Government procurement

There are **three** areas of work in the WTO on government procurement:

- [Transparency](#) in government procurement, addressed by a working group of all WTO members
- Government procurement in [services](#) – handled by the Working Party on GATS Rules
- The [Government Procurement Agreement](#) – a “plurilateral” agreement signed by some WTO members, administered by a plurilateral committee

Starting point: no commitments on market access in basic instruments

[Extracts from GATT \(goods\) and GATS \(services\)](#) exempting government procurement regulations from governments’ market access commitments.

The three areas: [back to top](#)

[Transparency: the Working Group on Transparency in Government Procurement Practices \(WGTGP\)](#)

A multilateral working group set up to study transparency in government procurement practices and to develop elements for inclusion in a future agreement. **Material includes:** introduction, mandate, and work of the Working Group

[Services: the Working Party on GATS Rules \(WPGR\)](#)

Established, among other purposes, for negotiations on government procurement of services as required under the General Agreement on Trade in Services (GATS). **Material includes:** mandate, work of the Working Party

[Plurilateral: Government Procurement Agreement](#)

An agreement signed by a limited number of WTO members. **Material includes:** explanations, legal text, countries’ commitments and notifications, work of the Committee.

Government procurement: transparency

A multilateral working group i.e. all WTO members participate, set up by the 1996 Ministerial Conference in Singapore. Its mandate is to study transparency in members' government procurement practices, and to develop elements which could be included in a future agreement on transparency.

UNDERSTANDING THE WTO: CROSS-CUTTING AND NEW ISSUES

Investment, competition, procurement, simpler procedures

Ministers from WTO member-countries decided at the 1996 Singapore Ministerial Conference to set up three new working groups: on trade and investment, on competition policy, and on transparency in government procurement. They also instructed the WTO Goods Council to look at possible ways of simplifying trade procedures, an issue sometimes known as “trade facilitation”. Because the Singapore conference kicked off work in these four subjects, they are sometimes called the “Singapore issues”.

Click the + to open an item.

Understanding the WTO

-  Basics
-  Agreements
-  Settling disputes
-  Cross-cutting and new issues
-  The Doha agenda
-  Developing countries
-  The organization
-  Abbreviations

These four subjects were originally included on the Doha Development Agenda. The carefully-negotiated mandate was for negotiations to start after the 2003 Cancún Ministerial Conference, “on the basis of a decision to be taken, by explicit consensus, at that session on modalities of negotiations”. There was no consensus, and the members agreed on 1 August 2004 to proceed with negotiations in only one subject, trade facilitation. The other three were dropped from the Doha agenda.

Investment and competition: what role for the WTO? [back to top](#)

Work in the WTO on investment and competition policy issues originally took the form of specific responses to specific trade policy issues, rather than a look at the broad picture.

Decisions reached at the 1996 Ministerial Conference in Singapore changed the perspective. The ministers decided to set up **two working groups** to look more generally at how trade relates to investment and competition policies.

The working groups’ tasks were analytical and exploratory. They would not negotiate new rules or commitments without a clear consensus

decision.

The ministers also recognized the work underway in the [UN Conference on Trade and Development \(UNCTAD\)](#) and other international organizations. The working groups were to cooperate with these organizations so as to make best use of available resources and to ensure that development issues are fully taken into account.

An indication of how closely trade is linked with investment is the fact that about one third of the \$6.1 trillion total for world trade in goods and services in 1995 was trade within companies – for example between subsidiaries in different countries or between a subsidiary and its headquarters.

The close relationships between trade and investment and competition policy have long been recognized. One of the intentions, when [GATT was drafted in the late 1940s](#), was for rules on investment and competition policy to exist alongside those for trade in goods. (The other two agreements were not completed because the attempt to create an [International Trade Organization](#) failed.)

