basis;**
- **by origin of services and suppliers.**

In order to enhance the comparability of data provided, Members may choose to provide statistics according to the services sectoral classification in document MTN.GNS/W/120 (dated 10 July 1991) at the appropriate level of aggregation.

No statistics of this kind are available.

12.(b) Please provide statistics (if available) on the:

- **Share of services procurement in total procurement;**
- **share of procurement of each service in total domestic output of the service;**
- **share of procurement of each service in total domestic consumption of the service.**

Total domestic consumption is defined as the sum of public and private consumption or the sum of domestic output and net imports (i.e., imports minus exports) of the service in question.

No statistics of this kind are available.

Working Party on GATS Rules

COMMUNICATION FROM NEW ZEALAND

Response to the Questions to the Information Exchange Required
Under the Subsidies Negotiating Mandate

Addendum

The following communication is being circulated at the request of the delegation of New Zealand to Members of the Working Party on GATS Rules.

New Zealand submits the attached response to the questionnaire sent to Members by the Working Party on GATS Rules in document S/WPGR/W/16 of 5 February 1997. The response is submitted without prejudice to New Zealand's negotiating position within the WTO. New Zealand reserves the right to add to or to amend this response in the light of further discussion in the Working Party on conceptual issues that may clarify the scope of measures that members seek to address.

Paragraph numbers used in the responses correspond to the question numbers set out in document S/WPGR/W/16.

General

This questionnaire provides information on programmes in New Zealand: education, broadcasting, film production, land transport, air transport, business and tourism services.

9. Please indicate any subsidy disciplines already assumed in the context of regional agreements.

Export subsidies are subject to disciplines under Article 11 of the Protocol on Trade in Services to the Australia New Zealand Closer Economic Relations Trade Agreement.

Education

1. Please identify any subsidy programmes related to trade in services, with a brief description of each programme.

The New Zealand Government provides approximately \$244 million annually to private entities involved in the provision of post-compulsory education and training (PCET), ie private tertiary education providers, second chance education, and industry training.

2. Please state the policy objectives underlying the use of each subsidy.

- a) *Tertiary Education: The provision of mainstream post-compulsory education and training is an expected role for the New Zealand Government in order to achieve employment, and other broad economic and social goals.*
- b) *Training Opportunity Programme (TOP): TOP is designed to provide second chance education. It provides a 100% tuition subsidy to educationally disadvantaged trainees, provided by private, charitable and state education providers on a highly competitive basis.*
- c) *Industry Training: Industry training is designed to encourage industry to deliver relevant portable generic skills (as opposed to firm-specific skills) to the workforce. Industry training is funded jointly by Government (approximately 35%) and industry (65%), via non-Government Industry Training Organisations. Funding subsidies are delivered through a bidding/purchase system based on national benchmarks.*

3. Please indicate the availability in the case of your country, of information necessary to distinguish subsidies to services from subsidies to goods, eg when a company produces both goods and services.

Funding is provided for services only.

4. Please indicate the form of each subsidy (eg tax concession, loan, grant etc).

Grant.

5. Unless previously indicated, please state which sectors are eligible under the subsidy and/or the estimated number of enterprises which are eligible under the subsidy.

Subsidies are limited to the education sector, including training services provided as an incidental activity by the manufacturing sector. For the year ended 31 December 1996, the Ministry of Education funded approximately 530 private

training establishments; 54 industry training organisations were eligible to receive money for allocation to either private or public sector organisations.

6. Please indicate the eligibility criteria for subsidies (location, nationality, destination of output or any other conditions).

Entities are eligible if they are registered as having met baseline educational entry criteria by the New Zealand Qualifications Authority and the Ministry of Education (or the Education and Training Support Agency in the case of industry training). Educational services (courses) must also meet quality criteria specified by the New Zealand Qualifications Authority.

7. Please indicate how the subsidy is calculated (eg on production, on exports, on a fixed or fluctuating basis etc).

Subsidy is calculated on the basis of full-time student numbers or proportions thereof.

8. Please specify any time limits attached to the subsidies described above.

Monies are paid in return for the delivery of services to students/trainees. There is no limit for payment to providers although TOP trainees can accumulate only the number of credits specified for their course.

10. Where such information is available, Members may wish to indicate:

a. Subsidy per unit or total annual subsidy outlay, in respect of each subsidy granted;

Approximate total annual subsidy: \$ million

Private Tertiary Education providers:	7
TOP:	186
Industry Training:	57
Total:	250

b. Statistical data indicating the impact of subsidies on trade in services in the sectors or activities concerned.

*Total number of trainees/students affected: 15,000 TOP trainees
2,600 private tertiary students
30,000 industry trainees*

Broadcasting

1. Please identify any subsidy programmes related to trade in services, with a brief description of each programme.

Funding is made available by the Broadcasting Commission, an independent statutory body established under the Broadcasting Act 1989, to assist with the production of radio and television programmes which:

- *reflect and develop New Zealand identity and culture;*
- *promote Maori language and Maori culture;*
- *provide for the interests of women, children, persons with disabilities and minorities in the community, including ethnic minorities.*

2. Please state the policy objectives underlying the use of each subsidy.

The policy objective is to ensure that programmes which might not be provided in a purely commercial broadcasting environment will be available to meet the needs identified in the response to question 1 above. Note that there are no content quotas for New Zealand content in broadcasting: the Broadcasting Act does not require that a specific amount of New Zealand programming be produced or broadcast.

3. Please indicate the availability in the case of your country, of information necessary to distinguish subsidies to services from subsidies to goods, eg when a company produces both goods and services.

The subsidy applies to the production of services.

4. Please indicate the form of each subsidy (eg tax concession, loan, grant etc).

Grant. Contractual conditions apply.

5. Unless previously indicated, please state which sectors are eligible under the subsidy and/or the estimated number of enterprises which are eligible under the subsidy.

Producers of television and radio programmes are eligible. This includes television networks and radio stations with in-house production arrangements as well as independent producers.

6. Please indicate the eligibility criteria for subsidies (location, nationality, destination of output or any other conditions).

The Broadcasting Commission must take account of the requirements of the Broadcasting Act in relation to the type of programming funding (see response

to question 1). The Act also requires account to be taken of the likelihood that the programme will be broadcast. Within those broad criteria the Commission is free to determine more detailed criteria. There are no restrictions on the nationality of the programme provider.

7. Please indicate how the subsidy is calculated (eg on production, on exports, on a fixed or fluctuating basis etc).

The nature of the service being supported means that there is no fixed unit cost. The Broadcasting Commission determines the amount of funding to be provided on a project-by-project basis, taking into account factors such as the cost of production, the extent to which the requirements of the Broadcasting Act are met, the extent to which the programme may be able to attract funding from other sources (eg joint venture, future advertising revenue once broadcast).

8. Please specify any time limits attached to the subsidies described above.

Time limits for each project are determined by the Broadcasting Commission in negotiation with the producer and are set down in contract.

10. Where such information is available, Members may wish to indicate:

a. Subsidy per unit or total annual subsidy outlay, in respect of each subsidy granted;

The source of funding dispensed by the Broadcasting Commission is the public broadcasting fee. This is a tax of NZ\$110 per annum required to be paid by any person who owns, operates or uses a television set.

The total amount of public broadcasting fee revenue collected by the Broadcasting Commission is around NZ\$87 million, net of collection costs and provision for bad debts. Of this total, about 50% is spent on television programming (the remaining funding is allocated to a number of other non-programming statutory functions (eg archiving of programmes, assistance with extending radio and television transmission coverage).

As discussed above, there is no standard unit cost.

b. Statistical data indicating the impact of subsidies on trade in services in the sectors or activities concerned.

Radio and television programming funded by the Broadcasting Commission is intended to meet the needs of New Zealand audiences, ie the programmes are aimed primarily at the domestic market, not for export. Relatively little programming is sold overseas. Where such sales are made, the Broadcasting Commission requires that a proportion of the funding originally provided for production be rebated to the Commission. Accordingly, the effect of Broadcasting Commission funding, where an

overseas sale is made, is relatively revenue neutral: the seller of the programme cannot therefore exploit the grant for the purposes of obtaining a more favourable export position.

Film Production

1. Please identify any subsidy programmes related to trade in services, with a brief description of each programme.

Promotion and Support of New Zealand Films. The New Zealand Government appropriates funding to the New Zealand Film Commission, a Crown entity. The New Zealand Film Commission supports the production of film through investment, marketing, industry support and other activities.

2. Please state the policy objectives underlying the use of each subsidy.

The policy objectives underlying the use of this subsidy are:

- to encourage creative and sustainable production of quality New Zealand feature films;*
- to encourage the development of creative talent, and facilitate a dynamic film environment in New Zealand;*
- to stimulate local and international market intercession, and to attract investment to, New Zealand film.*

3. Please indicate the availability in the case of your country, of information necessary to distinguish subsidies to services from subsidies to goods, eg when a company produces both goods and services.

The programme is identifiably for the production of films.

4. Please indicate the form of each subsidy (eg tax concession, loan, grant etc).

Grant. Funding is allocated as an annual appropriation by way of Vote: Cultural Affairs.

It should be noted that the New Zealand Film Commission also receives a further grant of 6.5% of the lottery funds available for distribution by the New Zealand Lottery Grants Board. In the 1996/97 financial year, this amounted to \$9.872 million.

5. Unless previously indicated, please state which sectors are eligible under the subsidy and/or the estimated number of enterprises which are eligible under the subsidy.

Approximately 50 film producers and writers were eligible for assistance in 1995/96.

6. Please indicate the eligibility criteria for subsidies (location, nationality, destination of output or any other conditions.

In carrying out its functions, the Commission may not make financial assistance available in respect of a film unless it is deemed to have a significant New Zealand content as defined under Section 18(2) of the New Zealand Film Commission Act 1978. Films made pursuant to an agreement made between the New Zealand Government or the New Zealand Film Commission and the Government of another country or relevant public authority are deemed to have a significant New Zealand content. Where co-production agreements are entered into between New Zealand and other nations, the agreements generally provide for co-production films to enjoy all benefits which are or may be accorded in each country to national films.

7. Please indicate how the subsidy is calculated (eg on production, on exports, on a fixed or fluctuating basis etc).

The nature of the services being supported means that there is no fixed unit cost. The Film Commission determines the amount of funding to be provided on a project-by-project basis, taking into account funding such as the cost of production, the extent to which the requirements of the Film Commission Act are met, and the extent to which the projects may be able to attract funding from other sources such as joint ventures.

10. Where such information is available, Members may wish to indicate:

a. Subsidy per unit or total annual subsidy outlay, in respect of each subsidy granted;

b. Statistical data indicating the impact of subsidies on trade in services in the sectors or activities concerned.

In the year ended 30 June 1996, the Government provided grant monies of \$1.25 million in 1996/97 financial year and the New Zealand Lottery Grants Board provided \$9.872 million.

Land Transport

1. Please identify any subsidy programmes related to trade in services, with a brief description of each programme.

Public Passenger Transport.

2. Please state the policy objectives underlying the use of each subsidy.

The policy justification for the National Roads Account providing some support for public passenger transport is as follows:

-some road users choose private transport because they are not required to bear the full costs that this form of transport imposes on the community, including externalities such as environmental, congestion and safety costs. Because of this, encouraging more people to use public transport, which has fewer such costs, may result in a net improvement in national welfare.

-public transport provides a social service to the transport disadvantaged, ie people who do not have access to private transport, for reasons such as age, infirmity and low income.

3 Please indicate the availability in the case of your country, of information necessary to distinguish subsidies to services from subsidies to goods, eg when a company produces both goods and services.

Funding is provided for services only.

4. Please indicate the form of each subsidy (eg tax concession, loan, grant etc).

Grant.

5. Unless previously indicated, please state which sectors are eligible under the subsidy and/or the estimated number of enterprises which are eligible under the subsidy.

Land transport sector.

6. Please indicate the eligibility criteria for subsidies (location, nationality, destination of output or any other conditions.

Any firm may submit a tender, provided it is a licensed vehicle service operator. There is no restriction on nationality or ownership. The service must, however, be provided in the place and manner specified by the relevant Regional Council.

7. Please indicate how the subsidy is calculated (eg on production, on exports, on a fixed or fluctuating basis etc).

Transfund New Zealand allocates funds from the National Roads Account to Regional Councils to support public passenger transport. The funding for the National Roads Account comes from excise duty on petrol, road user charges and motor vehicle licensing fees. The services to be supported by the passenger transport funding provided by Transfund are identified by the regional Councils, which allocate the business to particular transport firms by competitive tender, ie the firms bid a level of subsidy that they believe will enable them to operate the services concerned commercially. The lowest tender wins the business. If a transport firm believes it can operate a particular service profitably, and consequently submits a zero subsidy bid, no subsidy will be provided.

8. Please specify any time limits attached to the subsidies described above.

The contract between the transport operator and the Regional Council will be for a specific period, usually one year. The subsidy applies for this period.

10. Where such information is available, Members may wish to indicate:

a. Subsidy per unit or total annual subsidy outlay, in respect of each subsidy granted;

Annual cost is estimated at NZ\$30 million.

b. Statistical data indicating the impact of subsidies on trade in services in the sectors or activities concerned.

No data is available.

Air Transport

- 1. Please identify any subsidy programmes related to trade in services.**

Subsidies to Airports.

- 2. Please state the policy objectives underlying the use of each subsidy.**

There is no explicit subsidy policy. However, a small number of domestic airports which operate in deficit, are assisted to assure their continued viability. Other domestic airports and all international airports are run on a purely commercial basis, including the requirement to pay taxes and local body rates and to return a dividend to shareholders.

- 3. Please indicate the availability in the case of your country, of information necessary to distinguish subsidies to services from subsidies to goods, eg when a company produces both goods and services.**

Funding is provided to maintain services only.

- 4. Please indicate the form of each subsidy (eg tax concession, loan, grant etc).**

The support takes the form of deficit funding by local authorities.

- 5. Unless previously indicated, please state which sectors are eligible under the subsidy and/or the estimated number of enterprises which are eligible under the subsidy.**

Air services sector. About 7 airports, out of 24, receive deficit funding.

- 6. Please indicate the eligibility criteria for subsidies (location, nationality, destination of output or any other conditions).**

Small domestic airports that are not commercially viable receive deficit funding from local authorities.

- 7. Please indicate how the subsidy is calculated.**

The subsidy is not calculated, but is directly related to the individual airport's operating deficit.

- 8. Please specify any time limits attached to the subsidies described above.**

The role of central Government in joint airport ownership is under review.

- 10. Where such information is available, Members may wish to indicate:**

a. Subsidy per unit or total annual subsidy outlay, in respect of each subsidy granted;

For the year ended 30 June 1996, total funding was \$156,000.

b. Statistical data indicating the impact of subsidies on trade in services in the sectors or activities concerned.

No data is available.

Business Development

1. Please identify any subsidy programmes related to trade in services, with a brief description of each programme.

The Ministry of Commerce Business Development Programme includes a grant scheme which can assist a qualifying business to:

- determine its strategic goals and objectives in such areas as business planning, quality and environmental management; and*
- develop a product or service new to its region, or introduce new technology into an existing product or service; and participate in trade fair, protect intellectual property and develop new markets.*

2. Please state the policy objectives underlying the use of each subsidy.

The programme aims to assist small to medium-sized businesses access the information and skills to compete effectively. It provides inter-linked elements; the grant element is designed to enable qualifying businesses to test and apply capabilities and skills gained in the Programme's training/educative element; and the innovation, research and development and implementation elements enable businesses to test their strategic focus.

3. Please indicate the availability in the case of your country, of information necessary to distinguish subsidies to services from subsidies to goods, eg when a company produces both goods and services.

The programme applies equally to businesses producing goods and services. Statistics compiled in relation to the grants make no distinction.

4. Please indicate the form of each subsidy (eg tax concession, loan, grant etc).

Grant.

5. Unless previously indicated, please state which sectors are eligible under the subsidy and/or the estimated number of enterprises which are eligible under the subsidy.

All sectors.

6. Please indicate the eligibility criteria for subsidies (location, nationality, destination of output or any other conditions).

The Programme is open to any individual or business based in New Zealand for the purposes of tax, but applicants employing more than fifty full-time equivalent employees are not eligible to apply for grants. (Although this restriction

excludes only a small proportion of all New Zealand enterprises it excludes those enterprises which are in fact responsible for most New Zealand exports.)

To gain entry to the grant scheme applicants have to show their Business Development Board that they are at a stage where they wish to test or apply a skill that they have acquired or have had access to through either the Programme's training/educative element or through some other means.

Assistance for market development is available only where the business has not previously sold its goods/services in the proposed new market.

Target groups are Maori, Pacific Island people and women.

7. Please indicate how the subsidy is calculated (eg on production, on exports, on a fixed or fluctuating basis etc).

The maximum available is NZ\$20,000 per applicant per annum and there is an all-time maximum of NZ\$50,000 per applicant. The grants are not linked to the applicant's level of production or exports. The grants are paid as a 50% reimbursement on qualifying expenditure.

8. Please specify any time limits attached to the subsidies described above.

An application for a grant must be made before any costs have been incurred, and the applicant must then uplift the grant within twelve months of approval. Where there has been delay in completing an approved project an extension of up to three months is available.

10. Where such information is available, Members may wish to indicate:

a. Subsidy per unit or total annual subsidy outlay, in respect of each subsidy granted;

From 1 July 1996 to 28 February 1997 a total of 2,657 projects were approved to a total of NZ\$8.6 million. During the same period NZ\$4.3 million was paid out in grants.

b. Statistical data indicating the impact of subsidies on trade in services in the sectors or activities concerned.

No data is available.

Tourism

1. Please identify any subsidy programmes related to trade in services, with a brief description of each programme.

Tourism Marketing Joint Venture Fund Projects. This allows the New Zealand Tourism Board to carry out joint marketing projects with the private sector where at least 50% of the cost is met by the private sector.

2. Please state the policy objectives underlying the use of each subsidy.

The objective is to carry out additional joint advertising, promotional and research projects which add value to the marketing of New Zealand as an international tourism destination and generate additional visitor arrivals, person nights and general tourism spending.

3. Please indicate the availability in the case of your country, of information necessary to distinguish subsidies to services from subsidies to goods, eg when a company produces both goods and services.

Funding is allocated to services only.

4. Please indicate the form of each subsidy (eg tax concession, loan, grant etc).

The programme does not provide any direct grants or loans. The way the subsidy works is that before a project begins its total cost is calculated and both the private sector's and the Board's contribution is determined. The Board's financial contribution is spent alongside or after the private sector's financial contribution in matching instalments.

5. Unless previously indicated, please state which sectors are eligible under the subsidy and/or the estimated number of enterprises which are eligible under the subsidy.

Tourism sector. Private sector partners may include the following types of organisations involved in marketing a tourism product overseas:

a. any company or commercial undertaking whether registered in New Zealand or overseas;

b. any state-owned enterprise;

c. any regional, local authority or regional tourism organisation;

d. any organisation that is not directly funded by the New Zealand Government.

6. Please indicate the eligibility criteria for subsidies (location, nationality, destination of output or any other conditions).

There are two types of eligible projects:

- a. offshore advertising, and/or promotion;*
- b. market research.*

The project must involve a new activity for the private sector partner - to ensure that the programme is not used as a way of diverting the partner's existing promotional funds.

7. Please indicate how the subsidy is calculated (eg on production, on exports, on a fixed or fluctuating basis etc).

The subsidy is negotiated between the Board and the private sector partner. This is based on a written contract between the Board and the partner. The rate of the subsidy is never more than 50% of the total cost of the project - the actual rate is a matter for negotiation between the Board and the partner.

8. Please specify any time limits attached to the subsidies described above.

Each contract (referred to in 7 above) must specify a time frame for expenditure, including instalment payment dates where appropriate.

10. Where such information is available, Members may wish to indicate:

a. Subsidy per unit or total annual subsidy outlay, in respect of each subsidy granted;

The amount allocated to this programme for the year ended 30 June 1997 is NZ\$20 million.

b. Statistical data indicating the impact of subsidies on trade in services in the sectors or activities concerned.

No data is available.

Tradenz Joint Action Group (JAG) Funding

1. Please identify any subsidy programmes related to trade in services.

The programme directs funding towards collective generic activities such as industry strategic development.

2. Please state the policy objectives underlying the use of each subsidy.

The programme is designed to enhance industry positioning and the selection and targeting of foreign markets, including in the services sector.

3. Please indicate the availability in the case of your country, of information necessary to distinguish subsidies to services from subsidies to goods, eg when a company produces both goods and services.

The programme applies equally to businesses producing goods and services.

4. Please indicate the form of each subsidy (eg tax concession, loan, grant etc).

Grant.

5. Unless previously indicated, please state which sectors are eligible under the subsidy and/or the estimated number of enterprises which are eligible under the subsidy.

The current focus is on the following sectors: consultancy services, publishing services, aviation services and audio-visual (film and television) services.

6. Please indicate the eligibility criteria for subsidies.

Funding is given to industry groups and not to individual companies. To be eligible an industry must have a cohesive industry unit that Tradenz can work through, particularly in generic funding. Processes are restricted to New Zealand companies which are currently or potentially earners of foreign exchange.

7. Please indicate how the subsidy is calculated.

Funding is allocated on a case-by-case basis with a maximum of 50% for approved activities.

8. Please specify any time limits attached to the subsidies described above.

There are no prescribed time limits, although all funding is dependent on annual budgetary allocations made by the Government.

10. Where such information is available, Members may wish to indicate:

a. Subsidy per unit or total annual subsidy outlay, in respect of each subsidy granted;

Total funding for the services sector for the year ended 30 June 1997 is approximately \$400,000.

b. Statistical data indicating the impact of subsidies on trade in services in the sectors or activities concerned.

No data is available.

Other

As the conceptual scope of the questionnaire does not yet appear to be fully defined, there may be other aspects of subsidisation in need of further consideration. At this point, New Zealand would draw attention to the following points:

A number of programmes relating to scientific research are currently awaiting Cabinet approval. Until that approval is obtained, it is not feasible to provide any information, should that be necessary, on such programmes.

New Zealand maintains a number of measures of a public good nature - including animal welfare services, border inspection and quarantine, pest and disease surveillance, emergency response, pest control, research, irrigation and flood control, adverse events, erosion control and soil conservation - which are notified under the WTO Agreement on Agriculture as exempt from reduction commitments in the "General Services" category of Annex 2 (the "Green Box").

There are in addition a number of issues relating to assistance available from local authorities, such as rates relief, which could be obtained only by surveying local authorities but not in the time frame stipulated. New Zealand is willing to enter into discussions on any of the above issues should other members regard these matters as falling within the scope of the questionnaire.

Working Party on GATS Rules

COMMUNICATION FROM ASEAN

Emergency Safeguards

The following communication is being circulated at the request of ASEAN to Members of the Working Party on GATS Rules.

The ASEAN would like to express our support to the Chairperson's suggested approach (3 June 1997) on the subject of emergency safeguards by addressing the 4 questions.

These questions are the prime and key elements that must be first tackled, and should serve as a starting point of our proceedings on the subject.

However, due to the relatively new and rather lack of information and research on the subject, definitive answers to these questions cannot be made at this time.

As a result, the ASEAN can only provide preliminary observations on them, on the understanding that they are without prejudice to our right to come back to the questions and to amend or withdraw our positions as appropriate in the light of new information or the more elucidation on the subject which may be transpired in the course of the proceedings.

1. On whose behalf would emergency safeguard action be taken?

The emergency safeguard measures (ESMs) would be taken temporarily to protect the national industry, which is understood to mean the totality of the natural persons and/or juristic persons supplying like or directly competitive services of the Member taking the measures according to the respective definitions provided for in Article XXVIII (Definitions) of the GATS, in order to enable them to adjust to foreign competition.

2. In what circumstances would emergency safeguard action be taken and what would be the purpose of such action?

The ESMs would apply to all modes of supply, including both pre-establishment and post-establishment of commercial presence, in the case whereby, as a result of

unforeseen development and of the effect of the obligations incurred by a Member under the GATS, there is a dramatic increase in consumption of foreign services, in absolute or relative terms, to such an extent that it causes or threaten to cause disruption of the national industry producing like or directly competitive services of the Member taking the measures.

The dramatic increase in consumption of foreign services could be assigned to a fixed percentage of the average level of supply of foreign services concerned as a whole of the previous representative years, such as 100, 150 or 200 %, the threshold of which is subject to negotiation.

3. **What approach should be adopted in respect of injury/adverse effects, and the relevant casual link between injury/adverse effects and commitments under the GATS?**

The injury should be serious injury, which could be measured by employing, *mutatis mutandis*, the method of measuring serious injury provided for in Article 4.2 and 4.3 of the Agreement on Safeguards, namely:

In the investigation to determine whether the dramatic increase of consumption of foreign services has caused or are threatening to cause serious injury to the national industry producing like or directly competitive services, the competent authorities shall evaluate all the relevant factors of an objective and quantifiable nature having a bearing on the situation of that industry; including in particular the rate and amount of increase in consumption of foreign services in absolute or relative terms; the change in level of supply of services of that industry; and the loss of profits and employment of that industry.

The determination referred to in the above paragraph shall not be made unless the investigation demonstrate, on the basis of objective evidence, the existence of the causal link between dramatic increase of consumption of foreign services and serious injury or threat thereof . When factors other than dramatic increase of consumption are causing injury to the national industry at the same time, such injury shall not be attributed to dramatic increase of consumption.

4. **What measures would be taken under the emergency safeguard mechanism? Are some measures deemed more suitable than others?**

Two measures, namely: (1) restriction on market access, which could include both regulations, taxes, quotas, and embargo; and (2) suspension of national treatment could be particularly appropriate to be used as emergency safeguard measures. These measures could be temporarily employed to all modes of supply, including both pre-establishment and post-establishment commercial presence, depending on the case involved. For instance, restriction on market access could be employed in mode 1 (cross border supply), mode 2 (consumption abroad), mode 3 (pre-establishment commercial presence), and mode 4 (movement of natural persons) of the GATS, while suspension of national treatment could be employed to mode 3 (both pre-establishment commercial presence (in case where there is no embargo on market access), and/or post-establishment commercial presence), and mode 4 (movement of natural persons). In case of post-establishment commercial presence, acquired right should be respected, namely any benefit derived from granted national treatment during the period of no ESMs should be preserved.

Suggestion

Since this subject is relatively new, and there is only a few information and research on it to help us in the process of conceptualizing and formulating provisions on the ESMs,

it should be advisable that we request the WTO Secretariat and other appropriate international organizations, such as the UNCTAD and OECD which are familiar with and expert on the subject to assist us. The assistance may be in the form of gathering information or conducting research on the subject for us.

A seminar on the subject could also be another avenue to gain knowledge on the subject.

SYNTHESIS OF THE RESPONSES TO THE QUESTIONNAIRE
ON GOVERNMENT PROCUREMENT OF SERVICES

Note by the Secretariat

This note presents a synthesis of the responses received so far to the *Questionnaire on Government Procurement of Services* (S/WPGR/W/11). Responses have been circulated as separate documents as addenda to document S/WPGR/W/11. The annex to this note gives the list of the responses received so far and the reference under which they have been circulated.

In certain cases, this synthesis refers to the responses of individual Members to illustrate specific aspects of procurement regimes. The references are selective rather than exhaustive, i.e. the references do not necessarily include all Members whose regimes have the relevant features. The references also do not imply a definitive interpretation of provisions in Members' procurement regimes. The following abbreviations are used:

EC European Communities and their Member States
HK Hong Kong
Korea Republic of Korea
NZ New Zealand
US United States

I. DEFINITION

1. What is the definition of government procurement employed in completing this questionnaire?

Several Members have stated that there is no legislative or regulatory definition of government procurement (Colombia, NZ). In most cases, government procurement is defined simply as the procurement of goods and services by the central, provincial and local governments, as well as by other public entities, which in certain cases include •utilities• - i.e. suppliers of energy, water, transport and telecommunications services (EC, India, Norway, Switzerland). While some Members have included all state procurement for the purpose of the current survey, others have limited coverage to federal government departments (Canada). One Member has taken the procurement of services covered by the GPA as its definition (Japan), while another has treated the use of public funds to finance purchases either fully or partially as the defining criterion (Poland).

Some have stated that the term •procurement• includes all stages of the process by which government agencies acquire from external sources the resources they need to fulfil their mandates (Australia). Others have indicated, explicitly or implicitly, that procurement generally does not include non-contractual agreements or any form of government assistance (Korea, US). One Member has noted that procurement includes both purchases and sales, as well as any contract concerning leasing, rental, work or supplies (Argentina).

II. ADMINISTRATIVE STRUCTURE

2. How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

(See response to Question 3)

III. LAWS AND REGULATIONS IN FORCE

3.(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

A dominant theme is the centralization of rule-making, and the decentralization of operational functions. In general, there are national (and sometimes provincial) legislation and/or guidelines on procurement, but the responsibility for award and execution of contracts remains with each contracting entity. In one case, the rules of the regional integration agreement apply to procurement above certain threshold values while national laws apply to procurement below the threshold values (EC). National laws themselves may only apply to procurement above specified threshold values (Norway). The national rules differ in depth, in certain cases specifying relatively detailed procedural obligations, while in other cases they contain only general guidelines. In some Members, a national public

procurement agency is responsible for monitoring and enforcement of procurement laws and the determination of procurement policy (Hungary). In a few cases, however, there are no laws or regulations relating specifically to procurement and each entity is free to determine its own procurement procedures within the general parameters set by the government's purchasing policy (NZ).

The actual procurement of services is invariably decentralized, and tends to take place close to the end-users. However, in certain cases, procurement above specified thresholds (Korea) and procurement of particular services, like construction services (Norway), takes place through a central specialized agency.

In the large majority of cases, the procurement regime does not distinguish between the procurement of goods and services (Brazil, Chile, many Member states of the EC, Japan, Korea, Mexico, Poland, Singapore, Switzerland). In some cases, even though the basic regime is the same, there may, nevertheless, be specialized additional rules that apply to specific services such as after-sales services (India), consultancy (HK), design contests (France), construction, major systems, and utilities (US).

In a limited number of cases, there is one regulation for the procurement of goods, one regulation for the procurement of services and one for the procurement of constructions and construction works (Norway, EC, Hungary) even though the differences between regulations may not be significant. The threshold values for service contracts and for goods contracts are usually the same. The threshold for construction works may be higher. If an entity wishes to purchase something which is considered partly a service and partly a good, the contract is regarded as a goods contract if the value of the goods exceeds the value of the service involved and vice versa. In order to be covered by the works regulation, the service has to bear the character of a works contract, i.e. concern work on buildings and similar projects. Services are sometimes treated as the residual category, i.e. a contract that is neither a supply nor a works contract is deemed to be a service contract.

In one case, the procurement of services is decentralized to departments and agencies while the procurement of goods is relatively centralized (Canada). In one Member, preferences are applied by state governments only to goods and related services, and not to procurement of services alone (Australia). In another case, the regime distinguishes not only between goods and services, but also between specific types of services, for instance between construction works, consultancy, professional services, execution of artistic works, telecommunication services and postal services (Colombia).

IV. PROCUREMENT PROCEDURES APPLIED

4.(a) What procedures are followed in the procurement process?

The basic range of permissible procurement procedures are the same in most Members, though there are some variations. As anticipated in the questionnaire, three broad categories of procedures are commonly distinguished: (i) public or open tendering procedures under which all interested parties may submit a tender; (ii) selective or restricted tender procedures under which participation is limited to a certain number of selected suppliers, and only these suppliers are invited to submit a tender; (iii) limited tendering, private contract or single tender in which the awarding authority contacts suppliers individually, and sometimes only a single supplier. Some Members have specified that the terms of the contract may be determined through negotiations in the context of limited tendering (Chile, India), while others seem to allow the possibility of negotiations also in other cases (EC, Poland).

In some Members, even in open tendering procedures, only qualified suppliers are invited to participate (Brazil, Japan). One Member conducts a stratified tendering procedure (Mexico). In the first •technical• phase, only the aspects of bids pertaining to the required technical specifications of the product or service in question are examined. Those bids which meet the technical requirements set forth in the bidding conditions qualify for the second •financial phase•, where price is the dominant criterion. Several Members sometimes employ design or other •contests• in the case of service contracts (Brazil, EC). Under this procedure, the contracting authority may acquire a plan or design selected by a jury after having been put into competition with or without the award of prizes. Design contests can be organized as a part of another procedure leading to the award of a service contract, or can constitute an independent procedure on their own (EC). Other members have mentioned, without further explanation, procedures such as •two-stage tendering•, •negotiations-with-retaining-competition• (Poland), and •repeat orders• (India).

In one Member, public sector purchasers use, on a voluntary basis, the services of several private sector supply brokerage companies which specialise in servicing the purchasers through consolidated period supply contracts which are established through competitive tendering (NZ).

In one Member, it is stipulated by law that technical specifications generally be free from any restrictive requirements so as to allow maximum competition among potential suppliers (US). The order of preference for specifications is: (1) voluntary standards; (2) commercial item descriptions in the acquisition of commercial items; (3) government product descriptions stated predominantly in terms of functions to be performed or performance required; (4) government product descriptions stated predominantly in terms of material, finishing schematics, tolerances, operating characteristics, component parts and other design requirements.

(It is possible that other Members have not addressed this aspect of their procurement regimes because it was not explicitly covered in the questionnaire.)

(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

Even though the basic range of procurement methods are the same in most Members, there are significant differences in the conditions under which a purchasing agency can resort to different procedures. In some Members, the procuring agency has significant discretion in choosing the precise procurement procedure within the parameters of the government's purchasing policy and guidelines (NZ, Australia). In most Members, public or selective tendering procedures are the rule, and selective tenders are exceptions which may be resorted to in special circumstances. In some cases, these circumstances are specified in the plurilateral agreement to which the Member is party, while in other cases these are specified in national legislation. It is also often the case that procurers have greater discretion, and more freedom to resort to less competitive methods, if procurement is below specified thresholds - either specified in a plurilateral agreement or the national legislation.

Whether a contracting authority uses an open procedure, a selective procedure or a project competition can also depend on the type of service which is to be procured and the complexity of the procurement (US). If there are tenders for basic services that are easy to compare and contracts are awarded according to price only, an open procedure tends to be used. If evaluation of the tenders would be time consuming, entities tend to use selective

procedure to ensure that excessive time is not spent on evaluation (Norway). This is also the case when the service in question cannot be defined sufficiently precisely.

Several members permit selective tendering when only a limited number of bidders are suitable for fulfilling the contract due to the particular nature of the subject of public procurement. In one Member, in the case of a construction project above certain thresholds, a contract official may restrict qualification of a bidder on the basis of past performance of the participants (Korea). In other cases, however, selective or limited tendering are permitted only when there are at least some minimum number (sometimes three) of qualified bidders suitable for submitting a bid (EC, Korea, Hungary).

The conditions on limited tendering imposed in certain Members are based on provisions in plurilateral agreements, but even Members not party to such agreements frequently stipulate similar conditions. These include: no satisfactory offers have been obtained in the open or selective procedure; tenders submitted have been collusive; for works of art or when for reasons of protection of intellectual property there is only one supplier possible; as a result of unforeseen circumstances the procurement becomes too urgent to organise an open or selective procedure; additional deliveries by the original supplier which are intended either as parts or replacements for existing supplies; unforeseen circumstances making additional construction services necessary which cannot be separated from the initial order, etc. Some Members have also stated that limited tendering may be used when it is not in the public interest to call for tenders by advertisement (India). Others permit such methods when procurement is confidential or sensitive (Singapore). One member allows a private contract when it is pursuant to a private group contract with small and medium enterprises (Korea).

The conditions for resort to negotiations vary between Members. In some Members, these conditions are similar to those under which limited tendering is permitted (Chile, Hungary). In one Member, negotiated procedures are sometimes used in the utilities sector after the publication of calls for competition (Norway). In the same Member, state entities can also use negotiated procedures when it is extremely difficult to specify the tender documentation to such an extent that bids can be compared. In yet another Member, negotiations are undertaken in extreme urgency to meet the •emergent demand within a given time frame where sources of supplies are known• (India).

One Member has stated that contracts involving foreign assistance or credit may be subject to the regulations of the competent entities, *inter alia*, in matters relating to procurement procedures and systems (Colombia). Another Member states that international tenders shall take place only when they can be justified by the entity, subject to market research, when the resources are obtained through foreign credits, or when the contract is covered by international agreements (Mexico).

(c) What are the time limits for submission of bids?

Most Members require that suppliers submit their bids before the deadline mentioned in the notice for tenders. The actual deadline varies. Several Members have time limits which are in line with the provisions of a plurilateral agreement. Minimum limits along the following lines are frequently observed: 1) public or open tendering procedure: 40 days after publication; 2) selective tendering procedures: 25 days after publication for submission of applications for participation, and 40 days after invitation to submit for submission of bids: Some Members, who give procurers freedom in defining procedures within the parameters of general guidelines, do not stipulate precise time limits (Australia, NZ).

In some Members, time limits differ according to the entity (Chile), the value of the procurement (Korea), the complexity of the procurement (US), and the service in question (EC, Chile). One Member stipulates a longer time limit for contracts advertised both locally and overseas than for contracts advertised only locally (Singapore) while another makes a similar distinction between international and domestic tenders (Mexico). In one Member, required time limits have been recently reduced for commercial, off-the-shelf acquisitions and are to be reduced further as more procurements are conducted electronically (US).

The time limit for receipt of tenders may be fixed, in some cases, by mutual agreement between the contracting entity and the selected candidates, provided that all tenderers are given equal time to prepare and submit tenders (EC). One Member allows, in justified cases, the inviter of bids to extend the deadline for submitting the bids on one occasion - provided that the extension of the deadline is published in an announcement prior to the expiry of the original deadline, and the reason for extending the deadline is indicated (Hungary). In some cases, the inviter of bids may apply an accelerated procedure in the course of procurement by invitation or negotiation when this is justified by extraordinary urgency, but the circumstances must not arise from the negligence of the inviter of bids, and an accelerated procedure may not be applied in construction projects (Hungary).

V. PUBLICITY FOR INVITING TENDERS

5.(a) How are intended procurements publicised? Are invitations to tender published? If so, where, and in what languages?

In most cases, procurement opportunities are advertised in some form of official gazette and/or newspapers of wide circulation. The former is frequently obligatory, and the latter at the discretion of the procurer. Often these means are supplemented by publication in relevant trade journals or magazines, contact points on government procurement (Japan), periodic handouts (US) and notice-boards (Argentina). Some Members also require the publication of preliminary summary information or periodic indicative notices containing the essential characteristics and value of the contracts that are to be awarded over the following 12 months (US, EC). In some cases, while it is compulsory for federal entities to publicise notices, provincial and local governments may do so on a voluntary basis (Norway). Only in one Member are there no central laws, regulations, or rules for publication of notices (NZ).

There is little uniformity in language requirements. Sometimes it is only the language of the country in question, while in other cases the use of one or more foreign languages is also required.

(b) Do the extent and form of publicity differ according to tendering procedures applied and/or on the value of procurement?

Predictably, invitations to tender are invariably published in the case of open or public procedures, may be published in the case of selective procedures, but are not published in the case of private contracts. In one member, the time-frame for publication differs between public and selective tendering procedures (Argentina). Publishing requirements are usually less rigorous for procurements falling below certain thresholds (EC, US). For instance, notices in the official gazette are only published in some Members for procurements above the threshold values, while notices for other procurements are publicised in local, regional or national newspapers (Norway). The thresholds may differ

according to the service in question (Canada). In one Member, invitations to tender for •non-priority services• contracts (presumably covering services deemed to be less •tradeable•) are not published, while invitations in the case of certain utilities like transport and telecommunication may not be published (EC). Some Members state that the extent and form of publicity does not depend on tendering procedures (Japan, Colombia) or on the value of procurement (Australia, India, Chile, Colombia, Japan).

(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

The type of information that must be made available in notices publicising procurement opportunities is similar for most Members though there are differences in the degree of detail. Most responses mention information such as name and contact address of inviting entity; clear description of the service to be provided; tender opening and closing dates; duration of contract and/or time limit for completion of the services; address of enquiry point for further information and tender documentations; deposits and guarantees required; technical standards, qualifications and any special conditions of participation in the tender; and criteria for the award of the contract. In some cases, the information required to be published differs for public works from those for other service (Argentina, Mexico).

(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set.

Practice with regard to charges for obtaining tender documents varies somewhat. Some Members do not charge any fees, while others leave open the possibility of doing so. In most cases where fees are charged, however, their level has to be related to the actual cost of provision of tender documentation. In some cases, a deposit may be required for documents which are handed out free of charge but must be returned to the procuring entity (EC). In some Members, advertised tender sets are sold on payment of fees which depend on the value of the procurement (India, Argentina). In one case, the Government's purchasing guidelines state that the price charged or deposit required, if any, for tender or related documents should not be so high as to discourage *bona fide* competent contractors or producers from participating in the tendering proceedings (NZ).

(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

The use of electronic means for publicising procurement opportunities is not uniform. While some Members have made a substantial investment in the development of electronic information systems, several others have only taken preliminary, experimental steps in this direction. In some cases, only tenders above certain thresholds are advertised electronically (Norway), and these threshold may differ according to the service sector concerned (EC). In other cases, information for electronic databases is still being provided voluntarily by the purchasing agencies (HK, NZ). Some agencies have •home pages• on the Internet and include tender notices at these websites (HK, US).

In one Member, it is planned to create electronic data interchange (EDI) networks which will be able to automatically update inventories, invoice customers, pay suppliers, advertise federal government requirements and perform many other tasks that are now time, labour, and paper intensive (US). It is estimated that the new electronic purchasing could cut the Member's federal procurement costs by 10 percent by 1997 and speed delivery times by a third. Another Member has created an open bidding service which is a user-friendly automated bidding system designed to give potential suppliers fast, equal access to information on government contracting opportunities (Canada). A third Member has begun work on an electronic public procurement network aiming to make the process more efficient, more reliable, less time-consuming, and ultimately more cost effective, both for procurers and suppliers (EC).

One Member has stated that its legal system does not currently permit the use of electronic means to participate in tendering procedures, but a new system is being created through which invitations to tender may be consulted electronically (Mexico). Another Member has stated that the use of electronic means to advertise government procurement opportunities is not provided for statutorily (Argentina).

VI. REQUIREMENTS LAID DOWN FOR POSSIBLE SUPPLIERS

6.(a) Are there registration, residence or other requirements for potential suppliers?

(There is significant overlap in the responses to parts (a), (b) and (c), which should be read together.)

Registration requirements

Members' procurement rules differ significantly in respect of registration requirements, which are compulsory in certain Members and do not exist in others. In certain Members (Colombia, India, Japan, Korea, Poland, Singapore) all local and foreign suppliers interested in participating in public sector tenders are required to register as government contractors or be qualified as such. Several Members state that their compulsory registration system is non-discriminatory, in that it is equally and objectively applicable to both local and overseas suppliers (Singapore). In some Members, non-registered firms could be allowed to participate only in *ad hoc* tenders for non-recurring services or works contracts (India, Singapore). In one Member, who operates a compulsory registration scheme, unregistered suppliers can only be considered if local expertise is lacking, or in cases where the local contractors are unable to execute their contracts or are unable to reach a certain high standard (Singapore). The registration system in this Member is to be reviewed with a view to eliminating any discriminatory effects.

Some Members have provided reasons for the operation of registration systems. One states that the objective of the system is to facilitate the qualification process. The system helps the procuring entity to create a readily available pool of information on each registered firm, which reduces the time needed to examine qualifications during the tender evaluation. The registered suppliers also benefit because they are not burdened by the need to provide the same information each time they participate in a public tender (Singapore). Another Member has stated that the registration system helps to reduce the risk that the designated supplier will not be able to implement the contract properly. Furthermore, once the competition is narrowed down to qualified suppliers, it is possible to evaluate bids only on the basis of price, which helps to enhance the transparency of the procurement procedures (Japan). Another Member maintains a register of small-scale industries who benefit from preferential procurement (India).

There are many Members who do not normally require registration or qualification, but nevertheless allow it in certain situations. For instance, one Member allows for lists of registered suppliers for certain services if the procurement falls below specified sectoral thresholds (Canada). Another states that in the utilities sector, contracting entities may use lists of qualified suppliers (Norway) while in another registration is essential for construction services (Argentina).

Residence requirements

Residence requirements seem to be relatively rare. In some Members, it is required that foreign natural persons without domicile in the country or foreign legal persons without a branch in the country must accredit an agent domiciled in the country who is duly empowered to submit tenders and sign contracts and also to represent them legally and in non-legal matters (HK, Colombia). In one Member, the inviters of bids may prescribe in the invitation that only bidders resident in the country may take part in the procedure (Hungary). In another Member, in order to conclude a contract with the State, a firm must normally be established in the country, but foreign firms are exempted from this requirement in the case of international tenders (Argentina). One Member has stated that the government may sometimes require the contractor to be within a certain distance of the site of contract performance where there is a legitimate need of the contracting entity to have the contractor in close proximity (US).

(For the relationship between local establishment and national treatment, see Question 9).

(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

Many Members require that potential suppliers provide evidence of their ability to fulfil the contract, for instance through demonstrating financial soundness, professional and technical qualifications and experience, adequate production capacity, and meeting any necessary legal requirements. For instance, contracting state entities may require a tax declaration from suppliers to show that the supplier has met all tax obligations (Norway), statement from banks, professional risk indemnity insurance (EC), etc. In some cases, the submission of bid security, an amount to be determined in advance, may be required, and failure to make a submission may render the bid non-responsive (Canada, Hungary, Mexico). Fines and other penalties imposed on the supplier for delay or non-performance can be applied against these guarantees (Chile).

The ability of service providers to perform services may be evaluated in particular with regard to their skills, efficiency, experience and reliability. The contracting authority may specify which references it wishes to receive, or the production of certificates issued by independent bodies attesting conformity of the service with certain quality assurance systems. In some cases, tenderers may be required to prove their enrolment in one of the professional or trade registers. Furthermore, legal persons may be required to indicate the names and relevant professional qualifications of the staff to be responsible for the performance of the service. In some cases, if tenders are submitted by groups of service providers, a specific legal form can be required once the contract has been awarded, even though it may not be required in order to submit the bid (EC). In some Members, tenderers have to comply with health, safety and employment equity considerations (Canada, Switzerland). Additionally, for sensitive procurements, a contractor may have to have appropriate security clearance, which may also be obtainable by foreign suppliers.

Some Members give credit for past performance (Singapore), while others only use inadequate past performance as a basis for disqualification (Mexico). One Member has put in place an •endorsed supplier arrangement•, under which suppliers of information technology and major office machine products under common use arrangements have to demonstrate a commitment to world best practice in terms of quality standards and service, and long-term value adding activities in countries party to the relevant regional integration agreement (Australia). Some Members identify the natural and legal persons who are not entitled to submit tenders. These could include persons who have family or business ties with the civil servant involved in the procurement process and persons who, individually or through the corporate group to which they belong, issue opinions, expert appraisals or assessments in connection with the settlement of disputes (Mexico). In some Members, entities have freedom to establish the objective requirements for participation which they deem necessary (Colombia, NZ).

(For reciprocity conditions in procurement, which amount to requirements to be services suppliers of particular countries, see Question 9).

(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers• mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

Members do not usually make a sharp distinction between registration or qualification requirements and the maintenance of lists of approved suppliers. Some allow lists of approved suppliers to be used only in exceptional cases, and then the recourse to lists must be justified and approved (US). Certified registration in official lists by the competent bodies usually constitutes a presumption of suitability in terms of the criteria for qualitative selection (EC). The guidelines for procurement in one Member, advise organisations which purchase items specifically designed and manufactured to meet their requirements, to consider developing a list of •approved suppliers• (NZ). This process would involve potential suppliers being evaluated under appropriate criteria. It is argued that while building up an •approved supplier• network could be expensive, there could be long-term benefits in consolidating effective relationships with reliable suppliers. However, to ensure fairness, organisations are advised to be careful to avoid exclusivity, and ensure that lists are continually reviewed.

Companies or firms seeking registration or qualification are usually required to make a declaration (Colombia, Poland) and/or have their background, finances and ability to provide a satisfactory service checked by the registration authorities (Japan, Poland). In some cases, a non-refundable registration fee is charged (Singapore). Where such lists are maintained, they are valid for a certain period, are regularly updated, and interested suppliers are given adequate opportunities to be included (Colombia, India, Japan). Qualifying criteria usually have to be published annually together with the list. Suppliers may apply for admission at any time or at regular intervals. If the procuring entity refuses to accept a supplier on the list, it may be possible to challenge this decision before an independent body (Switzerland).

One member maintains •common use arrangements• (CUAs) which are standing offers with companies to supply goods and services based on pre-negotiated terms and conditions and at agreed prices (Australia). Issues such as trade terms, delivery arrangements, discount schedules and all other contract details are agreed prior to suppliers being added to the lists. CUAs cover most requirements for recurring needs across departments and are continually monitored to ensure that suppliers meet required standards.

VII. CRITERIA FOR ASSESSING BIDS AND AWARDING CONTRACTS

7.(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

In general, contracts are awarded on the basis of criteria such as lowest price, best value for money spent or the economically most advantageous tender. The latter are based on evaluation of price, quality, technical merit, qualifications and experience, aesthetic and functional aspects, service and technical assistance, environmental impact, date of delivery, *et cetera*. In a couple of cases, it is mentioned that the procuring entity estimates a price which serves as the standard for awarding contracts (Japan, Korea).

It is invariably required that all the criteria for the award of contracts be made available in advance through publication in the tender notice or in the tender documents. In some cases it is also required that if criteria other than price are to be taken into account, their relative importance must be specified in advance where possible (Poland, EC).

(b) Is procurement subject to any offset provisions, such as local content, technology transfer or countertrade requirements?

In most cases, procurement is not subject to any offset provisions. Defence procurement may well be the most significant exception (Norway, NZ). In one Member, certain industry development programs involve offsets (Australia), while in another there is a provision in consultancy contracts which requires that government staff be trained (HK).

(Criteria which relate to local content requirements are discussed under Question 9).

(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

In general, preference is not given to any particular group of enterprises. However, in some cases, preferences are given to small and medium sized enterprises. In one Member, it is required that awards of any size be set aside for small business participation when there is a reasonable expectation that offers will be obtained from at least two small businesses and awards will be made at fair market prices (US). In another Member, state entities are authorized to give preference in selection, other things being equal, to local cooperatives, micro-enterprises, foundations, communal action associations and similar entities of the place where the contract is to be implemented (Colombia). In one Member, small-scale sector bidders are entitled to a price preference of up to 15 per cent over the large scale sector, as were public sector undertakings until recently (India).

(See also Question 6)

(d) Do the procurement criteria differ according to sector or region of the economy?

In most cases, procurement criteria do not differ according to the sector or region. However, in one case, geographical location is designated in the context of a labour surplus area set-aside (US). Another Member allows for conditions in the invitation for bidding which further the objectives of job creation, the development of underdeveloped regions, the protection of the environment, as well as increasing the chances of participation for small and medium size enterprises (Hungary). In one Member, evaluation criteria in procurements that are not subject to international agreements may be used to achieve industrial and regional benefits, as long as the benefits are sought in a non-discriminatory manner with respect to regions for which there exists a general framework of regional development (Canada). In one Member, even though there is no change in the basic criteria for procurement there is a special regime for exploration and exploitation of natural resources, and for trading, industrial and marketing activities by State entities that carry out such activities (Colombia). One Member has specified that there may be a

restriction on participating in tendering by •location of principal office• for contracts below certain thresholds (Korea). In one Member, certain regions are given concessions in taxes and duties by the central/state government (India).

(For differences in preference margins associated with provincial or local procurement, see question 9).

(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

In general, the purchasing authority is required to follow the pre-specified evaluation criteria and make a decision solely on the basis of these criteria. In some cases, where criteria other than price are used, discretion is reduced by recourse to stratified procedures, i.e. qualifying suppliers in advance on a non-discriminatory basis using non-price criteria, and then following straightforward price competition (Japan, Mexico). In some cases, however, the purchasing authority has some discretion in defining the criteria and/or choosing the specific procedure followed (Colombia, Hungary, Poland). One Member has mentioned that the procuring authority has the right to cancel the tender at any stage prior to the definitive award provided it has good cause to do so, or to make a preliminary award of all or part of the items.

In one case, only procurements above a certain threshold are subject to review by a state administrative authority to ensure compliance with administrative regulations (Chile). In another case, financial responsibility is delegated to Ministers or Chief Executives depending on the value of the procurement and associated payments (NZ).

(For situations in which a procurer may enter into negotiations, see Question 4)

VIII. DISCLOSURE OF BIDS RECEIVED AND CONTRACTS AWARDED

8.(a) How are tenders received, registered and opened?

Members have a lot in common concerning the basic principles of how tenders are received, registered and opened. In some cases, the principles must be in accordance with international agreements. It is frequently required that the date, time and place of opening, as well as the persons allowed to be present at the opening, must be published in the tender notice (EC, Norway, Poland). Most emphasize the importance of preserving the secrecy of bids prior to the closure of tenders, for instance through sealed envelopes or sealed tender boxes. Most Members specify that a proper record be kept of all bids, usually through a registration system or a record of proceedings at a public bid opening meeting. The record, in some cases, is required to include at least the following information: names of persons attending the opening procedure, names of tenderers, submission dates of offers, prices offered, and variety of offers (Switzerland). It is also invariably required that impartial observers be present at bid opening, e.g. more than one official must be present or the bids must be opened publicly.

In one Member, where a stratified tendering procedure is employed, tenders are received in two sealed envelopes (Mexico). The first envelope contains the documentation by which it is possible to identify and confirm the existence and participation of the bidder, and a description of the required technical specifications of the product or service in question. The second envelope contains the financial bid for the product or service together with the bid security document. During the first phase, known as the •technical phase•, all of the bids are opened in the presence of the participants, and their contents verified. Only those which meet the technical requirements set forth in the bidding conditions are qualified for their second or financial phase, where the final decision is made. Another Member has elaborated that, in negotiated procurements, prices are kept confidential until an award is made. The reason for doing so relates to the proprietary nature of the pricing information. An additional concern is that the knowledge of prices could lead to a

situation in which the incumbent contractor has an unfair advantage over its competitors which could affect the integrity of the procurement system (US).

There are also some cases in which the individual purchasing agency is free to determine its own procedures for receiving, opening and registering tenders in accordance with best practice and certain guidelines (Colombia, NZ).

(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

There is similarity in post-award procedures, but there are also some variations. Most responses indicate that all bidders are informed of the award of a contract within a fixed time period individually, through public notice or in both ways (Norway). But in some cases, there is no requirement for entities to publish details of the contracts awarded or to notify unsuccessful tenderers (Chile, Korea, NZ, Singapore). In one case, unsuccessful tenderers are informed of the decision if the award was not made in a public hearing (Colombia).

In some cases, the contracts are published in summary form in the official press (Brazil). Some require that more information be published, for instance the type of procedure, the nature and quantity of services procured, name and address of the procuring entity, date of award, name and address of the winning tenderer, price of the winning award or the highest and lowest offer taken into account in the award of the contract (Japan, Switzerland). Relevant information on the contract award may, in certain cases, be withheld if this would have harmful effects on the winning firm, might prejudice fair competition between suppliers, impede law enforcement or otherwise be contrary to the public interest (EC, Switzerland). In one case, the requirement to publish depends on the value of the contract (Australia).

(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

Such information is usually not published. But in most instances it is possible for unsuccessful bidders to obtain information on the reasons why their bids did not succeed and on the characteristics and relative advantages of the tender selected as well as the name of the winning tenderer, either as a matter of course or on request (sometimes in writing) (EC, Norway). This requirement sometimes exists in international agreements. In some cases, the request must be received within stipulated time limits (US). One Member states that debriefings may also assist suppliers who have won contracts previously and want to know how they performed against the evaluation criteria so as to continue to enhance their performance (Australia).

In several Members, there is no legal requirement for an entity to inform unsuccessful bidders of the reasons why their bid was not selected (Poland, Singapore). In one such Member, tenderers may nevertheless learn about aspects of the tender or competition through the freedom of access to information provided by law, or by recourse to the right of petition (Colombia). In one Member, where there are no laws and regulations governing procurement, communication to unsuccessful tenderers of reasons for not being selected is nevertheless encouraged under the Government's purchasing guidelines where tenderers request this (NZ). In another Member, even though there is no legal requirement, in practice it is customary to provide the reasons for rejecting bids at the request of the interested parties (Chile). In one Member, the competent authority is required to record the reason for rejection of the bids but unsuccessful tenderers are not informed (India). In another Member, even though there is no obligation to inform, nevertheless, if an interested party contests the preliminary award, the tendering authorities must make the full proceedings of the tender available to that party for examination (Argentina).

IX. TREATMENT GRANTED TO DOMESTIC AND FOREIGN SERVICES AND/OR SUPPLIERS

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of •domestic• in relation to domestic services and suppliers.

The responses of several Members indicate that there are no laws, regulations or procedures which accord domestic services and/or suppliers preferential treatment, or discriminate in any way between the services and service suppliers of other Members (Chile, HK, India, Japan, Korea, India, NZ). In some of these Members, government entities must nevertheless ensure the participation of suppliers of domestic origin, without prejudice to the objective selection procedure (Colombia, NZ). In some cases, preference to nationals is only relevant in the case of otherwise equal bids, as a •tie-breaker• (Brazil, Colombia). In some other cases (Colombia, Hungary), it is only when foreign suppliers submit otherwise equal bids that preference is given to those who incorporate greatest local content (in terms of human resources or other components) and/or offer the best conditions of technology transfer.

Most of the Members who responded to the questionnaire grant no less favourable treatment to services/service suppliers of other Members in the context of bilateral, regional or plurilateral agreements (except Argentina, Brazil and India). The granting of national treatment on a reciprocal basis is a recurrent theme - even in the context of international agreements on procurement. Treatment of services/service suppliers of Members not party to such agreements is frequently not clearly specified. In certain Members, foreign suppliers may be refused the right to participate in international tenders if an agreement has not been concluded with their country (EC). In certain cases, there is a clear preference rule which may differ according to the category of purchases (EC, Hungary, US). In some cases, for the purpose of price comparison, the price of the good of foreign origin includes current import duties and other taxes and charges required for it to be imported by a private importer without special privileges (Argentina, Brazil).

In certain cases, the central government does not grant preferences but provincial and local governments do (Australia). In some Members, procurement below certain thresholds may be limited to domestic suppliers (Poland). Some Members apply domestic source requirements only to specific services sectors, e.g. in the transportation sector (US). Purchases for specific uses, most notably defence-related, may also require procurement from domestic sources. In some cases, a local content policy is operated provided there is adequate competition, which is usually taken to mean the existence of three or more suppliers.

The notion of domestic is defined in some cases to mean those services which are wholly or partly produced in the country in question (NZ) or in the case of certain regional integration agreements, in any member state party to the agreement (EC). In some cases, bids are considered domestic provided local content is in excess of 50 per cent (Hungary, Mexico). In certain cases, domestic services include services provided through commercial presence established in the country and companies owned or controlled by nationals of the country, as well as by nationals who are resident in the country (Japan.). In certain other countries, companies with foreign capital participation may be termed domestic for the purpose of procurement provided they are established under national law and/or their principal business takes place in the country (EC). In one case the definition of domestic in the case of construction services includes an examination of ownership, nationality of directors and place of incorporation (US).

X. PROCEDURES FOR HEARING AND REVIEWING COMPLAINTS/APPEALS

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

All Members have procedures available for potential suppliers to lodge complaints at any time throughout the procurement cycle and against the award within fixed time limits. There is usually provision in the procurement legislation for effective legal remedies. Review procedures are available in most cases to any person who has or had an interest in obtaining a particular contract and who has been or risks being harmed by an alleged infringement. But some responses seem to suggest that certain remedies may be available only to suppliers from countries with which the country in question has concluded an agreement on government procurement. Only a few countries have explicitly noted that the procedures are available to both domestic and foreign suppliers (US).

For aggrieved suppliers, there is usually a prescribed sequence in which different types of controlling agencies may be invoked: internal controls of the procuring entity, independent administrative control, judicial control or political control. Any supplier who claims to be unfairly treated is usually first encouraged to take up the matter directly with the entity concerned. If this does not provide satisfactory results, the formal procedure is to bring an action against the contracting entity before either an independent review body or competent national judicial court (Norway, Switzerland). In some cases, where review bodies at first instance are not judicial in character, it is required that their decision be subject to judicial review.

In one case, the Ministry of Commerce which has responsibility for the government's purchasing policy, may also investigate complaints of unfair treatment (NZ), while in other cases it is the Ministry of Finance (Singapore), Ministry of Comptrollership and Administrative Development (Mexico), auditor-general (Brazil), commissions against corruption (HK), or other organs which make up the system of internal control. In another case, there is no provision for appeal through administrative channels, but complaints may be brought before courts (Colombia). In some Members, suppliers may complain to an ombudsman (Australia). In this case, agencies are not compelled to accept a recommended remedy, but if the agency does not act upon the recommendations adequately, the ombudsman may report to the Prime Minister and then to Parliament. Some Members have also mentioned arbitration or mediation procedures which have the effect of out-of court settlements (Korea).

Review bodies frequently have, firstly, power to take interim measures at the earliest opportunity, including measures to suspend the procedure for the award of a contract or the implementation of any decision taken by the contracting entity. Secondly, they may set aside decisions taken unlawfully. Thirdly, they have the power to award damages to persons injured by the infringement. In some cases the court or independent review body is empowered to stop an ongoing procurement procedure before the contract has been awarded, but not to revoke an award (Switzerland). In other cases, for instance, in some Members in the utilities sector, procurement procedures cannot be stopped during the process, but the court may fine contracting entities who are found guilty of breaking the rules, and adjudge indemnities to the complaining enterprises (Norway). Suppliers may also challenge the cancellation of the award of a contract (US).

Parties to international agreements sometimes also have the possibility of launching complaints to surveillance authorities set up in the context of the agreement in addition to national procedures (EC).

Working Party on GATS Rules

COMMUNICATION FROM SINGAPORE

Emergency Safeguard Measures

The following communication is circulated at the request of Singapore to Members of the Working Party on GATS Rules.

Introduction

1) *The Working Party on GATS Rules (WPGR) has to date discussed extensively the desirability and feasibility relating to Emergency Safeguard Measures in Services (ESM). The WPGR deliberations, the responses to the questionnaire and the papers that have been submitted on the issue have brought a number of conceptual problems to the forefront, particularly in the commercial presence mode. The conceptual and the statistical problems in services data have underlined the difficulties involved in designing ESM.*

2) *The analytical exercise should also involve a listing of possible means to address the issue of serious injury and/or the threat of serious injury in the services trade. Besides addressing some definitional issues, this paper also examines possible measures to address such injury, viz. ESM, GATS Article XXI (modification of schedules) and WTO Article IX (waiver).*

Definition of Domestic industry

3) *The Secretariat paper (S/WPGR/W/8) and the various responses have given varying notions of the definition of domestic industry. Some responses have pointed out that the use of ESMs to safeguard national service suppliers at the expense of foreign service suppliers already established in the territory of the*

member could lead to unnecessary discrimination and harm to the economy. They have therefore suggested that the definition of domestic industry should encompass both national and foreign suppliers such as in the Safeguards Agreement of GATT 1994.

4) We are however of the view that this definition may not be sufficient in the services context. Since national treatment (GATS Article XVII) and market access (GATS Article XVI) are negotiable in the GATS, a member may be expected to make a distinction between national and foreign service suppliers and to calibrate national treatment in order to accord phased protection/favourable treatment for national service suppliers. Thus, it may be appropriate for the GATS to examine the need to have separate definitions for national service suppliers and foreign service suppliers. A problem of national ownership may arise in the case of joint ventures between national and foreign services providers. Some criteria e.g. percentage of equity may have to be agreed on national ownership for purpose of ESM.

The case for ESMs

5) A number of delegations have argued that it may not be necessary to design specific ESMs, along the lines of GATT 1994 Article XIX, since the GATS already contains a number of safety valve articles, viz., Article II (MFN Exemptions), Article XII (BOPs), Article XIV (General Exceptions), Article XIV bis (Security Exceptions), Article XVI & XVII (Scheduling of Commitments) and Article XXI (Modification of Schedules). Other delegations are however of the view that the said articles may not provide for unforeseen emergency situations. They have also argued that the provision of ESMs in the GATS would provide the incentive and comfort for developing countries to be more forthcoming with their commitments.

ESMs in the GATS

6) Conceptually, ESMs in the GATS would be different from safeguards in goods because of two reasons. First, GATT 1994 Article III (National Treatment) obligates members to accord similar treatment to domestic and imported (foreign) products. It is silent on treatment of foreign producers or production in the host country. However, GATS Article XVII (National Treatment) applies to scheduled sectors only, which could be subjected to market access and national treatment limitations. Second, in the goods sector, trade is effected through the cross-border movement of the products. Through cross-border measures, a country could effectively control the quantity of the goods that can enter its market. This is not the case in the services trade, especially in the commercial presence mode. Once foreign service supplier/s have been allowed to establish operations in a member's territory, they could continue to expand their production/supply even after border measures are applied subject to whether limitations that are specified in the country schedule.

Measures to address injury

7) *If national service supplier/s suffer serious injury or face the threat of serious injury¹, beyond what can normally be expected when schedules are submitted, the member concerned could have the following options: (a) the ESM route; (b) GATS Article XXI modification route ; or (c) the WTO Article IX waiver route.*

(i) The ESM route

8) *A temporary ESM could be effected by regulating the foreign service supplier's market share and scale of activities/operations through suspension of scheduled market access and national treatment obligations. However, the ESM should adhere to specific rules² and be subject to approval by the Council for Trade in Services (CTS) or a Safeguards Committee.*

9) *ESMs in the commercial presence mode may be applied to both the pre- and post-establishment phases. Whereas a ESM could be applied with relative ease in the pre-establishment phase, it is not the case in the post-establishment phase. Application of ESMs in the post-establishment phase may involve the reversal or suspension of national treatment and market access for companies already established. It may give rise to divestment problem. Can foreign service suppliers already established be asked to de-register or disband their operations? Would domestic laws permit this? The issue of ESM in the post-establishment phase thus needs further analysis. We agree, however, that there should be no divestment arising from ESM.*

10) *ESMs in the commercial presence mode could be effected in the following ways:*

(i) *the market access route involving the regulation of entry of new foreign suppliers into the domestic market even if the market access schedule allows for more foreign service suppliers;*

(ii) *the national treatment route involving the regulation of the scale/extent of operation of established foreign service suppliers (e.g. in the banking sector, a member could impose limits on new lending activities by foreign banks);*

¹ In ascertaining whether serious injury has taken place or a supplier faces the threat of serious injury, the concepts and tests in Article 4:2 (a) of the safeguards agreement such as drastic decline (and rate of decline) in relative market share or profitability could be utilised.

² such as digressivity, MFN application, specified duration and adequate advance notice, among others.

(iii) a combination of both the market access and national treatment routes.