Over the years, GATT and the WTO have increasingly dealt with specific aspects of the relationships. For example, one type of trade covered by the [General Agreement on Trade in Services \(GATS\)](#) is the supply of services by a foreign company setting up operations in a host country – i.e. through foreign investment. The [Trade-Related Investment Measures Agreement](#) says investors' right to use imported goods as inputs should not depend on their export performance.

The same goes for competition policy. GATT and GATS contain rules on monopolies and exclusive service suppliers. The principles have been elaborated considerably in the rules and commitments on telecommunications. The agreements on [intellectual property](#) and services both recognize governments' rights to act against anti-competitive practices, and their rights to work together to limit these practices.

Transparency in government purchases: towards multilateral rules

[back to top](#)

The WTO already has an [Agreement on Government Procurement](#). It is plurilateral – only some WTO members have signed it so far. The

agreement covers such issues as transparency and non-discrimination.

The decision by WTO ministers at the 1996 Singapore conference did two things. It set up a working group that was multilateral – it included all WTO members. And it focused the group’s work on transparency in government procurement practices. The group did not look at preferential treatment for local suppliers, so long as the preferences were not hidden.

The first phase of the group’s work was to study transparency in government procurement practices, taking into account national policies. The second phase was to develop elements for inclusion in an agreement.

Trade facilitation: a new high profile

[back to top](#)

Once formal trade barriers come down, other issues become more important. For example, companies need to be able to acquire information on other countries’ importing and exporting regulations and how customs procedures are handled. Cutting red-tape at the point where goods enter a country and providing easier access to this kind of information are two ways of “facilitating” trade.

The 1996 Singapore ministerial conference instructed the WTO [Goods Council](#) to start exploratory and analytical work “on the simplification of trade procedures in order to assess the scope for WTO rules in this area”. Negotiations began after the General Council decision of 1 August 2004.

GOVERNMENT PROCUREMENT: TRANSPARENCY WORKING GROUP

Mandate: the Singapore Ministerial Declaration

The Working Group on Transparency in Government Procurement Practices was set up by the First WTO Ministerial Conference in Singapore, December 1996.

The mandate:

Document WT/MIN(96)/DEC, 18 December 1996, issued at the first WTO Ministerial Conference, Singapore, 9-13 December 1996

SINGAPORE MINISTERIAL DECLARATION

Adopted on 13 December 1996

1. We, the Ministers, have met in Singapore from 9 to 13 December 1996 for the first regular biennial meeting of the WTO at Ministerial level, as called for in Article IV of the Agreement Establishing the World Trade Organization, to further strengthen the WTO as a forum for negotiation, the continuing liberalization of trade within a rule-based system, and the multilateral review and assessment of trade policies, and in particular to:

Purpose

- assess the implementation of our commitments under the WTO Agreements and decisions;
- review the ongoing negotiations and Work Programme;
- examine developments in world trade; and
- address the challenges of an evolving world economy.

...

21. We further agree to:

- establish a working group to conduct a study on transparency in government procurement practices, taking into account national

Transparency in
Government
Procurement

policies, and, based on this study, to develop elements for inclusion in an appropriate agreement; and

**REPORT (2003) OF THE WORKING GROUP ON TRANSPARENCY IN
GOVERNMENT PROCUREMENT TO THE GENERAL COUNCIL**

I. INTRODUCTION

1. In the year 2002, the Working Group continued its work under the Chairmanship of Ambassador Ronald Saborío Soto (Costa Rica) pursuant to the mandate provided in the Singapore Ministerial Declaration and paragraph 26 of the Doha Ministerial Declaration (WT/MIN(01)/DEC/1). Paragraph 26 reads as follows:

26. Recognizing the case for a multilateral agreement on transparency in government procurement and the need for enhanced technical assistance and capacity building in this area, we agree that negotiations will take place after the Fifth Session of the Ministerial Conference on the basis of a decision to be taken, by explicit consensus, at that Session on modalities of negotiations. These negotiations will build on the progress made in the Working Group on Transparency in Government Procurement by that time and take into account participants' development priorities, especially those of least-developed country participants. Negotiations shall be limited to the transparency aspects and therefore will not restrict the scope for countries to give preferences to domestic supplies and suppliers. We commit ourselves to ensuring adequate technical assistance and support for capacity building both during the negotiations and after their conclusion.