Economic Welfare argument

11) The issue of economic welfare may arise in the use of ESMs. Unlike the GATT 1994 Safeguards Agreement, the use of ESMs in the GATS could reduce the overall domestic output and employment. In the goods sector, domestic output is bound to increase as a result of protection and at the expense of imports. This may also lead to a rise in domestic employment. However, the economic impact of ESMs in the GATS is uncertain. Whereas the output of national service suppliers would increase, the output of foreign service suppliers may decline due to new restrictions.

(ii) The Article XXI Modification route

12) Some delegations have suggested that subject to conditions like prior notification and compensation, the Article XXI route may be employed. This route has however three serious shortcomings. One, it is only available three years after a commitment has been made. Two, it could only be used after three months following the notification of the intention to modify schedules. (In the view of ESM advocates, both the above conditions reduce the scope for members to address unforeseen emergency situations). Three, it involves compensation. Some have argued that measures taken for legitimate emergency situations should not involve compensation. In addition, the peculiarities of the services trade (i.e. difficulty in determining unit output and market share) makes it difficult to determine the equivalent level of compensation. Nonetheless, it may be useful for the CTS to examine this route as an alternative to the ESM.

(iii) The WTO Article IX waiver route

13) Some delegations have suggested that if the conceptual and statistical problems are not clarified by end 1997 and consequently an acceptable outcome is not forthcoming by that time, the WPGR should extend the mandate of GATS Article X for, say, another two or three years. However, in order to keep the political impetus for continued liberalisation in the services sector trade, the WPGR could contemplate an interim solution. The interim solution could be the WTO Article IX waiver route. It could take the form of a multi-year waiver granted in accordance with WTO Article IX and thereafter subjected to regular annual review. As long as the two basic requirements for a waiver, i.e. "exceptional circumstances" and the "terms and conditions" are met, the waiver can be extended annually until its termination.

14) Our view is that the criteria and circumstances for the request for a waiver under Article IX would be very different from that under ESM. It would not be proper to relax waiver rules simply to accommodate a ESM situation. For example, the question of MFN may arise in the grant of a waiver for a temporary

period for the purpose of ESM. This is a systemic issue which the WPGR has to examine carefully.

Working Party on GATS Rules *Original: English*

COMMUNICATION FROM NORWAY

Response to the Questions Relevant to the Information Exchange Required
Under the Subsidies Negotiating Mandate

Addendum

The following communication is being circulated at the request of the delegation of Norway to Members of the Working Party on GATS Rules.

**NORWEGIAN SUBSIDY PROGRAMMES/SCHEMES RELATED TO
TRADE IN SERVICES**

Enclosure I covers existing subsidy programmes/schemes which contain all type of sectors (including services). Due to statistical data limitations, it is impossible to specify the subsidies paid out to these programmes.

Enclosure II covers existing subsidy programmes/schemes only related to services.

General remarks on duration and legal basis:

Support measures are generally decided by the Storting (the Parliament) each year on the basis of the Governments Budget Proposal. All budget decisions are made for a single fiscal year. In enclosure I specific additional legislations are referred to in relevant cases. Duration is stated in cases of explicitly time-limited schemes/programmes. In other cases the term •Duration has not been specified• is used.

In relation to the implementation of the Agreement on the European Economic Area (the EEA Agreement), the Norwegian Storting and the Government have adopted Act No. 117 of 27 November 1992 to State aid and Regulations concerning implementations of the provisions of the EEA Agreement relating to State aid.

ENCLOSURE I

1. RESEARCH AND DEVELOPMENT SCHEMES

1.1 Industrial R&D programmes and projects

1.1.1 Authority responsible for the subsidy:

The Ministry of Industry and Energy grants money to The Research Council of Norway (NFR). NFR administers the scheme.

1.1.2 Legislation under which it is granted:

The yearly State Budget approved by the Parliament.

The Statutes of the Research Council of Norway.

1.1.3 Policy objective of the subsidy:

Research and development.

1.1.4 Form of the subsidy:

Grants.

1.1.5 To whom and how the subsidy is paid:

All firms are eligible, regardless of branch, region or size.

Conditions applying from 01.04.95:

Cost eligible for aid are: Personnel cost, materials and supplies related to R&D, instruments and equipment, consultancy services, etc. Only costs directly related to the accomplishment of the projects are eligible. Maximum aid intensity: 50 per cent for basic industrial research and 25 per cent for applied research and development. SMEs (maximum 250 employees is one out of three criteria) may obtain an additional 10 percentage points. The Research Council of Norway has the right to publish the title of the projects, its financial contribution, a short resume and achieved results. Projects supported by other state aid schemes do not normally receive support from NFR. To the extent that this occurs, the aid ceilings referred to above apply to the combined aid.

1.1.6 Duration:

Starting date: 1991. Duration has not been specified.

1.1.7 Trade effects of the subsidy:

Support is granted to a variety of projects and sectors. Statistical data showing the trade effects of the subsidy are not available.

1.2 Public Research and Development Contracts

1.2.1 Authority responsible for the subsidy:

The Ministry of Industry and Energy. The Norwegian Industrial and Regional Development Fund (SND) is responsible for the administration of this scheme.

1.2.2 Legislation under which it is granted:

The yearly State budget.

Guidelines for public R&D-contracts and Industry R&D-contracts approved by the Ministry of Industry and Energy 30.03.95.

1.2.3 Policy objective of the subsidy:

Reinforce the capabilities of Norwegian industries to satisfy the needs of public entities.

Improve the quality and effectiveness of services supplied by public entities by implementing new and improved technology.

1.2.4 Form of the subsidy:

Grants.

1.2.5 To whom and how the subsidy is paid:

A public R&D contract is an agreement between a Norwegian enterprise and a public authority that asks for the development of a new product or process. The recipient of the subsidy is the producer. The projects must represent something substantially new.

The bulk of the projects will typically be within the stage of basic industrial research and/or applied research.

Conditions applying from 01.04.95:

Costs eligible for aid are: Personal costs, overhead, current costs, consultancy and equivalent services and instrument and equipment. Only costs directly related to the accomplishment of the projects are eligible. Maximum aid intensity: 50 per cent for basic industrial research and 25 per cent for

applied research and development. SMEs (maximum 250 employees is one out of three criteria) may obtain an additional 10 percentage points.

1.2.6 Duration of the subsidy:

Starting date: 1968. Duration has not been specified.

1.2.7 Trade effects of the subsidy:

Statistical data making possible an assessment of the trade effects of the subsidy is not available.

1.3 Industrial R&D Contracts

1.3.1 Authority responsible for the subsidy:

Administered by the Norwegian Industrial and Regional Development Fund (SND) on behalf of the Ministry of Industry and Energy.

1.3.2 Legislation under which it is granted:

The yearly State Budget arrived by the Parliament.

Guidelines for public R&D-contracts and Industry R&D-contracts approved by the Ministry of Industry and Energy 30.03.95.

1.3.3 Policy objective of the subsidy:

The purpose is to stimulate industrial R&D (Product development) and business links (network).

1.3.4 Form of the subsidy:

Grants.

1.3.5 To whom and how the subsidy is paid:

The projects eligible are R&D-cooperation projects between private enterprises - a major customer and a lesser subcontractor

Conditions applying from 01.04.95:

The grants are restricted to SMEs (maximum 250 employees is one out of three criteria) as partners in new business relations. Subsidy is granted to applied research and development projects. Maximum aid intensity is 35 per cent of projects cost.

Costs eligible for aid are: personnel costs, overhead, current costs, consultancy and equivalent services and instrument and equipment. Only costs directly related to the accomplishment of the projects are eligible.

The condition is that the aid is necessary to start up and realise a project.

1.3.6 Duration of the subsidy:

Starting date: 01.01.94. Duration has not been specified.

1.3.7 Trade effects of the subsidy:

Support is granted to a variety of projects and sectors. Statistical data showing the trade effects of the subsidy are not available.

2. ASSISTANCE TO DISADVANTAGED REGIONS

2.1 Regional Investment Grants

2.1.1 Authority responsible for the subsidy:

The Ministry of Local Government and Labour through The Norwegian Industrial and Regional Development Fund and 15 county municipalities.

2.1.2 Legislation under which it is granted:

- Parliamentary Act No. 97 of July 1992*
- Regulation on Regional measures administered by the Norwegian Industrial and Regional Development Fund and the county municipalities of March 1995.*
- Regulation on Areas eligible of Regional Aid of March 1995.*
- The yearly State Budget.*

2.1.3 Policy objective:

Regional aid; job creation, permanent and profitable business activity in areas with special employment problems or a low level of economic activity.

2.1.4 Form of the subsidy:

Grants or loans (few cases).

2.1.5 To whom and how the subsidy is paid:

Enterprises located in assisted areas for regional policy. All sectors except primary production in agriculture, forestry and fishing. Oil extracting or refining activities are also excluded.

Conditions applying from 01.04.95:

The assisted areas are divided into 3 zones. In zone A the general aid ceiling must not exceed 35 per cent. However, SME (maximum 250 employees is one out of three criteria) may receive on top of the prevailing rate an extra 15 percentage points. In zone B the general aid ceiling must not exceed 25 per cent where SME may receive an extra 5 percentage points. In zone C the general aid ceiling must not exceed 15 per cent where SME may receive an extra 10 percentage points. If the investment grant is combined with other measures containing state aid/subsidy, the total aid must not exceed the general ceilings in the different zones.

2.1.6 Duration of the subsidy:

Starting date: 1966. Duration has not been specified.

2.1.7 Trade effects of the subsidy:

Support is granted to a variety of projects and sectors. Statistical data showing the trade effects of the subsidy are not available.

2.2 Regional Grants for the Development of Business and Industry

2.2.1 Authority responsible for the subsidy:

The Ministry of Local Government and Labour through The Norwegian Industrial and Regional Development Fund and 15 county municipalities.

2.2.2 Legislation under which it is granted:

Parliamentary Act No. 97 of July 1992

-Regulation on Regional measures administered by the Norwegian Industrial and Regional Development Fund and the county municipalities of March 1995.

-Regulation on Areas eligible of Regional Aid of March 1995.

-The yearly State Budget.

2.2.3 Policy objective of the subsidy:

Regional aid; job creation, permanent and profitable business activity in areas with special employment problems or a low level of economic activity.

2.2.4 Form of the subsidy:

Grants or loans (few cases).

2.2.5 To whom and how the subsidy is paid:

Enterprises located in assisted areas for regional policy. All sectors except primary production in agriculture, forestry and fishing. Oil extracting or refining activities are also excluded.

Conditions applying from 01.04.95

The subsidy covers costs eligible under the notion of •soft aid• (costs must meet one-off requirements for up-to-date knowledge in various fields or be related to establishing of network co-operation etc., no physical investment, no operating aid) and/or research and developments projects. Subsidy falling under the notion of •soft aid• must not exceed 50 per cent of eligible costs, and it is confined to SME (maximum 250 employees is one out of three criteria). In cases where the costs are covering research and development activities, larger companies may receive aid within a maximum aid ceiling of 25 per cent of eligible costs. From the same type of activities SMEs may receive a grant within a maximum aid ceiling of 40 per cent of eligible costs.

2.2.6 Duration of the subsidy and/or any time limits attached to it:

Starting date: 1983. Duration has not been specified.

2.2.7 Trade effects of the subsidy:

Support is granted to a variety of projects and sectors. Statistical data showing the trade effects of the subsidy are not available.

2.3 Scheme for Restructuring in Regions Dependant of a Single Industry

2.3.1 Authority responsible for the subsidy:

The Ministry of Local Government and Labour. The scheme is administered by local municipalities and The Norwegian Industrial and Regional Development Fund.

2.3.2 Legislation under which it is granted:

The yearly State budget (Ministry of Local Government and Labour, Ch. 552, post 56).

Regulation of April 1993 (H-21/93).

2.3.3 Policy objective of the subsidy:

Restructuring: job creation in regions where a main enterprise or branch reduces the employment drastically or closes down.

2.3.4 Form of the subsidy:

Grants.

2.3.5 To whom and how the subsidy is paid:

Available to enterprises in municipalities dependent on a single industry or on a single enterprise.

Other criteria for the subsidy are as for •Regional Investment Grants• and •Regional Grants for the Development of Business and Industry• administered by The Norwegian Industrial and Regional Development Fund and the county municipalities.

2.3.6 Duration of the subsidy:

Starting date: 1987. Duration has been specified.

2.3.7 Trade effects of the subsidy:

Support is granted to a variety of projects and sectors. Statistical data showing the trade effects of the subsidy are not available.

2.4 The Norwegian Corporation for Industrial Estates and Development (SIVA)

2.4.1 Authority responsible for the subsidy:

Ministry of Local Government and Labour through the Norwegian Corporation for Industrial Estates and Development (SIVA)

2.4.2 Legislation under which it is granted:

The State budget (Ministry of Local Government and Labour, Ch. 552, 55)

Regulation on SIVA of 27.11.92.

Letter from Ministry of Local Government and Labour to SIVA of 28.03.95 and 09.01.96.

2.4.3 Policy objective of the subsidy:

Primary objective; regional assistance. Secondary; support to small and medium-sized enterprises.

2.4.4 Form of the subsidy:

Grants.

2.4.5 To whom and how the subsidy is paid:

SMEs (Maximum 250 employees is one out of three criteria). Primarily manufacturing industry located in assisted areas.

Grants cover costs eligible under the notion of •soft aid• (costs must meet one-off requirements for up-to-date knowledge in various fields or be related to establishing of network co-operation etc., no physical investment, no operating aid).

Maximum subsidy is 50 per cent of eligible cost.

2.4.6 Duration of the subsidy:

Starting date: 1992. Duration has not been specified.

2.4.7 Trade effects of the subsidy:

Support is granted to a variety of projects and sectors. Statistical data showing the trade effects of the subsidy are not available.

2.5 National programmes for regional development (Ch. 552.53)

2.5.1 Authority responsible for the subsidy:

Ministry of Local Government and Labour in most of the cases through intermediate administrative bodies.

2.5.2 Legislation under which it is granted:

The yearly State budget and Circular H-11/95 from The Ministry of Local Government and Labour.

2.5.3 Policy objective of the subsidy:

Regional. An important objective is to create new structures and ways of collaboration between R&D centres and private SMEs.

2.5.4 Form of the subsidy:

Grants.

2.5.5 To whom and how the subsidy is paid:

Mainly SMEs (Maximum 250 employees is one out of three criteria) in private sector located in assisted areas. Most of the funds available are used to support R&D - infrastructure. Single enterprises may not receive support from this scheme unless they are involved in a co-operation pluriannual programme of broader national interest.

Other criteria for the subsidy to enterprises are as for •Regional Grants for the Development of Business and Industry• administered by The Norwegian Industrial and Regional Development Fund and the county municipalities.

2.5.6 Duration of the subsidy:

Starting date: 1986. Duration has not been specified.

2.5.7 Trade effects of the subsidy:

Support is granted to a variety of projects and sectors. Statistical data showing the trade effects of the subsidy are not available.

2.6 Funds for restructuring of the Community of Rana

2.6.1 Authority responsible for the subsidy:

The Ministry of Industry and Energy. The Norwegian industrial and regional fund has the responsibility concerning aid to private enterprises. Two local institutions also take part in the programme.

2.6.2 Legislation under which it is granted:

The Proposition to the Storting No. 113 (1987-88) •Om Rana og Norsk Jernverk A/S•.

2.6.3 Policy objective of the subsidy:

Regional restructuring; development of new industrial activity and job creation in public and private sectors. The Norwegian steel industry was restructured during 1988-89. This affected the Community of Rana in the county of Nordland and led to a considerable reduction in the employment.

2.6.4 Form of the subsidy:

Grants.

2.6.5 To whom and how the subsidy is paid:

Enterprises located in the Community of Rana.

General investments are supported on the same conditions as applying to the scheme •Regional Investment Grants• administered by The Norwegian Industrial and Regional Fund.

It is also possible to grant the process of developing new projects, and developing enterprises by using equity capital.

2.6.6 Duration of the subsidy:

Starting date: 1.1.1988.

2.6.7 Trade effects of the subsidy:

Support is granted to a variety of projects and sectors. Statistical data showing the trade effects of the subsidy are not available.

2.7 Funds for restructuring of the Community of Sør-Varanger

2.7.1 Authority responsible for the subsidy:

Ministry of Industry and Energy. The Norwegian Industrial and Regional Fund administers subsidies to private enterprises.

2.7.2 Legislation under which it is granted:

Proposition to the Storting No. 80 (1990-91) on the restructuring of Sør-Varanger and A/S Sydvaranger.

2.7.3 Policy objective of the subsidy:

Regional restructuring; development of new industrial activity and job creation in public and private sectors. The Norwegian iron ore/mine industry is restructured during the period 1991 -1996. This affects the Community of Sør-Varanger in the County of Finnmark and leads to a considerable reduction in the employment.

2.7.4 Form of the subsidy:

Grants.

2.7.5 To whom and how the subsidy is paid:

Available to enterprises located in Sør-Varanger, Finnmark County.

General investments and the process of developing new projects are supported on the same conditions as applying to the schemes •Regional Investment Grants• and •Regional Grants for the Development of Business and Industry• administered by the Norwegian Industrial and Regional Fund.

2.7.6 Duration of the subsidy:

Starting date: 1.1.1991.

2.7.7 Trade effects of the subsidy:

Support is granted to a variety of projects and sectors. Statistical data showing the trade effects of the subsidy are not available.

2.8 Viking Business Development A/S

2.8.1 Authority responsible for the subsidy:

Ministry of Industry and Energy

2.8.2 Legislation under which it is granted:

Proposition to the Storting No. (199-92). •Omstilling i Askim•.

2.8.3 Policy objective of the subsidy:

Restructuring in an area of industrial decline.

2.8.4 Form of the subsidy:

Grants.

2.8.5 To whom and how the subsidy is paid:

Enterprises located in Askim in Østfold County and economically viable.

The venture company •Viking Business Development A/S• seeks and develops new business opportunities by placing risk capital in enterprises.

2.8.6 Duration of the subsidy:

Starting date: 01.12.91.

2.8.7 Trade effects of the subsidy:

Support is granted to a variety of projects and sectors. Statistical data showing the trade effects of the subsidy are not available.

3. ASSISTANCE TO SMALL AND MEDIUM SIZED COMPANIES

3.1 Development Grants

3.1.1 Authority responsible for the subsidy:

Ministry of Industry and Energy through the Norwegian Industrial and Regional Development Fund (SND).

3.1.2 Legislation under which it is granted:

Act 3 July 1992 on SND No. 97.

•Retningslinjer for Statens noerings- og distriktsutviklingsfonds landsdekkende virkemidler. •

Letter from the Ministry on Industry and Energy to the SND of 21.02.95.

The yearly State budget.

3.1.3 Policy objective of the subsidy:

Assistance to SME. Improve the efficiency of industry.

3.1.4 Form of the subsidy:

Grant.

3.1.5 To whom and how the subsidy is paid:

Scheme is primarily intended for SME. The scheme is available for all sectors except insurance, banking and finance, shipping, oil and gas exploration, public administration and public sector commercial enterprises, but primarily

Conditions applying from 01.04.95:

Subsidy allowed to SMEs (maximum 250 employees is one out of three criteria):

- maximum 50 per cent of costs eligible under the notion of •soft aid• (costs must meet one-off requirements for up-to-date knowledge in various fields or be related to establishing of network co-operation etc., no physical investment, no operating aid)*
- maximum 35 per cent of costs eligible for applied research and development projects and*
- maximum 7,5 per cent to physical investment (maximum 15 per cent to small enterprises).*

Larger companies are only allowed a maximum aid intensity of 25 per cent to R&D projects or subsidy up to 50,000 ECU in respect of one defined category over a three year period.

3.1.6 Duration of the subsidy:

Starting date: 01.01.93. Duration has not been specified.

3.1.7 Trade effects of the subsidy:

Support is granted to a variety of projects and sectors. Statistical data showing the trade effects of the subsidy are not available.

3.2 The Public Advisory System

3.2.1 Authority responsible for the subsidy:

The Norwegian Ministry of Industry and Energy.

The Subsidy is administered by the following institutions:

- The National Institute of Technology (TI);*
- The North Norwegian Institute of Technology and Innovation (VINN); and*
- The Regional Consulting Services (BRT) (a nation-wide network).*

3.2.2 Legislation under which it is granted:

Proposition to the Storting No. 86 (1986-87).

Royal Decree of 19.02.88.

Royal Decree of 22.04.88.

The yearly State budget.

3.2.3 Policy objective of the subsidy:

Transfer of competence and knowledge to SMEs.

3.2.4 Form of the subsidy:

Services free/partly free of charge.

3.2.5 To whom and how the subsidy is paid:

TI and VINN provide SMEs with technical competence and knowledge. BRT give general assistance.

The institutions only subsidy services directed towards SMEs with less than 100 employees and mainly companies with less than 20 employees. The legal

maximum aid level to a enterprise is 50,000 ECU over a 3-year period. The average level however is only NOK 10,000.

3.2.6 Duration of the subsidy:

The public advisory system was reorganised in 1988. Duration has not been specified.

3.2.7 Trade effects of the subsidy:

Support is granted to a variety of projects and sectors. Statistical data showing the trade effects of the subsidy are not available.

4. EXPORT PROMOTION

4.1 *The Export Campaign, the Strategy Programme and The Programme for Export Development in SME*

4.1.1 Authority responsible for the subsidy:

Ministry of Foreign Affairs through the Norwegian Trade Council.

4.1.2 Legislation under which it is granted:

Government Decree on the Statutes for the Norwegian Trade Council.

The yearly State Budget.

4.1.3 Policy objective of the subsidy:

Business Development and export promotion.

4.1.4 Form of the subsidy:

Grants.

4.1.5 To whom and how the subsidy is paid:

Conditions applying from 01.04.95:

Available to SMEs (maximum 250 employees is one out of three criteria). Costs covered; expenditures when attending trade fairs, expenditures for market research/surveys, seminars, training, consultancy fees. Maximum aid intensity 50 per cent. Average intensity is 25 per cent.

4.1.6 Duration of the subsidy:

Starting date: 1969, 1986 and 1989 for the Export Campaign. The Programme for Export Development in SME and The Strategy Programme respectively. Duration has not been specified.

4.1.7 Trade effects of the subsidy:

Support is granted to a variety of projects and sectors. Statistical data showing the trade effects of the subsidy are not available.

5. SUBSIDIES TO THE FISHERY SECTOR

5.1 Aid to development and rationalisation in the fishing industry

5.1.1 Authority responsible for the subsidy:

The Ministry of Fisheries.

5.1.2 Legislation under which it is granted:

Regulation on aid to development and rationalisation in the fishing industry of 08.02.95.

The yearly State budget.

5.1.3 Policy objective of the subsidy:

Fields: (1) Products and processing technology; (2) integrated sea/land production; (3) develop the cultivation of new species.

5.1.4 Form of the subsidy:

Grant.

5.1.5 To whom and how the subsidy is paid:

Private persons, firms and research institutions can apply for subsidies.

Main projects demands 50 per cent economic participation from private persons and firms.

5.1.6 Duration of the subsidy:

Starting date: 1994. Duration has not been specified.

5.1.7 Trade effects of the subsidy:

Limited means, and special demands for private participation, make the trade effects very small if at all existing.

ENCLOSURE II

PROGRAMME ONLY RELATED TO TRADE IN SERVICES

1) Please identify any subsidy programmes related to trade in services, with a brief description of each programme.

Tax reimbursement scheme for seafarers; The Parliament has for 1997 allocated funding for reimbursement of taxes calculated as 20 per cent of gross salaries.

Only seafarers liable for taxation in Norway are eligible for tax reimbursements. The amounts are paid through the employers.

An additional refund of up to 50 per cent may be paid for cadets, 100 per cent for junior officers and 150 per cent for apprentices. The maximum refund for these positions may in other words reach 30 per cent, 40 per cent or 50 per cent of gross wages respectively.

The scheme contains the condition that ships can not be eligible for any other subsidy.

Another condition for the scheme has been that the shipping community contribute with cost reducing effects of an equivalent magnitude as the tax reimbursement scheme.

2) Please state the policy objectives underlying the use of each subsidy.

The main objective of the scheme is to maintain and promote the maritime community in Norway in general, and the employment of national seafarers and training of new ratings and officers in particular.

3) Please indicate the availability, in the case of your country, of information necessary to distinguish subsidies to services from subsidies to goods, e.g. when a company produces both goods and services.

Not relevant.

4) Please indicate the form of each subsidy (e.g. tax concession, loan, grant etc.).

Grant.

5) Unless previously indicated, please state which sectors are eligible under the subsidy and/or the estimated number of enterprises which are eligible under the subsidy.

Approximately 9000 seafarers employed in some 300 companies on board 500 vessels.

6) Please indicate the eligibility criteria for subsidies (location, nationality, destination of output, or any other condition).

The seafarers must pay tax to Norway, and a certain number of the crew on board the vessel must pay taxes to Norway.

7) Please indicate how the subsidy is calculated (e.g. on production, on exports, on a fixed or fluctuating basis, etc.).

As a percentage of gross salaries, see answer to question 1.

8) Please specify any time limits attached to the subsidies described above.

Duration has not been specified.

9) Please indicate any subsidy disciplines already assumed in the context of regional agreements.

The scheme has been notified to the EFTA Surveillance Authority (ESA) in accordance with state aid provisions of the EEA agreement. ESA has not had any remarks to the scheme.

10) Where such information is available, Members may wish to indicate:

a) Subsidy per unit or total annual subsidy outlays in respect of each subsidy granted;

20 per cent of gross salaries raising to 30, 40 or 50 per cent for some categories, reference question 1. The total amount will depend on the number of eligible applicants, but as an indication NOK 414 million has been set aside in the budget year 1997.

b) Statistical data indicating the impact of subsidies on trade in services in the sectors or activities concerned.

Statistical data showing the trade effects of the subsidy are not available.

Working Party on GATS Rules

COMMUNICATION FROM MEXICO

Response to the Questions Relating to an Emergency
Safeguard Mechanism in GATS

Addendum

The following communication is being circulated at the request of Mexico to Members of the Working Party on GATS Rules.

The intention of this response to the questionnaire is to contribute to the discussion and analysis for evaluating the possibility of applying safeguards to trade in services.

The document does not prejudice Mexico's position on this matter and should not be interpreted as such.

1. What is the justification and purpose of an emergency mechanism under GATS?

The question of what a safeguard mechanism would be for involves the following considerations:

(a) Would an emergency safeguard for services be intended to deal with the kind of situation foreseen in Article XIX of GATT - that is, a temporary threat to a domestic industry arising from increased imports? Would it have any other objective?

If the temporary safeguard measure for services was applied in the same way, it would have the same objective as Article XIX of the GATT in relation to goods: to protect a domestic industry temporarily from international competition that might cause or threaten serious injury as a result of a significant increase in competition from foreign suppliers. The safeguard would restrict imports over a specified period of time so as to allow the domestic industry to make adjustments in order to face the foreign competition.

(b) Are existing safeguard mechanisms in GATS, notably those contained in Article XII and Article XIV, sufficient to address any difficulties governments might

encounter as a consequence of their GATS commitments? Similarly, does Article XXI provide an adequate vehicle for reversing or modifying scheduled commitments in the event of unanticipated difficulties?

Article XII (Restrictions to Safeguard the Balance of Payments) covers situations that affect the economy as a whole by allowing temporary measures of a general nature to be imposed. The mechanism is not selective and although it might resolve problems in sectors facing difficulties, it could also affect other services that may be vital for the functioning of the economy.

Articles XIV (General Exceptions) and XIV *bis* (Security Exceptions) apply under specific circumstances (to protect morals or to maintain public order; to protect human or animal life or health; compliance with laws; furnishing of confidential information for reasons of security; protection of essential security interests, etc.), which is not the same as the objective pursued when applying a safeguard in order to prevent serious injury to a domestic industry as a result of a significant increase in competition from foreign suppliers.

Article XXI (Modification of Schedules) allows a Member to modify or withdraw definitively any commitment in its schedule after three years have elapsed from the date on which the commitment entered into force. The draft procedures for modifying schedules (text of 23 May 1996) do not specify the conditions or circumstances that would allow commitments to be modified or withdrawn, so a Member modifying its schedule has a large measure of discretion when applying them. Moreover, there is no provision for utilizing this mechanism before three years have elapsed, even if unforeseen difficulties arise. There is no provision in Article XXI either allowing a Member to reinstate the level of commitment modified or withdrawn within a specified period.

(c) Does the nature of commitments undertaken in GATS - whereby Members may choose whether to schedule a sector, and may also condition market access and national treatment with respect to commitments that are made - obviate the need for safeguards? Or would it be more appropriate to think in terms of the idea that the existence of a safeguard would allow governments to be more forthcoming with respect to their scheduled commitments?

The establishment of a safeguard mechanism for services should not be a parameter to determine the level of and compliance with commitments by Members. Nevertheless, the elaboration of instruments to resolve unforeseen situations arising from an increase in imports that cause injury to a domestic industry, under certain conditions, could enhance the level of commitment of Members.

(d) What would be the economic objective of a safeguard - to protect production, investors or employment? Would it protect all domestic production, or only that part of production attributable to national suppliers? Would it aim to protect investment by nationals, or all domestically-based investments? What would be the objective of allowing departures from national treatment under modes 3 and 4? Is the distinction between establishment rights *per se* and post-establishment operations relevant in relation to possible safeguard measures under modes 3 and 4?

It is difficult a priori to determine whether the measure should protect investment, production or employment because an increase in imports directly affects all three variables. For example, when an industry faces problems caused by foreign competition, this has an impact on the sales of the services sector or subsector on the domestic market and, consequently, can have an effect on production, investment and employment.

One of the first elements to be defined in relation to mode 3 is what is meant by •domestic industry• because in many Members foreign-owned enterprises have been set up in accordance with their respective laws and are considered domestic enterprises, and therefore the whole domestic industry would have to be protected. Likewise, safeguards should not allow exceptions to the principle of national treatment.

Perhaps the only difference that could be allowed would be in relation to market access for new foreign-owned enterprises and already-established enterprises, to which safeguard measures would not apply.

(e) Would a safeguard mechanism need to contemplate special provisions for developing countries or does the concept of progressive liberalization offer adequate leeway in this respect?

The concept of progressive liberalization gives developing countries flexibility to open up their sectors according to their national interests. Nevertheless, when faced with an emergency situation and even if the country has adopted progressive liberalization commitments, a Member may not be able to move ahead with its commitments on opening up a certain sector and, consequently, a safeguard measure is necessary, which means suspending or withdrawing these commitments. This means that, despite the flexibility offered by progressive liberalization, it does not always constitute a guarantee that a country will not apply a safeguard measure.

In the case of trade in goods, experience suggests that developing countries require longer periods to adjust their markets to unforeseen circumstances. A safeguard mechanism could, therefore, include special provisions for these countries, along the lines of those established within the GATT.

(f) Is there anything intrinsic to service transactions, such as intangibility, simultaneity of production and consumption, or the need for physical proximity between the producer and the consumer, which makes (some) services transactions different from goods transaction in ways that might influence arguments as to the necessity or utility of safeguard measures in services?

Because of the different characteristics of trade in goods and trade in services it is extremely complicated to apply the elements of a safeguard for goods to trade in services. Consideration should be given, however, to those elements of safeguards for goods that could be applied both in practice and in theory to the area of services. In this connection, the mode of supply that most resembles trade in goods is cross-border supply because it is the •service• as such that •crosses• the border, so some mechanism could be established to restrict these flows in the same way as occurs for trade in goods. For the other modes of supply, however, the disciplines applying to trade in goods do not appear to be wholly applicable. Accordingly, provisions that apply more specifically to the characteristics of these three modes of supply of services would have to be developed.

(g) Is anything intrinsic to services markets, such as the role and importance of regulatory regimes, standards and certification requirements, which makes services markets different from goods markets in ways that might influence arguments as to the necessity or utility of safeguards measures in services?

As mentioned in the previous reply, one of the basic differences between trade in goods and trade in services is the variety of forms of the latter.

In the case of services, the various forms of market access are based on laws and regulations that define the characteristics of services in a particular sector. In this connection, in the hypothetical case that a safeguard were applied, irrespective of the mode of supply, this would mean that in the majority of cases changes would have to be made to the legal structure in order to remedy a situation caused by a significant increase in competition from foreign suppliers.

(h) Is anything intrinsic to the role of services in the economy, such as their important support and infrastructure role, which makes services markets different from goods markets in ways that might influence arguments as to the desirability of safeguards measures in services?

Some services sectors play a vital role in the economy, just as some goods may play a strategic role. Each Member will therefore have to assess the risks and decide whether the application of a safeguard for services could have negative effects on the rest of its economy.

(i) Do Members maintain any emergency safeguard measures in national legislation? If so, what are these measures and how are they implemented?

There are no emergency safeguard mechanisms in the services sector in our national legislation. The only safeguard measure for services is to be found in the North American Free Trade Agreement (NAFTA) and applies to the financial sector. This is an automatic measure that comes into effect when the sum of authorized capital of foreign commercial bank, affiliates reaches 25 per cent the aggregate capital of all commercial and investment banks in Mexico. Mexico may request consultations with the other NAFTA parties on the potential adverse effects arising from the presence of credit institutions of other parties on the Mexican market and the possible need for remedial action (see WTO Secretariat document S/WPGR/W/2).

2. What criteria might be brought to bear in determining when an emergency safeguard measure may be justified?

A number of questions can be identified in relation to the criteria that might apply in determining the circumstances in which emergency safeguard measures are to be used. The questions included below assume that essentially the same GATT concepts of increased imports, injury and causality would apply under an emergency safeguards mechanism in GATS.

(a) What, in terms of GATS is the equivalent of increased imports under Article XIX of GATT? In mode 1, the cross-border flow of services may be similar to the import of goods, but the situation is quite different under other modes. How should the possibility of safeguards be triggered in these circumstances?

Mode 1 (cross-border supply). This is the form of trade most similar to trade in goods. The safeguard mechanism could be triggered in a similar way to that established in the GATT, although the characteristics of the sector concerned would have to be taken into account. The mechanism would be triggered if the information available showed that the increase in imports was causing injury to an economic activity. The problem that arises is that the lack of statistics on the services sector is a constraint on triggering this mechanism.

Mode 2 (consumption abroad). For this mode of supply, it is difficult to exercise control over the entry and exit of consumers from one country to another. In general,

immigration forms show the country to which a person is going and the reason for his travel (business, tourism or other), but it would be difficult to use this as a basis for determining the person's specific activity and consumption abroad. It would therefore be virtually impossible to prove serious injury caused by flows under this mode of supply.

Mode 3 (commercial presence). As mentioned in the reply to question 1(d), once a foreign-owned enterprise has been established, it should be considered a national enterprise. The possible safeguard would, therefore, apply to market access for new enterprises. In this case as well, it is difficult to quantify the serious injury caused to existing national-owned or foreign-owned enterprises as a result of the increased share of new foreign enterprises in the market.

The foregoing also applies *pari passu* to mode 4.

(b) How should serious injury be determined? Injury to whom or what?

In the case of goods, according to the WTO Agreement on Safeguards, in order to determine whether there has been serious injury it is necessary to evaluate all relevant factors of an objective and quantifiable nature having a bearing on the situation of that industry, in particular the rate and amount of the increase in imports of the product concerned in absolute and relative terms, the share of the domestic market taken by increased imports, changes in the level of sales, production, productivity, capacity utilization, profit and losses, and employment.

For services, the factors to be evaluated in order to determine the existence of serious injury could be the same as those applying to goods; however, the problem is the absence of adequate statistics for each of the factors or indicators. Serious injury would be evaluated in relation to the domestic industry concerned.

(c) What standards would be required to determine that increased competition from foreign sources caused injury to the national industry?

All the elements affecting the domestic industry should be evaluated, including factors other than competition from foreign suppliers, in order to determine whether the latter factor resulting from the commitments entered into is the only or the most important element causing the serious injury.

(d) How would the national industry be defined for the purpose of determining injury?

As mentioned above, in defining the domestic industry it must be determined whether it includes enterprises whose equity is wholly or partly foreign-owned.

(e) Should a link be established between the nature of a specific commitment in a particular sector, including in relation to limitations on market access and national treatment, and the availability of a safeguard measure? In other words, should the availability or nature of a safeguard be restricted where limitations have been inscribed?

The schedules of commitments by member States of the GATS indicate the services activities they have bound and specify the conditions for market access and national treatment for each of them. For some of these activities, binding means that several restrictions have been maintained so that market access and national treatment are considerably restricted. Even though such restrictions may be bound in the schedule of commitments, an activity might cause problems resulting from increased competition from foreign suppliers, and therefore the country in question should be able to apply a safeguard.

(f) What measurement and identification problems arise in services that might complicate the development of a safeguard instrument, and how should they be dealt with?

The major problem in the services sector is the lack of statistics. If there were a methodology and better statistics, this would be a major step forward for quantifying the flows of trade in services and, possibly, quantifying the injury that might be caused by unexpected increases in competition from foreign suppliers. The development of statistics should not only cover cross-border flows, but also statistics at the national level identifying the major elements concerning production, employment and investment, which are essential above all for mode of supply 3.

3. What form might a safeguard mechanism for services take?

If increased foreign competition and serious injury to domestic services or service suppliers have occurred, and causality between the two has been established, a question arises as to the characteristics of a safeguard measure that might be applied.

(a) What type of measure should be applied? Would taxes, foreign exchange restrictions, other quantitative limitations, or regulatory restraints be suitable as safeguard measures?

For trade in goods, the safeguard measures that can be applied are tariffs and quantitative restrictions. For trade in services, the safeguards could basically be in the form of quantitative restrictions.

Foreign-exchange restrictions would not be advisable as safeguard measures to protect a specific services sector because their use could have adverse effects on other activities, as they have a general impact on the economy as a whole.

(b) What would be the implications of different modes of supply for the kind of measures employed?

Given the characteristics of each mode of supply, it would be difficult to adopt a measure that could be applied uniformly to all of them. In principle, safeguards mechanisms would have to be developed for each mode of supply and in some cases perhaps for specific sectors.

(c) Would there be circumstances in which the application of a safeguard measure in respect of one mode of supply would provoke a demand for comparable measures in relation to other modes at the same time?

Yes. It is possible, for example, that competition from foreign suppliers that causes serious injury and is subject to a safeguard measure applying to one particular mode of supply could then occur through another mode of supply, thus evading the safeguard measure.

(d) Should safeguards be applied on a non-discriminatory basis in all circumstances?

Yes, safeguard measures should be applied to all countries supplying the service, irrespective of which one causes the serious injury.

(e) How quickly would it be possible for a Member to take a safeguard measure? Would the notion of 'critical circumstances', as developed in the Agreement on Safeguards, apply in the services area?

No, in principle. Provisional safeguards for trade in goods are imposed because of critical circumstances that mean that any delay in their application would lead to injury it would be difficult to remedy and, in general, apply to agricultural goods, which are much more likely to involve critical circumstances because of their perishable nature. In the case of services, it is difficult to think of examples which could be subject to such circumstances.

(f) What should be the duration of any safeguard measures adopted?

The period of application of safeguard measures would depend on the time the sector required to adjust; nevertheless, the duration applicable to the services sector would have to be discussed, considering whether the time-limits laid down for trade in goods could be utilized.

(g) Would safeguard measures be made degressive during their period of application?

One could think so. The progressive reduction of the safeguard measure would facilitate readjustment of markets.

(h) Would a Member taking a safeguard action be required also to adopt adjustment measures?

Yes, so as to encourage the sectors benefiting from a safeguard measure to make the adjustments that would allow them to compete once again with foreign suppliers and to ensure that the measures do not become protectionist.

(i) Would the application of safeguard measures be accompanied by compensatory adjustments in the schedule of the Member taking the measure?

Compensation for countries subject to a safeguard measure could be decided upon, the cost to be borne by the country applying the measure, so that safeguard measures would only be used in exceptional circumstances and would not become protectionist trade-policy tools.

Working Party on GATS Rules Original: English

COMMUNICATION FROM THE EUROPEAN COMMUNITIES
AND THEIR MEMBER STATES

Response to the Questions Relating to an Emergency Safeguard Mechanism in
GATS

The following communication is being circulated at the request of the European Communities and their Member States to Members of the Working Party on GATS Rules.

At Singapore, Ministers agreed that further work should be undertaken, including more analytical work, with a view to completing the negotiations on Safeguards by the end of 1997.

It is with this objective in mind that the European Communities and their Member States are participating further in the discussions on safeguards through, answering the list of questions which has been established last year in the Working Party on GATS Rules (WTO document S/WPGR/W/15 of 12 December 1996).

The answers to the questions are therefore without prejudice to the EC's negotiating position on whether an emergency safeguard clause is desirable and or feasible with respect to trade in services. By the same token, they do not provide a reaction to the replies and papers already transmitted by other Members of the Working Party.

The thrust of the answers is to demonstrate that if an emergency safeguard action would be established, it would have to comply with strict and demanding conditions.

This submission is made to stimulate the analytical work. It is expected that other Members will have made similar contributions so that by the deadline of the end of 1997, a decision in full knowledge can be taken.

What is the justification and purpose of an emergency mechanism under GATS?

1. The question of what a safeguard mechanism would be for involves the following considerations:

a. Would an emergency safeguard for services be intended to deal with the kind of situation foreseen in Article XIX of GATT -- that is, a temporary threat to a domestic "industry" arising from increased imports? Would it have any other objective?

An emergency safeguard provision under the GATS should fulfil the same purpose as for trade in goods i.e. allow for the temporary protection of a domestic service industry in case of serious injury or threat thereof due to increased imports in a service sector in which specific commitments have been undertaken and only for such period of time as may be necessary to prevent or remedy serious injury. Any possible safeguard measure should be proportional to the nature and extent of such commitments. It should also be non-discriminatory in character. Whether there is merit in taking safeguard measures in areas where Members have not taken specific commitments needs to be examined since it is not clear if there would be a reason to justify a safeguard action in non-committed sectors.

Since the main purpose of the GATS is to bring about the liberalisation of trade in services, there should be no question, therefore, of any safeguard mechanism being used as a means of reversing the normal consequences of the market access commitments which have been undertaken.

If a safeguards measure was justified, its sole purpose would be to address an emergency situation, which was unforeseeable when the relevant commitments were made, and which involves a temporary - but seriously injurious - threat to a domestic industry arising from increased imports. It should be short-term, progressively liberalised and structured so as to provide a real incentive for the domestic industry's restructuring so as to adapt to the changed conditions in the market. In any event, an emergency mechanism should not be used or applied in such a way as to undermine the value and legal certainty of the GATS' commitments.

The requirement of "unforeseen developments" of GATT XIX should be included in the GATS safeguard definition.

b. Are existing "safeguard" mechanisms in GATS, notably those contained in Article XII and Article XIV, sufficient to address any difficulties governments might encounter as a consequence of their GATS

commitments? Similarly, does Article XXI provide an adequate vehicle for reversing or modifying scheduled commitments in the event of unanticipated difficulties?

The existing safeguards under the GATS are there for specific purposes with their own procedures and cannot or should not be used for emergency safeguard actions.

Article XII allows to take restrictive measures in the case of balance of payments difficulties which needs to be justified on these grounds and according to specific procedures in conjunction with the IMF. It does not allow to take a relief measure if, at the same time, it is not demonstrated that the Member has balance of payments difficulties.

Article XIV allows a Member to take restrictive and discriminatory measures for given reasons only and provided the Member complies with the necessity test. Injury to domestic industry is not a justification enumerated under Article XIV. The exception Article should be kept to a minimum and the exception of public order, for example, should not be interpreted in such a broad sense to cover emergency situations.

Article XXI does allow a Member to modify its commitments and in so doing be more restrictive but it has to compensate for it; there are no conditions laid down on the duration or the determination test; once a settlement has been found and is inscribed in the modified schedule of commitments, it could last for an undetermined period of time; there is no obligation to return to the original liberalisation commitment.

c. Does the nature of commitments undertaken in GATS -- whereby Members may choose whether to schedule a sector, and may also condition market access and national treatment with respect to commitments that are made -- obviate the need for safeguards? Or would it be more appropriate to think in terms of the idea that the existence of a safeguard would allow governments to be more forthcoming with respect to their scheduled commitments?

The progressive liberalisation nature of the GATS does not as such obviate the need of a safeguard clause since the latter is to redress unforeseen circumstances i.e. at the time of making commitments no emergency situation existed which would have justified not making a liberalisation commitment.

As to whether a safeguard action could play the role of a safety valve, this is difficult to demonstrate: in the absence of a safeguard clause in GATS, have Members been prevented to take up (more) liberalisation commitments?

d. What would be the economic objective of a safeguard -- to protect production, investors, or employment? Would it protect all domestic production, or only that part of production attributable to national suppliers? Would it aim to protect investment by nationals, or all domestically based investments? What would be the objective of allowing departures from national treatment under modes 3 and 4? Is the distinction between establishment rights per se and post-establishment operations relevant in relation to possible safeguard measures under modes 3 and 4?

The objective of an emergency safeguard action would be to protect the domestic service provider and or service. This could be through production, investors or employers but also consumers.

The protection should be limited in time and scope and therefore it should be granted for that part of the production attributable to the domestic suppliers only (see answer to question 2d for definition of domestic service supplier).

e. Would a safeguard mechanism need to contemplate special provisions for developing countries or does the concept of progressive liberalization offer adequate leeway in this respect?

No. The process of liberalisation itself takes into account the level of development of individual Members, both overall and in individual services sectors. Therefore there might be no additional justification to design a different or more flexible safeguard for developing countries. The only flexibility which could be considered is in the application of a safeguard clause for LLDCs.

f. Is there anything intrinsic to service transactions, such as intangibility, simultaneity of production and consumption, or the need for physical proximity between the producer and the consumer, which makes (some) services transactions different from goods transaction in ways that might influence arguments as to the necessity or utility of safeguard measures in services?

Some of the mentioned specificities of a service transaction do seriously influence the feasibility of a safeguard measure and how to enforce it. Indeed, it is understood that the use of a safeguard measure will only be acceptable when it complies with a number of strict conditions which imply quantification of injury, increased imports, domestic industry, etc. Further work on all the required conditions for applying a safeguard action is necessary before it can be decided whether this is feasible or not.

g. Is anything intrinsic to services markets, such as the role and importance of regulatory regimes, standards and certification requirements, which makes services markets different from goods markets in ways that might influence arguments as to the necessity or utility of safeguards measures in services?

The fact that the supply of a service is so much dependent on a given regulatory regime may help in applying a safeguard measure: in granting a license or certifying the requirements, control is possible on accepting or not a new service supplier in the market.

h. Is anything intrinsic to the role of services in the economy, such as their important support and infrastructure role, which makes services markets different from goods markets in ways that might influence arguments as to the desirability of safeguards measures in services?

Supply of a number of services are key vehicles for an economy (i.e. telecommunications, financial services, transport). But this is also the case for the production of a number of goods. If the provision of a service has overriding importance for the economy, a choice is to be made by the individual Member. It should not influence the rationale of creating a safeguard clause. A safeguard clause is a tool to use, not an obligation.

i. Do Members maintain any emergency safeguard measures in national legislation? If so, what are these measures and how are they implemented?

In Community legislation, Article 73f of the EC Treaty allows, in exceptional circumstances, for the possibility to take safeguard measures, for a period not exceeding six months, in the area of movement of capitals to or from third countries when this causes, or threatens to cause, serious difficulties for the operation of the economic and monetary union. In such case it will be necessary to act and react quickly. If restrictions on movement of capital from third countries would have to be taken, this may affect the specific commitments on cross-border trade and commercial presence.

In Community legislation, there is also the possibility to take safeguard measures in case of a crisis in the market for international carriage of goods by road on Community territory between Member States (see EC Regulation 3916/90 of 21/12/90 - OJ L375/10).

What criteria might be brought to bear in determining when an emergency safeguard measure may be justified?

2. A number of questions can be identified in relation to the criteria that might apply in determining the circumstances in which emergency safeguard measures are to be used. The questions included below assume that essentially the same

GATT concepts of increased imports, injury and causality would apply under an emergency safeguards mechanism in GATS.

a. What, in terms of GATS, is the equivalent of increased imports under Article XIX of GATT? In mode 1, the cross-border flow of services may be similar to the import of goods, but the situation is quite different under other modes. How should the possibility of a safeguard be triggered in these circumstances?

Strictly defined, import of services comes under mode 1 only. As to mode 2, too much consumption abroad could also cause injury to the domestic service supplier. As to mode 3: strictly speaking there is no import of a service but only of a service supplier when establishing for the first time in the territory. Therefore, any injury to a service being supplied within a Members' territory will depend on each Member's domestic legislation on incorporation / rules of origin i.e. at what stage does a foreign service supplier become a domestic supplier. As to mode 4, an increase in the number of foreign persons providing services is not as such a threat to a service. But if the amount of services provided increases injuriously or threateningly, should the importing country be able to stop this through limiting the number of new services suppliers?

b. How should serious injury be determined? Injury to whom or what?

Serious injury should be assessed on the basis of all relevant factors of an objective and quantifiable nature having a bearing on the situation of the industry, such as market share, employment, consumers' interest and profitability. The assessment should also demonstrate the existence of a causal link between the increase in value of services and the serious injury to domestic service suppliers.

As regards safeguards criteria, a question which arises is since, presumably, the greatest concern would be over relatively new, dynamic (and possibly technologically-volatile) services, over what period and against what yardstick would the data be determined, and what would be the timescale for doing the necessary investigation?

c. What standards would be required to determine that increased competition from foreign sources caused injury to the national industry?

Not "increased competition" but increase in the value of services in absolute or relative terms should be required".

d. How would the national industry be defined for the purpose of determining injury?

It appears not desirable to use the definition of a service provider of another Member as provided for in Article XXVIII (n), to define what constitutes a national industry since this may lead to unnecessary discrimination and harm to the economy in general.

In order to determine injury, concepts used under the GATT may have to be examined such as should the national industry be defined as the providers as a whole of the like or directly competing services operating within the territory of the Member, or those whose collective supply constitutes a major proportion of the total Member supply of those services?

e. Should a link be established between the nature of a specific commitment in a particular sector, including in relation to limitations on market access and national treatment, and the availability of a safeguard measure? In other words, should the availability or nature of a safeguard be restricted where limitations have been inscribed?

No sector specific need for a safeguard action has so far been established. In the absence of a general safeguard clause in the GATS, because such application could be too broad or general, it might be appropriate to examine a safeguard clause applicable to some specific sectors only. But any sectoral safeguard clause should be based on strict conditions and disciplines and not on unilateral inscriptions in the schedule of commitments. It should be noted that if a Member has already taken some limitations for market access or national treatment in the schedule, this need not necessarily mean that any safeguard action is less justifiable (see however answer under 1a).

f. What measurement and identification problems arise in services that might complicate the development of a safeguard instrument, and how should they be dealt with?

The concept of "increased imports" and the variety of factors to be analyzed for the determination of "serious injury" may prove to be difficult to assess in services. Furthermore, it might be more difficult to determine the directly competitive relationship between services.

Application of a safeguard action, in a disciplined way, requires the development of the following instruments:

- *statistics on trade in services; and*
- *classification of services in a more aggregated way.*

The above are not only necessary for safeguards. Also for the procedure on modification of schedules and disciplines on subsidy measures, for example, this will be necessary. But even with better available statistics, quantification of imports and comparison with domestic like services/service suppliers will remain very difficult.

What form might a safeguard mechanism for services take?

3. If increased foreign competition and serious injury to domestic services or service suppliers have occurred, and causality between the two has been established, a question arises as to the characteristics of a safeguard measure that might be applied.

a. What type of measure should be applied? Would taxes, foreign exchange restrictions, other quantitative limitations, or regulatory restraints be suitable as safeguard measures?

Foreign exchange restrictions and limitations to movement of capital might be an operational manner to monitor the import of services together with a quantitative limitation which could include a zero quota for a limited period of time. However, also in such case the application of emergency safeguards has to be in compliance with the IMF jurisdiction on foreign exchange restrictions.

Also through regulations the supply of a service can be controlled to the extent the services' sector is regulated : for example, only a partial licence could be granted, allowing to exercise some activities of the whole range of services activities of the sector.

b. What would be the implications of different modes of supply for the kind of measures employed?

The supply of services on a cross-border basis could be suspended on a temporary basis. As to mode 2, it could be envisaged to have a ban on expatriation of capital/deposits of money abroad. In practice, it appears that a safeguard measure could be applied to new entrants in modes 3 and 4.

c. Would there be circumstances in which the application of a safeguard measure in respect of one mode of supply would provoke a demand for comparable measures in relation to other modes at the same time?

To regulate the supply of services into your market, so as to adjust your own, it may be necessary to take safeguard action in all modes of supply at the same time or only in a given mode of supply, depending on the sector. Applying a safeguard action in one of the modes of supply only, may lead to circumvention and therefore possibly questioning the effectiveness of a safeguard clause.

This question raises also the issue of taking a safeguard action on a mode of supply for which no commitments have been taken in the sector.

d. Should safeguards be applied on a non-discriminatory basis in all circumstances?

Yes because safeguards are not designed to offset the adverse effects of unfair trade but to give the domestic industry time to adjust to a changed or unforeseen competitive environment.

e. How quickly would it be possible for a Member to take a safeguard measure? Would the notion of 'critical circumstances,' as developed in the Agreement on Safeguards, apply in the services area?

Possibility of taking provisional safeguard measures in critical circumstances as for goods : why not ? This may be necessary to address difficulties created by exchange rate policy and which can affect the supply of several sectors and through the different modes of supply.

If provisional measures are allowed, they should be allowed only under equivalent strict conditions as set forth in Article 6 of the Agreement on Safeguards such as being based on clear evidence that increased imports have caused serious injury and for a short duration. Additionally, the form of the measure should be reversible.

f. What should be the duration of any safeguard measures adopted?

A maximum period of two/three years, with in-built review after the first year, and with a view to its withdrawal or an increase in the pace of liberalisation, with the possibility of only one prolongation of just one year.

g. Would safeguard measures be made degressive during the period of their application?

Yes.

h. Would a Member taking a safeguard action be required also to adopt adjustment measures?

Yes.

i. Would the application of safeguard measures be accompanied by compensatory adjustments in the schedule of the Member taking the measure?

Under certain conditions, compensatory adjustments exist for goods after a given period of application of safeguard measures. A system similar to Article 8 of the Agreement on Safeguards could be envisaged.

Working Party on GATS Rules Original: English

COMMUNICATION FROM EGYPT

Response to the Questions Relating to an Emergency Safeguard Mechanism in GATS

The following communication is being circulated at the request of Egypt to Members of the Working Party on GATS Rules.

What is the justification and purpose of an emergency mechanism under GATS?

1. The question of what a safeguard mechanism would be for involves the following considerations:

a. Would an emergency safeguard for services be intended to deal with the kind of situation foreseen in Article EXES of GATT -- that is, a temporary threat to a domestic "industry" arising from increased imports? Would it have any other objective?

The original intent behind article X of the GATS was to conduct negotiations on emergency safeguards mechanism of the kind addressed by, and to serve the same objective of article XIX of GATT. Without dismissing the possibility of using safeguard mechanism beyond article XIX, so far our focus remains on measures to provide immediate relief to domestic industry from the pressure arising from a surge of imports or a threat thereof. The possibility of going beyond article XIX could be warranted by the crucial strategic and infrastructural role of services in the economy as a whole, which thus make the impact of services more far-reaching than that of goods on the development process. It is therefore essential that in undertaking their commitments, countries reckon that they may resort to temporary safeguards if the commitments were to result in injurious effects, difficult to foresee in advance. Such a clause would even induce countries to make more ambitious commitments to liberalize.

b. Are existing "safeguard" mechanisms in GATS, notably those contained in Article XII and Article XIV, sufficient to address any difficulties governments might encounter as a consequence of their GATS commitments? Similarly, does Article XXI provide an adequate vehicle for reversing or modifying scheduled commitments in the event of unanticipated difficulties?

Article XII and XIV are not designed to address the same type of situations which an emergency safeguard mechanism analogous to that of article XIX of the GATT will address.

Article XII is meant to address balance of payments problems which are specifically defined in the text of the article itself. It is analogous to article XVIII of the GATT. There should be no confusion between those different types of problems.

Similarly article XIV (General Exceptions) is meant to provide coverage for measures inconsistent with a Member's obligations under the GATS, in order to serve a set of well-defined paramount policy objectives. This provision is analogous to article XX of the GATT.

Although conceptually these provisions could be called "safeguard mechanisms", they should not be confused with the emergency safeguard mechanism discussed under article X of the GATS, therefore the question of whether they would be sufficient to address any difficulties governments might encounter as a consequence of their GATS commitments might not be the right question to ask. Emergency safeguard mechanism should - in fact - accommodate situations which were completely unforeseen when the commitments were initially negotiated. As service markets are further liberalized, temporary emergency safeguards become all the more relevant to address difficulties governments could encounter as a consequence of their GATS commitments.

Possibility of recourse to emergency safeguards could obviate the need for economic needs test.

While those who argue against such a safeguard clause for lack of feasibility, consider article XXI as sufficient, it is worthwhile noting that this article implies a permanent modification in the commitment in addition to payment of compensation, which is not the thrust of the argument of those favouring a safeguard clause. In addition, the modification of the concession in accordance with article XXI is conditioned by a lapse of a three year period before any action can be taken by the Member concerned. Furthermore it is conceptually difficult to see article XXI mechanism as a solution to emergency situations, as it would seem to provide a solution of a permanent nature for a problem of a temporary nature.

c. Does the nature of commitments undertaken in GATS -- whereby Members may choose whether to schedule a sector, and may also condition market access and national treatment with respect to commitments that are made -- obviate the need for safeguards? Or would it be more appropriate to think in terms of the idea that the existence of a safeguard would allow governments to be more forthcoming with respect to their scheduled commitments?

The first question resembles to a large extent the previous one in terms of built-in-safeguards, which we believe do not obviate the need for emergency safeguards. On the contrary, a safeguard clause could lessen the limitations under market access and national treatment provisions. We are of the view that, designing a safeguard clause -as a longer term objective - should encourage countries to be more forthcoming with substantive offers to liberalize. Integrating a safeguard clause should also be effective for ensuring a better involvement and increased participation on the part of developing countries in more sectors in trade in services as it would make countries feel secure in their commitments. As mentioned earlier, there is a qualitative difference between the concerns that governments might have in scheduling commitments and those which may arise in emergency situations. In the former such concerns may relate predominantly to long-term considerations, while in the latter they may relate to sudden changes in trade patterns.

d. What would be the economic objective of a safeguard -- to protect production, investors, or employment? Would it protect all domestic production, or only that part of production attributable to national suppliers? Would it aim to protect investment by nationals, or all domestically based investments? What would be the objective of allowing departures from national treatment under modes 3 and 4? Is the distinction between establishment rights per se and post-establishment operations relevant in relation to possible safeguard measures under modes 3 and 4?

These are a number of very complex questions which would necessitate in our view further studies and analysis. The answers given in this context are rather of a preliminary nature. In regard to the economic objective of a safeguard and whether it would aim at protecting production, investors or employment, this will certainly vary according to the different modes of supply and different situations. In any case, those elements may not be mutually exclusive. This can be better illustrated by way of examples.

-In the cross border mode, the economic objective of a safeguard might be to protect domestic suppliers in the face of a sudden surge of imports of insurance products.

-In the consumption abroad mode, the objective might be to protect the economy against the excess of outflow of resources created by sudden surge in demand on the part of domestic consumers to consume services abroad, which would injure the domestic suppliers.

-In case of commercial presence, the objective would be in general to protect domestic industry, and to ensure minimum domestic production and control. That may relate to levels of production, employment and/or investments.

-In the case of the movement of natural persons, the objective would be to protect employment from a sudden increase in foreign labour. It could obviate the need for economic needs test.

In regard to the second and third questions, whether the safeguard would protect all domestic production or only that part attributable to national suppliers and whether it would aim to protect investment by nationals or all domestically

based investments, for the purpose of an emergency safeguard mechanism, this issue is still under consideration in Cairo, and needs to be further analyzed by the group.

In regard to their fourth question, it is difficult to perceive what is meant by allowing departures from national treatment under modes 3 and 4. As for the fifth question regarding the relevancy of making the distinction between establishment rights *per se* and post-establishment operations in relation to possible safeguard measures under modes 3 and 4, Egypt, at this stage, does not see any purpose that can be served by dis-establishment or withdrawal of licences of operating service suppliers. The aim of emergency safeguards - in our view - is to regulate import levels, limit the number of service suppliers and limit the volume or value of services operations. The key words are •regulate• and •limit• not to digress or renege on previous commitments.

e. Would a safeguard mechanism need to contemplate special provisions for developing countries or does the concept of progressive liberalization offer adequate leeway in this respect?

The concept of progressive liberalization is about undertaking national treatment and market access commitments. If the question meant to be asked is whether the element of progressivity would obviate the need of a safeguard mechanism, the answer is NO. As mentioned before in the context of replying to the question (b), there is a conceptual distinction between the scheduling and modification of commitments on the one hand and the ability to address emergency situations, on the other hand. In so far as developing countries are concerned, there may very well be good reasons for allowing developing countries to address special situations that may arise only in the case of developing economies. The exact nature and remedies for such situations is a matter that needs further detailed examination.

f. Is there anything intrinsic to service transactions, such as intangibility, simultaneity of production and consumption, or the need for physical proximity between the producer and the consumer, which makes (some) services transactions different from goods transaction in ways that might influence arguments as to the necessity or utility of safeguard measures in services?

From a policy objective point of view, there seems to be no difference between the services and goods that could affect or lessen in anyway the necessity or utility of safeguard measures in services as compared to goods. However, the differences referred to in the question may lead to different approaches in devising how a safeguard mechanism would operate in the case of services. We have also to take into account the definition of trade in services under which sales by foreign owned corporations on the domestic market are considered as •exports• of services.

What criteria might be brought to bear in determining when an emergency safeguard measure may be justified?

2. A number of questions can be identified in relation to the criteria that might apply in determining the circumstances in which emergency safeguard measures are to be used.

The questions included below assume that essentially the same GATT concepts of increased imports, injury and causality would apply under an emergency safeguards mechanism in GATS.

a. What, in terms of GATS, is the equivalent of increased imports under Article XIX of GATT? In mode 1, the cross-border flow of services may be similar to the import of goods, but the situation is quite different under other modes. How should the possibility of a safeguard be triggered in these circumstances?

Safeguard action would flow from the definition of trade in services. One can measure in terms of article XVI on market access. Increased imports could be defined in terms of value, volume, number of providers, share of the market taken by the surge in imports, level of sales, capacity utilization, etc. Thus, it might include a rapid series of takeovers of domestic firms by foreigners, a rapid expansion of the share of the domestic market by foreign owned/controlled firms. Notion of injury would also need to address the retardation in the development of domestic services.

b. How should serious injury be determined? Injury to whom or what?

The criteria for determination of injury would need to be further examined. However, a link between increased service supply (or competition) and a potential injurious effect on the domestic industry should also be drawn in this respect. It is not inconceivable that criteria might differ according to the sector or mode of supply.

c. What standards would be required to determine that increased competition from foreign sources caused injury to the national industry?

The same kind of standards as in goods in establishing the causality between serious damage or actual threat thereof and the increased imports.

d. How would the national industry be defined for the purpose of determining injury?

It is not clear for the purpose of determining injury whether a safeguard mechanism should define national or domestic industry. Our preliminary view is a safeguard mechanism should aim at protecting domestic industry which would normally encompass national suppliers as well as of foreign origin. However, as mentioned above, this matter is still under consideration.

e. Should a link be established between the nature of a specific commitment in a particular sector, including in relation to limitations on market access and national treatment, and the availability of a safeguard measure? In other words, should the availability or nature of a safeguard be restricted where limitations have been inscribed?

Logically, the need to take emergency safeguard action would not necessarily relate to whether there are limitations on market access and national treatment in relation to the sector concerned. In our view there should be no link between the two.

f. What measurement and identification problems arise in services that might complicate the development of a safeguard instrument, and how should they be dealt with?

Lack of statistical data has been mentioned as one of the main reasons for not including a clause on emergency safeguard measures. It should be noted that lack of appropriate disaggregated statistical data on production, trade and foreign direct investment affects the implementation of the GATS as a whole.

What form might a safeguard mechanism for services take?

3. If increased foreign competition and serious injury to domestic services or service suppliers have occurred, and causality between the two has been established, a question arises as to the characteristics of a safeguard measure that might be applied.

a. What type of measure should be applied? Would taxes, foreign exchange restrictions, other quantitative limitations, or regulatory restraints be suitable as safeguard measures?

All above measures could be used. Price based measure could certainly be adequate tools for safeguard measures in terms of taxes or subsidies for domestic service suppliers.

b. What would be the implications of different modes of supply for the kind of measures employed?

- For cross-border mode: restriction of supply or temporary restrictions on the supply of services;
- for consumption abroad mode: taxes;
- for commercial presence mode: limit or stop new establishments, higher taxes;
- for movement of natural persons

c. Would there be circumstances in which the application of a safeguard measure in respect of one mode of supply would provoke a demand for comparable measures in relation to other modes at the same time?

Because of the infrastructural and economy wide role of services relating to the macro-economic policies, the possibility might arise of applying comparable safeguard measures on one or more modes at the same time.

e. How quickly would it be possible for a Member to take a safeguard measure? Would the notion of 'critical circumstances,' as developed in the Agreement on Safeguards, apply in the services area?

The answer to these questions could be rather left to the negotiations. We could think of the criteria developed in the Agreement on Textiles and Clothing, as in article VI, or apply the same criteria of the Agreement on Safeguards.

f. What should be the duration of any safeguard measures adopted?

Three to five years.

g. Would safeguard measures be made degressive during the period of their application?

It might also be left for further negotiations. Article 7.4 of the Agreement on Safeguards provides that if the safeguard measure is over one year, the Member applying the measure shall progressively liberalize it at regular intervals during the period of application.

h. Would a Member taking a safeguard action be required also to adopt adjustment measures?

Adjustment measures in terms of compensation - No.

i. Would the application of safeguard measures be accompanied by compensatory adjustments in the schedule of the Member taking the measure?

Since a safeguard mechanism would be of a temporary nature, as a matter of principle, Members should not be asked to provide compensation.

Working Party on GATS Rules

COMMUNICATION FROM HONG KONG

Emergency Safeguard Measures in Services: A Way Forward

The following communication is circulation at the request of Hong Kong to Members of the Working Party on GATS Rules.

Summary

1) This paper seeks to set down a practical way to take forward discussion of Emergency Safeguard Measures (ESM) in Services, in order for the Working Party (WP) to fulfil its mandate to that any results of multilateral negotiations on this subject should enter into force by 1 January 1998. The paper does not advocate that there should be ESM. It attempts to allow the WP to discuss the practical issues involved in the concept of ESM. Once this has been done systematically, the WP can consider whether the results justify any form of ESM.

Background

2. The WP has held many discussions and received many notable and detailed papers on this question. Most papers have highlighted the difficulties that would exist if there were to be ESM. Such difficulties fundamentally result from the fact that trade in services does not deal with tangible goods, and the concept - built into the GATS - of the four modes of delivery. Members will need to consider whether an ESM should extend to all four modes of delivery or whether some modes of delivery should be excluded. Moreover, Members will need to decide whether ESM remedies should be mode-specific, i.e. whether a measure restricting any of the four modes of delivery should be permitted only to remedy injury caused via the same mode.