2. As agreed at an informal meeting of the Working Group which took place on 29 January 2003, in addition to the work mandated by paragraph 26, the Working Group had a focus, at each of its meetings in 2003, on the matters of: (a) transparency-related provisions in existing international instruments on government procurement and national procedures and practices; and (b) technical assistance and capacity-building.

3. At the Working Group's meeting held on 7 February 2003, the Working Group discussed transparency-related provisions in existing international instruments on government procurement and national procedures and practices. In particular, comments were made on items I (definition and scope of government procurement), VIII (domestic review procedures) and XI (WTO dispute settlement procedures)¹ in the informal note by the Chairman entitled "List of Issues Raised and Points Made" contained in JOB(99)6782 of November 1999. Further, the Working Group discussed technical assistance and capacity building as called for by paragraph 26 of the Doha Ministerial Declaration.

4. At the meeting held on 18 June 2003, the Working Group continued its discussion of transparency-related provisions in existing international instruments on government procurement and national procedures and practices, and technical assistance and capacity building.

¹ M/17, para. 4.

II. ISSUES DISCUSSED IN THE WORKING GROUP

5. This section of the Report provides an overview of the substantive work done in the Working Group in 2003, pursuant to the mandate given in paragraph 26 of the Doha Ministerial Declaration (WT/MIN(01)/DEC/1). By its very nature, such an overview cannot reflect everything that was said and capture all nuances of the discussion such as can be found in the detailed records of the Working Group's meetings during the year (WT/WGTCP/M/17 and WT/WGTGP/M/18) and in the written contributions of Members.

A. TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES

6. This matter was discussed by the Working Group at its meetings of 7 February and 18 June 2003. Written submissions on this item were provided by the representatives of the United States (entitled "Considerations related to Enforcement of an Agreement on Transparency in Government Procurement"); the European Communities (entitled "Domestic Review Mechanisms Related to Transparency in Government Procurement"); Korea (entitled "Work Ahead up to the Cancun Ministerial"); and the European Communities (entitled "Positive Effects of Transparency in Government Procurement and Its Implementation"). They were circulated in documents WT/WGTGP/W/38, 39, 40 and 41 respectively.² The representatives of Australia; Brazil; Canada; Chile; China; Chinese Taipei; Colombia; Cuba; Dominican Republic; Egypt; European Communities; Hong Kong, China; Hungary; India; Japan; Korea; Malaysia; Morocco; Pakistan; Peru; Philippines; Poland; Nigeria; Sri Lanka; Switzerland; Thailand; United States; and Venezuela made oral statements or posed questions.

7. At both meetings, the Working Group took up the items on the Chairman's "List of Issues Raised and Points Made" (JOB(99)6782 of November 1999). Discussions focused on Items I (Definition and Scope of Government Procurement), VIII (Domestic Review Procedures), XI (WTO Dispute Settlement Procedures) and XII (Technical Cooperation and Special and Differential Treatment for Developing Countries). Set out below is a summary of the Working Groups' discussions on these matters.

8. In addition to the above-mentioned issues, the Working Group touched on a number of more general issues. With respect to the issue of the *importance of transparency in government procurement for international trade*, it was noted that all Member governments purchased goods and services both domestically and abroad. The view was expressed that, consequently, there was a significant amount of international trade generated by public entities when, in the exercise of their sovereign powers, they decided to purchase internationally. Given the impact on international trade, rules ensuring transparency should be negotiated in the WTO.³

9. Some of the benefits considered to be associated with a future multilateral agreement on transparency in government procurement that would accrue to procuring entities as well as to participating bidders were identified. First, it was suggested that transparency would result in enhanced efficiency and increased innovation. Specifically, public procurement applied in a transparent environment with a clear set of rules defined in advance and respected by all parties might allow tendering companies from both developed and developing countries to foster enhanced competition, which would, in turn, stimulate innovation amongst bidders. Second, a multilateral agreement would result in better value-for-money. In particular, transparent tendering should lead to effective competition between bidders (in some cases from foreign bidders), reduce the level of bids, and this would reduce the amount of public expenditure. Third, transparency rules would encourage domestic and foreign investment and partnerships between local and foreign suppliers. This benefit

² Hereinafter in the Report, documents issued in the series WT/WGTGP/W/- series are referred to as "W/..."; documents issued in the WT/WGTGP/M/- series are referred to as "M/...".

³ M/18, para. 5.

was considered to be of particular importance for developing countries that were trying to develop their markets. Fourth, a transparency agreement would have the effect of reducing corruption. It was suggested that this was a welcome side-effect for all countries.⁴ Fifth, ensuring transparency in government procurement was a core element of good governance and that this, in turn, was essential to economic development.⁵ Finally, an agreement on transparency in government procurement would result in the establishment of a minimum set of rules applicable world-wide that would have the effect of introducing legal certainty to existing procurement procedures.⁶ Reference was also made to a number of Members' experience with transparent procurement regimes. In this regard, it was noted that the enhancement of transparency in government procurement attracted more international bidders and foreign investment.⁷ The view was expressed that transparency in government procurement should not be perceived as politically controversial given the numerous benefits that flowed from transparency in government procurement and given that the issue of market access did not arise.⁸

10. The view was expressed that, despite the theoretical and actual benefits associated with transparency in government procurement, this was not necessarily a sufficient basis upon which to create multilateral rules in the area.⁹ Reservations regarding binding obligations in the area were expressed, particularly because the issue at stake was only one of transparency.¹⁰ The point was made that, while the benefits of transparency could not be denied by any Member, it was necessary to demonstrate and understand how an agreement on transparency in government procurement would enhance relations among WTO Members and how one Member applying enhanced transparency in government procurement affected and benefited its trading partners in the WTO.¹¹

11. With regard to the *nature of a multilateral agreement on transparency in government procurement*, the suggestion was made that a multilateral agreement on transparency in government procurement did not need to be a complex undertaking. It was noted that the Doha Ministerial Declaration had narrowed the scope of a possible agreement on transparency in government procurement by limiting the parameters to transparency aspects and by providing explicitly that such an agreement should neither restrict domestic preferences nor require market access commitments.¹² Recognizing difficulties for developing countries to implement a future agreement on transparency in government procurement, it was suggested that such an agreement be simple, focusing on core principles such as transparency in procurement opportunities and other elements as illustrated in the items in the Chairman's "List of Issues Raised and Points Made" (JOB(99)6782 of November 1999).¹³ An agreement should encompass a robust principles-based approach both with respect to transparency and due process aspects but which, at the same time, was not prescriptive and which did not confer a right to challenge tender outcomes. Such an agreement could be the first step towards a genuine multilateral instrument designed to facilitate companies' access to information about procurement opportunities, processes and practices and, at the same time, could provide the benefit of a more competitive procurement market.¹⁴

12. It was questioned whether the elements that were the subject of discussion within the context of the Working Group related exclusively to issue of transparency. The point was made that even with respect to those elements that were purely related to issues of transparency, clarification was needed as to whether they pertained to procurement procedures or, rather, to procurement activity in

¹⁴ M/18, paras. 17 and 21.

general.¹⁵ A related point was made that a transparency agreement should not interfere with substantive decisions made by procuring entities, such as the evaluation of offers, decision-making processes, provision of relief to unsuccessful tenderers, and review of procuring entities' decisions, etc.¹⁶