3. Most papers have also pointed out that there are several articles in the GATS which already provide a number of safety valves and question whether more are needed, particularly bearing in mind the difficulties outlined above. The Articles involved are:

- Article II (2) (MFN exemptions)
- Article XII BOP
- Article XIV General Exceptions

- Article XIV bis security exceptions
- Article XVI & XVII: Scheduling of commitments
- Article XXI Modification of Schedules

4. On the other hand, some papers and Members have argued that ESM is necessary. This is primarily because they can see situations where none of the above safety valves would cover a legitimate emergency situation. Further they argue that an ESM would encourage better and more specific commitments because of the added comfort the ESM would give if something unexpected were to occur.

5. One point where there seems to be general agreement is that a good starting point in considering the ESM question is to look at the Agreement on Safeguards under the GATT/WTO (herein after GATT SA). Nevertheless, it is important to bear in mind the structural differences between goods and services, and the different mode of supply of services under GATS.

6. Without a detailed and thorough examination of the principles, the purpose, and the scope and operation that we would like to see in an ESM, if one were to be established, it is not possible to evaluate the pros and cons of the arguments. This paper thus proposes a logical way to examine the issues so that, at the end of the day a decision can be made in the full knowledge of all the issues.

Basic Principles Governing ESM

7. It may be possible - and it would certainly be desirable - to set out some basic principles that would be necessary in any ESM. These might cover such aspects as:

It should be clearly shown that a proposed ESM will remedy the injury identified.

- (i) initiation of an ESM should only be based on **objective and well-defined criteria**;
- (ii) an ESM should represent the **minimum measure** necessary to adopt in order to tackle the problems arising from an emergency situation;
- (iii) an ESM should be applied on an **MFN** basis;
- (iv) there should be **sufficient advance notice** to inform other Members of the proposed ESM action;
- (v) the measure to be taken under the ESM should be **clearly specified** (i.e. the remedial action to be taken);
- (vi) the relationship of the proposed ESM to the **public policy concern** which it is seeking to remedy should be spelt out;
- (vii) an ESM should be **time-bound** and should be removed as soon as circumstances return to normal;
- (viii) ESM Agreement would **be subject to Article XXIII** (dispute settlement).

Most of these will be familiar, as they are enshrined in the GATT SA. Many will be discussed in detail in the paragraphs following. Members may wish to have them in mind when considering the issues in the paper.

8. Members will also need to consider whether the ESM should be limited to mode 1, or if it is to apply to other modes, whether ESM's should be mode specific, i.e. whether restrictions on a particular mode of delivery should be allowed only if the injury is caused through an increased supply of "foreign" services supplied through that mode of delivery. Members may wish to consider which approach is most likely to contribute to the further liberalisation of services and the maintenance of an adequate level of discipline on trade in services.

Purpose, Scope and Principles of Operation

9. It is suggested that the detailed types of issues to be discussed in considering the question of how an ESM could operate are as follows:

- (a) purpose of an ESM;
- (b) conditions under which an ESM can be invoked (e.g. what constitutes "emergency" situations);
- (c) procedure for invoking an ESM;
- (d) operation of an ESM;
- (e) application of an ESM (a common ESM for all service sectors or sector specific ESMs?);
- (f) remedial measures available under the ESM.

These are discussed in detail below.

(a) Purpose of an ESM

10. In the case of goods, the purpose of the safeguard measures is to enable a Member to protect "the domestic industry" from "serious injury" due to "increased importation" of "like or directly competitive products". All the words in inverted commas are difficult to grapple with in the services context as was admirably set out in secretariat Note S/WPGR/W/8. But we should examine each to consider whether they can be defined, whether they need to be defined and whether there may be different or better ways of setting out the purpose of an ESM. In doing so, some of the other issues detailed in paragraph 7 will be touched upon.

(i) Domestic Industry

11. In the globalising economy, the concept of "domestic industry" is becoming more and more diffuse. If we were to take the lead of the GATT SA, all producers of like or directly competitive products operating in the territory of the Member before the ESM would count as "domestic industry" (Article 4(1) (c). This raises the question of whether such a definition meets the needs under the GATS and also modal issues. One could conceive that an "emergency" has arisen because market opening has occurred too quickly for the national domestic service suppliers to adapt - see Note 1. So some restrictions might need to be put on the entry of "new" (foreign) domestic suppliers: i.e. those established under Mode 3. But under the GATT SA it would not be possible to take differential action against the "newcomers".

Note 1 : National domestic service supplies is used in this paper to refer to suppliers owned, managed or controlled by nationals of the Member concerned.

12. A further problem relates to Mode 4. Under this there is a clear differentiation between own and foreign nationals. So an anomalous situation could arise where a foreign company was not affected by an ESM, but foreign nationals within the company could be.
13. Is therefore the definition of domestic industry in the GATT SA appropriate for a GATS ESM? It would seem to be a retrograde step to attempt to differentiate between foreign and “domestic” established bodies. But that is exactly what the NT column allows and is the factual position in many Members’ specific commitments (i.e. limitations in the share holdings or directorships which foreigners can hold). Do we need a separate definition, which might be related to the type of specific commitment made by Members?

(ii) Serious Injury

14. The key question here is what or whom a Member might be seeking to safeguard from serious injury. Because of the four modes of supply, there are at least three possible targets:
- service suppliers (including individuals) established in the territory irrespective of ownership/management
 - national domestic owned/managed service suppliers
 - own nationals
15. The answer would seem to depend on the emergency situation, the sector in which the Member has made a commitment and the mode of supply that is causing the injury.
16. As regards the evaluation of whether serious injury has or will take place, the concepts and tests in the GATT SA seem quite appropriate. i.e. the Member would need to examine all relevant factors including the amount or rate of increase in importation of the product concerned, the share of the domestic market taken, changes in the level of sales, production, productivity, capacity utilisation, profits and losses and employment. One can conceive of such measures being transferable to most services sectors. Reliability of some of the data would, however, be problematic - see below. Further, factors for judging serious injury will depend on the mode of delivery causing the injury. It may be necessary to consider whether it would be desirable to distinguish injury to domestic industry, injury to domestically owned industry, or injury to national service providers.

(iii) Increased importation

17. The clear question to be faced here is how to obtain reliable data to establish increased importation and to decide what “increased importation” in fact means. As pointed out in several submissions, this is likely to be highly problematic in several services sectors because the relevant statistics simply do not exist. And again the question of what constitutes “importation” is complicated by the four modes of delivery. Mode 1 is clear: it is the supply from one Member into the territory of another - one might say classic importation. But an upsurge in Mode 2 (consumption abroad) could lead to serious injury to the domestic service suppliers but has no relation to the classic definition of “importation”. Under Mode 3, the importation could apply to “new entrants” (i.e. foreign established) service suppliers who were taking business from old established domestic suppliers. Under Mode 4 the importation is clear.
18. Does this, again, show that any ESM would have to be sector and mode specific?

(iv) Like products

19. The issue here is whether it will be possible to define adequately “like products” in a number of areas. Difficulties could arise in areas such as financial services, where there is a huge diversity of products in the same area of activity (i.e. is an insurance policy which bundles life, home, car and personal insurance together, a “like product” to a policy which only covers one of these? Or is a multi-currency account a like products to a single foreign currency account?). One possible solution would be not to seek to define like products in any detailed way and to put the onus on the Member seeking to impose the ESM to justify the measure. Case law would then build up.

(b) Conditions under which an ESM can be invoked (i.e. what constitutes “emergency” situations)

20. It would seem only logical that an “emergency” situation under the GATS could only relate to specific commitments made there under, or to MFN exemptions - or the lack of them. i.e. like the GATT, the ESM would have to be product (service) specific and could not be used to combat a general economic malaise, which would be better dealt with by measures already permitted under the GATS. Under Modes 1, 2 and 3 one could envisage emergencies where the share of domestic service suppliers, whether defined as all established or only national, could suffer serious decline in total market share. One can equally see that under Mode 4 social unrest or unemployment could arise from a MA commitment. And one could conceive of situations where an influx of foreign nationals (i.e. NT area) could lead to serious unemployment in a specific sector of nationals.

21. Thus it is suggested that possible emergency situations are limited but could include:

- serious environmental or societal problems, such as pollution (due to a specific commitment on transport?), mounting and high unemployment in a particular sector or social/racial problems
- drastic reduction in or elimination of total market share held by national service providers
- national service providers undergoing (temporary) restructuring or which are newly emerging

(c) Procedures for invoking an ESM

22. The GATT SA offers some proven procedural requirements for invoking an ESM, which cover such issues as:

- prior notification (in the GATT SA this is a requirement to notify the WTO immediately upon initiation of the investigatory process, making a finding of serious injury and taking a decision to apply a safeguard measure. The exact details must be spelt out.)
- notice period (in the GATT SA it is not specified but put as “adequate opportunity for prior consultations”)
- consultation with affected parties (in the GATT SA this is a requirement)
- compensation (see below), and
- dispute settlement (this is available under the GATT SA)

Also for consideration is whether there should be scope for a provisional ESM. Given the speed at which many areas of services change and evolve, this concept should certainly be evaluated.

23. The GATT SA also has special provision for deferential treatment for developing countries in that products from such Members may not be a target of an ESM as long as certain conditions are met - see Note 2. This question should be addressed in the GATS context. Since all Members have the opportunity to assess their commitments, it is not immediately obvious why developing countries would require greater protection. But, as some papers have pointed out, such countries may be less capable, from the technical point of view, fully to assess the implications/impact of commitments made.

24. All the above concepts are readily understandable and could be discussed in turn. Two related points of interests could be born in mind:

i) Should any ESM only relate to future improvements in specific commitments and not to the (current) situation Members have already bound themselves to - willingly in the absence of an ESM? This has been postulated in a couple of papers.

ii) If i) above were to be accepted, should compensation be payable in only some or indeed no circumstances? This would clearly also depend on the general eventual scope of ESM measures.

d) Operation of an ESM

25. Of considerable importance is how the serious injury would be assessed, and what the duration and subsequent progressive liberalisation might be and the mechanisms for review.

26. As regards assessment of serious injury, this poses the most difficult question in a number of service areas. If the concepts of the GATT SA are to be borrowed, and there seems little choice, a Member seeking to impose the ESM would have to **demonstrate that there was indeed a problem** and show **causality**. But statistics and data in many service areas are acknowledged, even in developed countries, to be less than adequate. How will a Member be able to provide convincing data in such circumstances? It is suggested that this problem is not one that can be resolved by laying down guidelines or by prescription. It will resolve itself in three ways. First, by the realisation by Members that in some areas, an ESM simply cannot be taken because of a lack of means to prove the cause of the emergency. Indeed it is for consideration that if an ESM is finally agreed, one of its clauses should be a recognition by Members that ESM has only a limited place in resolving problems. Second, by case law on cases which arise. While not the best way of defining the limits of actions, it is nevertheless a common one. Third, by the advance of statistics and data on the services sector as competent authorities seek to measure this area of activity better and as it grows in importance to the economies of all Members.

27. There should clearly be limits on the duration of any ESM measure. Given the speed at which matters change in the services sector, it might be appropriate to consider shorter periods than in the GATT SA. Thus instead of four years as the maximum (subject to possible extension), perhaps two would be more appropriate.

28. The same could be argued for the progressive relaxation of the ESM and the process of review.

Note 2: Under the GATT SA, safeguard measures shall not be applied against a product originating in a developing country Member as long as its share of imports of the product concerned in the importing Member does not exceed 3 per cent, provided that developing

country Members with less than 3 per cent import share collectively account for not more than 9 per cent of total imports of the product concerned.

(e) Application of an ESM

29. The Chairman's note of 1 May provides valuable insights into this question, which has already been discussed above. The key question is whether it is possible or desirable to have a common ESM for all Modes or mode-specific ESMs. Many of the analyses thus far have suggested that a common ESM simply will not work in the GATS. Thus, as the Chairman succinctly put it, can we agree that it is not possible to avoid modal distinctions in possible ESMs?

30. If it is agreed that ESM should be mode-specific, we need to consider whether restrictions on a particular mode should be allowed only if the injury is caused through an increased supply of "foreign" services through that mode of delivery. In doing so, we may need to consider which approach is most likely to contribute to the further liberalisation of services and the maintenance of an adequate level of discipline in trade in services. The GATT SA seems to provide the best fit with respect to services provided through mode 1. If it is decided to allow ESMs for other modes of delivery, modifications will be necessary with respect to key elements of the GATT SA, in particular with respect to definitions of industry and serious injury. Moreover, if the ESM is not mode specific, it may be necessary to rethink the conceptual foundation of a safeguard mechanism in services.

31. The next question is how to treat new entrants and existing suppliers under an ESM. As the Chairman's Note points out, while Modes 1 and 2 do not present difficulties in this area, Modes 3 and 4 do. (Although in theory it might be possible to envisage a situation where national suppliers are suffering from loss of customers due to Mode 2 but their foreign domestic counterparts are not because they are multinationals and thus able to offer a wider spread of services than the national suppliers.) In both Modes 3 and 4 it is possible to differentiate between foreign domestic service suppliers and national service suppliers and thus to invoke the ESM to protect only national service suppliers. This could even be at the expense of foreign domestic suppliers, irrespective of when they were established.

32. As has been outlined above, some papers have expressed concern at the idea that already established foreign domestic suppliers might either be penalised by an ESM or not protected by an ESM. They have argued that such a provision could make any potential foreign investor wary about investing in a Member which had the option to take such an ESM. It would seem that limits on the reach of ESMs in Modes 3 and 4 would be desirable, perhaps, based on the notion that everything committed (in specific commitments) so far should be considered as a done deal, and that there should be no differentiation between already established domestic suppliers as regards any ESM.

33. A further question in this area is whether Mode 4 is so different from Modes 1, 2 & 3 that a different type of ESM should be considered for it. Whereas Modes 1, 2 & 3 all deal with the supply of a service, irrespective of who or what is doing the supplying, Mode 4 deals with presence of national persons. It is also, perhaps, a more sensitive area.

(f) Remedial Measures available under an ESM

34. It will be necessary to consider and to perhaps to prescribe what sort of measures can be taken under an ESM. While the GATT SA does not prescribe particular measures, in practice two kinds have been used- quantitative restrictions (such as quotas) and price based measures (e.g. tariff increases or taxes). If such measures are used, then the GATT SA sets out the limits of the measures that may be taken.

35. Both such concepts could be used in the GATS, although it would be necessary to tailor the concept to fit the four Modes of supply. Mode 1 is the same as classic importation. Mode 2 would require some measure such as a tax or a restriction on travel to place disincentives on consumption abroad. Under Mode 3 the measures could cover such areas as taxes or restrictions on investment flows. These could seek to reduce or stop new foreign commercial presence or to limit the scope of established foreign domestic suppliers. Under Mode 4 the measure could limit the physical movement of natural persons, or place limits on the stay of such persons, or impose taxes on such persons. As with Mode 3, it would be possible to differentiate between already established foreign domestic suppliers and new ones but also to limit the activities of existing established foreign domestic suppliers.

36. Two points may be worth having in mind in this. One is whether the remedial measure should be mode-specific, i.e. whether a remedial action should target the mode of delivery which led to the domestic injury. The second is to find ways to ensure that the proposed ESM will indeed remedy the injury identified.

Way Forward

37. It is hoped that the above examination of the matters that are relevant to the consideration of whether or not ESM in the GATS is viable and appropriate, will provide a method to take forward this complex and important issue.

Working Party on GATS Rules

COMMUNICATION FROM ARGENTINA

Questionnaire on Government Procurement of Services

Addendum

The following communication is circulated at the request of Argentina to Members of the Working Party on GATS Rules.

I. EXISTING PROCUREMENT REGIMES

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

Procurement by the State Article 55 of the Decree-Law on Accounting No. 23.354/56, ratified by Law 14.487, defines as any purchase or sale on behalf of the Nation, as well as any contract concerning leasing, rental, work or supplies.

Article 1 of the Law on Public Works No. 13.064 defines national public works as any construction or work or service of an industrial nature carried out with funds of the National Treasury.

Administrative structure

2. How are government procurement activities administered? Do what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

Pursuant to Decree No. 1.545/94, the government procurement regime is based on the centralization of rule-making and the decentralization of operational functions. Thus, the National Procurement Office, part of the Department of Finance - Ministry of the Economy and Public Works and Services - is responsible for putting forward policies, establishing rules and elaborating operational management systems in this area. In turn,

each Ministry, decentralized body, official bank and State enterprise carries out its procurement through its own purchasing body.

Consequently, the procurement regime is subject to a single set of rules (see below, Laws and Regulations in force), with a distinction between goods and services on the one hand and public works on the other. As mentioned, there are also special procedures for public works concessions, which may include additional specifications depending on each particular case.

Law and regulations in force

3(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

At national level, the basic legal framework for procurement of goods and services is set out in the State procurement regime included in the Decree-Law on Accounting No. 23.354/56, and the regulations thereto in Decree No. 5.720/72 and amendments thereof.

In addition, other applicable provisions are those of Law No. 24.156 on Financial Administration and Control Systems of the National Public Sector, the decrees establishing regulations to that Law, and supplementary Decrees No. 2.662/92 on Powers to Authorize and Approve Expenditures and No. 2.380/94 and Administrative Decision No. 148/96 on Revolving Funds and Petty Cash of the Bodies of the Central Administration.

The regime in force for public works is laid down in the Law on Procurement of Public Works No. 13.064, as amended by Laws 16.798 and 17.804 and amending decrees thereto.

The regime for public works concessions is contained in Law No. 17.520, as amended by Law No. 21.691, Law No. 23.696 and its Regulatory Decree 1.105/89.

In the case of public works and concessions the procedures are primarily contained in specific legislation, while the provisions of the Law on Accounting (Articles 3 and 61, paragraph 147, of Decree 5.720/72) apply on a supplementary basis.

In accordance with Article 63 of Decree Law 23.354/56, procurement by the Armed Forces and decentralized entities in the Defence area are governed by the relevant specific provisions of their respective organic and special laws, and on a supplementary basis by the regime established by this Law and its regulatory decrees. In the specific case of the Armed Forces, the procurement regime is laid down in Law No. 20.124 and Decrees 265/73, 3.961/73, and 4.027/73.

(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

As mentioned above, the same regime governs the procurement of both goods and services.

Article 3 of Decree 5.720/72 establishes that procurement of supplies of materials or services for national public works shall be subject to the provisions established by the competent authority in accordance with the rules laid down in the legislation in force in

this respect (Law 13.064) or, failing such, the provisions of the regulations approved by that Decree.

Procurement procedures applied

4(a) What procedures are followed in the procurement process?

and

(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

Procurement procedures vary according to the different regimes in force. In all cases provision is made for public (open) and, selective (private) tendering and direct contracting, but preference is given to public tendering. The procurement methods and respective thresholds are summarized below:

	<u>Direct contract</u>	<u>Selective tender</u>	<u>Public tender</u>
<u>Goods and services</u>	up to \$100,000	up to \$1 million	over \$1 million
<u>Public works</u>	-up to \$69,000		over \$69,000
	-supplementary works for an ongoing work according to scale (limit of \$26,000 for works up to a value of \$129,500 or from 5% to 20% of the original cost for larger amounts). See Resolution 814/96 of the Ministry of the Economy and Public Works and Services.		
<u>Public works concession</u>	No threshold stipulated	No	No threshold stipulated

For procurement of goods and services, the general principle is that of public tender (Article 55 of the Law on Accounting). Selective tendering is also allowed if the amount of the transaction does not exceed the threshold (Article 56.1 of the Law on Accounting as updated by Decree 2.293/93). In the case of selective tendering at least six registered suppliers are invited, on a rotating basis, from the Register of Suppliers, including in all cases the previous winning bidder (Article 62, paragraph 8 and 9, of Decree 5.720/72). Direct contracting is allowed in the case of small amounts (Article 58.3 of the Law on Accounting and Decree 2.293/93) or where other requirements listed in that Article are fulfilled, namely, reasons of urgency, single supplier, tender declared void, scientific, technical or artistic works, need for secrecy, etc. In the case of direct contracts of less than \$100,000 or justified by reasons of urgency or void tender, three suppliers will nevertheless be requested to bid, failing which an official record will be made of the reasons that prevented doing so (Article 62, inc. 10, of Decree 5.720/72).

Procurements of goods and services by the National Administration are also subject to control by the Office of the Auditor-General (SIGEN) through the Reference Price System. This is mandatory for public tendering for over \$750,000, selective tendering for amounts of not less than \$500,000 and direct contracting for amounts of at least \$75,000. SIGEN nevertheless has the power to control any procurement, including that carried out under the public works regime (SIGEN Resolution No. 55/96).

In the case of procurement of public works, preference is again given to public tendering, but selective tendering or direct contracting is accepted when contract values do not exceed a specified threshold or in the case of works essential for an ongoing work but not provided for in the original project and which again do not exceed a specified threshold (Article 9 of Law 13.064). Other exceptions mentioned in Article 9 of the Law are: emergency work, unforeseen circumstances, State security, specific artistic or technical capability, special licences or privileges, void or unacceptable tenders.

The Law on Public Works Concessions (Law 17.520) also recognizes three alternative methods: public tendering, direct contracting with public entities or government-owned companies, and contracting with mixed-capital or private-sector companies. In the latter case, when dealing with works of public interest, the choice is between public tendering or competitions for complete projects. In the latter case, invitations are issued for the presentation of projects with a view to the submission of proposals (Law 23.696, Article 58 and Decree 1.105/89). If a more desirable bid than that of the person presenting the proposal is made, both may improve their respective proposals within a period not exceeding half of the original presentation period. The opening of the bids, and the continuation of the procedure, the award and subsequent continuation of the contract are governed by the principles laid down in the Public Works Regime (Law 13.064).

(c) What are the time-limits for the submission for bids?

In the case of procurement of goods and services, there are no mandatory time-limits for the submission of bids. Minimum time-limits for public notice and the period that must precede the opening date are set, the former being included in the latter (Articles 3 and 4 of Decree 826/88). These dates establish de facto minimum time-limits for submission of bids.

Publicity for inviting tenders

5.(a) How are intended procurements publicized? Are invitations to tender published? If so, where, and in what languages? and

(b) Do the extent and form of publicity differ according to tendering procedures applied and/or the value of procurement?

There is no obligation to publicise procurement intentions. Notices of tenders must be published.

Goods and services: notices of public and selective tenders and direct contracting are published in the Official Bulletin and on the notice-board of the procuring body. Where it is practically impossible to do so, as duly accredited by the National Director of the Official Register, and except in the case of public tendering, publication in the Official Bulletin may be replaced by publication in two mass circulation newspapers of the Federal Capital (Article 62 of the Law on Accounting, as amended by Decrees 826/88 and 2.293/93).

When it is presumed that interest may exist abroad, publication in the relevant countries may be authorized (Article 62 of the Law on Accounting).

Publication time-limits vary according to the procurement procedure:

Public tendering: published for 8 days, 12 days in advance of the opening date, except where the amount of the procurement does not exceed \$5,000,000, in which case the time-limits are reduced to 2 and 4 days, respectively (Article 3(a) of Decree 826/88).

Selective tendering: notices are published for 2 days, 3 days in advance of the opening date (Article 3(b) of Decree 826/88).

Direct contracting: following the conclusion of the contract, for a period of one day (Article 3(c) of Decree 826/88).

These time-limits refer to working days and minimum time-periods in all cases.

Public works: Article 10 of Law 13.064 provides for the publication of notices of public tendering in the Official Bulletin, which does not prevent publishing them in private media or in any other form within the country or abroad. The publication time-limits updated by Resolution 814/96 of the Ministry of the Economy and Public Works and Services depend on the value of the budget for the work:

-Up to \$110,000: notices published for 5 days, 5 days in advance;

-from \$110,000 to \$260,000: published for 10 days, 15 days in advance;

-over \$260,000: published for 15 days, 20 days in advance.

Public Works Concessions: There are no specific provisions in Law No. 17.520, apart from the reference to the amendment of Article 4 contained in Law 23.696, which establishes the provisions for competitions for complete projects. In this case the invitation to present projects is made through notices in the Official Bulletin and in two national mass circulation newspapers for five days. These notices must give a summary of the initiative, set the date, hour and place for the submission of bids and the date, hour and place of opening. The time-period between the final publication of notices and the date of submission of bids must be at least 30 days and at most 90 days, except in carefully defined exceptional cases where the maximum time-period may be extended.

None of the above provisions contain references to the language of notices, but in some cases, as mentioned above, they envisage the possibility of publishing them abroad.

(c)What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

For procurement of goods and services, the Law on Accounting and State Procurement (Article 62, as regulated by Decree 5.720/72 and amended by Decree 826/88, Article 7) establishes that the notices must state the name of the procuring body, type and number of procurement, object of procurement, place where tender specifications may be obtained or consulted, cost of tender specifications, place for submission of bids and place, date and time of opening of bids.

In the case of Public Works, Law 13.064 provides in Article 11 that the tender notice must state the work put out to tender, site of work, procuring body, place where the auction documents may be consulted or obtained, conditions to be fulfilled by bids, official to whom bids should be sent or delivered, place, date and time at which the auction will be held and amount of the security which bidders have to lodge in order to take part. The Law on Public Works Concessions does not contain any provisions in this respect.

Consequently, the provisions of the Law on Accounting apply, except as provided for in Law 23.696 on competitions for complete projects.

(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set?

Tender documents may be consulted free of charge. They may be obtained in order to take part in the bidding against payment of the amount established in the tender documents and specifications. This amount is set by the procuring body at between 0.5 per thousand and 5 per thousand of the estimated cost of the procurement (Article 61, paragraph 45.1, of Decree 5.720/72).

(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

The use of electronic means to advertise government procurement opportunities is not provided for statutorily.

Requirements laid down for possible suppliers

6. (a) Are there registration, residence or other requirements for potential suppliers?

In the case of procurement of goods and services, there is no requirement of prior enrolment in a register of suppliers. Decree No. 825/88 (amending Article 61 of the Law on Accounting and Decree 5.720/72) provides that the National General Accounting Office shall keep a roster of suppliers which will include any enterprise that bids or contracts with the State; the procuring body may request that a firm register therein within five days following the opening of bids.

Decree 5.720/72, Article 61.2(c) (as amended by Decree 825/88) provides that in order to conclude a contract with the State a firm must be established in the country, but foreign firms without local branches or representatives are exempted from this requirement in the case of participation in international tenders (Article 61.3(g)).

In the case of Public works, enrolment in the National Register of Public Works Building Contractors (Article 13 of Law No. 13.064) is an essential prerequisite for the qualification and authorization of firms. The Register is regulated by Decree No. 756/81, which establishes the powers of a Council comprising bodies of the national administration for the purpose of classification and qualification of firms according to their technical (economic and production) capability and contracting capacity (Article 22) as a requirement for enrolling them in the Register. The duration of qualification is one year and six months. The regime provides for some exceptions to prior enrolment, for example, when contracting capacity required is less than the threshold periodically set by the Council. Likewise, in the case of exceptional factors affecting the execution of the work, the Council may authorize participation in the tender by non-registered local firms, once only for such firms, provided they have a verifiable record in the country or abroad which justifies considering that they have sufficient technical and financial capability.

The Council may also authorize participation in international tenders of foreign firms not included in the Register when in its opinion they have adequate technical and financial capability (Article 30 of Decree 756/81).

In the case of consortia of local and foreign firms, the contracting capability attributed to them in the Register is exclusively that of the local firms.

(b)What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

For procurement of goods and services, it is necessary to have the capacity to contract, have a place of business or manufacturing in the country, a licence to trade, furnish such reports or references as may be required and satisfy the common requirements for all those engaged in trade, including proper records of accounting operations (journal, inventory, balance sheets, etc.) set out in Articles 33 and 44 of the Trade Code. Apart from the exemption of foreign firms from these requirements when taking part in international tendering, there are other bidders who for various reasons either do not need to meet these requirements or are prohibited from contracting (Article 61, paragraph 4, of Decree 5.270).

With regard to the tender process itself, in the case of procurement of goods and services, bidders must lodge a bid performance guarantee equivalent to 5 per cent of the total value of the bid or 10 per cent of that value in the case of licences or concessions (Article 61, paragraph 33, of Decree 5.720/72). Bidders do not have to lodge this guarantee at the time of submitting a bid, but must do so at the simple request of the procuring entity (Article 61, paragraph 37).

With respect to public works, in addition to the requirements of prior qualification and before submitting a proposal the bidder must lodge in cash, securities or bonds a guarantee equivalent to 1 per cent of the value of the official budget of the work put out to tender. In the case of procurement not exceeding \$69,000 it is not necessary to lodge it in advance, but this must be done at the simple request of the procuring entity (Article 14 of Law 13.064).

With regard to the regime for concessions, any proposal submitted by private individuals for a complete project competition must be accompanied by a maintenance guarantee which may not be less than 2 per cent of the amount of the work. This guarantee is executable in the event of non-submission of the bid, but may be converted into the bid guarantee in the event of an invitation to tender or competition. Nevertheless, if the bid is made subsequently, and the guarantee proves to be less than 2 per cent - with a 30 per cent margin - the bidder will not be considered to be the author of the proposal.

Likewise, a proposal submitted by private individuals must be accompanied by an identification of the work and its nature, economic and technical feasibility studies, full particulars of the bidder and, in the case of Argentine enterprises, their registered capacity to contract.

(c)Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

See the reply to question 6(a) above concerning the National Register of Public Works Building Contractors.

Criteria for assessing bids and awarding contracts

7.(a)What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

In the case of procurement of goods and services, Decree 5.720/72, Article 61, paragraph 76, provides that the contract should be awarded to the bid that is most desirable for the procuring body, taking into account quality, price, suitability of the bidder and other conditions of the bid. Article 61, paragraph 73, stipulates that in case of equality of prices, the contract should be awarded to the bid offering elements of domestic origin, and should there still be a tie, to the bid offering better quality elements if this emerges from the specific characteristics of the bid. If the tie continues, the Decree provides for other criteria, such as an improvement in prices, preference for the bid that originally agreed to a discount for payment by instalments, and a public draw of the tied bids.

With respect to public works, Law 13.064 provides that the contract will always be awarded to the most desirable proposal, in accordance with the conditions established for the tender (Article 18).

Law 23.696 and Decree No. 1.105/89 establishing its regulations amended the Law on Public Works Concessions, by stipulating as award criteria the economic/financial equation and the scope of the prior investments to be made in each case in order to obtain a real reduction in the tariff or charge to be paid by users.

With respect to complete project competitions, the Law provides that in the case of a more desirable bid than that submitted by the person who made the initial proposal, the two may improve their respective bids. When the bids submitted are equivalent, preference will be given to the person who submitted the initial proposal.

(b) Is procurement subject to any offset provisions, such as local content, technology transfer or counter trade requirements?

There are no offset requirements.

(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

No such preferences exist.

(d) Do the procurement criteria differ according to sector or region of the economy?

No, procurement criteria do not differ according to sector or region of the economy.

(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

The procuring authority must follow the evaluation criteria laid down in the legislation in force.

Prior to the definitive award, the procuring body may at any stage of the procedure cancel the tender on good cause shown, or make the preliminary award of all or part of the items put out to tender or of part of an item under certain conditions.

Disclosure of bids received and contracts awarded

8.(a) How are tender received, registered and opened?

In the case of procurement of goods and services, in accordance with Article 61, paragraph 50, of Decree 5.720/72, bids must be submitted to the procuring body by the date and time set for the opening of bids. They must be submitted in perfectly sealed envelopes bearing the identification of the tender concerned and the date and time of opening.

The opening of the bids, is carried out at the place, date and time announced and in the presence of the officials designated by the tendering body and any other persons wishing to attend. An official record of the outcome is drawn up, and is signed by the officials taking part and by any other persons present wishing to do so. Bidders may request, at their expense, a copy of the bids submitted (Article 61, paragraph 62, of the said Decree as updated by Decree 826/88).

The Law on Public Works No. 13.064 contains similar provisions (Articles 15 and 16).

(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

Decree 5.720/72 provides in Article 61, paragraph 78, that the award of contracts must be announced in one or more visible places in the premises of the procuring body to which the public have access. The time-periods for such public notice vary according to the type of procurement procedure.

- Public tender: During at least 3 days.
- Selective tender: During at least 2 days.
- Direct contract: During at least 1 day.

Pursuant to Decree 826/88, Article 9, the award also has to be published for one day in the same media in which the invitations to tender were published.

The winning bidder receives official confirmation of the definitive award within seven days by means of a purchase order and, exceptionally, in some other form (Article 61, paragraph 81, of Decree 5.720/72).

(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

No. Nevertheless, if after the preliminary award is announced an interested party contests it, the tendering authorities must make the full proceedings of the tender available to that party for examination (Article 61, paragraph 79, of Decree 5.720/72).

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of domestic in relation to domestic services and suppliers.

Decree 1.224/89, establishing the regulations to Law 23.697 which suspended the Buy National regime defines a good as being of domestic origin when produced or extracted in Argentina, provided the cost of the imported raw materials, inputs or materials used in its production does not exceed 50 per cent of the total cost (Article 2).

For the purposes of procurement of goods and services, Article 11 of the said Decree defines a domestic enterprise as one having its domicile and principal place of business in Argentina.

National Treatment: Economic Emergency Law 23.697 suspended the Buy National regime in force until that time for the procurement of goods and services (Article 23). Its regulatory Decree 1.224/89, as amended by Decree 2.284/91 on economic deregulation (confirmed by Article 29 of Law No. 24.307), stipulates preference for the purchase or lease of goods of domestic origin in the case of similar bids of identical quality and benefits when their price is the

same as or less than that of foreign goods (Article 3 of Decree 1.224/89 and Article 21 of Decree 2.284/91). For price comparison purposes, the price of the good of foreign origin will include current import duties and other taxes and charges required for it to be imported by a private importer without special privileges.

Article 61, paragraph 73, of Decree 5.720/72 refers to •elements of domestic origin• as an award criterion in case of a price tie.

With respect to procurement of works and services, preference will be given to local companies in case of equality of bids between a domestic and a foreign firm (Article 11 of Decree 1.224/89 and Article 21 of Decree 2.284/91).

MFN Treatment: There are no provisions of this kind in the domestic legislation.

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

Article 61, paragraph 79, of Decree 5.720/72 (Regulations on State Contracts) establishes a mechanism for challenging the purchase or contracting of goods and services. Those concerned may lodge a challenge when the preliminary award is announced, within a period of not less than three days from the expiry of the time-limit set for the announcement in question.

Challenges may be decided by the authority responsible for approving the contract, by a decision that cannot be subsequent to the final award decision. It should be borne in mind in this connection that the definitive award must be made within a maximum period of 30 days from the date of opening of the bids (time-limit for maintenance of bids), a period which is automatically extended by five days in the case of a challenge (Article 61, paragraph 61, of Decree 5.720/72).

With respect to public works and public works concessions, the provisions of the regulations on State contracts apply.

II. MEMBERSHIP OF PLURILATERAL, REGIONAL AND/OR BILATERAL AGREEMENTS

11. Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.

Argentina is not a party to any plurilateral, regional and/or bilateral agreements containing provisions on government procurement.

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12(a) Please provide statistics (if available) on the number and value of services procurements

- **On both an aggregate and sectoral basis;**
- **by origin of services and suppliers.**

(b) Please provide statistics (if available) on the

- **Share of services procurement in total procurement;**
- **share of procurement of each service in total domestic output of the service;**

- **share of procurement of each service in total domestic consumption of the service.**

The Argentine statistical system does not allow for the requested breakdown.

Working Party on GATS Rules

COMMUNICATION FROM POLAND

Response to the Questions Relating to an Emergency Safeguard Mechanism in GATS

The following communication is being circulated at the request of Poland to Members of the Working Party on GATS Rules

1. What is the justification and purpose of an emergency mechanism under GATS?

a. Would an emergency safeguard for services be intended to deal with the kind of situation foreseen in Article XIX of GATT -- that is, a temporary threat to a domestic "industry" arising from increased imports? Would it have any other objective?

An emergency safeguard for services should be intended to deal with the kind of situation foreseen in Article XIX of GATT - that is, a temporary threat to a domestic industry arising from increased imports.

b. Are existing "safeguard" mechanisms in GATS, notably those contained in Article XII and Article XIV, sufficient to address any difficulties governments might encounter as a consequence of their GATS commitments? Similarly, does Article XXI provide an adequate vehicle for reversing or modifying scheduled commitments in the event of unanticipated difficulties?

The existing provisions in GATS, notably those contained in Articles XII and XIV do not offer an adequate way to deal with adverse circumstances that might arise as a result of a member's specific commitments. In particular Article XII (3) states that restrictions to safeguard the balance of payments shall not be adopted or maintained for the purpose of protecting a particular service

sector. Article XIV does not contain any provisions referring to the situation foreseen in Article XIX of GATT, that is a temporary threat to a domestic industry arising from increased imports. Article XXI does not seem to provide an adequate mechanism for reversing or modifying commitments in the event of unanticipated difficulties. The measures under this article may only be taken when some conditions are fulfilled such as waiting period, prior notification, compensatory adjustment.

c. Does the nature of commitments undertaken in GATS -- whereby Members may choose whether to schedule a sector, and may also condition market access and national treatment with respect to commitments that are made -- obviate the need for safeguards? Or would it be more appropriate to think in terms of the idea that the existence of a safeguard would allow governments to be more forthcoming with respect to their scheduled commitments?

It is necessary to develop an emergency safeguard mechanism in GATS in view to achieve the higher level of specific commitments and support progressive liberalisation of trade in services.

d. What would be the economic objective of a safeguard -- to protect production, investors, or employment? Would it protect all domestic production, or only that part of production attributable to national suppliers? Would it aim to protect investment by nationals, or all domestically based investments? What would be the objective of allowing departures from national treatment under modes 3 and 4? Is the distinction between establishment rights per se and post-establishment operations relevant in relation to possible safeguard measures under modes 3 and 4?

The economic objective of a safeguard should be to protect domestic production consisting of national services suppliers. Service providers owned or controlled by foreign persons established in a Member's territory are considered to be foreign service suppliers according to the provision of Article XXVIII of GATS. The distinction between establishment rights *per se* and post-establishment operations could be relevant in relation to possible safeguard measures under modes 3 and 4. A Member could use a safeguard measure solely in respect to new entrants i.e. it could introduce limitations on market access in mode 3 and 4.

e. Would a safeguard mechanism need to contemplate special provisions for developing countries or does the concept of progressive liberalization offer adequate leeway in this respect?

A safeguard mechanism under GATS does not need to contemplate special provisions for developing countries.

f. Is there anything intrinsic to service transactions, such as intangibility, simultaneity of production and consumption, or the need for physical proximity between the producer and the consumer, which makes (some) services transactions different from goods transaction in ways that might influence arguments as to the necessity or utility of safeguard measures in services?

There is nothing intrinsic to service transactions which makes (some) services transactions different from goods transaction in ways that might influence arguments as to the necessity or utility of safeguard measures in services.

g. Is anything intrinsic to services markets, such as the role and importance of regulatory regimes, standards and certification requirements, which makes services markets different from goods markets in ways that might influence arguments as to the necessity or utility of safeguards measures in services?

There is nothing intrinsic to services markets which makes services markets different from goods markets in ways that might influence arguments as to the necessity or utility of safeguards measures in services.

h. Is anything intrinsic to the role of services in the economy, such as their important support and infrastructure role, which makes services markets different from goods markets in ways that might influence arguments as to the desirability of safeguards measures in services?

Some service sectors, for example financial services and communication services play a very important role in the economy. Furthermore these sectors seem to be very sensible to any injury. Therefore it is desirable to be authorized to prevent or remedy injury or any threat of injury very quickly. For this purpose safeguards measures are very desirable in these sectors.

i. Do Members maintain any emergency safeguard measures in national legislation? If so, what are these measures and how are they implemented?

Poland does not maintain any emergency safeguard measures in national legislation.

2. What criteria might be brought to bear in determining when an emergency safeguard measure may be justified?

a. What, in terms of GATS, is the equivalent of increased imports under Article XIX of GATT? In mode 1, the cross-border flow of services may be similar to the import of goods, but the situation is quite different under other modes. How should the possibility of a safeguard be triggered in these circumstances?

The term increased imports could relate to cross-border service transactions under mode 1, effects on domestic industry of consumption abroad under mode 2, an investment flow in respect to mode 3, the movement of natural persons in respect to mode 4.

b. How should serious injury be determined? Injury to whom or what?

Serious injury is defined in Article 4(1) of the Safeguards Agreement. The criteria described in this Article could be translated into a services context. The term •serious injury• could mean a significant overall impairment in the position of a domestic industry consisting of national service suppliers.

c. What standards would be required to determine that increased competition from foreign sources caused injury to the national industry?

The criteria described in Article 4 of the Safeguard Agreement could in principle be developed in a services context with the appropriate change.

d. How would the national industry be defined for the purpose of determining injury?

For the purpose of determining injury the national industry shall consist of national service suppliers.

e. Should a link be established between the nature of a specific commitment in a particular sector, including in relation to limitations on market access and national treatment, and the availability of a safeguard measure? In other words, should the availability or nature of a safeguard be restricted where limitations have been inscribed?

The availability and nature of a safeguard should depend upon the nature of specific commitments.

f. What measurement and identification problems arise in services that might complicate the development of a safeguard instrument, and how should they be dealt with?

There are certain measurement and identification problems arising in services that complicate the development of a safeguard instrument, which have already been discussed in the documents circulated among the members of the Working Party on GATS Rules. Some of them are: statistical problems, definitional problems, practical difficulties. Further work is necessary to find how to deal with these problems.

3. What form might a safeguard mechanism for services take?***a. What type of measure should be applied? Would taxes, foreign exchange restrictions, other quantitative limitations, or regulatory restraints be suitable as safeguard measures?***

Measures such as taxes, foreign exchange restrictions, other quantitative limitations, or regulatory restraints can be suitable as a safeguard measures. However, it is necessary to develop the procedure for application of these measures which can be in principle based on provisions of the relevant articles of Agreement on Safeguards.

b. What would be the implications of different modes of supply for the kind of measures employed?

See answer to the question c.

c. Would there be circumstances in which the application of a safeguard measure in respect of one mode of supply would provoke a demand for comparable measures in relation to other modes at the same time?

There could be certain circumstances in which the application of a safeguard measure in respect of one mode of supply would provoke a demand for comparable measures in relation to other modes. It will depend on the service to be supplied and the type of commitment made by the member taking the safeguard measure. Therefore under certain circumstances safeguards to be affective shall cover all modes of supply.

d. Should safeguards be applied on a non-discriminatory basis in all circumstances?

Safeguards should be applied in principle on a non-discriminatory basis except the case where safeguards are applied by a member which is a party to economic integration recognized by Article V of GATS.

e. How quickly would it be possible for a Member to take a safeguard measure? Would the notion of •critical circumstances• as developed in the Agreement on Safeguards, apply in the services area?

The notion of •critical circumstances•, as developed in the Agreement on Safeguards, should be applied in the services area.

f. What should be the duration of any safeguard measures adopted?

Any safeguard measure shall be applied only for such period of time as may be necessary to prevent or remedy serious injury. The criteria described in the Safeguard Agreement could in principle be developed in a services context with the appropriate changes.

g. Would safeguard measures be made degressive during the period of their application?

Safeguard measures should be made degressive during the period of their application.

h. Would a Member taking a safeguard action be required also to adopt adjustment measures?

It is necessary to determine the cases where a member taking a safeguard action is required to adopt adjustment measures as well as the kind of these adjustment measures.

i. Would the application of safeguard measures be accompanied by compensatory adjustments in the schedule of the Member taking the measure?

See the answer to question h.

Working Party on GATS Rules

COMMUNICATION FROM INDIA

Response to the questions relating to an emergency safeguard mechanism in GATS

The following communication is being circulated at the request of India to Members of the Working Party on GATS Rules.

1. What is the justification and purpose of an emergency mechanism under GATS?

Since the nature of trade in services is in many ways different from the nature of trade in goods, it would appear logical to state that the nature of an Emergency Safeguard Mechanism (ESM) in GATS would be different from the emergency safeguard provision in GATT. The ESM in GATS may be conceived of as a provision to address an emergency situation, which may arise in the economy of the Member, which makes it necessary for that Member to have to temporarily modify or withdraw any commitment in its Schedule. The main objective of the ESM would therefore be to provide remedy in case of such an unforeseen situation.

The existing "safeguard" mechanisms in GATS, such as those contained in Article XII and Article XIV, and even Article XIV bis, address situations such as restrictions to safeguard the balance of payments, general exceptions or security exceptions. Availability of these "safeguard" mechanisms is duly taken into account by the Member when scheduling its commitments in its Schedule. However, the provisions of Article XII, Article XIV and Article

XIV bis of GATS are not sufficient to deal with unexpected adverse developments or unforeseen emergency situations arising from the Member's obligations under the GATS. The provisions of Article XXI appear to be more applicable to non-emergency measures, especially since these apply to modification or withdrawal of commitments three years after such commitments have entered into force. The availability of the ESM as a provision of the GATS is also likely to give further confidence to the Member countries to undertake further liberalisation commitments under the GATS.

The focus of the ESM should be the specific commitment in the Schedule of the Member invoking the safeguard mechanism, rather than the nature of the commitment related, for example, to the concept of "progressive liberalisation", itself. The temporary nature of the ESM would make it different in nature from the long term nature of the commitment in the Schedule.

The economic objective of the ESM in GATS would need to be assessed in light of the emergency situation which has an impact on the commitments in the Schedule of the concerned Member.

./.

The ESM, while being available to all WTO Members, should have special provisions for developing countries, since the area of trade in services have been brought under the ambit of the multilateral trading system very recently with the formation of the WTO. Many developing countries do not have appropriate infrastructural systems, including the availability of necessary technology, to address unforeseen situations which may cause them to seek to modify or withdraw temporarily any commitments in their Schedules.

The experience in the operation of the trade in services sector under the provisions of the GATS and the experience in the operation of the trade in goods sector under GATT provisions would demonstrate the significant differences which are accorded to the role, transactions and markets in these two spheres of the multilateral trading system.

2. What criteria might be brought to bear in determining when an emergency safeguard measure may be justified?

The ESM should be of a temporary nature, with a specified maximum period of duration, since it is expected to address an emergency situation, which by its very definition would be of a temporary nature. Criteria to determine the justification of the ESM would need to be evolved through analysis. This exercise would have to take into account the fact that the measure has to be directly linked to the nature of trade in services, the specific commitment

being addressed, and would have to also take into account the scope of the commitment and the modes of supply involved. The ESM should be applied on MFN basis.

3. *What form might a safeguard mechanism for services take?*

The form of the ESM would be linked to the modification or withdrawal, on a temporary basis, of the concerned commitment in the Member's Schedule. It would also be related to the scope of the commitment and the modes of supply involved. There could be different mechanisms for the different modes of supply. It should be applied on a non-discriminatory basis in all circumstances. It should be available for invocation in "critical circumstances".

Working Party on GATS Rules Original: English

COMMUNICATION FROM THE REPUBLIC OF HUNGARY

Response to the Questionnaire on Government Procurement of Services

Addendum

The following communication is being circulated at the request of the Republic of Hungary to Members of the Working Party on GATS Rules.

Note: Basic legal instrument on public procurement in Hungary is Act XL of 1995 on Public Procurements (the Act). These responses are made on the basis of this Act. References are made to the specific Sections and Articles of the Act relevant to the question.

I. EXISTING PROCUREMENT REGIMES

Where a Member's procurement regime is different for central government entities, sub-central government entities, and other entities, such as public undertakings (e.g. public utilities), it would be useful if these differences were specified under each of the headings indicated below.

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

The following organizations shall come under the scope of this Act (Section 1.):

- a) the state, local governments, municipal minority local governments, local minority local governments, association of municipal local governments, central budgetary organs, budgetary organs of local governments, segregated state funds, Pension Insurance and Health Insurance self-government;
- b) public bodies and public foundations;

- c) foundations and social organizations established by or with the participation of the organizations specified in paragraphs a) and b), through contributing more than one-third of their assets, and/or non-profit companies, insurance associations, water management companies, also including their organizational units being legal entities, under the determining control of the organizations specified in paragraphs a) and b);
- d) organizations granted subsidy, not coming under the force of paragraphs a) to c), in respect of procurements realized from the subsidy, and/or irrespective of the value of guarantee, organizations for the payment obligations of which the Government undertook suretyship in accordance with Act XXXVIII of 1992 on the Central Budget (hereinafter: CBA) and ordered in the relevant Decree to apply the rules contained in this Act in respect of the procurements effected from the funds acquired in this manner;
- e) economic organizations referred to in Section 685, paragraph c) of Act IV of 1959 on the Civil Code of the Republic of Hungary (hereinafter: CC), or local government institutions referred to in Section 9, subsection (4) of Act LXV of 1990 on Local Governments, if they have exclusive licences to provide national, regional or local public services in accordance with legal rules, on the whole market affected by the procurement [the organizations contained in paragraphs a) to e) hereinafter collectively: inviters of bids].

Procurements Coming under the Scope of this Act (Section 2.)

- (1) The organizations referred to in Section 1 shall proceed in accordance with the rules of this Act in the course of their procurements of goods, as well as their building and construction projects and ordering their services (hereinafter collectively: public procurement), if their value specified in Section 4, subsection (1) reaches or exceeds the amount determined separately on commencing public procurement.
- (2) The public procurements carried out by the organizations indicated in Section 1, paragraph e) shall be exclusively interpreted as procurements directly connected with their public service providing activities.
- (3) The value limit of public procurements referred to in subsection (1) shall be determined for the year 1997 and subsequently in the annual Act on the Budget.

Section 96 of Law CXXIV of 1996 on the State Budget of the Hungarian Republic for 1997 establishes the following **threshold values**:

- HUF 12 million for procurement of goods,
 - HUF 24 million for building and construction projects,
 - HUF 6 million for technical planning for building and construction projects,
 - HUF 6 million for services,
 - HUF 240 million for pre-qualification requirement as defined in Section 42:3 of the Law on Public Procurement. (see Answer 6.(c))
- (4) The organizations specified in Section 1 are entitled to proceed in accordance with the rules of this Act in the course of their procurements of a value not reaching the value limit indicated in subsection (3).

Section 3

- (1) In respect of the central budgetary organs established by the Government or the Minister, the Government may order public procurements within the framework of a centralized procedure, defining their personal and material scope, as well as the party entitled to invite bids.
- (2) The Government shall publish its resolution providing for the centralized procedure of public procurements, which, if necessary, shall also contain the information related to the possibility of joining the procedure.
- (3) In the course of the centralized procedure of public procurements, the provisions contained in this Act shall also apply if the Government authorizes a person or organization not mentioned in Section 1 to invite bids. The detailed rules pertaining to the centralized procedure of public procurements shall be determined in a separate legal rule.

Section 6: The scope of this Act shall not apply to

- a) public procurements affecting state secrets or service secrets in respect of which the competent committee of Parliament made a preliminary decision excluding the application of this Act;
- b) procurements defined in international agreements, taking place within the framework of a separate procedure;
- c) procurements defined by international organizations, taking place on the basis of a separate procedure;
- d) procurements of the Economic Security Reserves providing for extraordinary tactical purposes, and their temporary inclusion in the inventory;
- e) procurements realized in accordance with legal rules from the Market Intervention Fund;
- f) procurements coming under the system of means of the regulation of the agricultural market;
- g) procurements of water and distributed energy sources;
- h) procurements to be carried out in the interest of preventing water damage, and/or water quality damage at the time of alert.

Section 9

- (2) The scope of this Act shall not apply to the following services:
- a) if a person or organization, defined in another legal rule, is exclusively entitled to provide a service;
 - b) if a contract may exclusively be concluded on the provision of a service under conditions defined in another legal rule;
 - c) central banking and financial institution's activities;
 - d) securities trade;

- e) development, production and joint production of programme material by broadcasters;
- f) research and development activities, unless at least fifty per cent thereof, and to the extent exceeding the value limit specified in Section 2, subsection (3), are financed by the inviter of bids, and the results thereof are also utilized by the inviter of bids;
- g) preparation of a regional and community arrangement plan, a technical, conceptional plan preceding the official permission of construction, an official plan documentation for the permission of construction, the contracting plan of a construction project, as well as preparation of plans for the regional arrangement, architectural and technical plan competition defined in a separate legal rule.

Administrative structure

2. How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

PUBLIC PROCUREMENT COUNCIL

Legal Status of the Council (Section 11)

- (1) The Public Procurement Council (hereinafter: Council) is established for the purpose of providing for the enforcement of the objectives defined in this Act; it is only subordinated to Parliament.
- (2) The Council is a central budgetary organ under the supervision of Parliament, with independent management, which has general competence with regard to its scope of duties defined in this Act. It is based in Budapest.

Competence and Operation of the Council (Section 15)

- (1) The Council shall
 - a) monitor the enforcement of the rules of this Act, initiate with the competent party the passing and amendment of legal rules related to public procurements;
 - b) express its opinion on draft legal rules related to public procurements and the operation of the Council;
 - c) prepare recommendations promoting the execution of legal rules related to public procurements, in the framework of these legal rules;
 - d) monitor the performance of the contracts concluded on the basis of public procurement procedures, define the criteria for qualification pursuant to which it publishes the list of economic associations (hereinafter: qualified bidders) which can be requested to take part in the procedure of invitation referred to in Section 65, subsection (1), paragraph b)

annually, in its official gazette, entitled Public Procurement Bulletin;

- e)perform, through its members, the task specified in Section 51, subsection (2);
 - f)determine the number of members of the Arbitration Committee of Public Procurements;
 - g)appoint, and/or relieve the chairman of the Arbitration Committee of Public Procurements and the commissioners of public procurements;
 - h)judge matters of conflict of interest related to the commissioners of public procurements;
 - i)provide for the publishing of the Public Procurement Bulletin with a regularity defined by it, publish the announcements prepared in connection with the public procurement procedure, the resolutions of the Public Procurement Arbitration Committee, the recommendations referred to in paragraph c), furthermore, any other notices related to public procurements;
 - j)promote the education and training of those participating in the public procurement procedure;
 - k)maintain relationship with public procurement organizations of other states, and with international organizations;
 - l)approve its own organizational and operational regulations, and the other internal regulations and budgetary proposals affecting its operation, furthermore, its annual budget report.
- (2)The Council shall prepare an annual report to Parliament on its experience related to the transparency of public procurements, as well as on its activities; the report shall be also sent to the State Audit Office for information.

- (3)The report shall contain statements regarding the extent to which the rules of this Act correspond to the requirements of the rules of economic life and the state budget, and the manner consistence therewith may be provided.

Laws and regulations in force

3.(a)Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

Public procurement is regulated by Act XL of 1995 on Public Procurements.

Other relevant rules and regulations:

- Government Decree 125/1996 on detailed rules of centralised procurements of central government agencies (125/1996. (VII. 24.) Korm. rendelet a központi költségvetési szervek központosított közbeszerzéseinek részletes szabályairól)

- Government Decree 128/1995 on rules and fees of publication in •Public Procurement Bulletin, the official gazette of the Public Procurement Council• (128/1995. (X. 20.) Korm. rendelet a •Közbeszerzési Értesítő, A Közbeszerzések Tanácsának Hivatalos Lapja•-ban történő közzététel rendjéről és térítési díjáról)
- Decree No.25/1996 of the Minister of Interior on centralised procurements of the Ministry of Interior (25/1996. (X. 2.) BM rendelet a Belügyminisztérium központosított közbeszerzési feladatainak ellátásáról)
- Decree No. 1/1996 of the Minister of Environment and Regional Development on detailed regulation of the documentation of offer requests for building and construction procurements (1/1996. (II. 7.) KTM rendelet a közbeszerzés keretében megvalósuló építési beruházásra vonatkozó ajánlati felhívás dokumentációjának részletes műszaki tartalmáról)
- Government Decree 1089/1995 on tasks related to the establishment of the Public Procurement Council (1089/1995. (IX. 21.) Korm. határozat a Közbeszerzések Tanácsa létrehozásával kapcsolatos feladatokról)

(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

Answer 3.(b) For the purposes of this Act, services are activities, which do not qualify as procurement of goods, or as construction projects, and are performed on the basis of a onerous contract. (Section 9.1)

The utilization of a service accompanied by goods shall also qualify as procurement of goods, if the value of the service is not in excess of the value of the goods. (Section 7.2)

Some services are not covered by the Act. (see Section 9.2 in Answer 1)

Different threshold values are applied for procurement of goods and services. See Answer 1.

Procurement procedures applied

4.(a) What procedures are followed in the procurement process?

Types of Procedure (Section 26)

- (1) A public procurement procedure may be an open procedure, a procedure by invitation, or negotiation. Procedures by invitation or negotiation may only take place if permitted in this Act.
- (2) Inviters of bids shall define the deadline for submitting bids, the criteria for the judgement of bids and its date in the invitation for bids in open procedures and procedures by invitation. Inviters of bids shall be bound by the conditions defined in the invitation for bids, and/or the documentation containing the detailed contractual conditions (hereinafter: documentation), while bidders are bound by their bids.
- (4) In a procedure by invitation, the parties invited by the inviter of bids may submit bids.

(5) In a procedure by negotiation, the inviter of bids shall conduct free negotiations with the parties selected by it about the conditions of the contract. In the course thereof, the parties are not bound, in the manner defined in Section 50 of this Act, by their bids pertaining to the content of the contract.

(6) The rules of open procedure shall appropriately apply to the procedures through invitation and negotiation, unless this Act provides otherwise.

It is not possible to switch from one type of procedure to another in the course of a public procurement procedure. (Section 27.1)

(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

A public procurement procedure may be an open procedure, a procedure by invitation, or negotiation. Procedures by invitation or negotiation may only take place if permitted in this Act.

Procedure by Invitation (Section 65)

(1) The inviter of bids shall apply a procedure by invitation, if

- a) only a limited number of bidders is suitable for fulfilling the contract due to the particular nature of the subject of public procurement, or
- b) with consideration to the subject of public procurement, and based on the list of qualified bidders, there are at least five qualified bidders suitable for submitting a bid.

Procedure by Negotiation (Section 70)

The inviter of bids may apply the procedure by negotiation if

- a) the open procedure or the procedure by invitation was unsuccessful, with the exception of the contents of Section 60, subsection (1), paragraphs e) and f), provided that the conditions of the invitation for bidding did not change in the meantime;
- b) owing to technical peculiarities, artistic considerations or the protection of exclusive rights, the contract can only be performed by a definite person;
- c) the object concerned is exclusively produced for research, experimental, study or development purposes; this case may not apply in the event of a quantity preparing the ground for marketability and/or covering the costs of research and development;
- d) the deadlines specified with regard to the open procedure or procedure by invitation could not be observed owing to the extraordinary urgency which occurred for a reason not foreseeable by the inviter of bids; the circumstances justifying extraordinary urgency may not arise from the negligence of the inviter of bids;

- e) it is not possible to define the subject of the service with the exactitude, and/or unambiguity, which makes the selection of the most favourable bid in open procedure, or procedure by invitation possible;
- f) in the case of the partial exchange or extension of an object obtained previously, the replacement of the previous winning bidder by another would carry the consequence that different objects with differing and incongruous technical specifications should be procured, and/or procurement would result in disproportionately high operation or maintenance costs; the period of such contracts, concluded with a previous winning bidder, can, however, not exceed three years;
- g) as a result of unforeseeable circumstances, a complementary service not included in the previous contract became necessary in order to provide the service or perform the construction project, provided that the complementary service or the construction work cannot be separated technically or economically from the contract concluded previously; the value of the complementary service, and/or construction work, however, may not exceed fifty per cent of the value of the previous public procurement in any case;
- h) the favourable conditions of procurement only prevail for a short time, and the utilization of favourable conditions would fail in the case of applying a procedure of another type;
- i) procurement aims at obtaining the right of ownership, or the right of use or utilization of a real property.

(c) *What are the time limits for submission of bids?*

As the general rules for Deadline for Submitting the Bids

Section 47

- (1) The inviter of bids may not set the deadline for submitting the bids (submission deadline) as a period shorter than forty days reckoned from publishing the invitation for bidding.
- (2) In justified cases, the inviter of bids may extend the deadline for submitting the bids on one occasion. The inviter of bids shall publish the extension of the deadline in an announcement prior to the expire of the original deadline, where the reason for extending the deadline shall also be indicated.
- (3) The deadline for submitting the bids may not be shortened.

Section 48

- (1) The inviter of bids may amend the conditions specified in the invitation for bidding, and/or the documentation prior to the expire of the deadline for submitting the bids. A new announcement shall be published on the amended conditions, in which a new deadline for submitting the bids shall be established. The deadline may not be shorter in this case, either, than that contained in Section 47, subsection (1).

(2)The inviter of bids may withdraw its invitation prior to the expire of the deadline for submitting the bids, which shall be published in an announcement.

(3)If the invitation for bidding is withdrawn, in case the documentation was made available for consideration, the inviter of bids shall return the consideration, while the bidder shall return the documentation.

Time limits for Documentation and Provision of Information:

Section 37

(1)If the inviter of bids prepares the documentation required for submitting appropriate bids, the documentation shall contain the detailed contractual conditions. In the invitation for bidding, the inviter of bids shall specify the manner and deadline of making the documentation available, the place of obtaining, as well as the financial conditions thereof.

(2)The inviter of bids shall provide for making the documentation available as of the date of publishing the invitation for bidding.

Section 38

(1)Beyond the documentation, the bidder may, for the purpose of drawing up his bid, request further information from the inviter of bids in writing not later than ten days prior to the expire of the deadline for submitting the bid. The content of the information shall be made available to the bidders.

(2)The inviter of bids shall be obliged to provide the supplementary information related to the documentation not later than six days prior to the expire of the deadline for submitting the bids.

(3)The inviter of bids shall provide the information in a manner that does not favour certain bidders over others, and which does not violate the equal chances.

(4) If the documentation is of a large volume, and/or if bids may only be submitted following the on-site checking of the documentation, or the inspection of the place of performance, the inviter of bids shall set or amend the deadline for submitting the bids with consideration to the above.

Procedure by Invitation: (Section 68)

(1)The inviter of bids may not specify the deadline for participation as a period shorter than twenty-five days reckoned from publishing the announcement.

(2)The inviter of bids may not specify the deadline for submitting bids as a period shorter than forty days reckoned from the dispatch of the invitation for bidding.

Accelerated Procedure (Section 72)

(1)The inviter of bids may apply an accelerated procedure in the course of the procedures by invitation or negotiation, if it is justified by extraordinary urgency. The circumstances justifying extraordinary urgency may not arise from the negligence of the inviter of bids.

- (2) In an accelerated procedure, the deadline for submitting the application for participation may not be shorter than ten days reckoned from the date of publishing the invitation to participation, while the deadline for submitting the bids may not be shorter than fifteen days reckoned from the date of the invitation for bidding.
- (3) In an accelerated procedure, the complementary information pertaining to the documentation shall be supplied to bidders not later than four days prior to the expiry of the deadline for submitting the bids.
- (4) In an accelerated procedure, the announcement shall be forwarded via telegram, telex or telefax, which shall subsequently be sent by letter, too.
- (5) Accelerated procedure may not be applied in the course of construction projects.

Publicity for inviting tenders

5.(a) How are intended procurements publicised? Are invitations to tender published? If so, where, and in what languages?

Publishing of Announcements:

Section 29

- (1) For the purposes of this Act, the publishing of an announcement shall be interpreted as publishing in the Public Procurement Bulletin.
- (2) An announcement may be a preliminary summary information, an invitation for bidding, an invitation to participate in the pre-qualification procedure, an invitation to participation, an information about the result of the procedure, or any other announcement defined by law.
- (3) In the Public Procurement Bulletin, exclusively the announcements, notices, recommendations and decisions defined in this Act may be published.
- (4) The announcement may be forwarded to the Public Procurement Bulletin via telegram, telex or telefax. The announcement shall also be sent in the form of a letter in the latter three cases.
- (5) The Council shall publish the announcement received. The dates of dispatch and receipt of the announcement shall be indicated at the end of the announcement to be published.
- (6) The deadlines indicated in the announcement shall commence on the day following the date of publishing the Public Procurement Bulletin.
- (7) The cost of publishing shall be borne by the party obliged to publish the announcement by law.
- (8) The announcement may only be published in any other domestic newspaper following its publication in the Public Procurement Bulletin.

Section 30

- (1) If foreign-based bidders (bidders resident abroad) may take part in the procedure, the announcement may also be published in foreign newspapers. In this case, the foreign language summary of the announcement may also be published in the Public Procurement Bulletin.
- (2) If the announcement is also published in a foreign newspaper, the announcement may not be published in the Public Procurement Bulletin prior to its dispatch abroad. The place of publishing abroad and the date of dispatch shall be indicated in the announcement sent to the Public Procurement Bulletin. In respect of the same public procurement, the announcements published abroad and in the Public Procurement Bulletin may not contain conflicting or different details and facts. In the case of any difference, the Hungarian language announcement shall be governing.

Institution of the Procedure (Section 32)

- (1) The open procedure is instituted by an invitation for bidding or a pre-qualification procedure, which shall be published by the inviter of bids by way of announcement.
- (2) The inviter of bids shall publish the invitation for bidding, and/or the announcement connected with the pre-qualification procedure, in case the licences required for concluding the contract are available, when the pecuniary cover providing for the fulfilment of the contract, or the security providing for the fact that the pecuniary cover will be available to it on the date of fulfilment, are at its disposal.

(b) Do the extent and form of publicity differ according to tendering procedures applied and/or on the value of procurement?

The rules for publishing announcements of Procedure by Invitation

- (2) The procedure by invitation shall commence with an invitation to participation, which shall be published by the inviter of bids through an announcement corresponding to the specimen contained in Schedule No. 8. (Section 65.2)

Section 66

- (1) In the case of Section 65, paragraph a), (see in Answer 4.(b)) the inviter of bids shall, in the announcement, indicate the parties it intends to request to submit their bids.
- (2) In addition to those indicated in the announcement, all parties may apply, on the basis of the announcement, for participating in the procedure, who are suitable for fulfilling the contract.
- (3) Following the expire of the deadline for applying for participation (deadline for participation), the inviter of bids shall simultaneously and directly request in writing all applicants for participation, qualified as suitable to submit their bids.

Section 67

- (1) In the case of Section 65, paragraph b) (see in Answer 4.(b)), bidders qualified on the basis of the publication of the announcement may apply for participating in the procedure, within the deadline for participation specified in the announcement.
- (2) The inviter of bids shall determine a limit figure for bidders in the announcement, with the proviso that invitations for bidding shall only be sent to a number of those applying for participation up to the maximum number defined by the limit figure.
- (3) The limit figure shall allow for at least five bidders. The limit figure shall be adjusted to the subject of public procurement, and shall provide for real competition under all circumstances.
- (4) The inviter of bids shall request the applicants selected in accordance with the limit figure for bidders determined in the announcement, based on their financial, economic and technical suitability, in writing, simultaneously and directly, to submit their bids.