13. It was noted that, while foreign access might be granted to procurement markets in some cases, the Working Group's mandate did not entail a market access component. Clarification was sought as to whether progression from a transparency agreement to one aimed at securing market access in the future would be sought. Clarification was also sought about whether it was proposed that a future agreement on transparency would be applied without distinction between tenders open to international bids and those that were not.¹⁷ In response, it was noted that, while the future agreement on transparency in government procurement should be applicable without distinction between bids open to foreigners and those that were not, this would not impinge upon the right of governments to decide what ultimately would remain exclusively reserved for national bidders.¹⁸

14. With regard to the issue of the relationship between transparency in government and the reduction of corruption, the view was expressed that corruption existed in all countries, even notwithstanding the application of transparency rules. Nevertheless, transparency rules enhanced the ability of countries to combat this problem.¹⁹ In response, the point was made that, while reducing corruption was a laudable objective for all national governments, it should not be a principal objective, nor should it be built into any possible agreement on transparency in government procurement. This was a moral issue, and that moral, social and similar kinds of issues were not the domain of the WTO. Rather, such issues should be addressed by each Member in accordance with its own respective legislation. It was also questioned how a multilateral agreement could assist Members in combating such practices.²⁰ In response, it was noted that the rationale underlying a future agreement on transparency in government procurement would not be to reduce corruption. Nor would a future multilateral agreement contain specific provisions on corruption. Rather, the reduction of corruption would be a side-effect of the agreement.²¹

Definition and Scope of an Agreement on Transparency in Government Procurement

15. In taking up the items in the informal note by the Chairman "List of Issues Raised and Points Made" contained in JOB(99)6782 of November 1999, comments were made in relation to item I, being the *definition and scope of government procurement*. On the one hand, the point was made that the substance of the Working Group's discussion was transparency in the procurement process, irrespective of whether this related to contracts for goods, services or a combination of both. The view was expressed that, accordingly, since a future agreement would not have a market access component, it should have a broad coverage extending to goods, services and construction services. Additionally, given the difficulty associated with distinguishing between procurement that should or should not be subject to transparency rules and that procurement regimes in most countries applied the same rules to procurement of both goods and services, it was important that the whole system, including goods and services, be transparent.²²

16. Another view was that any eventual agreement on transparency in government procurement should be limited in scope to procurement of goods only and should not include procurement of services or any combination of goods and services. In this regard, transparency in procurement of services went beyond the Working Group's mandate. Re-opening the issue of transparency in

¹⁵ M/17, para. 9.

¹⁶ M/18, para. 48.

¹⁷ M/18, para. 25.

¹⁸ M/18, paras. 7, 26 and 30.

¹⁹ M/18, para. 38.

²⁰ M/18, para. 39.

²¹ M/18, paras. 38 and 40.

²² M/17, para. 10.

procurement of services might be counter-productive and that the Group should instead seek to build on the progress made in discussions relating to transparency in relation to goods procurement.²³ However, it was recognized that procurement of goods often entailed procurement of services and there was a need to take account of this possibility.²⁴ It was further suggested that there might be a need to provide flexibility for developing countries with respect to the procurement of services²⁵ given that smaller developing countries did not procure significant quantities of services.²⁶

17. With respect to the issue of the application of *thresholds* in the context of a possible agreement on transparency in government procurement, the view was expressed that thresholds should be included in an agreement on transparency in government procurement. The point was made that a transparency agreement would become too onerous without the inclusion of thresholds, particularly for developing countries. In the absence of thresholds, the agreement would apply even to the smallest of procurements.²⁷ Higher thresholds might apply for developing countries or, at least, for the least-developed countries, if that was considered the way to accommodate such countries' concerns in the future.²⁸ However, there was also a view questioning the relevance of thresholds in the context of transparency in government procurement. There should be a commitment to transparency and openness even for small tenders.²⁹ In response, the view was expressed that while it might theoretically be the case that transparency should be applied irrespective of the magnitude of the procurement in question, thresholds might be a way to provide flexibility to accommodate developing countries' needs.³⁰