The rules for publishing announcements of **Procedure by Negotiation** (Section 71)

- (1) The inviter of bids shall only publish an announcement of commencing the procedure by negotiation, in accordance with the specimen contained in Schedule No. 9, in the cases defined in Section 70, paragraph a) and e) (see in Answer 4.(b)). In this case, the procedure by negotiation shall be commenced by an invitation to participation.
- (2) The inviter of bids may indicate, already in the announcement, the parties it intends to invite to participate in the procedure. In addition to those indicated in the announcement, all parties may apply for participating in the procedure on the basis of the announcement, who are suitable for fulfilling the contract.
- (3) The inviter of bids shall invite the persons selected in accordance with the limit figure defined in the announcement, and based on their financial, economic and technical suitability, directly, but at least three applicants shall be invited to the negotiation, provided that it is made possible by the number of applicants qualified as suitable.
- (4) In the case of an announced procedure by invitation, the provisions contained in Section 32, subsection (2), Section 40 and Section 68, subsection (1) shall apply. (See in Answers 5.(a), 5.(c) and 4.(c) respectively)
- (5) In the course of a procedure by negotiation conducted without publishing an announcement, the inviter of bids shall directly invite the parties selected by him to the negotiation.
- (6) The contents of Section 63, subsection (1) shall appropriately apply to publishing the result of the procedure by negotiation conducted without publishing the announcement.

The rules for publishing announcements of **Accelerated Procedure** (Section 72)

(4) In an accelerated procedure, the announcement shall be forwarded via telegram, telex or telefax, which shall subsequently be sent by letter, too.

(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

Invitation for Bidding

Section 33

(1) The content of the invitation for bidding shall be defined, in accordance with the specimen defined in Schedule No. 2, and in a manner that the bidders may submit appropriate bids with equal chances on the basis thereof.

(2) The inviter of bids may describe the certification of the financial, economic and technical suitability of the bidder exclusively in a manner defined in this Act.

(3) The inviter of bids may prescribe for bidders in the invitation for bidding to apply the method of value analysis.

Section 34

(1) The inviter of bids shall judge the bids complying with the conditions contained in the invitation for bidding, and/or in the documentation on the basis of the following criteria:

a) the consideration of the lowest amount, or

b) the most favourable bid on the whole.

(2) The inviter of bids shall define the criterion for judgement chosen by him in the invitation for bidding, with consideration to the contents of subsection (1).

(3) If the inviter of bids intends to choose the most favourable bid on the whole, he shall also define the order of importance of the criteria serving to judge thereof, which pertain to the requirements towards the subject of public procurement, the extent of the consideration and the other circumstances of performance.

Section 36

(1) It shall be indicated in the invitation for bidding whether a bidder may submit a bid in several versions or not.

Documentation and Provision of Information

Section 37

(1) If the inviter of bids prepares the documentation required for submitting appropriate bids, the documentation shall contain the detailed contractual conditions. In the invitation for bidding, the inviter of bids shall specify the manner and deadline of making the documentation available, the place of obtaining, as well as the financial conditions thereof.

- (2)The inviter of bids shall provide for making the documentation available as of the date of publishing the invitation for bidding.

Section 38

- (1)Beyond the documentation, the bidder may, for the purpose of drawing up his bid, request further information from the inviter of bids in writing not later than ten days prior to the expire of the deadline for submitting the bid. The content of the information shall be made available to the bidders.
- (2)The inviter of bids shall be obliged to provide the supplementary information related to the documentation not later than six days prior to the expire of the deadline for submitting the bids.
- (3)The inviter of bids shall provide the information in a manner that does not favour certain bidders over others, and which does not violate the equal chances.
- (4)If the documentation is of a large volume, and/or if bids may only be submitted following the on-site checking of the documentation, or the inspection of the place of performance, the inviter of bids shall set or amend the deadline for submitting the bids with consideration to the above.

Section 39

The inviter of bids may prescribe for bidders in the documentation or in the invitation for bidding to define the part of the contract in relation to which they intend to conclude contracts with third parties.

Technical Description (Section 40)

- (1)In the invitation for bidding or the documentation, the inviter of bids shall give a detailed technical description regarding the subject of public procurement (particularly in connection with the technical and quality requirements, the certification and control of adequacy, certification of the system of quality assurance).
- (2)The inviter of bids may only define the technical description with reference to a technical specification, and/or national standard contained in a legal rule or issued on the basis of a legal rule.
- (3)The inviter of bids may only depart from the contents of subsection (2), if the technical specifications and national standards
- a)are not available to it;
 - b)do not contain any description which would assure the adequacy of the subject of public procurement;
 - c)would, if applied, result in a procurement, not complying with previous procurements, and/or would cause technical difficulties or disproportionate extra costs for the inviter of bids;
 - d)do not make possible, if applied, public procurement expressly aiming at development.

- (4) If the inviter of bids fails to provide the technical description in accordance with subsection (2), the reason for the application of subsection (3) shall be indicated in the invitation for bidding or the documentation.
- (5) The inviter of bids may not define the subject of public procurement in a manner which excludes certain bidders from the opportunity of submitting their bids, or causes their unjustified and disadvantageous discrimination in any other manner. If the unambiguous definition of the subject of public procurement makes necessary any reference to an object, procedure, activity, person, and/or patent or trade mark of a definite origin and type, the description shall state that the description was only made for the purpose of the unambiguous definition of the nature of the object.

Procedure by invitation

The procedure by invitation shall commence with an invitation to participation, which shall be published by the inviter of bids through an announcement corresponding to the specimen contained in Schedule No. 8. (Section 65.2)

The inviter of bids shall, in the announcement, indicate the parties it intends to request to submit their bids. (Section 66.1)

Section 69

- (1) The provisions contained in Section 32, subsection (2) and Section 40 shall apply to the invitation to participation.
- (2) The invitation for bidding shall contain at least the following data:
- a) deadline for submitting the bids, the address to which bids shall be submitted;
 - b) reference to the invitation to participation published;
 - c) if necessary the place where the documentation was obtained, the deadline and financial conditions for its request;
 - d) conditions of the financial consideration of the inviter of bids;
 - e) date and place of opening the bids, those invited to the opening of bids by the inviter of bids;
 - f) period of binding by the bid;
 - g) indication of the certificates to be attached;
 - h) detailed criteria for judging the contracts, if not included in the invitation to participation.

Procedure by Negotiation (Section 71)

- (1) The inviter of bids shall only publish an announcement of commencing the procedure by negotiation, in accordance with the specimen contained in Schedule No. 9, in the cases defined in Section 70, paragraph a) and e). In this case, the procedure by negotiation shall be commenced by an invitation to participation.
- (4) In the case of an announced procedure by invitation, the provisions contained in Section 32, subsection (2), Section 40 and Section 68, subsection (1) shall apply.
- (6) The contents of Section 63, subsection (1) shall appropriately apply to publishing the result of the procedure by negotiation conducted without publishing the announcement.

Requirements laid down for possible suppliers

6.(a) Are there registration, residence or other requirements for potential suppliers?

National treatment shall be provided for foreign-based bidders (bidders resident abroad) in respect of participation, and the chance to win the contract in the course of the procedure, in harmony with the contents of international agreements governing with regard to the Republic of Hungary. (Section 24.3)

All interested parties may submit bids in the course of an open procedure, the inviters of bids may, however, prescribe in the invitation for bids that only bidders seated (resident) in Hungary may take part in the procedure, provided that their suitability for fulfilling the contract, also with consideration to Section 59, subsection (2) and (3), is presumable. In this case, the conducting a pre-qualification procedure is compulsory. If the procedure of pre-qualification is completed without success and the inviter of bids decides on inviting a new procedure, he shall be obliged to provide for the opportunity of participation of foreign-seated bidders (bidders resident abroad). (Section 26:3)

(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

Bid Collateral (Section 41)

(1) The inviter of bids may make the participation in the procedure subject to granting a bid collateral (hereinafter: collateral), which shall be made available by the bidders to the inviter of bids, simultaneously with the submission of their bids, or by the deadline set by the inviter of bids in the invitation for bidding, in the manner and to the extent defined therein. Bidders shall certify their making the collateral available to the inviter of bids.

(2) The inviter of bids may not establish the extent of the collateral in a manner which excludes certain bidders from the opportunity of submitting their bids, or causes their unjustified and disadvantageous discrimination.

(Bidders shall verify their financial, economic and technical suitability regarding the fulfilment of the contract. The relevant verifications shall be attached to the bid. (Section 43.2)

Section 44

(1) The financial and economic suitability required for fulfilling the contract may be verified by a declaration from a financial institution, and a declaration suitable for establishing the solvency of the bidder, containing the facts prescribed by the inviter of bids.

(2) The technical suitability of the bidder required for fulfilling the contract may be verified by

- a) setting forth the major supplies, construction projects and services of the previous three years;
- b) describing the technical equipment of the bidder;
- c) naming the technical specialists or technical units the bidder intends to involve in the performance, particularly presenting those who are responsible for quality control;
- d) naming the sub-contractors, and/or persons otherwise participating in performance the bidder intends to employ to an extent exceeding the value of public procurement by fifteen per cent;
- e) presenting a sample or a photo of the product or the planned project, the original nature of which shall be verified upon the request of the inviter of bids;
- f) in respect of the technical specifications required and described unambiguously, by a certificate issued by an acknowledged institution for quality verification, accredited in any national system;
- g) an examination performed by the inviter of bids or another organization, if the product is complex or serves special purposes;
- h) certifying the quality assurance systems of the own technical and economic units to be included in performance by a certifier accredited in any national system.

(3) The inviter of bids may prescribe one or more manners of certification from among those contained in subsections (1) and (2).

(4) With regard to the bidder's interests attached to business secrets, the inviter of bids shall limit the requesting of the details and facts defined in subsections (1) and (2) to the subject of the public procurement.

Section 46

(1) The following may not be bidders in public procurement procedures

- a) those who are under final accounting, or bankruptcy- and/or liquidation proceedings instituted against them are pending;
- b) those who failed to meet their payment obligations of tax, duty or social insurance contribution, as well as payment obligations towards a separated state fund, any of which expired earlier than one year ago, unless the creditor of the bidder agreed in writing to the payment of the debt at a later date;
- c) those who committed a breach of law within the scope of their business, established in a non-appealable court judgement, and/or in the non-appealable decision of the supervision of competition, made not earlier than five years previously;
- d) those who supplied false data on submitting their bids in a previous public procurement procedure conducted not earlier than five years previously, and were, as a result, excluded from the procedure;
- e) those whose violation of contractual obligations, undertaken on the basis of a previous public procurement procedure conducted not earlier than five years ago, was established in a non-appealable state administration, and/or court decision.

(2) Bidders shall attach to their bids their written declaration regarding the fact that neither they, nor the persons defined in Section 44, subsection (2), paragraph d) come under the force of subsection (1), paragraph a), furthermore,

paragraphs c) to e), as well as the certification of an authority that they do not come under the force of paragraph b).

Procedure by Invitation

In addition to those indicated in the announcement, all parties may apply, on the basis of the announcement, for participating in the procedure, who are suitable for fulfilling the contract. (Section 66.2)

The inviter of bids shall determine a limit figure for bidders in the announcement, with the proviso that invitations for bidding shall only be sent to a number of those applying for participation up to the maximum number defined by the limit figure. (Section 67.2)

Procedure by Negotiation

The inviter of bids may indicate, already in the announcement, the parties it intends to invite to participate in the procedure. In addition to those indicated in the announcement, all parties may apply for participating in the procedure on the basis of the announcement, who are suitable for fulfilling the contract. (Section 71.2)

In the course of a procedure by negotiation conducted without publishing an announcement, the inviter of bids shall directly invite the parties selected by him to the negotiation. (Section 71.5)

(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

Pre-Qualification Procedure (Section 42)

- (1) The inviter of bids is entitled to conduct a pre-qualification procedure in order that only bidders suitable for the performance of public procurement from financial, economic and technical point of view take part in the next phase of the public procurement procedure. Suitability may be verified in the manner defined in Section 44. (See in Answer 6.(c))
- (2) Those coming under the force of Section 46 may not take part in the pre-qualification procedure. (See in Answer 6.(c))
- (3) It is compulsory to conduct the pre-qualification procedure in the case of a construction project which reaches or exceeds the value limit determined in the annual Act on the Budget.
- (4) The inviter of bids shall publish the invitation to the participation in the pre-qualification procedure in the announcement complying with the specimen defined in Schedule No. 3.
- (5) In the pre-qualification procedure, the inviter of bids may not set the deadline for the application for participation as a period shorter than twenty-five days reckoned from publishing the announcement.
- (6) In the course of the pre-qualification procedure, the inviter of bids may not request, and the bidder may not submit, a bid.

- (7)The inviter of bids shall publish the result of the pre-qualification procedure in the announcement complying with the specimen defined in Schedule No. 4.
- (8)The inviter of bids shall, in writing, simultaneously and directly, invite the bidders selected in the course of the pre-qualification procedure to submit their bids. The contents of Section 69, subsection (2) shall apply to the contents of the invitation for bidding. (See in Answer 5.(c))

Criteria for assessing bids and awarding contracts

A.Commonwealth Procurement

7.(a)What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

(b)Is procurement subject to any offset provisions, such as local content, technology transfer or countertrade requirements?

(c)Is preference given to any particular enterprises or group of enterprises? If so, please specify.

(d)Do the procurement criteria differ according to sector or region of the economy?

(e)What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

Answers 7.(a) to 7. (e): Section 34

- (1)The inviter of bids shall judge the bids complying with the conditions contained in the invitation for bidding, and/or in the documentation on the basis of the following criteria:
- a)the consideration of the lowest amount, or
 - b)the most favourable bid on the whole.
- (2)The inviter of bids shall define the criterion for judgement chosen by him in the invitation for bidding, with consideration to the contents of subsection (1).
- (3)If the inviter of bids intends to choose the most favourable bid on the whole, he shall also define the order of importance of the criteria serving to judge thereof, which pertain to the requirements towards the subject of public procurement, the extent of the consideration and the other circumstances of performance.

Section 35

- (1) For the purpose of enforcing the objectives of employment policy, including the stimulation of job creation, and the development of underdeveloped regions, the protection of the environment, as well as increasing the chances of participation for small and medium size enterprises, the inviter of bids may define, in addition to the conditions specified in Section 34, subsection (3), conditions promoting the enforcement of the above considerations in the invitation for bidding, even if it is not made

compulsory in this Act (Section 59) (see below). The inviter of bids shall give preference to the bids meeting the conditions when selecting the most favourable bid on the whole, or selecting one of the bids which are otherwise equal, in accordance with the contents of the invitation for bidding.

- (2)The contents of Section 59, subsections (2) to (5) constitute a part of the invitation for bidding. The attention of the bidders shall be called to this condition in the invitation for bidding.

Section 59

- (1)The winner of the procedure is the party who submitted the most favourable bid to the inviter of bids in accordance with one of the considerations for judgement defined in Section 34, subsection (1) and on the basis of the conditions specified in the invitation for bidding (and in the documentation). The inviter of bids may only conclude a contract with the winner of the bidding, or in the case of his withdrawal, if it was prescribed in the invitation for bidding, with the party qualified as the one who submitted the next most favourable bid, on announcing the result of the procedure.
- (2)In the course of judging the bids, in the case of a difference not in excess of ten per cent, the bid pertaining to the price shall also be considered of equal value, on the basis of which the value produced by domestic employees is in excess of fifty per cent of the value of the subject of the procurement of goods.
- (3)In the course of judging bids pertaining to construction projects, in the case of a difference not in excess of ten per cent, the bid pertaining to the price shall also be considered of equal value, in which the value produced by domestic employees is in excess of fifty per cent of the value of procurement of goods constituting a part of the construction project, and/or where subcontractors with domestic head-offices (places of resident) are employed to an extent exceeding fifty per cent of the value of subcontractors' contracts.
- (4)From among the bids of the contents defined in subsections (2) and (3), that bid shall be given preference on the basis of which the value produced by domestic employees is the highest.
- (5)If, based on the contents of subsections (2) to (4), the winning bid cannot be established, the following bid shall be given preference in the case of bids of equal value, in the following order:
- a)that which contains products provided with the use of environment-friendly trade mark;
 - b)when the quality assurance system of the bidder was certified by a certifier accredited in any national system.
- (6)The fact defined in subsections (2) and (3), pertaining to goods, shall be certified by the certificate of origin issued by the chambers of economy. If the above fact cannot be certified prior to the expire of the deadline for submitting the bids, the bidder shall make a relevant declaration in the bid, and certify the above fact subsequently.

Disclosure of bids received and contracts awarded

8.(a) How are tenders received, registered and opened?

Opening the Bids (Section 51)

- (1) The closed documents containing the bids shall be opened on the date of expiry of the deadline for submitting the bids.
- (2) The inviter of bids, the bidders and the persons invited by them, the members of the Council, or persons appointed by them, furthermore, in the case of an inviter of bids who is granted central budgetary subsidy for public procurement, the organs and persons defined in a separate legal rule, may be present when bids are opened.
- (3) The names and head offices (places of residence) of the bidders, the consideration requested by them and the deadline of performance undertaken by them shall be announced in the course of opening the bids.

(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

The inviter of bids shall publish the information on the result of the procedure not later than within fifteen days reckoned from its announcement, in accordance with the specimen contained in Schedule No. 5. (Section 63:1)

Section 64

- (1) Upon the completion of the procedure, the inviter of bids shall prepare a written summary of the bids judged in accordance with the specimen contained in Schedule No. 6. The inviter of bids shall keep this summary for five years, and shall release it to the Council, upon request.
- (2) At the end of the budgetary year, the inviter of bids shall prepare an annual summary of annual public procurements, in accordance with the specimen contained in Schedule No. 7, which shall be sent to the Council.

(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

Bidders shall be informed, upon their request, within fifteen days reckoned from the receipt of the request about the reasons for their exclusion, and/or the refusal of their bids as referred to in the written summary established in Section 64, subsection (1) (see in Answer 8.(b)), and/or the reasons for their qualification as unsuitable in the pre-qualification procedure, as well as about the person of the winning bidder. (Section 63.2)

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment

is accorded. Please also specify the working definition of •domestic• in relation to domestic services and suppliers.

See: Answer 3. (a) for Laws and regulations in force.

See: Answer 6. (a) for National Treatment of potential suppliers.

See: Answer 7.(a) to (e) for criteria for assessing bids and awarding contracts, including the description how more favourable treatment to domestic services and/or suppliers is accorded and including the working definition of •domestic• in relation to domestic services and suppliers.

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

LEGAL REMEDY RELATED TO PUBLIC PROCUREMENTS

Procedure of the Committee

Competence of the Committee

Section 76

(1) In the sphere of legal remedy related to public procurements, the following shall come under the competence of the Committee:

- a) conducting a procedure instituted due to the unlawful bypassing of the public procurement procedure;
- b) conducting a procedure related to the contents of Section 5, as well as in connection with the violation of the principles or rules of the public procurement procedure;
- c) judging an application submitted by any interested party against the decision of the inviter of bids.

(2) The judgement of other legal disputes related to public procurements, not mentioned in subsection (1), shall come under the jurisdiction of the courts.

Rules Applicable to Proceeding Public Procurement Commissioners

Section 77

(1) Three public procurement commissioners shall proceed in the matters defined in Section 76, subsection (1) (hereinafter: public procurement matter), appointed by the chairman of the Committee.

(2) The public procurement commissioners proceeding in a public procurement matter shall be selected in such a manner that at least one of them has passed a specialised examination of law and another has a university or college degree in the field mostly connected with the subject of the matter.

Section 78

(1)The following public procurement commissioners may not proceed in public procurement matters:

- a)those who have ownership ratio in the inviters of bids, parties performing procurement through unlawfully bypassing the public procurement procedure, bidders or in another interested organization initiating the procedure (hereinafter collectively: client-organization);
- b)those with ownership ratio in an organization which maintains regular business relations with the client-organization.

(2)Public procurement commissioner whose relative

- a)maintains employment relationship, other legal relationship aiming at work performance or membership relationship with the client-organization, and/or is senior officers thereof;
- b)has an ownership ratio in the client-organization;
- c)maintains employment relationship, other legal relationship, aiming at work performance or membership relationship with an organization - and/or are senior officers thereof, or have an ownership ratio therein - which maintains regular business relations with the client-organization;
- d)maintain legal relationship of public service with organizations, which are supervising or subordinated organizations of the client-organization, and/or which provided support, and/or exclusive licence to the client-organization may not proceed in public procurement matters.

(3)Public procurement commissioners shall report to the chairman of the Committee if a reason for conflict of interest exists or occurred with regard to their person in respect of the public procurement matter, and shall terminate their participation in the matter in progress without delay.

Rules of the Procedure of Legal Remedy

Section 79

(1)The provisions of Act IV of 1957 on the General Rules of State Administrative Procedure shall apply to the procedure of the Committee, unless this Act provides otherwise.

(2)The procedure of the Committee is instituted upon an application or ex officio.

(3)The application may be submitted by the inviter of bids, the bidder or another interested party (hereinafter: applicant) whose right or lawful interest is violated or jeopardised by the activity or omission in breach of this Act.

(4)The institution of an ex officio procedure shall be initiated by a member of the Council, if he learns of an event violating the provisions of this Act.

(5)The institution of the procedure may be applied for, and/or initiated within fifteen days reckoned from the date of coming to knowledge of the event violating the rules of this Act, but not later than within sixty days reckoned from the occurrence of the event. Not acting within the above deadlines involves the forfeiture of rights.

- (6) A fee of administrative service of thirty thousand forints shall be paid, upon commencing the procedure, for the procedure of the Committee instituted upon an application.

Section 80

- (1) The following shall be indicated in the application:

- a) name, head office (place of residence) of the applicant;
- b) name of the inviter of bids and subject of the public procurement procedure, and/or name of the party performing procurement bypassing a public procurement procedure, related to which the legal remedy is initiated;
- c) date of the event violating law, and/or the date when it came to the knowledge of the applicant;
- d) what measures of the Committee are requested by the applicant, and the reasons therefor;
- e) whether the applicant requests the Committee to take temporary measures, and the reasons therefor;
- f) names and head offices (places of residence), known to the applicant, of the parties possibly interested in the public procurement matter.

- (2) If the application does not contain the data referred to in subsection (1), the Committee requests the applicant to supply the missing parts within five days.

- (3) If the Committee establishes that the applicant does not come under the force of Section 79, subsection (3), or the fee of administrative service specified in Section 79, subsection (6) was not paid, the application shall be refused ex officio, without performing in merito examination.

Section 81

- (1) The Committee shall commence the procedure of legal remedy on the basis of an application fully meeting the contents of Section 80, subsection (1), on the date of receipt of the application.

- (2) The Committee shall inform the parties and the parties interested in the public procurement matter of commencing the procedure without delay, by sending them the application, and/or the document of initiation, and requests them to send their remarks within five days and to report whether they claim the holding of a hearing or not, it, furthermore, requests the inviter of bids of the public procurement procedure, and/or the procurer unlawfully bypassing the public procurement procedure to send all documents available in connection with the procurement without delay.

- (3) If the application is submitted by the inviter of bids, it shall be obliged to attach all available documents to the application.

Section 82

- (1) The Committee may take temporary measures, upon request or ex officio, within three days reckoned from the receipt of the application corresponding to Section 80, subsection (1), and/or the initiation of the procedure, if it can be established from the documents that the purity of public procurements was

injured owing to the violation of the rules of this Act, or the danger thereof exists.

(2)As a temporary measure, the Committee may

- a)order the suspension of the public procurement procedure;
- b)prohibit the conclusion of a contract not concluded yet;
- c)request the inviter of bids of the public procurement procedure, if the purity of public procurement may also be ensured in this way, to draw the applicant into the procedure.

Section 83

(1)If it is requested by any interested party, the Committee shall hold a hearing, where the parties or others interested may be present in person or through their representatives, may make remarks and may submit their evidence prior to the completion of the hearing.

(2)The hearing shall be public.

Section 84

The persons other than the applicant of the public procurement matter, the party of contrary interest, furthermore, their representatives and the members of the Council, may only have access to the documents of the procedure, and/or may prepare copies or notes thereof on the basis of the permission of the Committee. The Committee may only give such a permit if lawful interests of the party submitting the application therefor are attached to the knowledge of such documents, and the access to the documents does not infringe the protection of business, and/or service secrets.

Section 85

The Committee may impose a penalty from fifty thousand to five hundred thousand forints on the participants of the public procurement procedure, if

- a)they disclose wrong or false data, and/or withhold data significant from the point of view of the judgement of the matter;
- b)fail to supply information, or fail to supply information within the deadline;
- c)hinder access to documents related to economic, and/or public procurement activities.

Section 86

(1)The Committee shall make a decision within fifteen days reckoned from the receipt of the application corresponding to Section 80, subsection (1), and/or the date of initiating the procedure, if no hearing was held in the matter.

(2)If the Committee holds a hearing in the matter, it shall make a decision within thirty days reckoned from the date of receipt of the application corresponding with Section 80, subsection (1), and/or the date of initiating the procedure.

(3)In justified cases, the deadline may be extended on one occasion, by not more than ten days, and the parties shall be informed accordingly prior to the expire of the original deadline.

- (4)The Committee shall make its decision by majority voting, based on the documents obtained, and/or in the case of holding a hearing, with consideration thereto, on behalf of the Council.

Section 87

The decision shall be delivered to the parties and other interested parties, and shall be published in the Public Procurement Bulletin.

Legal Consequences

Section 88

(1)In its decision, the Committee shall

- a)refuse unfounded applications;
- b)request the party causing the violation of law to proceed in accordance with the rules of this Act prior to the completion of the public procurement procedure, and/or may make the decision to be made by the inviter of bids subject to a condition;
- c)may declare null and void the decision of the inviter of bids made in the course of the public procurement procedure, or completing the public procurement procedure, except for the case if the contract has already been concluded on the basis of this decision;
- d)in addition to indicating the violated provision of this Act, it may establish the occurrence of the violation of law;
- e)may prohibit the bidder, for not more than five years, to take part in a public procurement procedure;
- f)may impose penalty on the organization violating the rules of this Act, or on the person responsible for the violation of law and maintaining legal relationship with the organization;
- g)oblige the party violating the law to bear the fee and costs of procedure.

(2)If the application aimed at establishing the quality of violating legal rules of the public procurement procedure preceding the contract to be concluded in accordance with Section 62, subsection (2), the Committee shall establish in its decision refusing the unfounded application that the public procurement procedure did not violate legal rules.

(3)If the Committee observes circumstances referring to the violation of other legal rules in the course of the procedure, it shall signal these to the competent authority, particularly to the investigation authority, the State Audit Office or the Control Office of the Government.

(4)The penalty contained in subsection (1), paragraph f) may only be imposed if following the decision closing the public procurement procedure or following the conclusion of the public procurement contract, the Committee established the unlawful nature of the procedure, furthermore, if the bidder was prohibited from participating in the public procurement procedure in accordance with subsection (1), paragraph e). The extent of the penalty may not be more than thirty per cent of the value of the public procurement procedure, but shall be at least five hundred thousand forints.

- (5)The Committee may also apply the measures contained in subsection (1) jointly, if the conditions thereof exist.

Procedure of the Court

Legal Remedy against the Decision of the Committee

Section 89

- (1)No appeal may be lodged against the decision of the Committee. The parties whose rights or lawful interests are violated by the decision of the Committee made with regard to the merits of the case, may request the court to review the decision in the form of a statement of claim.
- (2)The Committee may also publish its decision made with regard to the merit of the case if the review of the decision by the court was requested, but this circumstance shall be contained in the announcement.
- (3)With regard to the procedure instituted on the basis of the statement of claim submitted for the purpose of reviewing the decision made in the public procurement case, the court shall apply Chapter XX of Act III of 1952 on the Code of Civil Procedure (hereinafter: CCP) with the differences contained in Sections 90 to 93 of this Act.

Section 90

- (1)The statement of claim shall be submitted to the Committee within fifteen days reckoned from the date of service of the decision. It shall also be declared in the statement of claim whether the plaintiff requests the holding of a hearing or not.
- (2)The submission of the statement of claim has no delaying effect with regard to the implementation of the decision.
- (3)The Committee shall forward the statement of claim to the court, together with the documents of the case and the declaration corresponding to Section 331 of CCP, within five days reckoned from the receipt of the statement of claim. The Committee shall disclose in its declaration whether it requests the holding of a hearing or not.

Section 91

- (1)The persons who may not proceed as public procurement commissioners in accordance with the reasons defined in Section 78, shall be excluded from settling the case and may not take part in it as judge either.
- (2)The courts shall serve the statement of claim within eight days, and shall simultaneously
- a)inform the plaintiff of the declaration of the Committee,
 - b)request the parties interested in the public procurement case, by setting a deadline, with regard to whom the decision of the Committee contains a provision, to make a declaration, and shall inform them of the possibility of intervention.

(3) If the parties fail to request the court to hold a hearing, the court will judge the case without in chambers.

(4) The court proceedings shall have priority over other cases.

(5) The court may overturn the decision of the Committee, and may take the measures referred to in Section 88, subsection (1), paragraphs b) to f).

Section 92

An appeal may be lodged against the decision of the court acting at first instance in the matter specified in Section 89, subsection (3), within eight days reckoned from the disclosure of the decision.

Section 93

No review as specified in Chapter XIV of CCP may take place against the decision of second instance of the court proceeding in the case specified in Section 89, subsection (3).

II. MEMBERSHIP OF PLURILATERAL, REGIONAL AND/OR BILATERAL AGREEMENTS

11. Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.

Hungary is a signatory to following free trade agreements:

- Europe Agreement between the European Communities and their Member States and Republic of Hungary
- Free Trade Agreement between the EFTA Countries and the Republic of Hungary
- Central European Free Trade Agreement
- Free Trade Agreement between Turkey and the Republic of Hungary (not yet ratified)

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12.(a) Please provide statistics (if available) on the number and value of services procurements

- ***on both an aggregate and sectoral basis;***
- ***by origin of services and suppliers.***

(b) Please provide statistics (if available) on the

- ***share of services procurement in total procurement;***
- ***share of procurement of each service in total domestic output of the service;***
- ***share of procurement of each service in total domestic consumption of the service.***

Total domestic consumption is defined as the sum of public and private consumption or the sum of domestic output and net imports (i.e. imports minus exports) of the service in question.

12.(a) and (b):

Law No. XL of 1995 had entered into force in its entirety only on 1. January 1996 there are no available data, as yet.

Schedule No. 2 to Act XL of 1995

COMMENCEMENT OF A PUBLIC PROCEDURE (INVITATION FOR BIDDING)

1. Name, address, telegraphic address, telephone, telex and telefax numbers of the inviter of bids:
 - 2.a) The procedure chosen:
 - b) Definition of the contract in respect of which bids were invited:
 - 3.a) Subject and quantity of the procurement:
 - b) Place of performance:
 - c) Statement whether the bidder can submit a bid for a part of the subject of the procurement:
 4. Deadline of performance:*
 - 5.a) Name and address of the organization providing the documentation:
 - b) Deadline of applying for the documentation:
 - c) Conditions of purchasing the documentation:*
 - 6.a) Deadline for submitting the bids:
 - b) Address for submitting bids:
 - c) Language of submitting bids:*
 - 7.a) Definition of the parties to be invited by the inviter of bids for opening the bids:
 - b) Date and place of opening the bids:
 8. Conditions of providing the collateral:*
 9. Conditions of financial consideration, and/or definition of the place where these can be found in detail:
 10. Requirement of establishing an economic association from the winning joint bidders:*
 11. Data and facts requested for verifying the financial, economic and technical suitability of bidders:
 12. Period of binding by the bid:
 13. Criterion for judging bids:
 14. Definition of whether it is possible to make bids of several versions:
 15. Other information:
 16. Reference to the preliminary summary information:*
 17. Dates of dispatch and receipt of the announcement:
- The items marked by* shall only be filled in if required in respect of the procurement.

Schedule No. 3 to Act XL of 1995

PRE-QUALIFICATION PROCEDURE (INVITATION TO PARTICIPATION)

1. Name, address, telegraphic address, telephone, telex and telefax numbers of the inviter of bids:
 2. a) The procedure chosen:
 - b) Reasons for the condition of applying the procedure:
 - c) Reasons for the condition of applying an accelerated procedure:*
 - d) Definition of the contract for which bids were invited:
 3. a) Subject and quantity of the procurement:
 - b) Place of performance:
 - c) Statement whether the bidder can submit a bid for a part of the subject of the procurement:
 4. Deadline of performance:*
 5. Requirement of establishing an economic association from the winning joint bidders:*
 6. a) Deadline for submitting the bids:
 - b) Address for submitting bids:
 - c) Language of submitting bids:*
 7. Deadline of dispatch of the invitation for bidding:
 8. Conditions of providing the collateral:*
 9. Data and facts requested for verifying the financial, economic and technical suitability of bidders:
 10. Criterion for judging bids:
 11. Statement whether it is possible to make bids of several versions:
 12. Other information:
 13. Reference to the preliminary summary information:*
 14. Dates of dispatch and receipt of the announcement:
- The items marked by * shall only be filled in if required in respect of the procurement.

Schedule No. 4 to Act XL of 1995

**INFORMATION REGARDING THE RESULT OF THE PRE-QUALIFICATION
PROCEDURE**

- 1.Name and address of the inviter of bids:
- 2.The procedure chosen:
- 3.Date of judgement:
- 4.Number of applicants for the procedure:
- 5.Names and addresses of applicants qualified as suitable, as well as reasons for their qualification:
- 6.Names and addresses of applicants qualified as unsuitable, as well as reasons for their qualification:
- 7.Other information:
- 8.Date of publishing the invitation to participation:
- 9.Dates of dispatch and receipt of the announcement:

Schedule No. 5 to Act XL of 1995

INFORMATION REGARDING THE RESULT OF THE PROCEDURE

- 1.Name and address of the inviter of bids:
 - 2.a)The procedure chosen:
b)Reasons for applying the procedure in the case of a procedure by negotiation without publishing an announcement:
 - 3.Date of judgement:
 - 4.Criterion for judgement:
 - 5.Name and address of the winning bidder:
 - 6.Name and address of the bidder submitting the most favourable bid after the winning bid:*
 - 7.Number of bids received:
 - 8.Name(s) and address(es) of bidder(s):
 - 9.Subject and quantity of the procurement:
 - 10.Amount of consideration:
 - 11.The part and value of the subject of the procurement in respect of which the bidder intends to conclude a contract with a third person:*
 - 12.Other information:
 - 13.Date of publishing the invitation for bidding:
 - 14.Reference to the preliminary summary information:*
 - 15.Dates of dispatch and receipt of the announcement:
- The items marked by* shall only be filled in if the case contained therein exists.

Schedule No. 6 to Act XL of 1995

SUMMARY OF THE PROCEDURE

- 1.Name and address of the inviter of bids, as well as subject and value of the procurement:
 - 2.Names of bidders selected and reasons for their selection:
 - 3.Names of bidders refused, and/or excluded, and the reasons for their refusal and exclusion:
 - 4.Name of the winning bidder and the reasons for selecting his bid:
 - 5.The part of the procurement in respect of which the winner bidder may conclude a contract with third persons:*
 - 6.Reasons for the condition of applying the procedure in the case of a procedure by negotiation:
 - 7.Price bids of bidders:
 - 8.Reference to the previous summary information:*
 - 9.Date of preparation of the information material:
- The item marked by* shall only be filled in if the case contained therein exists.

Schedule No. 7 to Act XL of 1995

ANNUAL SUMMARY

1. Number and value of the annual procurements of the inviter of bids in excess of the value limit:
 2. Details of the annual procurements of the inviter of bids in excess of the value limit, as follows:
 - a) subjects of the procurement:
 - b) types of the procedure:
 - c) number of domestic and foreign winning bidders:
 3. Details of procedures by negotiation in accordance with the cases of their application, specifying the number and value of annual procurements:
 4. Reference to the previous summary information:*
- Item marked by* shall only be filled in if the case contained therein exists.

Schedule No. 8 to Act XL of 1995

PROCEDURE BY INVITATION (INVITATION TO PARTICIPATION)

1. Name, address, telegraphic address, telephone, telex and telefax numbers of the inviter of bids:
 2. a) The procedure chosen:
 - b) Reasons for the condition of applying the procedure:
 - c) Indication of the persons intended to be invited to submit their bids:*
 - d) Reasons for the condition of applying an accelerated procedure:*
 - e) Definition of the contract for which bids were invited:
 3. a) Subject and quantity of the procurement:
 - b) Place of performance:
 - c) Statement whether the bidder can submit a bid for a part of the subject of the procurement:
 4. Deadline of performance:*
 5. Requirement of establishing an economic association from the winning joint bidders:*
 6. a) Deadline for applying for participation:
 - b) Address of the place for applying for participation:
 - c) Language of applying for participation:*
 7. Deadline of dispatch of the invitation for bidding:
 8. Conditions of providing the collateral:*
 9. Data and facts requested for verifying the financial, economic and technical suitability of bidders:
 10. Criterion for judging bids:
 11. Planned number of and limit figure for bidders intended to be invited by the inviter of bids:*
 12. Statement whether it is possible to make bids of several versions:
 13. Other information:
 14. Reference to the preliminary summary information:*
 15. Dates of dispatch and receipt of the announcement:
- The items marked by* shall only be filled in if it is required in respect of the procurement.

Schedule No. 9 to Act XL of 1995

PROCEDURE BY NEGOTIATION (INVITATION TO PARTICIPATION)

1. Name, address, telegraphic address, telephone, telex and telefax numbers of the inviter of bids:
 2. a) The procedure chosen:
b) Reasons for the condition of applying the procedure:
c) Reasons for the condition of applying an accelerated procedure:*
 - d) Definition of the contract in the interest of the conclusion of which they wish to negotiate:*
 3. a) Subject and quantity of the procurement:
b) Place of performance:
c) Statement whether the bidder can submit a bid for a part of the subject of the procurement:
 4. Deadline of performance:*
 5. Requirement of establishing an economic association from the winning joint bidders:*
 6. a) Deadline for applying for participation:
b) Address of the place for applying for participation:
c) Language of applying for participation:*
 7. Conditions of providing the collateral:*
 8. Data and facts requested for verifying the financial, economic and technical suitability of bidders:
 9. Planned number of and limit figure for bidders intended to be invited by the inviter of bids:
 10. Statement whether it is possible to make bids of several versions:*
 11. Names and addresses of the parties already selected by the inviter of bids:*
 12. Other information:
 13. Reference to the preliminary summary information:*
 14. Dates of dispatch and receipt of the announcement:
- The items marked by* shall only be filled in if it is required in respect of the procurement.

Working Party on GATS Rules

Original: Spanish

COMMUNICATION FROM MEXICO

Questionnaire on Government Procurement of Services

Addendum

The following communication is being circulated at the request of Mexico to members of the Working Party on GATS Rules.

I. EXISTING PROCUREMENT REGIMES

Where a Member's procurement regime is different for central government entities, sub-central government entities, and other entities, such as public undertakings (e.g. public utilities), it would be useful if these differences were specified under each of the headings indicated below.

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

As defined in Article 1 of the Law on Public Procurement and Works, government procurement in Mexico refers to State expenditure on and execution, preservation, maintenance and control of goods, services and construction services contracted by Federal Government entities (including ministries and administrative departments as well as the decentralized agencies) and by government enterprises.

Administrative structure

2. How are government procurement activities administered? To what extent are procurement activities centralized?

In Mexico, each Federal Government agency and parastatal entity is responsible for planning and carrying out its own expenditures. Thus, the government procurement regime in Mexico does not operate through offices which centralize all purchases by the Federal Government.

Laws and regulations in force

3(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

- Constitution of the United Mexican States (Article 134)
- Law on Public and Procurement Works
- Regulations to the Law on Purchases, Leasing and Supply of Services Relating to Movables/Property
- Regulation to the Law on Public Works
- Free Trade Agreements concluded by Mexico with Canada and the United States; Colombia and Venezuela; Costa Rica; and Bolivia (specific chapters on government procurement).

(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

No. The Law on Public and Procurement Works applies to the purchase of goods, services and construction services. Its contents are as follows:

- Chapter 1.General Provisions
- Chapter 2.Planning, Programming and Budgeting
- Chapter 3.Procedures and Contracts
 - for the purchase or rental of goods and/or services
 - for construction services
 - exceptions to the public tendering procedures
- Chapter 4.Information and Verification
- Chapter 5.Sanctions
- Chapter 6.Challenge Procedures

Procurement procedures applied

4(a) What procedures are followed in the procurement process?

Procurement procedures could differ according to the openness of the invitations to tender. At least three broad categories of procedures are commonly distinguished: (i) public or open tendering procedures under which all interested parties may submit a tender; (ii) selective or restricted tender procedures under which participation is limited to a certain number of selected suppliers, and only these suppliers are invited to submit a tender; (iii) private contract or single tender in which the awarding authority contracts suppliers individually, and sometimes only a single supplier.

Article 28 of the Law lays down two types of procurement procedures: public tendering and restricted invitation:

(1)Public tendering: A procedure in which all interested suppliers may participate. Public tendering is the procedure generally applied for government procurement in Mexico.

(2)Restricted invitation: Under this procedure, an entity may contract suppliers individually. This method provides for two options:

- invitation of at least three suppliers;
- direct award of the contract.

(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

Article 81 of the Law specifies the type of contracts that may be obtained through restricted invitation (invitation of at least three suppliers or contractors, or direct award of the contract). These are, *inter alia*, contracts relating to the protection of patents, copyrights or other exclusive rights; contracts in which the goods or services may be purchased from a specified person only; consulting services involving confidential information; cases where two successive calls for tenders have not produced any solvent bids; purchases made with a view to commercial resale by government-owned retail stores.

With this authority, entities may apply a restricted invitation procedure when the estimated value of the contract in question does not exceed the amounts specified on an annual basis in the federal budget of expenditures. These amounts are determined according to the budget allocated to each entity.

Article 31 of the Law stipulates that international tenders shall take place only when they can be justified by the entity, subject to market research; when the resources are obtained through foreign credits; or when the contract is covered by international agreements.

(c) What are the time-limits for submission of bids?

The time-limit with respect to international tenders (participation of domestic and foreign bidders) for purchases, leasing, services and public works, and with respect to domestic tenders (participation of domestic bidders) for public works, is no less than 40 days following the date of publication of the invitation to tender.

The time-limit for domestic tenders (participation of domestic bidders) in connection with purchases, leasing and services is at least 15 calendar days following the date of publication of the invitation to tender.

This time-limit may be reduced only in cases of urgency duly justified by the purchasing entity.

Publicity for inviting tenders

5(a) How are intended procurements publicized? Are invitations to tender published? If so, where, and in what languages?

In accordance with Article 32 of the Law, invitations to tender are published in the special section which appears every Tuesday and Thursday in the Official Journal of the Federation (nationwide distribution) as well as in a newspaper of the federative entity (state) in which the good is to be used, the service supplied or the work executed. Only

when the procurement requirement covers three or more federative entities are the invitations published in a nationwide newspaper, such publication substituting for publication in the newspaper of the federative entity.

How far in advance the invitations are published is determined according to the time-limits set forth in the reply to subparagraph 4(d) above; the language used is Spanish.

(b) Do the extent and form of publicity differ according to tendering procedures applied and/or on the value of procurement?

Only public invitations to tender are published in accordance with subparagraph 5(a) above. The procedures for restricted invitation do not call for publication.

Tenders financed entirely or partly through foreign credits are published according to the guidelines of the credit institution.

No. All invitations to tender must be published in accordance with Article 32 of the Law.

(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

Details could include a description of service to be procured, tender opening and closing dates, conditions of participation, procuring entity, enquiry point, procurement plans, procurement outcomes - contract award notices, etc.

Article 33 of the Law provides for a minimum amount of information to be included in the invitations to tender, which may concern one or more goods, services or works. As a rule, this information consists essentially of:

- I. Title or business name of the inviting agency or entity;
- II. place, date and time-table for obtaining the basic tender information and specifications and, where appropriate, the price and form of payment;
- III. date, time and place of the presentation and opening of bids;
- IV. indication of whether the tender is domestic or international, whether it is covered by a particular agreement and the languages in which bids may be submitted.

Specifically as regards purchases, leasing and services, the following additional information must be provided:

- I. General description, quantity and unit of measurement of the goods or services;
- II. place and deadline of delivery and payment conditions;
- III. indication of whether or not there is an option to buy in the case of leasing.

In the case of public works the following information must also be included:

- I. General description of the works and the site at which the work is to be carried out, and, where appropriate, mention that part of the work may be subcontracted;
- II. estimated starting and finishing dates;
- III. experience and technical and financial capacity required according to the characteristics of the works, as well as other general requirements to be met by the interested parties;
- IV. percentages to be paid as advance payments;
- V. general criteria on the basis of which the contract is to be awarded.

(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set.

As a rule, the bidding conditions do have a price, the sole purpose of which is to recover the cost of publication of the invitation to tender and of the documents supplied.

(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

According to Articles 36 and 45 of the Law in force, offers must be submitted in writing in sealed envelopes. The Mexican system does not currently permit the use of electronic means to participate in tendering procedures. However, Mexico does have a new system, •Compranet•, through which invitations to tender may be consulted electronically.

Requirements laid down for possible suppliers

6. (a) Are there registration, residence or other requirements for potential suppliers?

The Mexican procurement system does not regard registration of suppliers as a prerequisite for participating in a tender. The only requirement consists in obtaining the conditions, and they are sold without distinction or preference whatsoever as to the nationality or residence of the suppliers or as to the type of purchase. Information, documentation and other requirements must in any case be satisfactorily met by all bidders wishing to participate in the tender.

Article 33 of the Law stipulates that all of the conditions must be set forth in the invitation to tender and the bidding conditions, thereby ensuring that all suppliers are informed sufficiently in advance of the participation requirements.

(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

The provisions governing the lodging of financial guarantees are laid down in Article 38 of the Law, which stipulates that persons participating in tenders or concluding contracts must provide bid security and guarantees with respect to their advance payments and fulfilment of the contract. The inviting entity retains the relevant guarantees until the date of the award, at which time they are returned to the bidders, except the bidder to whom the contract was awarded, whose guarantee is retained until the contract is fulfilled.

(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

In Mexico there are no lists or registers of approved suppliers.

However, Article 41 of the Law on Public Procurement and Works identifies the natural and legal persons who are not entitled to submit tenders or conclude contracts in the area of government procurement. These include:

- Persons employed by or discharging a duty or a mission for the public service, and those disqualified from doing so;
- suppliers and contractors to whom penalties have been applied by the Ministry of Comptrollership and Administrative Development for cancellation of a contract by their fault, for earlier breach of contract resulting in damage, for supplying false information or for acting fraudulently or in bad faith;

- persons who have been declared bankrupt or are undergoing insolvency proceedings;
- persons who have family or business ties with the civil servant involved in the procurement process;
- persons who individually or through the corporate group to which they belong issue opinions, expert appraisals or assessments in connection with the settlement of disputes, or who will carry out previous work which could affect the tenders relating thereto.

Criteria for assessing bids and awarding contracts

7(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

For instance, whether obtaining the best value for money spent is the aim and whether criteria other than price are taken into account.

Only the criteria specified in the invitation to tender and the bidding conditions must be taken into account in the evaluation leading to the selection of tenders.

According to Article 134 of the Constitution of the United Mexican States, procurement procedures in Mexico must be based on the principles of effectiveness, efficiency and honesty in order to ensure the best possible conditions with respect to price, quality, financing, opportunity and other relevant factors. These same objectives are set forth in Article 30 of the Law.

Thus, the contract is awarded to the firm or natural person among the bidders who best meets the conditions described in the invitation to tender and the bidding conditions established by the inviting agency or entity, who provides satisfactory guarantees of fulfilment of contractual obligations and who offers the lowest price.

These criteria for the award of the contract, together with a statement to the effect that mechanisms involving scores and percentages will in no case be used for the purpose, are communicated to the potential suppliers in the invitation to tender and the bidding conditions, and cannot be modified without notifying all of the potential bidders through the same channels used to transmit the above-mentioned documents.

(b) Is procurement subject to any offset provisions, such as local content, technology transfer or countertrade requirements?

No. Agencies and entities of the federal public administration are not authorized to consider, seek or impose any offsets in the qualification and selection of suppliers, products or services or in the evaluation of tenders or award of contracts.

(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

No. Article 33 of the Law stipulates that the requirements and conditions set forth in the bidding conditions shall be the same for all participants.

(d) Do the procurement criteria differ according to sector or region of the economy?

No. Article 33 of the Law stipulates that all of the requirements shall be specified in the bidding conditions and shall be the same for all participants.

(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend on?

The margin of choice or discretion could relate to (i) the relative weight/importance of each contract award criterion; (ii) margins of preference, if any, in respect of specific criteria; and (iii) threshold values, if any, above which referral to a higher level of purchasing authority is required.

The discretion allowed to the purchasing authority could vary according to whether there is (i) automatic tender, where the contract is awarded on the basis of predetermined criteria, either the simple criteria of price, or price and other criteria; (ii) discretionary tender procedures which involve acceptance of the bid which is most advantageous - the award of the contract is based on several criteria, some of which are predetermined, but which in general leave the awarding authority a certain measure of choice; and (iii) negotiated tender in which the awarding authority negotiates freely with the potential supplier or suppliers as to the conditions of the contract.

The criteria applied to the evaluation of tenders are predetermined in the invitation to tender and the bidding conditions.

Tenders are submitted in two sealed envelopes. The first envelope contains all of the required technical specifications regarding the product or service and the supplier. The second envelope contains the price of the product or service bid.

Only tenders which meet all of the specified requirements may proceed to the second stage, which involves opening the envelope containing the price bid. Through this mechanism, price constitutes the criterion which determines who is awarded the contract.

According to Article 33, entities in Mexico are not qualified to negotiate any of the provisions contained in the bidding conditions.

Disclosure of bids received and contracts awarded

8(a) How are tenders received, registered and opened?

Tenders are received in two sealed envelopes at the place, date and time indicated in the bidding conditions. The first envelope contains the documentation by which it is possible to identify and confirm the existence and participation of the bidder, and a description of the required technical specifications of the product or service in question. The second envelope contains the financial bid for the product or service together with the bid security document.

During the first phase, known as the •technical phase•, all of the bids are opened in the presence of the participants, and their contents verified. Only those which meet the technical requirements set forth in the bidding conditions are qualified for their second phase.

During the second phase, known as the •financial phase•, the envelopes containing the financial bids by the suppliers who passed the first stage are opened, also in the presence of the participants, and their contents verified. The financial envelopes of the bidders eliminated during the first phase are returned unopened.

Through this mechanism, the winner is determined and the contract awarded on the basis of the best price bid according to the evaluation criteria set forth in the bidding conditions.

The award is announced in a public meeting which bidders who participated in the presentation and opening of tenders are free to attend. The agencies and entities may also decide, in lieu of such a meeting, to communicate the award to each of the bidders in writing.

(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

The agencies and entities draw up the official record of the award of the contract to be signed by the bidders who attended the award proceedings, each one of whom receives a copy. Similarly, the contracting party must supply the bidders, in writing, with the award or, where applicable, with the reasons why their bid was not chosen.

Within a time-limit of 72 days following the date of the award, the contracting agency or entity must publish, in the Official Journal of the Federation, the identity and details of the enterprise or natural person to whom the contract was awarded as well as the amount, the characteristics of the product or service in question and any information considered relevant to the contract.

(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

The contracting party must inform the bidders in writing of the award or the reasons why their bids were not selected.

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a member more favourable treatment than those of another member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of 'domestic' in relation to domestic services and suppliers.

Domestic goods are defined as those which contain at least 50 per cent of domestic content. This category does not include foreign goods which are simply packaged, packed, labelled, diluted in water or any other substance which does not alter their characteristics, or which are merely assembled or put together in the country.

The term national suppliers is understood to mean any enterprises and/or natural persons that exercise their economic/productive activities in the national territory and are administratively, economically and legally constituted in accordance with domestic legislation.

Current Mexican legislation in the field of government procurement does not establish any quantitative preferences for national suppliers and goods over foreign suppliers and goods.

However, as explained above, international tenders only take place when the entities justify the need for them, subject to market investigation; when the resources are provided through foreign credits; or when the contract is covered by international agreements.

Moreover, Article 31 of the Law stipulates that foreign suppliers or contractors may be refused the right to participate in international tenders when an agreement has not been concluded with the country of which they are citizens or that country does not grant reciprocal treatment to Mexican suppliers and contractors or goods and services.

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide full details.

Details could include:

- Institutional status: whether challenges are heard by an administrative tribunal, a court or any other review body;**
- time-limits for complaints/appeals;**
- **type of remedy, if any, that may be granted.**

With respect to mechanisms for challenging actions that violate the Law on Public Procurement and Works or that stem from trade agreements concluded by Mexico, the only administrative authority in Mexico empowered to review and adopt resolutions is the Ministry of Comptrollership and Administrative Development (SECODAM), through the General Directorate of Complaints, it being understood that the interested parties may draw the attention of the procuring entity's supervisory body beforehand to any irregularities which they consider to have been committed in the contract awarding procedure with a view to their being corrected.

The challenge procedure is open to both persons and companies who consider that their rights have been infringed either in respect of the award decision or at any stage of the tendering procedure from the moment at which the invitation to tender is published until the award of the contract.

The complaint must be submitted in writing to the General Directorate of Complaints within a period of not more than 10 working days following the date on which the infringement occurred; the infringing party is then informed of the alleged violation of the law. It should be noted in this connection that when the interested party decides to lodge a preliminary complaint with the supervisory body referred to above, this step does not affect the deadline for submitting the complaint to the Ministry.

The complaint of infringement must be made under oath.

The General Directorate of Complaints may issue the following resolutions: cancellation of the procedure as from the commission of the infringement(s) or as from the issuing of recommendations to the purchasing entity establishing guidelines to ensure that the procedure takes place according to the law; full cancellation of the procedure; or declaration that the challenge is not receivable.

Once the General Directorate of Complaints issued its resolution on infringement, a supplier may lodge an appeal with the Sub-Secretariat of Citizens' Affairs and Social Comptrollership of SECODAM within 15 working days following the date of notification of the resolution.

All infringements that have been brought before a court, before or after the recourse to the Ministry of Comptrollership and Administrative Development, are excluded from the Ministry's intervention.

II. MEMBERSHIP OF PLURILATERAL, REGIONAL AND/OR BILATERAL AGREEMENTS

11. Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.

Mexico has concluded free trade agreements with Canada and the United States (NAFTA), with Colombia and Venezuela (G-3), with Costa Rica, and with Bolivia. These agreements contain specific chapters on government procurement. Mexico is not a member of the WTO Agreement on Government Procurement.

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12(a) Please provide statistics (if available) on the number and value of services procurements

- on both an aggregate and sectoral basis;
- by origin of services and suppliers.

In order to enhance the comparability of data provided, Members may choose to provide statistics according to the services sectoral classification in document MTN.GNS/W/120 (dated 10 July 1991) at the appropriate level of aggregation.

(b) Please provide statistics (if available) on the

- share of services procurement in total procurement;
- share of procurement of each service in total domestic output of the service;
- share of procurement of each service in total domestic consumption of the service.

Total domestic consumption is defined as the sum of public and private consumption or the sum of domestic output and net imports (i.e. imports minus exports) of the service in question.

The statistics available with respect to government procurement in 1990 are:

Working Party on GATS Rules

COMMUNICATION FROM THE UNITED STATES

Emergency Safeguards

The following communication is circulated at the request of the United States to Members of the Working Party on GATS Rules.

The purpose of safeguards provisions in trade agreements is to facilitate liberalization. Such provisions are included in trade agreements to acknowledge that as a result of undertaking trade liberalization, countries may encounter temporary, unforeseen domestic adjustment difficulties. The assumption is that these difficulties stem from, or are at least worsened by, the liberalization commitments.

One of the practical difficulties in assessing the need for a safeguards provision stems from the interpretation Members give to the degree of liberalization achieved in the Uruguay Round, in which commitments largely bound the status quo. Thus, the question is whether a safeguards provision, similar to that in the GATT 1994, is needed for future rounds, where the extent of liberalization presumably will be greater. The argument for a safeguards provision under these conditions would be that countries see a greater risk associated with a commitment that represents the abandonment of more restrictive practices. A safeguards provision can be justified largely by the incentive it provides to facilitate a greater measure of trade liberalization and act as a counterweight to the uncertainties associated with such liberalization.

Discussion in the Working Party, as well as most written submissions to date, have demonstrated the difficulty in adapting a safeguards provisions for goods that would be suitable for all forms of GATS commitments. The United

States believes that there exist important obstacles to constructing a safeguards provision applicable to all scheduled commitments. These include conceptual difficulties -- for example, definition of •like• services -- and practical difficulties -- for example, inadequacy of statistics for both •imports• and domestic production. Unless these obstacles can be overcome, attempting to include such a provision in the GATS may undermine the spirit of the agreement and the integrity of commitments associated with it.

On the other hand, participants have noted that the nature of scheduling the commitments themselves offers some scope for tailoring commitments to take account of safeguards-type concerns. This characteristic of GATS scheduling offers the opportunity to include a safeguards-type provision in a Member's schedule.

An alternative for responding to the mandate in GATS Article X therefore might be to develop rules to be followed by Members proposing to include safeguards-type provisions in their country schedules. Such provisions would adhere to specific rules. For example, these rules might address issues such as:

- inclusion in a schedule of a safeguards-type provision in a given sector must be paired with a commitment to liberalization in that sector*
- adequate advance notice must be given before invoking a safeguards-type provision*
- use of safeguards-type provisions must be temporary and with a specified maximum period of duration*
- access to a given safeguards-type provision must be limited -- for example, once during the course of a specified period of time -- and may not be reinvoked during the specified period*
- application of a safeguards-type action provision must be digressive*
- application of actions must be on an MFN basis*
- objective, identifiable criteria must be used as trigger for a safeguards-type action*
- clear specification of the action to be taken by mode and by sector or sub-sector*
- where the safeguards-type action involves temporary limits in mode 3, these limits would not allow for divestment or for the removal of existing licenses enjoyed by foreign services providers*
- if the agreed rules are followed, no payment of compensation would be required.*

Working Party on GATS Rules

Original: English

COMMUNICATION FROM THAILAND

Response to the Questions Relating to an Emergency Safeguard Mechanism in GATS

The following communication is being circulated at the request of Thailand to Members of the Working Party on GATS Rules

What is the justification and purpose of an emergency mechanism under GATS?

1. The question of what a safeguard mechanism would be for involves the following considerations:

a. Would an emergency safeguard for services be intended to deal with the kind of situation foreseen in Article XIX of GATT -- that is, a temporary threat to a domestic "industry" arising from increased imports? Would it have any other objective?

The prime element to be taken into account in answering this question is that the nature of trade in services is very much different from that of trade in goods and the scope of coverage of the former is very much larger than that of the latter. Naturally, therefore, the emergency safeguard measures (ESMs) in GATS can be different from that of the GATT. Though the ESMs in GATS can cover the situation similar to that in Article XIX of the GATT (Emergency Action on Imports of Particular Products), it can in no way be limited to that. Actually, the ESMs could be conceived of as a mechanism to correct any situation which may arise out of the obligations of the GATS by a Member of the WTO that could not be foreseen by that Member when it undertook those obligations, and which could not wait for the normal mechanism of the GATS, such as Article XXI, to solve the problem. For instance, a Member may encounter a situation whereby there is an overwhelming commercial presence of foreign banks, or foreign insurance,

transportation or telecommunication companies, or foreign professionals, etc. to such an extent that it causes or threatens to cause serious injury to the corresponding domestic companies or professions, despite its precautionary measures to prevent that situation. The situation could happen in the future taking into account the fact that Members of the WTO have an obligation to progressively liberalize higher level of their trade in services and considering the fact that the MFN exemptions provided for are only ephemeral. At a certain point in time the Members may find that they can no longer avail themselves of other safeguard mechanisms, such as Article XXI or the MFN exemptions, simply because they can not roll back their previous commitments and they can no longer resort to the MFN exemptions anymore. The ESMs can be employed in this situation to rectify the difficulties. In addition, for international trade policy purpose, the ESMs can also be a mechanism to provide incentive for a Member to liberalize its trade in services since it can at least provide an assurance to that Member that if anything which it had not conceived of when it undertook the obligations goes wrong, that Member can escape that situation through the ESMs.

b. Are existing "safeguard" mechanisms in GATS, notably those contained in Article XII and Article XIV, sufficient to address any difficulties governments might encounter as a consequence of their GATS commitments? Similarly, does Article XXI provide an adequate vehicle for reversing or modifying scheduled commitments in the event of unanticipated difficulties?

The purpose of ESMs is different from those of Articles XII, XIV, and XXI of the GATS as much as or even much more than the purpose of Article XIX of the GATT is different from those of Articles XII, XX, and XXVIII of that Agreement. Since it is established that Articles XII, XX, and XXVIII of the GATT, whose scope of coverage is very much narrower than the GATS's scope of coverage, are not enough for the handling of the emergency safeguard situations in the GATT context, and thereby Article XIX of that Agreement is provided for, *a fortiori* reason dictates that Articles XII, XIV, and XXI of the GATS, whose scope of coverage is very much wider than the GATT's scope of coverage, are not sufficient for the treatment of the emergency safeguard situations in the GATS context. It would be astonishing to hold that the GATT and other Agreements under the WTO such as Agriculture and Textiles and Clothing which cover only the trade in goods as products need a variety of means to cope with the emergency situations, but the GATS which cover almost all aspects of trade life of the Members, and many of them are essential to the economy, social, cultural and environmental life of the peoples of these Members, does not need an emergency safeguard provision at all. Consequently, Articles XII, XIV, and XXI of the GATS are not sufficient for the treatment of the emergency safeguard situations of trade in services. The implementation of commitments might result in unforeseen developments of increased service imports which cause or threaten serious injury to domestic services suppliers and which the referred mechanisms cannot remedy the difficulties. Article XXI cannot either provide an adequate vehicle to solve the unanticipated difficulties which require immediate or emergent remedy. To modify the commitment in accordance with Article XXI, governments must await the three years requirement to lapse before. Such measures may not be effective to governments to safeguard their interests due to emergency situations.

c. Does the nature of commitments undertaken in GATS -- whereby Members may choose whether to schedule a sector, and may also condition market access and national treatment with respect to commitments that are made -- obviate the need for safeguards? Or would it be more appropriate to think in terms of the idea that the existence of a safeguard would allow governments to be more forthcoming with respect to their scheduled commitments?

Article XIX of the GATS requires, *inter alia*, that “Members shall enter into successive round of negotiations, beginning not later than five years from the date of entry into force of the WTO Agreement and periodically thereafter, with a view to achieving a progressively higher level of liberalization.” Moreover, Article XVII of the GATS further requires that the Member which has granted a concession and thus inscribed that concession within its Schedule of Specific Commitments must accord national treatment to all other Members in respect of that concession. Consequently, once a Member has made a concession, the Member can not, in principle, withdraw, retract, or modify that commitment, nor refuse to accord national treatment to other Members. It is true that a Member can decide whether or not to make a concession, or to condition its national treatment, or to modify them later on in accordance with Article XXI; however, the freedom and easiness of such actions is restricted by the requirement of progressively higher level of liberalization together with the stringent requirements of negotiations, compensations, or retaliations for any modification of the concession in pursuance of that Article. In any event, the modification according to Article XXI must await the three year requirement to lapse before the Member can take any action. In the longer terms, therefore, such actions may not be effective nor useful anymore to the Member to safeguard its interests due to emergency situations. The non-existence of the ESMs may cause a Member to be very cautious, and to meticulously grant only those concessions which they consider they can cope with should an emergency situation arise, which in practice tend to be a bare minimum as we have witnessed in the past. Therefore, it would be more appropriate or even more advisable to think about the ESMs as an indispensable tool to trigger more concession and higher liberalization of trade in services.

What criteria might be brought to bear in determining when an emergency safeguard measure may be justified?

2. A number of questions can be identified in relation to the criteria that might apply in determining the circumstances in which emergency safeguard measures are to be used. The questions included below assume that essentially the same GATT concepts of increased imports, injury and causality would apply under an emergency safeguards mechanism in GATS.

b. How should serious injury be determined? Injury to whom or what?

The serious injury should be determined by a variety of factors of an objective nature having a bearing on domestic services suppliers sustaining unanticipated difficulties, such as the rate and amount of the increase in imports of services in absolute or relative terms, the share of domestic market by foreign imports; the rate and amount of increase of foreign services suppliers; the rate and amount of changes in the level of sales, profits,

production, capacity utilization, and employment of domestic service suppliers.

What form might a safeguard mechanism for services take?

3. If increased foreign competition and serious injury to domestic services or service suppliers have occurred, and causality between the two has been established, a question arises as to the characteristics of a safeguard measure that might be applied.

f. What should be the duration of any safeguard measures adopted?

The duration should be sufficient to rectify the difficulties.

g. Would safeguard measures be made degressive during the period of their application?

It would be possible. Some provisions of the Safeguard Agreement could be applied mutatis mutandis in a GATS context.

h. Would a Member taking a safeguard action be required also to adopt adjustment measures?

It would be possible. Some provisions of the Safeguard Agreement could be applied mutatis mutandis in the GATS context.

i. Would the application of safeguard measures be accompanied by compensatory adjustments in the schedule of the Member taking the measure?

It would be possible. Some provisions of the Safeguard Agreement could be applied mutatis mutandis in the GATS context.

Working Party on GATS Rules

Original: English

COMMUNICATION FROM SINGAPORE

Response to the Questionnaire on Government Procurement of Services

The following communication is being circulated at the request of Singapore to Members of the Working Party on GATS Rules.

I. EXISTING PROCUREMENT REGIMES

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

Government procurement is defined as procurement of goods and services by the Ministries and Departments of the Government of Singapore as well as Statutory Boards.

Administrative structure

2. How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

The bulk of government procurement activities has been decentralised to individual Government Ministries and Departments as well as Statutory Boards, who will make their own arrangements. However, there are several centralised

government procurement functions which are performed by the following entities:

(i) Ministry of Finance (Budget Division)

-Formulate the government procurement policies and guidelines which need to be complied with by all Government Ministries and Departments as well as Statutory Boards.

(ii) Expenditure & Procurement Policies Unit of the Ministry of Finance (Budget Division)

-Perform centralised purchasing of a very limited number of products such as paper and rice for Government Ministries and Departments.

-Register the suppliers for government procurement in respect of general goods and services.

(iii) Pharmaceutical Department of the Ministry of Health

-Perform centralised purchasing of certain pharmaceutical products for Government Ministries, Departments and Statutory Boards.

-Register the suppliers for government procurement in respect of pharmaceutical products.

(iv) Construction Industry Development Board

-Register the suppliers for government procurement in respect of construction services.

Laws and regulations in force

3.(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

Section B of the Instruction Manual No. 3 issued by the Ministry of Finance (Budget Division) sets down the policies and guidelines in respect of government procurement. This is an administrative procedure and it applies to all Government Ministries and Departments as well as Statutory Boards.

Currently, there is only one law which is related to government procurement. It is the Government Contracts Act (Chapter 118) which provides a list of

public officers who can execute and sign contracts on behalf of Government. This Act applies to Government Ministries and Departments.