18. As regards the *level of government* that might be covered by a transparency agreement, in response to a statement that a transparency agreement should be applicable at the federal level as well as the sub-federal and municipal levels, the view was expressed that a multilateral agreement on transparency in government procurement should be limited to procurement by federal entities and should not extend to procurement by entities at the sub-federal level because, *inter alia*, local entities encountered capacity problems.³¹

Domestic Review Procedures and WTO Dispute Settlement Procedures

19. Comments were also made on items VIII and XI of the Chairman's "List of Issues Raised and Points Made"³², concerning domestic review procedures and WTO dispute settlement procedures respectively. Some general comments were made in relation to both domestic review procedures and the application of WTO dispute settlement procedures. In addition, separate and specific comments were made in relation to the two compliance mechanisms. In relation to domestic review procedures, discussions touched, *inter alia*, on the pros and cons associated with domestic review procedures; the degree of precision of provisions on domestic review procedures, if any, in a WTO transparency agreement; and the scope of application of domestic review procedures under a WTO transparency agreement. In relation to WTO disputes settlement procedures, the issues discussed included the question of whether such procedures should apply to a transparency agreement and the circumstances in which the DSU might apply. Comments were also made about the interaction between domestic review procedures and the application of the WTO Dispute Settlement Understanding.

³² JOB(99)6782, November 1999.

20. *Some general comments were made covering both domestic review procedures and the application of WTO dispute settlement procedures.* Referring to submissions that had been made in relation to this item³³, the view was expressed that a strong case had been made for ensuring adequate enforcement mechanisms.³⁴ The existence of provisions on domestic review in other WTO agreements clearly highlighted the widespread applicability of that concept to trade matters. Procurement involved domestic implementation of trade-related matters and, in that sense, procurement rules were similar to the rules contained in other WTO agreements.³⁵ Accordingly, domestic review procedures and the DSU should be among the core elements of a future transparency agreement in government procurement.³⁶

21. Another view was that domestic review procedures and the application of the DSU had nothing to do with transparency. They were outside the scope of an agreement that dealt with transparency. As long as those two elements were on the negotiating table, there would be no consensus at the Cancun Ministerial Conference to negotiate an agreement in this area. It was stressed that any eventual agreement on transparency in government procurement should be limited in scope, should not be prescriptive, and should not contain provisions on domestic procurement review that could be used to question the decisions of Members' governments, administrations and procuring entities.³⁷

22. In response, the point was made that the provisions on domestic review procedures and dispute settlement would be determined by the rules that might emerge from the negotiations. It was acknowledged that such rules had to be consistent with Members' governance objectives. It was difficult to delve into domestic review and dispute settlement issues except in a rather general way until Members knew the content, coverage and elements of a transparency agreement.³⁸

23. It was noted that there was perhaps an unnecessary fear that the Working Group would try to develop a one-size-fits-all model in relation to enforcement mechanisms.³⁹ Members should work towards identifying the models of enforcement mechanisms that could be appropriately applied to a transparency agreement⁴⁰ and that worked best for them based on their legal traditions, experiences and background.⁴¹ Many countries had used the UNCITRAL Model Law as a guide for development of their respective procurement systems. Others had used the World Bank Guidelines while others had developed their laws in other ways.⁴²

24. With respect to *the pros and cons associated with domestic review procedures*, the view was expressed that such procedures were important for the proper functioning of a procurement system, not only for foreign suppliers but also for domestic constituencies.⁴³ The establishment and maintenance of a transparent procurement system provided confidence to potential suppliers that they would be treated fairly in the procurement process. When procurement processes became clouded and decisions were perceived not to follow a logical outcome, suppliers could lose confidence in the system.⁴⁴ Based on the experience of countries that already had domestic review procedures, it was suggested that such procedures provided credibility. They also assured suppliers that, if they had a complaint against a decision of a procuring entity, they would have the means for having that decision reviewed by an impartial body. Most Members already had domestic review procedures in place, not

³³ WT/WGTGP/W/38 and 39.