(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

The same procurement regime is applied regardless of whether the procurements are made for goods or services.

Procurement procedures applied

4.(a) What procedures are followed in the procurement process?

The Singapore Government adopts the fundamental principles of fairness, openness and competitiveness for its government procurement policies. The government procurement procedures are based on a tendering system. Tenders are invited by using the open, selective or limited tendering procedures.

(i) Open procedures are used for all tenders exceeding S\$ 30,000. An open tender requires that the tender be given the widest possible circulation to attract the largest number of tenderers. On the average, open competition accounts for about 85 per cent of the total number of tenders called or about 60 per cent of the value of tenders, when excluding defence procurement contracts.

(ii) Selective tendering is normally conducted for all tenders under S\$ 30,000. It is also used in exceptional cases where the project is confidential or sensitive. In such instances, invitations to tender are sent to selected firms.

(iii) Limited tendering is used in cases involving purchase of specialized systems and equipment from sole suppliers. It is also used in cases of emergency or when it is manifestly in the public interest. The circumstances and reasons for granting such waivers are endorsed by the senior management of the procuring entities and submitted for approval to the relevant tenders approving authority.

(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

Please refer to the answer 4.(a) above.

(c) What are the time limits for submission of bids?

The minimum time limits for submission of bids for contracts which are advertised locally are not less than 3 or 8 weeks for conventional and design-and-build projects respectively. And if the contracts are advertised both locally and overseas, then the minimum period is not less than 12 weeks. (The existing procedures are now under review to ensure compliance with the WTO-AGP (1994 Agreement on Government Procurement under the World Trade Organization)).

Publicity for inviting tenders

5.(a) How are intended procurements publicised? Are invitations to tender published? If so, where, and in what languages?

Under the open tendering procedure, the tender is required to be given the widest possible circulation to attract the largest number of tenderers. This is done by advertising the tenders in the local or international press. Publishing in the Singapore Government Gazette may be done if it is advantageous to do so. English is the preferred language for the notices published. (The existing procedures are now under review to ensure compliance with the WTO-AGP).

(b) Do the extent and form of publicity differ according to tendering procedures applied and/or on the value of procurement?

Please refer to the answer 4.(b) above.

(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

The advertisements on intended procurement will provide the minimum information necessary for firms to know what is required, over what period, and whether the issue of tenders is restricted to registered suppliers under specific Supply and/or Financial categories. Advertisements will ask tenderers to apply to the procuring entities for tender forms. (The existing procedures are now under review to ensure compliance with the WTO-AGP).

(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set?

Charges are normally imposed for obtaining the full set of tender documents. The charges are set based on the cost recovery basis.

(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

Currently, the interactive computer network •Televue, which is Singapore's own hybrid version of videotex, provides information on government procurement opportunities. However, as the participation in Televue is voluntary, not all the procurement opportunities can be found in Televue.

A more advance electronic tendering information system is now being developed. It will allow all government procurement opportunities through open tendering procedures to be published in the Internet.

The same tendering provisions are applied regardless of whether the contracts are advertised in the traditional or electronic means.

Requirements laid down for possible suppliers

6.(a) Are there registration, residence or other requirements for potential suppliers?

All local and foreign suppliers interested in participating in Singapore's public sector tenders are required to register as government contractors under the appropriate Supply and Financial categories with the Expenditure & Procurement Policies Unit, Pharmaceutical Department or Construction Industry Development Board.

Companies or firms seeking registration will have their background, finances and ability to provide a satisfactory service checked by the registration authorities, and are required to pay a non-refundable registration fee. The approved registration will be valid for 3 years. Non-registered firms could be allowed to participate only in tenders for non-recurring goods, services or works where local expertise is lacking, or in cases where the local contractors are unable to execute their contracts, or are unable to reach a certain high standard.

The current compulsory registration system is non-discriminatory. It is applicable to both local and overseas suppliers. The objective of the registration system is to facilitate the qualification process. It ensures that the same objective criteria are being applied in the qualification process. The compulsory registration process means that there is a pool of information on each register firm already in the possession of the procuring entity. This reduces the time needed to examine the qualifications of a firm during the tender evaluation. The register suppliers also benefit as they need not provide the same information all over again each time they participate in a public tender.

(Taking into account the concerns expressed by some WTO-AGP members, Singapore will review its current compulsory registration system with the view to remove any unintended effects of discrimination and of limited tendering in its open tendering system that the existing registration system may have on WTO-AGP members).

(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

For the first question, please refer to the answer 6.(a) above. As for the second question, the conditions of participation vary according to the type of tendering procedures as indicated in the answer 4.(a) above. These conditions are not affected by the value of the intended procurement.

(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

Please refer to the answer 6.(a) above. The list of approved suppliers is updated as and when a new or renewal application is approved. Interested suppliers may apply for the registration process at any time. The list is available to all the Government Ministries and Departments as well as Statutory Boards.

Criteria for assessing bids and awarding contracts

A. Commonwealth Procurement

7.(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

Tenders are awarded to the lowest bid meeting tender specifications in full or very substantially.

(b) Is procurement subject to any offset provisions, such as local content, technology transfer or countertrade requirements?

The procurement is not subject to any offset provisions.

(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

Singapore does not give specific preferences to domestic suppliers in government procurement except for local contractors with consistent good performance in government construction works. (The existing procedures are now under review to ensure compliance with the WTO-AGP).

(d) Do the procurement criteria differ according to sector or region of the economy?

The same procurement criteria are being used.

(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

Generally, no discretion is allowed as the government procuring entities are required to award tenders to the lowest bid meeting tender specifications in full or very substantially. Under exceptional circumstances, the award may be made to other than the lowest complying tender. However, such award would usually be to the most advantageous tender.

Disclosure of bids received and contracts awarded

8.(a) How are tenders received, registered and opened?

Tenders will be received at the office of the government procuring entity issuing the tender invitation up to the stipulated time on the closing date. They are required to be deposited in designated tender boxes which will be made accessible to tenders during normal working hours and will remain locked. Every effort will also be made by the procuring entity to deposit the tenders received through the post promptly and into the correct tender box. Any tender delivered after the stipulated time, from whatever cause arising will not be considered and will be returned to the tenderer with the reason stated. The procuring entities are prohibited from opening the tender boxes before the stipulated closing dates. The tenders will be opened by a Tenders Opening Committee. (The existing procedures are now under review to ensure compliance with the WTO-AGP).

(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

The government procuring entities are required to publish details of the contracts awarded. They are not required to notify the unsuccessful tenderers. (The existing procedures are under review to ensure compliance with the WTO-AGP).

(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

The government procuring entities are not required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected. (The existing procedures are now under review to ensure compliance with the WTO-AGP).

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services

and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of 'domestic' in relation to domestic services and suppliers.

(i) Singapore is a member of the 1977 Agreement on ASEAN (Association of South East Asian Nations) Preferential Trading Arrangement. Article 7 of the Agreement requires the ASEAN countries to accord each other a preferential margin of 2,5 per cent, which should not exceed US\$ 40,000 worth of preferences per tender, in respect of international tenders for government procurement of goods and auxiliary services from untied loans. The preferential margin should be applied on the basis of the lowest evaluated and acceptable tender.

(ii) Preferences are given to local contractors with consistent good performance in government construction works. Under Singapore's Preferential Margin Scheme for Construction Quality, local contractors which meet the eligibility criteria of obtaining an Average CONQUAS (Construction Quality Assessment System) Score of 65 for his 3 most recently completed projects, will be given a preference of 0.2 per cent for every point it scores above 65. A contractor's performance in the execution of the contract will be assessed by the procuring agency and the Construction Industry Development Board. The contractor will be awarded the contract if his tender price does not exceed the lowest tender by the computed preferential margin. The amount of premium is subject to a ceiling based on the total value of the scored projects that qualify the contractor for the premium, the maximum amount that a contractor can enjoy being 5 per cent or S\$ 5 million, whichever is lower. If a firm is given preferential margin under building works, it will not be able to use this tendering advantage for projects under civil engineering works and vice versa. (The existing procedures are now under review to ensure compliance with the WTO-AGP).

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

The Ministry of Finance (Budget Division) investigates complaints/appeals from the suppliers and initiates any remedy action if this is deemed necessary. (The existing procedures are under review to ensure compliance with the WTO-AGP).

II. MEMBERSHIP OF PLURILATERAL, REGIONAL AND/OR BILATERAL AGREEMENTS

11. Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.

Memberships:

(i) Member of the 1979 Agreement on Government Procurement under the GATT (General Agreement on Tariffs and Trade);

(ii) Member of the 1977 Agreement on ASEAN Preferential Trading Arrangements;

(iii) Member of the APEC (Asia-Pacific Economic Cooperation); and

(iv) Observer to the WTO-AGP. On 20 September 1996, the Committee on Government Procurement accepted Singapore's accession to the Agreement. Singapore will have up to October 1997 to adjust its government procurement policies and procedures so as to ensure conformity with the requirements of the Agreement.

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12.(a) Please provide statistics (if available) on the number and value of services procurements

- ***on both an aggregate and sectoral basis;***
- ***by origin of services and suppliers.***

The government procurement statistics for the year 1995 are as follows:

<i>Contracts</i>			<i>Total S\$</i>
<i>Goods S\$</i>	<i>Services S\$</i>	<i>Construction Services S\$</i>	
<i>9.6 billion</i>	<i>3.8 billion</i>	<i>5 billion</i>	<i>18.4 billion</i>

(b) Please provide statistics (if available) on the

- ***share of services procurement in total procurement;***
- ***share of procurement of each service in total domestic output of the service;***
- ***share of procurement of each service in total domestic consumption of the service.***

Information not available.

Working Party on GATS Rules

QUESTIONS RELEVANT TO THE INFORMATION EXCHANGE
REQUIRED
UNDER THE SUBSIDIES NEGOTIATING MANDATE

Note by the Secretariat

The Working Party agreed that wherever possible Members would provide written replies to the questions listed below, in order to help meet the requirement under Article XV to exchange information concerning all subsidies, at any level of government, related to trade in services provided to domestic service suppliers. It is also understood that the information provided is without prejudice to the negotiating positions of governments.

The Working Party agreed that a working definition of a subsidy was necessary in order to proceed with the information exchange. For these purposes, it was agreed that the definition of subsidy contained in Article 1 of the Agreement on Subsidies and Countervailing Duties would serve as a basis for the working definition. The relevant definition is reproduced below:

•1.1 [A] subsidy shall be deemed to exist if:

(a)(1) there is a financial contribution by a government or any public body within the territory of a Member (referred to in this Agreement as •government•), i.e. where:

(i) a government practice involves a direct transfer of funds (e.g. grants, loans, and equity infusion), potential direct transfers of funds or liabilities (e.g. loan guarantees);

(ii) government revenue that is otherwise due is foregone or not collected (e.g. fiscal incentives such as tax credits)¹;

(iii) a government provides goods or services other than general infrastructure, or purchases goods;

(iv) a government makes payments to a funding mechanism, or entrusts or directs a private body to carry out one or more of the type of functions illustrated in (i) to (iii) above which would normally be vested in the government and the practice, in no real sense, differs from practices normally followed by governments;

¹In accordance with the provisions of Article XVI of GATT 1994 (Note to Article XVI) and the provisions of Annexes I through III of this Agreement, the exemption of an exported product from duties or taxes borne by the like product when destined for domestic consumption, or the remission of such duties or taxes in amounts not in excess of those which have accrued, shall not be deemed to be a subsidy.

or

(a)(2) *there is any form of income or price support in the sense of Article XVI of GATT 1994;*

and

(b) *a benefit is thereby conferred.*

Members may choose to vary or supplement the above definition for the present purposes. Please specify any such changes in the working definition.

QUESTIONS ON SUBSIDIES RELATED TO TRADE IN SERVICES

- 1) *Please identify any subsidy programmes related to trade in services, with a brief description of each programme.*
- 2) *Please state the policy objectives underlying the use of each subsidy.*
- 3) *Please indicate the availability, in the case of your country, of information necessary to distinguish subsidies to services from subsidies to goods, e.g. when a company produces both goods and services.*
- 4) *Please indicate the form of each subsidy (e.g. tax concession, loan, grant etc.).*
- 5) *Unless previously indicated, please state which sectors are eligible under the subsidy and/or the estimated number of enterprises which are eligible under the subsidy.*
- 6) *Please indicate the eligibility criteria for subsidies (location, nationality, destination of output, or any other condition).*
- 7) *Please indicate how the subsidy is calculated (e.g. on production, on exports, on a fixed or fluctuating basis, etc.).*
- 8) *Please specify any time limits attached to the subsidies described above.*
- 9) *Please indicate any subsidy disciplines already assumed in the context of regional agreements.*
- 10) *Where such information is available, Members may wish to indicate:*
 - a) *Subsidy per unit or total annual subsidy outlays in respect of each subsidy granted;*

b) Statistical data indicating the impact of subsidies on trade in services in the sectors or activities concerned.

Working Party on GATS Rules

Original: Spanish

COMMUNICATION FROM CHILE

Questionnaire on Government Procurement of Services

The following communication is being circulated at the request of Chile to members of the Working Party on GATS Rules.

The Delegation of Chile has supplied the Secretariat with the following documents which are available for consultation:

- *Regulations of the DAE Register of Suppliers;*
- *Regulations of the General Register of Contractors, Supreme Decree No. 15, 1992, Public Works.*

I. EXISTING PROCUREMENT REGIMES

Definition

1. What is the definition of government procurement used in completing this questionnaire?

In Chile, government procurement of services comprises contracts for services, tangible or intangible, whether for own functions or for support, between any public entity (public service, municipality or public enterprise) and a natural person or corporate body, domestic or foreign.

Administrative structure

2. How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

(1) Chilean public sector

In Chile, the public sector, like the system of government, corresponds to that of a unitary (non-federated) State. It is based on the public services, State enterprises and municipalities.

(a) Public services: These include the ministries, the provincial and departmental authorities and the Services established to perform the administrative function.

(b) State enterprises: A concept which includes the State enterprises established by law and those organized as private corporations in which the State holds a majority interest.

(c) Municipalities (local government): These are autonomous public-law corporations, with legal personality, independent assets and their own resources, managed outside the State budget, and are responsible for the local government of the country's communes.

(2) Administration of government procurement

In Chile, there is no single government procurement system or procedure. This means that, generally speaking, the procurement process is highly decentralized. In fact, most government contracts are let at service, enterprise or municipality level. Nevertheless, the central government has two specialized government purchasing agencies, the Central Supply Agency for the National System of Health Services (Central de Abastecimiento del Sistema Nacional de Servicios de Salud - CENABASS) for the health sector and the State Supply Directorate (Dirección de Aprovechamiento del Estado - DAE) for supplying certain goods to the public services.

Government procurement can be described by reference to the systems used by the public services, State enterprises and municipalities respectively.

Public services

Independent procurement. Generally speaking, each public service makes most of its purchases of goods and services independently, a power derived from its own organization act or forming an exception to the general procurement system. Most purchases are for goods and services and the purchasing programmes are planned for one-year periods, in conjunction with the State budget.

State Supply Directorate (DAE). The DAE is a public service operating under the Ministry of Finance to which the public services turn whenever they

need to purchase goods from stocks held by the Directorate. It also provides a single central service: printing services. In general, the DAE plans its purchases for one-year periods.

Construction services. The general construction services procurement system is run by the Ministry of Public Works (bridges, airports, seaports) and the Ministry of Housing and Urban Development (basic housing, roadworks), the services being permitted to carry out minor works directly. The planning period for construction services programmes varies with the nature of the works involved (1 to 5 years).

Central Supply Agency for the National System of Health Services (CENABASS). This is a government department under the Ministry of Health which supplies goods such as drugs, equipment, instruments and other necessary inputs required by the National System of Health Services. The purchasing programmes are organized on an annual basis, like those of the health services.

State enterprises

The State enterprises are independent as far as procurement is concerned. Accordingly, they use the business management criteria commonly applied by private enterprises for these purposes, obtaining goods and services from domestic and/or foreign suppliers without distinction. In some cases, their procurement systems or procedures are regulated by supreme decree, particularly in some State enterprises established by law. In other cases they are governed by internal rules.

The mode of procurement is determined by the sums involved. Thus, it may sometimes be possible to proceed by restricted tender, but where large purchases are concerned public tendering is mandatory.

Municipalities

Each municipality enjoys autonomy as regards the organization and implementation of its procurement procedures. Nevertheless, the Chilean Association of Municipalities provides all the municipalities with procurement manuals and guidelines. Moreover, it keeps them regularly informed about domestic suppliers.

The DAE's organization act also allows municipalities to make their purchases through that department, a facility of which they make frequent use.

The procurement programmes of the municipalities generally cover a period of one year.

Laws and regulations in force

3(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their

application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

In Chile, there is no body of law dealing comprehensively with the legal regime applicable to government procurement. In general, procurement is governed by rules derived from the regulatory powers (administrative rules and regulations) specific to each public service, public enterprise or municipality.

Municipalities

In procuring the goods and services they need to function, the municipalities are subject to the rules of private or ordinary law, as confirmed by Article 22 of the law-ranking Decree (DFL) No. 789 of 1978 concerning national property. Nevertheless, the general rules of procurement which every municipality must follow are laid down in Article 6 of Law No. 18.695.

Public enterprises

All public enterprises are independent as far as procurement is concerned. The rules stem mainly from their own organization acts or internal statutes. In general, the mode of procurement is determined by the sums involved. All large purchases must be made by public tender.

Central government

In the case of central government, the questions relating to government procurement have been defined by the administrative authority (Office of the Comptroller-General of the Republic and the departments themselves) rather than by the legislative authority as in other countries. Nevertheless, there are laws, decrees and regulations specifically concerning government procurement of services which extend to the whole of government and are described in detail below:

Procurement of services

1. Personal service contracts with public-sector corporations or entities

Contracts with public-sector corporations or entities, with municipalities, with State universities and vocational colleges and with State-recognized private universities and vocational colleges are governed by:

Article 16 of Decree Law (DL) No. 1608 and its regulations Supreme Decree (DS) No. 98 of 1991 (Finance), if they involve the provision of the personal services of employees.

The provisions of Law No. 18.803 and its Regulations DS No. 21 of 1990 (Finance), if they constitute the procurement of support for the functions of a public service which does not correspond to the actual exercise of its powers.

In both cases, the laws and regulations permit contracts to be awarded directly to the entities in question since they provide exemption from calls for quotations and restricted invitations to not less than three firms. Moreover, in both cases there is exemption from the requirement of a guarantee that the entities do not have among their personnel persons who are employees of the State or have among their partners one or more persons who provide State services as employees and hold 50 per cent or more of the share capital.

2. *Service or support contracts with private-law corporations or entities*

(a) Personal service contracts. Application of Article 16 of DL 1.608 of 1976 and DS 98 (Finance) of 1991.

The following conditions must be satisfied:

(i) The services procured must be indispensable for the efficient performance of the institution's own functions;

(ii) the services cannot be provided by the institution's own human resources;

(iii) the procuring entity must have sufficient funds available to pay the fees;

(iv) the corporate bodies may not have among their partners one or more officials belonging to entities governed by D.L. No. 249 of 1974 who together represent 50 per cent or more of the equity capital or have among their workers persons who are at the same time officials of the above-mentioned entities;

(v) at least three firms must be invited to bid for a contract to be awarded.

(b) Personal service contracts. Application of Law No. 18.803 and its Regulations; DS No. 21 of 1990 (Finance).

Conditions:

(i) Must involve support for the service's functions and not the actual exercise of its powers;

(ii) the corresponding tender conditions must be approved by decision of the head of the procuring public service;

(iii) there must be an invitation to tender, public or restricted, and in the latter case at least three private-law entities must participate as bidders;

(iv) when the contracts involve the provision of the personal services of the partners or their workers, the bidding entities may not have among their partners one or more persons who provide services to the State as employees and hold 50 per cent or more of the equity capital or have among its workers persons who are also officials in the employ of the State;

(v) the private-sector tenderer must agree to provide security in rem or in the form of a deposit to guarantee the performance of the contract.

The amount of security must be specified in the corresponding tender documents.

Any fines or other penalties imposed on the service provider for delay or non-performance will be charged against these guarantees.

Depending on the activities forming the subject of the contract, other requirements laid down by the law and its regulations must also be met, as determined case by case.

3. Non-personal service contracts

3.1 Contracts with individuals or corporate bodies in accordance with Article 16 of DL 2.879 of 1979 and more specifically the following:

- Repairs to the offices and premises of the tax services;
- maintenance of the services• furniture, machines and equipment, and cleaning;
- data processing service: translation, reproduction, form design and the like, as specified by the service.

3.2 Contracts with individuals or corporate bodies in accordance with Article 84 of Law No. 18.482 relating to the leasing of data processing equipment, photocopiers and, in general, office machines of all types.

Public works procurement (construction services)

1. Decree 1340 of 1964

Regulations concerning the evaluation, contracting and execution of public works. Amendments in Supreme Decree No. 15 of 1992.

2. Supreme Decree No. 294 of 1984 (Ministry of Public Works - MPW)

Establishes the public works procurement system.

3. Supreme Decree No. 15 of 1992 (MPW)

Establishes the rules and regulations for public works contracts awarded by the Ministry of Public Works and its agencies. Also requires that, without prejudice to the cases in which such work must be done by other services in accordance with their organization acts, any planning, construction, repair or maintenance of public buildings financed from taxes should be carried out by the Architectural Directorate of the Ministry of Public Works.

4. Decree No. 48 of 1994 (MPW)

Regulations concerning the procurement of consultancy services by the Ministry of Public Works. Also regulates the hiring of contractors.

Exceptions

With respect to the legal framework described in the previous section there are exceptions for certain types of services, as indicated below:

Purchase or lease of motor vehicles

Government public services need prior authorization from the Ministry of Finance in order to purchase, on any basis, motor vehicles of any type intended for the transport of persons or goods. Services with a fixed maximum complement of motor vehicles require similar authorization to lease such vehicles (Article 12, Law No. 19.259).

•Leasing system• operations

The public bodies and services governed for budgetary purposes by DL No. 1.263 of 1975 require prior authorization from the Ministry of Finance in order to enter into commitments involving the leasing of movables with option to purchase the leased good or to enter into agreements to purchase goods when all or part of the price is to be paid in a period that exceeds the budgetary year (Article 11, Law No. 19.259).

Electronic and office machines

For leasing data processing equipment, photocopiers, duplicators and, in general, office machines of any type and for letting contracts for data processing, reproduction, form design and other similar services specified by the entity concerned, the Head of the Service is permitted to contract directly, with the authorization of the corresponding Undersecretary.

Purchase or lease of data processing equipment and contracting for computer services

Public bodies and services covered by the Budgets Act require prior authorization from the Ministry of Finance in order to purchase or lease data processing equipment and peripherals when the price or rental exceeds the amounts laid down by the Ministry (Law No. 19.430).

Similar authorization is also required in order to contract for data processing services, whether independently or as part of a broader services agreement, or for their extension or modification, when the expenditure involved exceeds the amount laid down by the Ministry in question.

The authorization of the Ministry of Finance does not need to be renewed when data processing equipment leases which it approved in previous years maintain the terms originally agreed.

These authorizations are not needed when the equipment in question forms part or is a component of an investment project or an investment study identified as required by the Budgets Act.

Direct purchase, leasing and contracting for services by public bodies and services

It is possible to proceed in this way if the payments involved do not exceed the equivalent in national currency of 2,000 •promotion units• (unidades de fomento). Under these conditions, procurement can take the form of restricted tendering with the participation of at least three bidders (Article 10, Law No. 19.259).

3(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

In Chile, the rules of government procurement do distinguish between the procurement of goods and services. The application of the rules in cases of joint procurement depends on the nature of the procurement. In general, both sets of rules are applied since there is no conflict between the rules for goods and those for the procurement of services.

Procurement procedures applied

4(a) What procedures are followed in the procurement process?

Procurement procedures could differ according to the openness of the invitations to tender. At least three broad categories of procedures are commonly distinguished: (i) public or open tendering procedures under which all interested parties may submit a tender; (ii) selective or restricted tender procedures under which participation is limited to a certain number of selected suppliers, and only these suppliers are invited to submit a tender; (iii) private contract or single tender in which the awarding authority contracts suppliers individually, and sometimes only a single supplier.

The procurement procedures of the public services (procurement of goods, services and construction services), public enterprises and municipalities are outlined in general terms below.

Public services

I. PROCUREMENT OF GOODS AND SERVICES

In general, the procedures for procuring goods and services used by the Chilean public services can be classified in four categories, namely:

Direct quotation (enquiry among suppliers): The procurement unit sends three suppliers a simple quotation document specifying the goods or services required. A supplier is chosen on the basis of the three quotes received.

Restricted tender: The service invites a limited number of suppliers to tender. The invitation specifies the goods or services needed and, in their turn, the suppliers respond with a technical proposal (quality) and a commercial proposal (price) on the basis of which the service makes its decision.

Public tender: An invitation to tender for the supply of goods or services giving a general description of the tender procedure is published in the press. Later, the interested parties receive the specifications in a document entitled •Technical and Administrative Conditions•. The subsequent steps are similar to those of the restricted tender procedure.

Private contract: A supplier is asked to quote and awarded a contract for goods or services. This is an exceptional measure used mainly in emergencies or unforeseen circumstances.

As regards the specific aspects of the procurement procedure, despite the lack of uniformity in the regulations that govern the process in the various institutions, most public services align their procedures on those used by the State Supply Directorate (DAE) of the Ministry of Finance.

Broadly speaking, the public sector procurement system is predominantly based on public tendering, with restricted tendering and direct quotation reserved for •marginal• situations such as:

- *Urgent procurement;*
- *domestic market restricted because of the nature of the product;*
- *small amounts. Below certain thresholds procurement is by restricted tender or direct quotation.*

In general, the process is transparent and the parties well informed, considering that they receive the general and technical documentation and that the

invitations to tender and, in some cases, the outcome of the tender procedure are published in national newspapers.

Depending on the amount involved, the decision to award a contract may be taken by an individual (head of the public service in question) or by a committee (Awards Commission).

As mentioned above, most public entities use, as a procurement model, the procedure applied by the DAE. Consequently, a knowledge of the latter will give a fairly accurate picture of the procurement process throughout government. The procurement system of the DAE is described below.

The DAE procurement system

Steps in the process of procurement by public tender:

(a) *Tender documentation*

Consist of two parts: the administrative conditions and the technical specifications. The former specify the goods or services to be procured, the place and time of delivery, the terms of payment and any other tender requirements. The technical specifications describe the goods or services being put out to tender, the quality standards, minimum acceptance requirements and any other elements that will be taken into account in the appraisal (guarantees, samples, manuals, catalogues, etc.).

(b) *Invitation to tender*

While the tender documentation is being prepared, the corresponding invitation to tender is published, prominently in three national newspapers.

(c) *Issue of tender documentation and receipt of bids*

In this phase, the tender documentation is issued or sold, any queries are answered and the bids are received. A precondition for making a bid is to be listed in the DAE's Register of Suppliers.

(d) *Opening of the bids*

The bids are opened in public by a commission appointed by the DAE, the procedure being as follows:

- *Opening of the envelopes;*
- *verification of the documentation;*
- *correlative numbering of the bids;*
- *signing of the documentation by the members of the commission;*
- *taking of minutes and reading out of the bids;*

- *incorporation of comments in the minutes;*
- *signing of the minutes by the members of the commission and the bidders.*

(e) Appraisal

The procurement department of the DAE checks that the tender conditions have been satisfied and compiles a comparative table of prices bid. Subsequently, the Technical Sub-Directorate checks the extent to which the technical requirements have been met and prepares a report, the results of which are combined with the comparative table of prices.

(f) Award

The Director of the DAE analyses the information contained in the comparative table of prices and decides to whom the contract should be awarded.

If the price exceeds 7,200 UTM¹ (approx. US\$380,000), the Director passes on the information to the Board of the DAE, which takes the final decision.

(g) Formalization

The result of the tender process is formalized by means of an exempt resolution signed by the Director of the DAE, after which the corresponding purchase orders, which constitute a contract with the supplier, are issued.

If the purchase orders are for an amount in excess of 4,000 UF (about US\$120,000), they are published in the Diario Oficial (Official Journal).

II. PROCUREMENT OF CONSTRUCTION SERVICES

Most construction services contracts are let by the Ministry of Public Works and the Ministry of Housing and Urban Development. The works programmes run for periods of 1 to 5 years.

The public works procurement system of the MPW is defined in Article 86 of D.S. No. 294 (Public Works) of 1984, which specifies that the works shall be carried out under a contract awarded by public tender.

However, the same Article indicates that public works may also be carried out under a private contract or a contract awarded by direct quotation or by

¹Monthly Tax Units (*Unidades Tributarias Mensuales*).

administrative authority or delegated administrative authority, as determined by the Regulations in the cases in question.

In general, most public works procurement uses the public tender system, which consists of placing notices in the Official Journal inviting construction firms listed in the General Register of Contractors in the specialties and categories in question to submit bids for carrying out the works concerned. This notice specifies the date and the time for the opening of the bid.

Public works tendering system

(a) *Qualification of suppliers*

There is a register of contractors capable of carrying out major works, maintained centrally, and registers of smaller contractors, maintained at regional level, in which construction companies are listed by specialty, depending on their experience, and by category, depending on their economic capacity, in accordance with the provisions of the Regulations for Public Works Contracts (RCOP).

The categories in the major works register range from 3 to 1 for each specialty. This determines the contracts that can be bid for in terms of the contract sum and the type of work, whether it be roadworks, earthworks, concrete structure, etc.

(b) *Invitation to tender*

Open invitations to tender are issued by placing notices in the Official Journal and the main newspapers; a certain minimum period must elapse between the issuing of the invitation and the date of opening of the bids (Article 65 RCOP).

(c) *Selective tender procedure*

This procedure, which can be likened to restricted tender, consists in sending a written invitation to various construction companies listed in the Register of Contractors in the specialty and category in question to carry out specified works.

The letter indicates the place, date and time of opening of the bids.

The firms invited receive the plans, the general conditions, the technical specifications and the official estimate.

(d) *Time-limits for tendering and delivery*

The minimum periods of time for submitting bids, reckoned from the date of first publication of the notice in the Official Journal, are laid down in Article 65 of the Regulations for Public Works Contracts.

Nevertheless, the inviting authority may modify the periods laid down, in accordance with the relevant provisions of the above-mentioned Article 65.

(e) Tender documentation

To enable bids to be properly submitted the following documents are supplied:

- plans of the project and cubage, structures, etc.;
- general and particular administrative conditions;
- technical specifications;
- official estimate;
- tender form.

(f) Negotiation

Negotiation would be used if no contractors responded to a public invitation to tender in which case, in accordance with Article 86 of Decree No. 294 of 1984, it would be necessary to have recourse to a private contract.

(g) Submission, receipt and opening of bids and awarding of contracts

The bids are submitted, received and opened in the presence of the authorized officials at a bid opening ceremony at which the representatives of the bidders hand in their bids.

Once the bids have been opened, their values are made known in the presence of the rival bidders.

The opening proceedings are recorded in Minutes which include a description of the works, the date and time of the ceremony, the bidders present and the value of their bids.

Once the bids have been examined and checked for errors, the contract is awarded by issuing a resolution in favour of the most advantageous bid.

(h) Limited tender

Limited tender, which may be likened to private contract, is appropriate in the case of works declared urgent by Supreme Decree, when the work needs to be begun with the utmost urgency, and in the situations envisaged in the above-mentioned Article 86 of Decree No. 294.

Public enterprises

As already mentioned, Chilean State enterprises are independent as far as procurement is concerned. Therefore they use the economic management criteria

commonly applied in the private sector for such purposes, obtaining their supplies from domestic and foreign suppliers without distinction. In some cases their procurement systems or procedures are specified at supreme decree level, particularly in some statutory State enterprises; in other cases they satisfy criteria established autonomously.

The mode of procurement is determined by the amount of funds involved. Thus, restricted tendering may occasionally be used, but where larger amounts are involved public tendering is compulsory. Under the Constitution, neither the State nor its agencies may discriminate arbitrarily among bidders, whether domestic or foreign.

The Comptroller-General of the Republic is empowered to oversee the procurement procedures of State enterprises.

Municipalities

As previously mentioned, each municipality is autonomous as far as procurement is concerned. Article 60 of Law No. 18.695, the Municipality Constitutional Organization Act, obliges them to procure goods of a value exceeding 200 UTM (US\$10,275) by public tender.

The municipalities' procurement procedures comply with internal regulations and, generally speaking, the quotation system and public and restricted tendering are used.

The organization act of the State Supply Directorate also provides for procurement through that department to which the municipalities frequently have recourse since they are then able to avoid quotation or tender procedures.

The Comptroller-General of the Republic oversees the municipalities' procurement procedures.

4(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

In general, the procurement procedure employed depends on the amounts involved. Thus, if the quote is below a certain threshold, direct purchase or restricted tender is used; if it is above that threshold, the public tender procedure is followed. The threshold for determining which procedure to use varies from one entity to another. The following table illustrates the situation:

Government Procurement of Goods and Services by Value (Average)

	<i>Public tender</i>	<i>Restricted tender</i>	<i>Direct quote</i>
--	----------------------	--------------------------	---------------------

Public services	• US\$150,000	• US\$150,000	• US\$10,000
Municipalities	• US\$10,000		• US\$10,000

*Values as of November 1996.

4(c) What are the time-limits for the submission of bids?

The time-limits vary according to the entity and the goods or services involved. The minimum time-limits generally employed are as follows:

Minimum Time-Limits for the Government Procurement of Goods and Services
(From the Publication of the Invitation)

Public and restricted tender:	7 calendar days
Direct quotation:	3 calendar days
International tender:	60 calendar days

Publicity for inviting tenders

5(a) How are intended procurements publicized? Are invitations to tender published? Is so, where, and in what languages?

Further to the replies to section 3 of the questionnaire, in Chile public sector procurements are published in the newspapers with the biggest national circulation: *El Mercurio*, *La Nación*, *La Época* and *La Tercera*, as well as in the financial and business press: *Estrategia* and *El Diario Financiero*. In general, the invitations are in Spanish.

Procurements are also published in the *Official Journal*, which appears daily. Moreover, depending on the type of procurement and the nature of the entity or enterprise, the latter is informed through the specialized publications of the national trade associations.

The principal public sector procurements are listed in the *Revista Licitasur*, a regional weekly (Argentina, Brazil, Paraguay and Chile) accessible by e-mail. For subscription rates and information, contact *Compania No. 1068 of. 901*, Telephone: 672 41 89 - 672 94 10, Fax: 672 41 92.

5(b) Do the extent and form of publicity differ according to tendering procedures applied and/or the value of the procurement?

Except in rare cases, direct quotation procurements are not published in the press. Public procurements are all published and in the same way for different bidding entities. There are no differences in publicity according to the value of the procurement. Procurements financed with credits from credit institutions such as

the World Bank or the Inter-American Development Bank are advertised slightly differently.

5(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

Details could include a description of the service to be procured, tender opening and closing dates, conditions of participation, procuring entity, enquiry point, procurement plans, procurement outcomes - contract award notices, etc.

Public tender notices must contain the following information:

- *Procuring entity;*
- *tender number;*
- *goods or services to be procured;*
- *time-limits for submission of bids;*
- *price of tender documentation (if sold);*
- *place and hours of sale or distribution of tender documentation.*

5(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set.

The law does not require the tender documents to be sold. The public services are free to set a charge for the sale of their tender documentation. Even though there are no precise figures, it can be stated that in the case of tenders for the provision of services the documentation is mostly free of charge. Nevertheless, the power to set a charge for the tender documents is present in the institution's regulations and generally vested in the director of the service, the head of administration or a purchasing commission.

5(e) Are electronic means used to advertise procurement opportunities? What is the nature of the systems in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

In addition to the information channels previously mentioned, some public services such as the Ministry of Public Works and the State Supply Directorate use electronic means for publicizing their procurements. The information and the tendering provisions are the same as when other means are employed.

Requirements laid down for possible suppliers

6(a) Are there registration, residence or other requirements for potential suppliers?

It is not very often that in procuring services the entities use registers of suppliers. Where the procurement of construction services is concerned, such registers are very often used. This procedure, which is fully regulated, is described under 4(a).

6(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

In most public and restricted tendering, financial guarantees are required for the submission of bids and for the performance of the contract. These are retained until the tender process is complete or the service has been rendered. These guarantees do not vary with the nature of the tender process; on the contrary, a percentage of the value of the bid or the value of the purchase order is applied. The guarantee sum must be specified in the corresponding tender documents. Fines and other penalties imposed on the supplier for delay or non-performance can be applied against these guarantees.

6(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

In the case of the procurement of services in general, the public entities do not keep lists of approved suppliers. The technical or economic requirements are specified in the corresponding tender documents. Where the procurement of construction goods or services is concerned, lists of suppliers are generally used. The provisions relating to both cases are appended to this questionnaire.

Criteria for assessing bids and awarding contracts

7(a) What criteria are taken into account in the award of tenders? Are the criteria for award of contracts made available in advance to potential suppliers?

For instance, whether obtaining the best value for money spent is the aim and whether criteria other than price are taken into account.

The rules state that in awarding service contracts the following aspects should be taken into account:

- *The solvency and technical qualifications of the bidders;*
- *the specialized professional qualifications of those directly responsible for providing the service;*

- the experience of the bidders and, in particular, of those responsible for providing the service;
- the contract price;
- the time within which the service will be provided;
- the relationship between time and price;
- the manner of payment in relation to the progress of the work;
- the fines and other penalties proposed for any delay or non-performance.

7(b) Is procurement subject to any offset conditions, such as local content, technology transfer or countertrade requirements?

As distinct from other countries, Chile has no provisions of this kind in its government procurement regulations nor is any type of offsetting encountered in practice.

7(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

As distinct from other countries, Chile has no provisions of this kind in its government procurement regulations nor is any preference given in practice.

7(d) Do the procurement criteria differ according to sector or region of the economy?

The procurement criteria do not differ according to the different sectors or regions of the economy.

7(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

The margin of choice or discretion could relate to (i) the relative weight/importance of each contract award criterion; (ii) margins of preference, if any, in respect of specific criteria; and (iii) threshold values, if any, above which referral to a higher level of purchasing authority is required.

The discretion allowed to the purchasing authority could vary according to whether there is (i) automatic tender, where the contract is awarded on the basis of predetermined criteria, either the simple criteria of price, or price and other criteria; (ii) discretionary tender procedures which involve acceptance of the bid which is most advantageous - the award of the contract is based on several criteria, some of which are predetermined, but which in general leave the awarding authority a certain measure of choice; and (iii) negotiated tender in which the awarding authority negotiates freely with the potential supplier or suppliers as to the conditions of the contract.

With respect to both goods and services there is a margin of discretion for the public entities in their procurement process which is related to the value of the

procurement. The procurement of goods with a value of more than 2,000 UTM (approx. US\$117,000) and services with a value of more than 1,000 UTM (US\$58,000) is subject to review by the Comptroller-General's Office (State administrative authority) which verifies compliance with its rules of competence and the administrative regulations.

Disclosure of bids received and contracts awarded

8(a) How are tenders received, registered and opened?

See reply to question 4(a).

8(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

Entities are not obliged to publish details of services contracts awarded. Neither is there a requirement to notify unsuccessful tenderers.

8(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

There is no legal requirement, but in practice it is customary to provide the reasons for rejecting bids at the request of the interested parties.

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of 'domestic' in relation to domestic services and suppliers.

In Chile, as distinct from other countries, neither in the legislation nor in practice is it stipulated that any particular bidder for a government procurement contract should be accorded more favourable treatment. In particular, Article 57 of the Chilean Civil Code states that the law does not recognize any distinctions between Chileans and foreigners as regards the acquisition and enjoyment of civil rights.

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

Details could include:

- ***Institutional status: whether challenges are heard by an administrative tribunal, a court or any other review body;***
- ***time-limits for complaints/appeal;***
- ***type of remedy, if any, that may be granted.***

In practice, the Chilean public sector has a decentralized procurement system. As explained earlier, each entity, enterprise and municipality procures its supplies directly in the markets in accordance with its own regulations and procedures. Consequently, the procedures for challenging an award vary from one entity to another. Usually, challenges are treated as follows:

- *During the opening of bids, any supplier may make any comments he considers relevant, these being recorded in the corresponding minutes;*
- *after the bids have been opened, tenderers may make any comments they consider appropriate in writing;*
- *once the contract has been awarded, any bidder who considers himself injured may request an explanation of why his bid has been rejected. If he is not satisfied with the explanation, he can seek redress from the Office of the Comptroller-General or the courts.*

Without prejudice to the above, public sector procurement processes are subject to the following checks: institutional control, government control, control by the Office of the Comptroller-General, political control by the Chamber of Deputies, judicial control.

1. *Institutional control*

This control is exercised internally by the entities themselves, in particular by the audit and internal inspection units.

2. *Government control*

In 1994, the Government began carrying out ministerial audits of all the services and enterprises of each Department. The aim of these audits is to ensure an honest and efficient civil service including, inter alia, the correct use of tender procedures for procuring goods and services.

Moreover, the Government indirectly exercises control over government procurement through the process of preparation of the national budget and its control over budget administration since government entities must justify to the Budget Directorate, a body under the authority of the Ministry of Finance, their requirements for and use of the resources allocated to them by the Budget Act.

3. *Control by the Office of the Comptroller-General*

In accordance with its organization act, the Office of the Comptroller-General of the Republic oversees the purchases made, directly or through tendering and bidding processes, by the public services (including municipalities), State enterprises and joint-stock companies in which the State has at least a 50 per cent stake. The control is legal and financial and may be carried out at any stage of the tender process.

If a fault or irregularity is detected, whether as a result of a complaint or as a direct consequence of its own investigation, the Office of the Comptroller-General informs the authority concerned in order that the fault or irregularity may be put right. If the situation so warrants, the latter may institute proceedings, administrative, civil or criminal, against the officials involved before the appropriate court or tribunal.

4. *Political control by the Chamber of Deputies*

In the exercise of its powers of oversight, the Chamber of Deputies is authorized to investigate irregularities committed by civil servants in the performance of their administrative duties.

5. *Judicial control*

The Constitution provides for the remedy of application for protection to the higher courts of justice (Courts of Appeal) when constitutional guarantees, including those relating to illegal acts of the public authorities, are infringed. The proceedings are special and summary.

II. MEMBERSHIP OF PLURILATERAL, REGIONAL AND/OR BILATERAL AGREEMENTS

11. *Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.*

The Government of Chile has entered into commitments with respect to government procurement in the free-trade agreements it has signed with Mexico, Ecuador, Colombia and Venezuela and in its cooperation agreement with the European Union.

All its international agreements include the following clause:

•In the first year in which this Agreement is in force, the Administrative Commission, established by the Article in question, shall define the scope and conditions of government procurement between the signatory countries. To this end, it shall take into account the criteria laid down in the General Agreement on Tariffs and Trade (GATT) in order that the signatory countries may enjoy open, transparent, fair and competitive access where public sector procurement is concerned. •

The cooperation agreement with the European Union provides as follows:

- 1. The parties agree to cooperate to ensure, on the basis of reciprocity, open, non-discriminatory and transparent procedures in their respective government procurement processes and the procurement processes of their public service sector entities, at central, federal, regional and local levels.*
- 2. to this end, the Parties agree to examine the possibility of concluding an agreement on access to procurement in these sectors by creating conditions that are transparent, fair and subject to clearly defined challenge procedures.*
- 3. the cooperation between the Parties in this sector shall also have as one of its objectives technical assistance in matters relating to the Agreement on Government Procurement (AGP).*
- 4. the Parties are considering the possibility of holding annual consultations in this sector.*

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12(a) Please provide statistics (if available) on the number and value of services procurements

- on both an aggregate and a sectoral basis;*
- by origin of services and suppliers.*

In order to enhance the comparability of data provided, Members may choose to provide statistics according to the services sectoral classification in document MTN.GNS/W/120 (dated 10 July 1991) at the appropriate level of aggregation.

The Government of Chile does not compile central records indicating the origin of services and suppliers or the classification in document MTN.GNS/W/120. It only maintains this information for some of its departments. Nevertheless, information on government procurements for the period 1991-1994 is available. Chile would be in a position to provide such information in the future.

Procurements of the Central Government of Chile (1991-1994) *(at Current Prices in Thousands of US Dollars)*

CG-CH/MIN/ITEM 1991-94 (thousands of US dollars)

<i>Item/year</i>	<i>1991</i>	<i>1992</i>	<i>1993</i>	<i>1994</i>
------------------	-------------	-------------	-------------	-------------

<i>Goods</i>	423,065	469,438	469,653	453,294
<i>Services</i>	454,702	557,934	596,625	649,894
<i>Construction services</i>	668,025	925,662	1,183,118	1,407,406
<i>Total</i>	1,545,792	1,953,034	2,249,396	2,510,594

12(b) Please provide statistics (if available) on the

- **share of services procurement in total procurement;**
- **share of procurement of each service in total domestic output of the service;**
- **share of procurement of each service in total domestic consumption of the service.**

Chile

Central Government Procurements 1994

Construction services 56%

[Pie Chart]

Goods 18% Services 26%

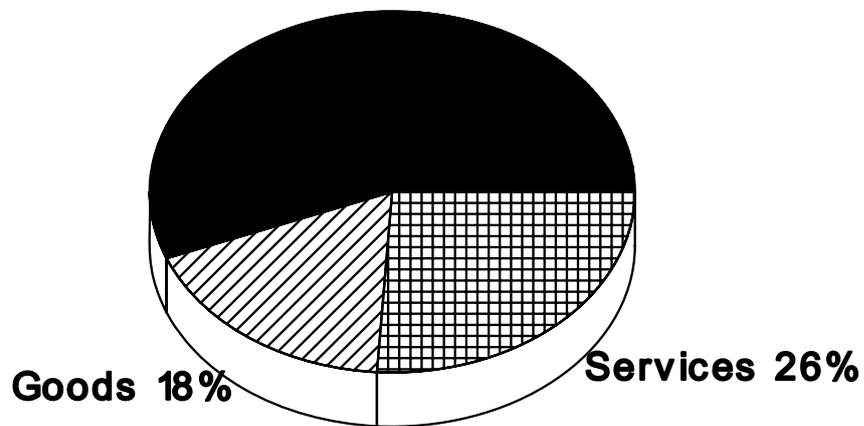

As regards the share of services procurement in domestic output and consumption, it is not possible to provide reliable information since the data on the consumption and output of services in the national accounts are classified

differently from those used for compiling government procurement data. Chile would be in a position to supply this information in the future.

Working Party on GATS Rules

Original: English

COMMUNICATION FROM INDIA

Response to the Questionnaire on Government Procurement of Services

The following communication is being circulated at the request of India to Members of the Working Party on GATS Rules.

I. EXISTING PROCUREMENT REGIMES

Where a Member's procurement regime is different for central government entities, sub-central government entities, and other entities, such as public undertakings (e.g. public utilities), it would be useful if these differences were specified under each of the headings indicated below.

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

Government procurement is defined as the procurement made for and on behalf of the Government. This includes Central Government, State Governments, Public Sector undertakings and Public bodies.

Administrative structure

2. How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

Each Government Department has an administrative structure to look after their procurement activity, and assistance of an outside agency is sought whenever necessary. Purchases by the Government are decentralized, except common user items for which Rate Contracts are concluded by the Directorate General of Supplies and Disposals (DGS&D), the central purchase organisation of the Government. This organisation in addition to Rate Contracts also entertains requests from Central Government, State Governments and public bodies for procuring their ad hoc requirements.

Laws and Regulations in force

3.(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

The purchases are broadly governed by the General Financial Rules (GFRs) of India and all procurement agencies evolve their own methods and procedure in keeping with the general guidelines states in the GFRs. The legal aspects of purchase were governed by the Arbitration Act of 1940 which has since been repealed and replaced by •The Arbitration and Conciliation Ordinance, 1996 (No.8 of 1996)•. The Ordinance has come into force on 25th January, 1996. The contracts concluded by the Central Purchase Organisation are generally governed by the General Conditions of the Contract as stated in the Form DGS&D-68 (Revised) read with instructions to Tenderers in Form No. DGS&D-229.

(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

The rules governing contracts for services are generally the same as that for goods except that certain provisions are made to take care of the after sale-service wherever required.

Procurement Procedures Applied

4.(a) What procedures are followed in the procurement process?

The essential ingredients of the objective of public procurement are considered to be

- (i) procurement of specified quantity and specified quality,

- (ii) procurement on competitive basis at the lowest reasonable price, and
- (iii) procurement with a planned timely delivery.

The methods of purchase adopted are:

1. By advertisement - open /advertised tender.
2. By direct invitation to limited number of firms - Limited Tender.
3. By invitation to one firm only - Single Tender.
4. By negotiation to one firm only - Single Tender.
5. By repeat orders.

(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

Open Tender system i.e. Invitation to Tender by Advertisement is used as a general rule. Limited Tender system is adopted where the demand is urgent, sources of supplies are definitely known and sufficient reasons exist to indicate that it is not in the public interest to call for tenders by advertisement. A single tender is issued for proprietary items. Ab-initio negotiations are undertaken in extreme urgency to meet the emergent demand within a given time frame where sources of supplies are known.

(c) What are the time limits for submission of bids?

The time limit for submission of bids are as under:

1. Tender by Advertisement - 71 days from the date of issue of tender notice.
2. Limited tender - 30 days from the date of issue of tender.
3. Negotiation } Time is fixed keeping in view the
- } urgency of requirement
4. Single Tender }

Publicity for inviting tenders

5.(a) How are intended procurements publicised? Are invitations to tender published? If so, where, and in what languages?

All Tender Notices are published in the Indian Trade Journal, a magazine published by the Directorate General of Commercial Intelligence and

Statistics, Calcutta which is a weekly document. Copies of the Tender Notices are also sent to the known prospective suppliers. GFRs of the Government of India also provide the Tender Notices can be published in two National daily Newspapers. The publications are made in English and Hindi. The State Governments may also publish the Tender Notices in the local language papers.

(b) Do the extent and form of publicity differ according to tendering procedures applied and/or on the value of procurement?

For domestic bidding, a uniform procedure is adopted for publicity irrespective of value. However, for global tendering, Tender Notices are also published/notified through Indian Embassies all over the world and copies are also given to the local representatives of Embassies/ High Commissions.

(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

The Tender Notices normally contains the following details:

1. Name of the procurement agency.
2. Description of items.
3. Specifications applicable.
4. Quantities to be procured.
5. Price of the Tender Set.
6. Due date of opening of tender.
7. Tender sales points.
8. The last date up to which tenders are to be kept valid.

(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set?

Advertised Tender sets are sold on payment of fees as per scale given below:-

Estimated value of first Tender the Tender. including accompanying	Price (Rs.) of the set schedule.
(i) Up to Rs.5,000,000	Rs.100/-
(ii) from Rs.5,000,000 to Rs.10,000,000	Rs. 250/-
(iii) from Rs.10,000,000 to Rs.50,000,000	Rs. 500/-
(iv) above Rs.50,000,000	Rs.1000/-

(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

The information in Tender Notices is also transmitted through NICNET programme of the National Informatic Centres.

Requirements laid down for possible suppliers

6.(a) Are there registration, residence or other requirements for potential suppliers?

DGS&D as a Central Purchase Organisation have a system of registering firms for various items. National Small Industries Corporation (NSIC) is also authorised to register small scale industries under single point registration programme. Rate Contracts are only awarded to firms registered with DGS&D/NSIC. Unregistered/untried firms are considered for ad hoc tenders. The Registration Certificate issued stipulates certain monetary limits depending upon the financial reports obtained from the bankers and their turn-over.

(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

Unregistered/untried firms are normally considered for placement of ad hoc orders up to 20% of the Tender Enquiry quantity. Even firms registered are considered for quantities up to twice their monetary limit. The contracts for operational demand are placed only on past supplier.

(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

The lists of firms registered for an item and past supplier is maintained by each purchase unit. For firms who quote against tenders, a capacity report is called for through the Inspectorate. The registration granted by the Registration Branch is permanent but is reviewed/updated after every three years.

Criteria for assessing bids and awarding contracts

7.(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

All Tender Enquiries issued for concluding Rate Contracts stipulate a condition that Rate Contract shall be awarded only to such firms who are registered on the date of Tender opening for the item or get themselves registered within 90 days of the date of Tender opening. A firm registered for allied items is considered as registered. Another essential requirement for award of Rate Contract is that the firms have to meet the performance level during the last three years as specified in the Tender Enquiry. For ad hoc tender, however, the criteria for award of contract is not indicated in the Tender Enquiry, except that it is stipulated that firms not registered with DGS&D or NSIC or the procurement agency are to be considered only if the bids are submitted with an earnest money as specified in the Tender Enquiry. Normal scale of seeking earnest money is 2% of the likely value of the tender.

(b) Is procurement subject to any offset provisions, such as local content, technology transfer or countertrade requirements?

No.

(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

The main parameter of the policy relating to purchase and price preference are as under:

(i) Small Scale Sectors are entitled for a price preference up to 15% over the large scale sector. But the price preference to Small Scale Sector over Large Scale Sector is not automatic and is considered on merits of each case.

(ii) Public Sector Undertakings are entitled for purchase preference. This facility is valid up to 31.3.97.

(d) Do the procurement criteria differ according to sector or region of the economy?

Certain sectors of industry are given preference as explained against 7(a). No preference is accorded on regional basis. Certain regions depending upon the locations are given certain concessions in taxes and duties by the Central/State Governments. The procurement is decided based on the ultimate cost to the purchaser.

(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

Purchasing authority is expected to award contracts keeping in view the laid down policy and also the capacity of the individual firms and delivery requirements. Except this no other discretion is available to the Purchase Authority. The margin of preference is regulated by the policy of purchase/price preference as detailed against 7(a). Negotiation, if resorted to, is conducted with all the eligible tenderers.

Disclosure of bids received and contracts awarded***8.(a) How are tenders received, registered and opened?***

Tenders are received through the Tender Box in a sealed cover. These are duly registered in a separate register after taking tenders from the tender box and opened in public at the specified time.

(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

The unsuccessful tenderers are notified through a standard regret card. At present, there is no requirement to publish details of the contracts awarded.

(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

The competent authority is required to record the reason for rejection of the bids. The unsuccessful tenderers are not given the reason for rejection of their bids.

Treatment granted to domestic and foreign services and/or suppliers***9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the***

working definition of •domestic• in relation to domestic services and suppliers.

The domestic bidders are treated at par with the foreign bidders and the ultimate price available to the user department is the determining criteria.

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

The unsuccessful bidders can lodge their complaints to the concerned procurement agency or to the Public Relation Officer. Whereas disputes arising out of the contracts were governed by the Arbitration Act of 1940 which has since been replaced by •The Arbitration and Conciliation Ordinance, 1996 (No.8 of 1996)• but any dispute at pre-contract stage can only be petitioned by the aggrieved party before the court.

II. MEMBERSHIP OF PLURILATERAL, REGIONAL AND/OR BILATERAL AGREEMENTS

11. Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.

No.

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12.(a) Please provide statistics (if available) on the number and value of services procurements

- ***on both an aggregate and sectoral basis;***
- ***by origin of services and suppliers.***

Service procurements are integral part of the general procurement contracts and no separate data have been maintained.

(b) Please provide statistics (if available) on the

- ***share of services procurement in total procurement;***
- ***share of procurement of each service in total domestic output of the service;***
- ***share of procurement of each service in total domestic consumption of the service.***

Total domestic consumption is defined as the sum of public and private consumption or the sum of domestic output and net imports (i.e. imports minus exports) of the service in question.

In view of 12(a) above, this information cannot be furnished.

Working Party on GATS Rules Original: English

COMMUNICATION FROM AUSTRALIA

Response to the Questionnaire on Government Procurement of Services

The following communication is being circulated at the request of Australia to Members of the Working Party on GATS Rules.

I. EXISTING PROCUREMENT REGIMES

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

Government procurement is the entire process by which government agencies acquire from external sources the resources they need to carry out their missions and administer their programs. This includes:

- all types of consultancies and professional services;
- construction and related services;
- training for Commonwealth personnel;
- services procured for public utilities; and

-financial and operating leasing including the leasing of equipment and real property, as well as outright purchase.

Government procurement also includes outsourcing or contracting out for goods or services that typically have previously been provided from internal sources. These services may involve program delivery such as services to lines as well as program support such as office cleaning or other property services.

Administrative structure

2.How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

Australia is a federation. In addition to the national or Commonwealth Government, there are six State Governments and two Commonwealth Territory Governments. The third tier of government is local government.

The Commonwealth Government and each of the State and Territory Governments have their own procurement legislation policies and procedures. There is no national regulation of government procurement. The Commonwealth, State and Territory governments and New Zealand are, however, parties to the Government Procurement Agreement (GPA) which commits them to:

- remove discrimination among themselves in government procurement; and
- work in a coordinated way to improve procurement practices and procedures and to introduce greater uniformity.

The principal agency for the implementation of this intergovernmental agreement is the National Supply Group (NSG), a body of senior State, Territory Commonwealth and New Zealand officials set up to consider broad strategy issues relating to public sector procurement and supply.

The NSG is responsible for reinforcing the objectives of the GPA including promoting commonality in procurement policies and practices.

A.Commonwealth Government Procurement

(i)Administrative Structure

In the Commonwealth government, the management of procurement is substantially decentralised with each agency being responsible for its own procurement within a centrally prescribed framework of procurement policy and advisory guidance on best practices and techniques. This framework is set out in the *Commonwealth Procurement Guidelines* issued by the Minister for Administrative Services under the authority of the *Audit Act 1901* and Finance Regulations.

At present, there are thirteen of these Guidelines.

1. Getting Value for Money
2. Open and Effective competition and Gazettal of Purchasing Information
3. Ethics and Fair Dealing
4. Planning Government Procurement
5. Using Staged Procurement
6. Using Specifications
7. Negotiation
8. Managing Risk in Procurement
9. Managing Performance
10. Benchmarks for Procurement Decisions
11. Know Your Market
12. Australian and New Zealand Supplies
13. Contracting for Consultancy Services

The Guidelines are currently being revised for reissue in an updated and consolidated form.

The Government also expects Government Business Enterprises (GBEs), unless specifically exempted, to operate in accordance with the Government's procurement policies, but excluding the requirements concerning gazettal of procurement matters and use of Common Use Arrangements (CUAs).

CUAs are standing offers for Information Technology and general goods and services arranged by Purchasing Australia for common use supplies to meet the needs of all Commonwealth agencies.

(ii) Central procurement entities

There are a number of entities in the Commonwealth Government with procurement responsibilities and functions as described below.

Department of Administrative Services

Under the Administrative Arrangement orders, the Department of Administrative Services (DAS) is responsible for coordination of purchasing policy and civil purchasing. Areas within DAS that have central procurement responsibilities include:

Purchasing Australia

Purchasing Australia administers the Commonwealth Government's purchasing and disposals framework and plays a major role in contributing to its development in conjunction with other government agencies. It manages the development of the *Commonwealth Procurement Guidelines* for issue by the Minister for Administrative Services.

Other services and support provided to Commonwealth buyers include:

- Common Use Arrangements (CUAs): Purchasing Australia manages CUAs for use by other agencies. These cover the supply of Information Technology (IT) and other commonly used goods and services;
- Office of Government Information and Advertising (OGIA); OGIA provides advice and assistance on advertising, market research, public relations, strategic planning, marketing, government information policy and the content and appropriateness of printed material for public use. It manages the centralised arrangements for Commonwealth advertising;
- surplus asset disposal;
- assistance with contracting;
- facilitating the implementation of electronic commerce in Commonwealth purchasing;
- buyer training and initiatives to improve the quality and availability of training; and
- publications and other advisory material on procurement matters.

Purchasing Australia also provides support to the general supplier community through the following mechanisms:

- A Supplier Development Program, which assists small to medium enterprises to access the Commonwealth marketplace by linking suppliers with buyers, providing information and facilitating skills development. The program includes Meet the Buyers Trade Fairs, which provide an opportunity for suppliers and government buyers to meet and open communication channels, and information and publications to assist suppliers in dealing with the Government, e.g. the *Guide to the Government Marketplace*, and
- Government Electronic Marketplace Service (GEMS), which provides information through the Internet about current Commonwealth and New Zealand Government request for tenders, dates for government auctions of surplus goods, a range of material about Australian government purchasing policies and special purchasing opportunities.

Public Works Policy Group

The Public Works Policy Group (PWPG) provides assistance to agencies in the application of relevant public works policies. The PWPG promotes the implementation by agencies of best practice in the procurement of construction and related services, and facilitates on-going development of best practice strategies.

The PWPG comprises an Advisory Committee, chaired by the Secretary of DAS, with special expertise drawn from government agencies, the construction

industry and trade unions, and a secretariat within the Canberra office of DAS.

Other Central Procurement Bodies

National Procurement Board

The National Procurement Board (NPD) monitors, reviews and report on the efficiency and effectiveness of the Government's buying framework and plays a key role in ensuring that the Government's policies are carried out by all agencies.

The NPB has an independent chairman and membership drawn from industry sectors, unions and government departments. It is served by a Secretariat located in the Department of Administrative Services in Canberra.

B.State and Territory Procurement Structures

Information on the administrative structure of individual State and Territory procurement regimes is not available. However, the following list identifies the central procurement organizations within State and Territory Governments.

New South Wales: The State Contracts Control Board established under the *Public Sector Management (Stores and Services) Act 1988* has responsibility for the regulation of New South Wales Government Procurement activity.

South Australia: The State Supply Board is responsible for procurement administration in South Australia.

Western Australia: Under the *State Supply Commission Act 1991* the State Supply Commission has responsibility for the conduct of the supply process across the whole of government.

Queensland: The Queensland State Purchasing Council has responsibility for the administration of government procurement within the State.

Victoria: The Victorian Government Purchasing Board is responsible for the administration of government procurement within the State.

Tasmania: The State Purchasing and Sales Division in the Department of Treasury and Finance, has responsibility for the administration of government procurement within the State.

Northern Territory: The Department of Asian Relations, Trade and Industry has responsibility for the administration of government procurement within the Northern Territory.

ACT Government: The ACT Supply and Tender Agency has responsibility for government supply (purchasing) policy within the Australian Capital Territory.

Laws and regulations in force

3.(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

General

The Government Procurement Agreement 1986, is an administrative agreement to which all Australian States and New Zealand are signatories. It prohibits the parties to the Agreement from applying preference schemes against each other. It also prohibits forms of discrimination between the parties to the Agreement based on the State of origin of goods and services in government procurement. The Agreement is currently under review.

A.Commonwealth Laws and Regulations

Primary legislation relating to Commonwealth Government procurement is the *Audit Act 1901*, Finance Regulations made under the *Audit Act* set the regulatory framework for procurement.

The Regulations require that those agencies involved in procurement:

- have regard to *Commonwealth Procurement Guidelines* issued by the Minister for Administrative Services;
- choose procurement methods that will promote open and effective competition;
- provide for the notification of contracts arranged and standing offers above \$2,000 in value in the *Commonwealth (Purchasing and Disposals) Gazette*; and
- not enter into procurement commitments unless satisfied that they could not obtain better value for money for the Commonwealth.

Legislation/regulations that give exemption to the normal government procurement regulation practices

The Finance Regulations provide that the Secretary to the Department that is responsible for procurement of supplies may, in writing, direct that details of contracts or standing offers that (in his or her opinion) are exempt matters under the *Freedom of Information Act, 1982* are not to be published in the *Commonwealth (Purchasing and Disposals) Gazette*.

(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

There are no separate regulations for the procurement of goods as opposed to services in Commonwealth government procurement.

B.State and Territory Laws and Regulations

Generally, State and Territory laws and regulations require competitive procurement practices, value for money and transparency in government procurement. The use of public tendering processes is required for procurements above certain thresholds. (See section 5B).

The following laws and regulations apply to specific Australian State and Territory procurement regimes:

New South Wales: The legislation governing New South Wales State purchasing is the *Public Sector Management (Stores and Services) Act 1988*.

South Australia: The legislation governing South Australian government purchasing is the *State Supply Act 1985*.

Western Australia: The legislation governing Western Australian State government procurement is the *State Supply Commission Act 1991*.

Queensland: The legislation governing Queensland State government procurement is the *Financial Administration and Audit Act*. Compliance with State purchasing policy is required by the Public Finance Standards issued under the Act.

Victoria: The legislation governing Victorian State government procurement is the *Financial Management (Amendment) Act 1994*.

Tasmania: The legislation governing Tasmanian State government procurement activities is the *Financial Management and Audit Act*.

Northern Territory: The legislation covering Northern Territory government procurement is the *Financial Administration and Audit Act*.

ACT Government: The legislation governing government procurement in the Australian Capital Territory is the *Australian Capital Territory Audit Ordinance 1989*.

Distinction Between the Procurement of Goods and Services

We are not aware of any separate regulations for the procurement of goods as opposed to services in State and Territory government procurement.

However, the monetary preferences applying in State and Territory purchasing as set out in the Government Procurement Agreement apply only to goods and related services and thus do not apply to procurement of services alone (see Section 9B).

Procurement procedures applied

A.Commonwealth Procurement Procedures

4.(a)What procedures are followed in the procurement process?

Commonwealth government procurement policy emphasises the achievement of value for money through open and effective competition, ethics and fair dealing, accountability and support for other government policies including industry development.

Procurement practices and procedures are directed to achieving the best available value for money in the acquisition of goods and services for government programs on the basis of a comparison of relevant benefits and cost viewed from a whole of life perspective.

Open and effective competition is the central operating principle of Commonwealth procurement, permitting a range of procurement methods. It requires transparency in the procurement process, including access to opportunities for potential suppliers and ease of entry for new and small sellers.

The general guidance provided to agencies enables them to choose open, limited or selective procurement procedures. The Commonwealth does not prescribe the procurement method to be used nor does it set minimum limits on the numbers of offers to be sought. Requirements and market conditions vary and the person responsible for deciding how supplies are to be procured must consider each case on its merits.

This decision should take into account both the characteristics of the requirement and the particular market at the time. A consideration of these factors will determine whether:

- public (or open) notification is justified;
- effective competition can be achieved through confining (or limiting) invitations to known or qualified/approved suppliers; or
- market factors require single tendering or a similar approach.

(b)Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

In general, there are no threshold values for the application of particular procurement techniques or policies. However, procurements over \$100,000 in cost or of special complexity or sensitivity are to be handled by Accredited Purchasing Units in agencies to ensure that procurement staff have the necessary levels of competence.

(c) *What are the time limits for submission of bids?*

There is no general Commonwealth policy stipulating time limits for the submission of tenders. Decisions on this issue are at the discretion of individual government agencies.

B.State and Territory Procurement Procedures

State and Territory procurement procedures generally follow those of the Commonwealth government in emphasising the achievement of value for many through open and effective competition, ethics and fair dealing and accountability. However, they tend to be more prescriptive in relation to process. All State and Territory procurement regimes retain public tender thresholds as set out in section 5B below.

There is no uniform time limit for the submission of tenders across State and Territory procurement regimes. Time limits are ordinarily left to the discretion of individual agencies but are based on an informed assessment of the necessary time required for tenderers to respond to any individual tender in view of the degree of complexity involved.

Publicity for inviting tenders

5.(a)How are intended procurements publicised? Are invitations to tender published? If so, where, and in what languages?

Gazettal Requirements

The *Commonwealth (Purchasing and Disposals) Gazette* must be used to advertise all publicly available procurement opportunities including, but not limited to, expressions of interest, invitations to bid, to qualify as approved suppliers, to offer proposals or the like.

In addition to meeting the gazettal requirements, agencies may advertise in other media, for example the tender columns of newspapers or trade magazines. They must use the Commonwealth's centralised advertising arrangements, that is arrange advertisements through the Commonwealth's designated advertising agent.

All gazetted invitations are also placed on the Government Electronic Marketplace Service (GEMS) by the Australian Government Publishing Service (AGPS).

English is the language used in these media.

Gazettal of opportunities is not required wherever the decision is to confine an approach, for example, to a sole source, a limited field of suppliers or to a list of approved suppliers established following a publicly notified selection process.

The requirement to use the *Commonwealth (Purchasing and Disposals) Gazette* does not apply to Government Business Enterprises and other agencies not operating on the Commonwealth Public Account.

(b) Do the extent and form of publicity differ according to tendering procedures applied and/or on the value of procurement?

There is no financial threshold for the advertisement of Commonwealth government requests for tenders. The determining factor is the decision to approach the public at large.

(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

Details of procurement opportunities to be published in the *Commonwealth (Purchasing and Disposals) Gazette* include:

Portfolio

Department or agency

Branch

Reference Number

General Description of Requirements

P&S Code (Product and Service Classification)

Document Centre from where relevant documentation and/or project information is available

Commercial Inquiries (contact name and telephone)

Technical Inquiries (contact name and telephone)

Closing Date

(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set?

Generally, tender documents are free of charge. Any decision to charge, and the amount charged, for tender documents is at the discretion of individual government agencies. Where charges are imposed these are mainly intended to cover basic costs involved in preparing and distributing tender documents.

(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

All opportunities notified in the *Commonwealth (Purchasing and Disposals) Gazette* are also placed on the Government Electronic Marketplace Service (GEMS). GEMS is an electronic information service which provides information through the Internet about current Commonwealth and New Zealand Government requests for tenders, dates for government auctions of surplus goods, a range of material about Australian government purchasing policies and special purchasing opportunities. Its address is: <http://www.gems.gov.au>.

GEMS also provides sample information about government contracts awarded to help suppliers with market research. Links to State Government tenders are also being developed.

GEMS provides links to State and Territory electronic services available on the Internet.

All enquiries regarding the GEMS service can be mailed to gems.das.gov.au.

B.State and Territory Governments

The following rules apply to the advertisement of procurement opportunities within Australian State and Territory jurisdictions:

New South Wales: All government tenders above a threshold of \$50,000 are advertised in the local media. The relevant publication is the *Sydney Morning Herald*.

South Australia: All government tenders above a threshold of \$10,000 for government agencies, and \$20,000 for government instrumentalities, are advertised in the local media. The relevant publication is the *Adelaide Advertiser*.

Western Australia: Public tenders are called where the estimated value of the goods or services exceeds \$50,000. All government tenders over a threshold of \$50,000 are advertised. As a minimum, public tenders are to be advertised in the appropriate section of a newspaper with state wide circulation (the *West Australian* newspaper).

Queensland: All government tenders over a threshold of \$100,000 are advertised in the *Queensland Government Procurement Gazette*.

Victoria: All government tenders over a threshold of \$50,000 are advertised in the local media. The relevant publications are *The Age* and *The Herald Sun*.

Tasmania: All government tenders over a threshold of \$50,000 are advertised in local media. The relevant publications for gazettal are *The Mercury and The Examiner*. Where appropriate, tenders are also advertised in the national newspapers.

Northern Territory: All government tenders over a threshold of \$10,000 must be gazetted. The relevant publication is the *Northern Territory Government Gazette*.

ACT Government: All government tenders over a threshold of \$50,000 are published in the local newspaper, *The Canberra Times*.

Publication in Electronic Media

The following services are provided by State/Territory procurement regimes for the publication of procurement opportunities through electronic media:

The ACT Government publishes procurement opportunities through its local electronic media system, BASIS. BASIS is an on-line tender supply program which links purchasing officers with companies from the ACT and the southern New South Wales region. This system is not linked with the Internet.

The Victorian Government publishes some procurement opportunities on its internet site, *Tenders on Line*. The relevant internet address is: <http://www.vicnet.net.au/tenders/>

General information about Victorian State procurement can be obtained from the Victorian Government Procurement Board internet site: <http://www.vgpb.vic.gov.au>

The New South Wales Government publishes procurement opportunities on its internet site, NSW Government Business Opportunities. The relevant internet address is: <http://www.dpws.nsw.gov.au/tenders/>

As noted in Section 5A, the GEMS system provides links to any relevant State and Territory services available on the Internet.

Requirements laid down for possible suppliers

A.Commonwealth Procurement

6.(a)Are there registration, residence or other requirements for potential suppliers?

The Commonwealth government has no registration or residential requirements for potential suppliers.

However, the Commonwealth has put in place an Endorsed Supplier Arrangement under which only those suppliers who can demonstrate a commitment to world best practice in terms of quality standards and service, and long term value adding activities in Australia and New Zealand are eligible to supply information technology and major office machine products under common use arrangements.

(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

All domestic suppliers employing more than one hundred people must comply with the *Affirmative Action (Equal Employment Opportunity for Women) Act, 1986*.

Within the broad parameters of open and effective competition, buyers must be satisfied that the supplier selected will deliver the best available value for money. Simple procurements from reputable, established suppliers would not require an assessment of their capabilities. A detailed assessment may be required, however, when buying from unknown suppliers or suppliers of complex and high-cost goods and services. The services of in-house financial and technical experts or a specialist organisation may be utilized in these circumstances to assist with supplier assessment.

Conditions of assessment vary according to the nature of the requirement and at the discretion of the buying agency. However, the general aims of supplier assessment are as follows:

- to determine the capability of suppliers to meet the specified requirements including technical competence, available capacity, relevant experience, availability of key personnel, financial stability, management competence;
- to identify potential risks to the achievement of the primary procurement objectives;
- to acquire satisfactory evidence of overall performance and reliability in undertaking similar projects in either the private or public sectors;
- to evaluate the relative strengths and weaknesses of different suppliers as part of the bid evaluation process;
- to identify areas requiring special attention by agencies in managing the procurement project including, for example, ANZ industry development where appropriate; and
- to identify for individual suppliers key issues and priorities which must be addressed in negotiating and managing the contract.

Financial Guarantees

Financial guarantees are generally set at the discretion of individual Commonwealth government agencies. They include bank guarantees and retention sums which are normally sought to secure the timely performance of the contractor.

(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

The Commonwealth government has put in place the following general arrangements which act as approved supplier lists:

- Common Use Arrangements (CUAs) which are standing offers with companies to supply goods and services based on pre-negotiated terms and conditions and at agreed prices. Issues such as trade terms, delivery arrangements, discount schedules and all other contract details are agreed prior to suppliers being added to the contracts. Commonwealth CUAs cover most requirements for recurring needs across departments and are continually monitored to ensure that suppliers meet required standards.
- An Endorsed Supplier Arrangement for purchases of information technology and major office machines which recognises suppliers who can demonstrate a commitment to world best practice in terms of quality, standards and service, and long-term value-adding in Australia and New Zealand. Only endorsed suppliers can supply IT and major office machine products to government agencies under CUAs. The list of Endorsed Suppliers is reviewed biennially.

B.State and Territory Procurement

State and Territory procurement regimes generally follow Commonwealth procurement practice in emphasising open and effective competition as the central principle governing the selection of suppliers.

Some preference margins apply in State/Territory procurement. These are outlined in section 9B.

Criteria for assessing bids and awarding contracts

A.Commonwealth Procurement

7.(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

Obtaining value for money to Government is the central principle guiding Commonwealth procurement. There are no centrally prescribed contract award criteria. Agencies must decide their criteria for individual procurements in context. However, general guidance is provided on value for money.

For every procurement, Commonwealth agencies:

- evaluate the suppliers who have made offers;
- evaluate each offer seeking clarification from the bidder where necessary by applying only the evaluation criteria notified to bidders; and
- identify the bid which represents best available value for money.

The determination of relative value for money includes:

- establishing or verifying the competence, viability and capability of the prospective suppliers;
- confirming that the supplies offered comply with specified requirements including fitness for purpose and delivery;
- taking account of the benefits and costs involved on a whole of life basis;
- assessing and allowing for relevant risks; and
- ensuring avoidance of unnecessary costs.

Evaluation must be seen to be competent, fair and unbiased and Commonwealth buyers must maintain confidentiality and probity throughout the evaluation process.

(b) Is procurement subject to any offset provisions, such as local content, technology transfer or countertrade requirements?

There are no local content requirements or preferences for local suppliers in general procurement. However, agencies are required to investigate Australian and New Zealand (ANZ) industry capability and provide fair opportunity for suppliers to compete.

The Government does have some industry development programs. These include the Civil Offsets Agreement and the Partnerships for Development Program as outlined below.

The Commonwealth and States/Territories became signatories to the Australian Civil Offset Agreement in 1988. The agreement's objective is to contribute to the enhancement of Australia's industrial and technological development by establishing internationally competitive industries in Australia. The

Agreement states a preference for long term offsets programs which are not linked directly to any single Government purchase but which provide maximum benefits to local industry.

The Commonwealth abolished its civil offsets policy in 1992 and the States/Territories, while maintaining signatory status to the agreement, only occasionally apply offsets. The agreement is largely inactive although it continues to provide a framework for those States that continue to operate offsets programs. It also serves as the umbrella agreement for the Partnerships for Development Program (Pfd) in the international information technology and telecommunications (IT & T) sector.

The Pfd program and the Fixed Term Arrangements (FTA), encourages IT & T companies operating in Australia to make use of Australian skills and resources. Partners are encouraged to expand their operation by undertaking industry development activities in Australia that are long term, strategic to the partnership and make sound commercial sense. Companies are encouraged to seek out Australian products, services and skills with international prospects and mutually beneficial returns.

Companies with annual IT & T sales to Australian governments over \$40 M per annum are invited to sign a Partnerships for Development (Pfd) agreement. Firms with less than \$40 M per annum which wish to have their commitment to industry recognized, can enter into a FTA. Both programs are open to Australian and overseas companies.

Companies who have entered the Pfd/FTA program and are performing satisfactorily against their agreement will be considered as having demonstrated a commitment to investment and growth in their Australian activities. Activities and investments volunteered by Partner companies should be integral to global corporate strategies. Activities recognized under R&D, export, export facilitation, technology transfer, training, strategic investment and venture capital investment. The program also recognizes investment in establishing a regional headquarters in Australia, and the export of regional headquarters services, as an industry development activity.

(c)Is preference given to any particular enterprises or group of enterprises? If so, please specify.

There are no preferences given to any particular enterprises or groups of enterprises.

(d)Do the procurement criteria differ according to sector or region of the economy?

As noted in Section B below, some differences apply with respect to local preference margins associated with State and Territory procurement. These preference margins are outlined in Section 9B below.

(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

As noted in Section 1 above, the management of Commonwealth procurement is substantially decentralised. Each agency has the discretion to manage its own procurement programs within a centrally prescribed framework of procurement policy and advisory/guidance on best practices and techniques.

B.State and Territory Government Procurement

State and Territory Governments have their own procurement legislation, policies and procedures. Generally speaking, these correspond with the Commonwealth in their emphasis on obtaining value for money to government through open and effective competition. However, some differences apply with respect to local preference margins associated with State and Territory procurement. (See section 9B).

Disclosure of bids received and contracts awarded

A.Commonwealth Procurement Procedures

8.(a) How are tenders received, registered and opened?

Offers received are treated as commercial in confidence with information restricted on a need-to-know basis. All offers must be kept secure and sealed until the designated opening time. Commonwealth agencies are required to have procedures in place for receiving, storing, opening, registering, handling and filing offers.

Late submission of offers is not normally admissible. There is greater scope for flexibility in the treatment of registrations of interest and like material where the risks arising from a late submission are not as serious as for a late tender or quotation.

Government buyers are not permitted to canvass offers after the closing date from suppliers who have not submitted bids.

(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

Commonwealth agencies are required to notify in the *Purchasing and Disposals Gazette* details of any contract arranged for supplies to be procured or used in Australia where the total estimated liability is \$2000 or more, and standing offers.

Contracts arranged can include any commitment for supplies arranged, for example an oral or written contract, lease, corporate credit card transaction or purchase order. This includes procurements against any standing offer to supply arrangement such as service orders, period orders and national or

otherwise approved supply agreements for common use supplies, as well as period contracts, service contracts and maintenance agreements.

The procurement information provided includes:

Portfolio
Department or agency
Branch
Purchase Reference
Description of Supplies
Value (\$A)
Period Contract (if applicable)
Contractor (Supplier)
P&S Code (Product and Service classification)

(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

All suppliers who make an offer are entitled to a debriefing.

Typically the debriefing covers the reasons why the unsuccessful bidders were not selected. Debriefings may also assist suppliers who have won Commonwealth contracts previously and want to know how they performed against the evaluation criteria so as to continue to enhance their performance.

B.State and Territory Procurement Procedures

Generally speaking, State and Territory procurement procedures for the treatment of offers correspond with those of the Commonwealth noted above. However, some differences do apply, particularly in relation to the practices adopted in the opening of tenders in some States.

Receipt of Offers

Offers received must be treated as commercial in confidence with information restricted on a need-to-know-basis.

Offers must be kept secure and sealed until the designated opening time. State and Territory procurement agencies have procedures in place for receiving, storing, opening, registering, handling and filing offers.

Late submission of offers is not normally admissible. Government buyers are not permitted to canvass offers after the closing date from suppliers who have not submitted bids.

Opening of Tenders

The particular approach adopted in opening tenders is at the discretion of individual State and Territory procurement agencies. However, normal procedure is to convene a Tender Opening Committee consisting of not less than two members which undertakes the opening and scheduling process in a secure office. The public opening of tenders is sometimes practised in the case of higher value tenders.

Notification of Tender Outcomes

Standard procedure for State and Territory governments is to formally notify successful tenderers. However, the method for notification of outcomes to unsuccessful tenderers varies. Alternative modes of notification used by State and Territory governments include the placing of advertisements in the local media for contracts above a specified threshold, and/or the placement of tender outcomes on public notice boards within State/Territory procurement offices.

Debriefing Requirements

Normal practice is for procurement regimes to provide debriefings to unsuccessful tenderers on request. The debriefing typically covers the specific reasons why a tender was unsuccessful.

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of 'domestic' in relation to domestic services and suppliers.

A. Commonwealth Procurement

Open and effective competition is the central operating principle of Commonwealth procurement. There are no local content requirements or preferences for domestic suppliers in general procurement which would accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member.

B. State and Territory Procurement

Preference margins apply in Australian State/Territory procurement where one or more suppliers claim Australian or New Zealand (ANZ) content. These preference margins are applied by way of a surcharge on the non-ANZ portion of the tender.

The following preference margins are applied within individual States and Territories:

New South Wales	<p>An internal preference policy ranging from 2.5-5% applies when an offer or tender has been received from a specified NSW region and the preferred tenderer would have been from metropolitan NSW or overseas (except New Zealand).</p> <p>A 20% preference margin applies where one or more suppliers claim Australian or New Zealand content.</p>
South Australia	<p>A 20% preference margin applies where one or more suppliers claim Australian or New Zealand content.</p>
Western Australia	<p>A 10% preference margin applies to goods manufactured in WA regional areas as against the Metropolitan Statistical region up to a maximum of \$100,000.</p> <p>A 10% preference margin applies where one or more suppliers claim Australian or New Zealand content.</p>
Victoria	Nil
Queensland	<p>A 20% industry development clause applies in information technology contracts. The Queensland Government advises that this offset applies to all bidders, regardless of their State of origin and is not a preference margin as such.</p> <p>A 20% preference margin applies where one or more suppliers claim Australian or New Zealand content.</p>
Tasmania	<p>A 10% preference margin applies where one or more suppliers claim Australian or New Zealand content.</p>
Northern Territory	<p>A 10% preference margin applies where one or more suppliers claim Australian or New Zealand content.</p>
ACT Government	Nil

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

There is no special Commonwealth-wide system for dealing with procurement complaints or providing remedies for complainants. There are, however, a number of avenues of complaint available.

General Complaints

Suppliers who complain about procurement processes or decisions are entitled to receive a fair hearing from agencies. Agencies should accept complaints in the normal course of events in accordance with whatever procedures they have in place for handling complaints in general. Often buyers and suppliers can resolve them at the working level.

Any supplier may complain to the *Commonwealth Ombudsman* concerning actions or decisions by a buying agency which the supplier considers to be wrong, unjust, unlawful, discriminatory or unfair. If the Ombudsman finds a complaint to be justified, the Ombudsman may recommend a remedy, such as:

- an apology
- a reconsideration of or changes to a decision
- changes to agency rules or procedures
- compensation for losses or damages caused by the agency's decision or action, or
- changes to the law that caused the problem.

Agencies are not compelled to accept a recommended remedy, but if the agency does not act upon the recommendations adequately, the Ombudsman may report to the Prime Minister and then to Parliament.

Complaints to the Designated Body

Under the terms of the Government Procurement Agreement (GPA), a supplier may complain to the Designated Body about alleged breaches of the GPA by Commonwealth bodies. (The Department of Administrative Services (DAS) is currently the Designated Body for this purpose).

The principal review provisions of the GPA require that the parties provide non-discriminatory access to their procurement for Australian and New Zealand suppliers and products, and maximise the competitive opportunities available to them.

If the Designated Body cannot resolve the complaint satisfactorily, it will be referred to the National Supply Group (NSG). If the NSG cannot resolve the complaint, it may refer it for ministerial consideration. There is no requirement that a procurement process be suspended as a result of a complaint.

B.State and Territory Procedures

Suppliers may address complaints about individual government procurement decisions to State/Territory procurement agencies where they consider they have a grievance. Where a supplier is not satisfied with the agency's response, the complaint may be referred to the relevant State/Territory Government Minister.

A supplier may also complain to the State/Territory Ombudsman concerning actions or decisions by a Government agency which the supplier considers to be wrong, unjust, unlawful, discriminatory or unfair. The State/Territory Ombudsman's powers are generally the same as those exercised by the Commonwealth Ombudsman.

II.MEMBERSHIP OF PLURILATERAL, REGIONAL AND/OR BILATERAL AGREEMENTS

11.Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.

The Australian Government is a signatory to the *Australian New Zealand Government Procurement Agreement (ANZGPA) 1991*. The objective of this agreement is to remove discrimination in government procurement among the signatory parties. Members of the agreement include the Australian Commonwealth, State and Territory governments and the New Zealand government.

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12.(a)Please provide statistics (if available) on the number and value of services procurements

- ***on both an aggregate and sectoral basis;***
- ***by origin of services and suppliers.***

(b) Please provide statistics (if available) on the

- ***share of services procurement in total procurement;***
- ***share of procurement of each service in total domestic output of the service;***
- ***share of procurement of each service in total domestic consumption of the service.***

Total domestic consumption is defined as the sum of public and private consumption or the sum of domestic output and net imports (i.e. imports minus exports) of the service in question.

The following table provides available statistics on the number and value of service procurements compared with other types of procurements undertaken by the Australian Commonwealth government for the financial years 1990 through to 1995.

ANNEX I

Commonwealth Government Purchasing by Sector*

1990-91 to 1994-95**

Year	Primary	Manufacturing	Services	Grand Total
	\$,M	\$,M	\$,M	\$,M
1990-91	49.7	4999.7	1439.2	6488.6
	0.77%	77.50%	22.18%	100%
1991-92	31.2	2576.8	1666.1	4273.3
	0.73%	60.28%	38.99%	100%
1992-93	24.9	1730.7	2420.7	4176.3
	0.60%	41.44%	57.96%	100%
1993-94	13.2	2432.6	5214.6	7660.4
	0.17%	32.09%	68.78%	100%
1994-95	13.7	3107.2	4448.3	7581.1
	0.18%	40.99%	58.68%	100%*
*This total includes unallocated codes of \$11.9M or 0.15%.				

*Table compiled by the Electronic Commerce Office, Purchasing Australia using data from the Australian Government Publishing Service Database derived from the *Commonwealth (Purchasing and Disposals) Gazette*.

**These statistics include gazettal values for both contracts arranged and standing offers. However, the figures for standing offers are estimates only of the amounts to be spent under the standing offers. The statistics presented are also subject to limitations affecting the data source. These include a minimum \$2,000 threshold for the gazettal of government procurements which excludes all purchases below this value. In addition, the percentages quoted do not include some services which have not been bought through formal contracting processes (e.g. electricity, some telecommunications, rents and postal services).

B.State and Territory Procurement Statistics

Statistical information on State and Territory services procurement is not available.

Working Party on GATS Rules

QUESTIONS RELATING TO AN EMERGENCY
SAFEGUARD MECHANISM IN GATS

Note by the Secretariat

The Working Party on GATS Rules agreed at its eighth meeting on 8 October 1996 that the following questions relating to the establishment of an emergency safeguard mechanism under GATS would be circulated as a working document of the Working Party. The Working Party agreed that those Members wishing to do so would provide written replies to these questions.

What is the justification and purpose of an emergency mechanism under GATS?

1. The question of what a safeguard mechanism would be for involves the following considerations:
 - a. Would an emergency safeguard for services be intended to deal with the kind of situation foreseen in Article XIX of GATT -- that is, a temporary threat to a domestic "industry" arising from increased imports? Would it have any other objective?
 - b. Are existing "safeguard" mechanisms in GATS, notably those contained in Article XII and Article XIV, sufficient to address any difficulties governments might encounter as a consequence of their GATS commitments? Similarly, does Article XXI provide an adequate vehicle for reversing or modifying scheduled commitments in the event of unanticipated difficulties?
 - c. Does the nature of commitments undertaken in GATS -- whereby Members may choose whether to schedule a sector, and may also condition market access and national treatment with respect to commitments that are made -- obviate the need for safeguards? Or would it be more appropriate to think in terms of the idea that the existence of a safeguard would allow governments to be more forthcoming with respect to their scheduled commitments?
 - d. What would be the economic objective of a safeguard -- to protect production, investors, or employment? Would it protect all domestic production, or only that part of production attributable to national suppliers? Would it aim to

protect investment by nationals, or all domestically based investments? What would be the objective of allowing departures from national treatment under modes 3 and 4? Is the distinction between establishment rights *per se* and post-establishment operations relevant in relation to possible safeguard measures under modes 3 and 4?

- e. Would a safeguard mechanism need to contemplate special provisions for developing countries or does the concept of progressive liberalization offer adequate leeway in this respect?
- f. Is there anything intrinsic to service transactions, such as intangibility, simultaneity of production and consumption, or the need for physical proximity between the producer and the consumer, which makes (some) services transactions different from goods transaction in ways that might influence arguments as to the necessity or utility of safeguard measures in services?
- g. Is anything intrinsic to services markets, such as the role and importance of regulatory regimes, standards and certification requirements, which makes services markets different from goods markets in ways that might influence arguments as to the necessity or utility of safeguards measures in services?
- h. Is anything intrinsic to the role of services in the economy, such as their important support and infrastructure role, which makes services markets different from goods markets in ways that might influence arguments as to the desirability of safeguards measures in services?
- i. Do Members maintain any emergency safeguard measures in national legislation? If so, what are these measures and how are they implemented?

What criteria might be brought to bear in determining when an emergency safeguard measure may be justified?

2. A number of questions can be identified in relation to the criteria that might apply in determining the circumstances in which emergency safeguard measures are to be used. The questions included below assume that essentially the same GATT concepts of increased imports, injury and causality would apply under an emergency safeguards mechanism in GATS.

- a. What, in terms of GATS, is the equivalent of increased imports under Article XIX of GATT? In mode 1, the cross-border flow of services may be similar to the import of goods, but the situation is quite different under other modes. How should the possibility of a safeguard be triggered in these circumstances?
- b. How should serious injury be determined? Injury to whom or what?
- c. What standards would be required to determine that increased competition from foreign sources caused injury to the national industry?
- d. How would the national industry be defined for the purpose of determining injury?
- e. Should a link be established between the nature of a specific commitment in a particular sector, including in relation to limitations on market access and national

treatment, and the availability of a safeguard measure? In other words, should the availability or nature of a safeguard be restricted where limitations have been inscribed?

f. What measurement and identification problems arise in services that might complicate the development of a safeguard instrument, and how should they be dealt with?

What form might a safeguard mechanism for services take?

3. If increased foreign competition and serious injury to domestic services or service suppliers have occurred, and causality between the two has been established, a question arises as to the characteristics of a safeguard measure that might be applied.

- a. What type of measure should be applied? Would taxes, foreign exchange restrictions, other quantitative limitations, or regulatory restraints be suitable as safeguard measures?
- b. What would be the implications of different modes of supply for the kind of measures employed?
- c. Would there be circumstances in which the application of a safeguard measure in respect of one mode of supply would provoke a demand for comparable measures in relation to other modes at the same time?
- d. Should safeguards be applied on a non-discriminatory basis in all circumstances?
- e. How quickly would it be possible for a Member to take a safeguard measure? Would the notion of •critical circumstances,• as developed in the Agreement on Safeguards, apply in the services area?
- f. What should be the duration of any safeguard measures adopted?
- g. Would safeguard measures be made degressive during the period of their application?
- h. Would a Member taking a safeguard action be required also to adopt adjustment measures?
- i. Would the application of safeguard measures be accompanied by compensatory adjustments in the schedule of the Member taking the measure?

Working Party on GATS Rules Original: English

COMMUNICATION FROM THE REPUBLIC OF POLAND

Response to the Questionnaire on Government Procurement of Services

The following communication is being circulated at the request of the Republic of Poland to Members of the Working Party on GATS Rules.

I. EXISTING PROCUREMENT REGIMES

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

•Public procurement• - means procuring construction, the delivery of goods and performing services, financed fully or partially with public funds; (Art. 2(4)) The Act of 10 June 1994 on Public Procurement). •public funds• - means the following source of funds:

- a) funds from the state budget or the budgets of self-government units that are allocated for ordinary activity and capital investment activity;
- b) funds as defined in the Budgetary Act as •extra budgetary funds•;
- c) funds guaranteed, secured or for which the cost of the credit is co-financed by the state Treasury, the local self-governments or a union of self-governments;
- d) funds granted as foreign aid under international agreements, unless the agreement requires different procedures for using the funds.

The Act applies to public procurements issued by:

- 1) state units and support services created by the state budgetary units (including the ministries and central support offices);
- 2) units of self-governments;
- 3) funds established by state earmarks;
- 4) state and municipal entities that receive any public funds and perform public utility activities;
- 5) co-operatives, foundations and associations to the extent that they dispose of public funds.

The Polish term •zamówienia publiczne• is adopted from the historic reference to public acquisitions. The literal translation is ,public orders•, but as defined in the Act on Public Procurement (Dz. U. No. 76, Item 344) it is intended to mean •public procurement•.

The definition of •public procurement• encompasses only purchasing activities. It does not include selling government-owned property or granting concessions or licenses unless, within the scope of these activities, the government is actually purchasing goods, services or construction.

Administrative structure

2. How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

The Polish system of public procurement is a decentralized system where the procuring entities are in the very centre of the process of procurement realization.

On 1 January 1995 a central administration agency was created - the Office of Public Procurement, working directly under the Prime Minister. It is a policy making agency and does not conduct any procurements except for its own needs.

The scope of activities of the Office includes:

- approving as provided in Art. 15 the selection of a procedure for conducting a public procurement other than the unlimited tendering procedure; establishing and maintaining the list of arbiters to review the appeals filed in procurement proceedings, and publicizing the list of arbiters in the Bulletin of Public Procurement;
- presenting an annual report to the Council of Ministers concerning the functioning of the public procurement system;
- disseminating, in coordination with appropriate Ministries, the general conditions and forms of contracts for public procurements, the rules and

standard procedures for conducting procurements and information related to conducting public procurements;

- preparing drafts of Acts and regulations concerning public procurement;
- recording and maintaining the list of public procurements, and collecting information about procurement planning, signed contracts, and performance of public contracts;
- preparing training programs, and conducting and encouraging training concerning public procurements;
- cooperating with foreign entities on matters concerning public procurement;
- issuing the official Bulletin of Public Procurement.

Laws and regulations in force

3.(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

The main laws concerning the public procurement system in Poland include:

- The Act on Public Procurement with the implementing ordinances and orders;
- The Budgetary Act;
 - The Highest Chamber of Control Act;
- The Protection of Economic Turnover Act;
- The Fighting of Unfair Competition Act.

(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

There are no separate procedures for the procurement of goods and services.

Procurement procedures applied

4.(a) What procedures are followed in the procurement process?

Article 13 of the Act states:

Public procurements shall be conducted according to the following procedures:

- 1) unlimited tendering;
- 2) limited tendering;

- 3) two-stage tendering;
- 4) negotiations-with-retaining-competition;
- 5) request-for-quotation;
- 6) single-source procurement.

The preferred procedure for conducting public procurements is unlimited tendering (Art. 14). Procedures other than unlimited tendering can be used only under the conditions specified in the Act.

(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

Art. 15 of the Act states:

1. In public procurements valued less than 20.000 ECU and in public procurements financed with less than 20.000 ECU in public funds, unlimited tendering procedures are not obligatory and the following requirements of this Act shall not apply: the requirements related to the publication of announcements in the Bulletin of Public Procurement, written procedures, official records of proceedings, specification of essential provision of the procurement, time periods and deadlines, tender security and protests and appeals.
2. If the amount of the procurement exceeds 200.000 ECU, the selection of a procurement procedure other than unlimited tendering requires approval by the Chairman of the Office.
3. The Council of Ministers may, by ordinance determine before 30 September of every year, the obligatory thresholds limits reference in paragraphs 1 and 2 for the coming year beginning 1 January.

To determine the appropriate procurement procedure, this Article (15) together with Art. 71, subparagraph 7 divides procurements into four groups according to the estimated value of procurement:

- 1) Procurements valued 1.000 ECU or less - single-source procedures are permitted (Art. 71).
- 2) Procurements valued more than 1.000 ECU up to 20.000 ECU - simplified proceedings of the authorized procedures are permitted, only basic activities have to be recorded (Art.26), and use of any procedure other than unlimited tendering is determined by the procuring entity according to the conditions specified in the Act.
- 3) Procurements valued more than 20.000 ECU and less than 200.000 ECU - formal procedures are required and use of a procedure other than unlimited tendering is determined by the procuring entity according to the conditions specified in the Act.

- 4) Procurements valued more than 200.000 ECU - formal procedures are required and use of a procedure other than unlimited tendering requires approval of the Chairman of the Office of Public Procurement.

(c) *What are the time limits for submission of bids?*

The deadline set by the procuring entity for submission of tenders shall not be shorter than:

1) in an unlimited tendering

-6 weeks after the announcing of the tendering;

2) in a limited tendering

-4 weeks after the date of sending the invitation for tenders.

In justified cases and on motion of the procuring entity, the Chairman of the Office of Public Procurement may agree to establish shorter deadlines.

All required minimum deadlines must be counted from the date of the official tender publication in the Bulletin of Public Procurement.

Publicity for inviting tenders

5.(a) How are intended procurements publicised? Are invitations to tender published? If so, where, and in what languages?

The announcements of public procurements governed by the Act on Public Procurement are published in the Bulletin of Public Procurement issued by the Chairman of the Office of Public Procurement. The Bulletin is published 5-6 days a week. It has been published now for 17 months. The announcements are published in Polish but in especially justified circumstances, the Chairman of the Office of Public Procurement may agree to the preparation of the tender, including the announcement in a language commonly used in international trade.

Announcements in the media are totally to the discretion of the procuring media. Such announcements may be released first after the official announcements in the Bulletin.

(b) Do the extent and form of publicity differ according to tendering procedures applied and/or on the value of procurement?

Announcements of all unlimited tenders, irrespective of the value of procurement, must be posted in a public place at the site of the procuring entity. For

procurements valued over 20.000 ECU, the announcements also must be published in the Bulletin of Public Procurement.

(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

As stated in Art. 20 of the Act, the announcement shall contain at minimum:

- 1) the name and address of the procuring entity;
- 2) the quantity, amount and category of deliveries to be procured, or services to be supplied, or the category, range and location of construction;
- 3) the desired or required time period and deadline for performing the public procurement;
- 4) the information about conditions required of suppliers or contractors;
- 5) a statement of the applicability of national preferences;
- 6) the instructions for obtaining the documents specifying the essential provisions of the procurement and the price, if any, for these documents;
- 7) the place, the time period and the deadline for the submission of tenders;
- 8) the place and the deadline for opening deadlines;
- 9) the amount and form of the tender security;
- 10) contact person at the procuring entity.

(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set?

The price that there may be charged for the documents specifying the essential provisions of a procurement shall cover only the cost of printing and sending the documents.

(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

The Bulletin of Public Procurement is also accessible by the Internet at the address <http://www.urm.gov.pl/uzp/indexuzp.html>.

Requirements laid down for possible suppliers

6.(a) Are there registration, residence or other requirements for potential suppliers?

&

(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

To participate in a public procurement other than a proceeding conducted by request-for-quotation, every supplier or contractor has to declare that :

- 1) it has the legal capacity to enter into legal transactions according to legal requirements;
- 2) it has satisfied the legal requirements essential to perform the defined work or activities, if these legal requirements are established by an Act;
- 3) it possesses the knowledge, experience, financial resources, technical competence, personnel and all necessary capacity to perform the procurement;
- 4) it is in a financial situation to ensure performance of the procurement;
- 5) it is not excluded from the procurement proceeding under the provisions of the Act;

For procurements valued up to 20.000 ECU, the procuring entity may, but is not required to, request documentation supporting the declarations. For procurements value over 200.000 ECU, the procuring must request supporting documentation.

(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

No such official lists exist as of now.

Criteria for assessing bids and awarding contracts

7.(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

The procuring entity must determine the selection criteria appropriate for the particular procurement and consistent with the principles of the Act, generally defined in the definition of •best offer•. The criteria must be defined in the specification of the essential provisions of the procurement. Selection must be made in accordance with the announced evaluation criteria and relative importance of the criteria. Each offer is evaluated and points assigned for each evaluation factor.

(b) Is procurement subject to any offset provisions, such as local content, technology transfer or countertrade requirements?

Concerning local content see answer to question 9. Otherwise no.

(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

No.

(d) Do the procurement criteria differ according to sector or region of the economy?

No.

(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

Under procurements valued under 200.000 ECU the use of a procedure other than unlimited tendering is determined by the procuring entity. The procuring entity always determines the technical specification and award criteria.

Disclosure of bids received and contracts awarded

8.(a) How are tenders received, registered and opened?

The specification of the essential provisions of the procurement should contain a definite description of the place, the time period and the deadline for the submission of tenders. During a public procurement proceeding, the procuring entity shall prepare an official record of the procurement proceedings that shall contain information mentioned in Art. 25. The tenders shall be opened at the place and the time specified in announcement of the tendering. The offerors may be present at the opening of the tenders. The name and address of each offeror whose tender is opened, as well as the price of each tender shall be announced immediately to those persons present at the opening of the tenders and recorded immediately in the official record of the tendering proceeding

(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

After the selection of an offer the procuring entity gives prompt notice of the selection to other offerors, identifying the name and seat of the successful offeror and the price of its tender. An announcement with the above information is also published in the Bulletin of Public Procurement.

(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

No.

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of 'domestic' in relation to domestic services and suppliers.

As stated in Art. 18. 1, of the Act on Public Procurement •domestic as well as foreign suppliers and contractors shall be able to participate in procurement proceedings on equal basis according to the provisions of this Act•.

The definition of •domestic suppliers and contractors• - means natural persons residing in Poland, and legal persons and entities established under Polish law without legal personality that have their site in Poland (Art. 2.6).

Under the terms of Art. 18, a company with the participation of foreign capital established under the rules of the Polish law of 14 June 1991 may also qualify as a •domestic supplier of contractor •.

These two Articles (2.6 and 18) define the eligibility requirements for national preferences when applied in a public procurement proceeding.

If the value of the procurement does not exceed the amount referred in Art. 15. 1, (see answer to question 4(b) of this questionnaire) the procuring entity may limit participation in a procurement proceeding solely to domestic suppliers and contractors, and foreign suppliers or contractors that have a branch or a representative office in Poland (Art. 18.2.).

When applying national preferences in a procurement proceeding, the procuring entity must inform the suppliers and contractors about the national preference when it starts the procurement procedure. This declaration cannot be changed thereafter.

The Chairman of the Office of Public Procurement may waive the application of national preferences.

The specific rules applying to the national preferences in public procurement proceedings are specified in the Ordinance on applying domestic preferences issued by the Council of Ministers on 28 December 1994 and it includes:

- the following price calculations is used at the moment when applying national preferences in services - 20%;
- in procurement of services it is also obligatory to apply domestic preferences by means of using at least 50% of the value of domestic raw materials and products in the performance of a procurement.

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

The procedure starts at the moment the interested supplier or contractor submits a written protest to the procuring entity. Upon resolution or rejection of the

protest or in the case of failure to resolve the protest in due time (seven days from the day of filing), the interested supplier or contractor may file an appeal with the Chairman of the Office of Public Procurement.

One of the principal rules of appeals proceedings is speed (the panel of three arbiters reviews the appeal within 14 days). The costs of the appeal proceedings are to be covered by the party defined in the sentence. An appeal is reviewed by a panel of three arbiters selected from the list of arbiters maintained by the Chairman of the Office. One of the arbiters is selected by the supplier or contractor who has filed the appeal, one is selected by the procuring entity and one by the Chairman of the Office. If a party does not select an arbiter the Chairman will do so. The Chairman appoints the chairman of the panel of arbiters. The arbiters are neutral and do not represent the interests of the nominating party.

As a result of the review the panel shall uphold or reject the appeal and assess the cost of the proceedings. When upholding an appeal, the panel of arbiters may order the procuring entity to do or redo an action, or declare an action invalid except the action of signing the public procurement contract, or cancel the public procurement proceeding. The panel may not discontinue the appeal or allow an agreement between the parties. To the appeals proceedings the Acts of the conciliatory courts established in the Civil Procedure Code are applied. Both sides of the appeals procedure may, within a month from the delivery of the sentence, file a complaint to a public court for annulling the sentence of the arbitration panel.

II.MEMBERSHIP OF PLURILATERAL, REGIONAL AND BILATERAL AGREEMENTS

11.Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.

A. Poland has signed the Europe Agreement establishing an association between the Republic of Poland and the European Communities.

Article 67 states:

1. The Contracting Parties consider the opening up of the award of public contracts on the basis of the non-discrimination and reciprocity, in particular in the GATT context, to be a desirable objective.
2. Polish companies as defined in Article 48, shall be granted access to contract award procedures in the Community pursuant to Community procurement rules under a treatment no less favourable than that accorded to Community companies as of entry into force of this Agreement.

Community companies as defined in Article 48 shall be granted contract award procedures in Poland under no less favourable than that accorded to

Polish companies at the latest at the end of the transitional period referred to in Article 6.

Community companies established in Poland under the provisions of Chapter II of Title IV shall have, upon entry into force of the Agreement, access to contract award procedures under a treatment no less favourable than that accorded to Polish companies.

The Association Committee shall periodically examine the possibility for Poland to introduce access to award procedures in Poland for all Community companies prior to the end of the transitional period.

3.As regards establishment, operations, supply of services between the Community and Poland, as well as employment and movement of labour linked to fulfilment of public contracts, the provisions of Articles 37 to 58 are applicable.

B.Poland is a party of the Agreement between the EFTA states and the Republic of Poland.

Article 16 states:

1. The States Parties to this Agreement consider the effective liberalization of their respective public procurement markets as a desirable and important objective of this Agreement.
2. As of the entry into force of this Agreement, the EFTA States shall grant Polish companies access to contract award procedures on their respective public procurement markets according to the Agreement on Government Procurement of 12 April 1979, as amended by a Protocol of 2 February 1987, negotiated under the auspices of the General Agreement on Tariffs and Trade. Poland shall take into account the restructuring and development process of its economy, gradually ensure that companies from the EFTA States have access on the same principles to contract award procedures on its public procurement market.
- 3.As soon as possible after the entry into force of the Agreement, the States Parties to this Agreement shall progressively develop and adjust the rules, conditions and practices governing the participation in public procurement contracts, so to ensure free access and transparency, and that there is no discrimination between the potential suppliers from the States Parties to this Agreement. After a period of decreasing asymmetry in favour of Poland in their relations, a full balance of rights and obligations between the States Parties to this Agreement shall be established not later than at the end of the transitional period.

4. The Joint Committee shall agree or recommend, as appropriate, the practical modalities for this development including, *inter alia*, scope, timetable and rules to be applied, and designation of entities awarding public procurement contracts, that is public authorities, public undertakings and private undertakings which have been granted special or executive rights.

5. The States Parties concerned shall endeavour to accede to the relevant Agreements negotiated under the auspices of the General Agreement on Tariffs and Trade.

C. Poland is a party of the Central European Free Trade Agreement.

Article 24 states:

1. The Parties consider the liberalization of their respective government procurement markets as an objective of this Agreement.

2. The Parties shall progressively develop their respective regulations for government procurement with a view to grant suppliers of other Parties by the end of the transitional period referred to Article I of this Agreement, at the latest, access to contract award procedures on their respective government procurement markets according to the provisions of the GATT Agreement on Government Procurement of 12 April 1979, as amended by a Protocol of Amendments of 2 February 1987.

3. The Joint Committee shall examine developments related to the achievement of the objectives of this Article and may recommend practical modalities of implementing the provisions of paragraph of this Article so as to ensure free access, transparency and full balance of rights and obligations.

4. During the examination referred to in paragraph 3 in this Article, the Joint Committee may consider, especially in the light of developments in this area in international relations, the possibility of extending the coverage and/or the degree of the market opening provided for in paragraph 2.

5. The Parties shall endeavour to accede to the relevant Agreements negotiated under the auspices of the GATT.

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12.(a) Please provide statistics (if available) on the number and value of services procurements

- ***on both an aggregate and sectoral basis;***

- ***by origin of services and suppliers.***

No such statistics have, as of now, been completed.

(b) Please provide statistics (if available) on the

- ***share of services procurement in total procurement;***
- ***share of procurement of each service in total domestic output of the service;***
- ***share of procurement of each service in total domestic consumption of the service.***

Total domestic consumption is defined as the sum of public and private consumption or the sum of domestic output and net imports (i.e. imports minus exports) of the service in question.

No such statistics have, as of now, been completed.

Working Party on GATS Rules Original: English

COMMUNICATION FROM THE REPUBLIC OF KOREA

Response to the Questionnaire on Government Procurement of Services

The following communication is being circulated at the request of the Republic of Korea to Members of the Working Party on GATS Rules.

I. EXISTING PROCUREMENT REGIMES

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

Government procurement refers to the procurement of goods and services through contracts by the central government, local governments, or government-invested enterprises for their own use.

Administrative structure

2. How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

Basically, each government authority is responsible for procuring goods, and services for its own use. However, goods and works exceeding a given threshold value (in the case of construction, more than 2 billion won) which a specialized agency can procure more efficiently, should be procured and

supplied through the Office of Supply of the Republic of Korea which is the sole central procuring entity for government procurement (hereinafter referred to as OSROK) on behalf of central and local government agencies (so-called end-users). Other services can be procured by the OSROK when asked.

The OSROK's end-users are classified into two categories : obligatory and voluntary. The former consists of central and local government agencies, which are required to purchase their needed goods and works above a given threshold value through the OSROK. The latter consists of government-funded or government sponsored agencies, which have options to procure goods, services and works for themselves or through the OSROK.

Even the obligatory end users, however, are allowed to purchase goods and conclude construction contracts for themselves in cases of urgent procurement needs, small purchases below a given threshold value or procurement for national defense or security.

Each central and local government agency will forecast its needs for supplies and construction services during the course of a year; determine the purchase request plan with the preparation of the budgeted funds, and submit it to OSROK before the beginning of the next fiscal year.

Upon receipt of the purchase plans from the end-users, OSROK draws up a comprehensive Acquisition Program considering the end-users procurement plan for the coming year as well as the procurement level of the previous year. It will then procure and supply in a cost-effective and timely manner.

Laws and regulations in force

3.(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

(1) The Act Relating to Contracts to which the State is a Party (•ARCSP•) prescribes details concerning contracts in which the state is a party, facilitates procurement proceedings and contract administration, and provides details related to government procurement contracts through international competitive bidding. It also contains provisions related to national Treatment, Non-discrimination, and the Transparency of government Procurement.

(2) The Enforcement Decree and Regulation of the ARCSP provides details delegated by the ARCSP and those necessary for the enforcement thereof. The Special Enforcement Decree will enter into force on 1 January 1997. It is established with the goal of implementing the provisions of WTO/GPA.

(3)The Local Finance Law prescribes details concerning contracts to which the sub-central government is a party. The process of procurement applies in accordance with the provisions of ARCSP.

(4)The Government Invested Enterprise Management Law prescribes the basic details concerning contracts to which the government invested enterprises is a party. The process of procurement is applied in accordance with the provisions of ARCSP.

(b)Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

There is no differences between goods and services in the government procurement except threshold value.

Procurement procedures applied

4.(a)What procedures are followed in the procurement process?

In cases where a contract official enters into a contract related to a purchase, sale and lease, or any other type of contracts, he or she shall, in principle, announce it publicly and put it to a general competition. Provided that, if it is deemed necessary in light of the object or nature of a contract, he may restrict the qualification of participants, or bring nominated participants into a competition, or enter into a private contact. The examples are as follows

-In the case of a construction project, whose estimated price is more than 2 billion Won, a contract official may restrict qualification of a bidder, considering the past manufacturing or construction work performances of the participants.

-In the case where the goals of an agreement are hard to achieve unless the contractor has special facilities or technology, and if the number of tenderers who may apply for the tender is not more than 10 persons, a contract official can put it to a nominated competition.

-Cases for private contracts are as follows :

-where it is impossible to put it to a competition due to a technique or service of a specified person, location, structure, quality, etc.;

-where there is no time to put it to a competition, due to natural calamity, armed forces movement for the operation, extraordinary disasters, and other similar cases;

-where it is pursuant to a private group contract with small and medium enterprises in accordance with the provisions of the Small and Medium Enterprise Promotion Act;

-where the presumed price for construction work is under 50 million Won (other goods and services: under 20 million Won).

(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

See answer in 4(a) above.

(c) What are the time limits for submission of bids?

The deadline for filing the application documents shall be the day before the date of tender. Time limits for submissions of bids vary according to types or value of contracts. In principle, 10 days are given from the date of public notice. In case of construction work tendering, 7 days shall be given from the date of construction site explanation. The site explanation shall be carried out before the following period from the tendering date according to the size of presumed price: 10 days or more, less than 1 billion Won; 30 days or more, 1 billion or more but less than 5.5 billion Won; 45 days or more, 5.5 billion Won or more.

Publicity for inviting tenders

5.(a) How are intended procurements publicised? Are invitations to tender published? If so, where, and in what languages?

The public notice on the tendering shall be done by placing it in the daily newspaper or an official gazette (in case of a certain threshold value, such as above 300 million Won in construction work tendering) or by posting it on the notice board (when payment is in a foreign currency, the public notice can be in English). A public notice of tendering shall be given ten days immediately preceding the opening of the tendering.

(b) Do the extent and form of publicity differ according to tendering procedures applied and/or on the value of procurement?

If the presumed price is not less than the amount mentioned in any of the following items, it shall be placed in the official gazette or any daily newspaper.

- i. For construction: 300 million Won.
- ii. For manufacturing of goods: 100 million Won.
- iii. For purchases of goods, services or others : 50 million Won.

(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

The public notice shall contain the following details:

- matters assigned for tendering;
 - place, date and time for tendering and its opening;
 - place, date and time of the site explanation;
 - matters on the qualification of tendering participants;
 - matters of the security deposit for tendering and its reversion to the National Treasury;
 - place where the conditions of the contract will be disclosed;
 - matters on the nullification of tendering;
 - where tendering by mail is permitted, such indication and address to which the tendering application should be sent;
- where a joint contract is permitted, the statements indicating that it is possible and the method of performance of the joint contract, etc.

(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set?

There are charges for obtaining the full set of tender documents, which differ according to number of pages. All documents related to the procurement by the OSROK can be read, brought or copied at the Total Service Centre in the OSROK.

(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

GINs (Goldstar Information Network Services) is an electronic system for publicizing information related to tenders and contracts through the Value Added Network. It has functions for databases and E-mail. It covers information on the procurement of about 350 procuring entities such as OSROK, Korea Telecommunications, Korea Electric Power Organizations. GINs also covers information on procurement of foreign goods, services and facility construction contract.

Requirements laid down for possible suppliers

6.(a) Are there registration, residence or other requirements for potential suppliers?

In order to efficiently administer procedures of competitive tendering, a contract official may annually set a specific period in which the registration of eligibility for participation in competitive tendering can be done. Chances for the registration can be extended one to twelve times per year. Public notice for the registration shall be placed in a daily newspaper. In case of a joint contract, there is no restriction on the place of the head office, which is supposed to expire on 31 December 1996.

(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical

qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

To confirm eligibility of suppliers to fulfil obligations of a contract official shall review the qualifications of a bidder. Requirements for competitive tendering are as follows:

- a participant should be owning or leasing the facilities or stores which are required for manufacturing or supplying the objects of the relevant tendering;
- when any approval, permit or license, or any qualification is required pursuant to the provisions of other laws, the relevant approval, permit or license should have been obtained or should be qualified for such approval, permit or license;
- when any inspection, such as inspection for security, is required, its results must be accepted by the relevant authority;
- a participant should have a business entity registration certificate issued in accordance with the provisions of the Value Added Tax Law.

(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

There is no specific list of approved suppliers.

In case of construction works prescribed by a Prime Minister's Decree, a contract official may screen the qualification of the applicants for tendering in advance and then select the qualified persons who may participate in the competitive tendering. In this case, he or she shall notify the selected person of the results of such a selection.

In the event that a contract official screens the qualifications of the participants tendering, he or she shall determine the detailed screening standards of the relevant qualification according to the screening standards as determined by the Minister of Finance and Economy.

Criteria for assessing bids and awarding contracts

A. Commonwealth Procurement

7.(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

In case of a contract for construction with a presumed price less than 10 billion Won (in case of other services, less than 1 billion Won), a successful tender is the person with the lowest tender price under the estimated price, provided that the tender price shall not be less than the amount of 88% of the estimated price.

In case of any contract with a presumed price more than the amounts mentioned above, the successful tenderer shall be determined through reviewing the performance ability of the concerned contract in the order of the lowest tender price under the estimated price. The standard for reviewing the performance ability is publicized before the tendering date.

(b) Is procurement subject to any offset provisions, such as local content, technology transfer or countertrade requirements?

There is no offset provision such as technology transfer or counter trade requirements in the government procurement.

(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

No preference is given to any particular group related to service procurement.

(d) Do the procurement criteria differ according to sector or region of the economy?

There is no difference in criteria according to sector or region of the economy, except a restriction on participation in tendering by the location of its principal office for a contract whose estimated price is below 2 billion Won in case of construction, and 300 million Won for services.

(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

A purchasing authority can use negotiation procedures under specific conditions (e.g. urgency, security, etc.). In case the lowest tender price system is applied, there is not room for a purchasing authority. In case of the performance ability test system, the authority should evaluate the performance ability of bidders on the basis of predetermined assessment criteria.

Disclosure of bids received and contracts awarded

8.(a) How are tenders received, registered and opened?

To file the application documents for participation in tendering, a bidder shall submit them by the day before the date of tender. In principle, the application for tendering shall be submitted by the tenderer for himself/herself at the place, date and time indicated in the public notice for tendering. Provided that, if tendering by mail is permitted, the submission may be possible by mail. The opening of the tendering shall be conducted at the place, date and time indicated in the public notice of the tendering in the presence of the participating tenderers. In case a participating tenderer is not present at the opening of the tendering, a public officer not related to the opening of the tendering shall be present on behalf of such persons.

(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

There are no regulations required to publish details of the contracts awarded or notify unsuccessful tenderers.

(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

When inquired, a contract official may inform the unsuccessful bidders of pertinent reasons.

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of 'domestic' in relation to domestic services and suppliers.

Provisions of Non-discrimination are prescribed in the ARSCP. The related presidential decree and other regulations will be established by the end of 1996.

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

(1) The scope of complaint or appeal

According to the provisions of the WTO/GPA and related domestic regulations, the Committee for International Dispute Mediation shall be established in January 1997, when the GPA takes effect.

The scope of complaint or appeal include:

- details related to the scope of the government procurement contracts in International tendering;
- details related to qualifications for the bidder, tendering procedures and awarded of contract.

(2) Procedure for complaint/Appeal

A supplier or contractor shall submit a complaint within 15 days after the occurrence of the act which is the cause of the objection or 10 days after acquiring knowledge of such an act.

The head of the relevant procuring entity shall, within 40 days of the receipt of the complaint, examine and take necessary measures such as a correction and give a prompt notice of the decision to the supplier or contractor submitting the complaint.

The supplier or contractor who has no objection to the above measure can request a review from the Committee for International Dispute mediation within 15 days after the receipt of the notice decision.

The Committee, unless there are any other specific reasons, will review and arbitrate the appeal filed within 50 days after its receipt.

(3) Type of remedy that may be granted

Suspension of tendering proceedings or awarding of contractors may be granted by the Committee, when necessary, until the arbitration (mediation) process in the Committee is completed.

The mediation shall be final unless the applicant of the appeal or the head of a procuring entity concerned has any objection to it within 15 days after the completion of mediation. It shall have the same effect as an out-of-court settlement.

Legal channels for complaints or appeals are open to any suppliers. Appeals can be raised to a civil suit.

II. MEMBERSHIP OF PLURILATERAL, REGIONAL AND/OR BILATERAL AGREEMENTS

11. Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.

Korea joined the Plurilateral Agreement, WTO/(GPA, in 1994.

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12.(a) Please provide statistics (if available) on the number and value of services procurements

- ***on both an aggregate and sectoral basis;***
- ***by origin of services and suppliers.***

(b) Please provide statistics (if available) on the

- ***share of services procurement in total procurement;***
- ***share of procurement of each service in total domestic output of the service;***
- ***share of procurement of each service in total domestic consumption of the service.***

Total domestic consumption is defined as the sum of public and private consumption or the sum of domestic output and net imports (i.e. imports minus exports) of the service in question.

The aggregate value of services procurement by entities pursuant to the provisions of the WTO/GPA is about 1,012 billion Won in 1995. The share of services procured of the total procurement (27,270 billion Won) was 3,7% in 1995. Detailed data on the service procurement is not available.

Working Party on GATS Rules

COMMUNICATION FROM THE EUROPEAN COMMUNITIES
AND THEIR MEMBER STATES

Response to the Questionnaire on Government Procurement of Services

The following communication is being circulated at the request of the European Communities and their Member States to Members of the Working Party on GATS Rules.

Introductory Comments

1) The answers to the questionnaire on government procurement of services explain the regime which is applicable at European Community level based on the general principles of non-discrimination, as laid down in the EC Treaty and the directives taken to implement these principles at Community level (so-called secondary legislation).

2) In the answers, Member States specify the way in which they have implemented the Community regime at national level as well as explaining, to the extent relevant, the national rules that they have governing the procurement of contracts below the Community thresholds. Since not all Member States have specific or separate rules for contracts below threshold, not all Member States have responded to all questions.

3) Member States are cited by the following abbreviations:

A Austria

IRL Ireland

B	Belgium	L	Luxembourg
D	Germany	NL	The Netherlands
DK	Denmark	P	Portugal
E	Spain	S	Sweden
EL	Greece	SF	Finland
F	France	UK	United Kingdom
I	Italy		

4) No answers have been provided to the questions under point 12 due to the lack of accurate and relevant data. This is to be regretted while at the same time it is noted that many Members are in a similar situation. The lack of statistics at this stage should be seen as an incentive to engage better in this part of the work.

1. EXISTING PROCUREMENT REGIMES

Definition

1. ***What is the definition of government procurement employed in completing this questionnaire?***

Government procurement covers written contracts for pecuniary interest awarded by public authorities, semi-public bodies and the •utilities• which supply water, energy, transport and telecommunications services within the scope of the European Community legal provisions concerned.

The entities in question are subject to a common EC-wide regime for procurement above certain threshold values. There are seventeen categories of services (including construction services) are subject to all the obligations contained in the relevant legislation. The rules concerning procurement under the threshold values are defined by national law, in accordance with the general principles of law laid down in the EC Treaties.

Administrative structure

2. ***How are government procurement activities administered? To what extent are procurement activities centralised? Please specify the identity of any central procurement agencies and their respective responsibilities.***

Administration of public procurement activities varies according to the type of procurement, the contracting entity and its country of location.

-A. Procurement activities are not centralised; each of the individual government agencies is responsible for its own procurement of goods and services.

-B. Legislation on government procurement is federal, however, the responsibility of the award and execution of contracts remains on each

contracting entity, following the laws, regulations or other legal texts. Therefore, there is no specialised central agency for the award of public contracts.

-D. In principle all authorities procure in their own responsibility, so public procurement activities are basically decentralised. Central purchasing is the exception and is only executed by the procurement department of the Ministry of the Interior for the demand of the Ministry (BMI), procurement department of the army for the demand of the armed forces, procurement department of the *Land*Hesse for the demand of the *Land*Hesse.

-DK. The structure of the public procurement in the Danish system is essentially a decentralised one, both at central government, regional and local level. Within the different authorities, the degree of independence of the various subdivisions (agencies, institutions etc.) varies between a relatively high degree of independence in some instances and a relatively high degree of centralisation in other.

A 100 pct publicly owned company, •National Procurement Denmark Ltd• (*Statens og Kommunernes Indkøbsservice A/S*) offers the possibility to procure via framework contracts which have been submitted for tender. There is, however, no obligation on public institutions to procure via these framework contracts. The degree of -voluntary- use of this alternative to •direct• procurement on the basis of a contract between a public authority and a supplier varies from area to area. The •National Procurement Denmark• cannot be said to have a dominant position in any segment of the Danish public procurement market. Similar cooperation arrangements on procurement have been entered into by some regional and local authorities.

-E. Public procurement activities are administered following the rules contained in the relevant laws, regulations and administrative provisions. These activities are decentralized. Each contracting authority procures on its own. Only particular purchases declared to be of common interest by the State are centralized. The purchasing bodies of the State (*Administración General del Estado*) are: Ministerial Departments, autonomous bodies and entities ruled under Public Law (including universities). The purchasing bodies of the Regional subdivisions (*Comunidades Autónomas*) are: seventeen Regions and two towns within the same regime, which have a system similar to that of the central State: Departments (*Consejerías*), autonomous bodies and entities ruled under Public Law (including universities). The purchasing authorities at local level (*Administración local*) are: Provincial Institutions (*Diputaciones Provinciales*), Municipalities (*Ayuntamientos*), entities constituted by several municipalities, autonomous bodies and entities under public law, as long as they exist.

-EL. According to the Hellenic Administrative System, the legislation on public works contracts and designs fall into the competence of the General Secretariat of Public Works of the Ministry of Environment, Physical Planning and Public Works. The Government intends to implement

Directive n°92/50 on Public Procurement of Services and assign the relevant competence to the Ministry of National Economy. Directive 93/38, concerning telecommunications, energy, water and transports sectors has not been incorporated in the Hellenic legislation yet, due to a period of transition, ending on 1 January 1998.

- F. Contracts concluded by the State are prepared, awarded and signed by high level officials specially authorised. Empowered to award public contracts, on the one hand, are the directors of the central administrations (around 200), on the other hand, the administrative chiefs (*Préfets*) of Regions and Provinces (*Départements*). Public contracts awarded by the local entities (municipalities and groups of municipalities, around 36.000; provinces: around 150; regions: 26), or the national public establishments (around 800) or local public establishments (around 8.000) are awarded by the legal representative of the entity concerned (mayor, president, director general). Public contracts awarded by public enterprises or private ones that have special or exclusive rights (directive 93/38) are signed by the president or the director so authorised by the enterprise.

Government and Parliament adopt the relevant legislation which is applied by the territorial entities and the public establishments, without the intervention of the state officials. However, state services control the application of public procurement legislation by the contracting entities and can, if necessary, take action before the competent judge in order to finalise the alleged infringement.

- IRL. Government procurement in Ireland is mainly organised on the basis of the delegation of responsibility to each individual Contracting Authority, which can comprise of Government Departments and Offices; local authorities; autonomous public health and educational bodies and other bodies coming within the definition of the public sector by virtue of EU or national rules. Public procurement activities are not therefore centralised to any appreciable extent.

There is a small amount of centralised purchasing within a body known as the Office of Public Works (works contracts for central government agencies, parks, museums, inland waterways and certain tourist facilities). A division of this office, known as the Government Supplies Agency has a centralised procurement function for central government agencies, including the police, in respect of clothing, fuel, vehicles, printing, publishing and furniture. As paymasters to local authorities and health agencies respectively, the Departments of the Environment and Health have considerable influence over procurement in these bodies, but not a centralized procurement role.

All other procurement is carried out by the individual Contracting authorities as referred to above with the exception of occasional combined purchasing arrangements between regional and health bodies for individual contracts.

- L. Public procurement is not centralised; each contracting entity conducts its own procurement. Contracting entities are the central authorities, local authorities, intercommunale entities, public establishments or private entities (utilities). The most important contracting entity is the Ministry of Public Works, which is also competent for public procurement legislation and implementation of the EC directives.
- NL. Dutch procurement policy and activities are decentralised, i.e. each entity is responsible for its own procurement and observance of applicable regulation. There is no central legislation on procurement of services contracts other than required by the EC directives. The Ministry of Economic Affairs is responsible for transposition of international regulations into national legislation and provides information on the application thereof. Contracting entities are indicated in annexes to the GPA and to the EC-directives.
- P. Government procurement of services is not centralized by a specific entity.
- S. Every public authority, utility or enterprise, foundation, association etc. which has been specified under question 1 constitutes an individual procurer. The procurers are responsible for their own procurement and for following the prevailing rules for procurement. In Sweden there is however a certain degree of coordination of state procurement. The Swedish National Audit Office (*Riksrevisionsverket*) authorizes various public authorities to sign framework agreements for the government. These framework agreements are not binding and hence voluntary for the procurers. The possibility of subordering from these agreements is limited to authorities which legally belong to the government. Public enterprises therefore cannot use the framework agreements.

In Sweden, *Nämnden för offentlig upphandling* (NOU) is a public authority employing nine people, of whom six are legal advisors. NOU supervises all public procurement in Sweden as defined in the law on public procurement (LOU) and in the rules of GPA and GATT. NOU may collect all necessary information from the procurers to carry out its task. The information should normally be submitted in written form but may (due to the extent of the material, haste or other circumstances) also be collected through a physical visit by the authority's officials. NOU cannot impose sanctions if it finds that the procurer has violated the law on public procurement. However, it could take a decision which later could be invoked in a process on indemnity in the district court.

- SF. The Ministry of Trade and Industry has an overall responsibility for public procurement legislation in Finland. However, government procurement activities are decentralised in the sense that each contracting entity is responsible for its own procurement practices.
- UK. In the UK there is no national procurement system and prior to the implementation of the EC rules there was no UK legislation. Procurement

is conducted under value for money policy, which ensures non-discrimination. Central advice on procurement policy is provided by HM Treasury's Central Unit on Procurement, but government departments, local authorities and public sector utilities are each responsible for their own procurement. Departmental expenditure is subject to scrutiny by Parliament's Public Account Committee, through the National Audit Office. Local authorities are subject to specific legislation on their procurement and are subject to scrutiny by the Audit Commission. A significant element of departmental procurement expenditure is made through, or with the advice of, the following Central Purchasing Agencies: Her Majesty's Stationery Office (HMSO), the Central Office of Information (COI), the Buying Agency (TBA), the Government Centre for Information Systems (CCTA), but departments are free whether to use their services or not.

Laws and regulations in force

3.(a) *Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exists. Please provide a brief summary of the content of each of these measures.*

(i) At E.C. level, general public procurement rules stem from the Rome Treaty. Those rules have been completed by several Community Directives, specially with respect to procedural requirements.

The main E.C. Treaty articles having consequences for public procurement are articles 6 (non discrimination on grounds of nationality principle), 30 & seq. (the ban on quantitative restrictions on imports and all measures having equivalent effect), 52 & seq. (the right to establishment in the territory of another Member State) and 59 & seq. (freedom to provide services).

Secondary legislation applies those general principles to concrete matters. Thus, there is a group of Council Directives laying down procedures with respect to Public Procurement. These directives need implementation at national level and their purpose is to harmonize the procedures to be followed in each Member State whenever a contract is to be awarded whose value exceeds a certain threshold.

For contracts below the threshold, national rules are not bound by the EC directives, though the general rules of the Treaty still apply. This means that, below the threshold, national rules are not uniform, so each Member State has its own public procurement rules which must only respect the general principles laid down in the Treaty, in particular non-discrimination in respect of goods and services.

The directives fall into two groups, those governing the traditional areas of public procurement (Public Authorities directives or traditional sectors

directives), and those dealing with water, energy, transport and telecommunications (Utilities directives or •excluded• sectors directives). Both groups are completed by two Remedies directives. Although they differ in a number of respects, both groups apply the following principles: a ban on discrimination; open access to all EC suppliers, transparency of award procedures; a precise indication of which of the permissible award procedures has been chosen; compliance with technical requirements and transparency of the procedures of selecting contractors and awarding contracts, through the use of objective criteria which must be known beforehand.

(ii) The Public Authorities Directives: contracting authorities within the sense of those directives are the State, Regional or Local authorities, and bodies governed by public law.

- Council Directive n° 93/36, as amended, co-ordinating procedures for the award of public contracts (The Public Supplies Directive). This directive is not relevant as regards services.
- Council Directive n° 93/37, as amended, concerning the co-ordination of procedures for the award of public works contracts, (the Public Works Directive). This directive covers contracts between a contractor and a contracting authority concerning the execution or both the execution and design of works related to building or civil engineering activities, in addition to ancillary supplies and services contracts necessary for their execution.
- Council Directive n° 92/50, as amended, relating to the co-ordination of procedures for the award of public service contracts, (the Public Services Directive). This directive covers all contracts between a contracting authority and a service supplier which are not yet covered by existing other public procurement directives. Services are divided into two categories, priority services for which there is a complete set of rules, and other services for which the requirements are much lesser (see articles 8-10). Priority services are listed in Annex IA of the directive, which includes those services which are most concerned with cross-frontier trade. Annex IB lists those services which seem less susceptible of being a subject of European-wide competition. This second category is subject to a more flexible regime: only common rules on technical specifications and post-award information notices are compulsory.