⁴² M/17, para. 65.

⁴³ M/17, para. 18.

⁴⁴ M/17, para. 20.

because the WTO had imposed an obligation requiring them but, rather because such Members had determined that it was in their best interest. On the basis of the foregoing, it was suggested that domestic review procedures should be part of a transparency agreement.⁴⁵

25. Another view was that domestic review procedures had nothing to do with transparency. Therefore, they were outside the scope of an agreement that dealt with transparency.⁴⁶ Further, domestic review procedures might be susceptible to abusive challenges that were aimed at delaying the procurement process and could result in the re-commencement of the procurement process if, as a result of such a challenge, the original process was declared null and void. With this perspective, the view was expressed that suppliers' rights had to be balanced against the interest of governments to conduct efficient procurement processes and the need to guarantee an efficient allocation of public resources.⁴⁷ Another view was that suppliers did not normally use domestic review procedures very often – possibly because they wished to avoid problems arising with procuring entities in future tenders. In response, the view was expressed that suppliers were perfectly aware of their legislative rights and they exercised them to the extent possible without fear of being sidelined in future procurements.⁴⁸

26. In relation to the *degree of specificity that provisions, if any, on domestic review procedures should have in a WTO transparency agreement*, the view was expressed that domestic review obligations should be strong but non-prescriptive.⁴⁹ An agreement on transparency in government procurement could include simple and flexible provisions on domestic review procedures that took into account and accommodated independent administrative or judicial tribunals and review procedures that currently existed in various Member countries.⁵⁰ Adequate domestic administrative, audit and judicial mechanisms were already in place in many countries to ensure that all participants in the procurement process acted in conformity with the applicable rules and procedures. It was suggested that the need for the establishment of a domestic review mechanism would arise only if a Member's pre-existing system did not guarantee the overall transparency of government procurement.⁵¹

27. In response, the question was raised as to whether an agreement on transparency in government procurement should impose common obligations with respect to domestic review procedures or whether Members should be left to establish their own procedures. Opposition was voiced to common obligations, common procedures and common mechanisms with respect to domestic review commitments. It was noted in this regard that domestic review provisions contained in existing WTO Agreements did not require that all Members have or apply common rules but, rather that the rules were consistent with their commitments in the WTO.⁵²

28. In counter-response, it was stressed that the agreement should set out general obligations or principles and each Member would then have to implement them in the way that worked best within its domestic system.⁵³ This approach would be an effective way of ensuring that the general principles were applied while simultaneously accommodating disciplines contained in pre-existing domestic procedures.⁵⁴ Responding to this view, it was noted that most WTO Members had reasonable and adequate administrative, arbitral and/or judicial mechanisms to suit their domestic needs and level of development, which ensured that all players in the procurement process acted in conformity with the relevant rules and procedures. Accordingly, the stipulation of any mandatory

⁵⁴ M/17, para. 57.

rules or prescriptive guidelines in a transparency agreement would not be acceptable. The primacy of domestic laws and procedures had to be preserved and there should be no requirement to change them.⁵⁵

29. As to *what would be the scope of application of domestic review procedures under a WTO transparency agreement*, the view was expressed that such procedures should ensure that all suppliers participating in a procurement had the legal right to challenge that process, independently of whether that procurement was covered by the agreement. For example, even if a procurement was subject to a national preference and even if only a Member's national suppliers had the right to have recourse to domestic review, the limitation of the scope of the agreement to transparency should not affect the ability of a national supplier to challenge procurement decisions in such cases.⁵⁶

30. In response, the view was expressed that Members should be allowed to limit the implementation of transparency rules, including the domestic review procedures. It was questioned why all suppliers should be provided with the opportunity to challenge procurement processes given that the work of the Working Group had nothing to do with market access.⁵⁷ Consistent with the Doha mandate, which explicitly excluded domestic preference schemes, enforcement mechanisms in a transparency agreement could not be used to challenge such schemes.⁵⁸ More specifically, if a national procurement system allowed governments to maintain domestic preferences, the right to challenge a procurement procedure should be limited to national suppliers.⁵⁹ Even if the domestic rules provided that suppliers had a right to challenge a procurement decision, a foreigner should not be able to invoke a WTO transparency agreement in cases where the tender did not fall under the scope of the agreement.⁶⁰