However, some contracts are excluded from the scope of this directive: contracts for the acquisition or rental, by whatever financial means, of land, existing buildings, or other immovable property or concerning rights thereon (nevertheless, financial services contracts concluded at the

same time as, before or after the contract of acquisition or rental, in whatever form, shall be subject to this Directive); contracts for the acquisition, development, production or co-production of programme material by broadcast and contracts for broadcasting time; contracts for voice telephony, telex, radiotelephony, paging and satellite services; contracts for arbitration and conciliation services; contracts for financial services in connection with the issue, sale purchase or transfer of securities or other financial services; employment contracts; research and development service contracts other than those where the benefits accrue exclusively to the contracting authority for its use in the conduct of its own affairs, on condition that the service provided is wholly remunerated by the contracting authority (art.1). Moreover, the directive is not applicable to public service contracts awarded to an entity which is itself a contracting authority within the meaning of art. 1(b) of the Directive (art.6).

This directive applies to public service contracts awarded in the field of defence, except when they are covered by the national security clause (art. 223 of the Treaty).

-Council Directive n° 89/665, as amended, on the co-ordination of the laws, regulations and administrative provisions relating to the application of review procedures to the award of public supply and public works contracts, and public services (the Public Remedies Directive). This directive provides for the establishment (if they do not already exists) of courts or tribunals with real powers to settle the conflicts which could arise between contracting authorities and firms, suppliers of services or individuals.

(iii)Utilities Directives: Water, energy, transport and telecommunications sectors.

-Council directive n° 93/38, as amended, co-ordinating the procurement procedures of the entities operating in the water, energy, transport and telecommunications sectors (the Utilities Directive). This directive rules those contracts stipulated by both private and public utilities operating in the so-called •former excluded sectors• of water, energy, transport and telecommunications operating in the said sectors, on the basis of special or exclusive rights granted by the competent public authority. Rules applying to those sectors are more flexible than those for the traditional public procurement sectors. In what regards services, similarly to the Services Directive, services are divided into two categories (articles 15 to 17).

-Council directive 92/13, as amended, co-ordinating the laws, regulations and administrative provisions relating to the application of Community rules on the procurement procedures of entities

operating in the water, energy, transport and telecommunications sectors (the Remedies Utilities Directive). This directive also provides for the establishment (if they do not already exist) of courts or tribunals with real powers to settle the conflicts which could arise between contracting authorities and firms, suppliers of services or individuals in the sectors concerned.

(iv) As already stated, E.C. Directives are not applicable to minor contracts, i.e. below threshold. The thresholds are as follows (classic sectors): 5.000.000 ECU for works; 200.000 ECU for services. Regarding the former excluded sectors the thresholds may vary: 5.000.000 ECU for works, 600.000 ECU for services (in telecommunications) and 400.000 ECU for services (the other three sectors). In any case, the general provisions of the Treaty apply to minor contracts, including the non discrimination principle and the free movement of services.

(v) At Member State level, national legislation has implemented EC rules. Furthermore, national legislation applies to minor contracts not subject to the EC directives.

- A. Procurement regulations above the thresholds are in accordance with EU-directives. For Central Government Entities they are specified in the Federal Act •Bundesvergabegesetz 1993•, being revised at present. Each of Austria's 9 states (•Bundesländer•) follows its own internal procurement rules and regulations, based on the common standard •ONORM A-2050•, which correspond to the regulations of the EU-directives. Procurement regulations below the thresholds of the EC-directives at federal level are also based on the common standard •ONORM A-2050•. Equal treatment of bidders and non-discrimination are basic principles of this common standard. The revised *Bundesvergabegesetz* implements the obligatory use of •ONORM A-2050• below the thresholds. Regulations of the nine *Bundesländer* below the thresholds differ but are in most cases also based on •ONORM A-2050•.
- B. Legislation on public procurement of goods, works and services is part of the competencies of the federal authorities, which have enacted an Act and implementing regulations (*arrêtés royaux*). This legislation applies to any public contract, regardless of its value, if they have a pecuniary interest. For the contracts below the EC or GPA thresholds, rules are largely harmonized with those established in the Directives and the GPA.
- D. The basis of the German procurement law is article 57a to 57c of the *Haushaltsgrundsatzgesetz* (Budgetary principle law). Article 57a defines the groups of contracting authorities. Articles 57b and c are concerned with the review procedures used in cases of violation of procurement provisions. The contract award regulations that German contracting authorities must comply with are the following: *Verdingungsordnung für Leistungen*,

VOL/A (Code for Awarding Public Supplies Contracts including services, but excluding public works contracts); *Verdingungsordnung für Bauleistungen*, VOB/A (Code for awarding public works contracts). Each code is divided into 4 sections. VOL/A: the first section contains provisions for national awards of supplies and services contracts below the EC thresholds; the second section contains provisions which implement the regulations of the EC public supplies Directive 93/36 and in future the EC public services Directive (92/50). Contracting authorities must comply with this section if the contract exceed the EC thresholds; the third section contains provisions applicable to public contracting entities operating in the water, energy, transport and telecom sector according to the EC Utilities Directive 93/38; the fourth section contains the implementation of the EC Utilities Directive for private contracting authorities. The VOB/A is similarly divided: first section, national regulations for the awards of public works contracts below the EC thresholds; second section, regulations which implement the EC public works Directive 93/37 and therefore are relevant to contracts above the EC threshold; third section, provisions which implement the EC utilities Directive concerning public contracting authorities; fourth section, implementation of the EC utilities Directive for private contracting authorities.

- DK. The following regulations apply in Denmark also to contracts of a value inferior to the thresholds: Circular of 14 April 1989 issued by the Housing and Building Agency which prescribes that state construction contracts and construction contracts subsidized by the state shall be subject to a public tender; Circular of 1 March 1994 issued by the Ministry of Finance which imposes an obligation on central government institutions to undertake a market testing on a regular basis with a view to a possible contracting out of a given activity.
- E. Basic legislation. Law 13/1995 (18 May) of Public Procurement. Its personal scope covers the State, the Regions, the Local administration, the autonomous bodies and the entities subject to public law which has their own legal personality and linked to any Public administration which have been created to satisfy the general interest or whose activity is mostly financed by public administrations, or whose direction is controlled by public administrations, or whose direction bodies are composed in their majority by persons appointed by public administrations or other entities of public law. Royal Decree 390/1996 (1 March), implementing the Law 13/1995. Also relevant are: Law 30/1992 (26 November) on the Legal regime of the Public Administrations and on the Common administrative procedure; Law 7/1985 (2 April) on the Local administration. Furthermore, there are some specific regulations enacted by the Regions.
- EL. As concerns contracts of public works the value of which is lower than the threshold established by Directive 93/37, Greece applies Law n° 1418/84 (as modified notably by Law n° 2299/94, Law n° 2308/95, Law n° 2372/96 and by Presidential Decrees) implementing the general provisions of the Treaty. In most cases, an open or restricted tendering procedure takes place and -in

exceptional cases- a negotiated procedure. For those public works contracts equal to or exceeding ECU 5 million in value, Greece applies the Treaty and Directive 93/37 as incorporated in the Hellenic legislation through consecutive presidential Decrees (notably 23/93 and 85/95). For all contracts for design and construction of public works, tendering and monitoring is carried out at three levels: central, peripheral and local level. As regards public services contracts, a legislation of a systematic and general nature is presently absent, pending the incorporation of Directive 92/50 into the Hellenic legislation. For the public services contracts with a value lower than the threshold of ECU 200.000, Greece applies Law n°2362/95 (art. 82 & 83) which provides for public tendering. As an exception, the public procurement of services after a simpler procedure or a negotiated procedure is allowed. There also exists a special legislation for public works design contracts, which, however, has to be modified, pending the incorporation of the 92/50 Directive. The processes for public procurement of services for the entities operating in the utilities sectors, will be provided for in the forthcoming legislation incorporating Directive 93/38.

- F. Every contract awarded by the State, the territorial subdivisions and the public bodies follow the rules established by the Code on Public Procurement, which comprises all the texts concerning the award of public contracts. Those rules are similar to those of the EC directives, although some time-limits are different. The Code establishes the general principle of freedom of access for candidates to public contracts, and that of equality of treatment for both candidates and tenders. It sets out that the award of contracts is done, in general, after a call for tenders, and limits the cases in which a negotiated procedure can be used.
- I. The Italian regime in force concerning public procurement of services has been regulated by two Legislative Decrees, that is to say, two laws delegated from Parliament to Government. The first, Legislative Decree of 17 March 1995, n°157 has transposed into Italian legislation the Directive 92/50 (public procurement of services in the traditional sectors). The second, Legislative Decree of 17 March 1995, n°158 has transposed the Directives 90/531 and 93/38, concerning the so-called excluded sectors.
- IRL. There is no body of law governing public procurement in Ireland law except for that provided for under European Community; WTO and other international obligations. Ireland has implemented into law all EU public procurement Directives by means of secondary legislation, that is by way of •Statutory Instruments• which transpose the Directives directly into Irish law.

With respect to contracts below EU thresholds, there are no legally binding regulations but there are national government guidelines which public authorities are bound to follow. The national guidelines are published by the Department of Finance and were last issued in 1994. The guidelines sets out the requirements for dealing with sub-threshold and above-threshold EU contracts. The Guidelines apply to •Government Departments, local and

regional authorities and other bodies dependent on State funding, in the award of public sector contracts (including the acquisition, letting and disposal of public property)•. In addition, it is pointed out that commercial and non-commercial State bodies should comply with the broad principles of Government contracts procedures and that tax clearance procedures are obligatory in all cases. Although these guidelines do not have formal force of law, failure to apply them may obviously attract the censure of the Department of Finance, Parliament, auditors and the Media. In addition, purchasers are aware of the argument that failure to comply with the guidelines may be a breach of a representation or contractual obligation, to the effect that the purchaser will apply the proper published guidelines in consideration of the tenderer submitting his tender.

- L. The main law is the Act concerning public supply and public works contracts (04.04.1974), based on the non-discrimination principles of the Treaty of Rome. EC directives have been implemented by special Regulations: one for the classical sectors (27.01.1994, as amended 31.05.1996), and one for the utilities (02.02.1996). An Act of 21.12.1989 transposed the remedies directive, which will be amended in what refers to the utilities remedies directive.
- NL. The EC directives have been implemented in The Netherlands through the *Raamwet EEG-voorschriften aanbestedingen* of March 13, 1993 (Staatsblad 1993, 212), entry into force April 12, 1993 (Framework legislation EEC regulation). Under this framework law there are the following two decrees for the relevant sectors:
 - Bestluit aanbestedingen nutssector* (Staatsblad 1993, 305), entry into force April 21, 1993 (Decree on procurement in the sector of utilities). This decree applies to procurement in the sector of utilities.
 - Bestluit overheidsaanbestedingen* (Staatsblad 1993, 305, as amended in 1994, Staatsblad 1994, 379), entry into force July 1, 1993 (Decree on government procurement). This decree applies to procurement of products, services and construction services.

The implementation is effectuated with a reference in the national legislation to the provisions of the EC directives which have to be applied.

Additionally, the *Uniform Aanbestedingsreglement EG 1991* (UAR-EG, Staatscourant 228, 1991, as amended in 1995, Staatscourant 1995, 103) (Harmonised regulation on EC procurement) contains standard conditions and procedures for the central government with respect to construction services.

The Netherlands do not have specific national legislation on procurement for products and services under the threshold. For procurement of construction services the *Uniform Aanbestedingsreglement 1986* (UAR 1986, Staatscourant 118, 1986) (Harmonised regulation on procurement) contains

standard conditions and procedures for the central government with respect to construction services under the threshold.

The two EC directives on remedies (89/665 and 92/13) are covered by existing national legislation (Civil Code). Therefore, no specific national legislation implementing these directives was needed.

-P. Rules governing public procurement in Portugal are the Decreto-Lei n°55/95 as modified by Decreto-Lei n°80/96. The Decreto-Lei n°64/94 governs the procurement of computer-related goods and services. The Decreto-Lei n°405/92 refers to works.

-S. Sweden has incorporated the relevant EC directives in its law (1992:1528) on government procurement (*Lagen om Offentlig Upphandling, LOU*), which has been revised accordingly (1993:1468) and reprinted in the register of promulgated laws (*Svensks Författningssamling, SFS*). The law has been additionally revised through amendments 1994:614, 1995:704 and 1996:433. Sweden has also introduced national rules on government procurement below threshold values given in the directives. The national rules apply to the same procurers and the same types of procurement (goods, services and public works contracts) that are subject to Community regulation but are not as detailed. The exemptions allowed for procurement above the threshold values are valid also for procurement below these values.

-SF. Finland has fully implemented all EC public procurement directives. In addition to EC rules, which apply only to contracts exceeding a certain threshold value, Finland has completed its internal legislation by rules applying also to contracts below threshold. The act on Public Procurement (1505/92, amend. 1523/94) applies to all public procurement regardless of the value of the contract. According to the Act, principles of non-discrimination and transparency have to be applied irrespective of the value of the procurement. Procurement without competitive tendering is permissible only for particular reasons. Furthermore, provisions relating to legal remedies are included in the act.

There are also two decrees applying to procurement procedures of government entities (i.e. municipalities, other public bodies or public utilities are not covered) which cover contracts below the given EC threshold value. Some basic procedural requirements to be followed in the award procedures of these contracts are established by these decrees. The decree on Government Procurement (1416/93) applies to supply and service contracts. Certain provisions of that Decree (for example those relating to opening of tenders, publicity or guarantees) apply also to contracts awarded by government entities above the threshold value.

-UK. The EC directives have been implemented in the United Kingdom. However, there is no law covering below threshold procurement.

(b) *Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving goods and services?*

The regime, at EC level, distinguishes between the procurement of goods and services (see supra). However, differences are minimal, and at Member State level, there is often only one set of rules. For instance in France, rules are, in principle, identical for supplies and services contracts, with the only exception of design contests which are followed by the provision of services (procedure frequently used for some works contracts).

If a public contract is intended to cover both products within the meaning of the Supply Directive and services within the meaning of the Public Services Directive, it shall fall within the scope of the latter if the value of the services in question exceeds that of the products covered by the contract. In the case of works contract, a judgement of the ECJ specifies that the Works directive is not applicable if the works in question are accessory to the main object of the adjudication (Gestion Hotelera, ECR, 1994, I-1329).

Procurement procedures applied

4.(a) *What procedures are followed in the procurement process*

There are three main public procurement procedures, plus a fourth one (•design contest•), that is peculiar to the service contracts:

- Open procedure: all interested service providers may tender
- Restricted procedure: only service providers that have been invited to tender by the contracting authority may do so.
- Negotiated procedure: the contracting authority consults selected service providers and negotiates the contract terms with one or more of them (usually a minimum of three).
- Design Contest: this procedure enables the contracting authority to acquire a plan or design selected by a jury after having been put into competition with or without the award of prices. Design Contests can be organized as a part of another procedure leading to the award of a service contract, or on the contrary, they can constitute an independent procedure on their own (art. 13 of the Services Dir.).

- (b) ***Under which circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.***

(i) Traditional sectors:

According to the Public Works and Public Services Directives, Contracting Authorities are entirely free to opt between open or restricted procedures, only the option of negotiated procedures, with or without prior publication of a contract notice, is limited to particular situations (see art. 7 and 11 respectively).

(ii) Water, energy, transport and telecommunications sectors:

Contracting authorities may choose any of the procedures provided that a call for competition has been made. This prior call for competition can be avoided under some circumstances (see art. 20.2 of the Utilities directive).

- (c) ***What are the time limits for submission of bids?***

(i) Traditional sectors:

In open procedures, the deadline established by the authority for receipt of the tenders cannot be less than 52 calendar days from the date of dispatch of the notice for publication. This time limit may be reduced to 36 days in case of pre-information.

In restricted and negotiated procedures, the bid is preceded by a request of the contractor to be invited to participate in the tender. The time limit for receipt of request to participate fixed by the contracting authorities shall be no less than 37 days from the date of dispatch of the notice. The time limit for receipt of tenders may not be less than 40 days from the date of dispatch of the written invitation in the case of restricted procedures. This time limit can be reduced to 26 days in case of pre-information. In case of justified urgency, those time limits may be reduced to not less than 15 days for the receipt of request, and not less than 10 days for the receipt of tenders.

(ii) Water, energy, transport and telecommunications sectors:

In open procedures, the time limit for the receipt of tenders is the same as for the traditional sectors: 52 days (36 if pre-information).

In restricted and negotiated procedures, timing is different. The time limit for receipt of request to participate shall, as a general rule, be at least 5 weeks from the date of dispatch of the notice or invitation and shall in any case not be less than the time limit for publication (see art. 25•3) plus 10 days. The time limit for receipt of tenders may be fixed by mutual agreement between the contracting entity and the

selected candidates, provided that all tenderers are given equal time to prepare and submit tenders. If that kind of agreement is not reached, the contracting entity shall fix a time limit which shall, as a general rule, be at least 3 weeks and shall in any case not be less than 10 days from the date of invitation to tender.

Publicity for inviting tenders

5(a) *How are intended procurement publicised? Are invitations to tender published? If so, where, and in what languages?*

The Directives foresee common advertising rules for the tender procedures.

(i) Traditional sectors

Contracting authorities shall make known, by means of a notice, their intention to award a contract, a work concession or a design contest. This notice shall be sent to the Office for Official Publications of the European Communities, which shall publish it not later than 12 days after its dispatch (5 days in accelerated procedures).

Notices are published in full in the Official Journal of the European Communities (supplement S) and in the TED data bank in the original language, which is the only authentic. A summary of the important elements of each notice is published in the other official languages of the Community, the original text alone being authentic. At present, the official languages of the Community are: Danish, Dutch, English, Finnish, French, German, Greek, Italian, Portuguese, Spanish and Swedish.

In addition to those invitation to tender notices, pre-information notices are published. In works contracts, Contracting authorities publish indicative notices containing the essential characteristics of the works contracts which they intend to award. This notice is published in full in all the official languages of the Community, the original text alone being authentic. In other services, contracting authorities shall make know, by means of an indicative notice to be published as soon as possible after the beginning of their budgetary year, the intended total procurement in each of the service categories listed in Annex IA of the Services Directive (the •priority services•) which they envisage awarding during the subsequent 12 months where the total estimated value is not less than ECU 750.000. Non-priority services contracts (those listed in Annex IB) are not published.

(ii) Water, Energy, Transport and Telecommunications sectors:

In these sectors, a call for competition is published in full in their original language in the O.J. of the E.C. and in the TED data bank. A summary of the important elements of each notice is published in the other official

languages of the Community, the original text alone being authentic. Notices shall be sent to the Office for Official Publications of the European Communities, which shall publish it not later than 12 days after its dispatch (5 days in accelerated procedures).

Calls for competition may adopt four different forms: a notice stating the intention to award a particular contract; a periodic indicative notice to which undertakings can express their interest (in that case, it must have been published not more than 12 months prior to the date on which the invitation to confirm the interest is sent. There is no further publication of a notice of a call for competition.); a notice on the existence of a qualification system; or a notice of call for competition in the case of design contests.

In the case of works contracts, contracting entities must make known, at least once a year, by means of a periodic indicative notice, the essential characteristics of the works contracts to be awarded which meet the threshold requirements. In the case of other service contracts, the periodic indicative notice must include the estimated total value of the service contracts in each of the categories of services listed in Annex XVI A which they intend to award over the following 12 months, if such value is equal or greater than ECU 750.000. (See arts. 21, 22, 23 and 25 of the Utilities Directive)

(iii) In addition to the publication in the Official Journal of the E.C., notices can be published in the official journals or in the press of the country of the contracting authority. However, publication cannot be made before the date of dispatch to the Office for Official Publications of the E.C. They shall not contain information other than that published in the O.J. of the E.C. Furthermore, notices for procurements below the EC threshold values are not published in the O.J.. They are usually published in the national official journals as well as in local, regional or national newspapers. See hereunder for specific information

- A. Notices below and above the thresholds are also published either in the •Wiener Zeitung• or in the •Amtlicher Lieferungsanzeiger•.
- B. Notices, regardless of the value of the contract, are also published in the •Bulletin des Adjudications•, an official body within the Belgian Official Journal (•Moniteur / Staatsblad•). Only in some cases, negotiated procedures are exempted from publication.
- D. Notices about procurement below the EC thresholds are published in the German Official Journal (•Bundesausschreibungsblatt•)
- DK. Notices on public works and construction contracts and contracts below the EC thresholds, are also published in a specialized newspaper (•Licitationen•). Furthermore, notices concerning contracts both above and below the thresholds, including notices on supplies and services contracts,

are sometimes published in national (or local) newspapers or in the specialised press, in the former case only after dispatch of the notice to the EC OJ. National publication is only mandatory for certain contracts submitted for tender by central government (state) institutions, both above and below threshold values.

- E. Contracts above the thresholds are also published in the Spanish Official Journal (*•Boletín Oficial del Estado•*), in Spanish.
- I. Contracts above the thresholds are also published in the Italian Official journal (*Gazzetta ufficiale della Repubblica italiana*), only in Italian language and summarized on at least two newspapers, one having national circulation, one at regional level. Below the thresholds contracts are published on national journals, regional and local bulletins. The annual pre-information is compulsory on the Official Journal of the EC and two newspapers.
- IRL. In general, advertising is recommended for all but the most minor contracts eg. above IR£ 10,000. The precise nature of advertising would depend on valuation and nature of the contract. For a sub-threshold contracts advertising would normally take place in at least two national newspapers, supplemented by the international press, as appropriate. Many sub-threshold contracts, funded from Community sources, are advertised voluntarily in the Official Journal of the EU.
- L. Notices are also published in Luxembourg newspapers, although information provided is less detailed.
- P. Notices are published in the third serie of the Portuguese Official Journal (*•Diário de la República•*) and in two major newspapers, in Portuguese.
- S. There is no mandatory obligation to publish invitations to tenders below the threshold values. Announcements of such procurement are however, sometimes published in Swedish newspapers for commercial reasons.
- SF. Notices concerning intended procurement of Finnish contracting entities are also published in Finnish or Swedish language in the supplement to the Finnish Official Gazette (*•Julkiset hankinnat•*). Publication of notices exceeding certain threshold values according to EC directives is mandatory but many contracting entities also voluntarily publish notices of smaller contracts.

(b) Do the extent and form of publicity differ according to tendering procedures applied and/or on the value of procurement?

The length of the notice shall not be greater than one page of the Journal, or approximately 650 words (for the traditional sectors).

Invitations to tender in non-priority services contracts (those listed in Annex IB of the Services Directive) are not published.

In the case of the negotiated procedure, some contracts can be awarded without prior publication of a contract notice, provided that some requirements are met. See art. 7.3 of the Public Works directive and art. 11.3 of the Public Services directive.

In the sectors of Water, Energy, Transport and Telecommunication, a procedure without prior call for competition may be followed according to art. 20.2.

There are no common advertising rules for contracts under the threshold values. Each national legislation establishes its own rules which usually provide for publication at national level.

(c) *What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.*

Works: notices shall specify the information requested in the models set out in annexes IV, V and VI of the Works Directive.

Other Services: notices shall specify the information requested in the models set out in annexes III and IV of the Services Directive.

Water, Energy, Transport and Telecommunications sectors: the calls for competition may be made by means of a notice drawn up in accordance with Annex XII A,B or C; a periodic indicative notice drawn up in accordance with Annex XIV; or by means of a notice on the existence of a qualification system drawn up in accordance with Annex XIII. In Design Contests, the call for competition shall be made by means of a notice drawn up in accordance with Annex XVII.

Standard forms exists for use by contracting entities, but their use is not (yet) mandatory.

(d) *Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set.*

According to the directives, the contract documents and supporting documents shall be sent to the service providers by the contracting authorities or competent departments within six days of receipt of their application. Nevertheless, where tenders require the examination of voluminous documentation such as lengthy technical specifications, a visit to the site or an on-the-spot inspection of the documents supporting the contract documents, this shall be taken into account when the appropriate time limits are fixed.

Charges for obtaining the full set of tender documents may be imposed or not, depending on the relevant national legislation.

- A. According to the •Bundesvergabegesetz• •25, charges for bidding-documents for open tendering should correspond to the cost for production of these documents plus postal charges. A deposit may be required for documents which are handed out free of charge but must be returned to the procuring entity.
- B. If charges are imposed, they cannot exceed the cost of copying and sending the documents.
- D. In open procedures the charges for obtaining the full set of tender documents must not exceed the cost of copying. In restricted and negotiated procedures there are no charges.
- DK. According to the Danish tradition, a charge (deposit) is normally required in order to obtain tender documents in the construction and work area, and the deposit will be refunded upon return of the documents in undamaged condition. As to tender documents relating to supplies and services procurement, there is no established tradition. Tender documents can in some instances be obtained free of charge, in other cases a charge (which in some, but not all, cases is subject to refund upon return of the documents) has to be paid.
- E. Charges can be imposed to obtain the tender documents. In that case, they must be specified in the call for tenders.
- EL. The charge for obtaining the full series of documents regarding the tendering corresponds to the cost of reproducing those documents.
- F. The whole set of bidding documents can be obtained free of charge from the contracting entity. Territorial entities have the possibility to ask for a refund deposit while giving the documents. Such deposit will be refunded to the candidate along with the introduction of the bid.
- I. The charges for obtaining the documents from public contracting entities correspond to the cost of reproducing those documents.
- I. The seeking of deposits for tender documents is common. However the recommended practice is that deposits should be returnable in full on receipt of a bona fide tender, not subsequently withdrawn. The amount of the deposit sought should not be excessive and should be based on the marginal costs incurred in preparing the relevant documents, i.e. the costs incurred in reproducing and issuing the documents including all overheads such as labour, materials, reproduction costs, postage, etc. The marginal costs should not include the costs of preparing the original set of tender documents. Fees or deposits cannot be used as a barrier to free competition.

- L. National legislation provides that the transmission form and the terms of reference are sent free of charge. However, if the submission documents contain maps or other pieces, the contracting authority can request bidders to pay the cost of these documents. Charges are nevertheless reimbursed to all candidates submitting a tender.
 - NL. As each entity is responsible for its own procurement, they are also free to decide on charges for tender documents. If charges are made this will in general be on cost-related basis. It is advised that charges, if made, should be set in a non-discriminatory manner.
 - P. There is a direct link between the charge to be paid and the cost of the procedure.
 - S. It is up to the individual procurer to decide, when engaged in procurement activities above and beneath the threshold levels, if it wants to collect charges for obtaining the set of tender documents as well as the size of these charges, as long as the demanded charges are not undue to certain groups of suppliers.
 - SF. There are no uniform practice relating to charges of tender documents. In principle, contracting entities may charge a reasonable price for tender documents. However, charges should be in relation to real costs caused to the contracting entity for supplying those documents.
 - UK. Public purchasers could make charges for tender documents. The advice is that such charges should not be made, but if they are, they should be based on the cost of producing extra sets of documents.
- (e) ***Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.***

Tenders Electronic Daily, known as TED, is the on-line version of the printed •Supplement S to the Official Journal of the European Communities•. Similarly to the Official Journal, TED is updated five times per week. It is produced by the Office for Official Publications of the European Communities, hosted by the European Commission Host Organisation (ECHO) and offered in many countries via Official Gateways.

At present, in addition to the former connection procedures, a user-friendly graphical interface allows users to connect to the ECHO databases using a •Windows• environment (•Windows access to Central Host). Watch-ECHO can be down-loaded from the Internet (<http://www2.echo.lu/echo/en/menuecho.html>).

Furthermore, the Commission services are currently working on a pilot project named SIMAP (Information system for public procurement) which intends to create an EU-wide electronic public procurement network aiming to

make the process more efficient, more reliable, less time-consuming, and ultimately more cost effective, both for procurers and suppliers. It is expected to be fully operative by the year 2000. The Internet Homepage can be visited at: <http://194.78.31.74:8087/>.

Requirements laid down for possible suppliers

6.(a) *Are there registration, residence or other requirements for potential suppliers?*

There are no residence requirements.

The Works and Services directives do not prejudice the application at national level of rules concerning the conditions for the pursuit of an activity or a profession, provided that they are compatible with Community law. In addition, tenderers may be requested to prove their enrolment in one of the professional or trade registers. (See article 25 of the Works directive and 30 of the Services directive)

Legal form of tenderers or candidates is not a ground for rejection of the tender as long as under the law of the Member State of establishment tenderers or candidates are entitled to carry out the relevant service activity. However, legal persons may be required to indicate the names and relevant professional qualifications of the staff to be responsible for the performance of the service. If tenders are submitted by groups of service providers, a specific legal form cannot be required in order to submit the bid, although it can be required once the contract has been awarded. (See articles 21 of the Works directive, 26 of the Services directive and 33 of the Utilities directive)

(b) *What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?*

(i) Traditional sectors

There are some conditions that allow the participation to the tender procedure; and some others that allow the exclusion from it.

Any service provider may be excluded from participation in a contract under some circumstances, such as bankruptcy (and other insolvency procedures), criminal conviction, grave professional misconduct, failure to respect the social security or tax obligations, and misrepresentation in supplying or failing to supply the information that may be required as regards qualitative criteria. (See articles 24 of the Works directive and 29 of the Services directive).

In respect to the proof of the service provider's financial and economic standing, the contracting authorities shall specify in the contract notice or in the invitation to tender the reference to be produced. The directives provide with some references *ad exemplum*: statements from banks, professional risk indemnity insurance, service provider's balance sheets or statement of the undertaking's turnover. (See articles 26 of the Works directive and 31 of the Service directive).

The ability of service providers to perform services may be evaluated in particular with regard to their skills, efficiency, experience and reliability. The directives list several means according to the nature, quantity and purpose of the service to be provided in order to give evidence of the service provider's technical capability. The contracting authority shall specify which references it wishes to receive, taking into consideration the legitimate interests of the service providers as regards the protection of their technical or trade secrets. It can be required the production of certificates issued by independent bodies attesting conformity of the service with certain quality assurance systems, which must be based on European standards. (See articles 27 of the Works directive and 32-33 of the Services directive).

(ii) Utilities

Rules regarding the sectors of water, energy, transport and telecommunications are much less detailed. No equivalent rules on technical and financial suitability are included in the Utilities directive, instead, it simply provides that selection of candidates to tender (in restricted and negotiated procedures) shall be made according to objective criteria and rules which contracting entities lay down and which they shall make available to interested service providers. Those criteria may include the criteria for exclusion specified in the Works and Services directives (*supra*). In any case, the selection procedure must take account of the need to ensure adequate competition.

A similar lack of detailed rules also exists in relation to qualification systems (see *infra*). However, despite this absence of detailed rules, in practice utilities should look at the same factors and accept the same means of proof as those provided in the other directives. (See article 31 of the Utilities directive).

(c) ***Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?***

(i) Traditional sectors:

Member States can have official lists of recognized service providers, although most of them do not have. Those lists must respect the Directives provisions concerning the criteria for qualitative selection (see *supra*).

Certified registration in official lists of service providers by the competent bodies shall, for the contracting authorities of other Member States, constitute a presumption of suitability corresponding to the service provider's classification in most of the criteria for qualitative selection. (See articles 29 of the Works directive and 35 of the Services directive).

(ii) Utilities:

Contracting entities which so wish may establish and operate a system of qualification of suppliers, contractors and service providers. An informative notice is published in the Official Journal of the European Communities. The system shall operate on the basis of objective criteria and rules, making reference to European standards if appropriate. Updating of criteria and rules is possible. Refusal of qualification or bringing the qualification to an end must be reasoned and applicants or services providers should be notified.

Where a qualification system exists and a Qualification Notice is used as the sole •call for competition•, the selection of candidates for bidlists for specific contracts must derive from those suppliers or contractors qualified under the system. (See article 30 of the Utilities directive).

Criteria for assessing bids and awarding contracts.

7.(a) *What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?*

The criteria on which the contracting authority must base the award of contracts are (without prejudice to national laws, regulations or administrative provisions on the remuneration of certain services): the lowest price or the most advantageous tender.

Criteria for award have to be made known beforehand. Moreover, where the contract is to be awarded to the economically most advantageous tender, the contracting authority shall state which award criteria it intends to apply, where possible in descending order of importance. Those criteria can be, for example: quality, technical merit, aesthetic and functional characteristics, technical assistance and after-sale service, delivery date, delivery period or period of completion, price...

(b) *Is procurement subject to any offset provisions, such as local content, technology transfer or countertrade requirements?*

No. However, as regards utilities, there is a provision which creates a kind of Community preference, thus favorising local content. See infra question 9 (art. 36 of the utilities directive).

- (c) ***Is preference given to any particular enterprise of group of enterprises? If so, please specify.***

No.

- (d) ***Do the procurement criteria differ according to sector or region of the economy?***

No.

- (e) ***What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?***

If the criterion is the lowest price, the award shall be automatic. However, abnormally low tenders can be rejected, provided that some rules are respected.

In the case of the most advantageous tender, the criteria shall be previously fixed. Those criteria are objective in the sense that they must concern the characteristics of the provision of services or the execution modalities, but not the subjective qualities of the suppliers. In any case, contracting authorities do not have an unconditional freedom of choice.

8. Disclosure of bids received and contracts awarded

- (a) ***How are tenders received, registered and opened?***

Reception, registration and opening of bids are governed by national law. The EC only indicates that, in open procedures, the date, time and place of the opening must be published in the tender notice, as well as the persons allowed to be present at the opening.

- A. According to •Bundesvergabe-gesetz• 1993, •32 tenders have to be submitted in a sealed envelope to the procurement entity, which will keep a record of the day and exact time of receipt of tenders. Informations regarding the tenders received, especially the name of bidders and number of bids will not be disclosed. Tenders are to be stored securely until opening of bids. According to section 33 of the same Act, in open and restricted procedures, bids have to be opened at the specified time and place immediately after expiration of the bidding period as stated in the bidding documents. Opening of bids is to be carried out by a commission, consisting of at least 2 informed representatives of the procurement entity. Bidders are entitled to be represented at bid-opening; and can only be excluded for important reasons. In this case, that commission has to be composed of at least 3 informed representatives of the procurement entity. As regards the negotiated procedure, no formal opening of bids is required. According to a Government directive, the relevant regulations of •ONORM A 2050 -award of bids for services, tendering offers and award• of 1 January 1993 are to be applied for opening of bids. This also requires that certain unit-prices or

prices for certain positions, which are subject to later price-changes are to be made known at bid opening.

- B. According to the Belgian legislation, tenders must be sent by ordinary or registered mail, or handed to the contracting entity. In order to guarantee confidentiality, tenders are inserted in a second anonymous envelope. Tenders are opened in public (open procedures), or in presence of the bidders (restricted procedures) by an Opening Commission established by the Contracting Entity. When the award criteria is the lower price, prices are publicly disclosed at this time. A record of the opening, which can be consulted by the persons attending, is drawn up. No negotiation on the tenders is allowed. In negotiated procedures, there is no public opening of tenders.
- D. Offers have to be marked the day of arrival without being opened, and have to be kept closed until the day of disclosure. After the period for submitting tenders, offers can be opened by the chairman and two officials of the contracting authority without the presence of bidders. A note has to be made stating the name of the bidder, the price and, if existing, side offers. The bidder has not access to those notes. After the bids are opened and until the contract is awarded, negotiations between the bidder and the contracting authority are not allowed.
- DK. Tenders are received in the ways described in the EU procurement directives. Registration is done according to the procedures of the individual public authorities. In the field of construction and works, bidders have a legal right to be present at the opening of tenders. In the supplies and services areas, there exists no legal obligations on public institutions to allow presence of the bidders at the opening of bids. In practice, however, some authorities do allow presence of tenderers, whereas other do not admit tenderers at the opening.
- E. Bids are received in the Register Office of each entity, and are opened by a collegiate body, composed of officials.
- EL. Greek legislation is providing a full description of the process for receiving, registering and opening of the offers so as to secure publicity and transparency. Offers are submitted or sent by a registered letter in a sealed envelope, accompanied with all other relevant documents.
- F. Bids must be sent anonymously, but ensuring that the date is clear. Bids are registered and a receipt is given to the person who presented the bid. Opening is done by a Commission acting as college. With respect to the territorial entities, this Commission is composed of people designed by votation within the Assembly. Therefore, the opening is subject to the principles of plurality and representativeness.
- I. Italian legislation foresees the request of participation to tender must be sent by closed envelope. In the case of economic offer the request must be sent

by sealed envelope with sealing-wax. the envelope will be open by the Commission of valuation. These rules are in force for all contracting entities.

- IRL. Tenders are received, registered and not opened until the nominated date, when they are simultaneously opened, usually in private but with more than one official present. Late tenders are not entertained and are returned unopened.
- L. Envelopes containing the tenders should be sent closed. In open and restricted procedures, tenders are opened in presence of the bidders, at the time and date fixed for the opening. Tenders can be sent by registered mail or delivered in person.
- NL. It may vary according to the kind of service required and the procurement procedure chosen. In general, tenders are opened simultaneously and in presence of an impartial party.
- P. Bids are received and registered by the administrative services and open by the •Júri de Abertura de Propostas• (Bids Opening Jury).
- S. Tenders may, in the case of procurement above the threshold levels, only be submitted in the original within the set time limit. In the case of procurement beneath the threshold levels, the tenderer may submit tenders by telegram, telefax or any equivalent means within the time limit, if the tenderer promptly confirms the tender through a personally signed document. The procurers decide themselves how the tenders be registered before the opening of the tender. The tenders are opened with a minimum of two people designated by the procurer present. On the demand of a tenderer, a person designated by the Chamber of Commerce may also be present at the opening of the tender. The extra cost incurred is paid by the tenderer who has demanded the presence of this person.
- SF. There are no uniform rules or practices relating to receiving, registering and opening of tenders. However, according to Decree on Government Procurement, when tenders are opened, a list of all tenders received has to be drawn up. The Federation of the Finnish Municipalities has included corresponding rules in its General Procurement Guideline (1995).
- UK. In many cases the procurement of services will involve iterative procedures in which there will be a competitive tendering stage. The advice to government departments on tendering procedures is contained in the Central Unit on Procurement's Guidance n°40, The competitive tendering process as follows:

All responses to Invitations to Tender must be conducted under •sealed bid• conditions. Each bid must be submitted •sealed• and kept secure by the department until the bid opening time is reached. To preserved equity and to avoid premature disclosure of tender prices or other irregularities, all competitive tenders should be opened on the due

date, and recorded by the Tender Opening Board. (Tender opening boards should be formally constituted and comprise a Chairman who will normally be an officer serving in a Purchasing Unit, an independent member from a non-Purchasing Branch and a Secretary).

It is envisaged that where bids are made other than in writing, they will be kept safe until the due date.

(b) *Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?*

Contracting authorities or contracting entities who have awarded a contract, or have held a design contest shall make known the result by means of a post-award information notice to be published in full in the O.J. of the E.C. and in the TED data bank in the official languages of the Communities, the original text alone being authentic. In the case of utilities, publication is done only in the original language. This requirement shall be fulfilled within 48 days after the contract award.

The information to be published is not limited to the mere mention of the actual award of a contract but must contain the conditions under which the contract has been awarded (i.e. the criteria applied and the price agreed). However, relevant information on the contract award may, under certain circumstances, be omitted. This possibility is limited to that information which could have harmful effects on the winning firm or the public interest. (See art. 11.5 of the Public Works directive, art. 16 of the Public Services directive, and art. 24 of the Utilities directive).

In addition, for each contract awarded, the contracting authorities shall draw up a written report to be communicated to the Commission at its request. (See art. 8.3 of the Public Works directive; art. 12.3 of the Public Services directive)

(c) *Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?*

Contracting authorities must, within fifteen days of the date on which the request is received, inform any eliminated candidate or tenderer who so request in writing of the reasons for rejection of his application or his tender, and in the case of a tender, the name of the successful tenderer. Unsuccessful tenderers may ask for additional information to the contracting entity if they are not satisfy with the explanations. (See art. 8.1 of the Public Works directive, art. 12.1. of the Public Services directive).

Furthermore, the contracting authority shall inform candidates or tenderers who so request in writing of the grounds on which it decided not to award a contract in respect of which a prior call for competition was made, or to recommence the procedure. It shall also inform the Office for Official

Publications of the European Communities of that decision. (See art. 8.2 of the Public Works directive, art. 12.2. of the Public Services directive).

Treatment granted to domestic and foreign services and/or suppliers

9. ***What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of 'domestic' in relation to domestic services and suppliers.***

In E.C. law, all suppliers from any Member State of the E.C. must be equally treated. So, 'Domestic' must be understood as referring to the whole territory of the E.C.

With respect to the treatment accorded to foreign services and/or suppliers, such treatment depends on the multilateral or bilateral agreements signed by the E.U. See question 11.

Article 36 of the Utilities Directive provides for a preference rule. This article applies to tenders comprising products originating in third countries with which the Community has not concluded, multilaterally or bilaterally, an agreement ensuring comparable and effective access for Community undertakings to the markets of those third countries. Where two or more tenders are equivalent in the light of the award criteria (they are equivalent if the price difference does not exceed 3%), preference shall be given to the tenders where the proportion of the products originating in third countries does not exceed 50% of the total value of the products constituting the tender. Moreover, if there are no equivalent tenders, contracting entities still may reject non-Community tenders as defined. This rule applies regardless of the nationality of the tenderer.

Following the imposition of sanctions against the Community by the US under Title VII of its 1988 Trade Act, the Community took counter measures as it considered that such sanctions were unfair and unjustified. Therefore, the Council approved Regulation n°1461/93 concerning access to public contracts for tenderers from the United States of America (OJ L 146, 17.6.1993). This Regulation was subsequently completed by Regulation n°1836/95 (OJ L183/4, 2.8.1995) as a result of the enlargement of the Community. Those measures are applied without prejudice to the obligations of the Community and its Member States towards third countries, and to the obligations in respect of the GPA.

Procedures for hearing and reviewing complaints/appeals**10. *What, if any are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.***

The rule is that any potential contractor who considers that he has been injured by an unlawful decision on the part of a contracting authority may seek review. There are two levels of remedies available: national procedures and E.C. level control.

(i) Regarding national remedies, the Community has issued two directives (the so-called Remedies Directives, see *supra*) aiming to co-ordinate the laws, regulations and administrative provisions relating to the application of Community rules on the procurement procedures. The objective is to ensure that everyone everywhere has the same rights concerning the review procedures.

These directives provide for the establishment in every Member State of courts or tribunals with real powers to settle the conflicts which might arise between contracting entities and firms, suppliers of services or individuals. This means that in every Member State there is some legally authorized body able to resolve conflicts in the field of public procurement. Nevertheless, jurisdiction nature may differ from one Member State to another, as well as the remedies available. Review bodies at first instance might not be necessarily judicial in character, although their decision should always be reasoned. However, in such a case, their decision must be subject to judicial review or review by another body which is a court or tribunal within the meaning of article 177 of the Treaty, and independent of both the contracting entity and the review body. This independent body shall take its decisions following a procedure in which both sides are heard, and these decisions shall, by means determined by each Member State, be legally binding.

Review procedures are available at least to any person having or having had an interest in obtaining a particular contract and who has been or risks being harmed by an alleged infringement.

Member States must ensure that the review bodies have a minimum number of powers. Firstly, power to take, at the earliest opportunity and by way of interlocutory procedure, interim measures, including measures to suspend or to ensure the suspension of the procedure for the award of a contract or the implementation of any decision taken by the contracting entity. Secondly, power to set aside decisions taken unlawfully. Thirdly, the power to award damages to persons injured by the infringement.

The Utilities Remedies Directive provides for a special procedure known as attestation. Contracting entities are given the possibility of having

recourse to an attestation system in which contract award procedures are periodically examined by independent bodies with a view of obtaining an attestation that, at that time, those procedures and practices are in conformity with Community law concerning the award of contracts and the national rules implementing the law.

If the Remedies directives have not been duly implemented, parties may bring a case against the Member State in question before a national court of that State, invoking the ECJ case law which states that the Member State could be liable for undue implementation of directives, provided that some requirements are met (see ECJ judgments in cases *Francovitch* and *Brasserie du Pecheur*).

There is also a mixed procedure. Any national court can raise a preliminary question before the European Court of Justice in Luxembourg in order to obtain a judgment interpreting the E.C. law provision which might be applicable to the case. During the procedure before the ECJ, the Commission is allowed to intervene and express its views. After the ruling of the European Court of Justice, the national court *•a quo•* must rule in the case in question according to the interpretation given. See article 177 of the E.C. Treaty.

(ii) In what concerns E.C. review procedures, parties can lodge complaints with the E.C. Commission, possibly at the same time as a domestic legal action, with the latter not being a necessary preliminary to the lodging of such a complaint. A complaint can be treated in confidence and does not involve any expense.

The Commission examines those complaints, and when it considers that an infringement of Community provisions in the field of procurement has been committed, it can open the procedure established in articles 169 and 170 of the Treaty, which, after prior consultations between the Commission and the Member State, can lead to the adoption of a decision by the European Court of Justice. There is a special procedure under article 3 of the Public Remedies directive and article 8 of the Remedies Utilities directive in the case that the Commission considers that an infringement has been committed prior to a contract being concluded.

The Commission can also, under articles 186 of the E.C. Treaty and 83 of the Procedure Regulation of the Court, seek, in an interlocutory procedure before the Court of Justice, to obtain the suspension of the award procedure.

II. MEMBERSHIP OF PLURILATERAL, REGIONAL AND/OR BILATERAL AGREEMENTS

11. *Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.*

The European Communities and their Member States are a party to the Agreement on Government Procurement concluded within the framework of the WTO on a plurilateral basis (Tokyo Round and Uruguay Round).

Bilateral agreements to which the European Communities and their Member States are a party and which contain certain provisions relating to government procurement have been indicated in the table below.

Type of agreement	Contracting parties to the agreement	Description of the relevant provisions of the agreement
Agreement in the form of exchange of letters on government procurement	USA	The agreement lays down provisions relating to government procurement between the parties and in particular it broadens the scope of commitments of both parties under the GPA.
"Europe" Agreements	Poland, Hungary, Bulgaria, Romania, Slovakia, Czech Republic Slovenia, Estonia, Latvia & Lithuania (not yet ratified).	-The parties' objective is to open up the award of public contracts on the basis of non-discrimination and reciprocity. -It provides for progressive implementation of national treatment principle in respect to contract award procedures. -Establishment, operations, supply of services and movement of labour linked to fulfilment of public contracts are subject to general provisions which regulate movement of workers, establishment and supply of services between the parties.
EEA: Agreement on the European Economic Area	Iceland Liechtenstein Norway	The agreement lays down specific provisions and arrangements concerning application by the non-EC parties certain EC legislation regulating procurement.
ACP-EC Convention of Lomé	ACP countries: Africa, Caribbean, Pacific.	The agreement provides for preferential treatment of natural and legal persons of ACP countries in respect of award of tenders of contracts financed by European Development Fund within the scope of financing of cooperation.
Partnership and Cooperation Agreements	Russia, Ukraine.	Public procurement is being indicated as an area of cooperation aiming at developing conditions for open and competitive awards of contracts for goods and services, in particular through calls for tenders.
Euro-Mediterranean Agreement	Tunisia	The parties shall aim at a reciprocal and gradual liberalization of public procurement contracts.
Euro-Mediterranean Agreement	Israel	The parties shall take measures with a view to a mutual opening of their government procurement markets and the procurement markets of undertakings operating in the utilities sectors for purchase of goods, works and services beyond the scope of obligations under the GPA.
Procurement by telecom operators	Israel (signed, not yet ratified).	Mutual opening of their government procurement market and procurement markets of undertakings operating in the telecom sector for the purchase of goods, works and services beyond the scope of obligations under the GPA

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12.

(a) Please provide statistics (if available) on the number and value of services procurements:

- on both an aggregate and sectoral basis**
- by origin of services and suppliers**

services sectoral classification in document MTN.GNS/W/120

(b) Please provide statistics (if available) on the

- share of services procurement in total procurement**
- share of procurement of each service in total domestic output of the service**
- share of procurement of each service in total domestic consumption of the service**

No accurate and relevant data available.

Working Party on GATS Rules

COMMUNICATION FROM THE UNITED STATES

Response to the Questionnaire on Government Procurement of Services

The following communication is being circulated at the request of the delegation of the United States to Members of the Working Party on GATS Rules.

Attachment II (referred to on page 11, question 12(b)) will be circulated at a later date.

I. EXISTING PROCUREMENT REGIMES

Where a Member's procurement regime is different for central government entities, sub-central government entities, and other entities, such as public undertakings (e.g. public utilities), it would be useful if these differences were specified under each of the headings indicated below.

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

Procurement is generally defined in terms of purchasing for the direct benefit and use of government entities. The Office of Federal Procurement Policy (OFPP) Act (41 USC 403) defines procurement on the following basis:

The term procurement includes all stages of the process of acquiring property or services, beginning with the process for determining a need for property or services and ending with contract completion and closeout.

Procurement generally does not include non-contractual agreements or any form of government assistance, including cooperative agreements, grants loans, equity infusions, guarantees, fiscal incentives, and governmental provisions of goods and services to persons or governmental authorities not specifically covered under U.S. annexes to the WTO Government Procurement Agreement (GPA) and NAFTA Chapter 10.

Public sector procurement defined broadly includes purchasing by Federal, state and municipal governmental authorities. However, the U.S. procurement system is not centralized, except with respect to U.S. Federal executive agencies. The answers provided in response to this inventory generally refer to procurement by Federal executive agencies.

Administrative structure

2. How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

See discussion of the Federal Acquisition Regulations (FAR) under Question 3(a) below. Although Federal executive agencies are covered by the same framework of laws and regulations on their procurement activities, they generally conduct procurements individually, except when procuring off General Services Administration (GSA) or Defense Logistics Agency (DLA) supply schedules.

Laws and regulations in force

3.(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

United States Code, Titles 10 and 41 contain the bulk of the laws upon which the FAR is based. On an annual basis, authorization and appropriation acts passed by Congress and signed by the President may provide additional authority and requirements.

The FAR System codifies and publishes uniform policies and procedures for acquisition by all U.S. executive agencies (central government entities). The FAR System consists of the FAR itself, which is the primary legal document, and agency-specific acquisition regulations that implement or supplement the FAR. The FAR does not permit agency acquisition regulations that unnecessarily repeat, paraphrase, or otherwise restate the FAR; limits agency acquisition regulations to those necessary to implement FAR policies and procedures within an agency; and provides for coordination, simplicity, and uniformity in the U.S. Federal acquisition process.

Title 41 of the U.S. Code and the FAR are available on the Internet at <http://www.findlaw.com>.

Executive agencies receive appropriations from Congress each year. These appropriations stipulate the programs that entities are authorized to fund and the dollar amounts they are authorized to spend. Executive Agencies are required in some instances to satisfy requirements for goods or services from or through centralized government supply sources. One example is obtaining goods or services from wholesale supply sources such as the GSA or the DLA. See Attachment 1 for a list of pertinent laws.

41 USC 253(c) and 10 USC 2304(c) -- Other than Full and Open Competition -- authorize, under certain conditions, contracting without providing for full and open competition. The conditions include:

- 1) only one responsible source and no other supplies or services can meet agency requirements;
- 2) unusual and compelling urgency;
- 3) industrial mobilization, engineering, developmental, or research capability, or expert services;
- 4) international agreement;
- 5) authorized or required by statute, e.g., national industries for the blind and severely handicapped; Federal prison industries (UNICOR); government printing and binding;
- 6) national security; and
- 7) public interest, which is rarely used because it requires notification to Congress not less than 30 days prior to contract award.

Additionally, the Department of Defense (DOD), in particular, has specific requirements to procure from domestic sources, as specified in annual appropriations and authorization legislation. These include items such as textiles, food, specialty metals, and hand and measuring tools, among other things, that are set forth in the Defense Federal Acquisition Regulations (DFAR) and are exempt from U.S. obligations under the WTO GPA and NAFTA Chapter 10.

(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

The United States generally does not distinguish among procurement of goods and services in terms of competitive and transparent procedures. The same transparent procurement regulations apply to all types of contracts listed above. Please see response to Question 3.(a) above.

The United States does have some specialized rules for services, construction, major systems, utilities, purchases under \$100,000 and commercial item acquisitions, which are set forth in specific provisions of the Federal Acquisition Regulations (FAR), but even these specialized rules are still

within the general umbrella of procedures and requirements on transparency and competition.

FAR provisions generally apply to any combination of goods and services, although there may be specialized additional rules that apply to specific services, for example.

Procurement procedures applied

4.(a) What procedures are followed in the procurement process?

Procurement procedures could differ according to the openness of the invitations to tender. At least three broad categories of procedures are commonly distinguished: (i) public or open tendering procedures under which all interested parties may submit a tender; (ii) selective or restricted tender procedures under which participation is limited to a certain number of selected suppliers, and only these suppliers are invited to submit a tender; (iii) private contract or single tender in which the awarding authority contracts suppliers individually, and sometimes only a single supplier.

The general rule is full and open competition, although there may be specific circumstances in which selective tendering or sole sourcing may be permissible. See the response to Question 3(b) above.

Two main procurement procedures are used based on the level of complexity of the goods or services being procured. Simplified acquisition procedures are used for procurements expected to be less than \$100,000, and sealed bid or negotiation procedures are used when the procurements are expected to be above \$100,000. Irrespective of the procedure used, the emphasis is on ensuring transparency throughout the process. Procedures are predictable. The Competition in Contracting Act (CICA) requires that criteria for award of a contract be set forth in the solicitation. If the agency changes the criteria without advising the offerors, the procurement may be protested. Bid deadlines are the same for all offerors. Where the procurement is conducted using price and other factors, the unsuccessful offerors may request, in writing, debriefings from the contracting officer. If the price is the only decision factor, the unsuccessful offeror will be notified in writing of the number of bidders, the number of proposals and the total contract price of the items in the award.

By law, technical specifications are generally to be free from any restrictive requirements so as to allow maximum competition among potential offerors. The order of preference for specifications is:

- 1) voluntary standards;
- 2) commercial item descriptions in the acquisition of commercial items;
- 3) government product descriptions stated predominantly in terms of functions to be performed or performance required;

- 4)government product descriptions stated predominantly in terms of material, finishing schematics, tolerances, operating characteristics, component parts and other design requirements.

Solicitations generally contain detailed specifications (although the trend recently has been towards commercial item acquisition), as well as contact points for obtaining more detailed information. The Commerce Business Daily (CBD), in which most Federal solicitations are published, includes initial notifications of the intent to procure certain supplies and services. Specific requirements and specification information are contained in the solicitation document itself. The CBD will only contain a brief description, along with information regarding whether a particular procurement is using a performance or design-based specification.

Additionally, in complex procurements, procuring officials may develop a draft Request for Proposal (RFP) and send it out to interested suppliers for comment. This process is open to all interested suppliers. Depending on the comments received, the RFP may be altered. If a change is made after the solicitation is issued, the change is generally transmitted through an amendment to the solicitation.

(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

The general principles and requirements are described in the response to Question 4(a) above. The FAR contains very detailed provisions to guide contacting officials in ensuring transparent, competitive procurement. These procedures generally apply to all procurements above \$2,500, although they are simplified with respect to procurements below \$100,000.

(c) What are the time limits for submission of bids?

The CBD notice generally must be published 15 days before issuance of the solicitation, and the solicitation must allow at least 30 days response time. However, the response time is a function of the procurement's complexity. Consequently, in some procurement cases, the response time will be greater than 30 days. Additionally, required time limits have been recently reduced for commercial, off-the-shelf (COTS) acquisitions and will be reduced in the future for procurements that are conducted electronically. As procurement methods evolve, particularly by eliminating government-specific requirements and adopting new technologies, the period of time necessary to allow for competitive procurement opportunities is likely to decrease.

Publicity for inviting tenders***5.(a)How are intended procurements publicised? Are invitations to tender published? If so, where, and in what languages?***

Two statutes require public notice in the CBD: 15 USC 637 (c) and 41 USC 416. These statutes are implemented in 48 CFR 15.201, •Synopsis of Proposed Contract Actions. There are 12 exceptions to the synopsis publishing requirement. These are listed in 48 CFR 1 subpart 5.202. In addition, at the discretion of the Federal government entity, invitations to tender can be publicized through periodic handouts, announcements in newspapers, trade journals, magazines, or other mass communication media. The Federal Government is increasingly looking to the use of electronic means of publication, which promises to greatly increase commercial access to information on procurement opportunities. The Federal Acquisition Streamlining Act (FASA) of 1994 specifically requires the establishment of a government-wide electronic system. Additionally, individual agencies, such as NASA, provided their solicitations over the Internet.

(b)Do the extent and form of publicity differ according to tendering procedures applied and/or on the value of procurement?

Publishing requirements are less rigorous for procurements falling below the small acquisition threshold of \$100,000.

(c)What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

Details could include a description of the good or service to be procured, tender opening and closing dates, conditions of participation, procuring entity, enquiry point, procurement plans, procurement outcomes, contract award notices, etc.

All necessary information concerning the procurement is contained in the CBD announcement and is specified in 48 CFR 5.207. Information in the CBD notice includes, but is not limited to, contracting office address, subject, proposed solicitation number, opening/closing response date, contact point/contracting officer, and description of goods or services. The description of supplies or services must be clear and concise and not unnecessarily restrictive of competition. It should allow a prospective offeror to make an informed business judgment as to whether a copy of the solicitation should be requested.

(d)Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set?

Solicitations are provided free of charge to anyone who is interested in making an offer. A subscription to the CBD or account on an electronic bulletin board, however, is not free.

(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

Tender notices are posted on an electronic bulletin board in addition to being published as noted in the CBD. Some agencies, such as NASA, have Home Pages on the Internet and include tender notices at these websites. For example, the NASA Home Page has now been linked to the APEC Home Page.

In October 1993, President Clinton sent a memorandum to all Federal agencies directing them to streamline procurement through •electronic commerce. The central component of electronic commerce is EDI, computer-to-computer exchange of business data.

The use of EDI allows organizations to generate, receive and process data with minimum human intervention. EDI networks will be able to automatically update inventories, invoice customers, pay suppliers, advertise federal government requirements and many other tasks that are now time, labor, and paper intensive. It is estimated that the new electronic purchasing could cut federal procurement costs by 10 percent by 1997 and speed delivery times by a third.

In order to implement EDI, FASA calls for the establishment of a government-wide Federal Acquisition Network (FACNET) within five years. This network will open up the acquisition process to any business with a personal computer. Agencies have been given an incentive to implement the new system quickly because they may not use the new simplified acquisition procedures for contracts greater than \$50,000 until they have developed •interim FACNET capability. This means that, at a minimum, they must be able to provide widespread public notice of solicitations and receive responses to those solicitations and related requests for information.

After December 31, 1999, agencies may not use the simplified acquisition procedures for contracts greater than \$50,000 until they have implemented a •full FACNET capability. This means that an agency must be able to conduct 75 percent or more of its acquisitions above \$2,500 and below \$100,000 through EDI. Once there is full government-wide use of electronic commerce, the requirement to publish contract notices in the CBD will be waived for all contracts below \$250,000 that are conducted using electronic commerce.

Requirements laid down for possible suppliers

6.(a) Are there registration, residence or other requirements for potential suppliers?

Generally, the United States does not have registration, residence or other requirements for potential suppliers. However, on a particular procurement the government might require the contractor to be within a certain distance of the site of contract performance. This requirement would be in the solicitation and applicable to all offerors and would only relate to a legitimate need of the contracting entity to have the contractor in close proximity. Additionally, for sensitive procurements, a contractor may have to have appropriate security clearances, which may be obtainable by foreign suppliers.

(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

Offerors must be determined to be “responsible” by the contracting officer. This entails a review of the contractor’s financial, technical and managerial capabilities in order to predict the probability of whether the contractor will be able to perform the terms of the contract.

(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers’ mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

Generally, Federal government entities do not use source lists for qualified suppliers. In exceptional cases, however, a Federal entity can establish a source list, although only after the head of the entity prepares a written justification explaining the extenuating circumstances for use of such a list. Potential foreign suppliers from designated countries under the terms of the WTO GPA may be included in source lists. Additionally, Part 9 of the FAR provides for the possibility of qualified bidders lists (QBLs), qualified manufacturers lists (QMLs) and qualified products lists (QPLs). Entities must specifically justify and document the need for establishing such lists and all interested suppliers must be provided an opportunity to be included in such lists.

Criteria for assessing bids and awarding contracts

7.(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

For instance, whether obtaining the best value for money spent is the aim and whether criteria other than price are taken into account.

Criteria for award, known as evaluation factors, are found in section “m” of the solicitation, as published in the CBD.

(b) Is procurement subject to any offset provisions, such as local content, technology transfer or countertrade requirements?

Federal executive agencies do not apply offsets, but there are certain Buy America requirements, set asides and other restrictions. Please see the answer to (c) below.

(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

Local content requirements: In general, the Buy American Act of 1933 requires that domestic end products be acquired for public use. Executive Order 10582, December 17, 1954 (as amended) implements the statutory preference by stating that an offered price of a domestic product is unreasonable and that an award can be made for a foreign product if the price exceeds the price of a foreign product by six percent. Moreover, the Executive Order authorizes a Federal agency to use any factor to determine that the offered price of a domestic product is excessive. For example, a factor of 12 percent is used by many civilian agencies to determine whether a price offered by a small business firm is unreasonable. Generally, Federal agencies other than DOD use the six or 12 percent evaluation factor to determine if the offered price of a domestic product is unreasonable. DOD uses a 50 percent factor.

Procurement subject to U.S. international obligations is exempt from Buy American Act preferences by Presidential action authorized under the Trade Agreements Act (TAA) of 1979. Authority under the TAA has been used to implement obligations under the WTO GPA, NAFTA, the U.S.-Israel Free Trade Agreement and the WTO Agreement on Civil Aircraft. The President has also used the authority granted under the TAA to exempt procurement from certain other countries from Buy American Act preferences. Additionally, the Buy American Act does not apply to procurement of services or procurement by state and local governments, although many of these subfederal jurisdictions apply their own preferential procurement policies. However, specific services sectors, particularly in the transportation sector, may be subject to domestic source requirements. Examples include the Cargo Preference Act and the Fly American Act.

In addition to the Buy American Act, appropriations and authorization legislation, particularly for DOD, may require procurement from domestic sources, as discussed under Question 3(b) above.

Preferences for small and medium size enterprises: There is no preference for medium size companies. The Small Business Act requires that awards of any size shall be set aside for small business participation when there is a reasonable expectation that offers will be obtained from at least two small businesses and awards will be made at fair market prices. This is the so-called "Rule of Two" for application of set asides.

Purchasing Prohibition: The TAA requires that procurement of products from countries that the President has not exempted from application of the Buy American Act be prohibited for Federal goods contracts that are covered by the GPA. This provision is intended to provide incentive to WTO Members to join the GPA. The prohibition affects approximately \$20-\$30 billion in procurement opportunities annually. Amendments to the TAA contained in the Uruguay Round Agreements Act (URAA) of 1994 permit the President to waive the purchasing prohibition and apply Buy American preferences in its place for countries that are not signatories to the GPA but agree to apply equivalent competitive procurement procedures and effective anti-corruption measures. This authority has yet to be exercised. The purchasing prohibition does not apply to services that are covered under the GPA.

(d) Do the procurement criteria differ according to sector or region of the economy?

Generally, criteria do not differ according to sector or region of the economy. However, where there is a labor surplus area set-aside, geographical location is designated.

(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

The margin of choice or discretion could relate to (i) the relative weight/importance of each contract award criteria; (ii) margins of preference, if any, in respect of specific criteria; and (iii) threshold values, if any, above which referral to a higher level of purchasing authority is required. The discretion allowed to the purchasing authority could vary according to whether there is (i) automatic tender, where the contract is awarded on the basis of predetermined criteria; (ii) discretionary tender procedures which involve acceptance of the bid which is most advantageous-the award of the contract is based on several criteria, some of which are predetermined, but which in general leave the awarding authority a certain measure of choice; and (iii) negotiated tender in which the awarding authority negotiates freely with the potential supplier or suppliers as to the conditions of the contract.

Contracts are always awarded on the basis of specified criteria in the solicitation. These criteria may be weighted for purposes of making best overall value awards. Preferences under the Buy America Act are described under (c) above. Negotiated procedures are generally only used to select a supplier from the competitive range.

Disclosure of bids received and contracts awarded

8.(a) How are tenders received, registered and opened?

The responses to sealed bids are opened publicly. However, in negotiated procurements, the prices are kept confidential until an award is made. The reason for doing so relates to the proprietary nature of the pricing

information. In addition, the knowledge of prices could lead to a situation in which the incumbent contractor has an unfair advantage over its competitors. This could affect the integrity of the procurement system. Accordingly, the only time when prices are publicly disclosed is in a sealed bid situation.

(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

The contracting officer shall award a contract with reasonable promptness to the successful offeror by transmitting written or electronic notice of the award to that offeror. Within three days after the date of the contract award, the contracting officer shall notify, in writing or electronically, each offeror whose proposal is determined to be unacceptable or whose offer is not selected for award. Additionally, a post-award notice must be published in the CBD.

(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

When a contract is awarded on the basis of competitive proposals, an offeror, upon its written request received by the agency within three days after the date on which that offeror has received notice of contract award, shall be debriefed and furnished the basis for the selection decision and contract award. When practicable, debriefing requests received more than three days after the offeror receives notice of contract award shall be accommodated. However, accommodating such untimely debriefing requests does not extend the time within which suspension of performance can be required, as this accommodation is not a "required debriefing" as described in FAR Part 33. To the maximum extent practicable, the debriefing should occur within five days after the receipt of the written request. Debriefings of successful and unsuccessful offerors may be done orally, in writing, by electronic means, or any other method acceptable to the contracting officer.

At a minimum, the debriefing information shall include: (1) the entity's evaluation of the significant weaknesses or deficiencies in the offeror's proposal, if applicable; (2) the overall evaluated cost or price and technical rating, if applicable, of the successful offeror and the debriefed offeror; (3) the overall ranking of all offerors when any ranking was developed by the agency during the source selection; (4) a summary of the rationale for award; (5) for acquisitions of commercial end items, the make and model of the item to be delivered by the successful offeror; and (6) reasonable responses to relevant questions about whether source selection procedures contained in the solicitation, applicable regulations, and other applicable authorities were followed. The debriefing shall not include point-by-point comparisons of the debriefed offeror's proposal with those of other offerors.

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of 'domestic' in relation to domestic services and suppliers.

"Domestic" with respect to products is generally on the basis of the Buy American Act rule of origin, which specifies that more than 50 percent of the content must be manufactured in the United States and that the product itself must be manufactured in the United States. Although it is generally not necessary to determine "domestic" with respect to services, including public works, the Buy American Act provides a definition with respect to construction services that includes an examination of ownership, nationality of directors and place of incorporation.

Information regarding laws, regulations, procedures or practices that accord domestic goods, services, public works and/or suppliers treatment more favourable than that accorded to foreign goods, services, public works and/or suppliers is provided in the response to Question 7(c) above.

Information regarding laws, regulations, procedures or practices that accord goods, services, public works and/or suppliers of one country more favourable treatment than those of another country (e.g. through regional agreements) is provided in the response to Question 7(c) above.

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

Details could include:

- institutional status: whether challenges are heard by an administrative tribunal, a court or any other review body;**
- time limits for complaints/appeal;**
- type of remedy, if any, that may be granted.**

There are procedures available for potential suppliers, domestic and foreign, to lodge complaints during any step of the procurement process. These apply to all U.S. Federal executive entities. An interested party can protest: (a) a solicitation or other request by an agency for offers for a contract for the procurement of property or services; (b) the cancellation of the solicitation or other request; (c) an award or proposed award of a contract; (d) a termination or cancellation of an award of the contract, if the written objection contains an allegation that the termination or cancellation is based in whole or in part on improprieties concerning the award of the contract.

The interested party can file a protest with a Congressional agency, the General Accounting Office (GAO), which is responsible for general oversight of Federal executive agency activities. The GAO issues its recommendation on a protest within 125 days from date of filing of the protest with GAO, or within 65 days under an accelerated review procedure. The GAO can suspend the procurement process while it reviews a case to ensure that all suppliers' interests are not prejudiced.

For controversial issues that arise under a contract, the contractor and the Federal government entity are encouraged to resolve the issues through mutual agreement -- alternative dispute resolution. A contractor also has the option of filing a claim with the contracting officer and filing an appeal with the Agency Board of Contract Appeals or a suit in the Federal Court of Claims.

II. MEMBERSHIP OF PLURILATERAL, REGIONAL AND/OR BILATERAL AGREEMENTS

11. Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.

The United States is a signatory to the WTO Government Procurement Agreement, NAFTA and the U.S.-Israel Free Trade Agreement.

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12.(a) Please provide statistics (if available) on the number and value of services procurements

- ***on both an aggregate and sectoral basis;***
- ***by origin of services and suppliers.***

In order to enhance the comparability of data provided, Members may choose to provide statistics according to the services sectoral classification in document MTN/GNS/W/120 (dated 10 July 1991) at the appropriate level of aggregation.

(b) Please provide statistics (if available) on the

- ***share of services procurement in total procurement;***
- ***share of procurement of each service in total domestic output of the service;***
- ***share of procurement of each service in total domestic consumption of the service.***

Total domestic consumption is defined as the sum of public and private consumption or the sum of domestic output and net imports (i.e. imports minus exports) of the service in question.

Attachment II contains summary information on U.S. Federal procurement for Fiscal Year 1995.

ATTACHMENT 1: LAWS RELATED TO PROCUREMENT

Citation	Name/Description	Applicability
Ethics		
Section 27 of the Office of Federal Procurement Policy Act (41USC 423), as amended by section 814 of the FY 90/91 National Defense Authorization Act, Public Law 101-189, and section 815 of the 1991 National Defense Authorization Act, Public Law 101-510	Procurement Integrity	
18 USC 201, 10 USC 201, 10 USC 2207, 5 USC 7353, and CFR Parts 735 and 2635 -	Prohibition of the offer or acceptance of a bribe.	
18 USC 208 -	Precludes a USG employee from participating personally and substantially in any particular matter that would affect the financial interests of any person.	
18 USC 207	Post-employment restrictions. Prohibits certain activities by former USG employees, including representation of a contractor before the USG in relation to any contract on which the former employee worked while employed by the USG.	
41 USC 51-58	The Anti-Kickback Act; deters subcontractors from making payments, and contractors from accepting payments for the purpose of improperly obtaining or rewarding favourable treatment in connection with contracts.	Certain provisions do not apply to contracts under \$100,000.
10 USC 2306(b) and 41USC 254(a)	Restrictions on certain contingent fees.	Applies to contracts above \$100,000.

--	--	--

Citation	Name/Description	Applicability
31 USC 1352	Prohibits a recipient of a Federal contract from using appropriated funds to pay any person for influencing or attempting to influence an employee of any agency or a Member of Congress in connection with the awarding of a Federal contract.	
Transparency/Openness		
10 USC 2304 and 41 USC 253	Full and Open Competition Requirement; with certain exceptions, USG contracting officers shall promote and provide for full and open competition in soliciting offers and awarding USG contract.	
Section 30 of the Office of Federal Procurement Policy (OFPP) Act (41USC 426)	Electronic commerce in contracting - provides policy and procedures for the establishment and use of the Federal Acquisition Computer Network (FACNET). FACNET is the preferred method of soliciting and receiving quotes and providing notice of Government purchases between \$2,500 and \$100,000.	Purchases between \$2,500 and \$100,000.
15 USC 637(e) and the Office of Federal Procurement Policy Act (41 USC 416)	Requirement for dissemination of information on any action that would result in a contract.	
Title VII of the Federal Acquisition Streamlining Act of 1994 (Public Law 103-355)	Acquisition of Commercial Items - USG preference for acquisition of commercial items or nondevelopmental items when they are available to meet the needs of the agency.	
10 USC 2306(a) and 41 USC 254(b) - Truth in	Requirement and exceptions for cost or	

Negotiation Act	pricing data requirements. Also imposes restrictions on profit for different types of contracts.

Working Party on GATS Rules

COMMUNICATION FROM SWITZERLAND

Safeguards and Trade in Services

Characteristics of the GATS and identification of circumstances

Given the flexibility of the GATS in its present shape, it is not obvious whether circumstances can be identified under which inclusion of a specific safeguard mechanism in the GATS would be necessary. The principle of progressive liberalization of the GATS (Art. XIX), whereby specific commitments on market access and on national treatment are determined by successive negotiations, allows Members - while progressively liberalizing trade in services - to take into consideration the level of development and competitive strength of individual sectors of the domestic industry. This approach contributes to considerably reducing the later occurrence of situations that might induce Members to take measures in order to prevent undesirable effects, if they should occur, resulting from specific commitments in particular circumstances. In the area of trade in services such circumstances, if any, are mostly conceivable in relation to payments and transfers. This is obviously the case in the field of financial services, but it is also true for other services sectors, since trade in services normally involves payments and transfers, irrespective of modes of delivery. These types of difficulties, however, are already dealt with in article XII of the GATS.

Further flexibility is provided by article XXI of the GATS, allowing members to take specific action in circumstances that may require taking particular measures. While it is true that measures under article XXI may only be taken when some conditions are fulfilled (waiting period, prior notification, compensation if other Members request so), the mechanism available under article XXI lends itself to overcome difficulties arising from unforeseen effects of specific commitments. The conditions to be observed when taking recourse to article XXI prevent members from taking premature or overly burdensome measures, which might unduly modify the balance of benefits under the Agreement. Although article XXI does not make explicit reference to temporary modification of schedules, the Agreement does not exclude making use of article XXI in case a particular commitment needs to be modified on a temporary basis - if temporary modification of a commitment relating to trade in services is at all practically feasible (see below).

Engaging in negotiations on the design of a specific safeguard mechanism will only make sense if relevant circumstances not already cared for by existing provisions of the GATS

have been concretely identified. Only then will the Members be in a position to sensibly decide whether or not to engage in negotiations on the design of a specific safeguards clause under the GATS.

Conceptual and practical problems relating to characteristics of trade in services

Emergency safeguard measures under the Agreement on Safeguards of the GATT are temporary measures a Member may implement in order to limit excessively increased imports causing, or threatening to cause serious injury to its domestic industry producing like or directly competitive products. For a safeguard mechanism to function properly, key concepts like imports, domestic industry, injury, and like or directly competitive products have to be clearly defined. These terms pose a number of conceptual and practical problems resulting from specific characteristics of trade in services. In addition the implementation of any safeguard mechanism in the services area would encounter a range of practical problems related to the types of measures, to services sectoral classification, and to statistical and measurement difficulties.

Imports and domestic industry

While in the services context imports and domestic industry (and hence injury caused to the domestic industry) may be defined meaningfully in relation to modes 1 and 2, these concepts cause considerable difficulties in relation to mode 3 (and to a certain degree also in relation to mode 4). The definition of imports under mode 3 depends on the definition of domestic industry. If domestic industry includes all service providers established in a Member's territory, there are no imports (and hence no serious injury caused by increased imports) under mode 3. If, however, service providers owned or controlled by foreign persons established in a Member's territory are excluded from the definition of its domestic industry, their services - although produced (and supplied) domestically - would be deemed imports. This leads to the following dilemma: either there are no imports under mode 3 or, although established in the territory of a Member, service suppliers creating value-added and employment within the territory of that Member, would not be considered part of the domestic industry, depending on ownership or control of the established entity. If the latter approach were adopted, safeguard measures could be taken against services of suppliers established in the territory of the Member taking the measure. This would most probably increase injury to the domestic economy of the Member concerned instead of relaxing the problem, an effect, obviously, inconsistent with the purpose of any safeguard mechanism.

Like or directly competitive products

Application of the concept of like or directly competitive products might be more difficult in the field of services than in the field of goods, in particular with regard to modes of supply no. 1 and no. 2. Given the fact that services are in many cases produced and consumed at the same time and in direct contact of a supplier and a consumer, a service consumed abroad (mode 2), or supplied across the border (i.e. without the physical presence of the supplier, mode 1), is not necessarily like, or a close substitute to a similar service supplied at the location of the consumer by a producer established in the territory of the Member concerned. Even if the service, abstraction made from the location and the proximity of the supplier and the consumer, may look very similar from a technical point of view, the absence of the physical presence of the supplier, or the foreign location of the consumption respectively may make an important difference from an economic point of view, the latter being relevant for determining whether two services are like or directly competitive (i. e., in market terms, close substitutes). Due to the specific nature of services, determination of whether a service supplied cross-border is like or directly competitive to a

similar service supplied domestically will in many cases be more difficult than in the case of trade in goods, and hence could give rise to considerable implementation problems. In addition services typically are differentiated and individualized to a higher degree than goods, rendering determination of like and directly competitive products more difficult in the context of trade in services, even when not having to compare services supplied under different modes of delivery.

Domestic regulation

In contrast to liberalisation of trade in goods, which is mainly brought about by reduction of tariffs and removal of other barriers at the border, liberalisation of trade in services almost exclusively is done by modification of domestic regulation, in many cases applied to foreign and domestic suppliers alike. Tariffs and other measures applied at the border are rarely applicable to trade in services due to the intangible nature of services output. In the context of trade in services, measures taken at the border could at best relate to payments and transfers, or to movement of consumers or suppliers of services. Control of trade in services by preventing people from crossing the border would in many cases be practically difficult, and measures relating to payments and transfers are already covered by art. XII of the GATS.

Even if a limited range of border measures were available, safeguard measures in relation to trade in services would in the vast majority of cases incontestably have to rely on temporary modification of domestic regulation. However, practicability of timely and temporary modification of domestic laws and regulations is in most cases very doubtful, where indeed timely and temporary action is fundamental to any safeguard mechanism. Even if timely and temporary modification of domestic regulation were possible in some cases, it would not be desirable, because temporary change of domestic laws and regulations tends to undermine stability and foreseeability of the legal system, not only detrimental to foreign but also to domestic suppliers. Even if Members were prepared to accept resulting negative implications on the national economy, such action would still not be acceptable from the point of view of the stability of the trading system, particularly in relation to acquired rights in the context of commercial presence.

Classification of services sectors

In services, targeting safeguard measures to specific activities is considerably more difficult than in the case of trade in goods, where the harmonised system is much more detailed than the sectoral classification under which specific commitments relating to trade in services are typically inscribed. Together with the fact that safeguard measures would have to be applied, in any particular sector, in strict conformity with the principle of MFN (GATS, article X, paragraph 1), this implies a considerable risk of unravelling. A safeguard measure would almost necessarily affect a wide range of suppliers, possibly originating from a great number of Members, irrespective of the origin of the difficulty triggering the safeguard measure.

Statistical difficulties and measurement problems

Further practical difficulties related to implementation arise due to statistical and measurement problems. First, the invisibility of most services makes it difficult to measure trade flows and hence increased quantities, the proper identification of which is a necessary prerequisite for a safeguard action to be triggered (and reviewed) by objective standards. The fact that services are provided under four modes of supply makes the task even more difficult. Second, to be able to evaluate the impact of increased imports on the domestic economy, reliable and sufficiently detailed data on production and employment

are necessary. This is also true in view of proper review of any safeguard action. Statistical data need to be available on a sub-sectoral level or even on the level of single products, for four modes of supply, and on a quarterly or monthly basis. Existing statistics for trade in services do not normally fulfil these requirements. Typically, available statistics on services lack international comparability, and measurement concepts frequently are inconsistent even on the national level, e. g. between modes of supply, or between trade and domestic production. Even if a great effort were put into statistical work, it is hardly conceivable that sufficiently detailed and reliable data could be made available in the foreseeable future.

Conclusions and options for future work

Further examination clearly seems to be necessary. The question has to be answered whether, in relation to trade in services, circumstances that make a safeguard mechanism desirable can be concretely identified. Should a safeguard clause prove to be desirable, in principle, possible benefits and practicability still remain doubtful, given the present state of knowledge.

Considering that implementation problems, due to specific characteristics of trade in services, would make proper monitoring and effective review of safeguard measures difficult, the risk of undermining basic principles of the GATS is rather high. If the concepts of imports and injury may be reasonably defined for trade in services under modes 1 and 2, the application of the concept of like and directly competitive products might cause, for these two modes, considerably greater difficulties than in the context of trade in goods. On the other hand, while the concept of like and directly competitive products may reasonably be applied to modes 3 and 4, in the context of these modes this seems to be rather doubtful for the concept of imports, and hence of injury to the domestic industry. In addition, for all modes of supply, domestic regulation, measurement problems, and sectoral classification pose difficulties.

These difficulties are not merely of practical importance, but are fundamental for the effectiveness and the well functioning of any safeguard mechanism not undermining the balance under, and basic disciplines of the Agreement. If these difficulties cannot be overcome, developing a safeguard clause remains a theoretical exercise without prospect of reasonable application.

If examination of these issues should take longer than the time frame foreseen in article X, paragraph 2, extension of the deadline foreseen in article X, paragraph 3 could be considered. Allowing for sufficient time to carefully examine relevant issues would also allow to consider the question of emergency safeguard measures in the context of extended experience relating to the functioning of the still rather young GATS and to ongoing progressive liberalisation.

Working Party on GATS Rules Original: English

COMMUNICATION FROM HONG KONG

Response to the Questionnaire on Government Procurement of Services

The following communication is being circulated at the request of the delegation of Hong Kong to Members of the Working Party on GATS Rules.

I. EXISTING PROCUREMENT REGIMES

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

Government procurement refers to the procurement of goods and services by the various departments of the Hong Kong Government.

Administrative structure

2. How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

The Secretary for the Treasury has the overall responsibility of ensuring that all government procurement activities are conducted in accordance with the regulations and tendering procedures issued by him. For tenders exceeding the specified limits, departments will have to seek the acceptance by the appropriate approving authority before entering into a contract with the successful tenderer. The authority for acceptance of a tender is vested in one of the subsidiary tender boards appointed by the Financial Secretary or in the case of a high value contract, in the Secretary for the Treasury who normally acts on the advice of the Central Tender Board.

For the procurement of goods, the Hong Kong Government adopts a central purchasing system using Government Supplies Department (GSD) as its agent, except for low value items which are purchased by individual departments direct. As regards services, while the majority of services (including works contracts and consultancy agreements) are obtained by individual departments, those which are procured centrally are done through GSD.

Laws and regulations in force

3.(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

The Stores Regulations, supplemented by Financial Circulars issued by the Secretary for the Treasury, govern the government procurement process. Stores regulations are administrative measures made under the Public Finance Ordinance and are not statutory. The procedures laid down in these regulations and circulars are consistent with the provisions set out in the Tokyo Round of Agreement on Government Procurement.

The tender procedures set out in the Stores Regulations are required to be followed by all government departments for the procurement of stores, services as well as civil and engineering works, with the exception of the following for which separate procedures shall apply -

- (i) Franchises, concessions, leases, licences, tenancies and other items procured by public auction or method laid down by statute and government regulations.
- (ii) Private treaty grants of land, land exchanges, extensions and short-term tenancies of land.
- (iii) Consultancy service agreements approved by consultant selection boards appointed by the Secretary for the Treasury.

(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

Apart from the procurement of consultancy services which follow different procedures, we do not make a distinction between the procurement of goods and services.

Procurement procedures applied

4.(a) What procedures are followed in the procurement process?

Depending on the nature of procurement, there are two kinds of procedures to be followed - tendering, and consultants selection procedures. For the purchase of goods and services, including engineering and construction works where we can specify and quantify details of tasks and performance standards with a reasonable degree of precision, the tendering procedures are followed.

Tenders for the procurement of goods and services are invited in the following ways :

- (i) Open tendering - all interested suppliers/contractors may tender;
- (ii) Single, selective or restricted tendering - invitation of tenders is limited to one or a certain number of selected suppliers/contractors; and
- (iii) Private tendering - single purchase of goods or procurement of services not exceeding a specified financial limit.

In obtaining services of consultants for problem-solving and where the quality of service is dependent on qualities which cannot be precisely specified or quantified, the consultants selection procedures are followed. Consulting firms on the long-list maintained for the purpose of obtaining a particular kind of consultancy service are first asked to indicate an interest in undertaking the study. Interested firms will then be invited to bid by submitting a technical proposal together with a separate financial proposal.

(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

When procuring goods, the Hong Kong Government's policy is to purchase on a worldwide basis, through open competitive tendering whenever possible. Services are procured similarly by the use of open tendering, where applicable, so as to obtain the best value for money.

Selective, restricted or single tenders are used only in approved circumstances, such as to ensure compatibility with existing equipment, or for patented or proprietary products, or where services are to be provided by utility companies or where maintenance is to be executed on patent or specialised equipment, or for term contracts where there are only a limited number of suppliers/contractors who would be reliable in meeting the requisite quality standard or delivery schedule over the term of the contract.

Goods and services below a value of HK\$0.5 million and HK\$1 million respectively may be procured direct by the user department through private tendering without recourse to a tender board. Normally for private tendering, a minimum of five quotations is obtained from qualified contractors/suppliers and the lowest quotation to specification is accepted.

The Architectural and Associated Consultants Selection Board and the Engineering and Associated Consultants Selection Board approve the award of architectural and engineering consultancy agreements respectively. The award of other consultancy agreements with a value exceeding HK\$0.5 million is subject to the approval of the Secretary for the Treasury, who normally acts on the advice of the Central Consultants Selection Board.

(c) What are the time limits for submission of bids?

A minimum of three weeks is normally provided to allow both overseas and local tenderers to prepare and submit tenders. For procurements covered by the Tokyo Round of Government Procurement Agreement, at least forty days would normally be allowed.

Publicity for inviting tenders

5.(a) How are intended procurements publicised? Are invitations to tender published? If so, where, and in what languages?

Tender notices for procurement of goods and services through opening tendering by Government departments are published both in English and Chinese in the Hong Kong Government Gazette on Friday (except when Friday is a public holiday). Where necessary, tender notices may also be advertised in the local and/or international press.

(b) Do the extent and form of publicity differ according to tendering procedures applied and/or on the value of procurement?

In the case of selective tendering, tender invitations may be sent by letter to all contractors/suppliers on the relevant lists of qualified contractors/suppliers established for the purpose of selective tendering.

In the case of single or restricted tendering conducted under approved circumstances, tender invitations are sent by letter to only one or a number of contractors/suppliers approved by the appropriate authority. Services not exceeding HK\$20,000 in value may be obtained by user departments direct without recourse to tender. Services costing over HK\$20,000 but not exceeding HK\$1 million for construction and engineering works and HK\$0.5 million for consultancy and other services may be obtained by user departments by private tendering.

(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

Information published in tender invitations covers the tender reference, the procuring entity, a description of the goods or services required, the address and telephone number of the office from which forms of tender and further particulars may be obtained, the exact location of the tender box in which tenders are to be deposited, and the closing date and time for receipt of tenders.

(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set?

There is no charge for obtaining a full set of tender documents from the procuring department.

(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

In addition to publishing tender notices in the Government Gazette, an outline of the tender information on procurement of goods and services by government departments is provided on the Finance Branch Home Page on the Internet (Address: <http://www.info.gov.hk/fb/tender.htm>). Updating of the tender information on the Internet will be made every Friday. In addition, a forecast of invitations to tender for civil and engineering works is published on the Works Branch Home Page on the Internet (Address: <http://www.wpelb.gov.hk/>). The tender information published on the Internet is basically the same as that provided in the tender notices published in the Government Gazette and the same tendering provisions apply.

Requirements laid down for possible suppliers

6.(a) Are there registration, residence or other requirements for potential suppliers?

There is no restriction on the qualification or eligibility of tenderers wishing to tender for goods and services invited by way of open tendering. Where there is frequent need to invite tenders for services or goods but where not all contractors/suppliers in the market are capable of delivering, departments could establish a list of qualified contractors/suppliers for the purpose of restricted tendering, subject to the prior approval of the Secretary for the Treasury. Departments maintaining such lists are required to publish the up-to-date lists and the method of application and assessment in the Government Gazette annually. Interested overseas companies wishing to tender for works contracts are required either to set up a registered office in Hong Kong or to appoint a local agent who must be a person of good standing. As a general rule, the qualification criteria and assessment method should not discriminate among foreign contractors/suppliers or between domestic and foreign contractors/suppliers.

(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

For registration as a supplier under the appropriate category of products in the qualified list established by government departments, interested firms are required to provide company details including organisation and staff, financial resources and business activities together with supporting documents. In the case where the products require technical clearance to assess their suitability for use, the technical data should also be provided. To be accepted as an approved contractor under the appropriate category of civil engineering works or approved suppliers of materials and specialist contractors for public works, interested firms need to provide their company details, financial background, with supporting evidence on work experience. They are required to set up a registered office in Hong Kong or to appoint a local agent. In the case of an extremely complex project involving very high value or very rigid completion programme; an exercise will be conducted to prequalify a list of tenderers who are financially and technically capable of undertaking the project.

Similar conditions apply to the registration of service providers. Interested companies are required to provide company details, financial background, with supporting evidence on the provision of the relevant service, availability of adequate manpower, equipment, plants and materials.

(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

Government departments may establish different lists of approved suppliers/contractors for specific categories of products, services and works. Interested firms may check with the departments concerned to see whether they are suitable for inclusion in the approved lists. At present, the GSD and Works Branch of Hong Kong Government are the two main departments maintaining most of the registered/approved lists used by various government departments. While GSD maintains registered lists of suppliers for various products, the Works Branch maintains lists of approved contractors for works categories and suppliers of materials and specialist contractors for public works.

There is no time limit for interested companies to submit applications for inclusion in the approved lists of contractors/suppliers. Applications could be made any time to the government department concerned direct. Applications are checked against the approved qualification criteria and assessed in accordance with the approved assessment method. Approved lists are reviewed regularly to ensure that new applications are processed promptly.

Criteria for assessing bids and awarding contracts

7.(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

Tenders are generally accepted on the basis of their compliance with the tender specifications and the tendered sum. Departments select the offers that represent the best value for money, having regard to their suitability in meeting the users' requirements, competitiveness in price, maintenance and other operational costs, reliability of performance and where applicable, after-sale services. The country of origin of the goods and services is not a consideration in the award of contracts. If selection criteria are adopted for selecting the supplier/contractor for a particular contract, the criteria are outlined in the tender documents for tenderers' information.

(b) Is procurement subject to any offset provisions, such as local content, technology transfer or countertrade requirements?

Generally, procurement of goods and services initiated by government departments is not subject to any offset provisions. However, for consultancy agreement, a specific commitment on the part of consultants to train government staff is required and provided for in the agreement, where appropriate.

(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

No preference is given to any particular enterprises or group of enterprises. Hong Kong Government operates a level playing field in procurement and ensures an open and fair competition amongst domestic and foreign suppliers.

(d) Do the procurement criteria differ according to sector or region of the economy?

The same tendering principles apply regardless of which sector or region of the economy.

(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

Unless the contract is to be awarded on the basis of some predetermined assessment criteria previously approved by the appropriate tender board prior to invitation of tender, selection of a tender is generally based on its compliance with the tender requirements and whether it represents the best value for money.

Disclosure of bids received and contracts awarded

8.(a) How are tenders received, registered and opened?

Tenders are required to be deposited by the tenderers to the designated tender box before the specified tender closing time. A designated team of personnel from the relevant tender board will collect tenders from the tender box, open and register the tenders received and send the tenders to the procuring department for tender evaluation.

(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

Contracts awarded by tender boards are published for general information in the Government Gazette before the end of the following month. The notice contains information on the procurement entity, description of the contract awarded, name of the successful tenderer and the amount of the contract. In addition to notifying the successful tenderer of accepting his tender, the procuring department is required to inform all unsuccessful tenderers of the result of the tender exercise.

(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

Procuring departments are not required to publish the reasons for rejecting bids made by unsuccessful tenderers. Unsuccessful tenderers are told of the reasons why their bids have not been accepted.

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of 'domestic' in relation to domestic services and suppliers.

As Hong Kong Government adopts a non-discriminatory tendering system in the procurement of goods and services, we do not give preference to domestic suppliers or suppliers from any particular Member. There are therefore no laws, regulations, procedures or practices according preferential treatment to domestic or overseas services or suppliers.

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

Contractors/suppliers may lodge complaints about the process or result of a tender exercise to the procuring department direct or to the relevant tender board, Independent Commission Against Corruption, or the Office of the Commissioner for Administrative Complaints (COMAC). Under the Commissioner for Administrative Complaints Ordinance (Cap.397), the COMAC is empowered to investigate a complaint concerning the procedures adopted in inviting tenders, determining the qualification of persons entitled to tender and the selection of the successful tenderer.

On receipt of a complaint or the referral of a complaint from other offices, the Head of the Department responsible for the contract will deal with the complaint with a view to providing an early and substantive reply to the complainant direct or through the

referral office. An interim reply would be sent to the complainant if a substantive reply cannot be issued shortly.

II. MEMBERSHIP OF PLURILATERAL, REGIONAL AND/OR BILATERAL AGREEMENTS

11. Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.

The Hong Kong Government became a party to the "GATT Agreement on Government Procurement" on 17 December 1979. Hong Kong is a Member Economy of the Asia-Pacific Economic Cooperation (APEC).

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12.(a) Please provide statistics (if available) on the number and value of services procurements

- ***on both an aggregate and sectoral basis;***
- ***by origin of services and suppliers.***

The procurement statistics in respect of government departments for the year 1994-95 are summarised as follows -

<u>Supply of Goods Contracts</u>		<u>Service Contracts</u>		<u>Works Contracts</u>	
<u>No.</u>	<u>Value</u>	<u>No.</u>	<u>Value</u>	<u>No.</u>	<u>Value</u>
8 590	\$6, 012.2M	310	\$1,207.8M	358	\$28,388.1M

Remarks: Statistics only include procurement of goods and services of a value exceeding HK\$0.5 million and \$1 million respectively.

(b) Please provide statistics (if available) on the

- ***share of services procurement in total procurement;***
- ***share of procurement of each service in total domestic output of the service;***
- ***share of procurement of each service in total domestic consumption of the service.***

Information not available.

Working Party on GATS Rules Original: English

COMMUNICATION FROM CANADA

Response to the Questionnaire on Government Procurement of Services

The following communication is being circulated at the request of the delegation of Canada to Members of the Working Party on GATS Rules.

The delegation has indicated that printed copies of related documents referred to in this response will shortly be submitted to the Secretariat. These documents, which will be available for reference, are:

- The Financial Administration Act;
 - Your Guide to Doing Business with PWGSC;
 - The Open Bidding Service;
 - Annual Contracting Activity Reports, fiscal years 91-92, 92-93, 93-94.
-

I. EXISTING PROCUREMENT REGIMES

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

Government procurement is defined as the direct acquisition on the part of Canadian federal government departments and agencies of materiel and services for the fulfilment of their mandates.

Administrative structure

2. How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

All government procurement is decentralized to departments and agencies except the procurement of goods, which generally rests with the Department of Public Works and Government Services (PWGSC). Overall, 75 per cent of procurement over \$25,000 is handled by PWGSC while the remaining 25 per cent is carried out directly by other departments and agencies. The Treasury Board is responsible for the establishment of the procurement policy of the federal government departments and agencies. Crown corporations are generally responsible for their own set of procedures.

Laws and regulations in force

3.(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

Financial Administration Act

Annual Appropriation Acts

Treasury Board Contracting Policy and Guidelines

Departmental enabling legislation

Departmental policies and practices.

Each department and agency has individual spending authority. Individual departmental authorities for contracting are generally in the legislation constituting each department and conferring certain powers to its Minister. These authorities are reinforced by the Appropriation Acts passed by Parliament each year which provide funds to carry out departmental mandates. The Financial Administration Act provides for the establishment of financial limits above which Governor in Council or Treasury Board approval is required.

(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

Yes, the procurement of services is decentralized to departments and agencies while the procurement of goods is generally centralized with Public Works and Government Services Canada, but is subject to Treasury Board contracting policy and guidelines. A mixed procurement is deemed to be a service procurement when the service component accounts for more than 50 per cent of the total projected cost.

Procurement procedures applied

4.(a) What procedures are followed in the procurement process?

The objective of federal government procurement contracting is to acquire goods and services and to carry out construction in a manner that enhances access, competition and fairness and results in best value or, if appropriate, the optimal balance of overall benefits to the Crown and the Canadian people. Inherent in procuring best value is the consideration of all relevant costs over the useful life of the acquisition, not solely the initial or basic contractual cost. The standard rule is to acquire goods and services through a competitive process. However, in specific conditions such as low value purchases or when only one supplier is available, single tendering is allowed.

(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

Federal Contracting Regulations specify that, consistent with international agreements on all procurement covered by these agreements, departments are required to conduct mandatory bids for procurements exceeding \$25,000 except where exceptions are permitted.

(c) What are the time limits for submission of bids?

Consistent with international agreements, bids are posted from 7 to 40 days, depending upon the relevant legislation or policy.

Publicity for inviting tenders

5.(a) How are intended procurements publicised? Are invitations to tender published? If so, where, and in what languages?

Procurement opportunities that are publicly advertised, are published on the Open Bidding Service (OBS) and in the Government Business Opportunities (GBO). Notices on the OBS and in the GBO appear in Canada's two official languages, French and English, and contain both intended procurement and invitations to tender.

(b) Do the extent and form of publicity differ according to tendering procedures applied and/or on the value of procurement?

Lists of registered suppliers, contractors or consultants may be used to solicit competitive proposals for requirements below \$10,000 for printing, below \$25,000 for most goods and services, and below \$60,000 for realty, construction, architectural and engineering consulting, leasing and construction and maintenance services and for some requirements of greater value.

Printing services estimated at \$10,000 or above, most goods and services estimated at \$25,000 or above, and communications services worth \$50,000 or more are normally advertised on the OBS and in the GBO; as are requirements estimated at \$60,000 or above for realty, construction, architectural and engineering consulting, leasing and maintenance services.

(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

Procurement notices include sufficient information to allow a potential bidder to make an informed decision on whether to order the bid solicitation document. Notices for procurement that are subject to NAFTA or the WTO-AGP must also include information set out in the respective agreement(s). This would include information such as the bid closing time, description of the nature and quantity of the goods or services being procured, and the name and address of the contracting authority.

(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set?

Documents ordered through the OBS on-line and Bid Request Line services are priced according to a rate schedule established in the contract with the service provider. Documents costs range from roughly \$5 to \$55, depending on size and method of delivery. Most documents ordered are at the low end of the range. Subscribers have several choices of delivery methods, such as facsimile, courier and mail.

(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions applied to contracts advertised in this manner? If so, please describe.

The Open Bidding Service (OBS) is a user-friendly automated bidding system designed to give potential suppliers fast, equal access to information on government contracting opportunities. Most PWGSC bidding opportunities for goods and services valued at over \$25,000 are advertised on the OBS, as well as construction, maintenance, architecture, engineering and leasing opportunities over \$60,000, communications professional services valued at over \$50,000 and printing requirements valued at over \$10,000.

Further information on the OBS is found in the brochures *Your Guide to Doing Business with PWGSC* (refer to pages 3, 4 and 5) and *The Open Bidding Service* (provided to the Secretariat). In addition, the OBS Web site address on the Internet is <http://www.obs.ism.ca>.

Requirements laid down for possible suppliers

6.(a) Are there registration, residence or other requirements for potential suppliers?

Lists of registered suppliers, contractors or consultants may be used to solicit competitive proposals for requirements below \$10,000 for printing, below \$25,000 for most goods and services, and below \$60,000 for real estate services, construction, architectural and engineering consulting, leasing and maintenance services.

(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

Contracting authorities have a duty to protect the financial interests of the government. When the bid solicitation requires the submission of bid security, the amount should be determined by the contracting authority in advance. When a bidder has submitted less than the financial security stipulated, the bid will generally be considered as non-responsive. Usually, other additional standards have to be met by Canadian firms, such as health and safety or employment equity considerations.

(c) Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers' mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

The Canadian federal government uses source lists infrequently except for low dollar value contracts.

Criteria for assessing bids and awarding contracts**7.(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?**

Award of tenders is based on criteria specified in tender document, such as qualifications, follow-on service or experience, which must be specified in the tender documents.

(b) Is procurement subject to any offset provisions, such as local content, technology transfer or countertrade requirements?

Some procurements are not covered by international agreements or are subject to exceptions set out in international agreements, such as set-asides for Aboriginals. For procurements not subject to international agreements, special provisions are allowed for regional and economic development purposes, and a preference may be accorded for Canadian value-added benefits.

(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

Generally, no preference is given to any enterprise or group of enterprises.

(d) Do the procurement criteria differ according to sector or region of the economy?

Procurements that are subject to international agreements cannot contain criteria that differ according to sector or region of the economy. For procurements over \$2 million that are not subject to international agreements, but are subject to the Agreement on Internal Trade, evaluation criteria may be used to achieve industrial and regional benefits, as long as the benefits are sought in a non-discriminatory manner with respect to regions for which there exists a general framework of regional development. Procurements over \$2 million, that are not covered by any of the trade agreements, are examined on a case-by-case basis and may include criteria according to a sector or region of the economy.

(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

The purchasing authority is expected to make the appropriate choice among suppliers, taking into account best value for taxpayers and national and international obligations, such as trade agreements.

Disclosure of bids received and contracts awarded

8.(a) How are tenders received, registered and opened?

Procurements subject to trade agreements are consistent with international trade obligations.

(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

No, entities do not have to notify unsuccessful tenders individually.

(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

Contract awards subject to the trade agreements are published.

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment than those of another Member? Please specify how, if at all, more favourable treatment is accorded. Please also specify the working definition of 'domestic' in relation to domestic services and suppliers.

Local Content Requirements: none.

Preference for domestic suppliers: An industrial and regional benefits policy may apply for larger value procurements by all government departments, when the procurement is not covered by the international trade agreements. Under this policy, all procurements over a value of \$2 million are reviewed to assess the opportunities for achieving socio-economic benefits in Canada. However, this policy is rarely applied to contracts under \$100 million.

For procurement handled by Public Works and Government Services Canada and not covered by international trade agreements, PWGSC applies a Canadian Content Policy, which restricts a procurement opportunity to suppliers of Canadian goods and services, provided there is adequate competition, usually three or more suppliers.

Preference for small or medium-size enterprises: Canada does maintain an exception under the WTO-AGP and NAFTA for small business. However, it does not currently have in place a program providing small business with preferences.

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

A bid challenge process allows any potential supplier to complain to an impartial reviewing authority, at any time throughout the procurement cycle, on how a government procurement is being handled.

The Canadian International Trade Tribunal has been designated as the independent bid challenge authority for Canadian federal government procurements that are subject to the Agreement on Internal Trade, the North American Free Trade Agreement, and the World Trade Organization - Agreement on Government Procurement.

For procurements outside the trade agreements, each purchasing department usually has its own appropriate procedures to deal with complaints.

II. MEMBERSHIP OF PLURILATERAL, REGIONAL AND/OR BILATERAL AGREEMENTS

11. Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.

Memberships: World Trade Organization - Agreement on Government Procurement, North American Free Trade Agreement, GATT Agreement on Government Procurement (1988) and Agreement on Internal Trade.

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12.(a) Please provide statistics (if available) on the number and value of services procurements

- *on both an aggregate and sectoral basis;*
- *by origin of services and suppliers.*

(b) Please provide statistics (if available) on the

- *share of services procurement in total procurement;*
- *share of procurement of each service in total domestic output of the service;*
- *share of procurement of each service in total domestic consumption of the service.*

Total domestic consumption is defined as the sum of public and private consumption or the sum of domestic output and net imports (i.e. imports minus exports) of the service in question.

Annual contracting activity reports showing services procurement, for fiscal years 1991-92 to 1993-94, has been provided to the Secretariat.

Working Party on GATS Rules

COMMUNICATION FROM COLOMBIA

Questionnaire on Government Procurement of Services

The following communication is being circulated at the request of Colombia to members of the Working Party on GATS Rules.

In Colombia, the government procurement rules have been unified in Law 80 of 1993, which therefore applies to all central and decentralized public bodies and entities, except in the cases provided for in that Law or other special laws.

I. EXISTING PROCUREMENT REGIMES

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

There is no explicit definition of government procurement. However, government procurement should be understood to mean the rules and procedures governing the purchase of goods and services, procurement of works and concession of activities of different kinds by public entities among themselves or with private individuals, in order to carry out and implement their objectives.

The above-mentioned Law 80 of 1993, which constitutes the general statute governing procurement by the public administration, establishes in Article 10 that its object is to establish the rules and principles governing contracts of state entities.

Article 32 of Law 80 establishes that •State contracts means all legal acts performed by the entities referred to in this Law giving rise to obligations which

are provided for in private law or in special provisions or derive from the exercise of free will...•

Administrative structure

2.How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

The procurement regime of the public administration in Colombia is decentralized, which means that there is no single body responsible for making contracts, but rather each competent entity can do so in accordance with its needs and requirements.

The territorial entities empowered to enter into contracts, in accordance with Article 20 of Law 80 of 1993, include the Nation, region, departments, provinces, indigenous territories, districts, municipalities, metropolitan areas and associations of municipalities, as well as public establishments, industrial and commercial enterprises and mixed-ownership companies in which the State holds more than 50 per cent of the capital stock, indirect decentralized entities and other legal persons with a majority public shareholder, however named, of all orders and levels.

At the central or national level, for example, contracts may be signed by Ministries, Administrative Departments, Supervisory Authorities, Special Administrative Units, public establishments, industrial and commercial enterprises and joint companies attached or linked to the above-mentioned central bodies. Again at the central level, contracts may be entered into by the Senate of the Republic, Chamber of Representatives, Judicial Service Commission, the Office of the Government Attorney, the Office of the Comptroller-General of the Republic, the Office of the Prosecutor General of the Nation and the Registry Office.

Apart from these entities, the Law also grants other State bodies and establishments the capacity to sign contracts.

Laws and regulations in force

3.(a)Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

Law 80 of 1993 was issued on the basis of the final indent of Article 150 of the Political Constitution, which empowers Congress to enact the general statute of government procurement and in particular procurement by the National Administration. Regulations under this Law have been enacted in various instruments, including the following:

- Decree 2681 of 1993 partially regulating public credit operations;

- Decree 94 of 1994 delegating the power to conduct, on behalf of the Nation, the transactions referred to in Decree 2681 of 1993;
- Decree 679 of 1994 regulating various aspects of Law 80, including the certification of the quality of goods and services; the establishment of requirements for participation by temporary unions or consortia in tenders and contracts; definition of open public limited companies; decentralization of contractual acts and formalities; delegation of power to sign contracts; definition of the rules applicable to State contracts; observance of the principle of reciprocity; qualification of national origin of goods and services; unpackaging of technology; definition of budgets of entities; application of positive administrative silence in connection with requests relating to contract performance; obligation to lodge the single guarantee for contractual obligations, and effects of lodging it;
- Decree 855 of 1994 establishing regulations under the statute in respect of direct contracting. This decree has been supplemented and amended by other decrees;
- Decree 856 of 1994 governing the register of potential tenderers of chambers of commerce;
- Decree 1584 of 1994 governing the classification and qualification of registered suppliers (*proponentes*), particularly in matters relating to technical and financial aspects, capital and experience;
- Decree 1985 of 1984 governing the delegation of capacity to enter into contracts;
- Decree 1898 of 1994 governing competitions for insurance intermediaries;
- Decree 229 of 1995 establishing regulations under Law 80 in respect of the postal service;
- Decree 1448 of 1995 governing the grant of concessions for some telecommunication services;
- Decree 1446 of 1995 governing the sound broadcasting service and the organization and functioning of radio networks.

In addition to the above, the following special provisions in Law 80 and in other instruments govern aspects of government procurement:

- Decree Laws 1900 and 1901 of 1990 reforming the rules and statutes regulating telecommunications and related activities and services;

- to a partial extent, Decree Law 591 of 1991 relating to specific forms of contracts to promote scientific and technological activities;
- Law 37 of 1993 regulating procedures, contracts, forms of association and award of telecommunication services;
- Laws 142 and 143 of 1994 on the regime for household public services and for electricity in the national territory, respectively. The first of these laws establishes that, with a few exceptions, contracts entered into by State entities providing household public services for the purpose of providing such services are governed by private law. The second, concerning contracts for the concession of the electricity service, establishes that the contract will be awarded through public tender to the bidder offering the best technical and economic conditions for the grantor and users, without prejudice to other viable forms of contracting;
- Decree 930 of 1992 establishing regulations under Decree Laws 1990 and 1901 of 1990 concerning the establishment of private telecommunication networks and use of the radio spectrum;
- Decree 1137 of 1996 establishing regulations under Decree No. 1900 of 1990, with respect to the allocation and management of the electro-magnetic spectrum attributed to space radiocommunications, for use by satellite networks, including the space segment and the Earth segment.

(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules to be determined in cases of joint procurement involving both goods and services?

The procurement of goods and the procurement of services constitute different modalities or systems, although broadly speaking the formalities and procedures are the same. Obviously, each modality of goods, services or works may involve different elements and requirements, at least in terms of its nature and purpose.

Nevertheless, the Law establishes some differences between contracts for goods and those for services, chief among which are the following:

- Article 22 of Law 80 imposes the obligation of registration with the Chambers of Commerce for natural or legal persons wishing to enter into contracts with State entities for works, consultancy and the supply and purchase of movable property. This registration implies that would-be suppliers have to classify and qualify themselves. The same Article exempts contracts for the provision of services from these requirements.

- Article 24 of Law 80 authorizes direct procurement, as will be seen below, in the case of professional services or the execution of artistic works that can only be commissioned from specific natural or legal persons, or for carrying out scientific or technological activities. It also provides for direct contracting for procurements of goods and services needed for national defence or in the case of contracts awarded by State entities for the provision of health services.
- Article 33 of the Law establishes that telecommunication services and activities will be provided through a concession granted by direct contracting or by licences issued by the competent entities in accordance with Decree 1900 of 1990 and any other provisions that replace, modify or supplement that Decree. The paragraph of the above-mentioned Article 33 provides that the procedures, contracts, forms of association and award of telecommunication services referred to in Law 37 of 1993 will continue to be governed by the provisions of the latter Law and the provisions developing or supplementing it.
- Article 34 of Law 80 establishes that the concession for the supply of national or international long-distance switched fixed basic telephone services will be granted in accordance with Decree 2122 of 1992.
- Article 35, paragraph 10 of Law 80 provides that the community sound broadcasting service is considered a telecommunication activity and granted directly by licensing, subject to fulfilment of the legal, social and technical requirements and conditions established by the national government.
- Article 37 of Law 80, referring to mail and specialized courier services, provides in paragraph 10 that the provision of specialized services will be granted directly through licensing.

Article 32, paragraph 1, of Law 80 establishes, *inter alia*, that contracts entered into by credit establishments, insurance companies and other State financial entities falling within their ordinary business activities under their by-laws are not governed by the provisions of Law 80 but by the laws and regulations applicable to such activities, that is to say civil and commercial provisions.

Joint procurement of goods, services and/or works is not expressly provided for in Law 80 of 1993. In practice, however, joint contracts are used to allow simultaneous procurement of goods, services and works.

Procurement procedures applied

4.(a) What procedures are followed in the procurement process?

Pursuant to Article 24 of Law 80, the choice of a contractor is always made through public tender or competition, and exceptionally by direct contracting.

The public tender or competition procedure may be assimilated to what is ordinarily called open tendering, in which all those interested in submitting bids may participate. This procedure is used to select bids for goods, services, works and consultancy. The competition procedure provided for in Colombian legislation establishes the same rules for participation by interested persons and is governed by the same formalities and procedures as the public tender procedure. It is used for the selection of bids relating to technical, intellectual or specialized studies or works. The difference lies in the fact that whereas the public tender procedure relates to the physical aspects of the goods or service to be procured, the competition procedure relates to the intellectual capacity or talent of the person carrying out the work or service. Another formal difference lies in the fact that the conditions and requirements of the public tender procedure are called •tender specifications• while those of the competition procedure are called the •terms of reference•.

The Law does not provide for selective or limited tendering, although this does arise exceptionally in some cases of direct procurement.

Direct contracting, or direct procurement, is provided for in Article 24 of Law 80 as an exception to the public tender or competition procedure in the following cases: contracts of lesser value; loan contracts; interagency contracts; contracts for the provision of professional services or performance of artistic works; leasing or purchase of real estate; cases of •manifest emergency•; where a public tender or competition procedure is declared void; where there are no bids, or no bid in keeping with the tender specifications or terms of reference; where there is an inadequate number of bids; procurement of goods and services for national defence and security; procurement of agricultural goods available in commodity exchange markets; contracts of State entities for the provision of health services; and acts and contracts relating to industrial and commercial activities of industrial and trading enterprises and mixed-ownership companies. This type of procurement is essentially regulated by Decree 855 of 1994.

Article 18 of Decree 855 establishes that for the purposes of Article 24(m) of Law 80 of 1993, acts and contracts directly relating to the commercial and industrial activities of State industrial and trading enterprises and mixed-ownership companies including the following: purchase, barter, supply and leasing of goods and services constituting the business purpose of such entities; inputs, raw materials and intermediate goods for the obtention of the goods constituting the business purpose of such entities; materials and equipment directly used for the production of such goods and services, and for the marketing of their goods and services.

(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

Apart from the selection systems mentioned above, there are procedures under special provisions such as those mentioned in point 3(b) above. In addition, contracts relating to foreign credits with multilateral credit organizations, foreign public-law persons or international cooperation, assistance or aid agencies, may be

subject to the regulations of those entities, *inter alia*, in matters relating to procurement procedures and systems.

Article 76 of Law 80 also exempts the mining sector and state enterprises engaged in trade or industry. For example, the Colombian Petroleum Company - ECOPETROL - has a special procurement manual that provides for the following types of selection: open tendering, selective tendering, and direct procurement. Likewise, selection in the case of science and technology contracts may be carried out by any means, taking into account that such contracts are governed by private law.

(c) What are the time-limits for the selection of bids?

The time-limits, and extensions to them, for the submission of tenders depend on the terms established for the purpose for each public tender or competition procedure. In any case, in accordance with Article 30.5 of Law 80 of 1993, the time-limit for the tender or competition is the period which must elapse between the date at which bids may be submitted and the closing of the process.

Publicity for inviting tenders

5.(a) How are intended procurements publicized? Are invitations to tender published? If so, where, and in what languages?

Prior to publication of the tender or competition notices and initiation of the corresponding processes, State entities must transmit to their competent Chamber of Commerce general information on each tender or competition they wish to open. On the basis of this information the Chamber of Commerce published a monthly bulletin that acts as a channel of information for possible registered suppliers to prepare to participate, if they so wish, in the tender or competition procedures concerned. Under Article 12 of Decree 856 of 1994, the information in question must be submitted to the corresponding Chamber of Commerce within the first five working days of each month. The single bulletin is published within the first 20 days of each month. The information in question must also be transmitted to the Colombian Confederation of Chambers of Commerce (Confecámaras) for publication at national level.

Article 30, paragraph 30, of the Law provides that within 10 to 20 calendar days prior to the opening of the tendering or competition procedure, up to three notices shall be published at intervals of between two and five calendar days, in mass-circulation newspapers within the territorial jurisdiction of the entity or, failing such, in other public communication media having a similar dissemination. The notices shall contain information on the purpose and essential features of the tendering procedure or competition in question.

Some entities have recourse to publicising their invitations to tender through notices in foreign newspapers or magazines when the activities to be procured require international participation, as in the case of ECOPETROL.

Publication is in Spanish, as provided for by the Constitution, and also because Law 80 does not provide for the use of other languages.

(b) Do the extent and form of publicity differ according to tendering procedures applied and/or on the value of procurement?

The Law does not provide for differences in the extent and form of publicity according to the tendering procedures applied and/or on the value of procurement.

In the case of contracts of lesser value and other contracts involving single tendering, publicity is carried out in accordance with Decree 855 of 1994, as appropriate. In this modality, the public invitation to tender is made through a notice set up in a visible place of the entity concerned for two consecutive days. Public notices in national or regional mass-circulation newspapers are also usually employed.

(c) What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.

In accordance with Article 30.3 of Law 80 of 1993, the notices contain information on the purpose and essential features of the tendering procedure or competition. They refer, *inter alia*, to the purpose, amount, opening date and hour, closing date and hour, date and hour of the mandatory visit to the site of the work, if appropriate; place of sale, withdrawal and consultation of the tender specifications or terms of reference; assessment and award factors; conditions of participation; and guarantees of the seriousness of tenders.

(d) Are there any charges for obtaining the full set of tender documents? If so, please specify and describe how these charges are set.

Public entities establish the corresponding requirements to cover the paper costs relating to the acquisition of the tender specifications or terms of reference. Many of them usually charge the equivalent of 1 per cent of the amount roughly budgeted for the contract in question.

(e) Are electronic means used to advertise procurement opportunities? What is the nature of systems that are in place? Are different tendering provisions to contracts advertised in this manner? If so, please describe.

There is no provision for the use of electronic means to advertise procurements and contracts, and the law does not provide for them. In any case, some entities have already implemented such a system or are in the process of doing so. A Resolution provides for furnishing information on contracts awarded through electronic means, but this provision does not extend to tendering or competitions.

Requirements laid down for possible suppliers

6.(a) Are there registration, residence or other requirements for potential suppliers?

Article 22 of Law 80 of 1993 provides that any natural or legal person wishing to enter into contracts for works, consultancy, or supply and purchase of movable property with public entities must register with the Chamber of Commerce of their jurisdiction. This register of suppliers (*proponentes*), which is different from the company register, is carried out by means of a single form prepared by the Government for the purpose.

Article 22 also provides that foreign natural persons without domicile in the country or foreign legal persons without a branch in Colombia, wishing to submit tenders or enter into contracts with public entities, must register as suppliers, by accrediting their enrolment in the corresponding register of the country where they have their principle domicile. In addition, they must accredit in Colombia an agent domiciled in the country who is duly empowered to submit tenders and sign contracts and also to represent them legally and in non-legal matters.

The classification and qualification of registered suppliers is carried out by the persons themselves interested in entering into contracts with public entities, on the basis of the principle of good faith. The corresponding declarations, which are made together with enrolment in the register of suppliers, must strictly follow the regulations laid down by the Government relating to criteria of experience, financial capacity, technical capacity, organization and availability of equipment. The declarations of the suppliers are subject to verification by the contracting entity, and may also be challenged by anybody. Inaccuracy in the information provided leads to the cancellation of the registration as well as administrative and penal sanctions.

Under the Law, registered suppliers classify themselves in three categories: builders, consultants or suppliers, according to their field of specialization. Registration as such does not require the posting of a guarantee.

(b)What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?

Each entity establishes as it sees fit the objective requirements for participation in tenders and the selection of bidders, one of which is the posting of a guarantee of the seriousness of the bid by the bidder. Once these requirements have been laid down definitively, the entity is bound by them.

(c)Do there exist lists of approved suppliers? If so, what are the procedures for checking the capability of firms applying for inclusion on tenderers mailing lists? Are lists of approved suppliers, if any, regularly reviewed/updated?

The Law does not provide for lists of approved suppliers. The corresponding Chamber of Commerce assigns a registration number to each

registered supplier and opens a file for documents relating to that person's registration and performance as a contractor. The Chamber of Commerce issues the corresponding certification on the basis of the data contained in the registration file and information supplied by public entities. The review or updating of suppliers is carried out by the process of registration of suppliers, which is valid for one year, at the end of which they must renew their registration in order to continue to have the option of tendering. Registered suppliers must update the initial information or modify the terms of their registration if circumstances arise making it essential to do so.

In addition, on the basis of Article 76 of Law 80 of 1993, State entities signing contracts for the exploration and exploitation of renewable and non-renewable natural resources and for trading and industrial activities are governed by their own registration systems.

Criteria for assessing bids and awarding contracts

7.(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

Article 29 of Law 80 establishes that the selection of the bidder must be objective, on the basis of the most favourable bid, and without taking account of subjective feelings or interests. The most favourable bid is the one that takes account of various factors, such as implementation, experience, organization, availability of equipment, deadlines, price, and a full and detailed weighting of these factors. Preference must not be based on factors other than those established in the tender specifications or terms of reference, nor on one of them alone, such as lowest price or shortest deadline. The basic criteria and principles are established in the Law.

(b) Is procurement subject to any offset provisions, such as local content, technology transfer or countertrade requirements?

No. However, Article 21 of Law 80 establishes *inter alia*, that, for foreign bidders, and all things being equal, preference will go to the tender that incorporates the most local human resources, local components and best technology transfer conditions. In the case of the implementation of investment projects, the 'unpackaging' of technology is to be provided for.

(c) Is preference given to any particular enterprises or group of enterprises? If so, please specify.

On the basis of the criteria for the selection of contractors, the principles of equality and reciprocity, and guaranteed participation for bids of domestic origin, Law 80 does not offer preferences to specific enterprises or groups of enterprises, except as provided for in Article 16 of Decree 855 of 1994. This Article authorizes State entities to give preference in selection, in the case of the contracts covered by that Decree, that is to say direct procurement, and all things being equal, to local

cooperatives, micro-enterprises, foundations, communal action associations and in general similar entities of the place where the contract is to be implemented.

(d) Do the procurement criteria differ according to sector or region of the economy?

Law 80 of 1993 does not provide for any change in the basic criteria for procurement according to sector, region or branch of the economy. Nevertheless, while this may not be interpreted as a change in criteria, Article 76 of Law 80 provides for a special regime whereby contracts for exploration and exploitation of natural resources, and for trading, industrial and marketing activities by State entities that carry out such activities, will continue to be governed by the applicable special legislation. On the basis of this provision the Colombian Petroleum Company - ECOPETROL - for example has a special procurement regime, although it applies the general principles established in Law 80 of 1993.

In addition, Article 35, second paragraph, of Law 80 provides that the sound broadcasting service may be granted only to Colombian nationals or legal persons duly established in Colombia.

(e) What is the margin of choice or discretion allowed to the purchasing authority? What does the extent, if any, of discretion allowed depend upon?

Pursuant to Article 24, numeral 50, of Law 80 and the principles on which it is based, such as transparency, economy, responsibility and subordination to the postulates governing the administrative function, the discretionary power of public officials is quite limited. Nevertheless, some discretion may exist at the prior stage of setting the requirements for the contract and determining the tender specifications or terms of reference. In addition, under Article 30.3.4 and Article 9 of Law 80, there is also discretion in the determination of the number of public notices for the tender procedure or competition, or in the establishment of the relevant time-limits, or in the modifications which the head of the entity sees fit to make in those documents as a result of the hearing conducted to specify the content and scope, or in the extension of the relevant time-limits for the submission of tenders or award of the contract. On the other hand, there is practically no discretion once the requirements, tender specifications or terms of reference have been finally fixed.

Disclosure of bids received and contracts awarded

8.(a) How are tenders received, registered and opened?

The Law does not establish specific procedures. Entities establish the requirements for receiving tenders, although usually this is done by the interested bidders depositing them in an urn placed for the purpose in the place specified in the tender specifications or terms of reference and in the notices publicising the tender procedure or competition. When the tender or competition period is over, the urn is opened and the deposited tenders are removed, all of which is officially recorded. It is also usual to provide for registration of receipt of the tenders submitted.

(b) Are entities required to publish details of the contracts awarded and/or notify unsuccessful tenderers?

After the bids have been examined from the technical, economic and legal standpoints, the evaluation reports are prepared and tenderers are asked for any clarifications or explanations considered essential. These evaluation reports are kept in the secretariat of the entity for bidders to submit the relevant comments. After the above-mentioned formalities have been completed, the contract is awarded, and the decision stating the reasons is notified to the selected tenderer. Unsuccessful tenderers are informed of the decision if the award was not made in a public hearing. Article 30.10 of the Law, together with Article 273 of the Political Constitution, provides for the possibility that the award be made in a public hearing, of which the corresponding official record setting out the discussions and decisions will be drawn up.

For the purposes of social control and public participation, Article 51 of Law 190 of 6 June 1995 provides that, as from its entry into force, State establishments have to publicize in a visible place of the entity concerned, once a month, in simple layman's terms, a detailed list of goods and services procured, their destination and the name of the successful bidder, as well as the tenders declared void.

Article 59 of the same Law 190 of 1995 creates the central Unified Journal of Government Procurement as an Appendix to the Official Journal, which will contain information on contracting by public entities at national level. It will indicate the contractors, purpose, value and unit values if any, time-limit and supplements or modifications to each of the contracts, and will be published in such a way as to be able to establish parameters for comparisons according to cost, time-limit and type, so as to identify significant differences in procurement by the public administration, in evaluating its efficiency. Publication of contracts will take place within three months of the payment of the fees for publication in the Official Journal.

(c) Are entities required to publish, or provide to unsuccessful bidders, pertinent reasons why their bid was rejected?

Law 80 does not contain any provision obliging State entities to publish or communicate the reason why rejected tenderers were not selected. Nevertheless, tenderers may learn aspects of the tender or competition through the freedom of access to information provided by the Law. It is also possible to obtain information by recourse to the right of petition.

Treatment granted to domestic and foreign services and/or suppliers

9. What laws, regulations, procedures or practices accord domestic services and/or suppliers treatment more favourable than that accorded to foreign services and/or suppliers, or accord services and/or suppliers of a Member more favourable treatment of another Member? Please specify how, if at all, more

favourable treatment is accorded. Please also specify the working definition of •domestic• in relation to domestic services and suppliers.

In general, national and foreign bids are subject to equal treatment. Article 20 grants equality of treatment as between domestic and foreign bids, provided the country concerned offers Colombian bids equal treatment with domestic bids. In other words, equal treatment depends on the application of the principle of reciprocity. Article 15-04.1 of the Free-Trade Agreement between Colombia, Mexico and Venezuela, approved by Law 172 of 1994, establishes national treatment as between suppliers of goods and services of another country Party and domestic suppliers.

Apart from the above and the explanations in the replies relating to the criteria for the evaluation of tenders and the award of contracts in point 7 above, Article 21 of Law 80 of 1993 establishes that State entities must guarantee the participation of suppliers of goods and services of domestic origin, under competitive conditions of quality, opportunity and price, without prejudice to the objective selection procedure, wherever supply of domestic origin exists. The same Article establishes the following rules: (i) Under equality of conditions for procurement, preference shall be given to the supply of goods and services of domestic origin; (ii) for foreign suppliers who are in a position of equality of conditions, preference shall be given to the one incorporating the most domestic human resources, the biggest local component and the best conditions of technology transfer; (iii) in the case of implementation of investment projects, provision shall be made for the unpackaging of technology.

Article 44 of Law 80 also provides that State contracts are absolutely void where ... •they have been concluded disregarding the criteria established in Article 21 on the treatment of domestic and foreign bids or in violation of the reciprocity provided for in this Law•.

With the exception of the above and what was said in the section on criteria for the evaluation of tenders and the award of contracts (point 7), there are no procurement provisions according preferential treatment to bids from one foreign country and discriminating against those of another foreign country.

Procedures for hearing and reviewing complaints/appeals

10. What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.

In accordance with Article 77, first paragraph, of Law 80 of 1993, there is no appeal by administrative channels against an adjudication. The award decision may be challenged by bringing an action for annulment and restoration of rights in accordance with the rules of the Administrative Litigation Code.

In this regard, Article 85 of the Administrative Litigation Code establishes that any person who believes that he has been injured in a right protected by a legal provision may request that the administrative act be annulled and his right be

restored; he may also request reparation of the injury. This action may also be brought by anyone who claims that a fiscal or other type of obligation should be changed or that an amount unduly paid be returned.

In addition, Article 36, second paragraph, of the Administrative Litigation Code provides *inter alia* that the action for the restoration of rights shall lapse after four months from the day of publication, notification or execution of the act, as the case may be.

The competent courts of administrative jurisdiction are the Administrative Courts and the Council of State.

II. MEMBERSHIP OF PLURILATERAL, REGIONAL AND/OR BILATERAL AGREEMENTS

11. Is the Member party to any plurilateral, regional and/or bilateral agreements with provisions on government procurement? If so, please describe the relevant provisions.

Colombia, Mexico and Venezuela are members of the Free Trade Agreement signed on 13 June 1994 and approved in Colombia by Law 172 of 20 December 1994. Chapter XV of the Treaty refers to the government procurement regime among the three countries. The basic subject matter includes basic definitions; scope of application; observance of the principles of national treatment, non-discrimination and most-favoured-nation treatment; basic procedures for tendering, selective tendering and limited tendering, or direct procurement; procedures for the submission, reception and opening of bids and award of contracts; procedures for challenging and for dispute settlement. The Annexes to Chapter XV spell out the scope of the rules contained in the Chapter and the exceptions for which it provides. Such exceptions apply in particular between Colombia and Venezuela.

There are no government procurement provisions in the LAIA or Andean Group. Some agreements signed within the LAIA framework have provided for the adoption of government procurement provisions, but so far they have neither been proposed nor accepted.

III. ECONOMIC IMPORTANCE OF SERVICES PROCUREMENT

12.(a) Please provide statistics (if available) on the number and value of services procurements:

-On both an aggregate and sectoral basis;

-by origin of services and suppliers.

(b) Please provide statistics (if available) on the:

-Share of services procurement in total procurement;

-share of procurement of each service in total domestic output of the service;

-share of procurement of each service in total domestic consumption of the service.

No database exists which would make it possible to provide consolidated statistics on the total amount of procurement of services, not to mention broken down by sectors or suppliers.

In view of the importance of this aspect, the Ministry of Foreign Trade is working on the compilation of data in order to remedy the existing situation.

Working Party on GATS Rules Original: English

COMMUNICATION FROM NEW ZEALAND

Response to the Questionnaire on Government Procurement of Services

The following communication is being circulated at the request of the delegation of New Zealand to Members of the Working Party on GATS Rules.

I. EXISTING PROCUREMENT REGIMES

Where a Member's procurement regime is different for central government entities, sub-central government entities, and other entities, such as public undertakings (e.g. public utilities), it would be useful if these differences were specified under each of the headings indicated below.

Definition

1. What is the definition of government procurement employed in completing this questionnaire?

There is no legislative or regulatory definition of government procurement in New Zealand. For the purpose of this survey we have considered government purchasing to encompass all state sector procurement. The Ministry of Commerce has issued a booklet •Government Purchasing in New Zealand: Policy Guide for Purchasers•. These are recommended guidelines for use by government departments, statutory authorities, local authorities and other publicly-funded institutions and State-Owned Enterprises.

Administrative structure

2. How are government procurement activities administered? To what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.

There is no central control of government procurement activities. Within the parameters of the Government's purchasing policy (see paragraph 3 below), individual government organisations are responsible for their own purchasing and purchasing procedures which have also often been devolved to regions or delegated down the administrative line.

State-Owned Enterprises (SOEs) are required by the State-Owned Enterprises Act 1986 to operate as profitable and efficient businesses. They are subject to the same legal disciplines as private sector companies, and not to direct Ministerial control. Accordingly, like any company, they can determine their own purchasing policies and procedures.

Government departments and other publicly-funded agencies and institutions and SOEs are under no obligation to arrange purchases from, or through, any other government agency or from any particular private company. State sector purchasers have freedom of choice in what they buy, how they buy and from where they buy.

Laws and regulations in force

3.(a) Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.

There are no laws or regulations relating specifically to government procurement but the Government's purchasing policy and New Zealand's membership of the Australian Government Procurement Agreement do set the parameters for departmental purchasing decisions.

Reforms under the State Sector Act 1988 and the Public Finance Act 1989, while not including provisions for departmental purchasing, have brought about greater autonomy and accountability in departments' and agencies' financial management. They are designed to improve the efficiency and accountability of the public sector. The Government's decentralised purchasing policy, described below, operates in this context.

New Zealand's Government purchasing policy is based on the principle of best value for money through open and effective competition, including full and fair opportunity for domestic suppliers. Government purchasing decisions are seen as essentially no different from any other corporate or private purchasing decision taking place in an open deregulated and competitive marketplace. Like operators in the private sector decentralised government purchasing decisions are subject to individual corporate system guidelines and audit to ensure that decisions are based on value for money.

The purchasing guidelines do not prescribe or mandate a uniform procedure to be followed by purchasing agencies. The only specific requirement is that government departments are instructed (other purchasing agencies are requested) to require origin and local content information on all offers to supply goods and to obtain such information from any brokers before buying goods under contracts arranged by them. This requirement enables purchasing agencies to gauge whether they are giving full and fair opportunity to domestic producers and thus not overlooking any value for money advantages for the purchaser. There is no general benchmark level of local content required nor a policy of applying preferences that favour domestic industry and discriminate against foreign suppliers. Nor is there any policy of fostering and protecting specific industries through government purchasing.

(b) Does the procurement regime distinguish between the procurement of goods and services? If so, then how is the application of rules determined in cases of joint procurement involving both goods and services?

The Government's purchasing policy applies to both goods and services.

Procurement procedures applied

4.(a) What procedures are followed in the procurement process?

(b) Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.

(c) What are the time limits for submission of bids?

The individual purchasing agency decides for itself the procurement procedures to be applied. As noted, government agencies are free to follow their own purchasing procedures within the parameters of the Government's purchasing policy and to apply the principles and procedures of the Government's purchasing guidelines with common sense and judgement, consistent with sound and ethical purchasing practice, as set out in Treasury's publication 'A Guide to the Management of Departmental Purchasing'.

Generally the issuing of an open and competitive tender is used particularly for large purchases. In some circumstances, where this is not practicable (such as an emergency purchasing), a selective purchase is made.

While much purchasing is done directly by departments, State-Owned Enterprises and other government agencies, several private sector supply brokerage companies (including Supplycorp which was formerly the Government Stores Board) specialise in servicing public sector purchasers, including local bodies, through consolidated period supply contracts which are established through competitive tendering. Use of these contracts by public sector purchasers is on a voluntary basis. The National Health Supply Service, a unit of Capital Coast Health Ltd, acts as agent for Crown Health Enterprises participating, on a voluntary basis, in collective purchase of a range of various supplies.

Threshold levels or price guidelines used for specific procurement channels or methods, including open tendering, selective tendering and single tendering, are determined by the individual agencies for themselves. Thresholds used by the Ministry of Commerce for specific procurement channels are contained in paragraph 8.6.3.2.4, page 14, of the attached Appendix A and are provided as an example of individual departmental practice only.

Publicity for inviting tenders

5.(a) How are intended procurements publicised? Are invitations to tender published? If so, where, and in what languages?