31. In counter-response, the point was made that, although the transparency agreement would exclude market access, government authorities in WTO Members did not meet their procurement needs only through domestic suppliers but also through foreign suppliers. Therefore, foreign suppliers' interests should also be protected. It was suggested that the transparency agreement should require Members to make available domestic review procedures for both domestic and foreign suppliers who were concerned that a particular procurement had not been in compliance with the transparency provisions of the agreement.⁶¹

32. The view was expressed that in the absence of reassurance that domestic review procedures would not question the decisions of domestic authorities, the inclusion of such procedures in a transparency agreement could not be accepted.⁶² Further, while domestic review provisions existed in a number of WTO agreements, those agreements were not related to transparency. A transparency agreement would essentially require making available certain information on Members' relevant rules, regulations and procedures. Accordingly, domestic challenge procedures did not have their place in a transparency agreement.⁶³

33. The point was made that the establishment of domestic review mechanisms was an area where developing countries might be able to seek *technical assistance for capacity building*.⁶⁴

⁵⁵ M/17, para. 58.

⁵⁶ M/17, para. 74.

⁵⁹ M/17, para. 51.

⁶⁰ M/17, para. 75.

⁶¹ M/17, para. 52.

⁶² M/17, para. 23.

⁶³ M/17, para. 27.

⁶⁴ M/17, para. 48.

34. In relation to the *application of WTO dispute settlement procedures* in the area of transparency in government procurement, the view was expressed that an agreement on transparency in government procurement would be an important addition to the rules-based international trading system and its obligations should be subject to the same types of enforcement procedures as existing commitments in other WTO agreements.⁶⁵ Without a link to the DSU, a transparency agreement would not be effective. Members would simply ignore the requirements of the agreement knowing that they would suffer no detriment for having done so.⁶⁶

35. Another view was that the dispute settlement mechanism in whole or in part should not apply to a transparency agreement.⁶⁷ Members had to abide by the mandate given to the Working Group, namely to clarify and define transparency rather than identifying what would transpire in cases where Members did not abide by transparency rules.⁶⁸ Further, the nature of an agreement on transparency in government procurement would be inherently different from any existing WTO agreement. Unlike other WTO agreements, an agreement on transparency in government procurement, which – in terms of the Doha mandate – would allow Members to continue to discriminate in favour of national suppliers, would not seek to address trade relations among Members. The WTO dispute settlement mechanism was based on the presumption that a violation of an obligation would have an effect on the trade of Members whereas, in the context of an agreement on transparency in government procurement, there could be no such presumption. In addition, under the DSU, the way to correct non-compliance was through compensation or retaliation. It would be difficult to base any dispute settlement mechanism applying to transparency in government procurement on that premise because there would be no violation of trade rights.⁶⁹ Similarly, existing enforcement mechanisms had been devised to ensure fair trade and to avoid the creation of unnecessary obstacles to trade, which were market access issues. Without obligations on market access, an agreement on transparency in government procurement should not be treated like other WTO agreements.⁷⁰

36. In response, the view was expressed that, similar to other WTO agreements, a transparency agreement would contain obligations and requirements and an enforcement mechanism was needed in order to make those obligations and requirements meaningful.⁷¹ Further, it was suggested that as well as having market access as their principal focus, many WTO agreements included transparency elements. The agreement on transparency in government procurement would be similar to other WTO agreements in this respect. The WTO agreements that had transparency elements did not carve out the transparency elements to provide that such elements were not subject to WTO dispute settlement procedures. Any Member could challenge another Member's implementation of such transparency provisions. Further, while accepting that the agreement was about transparency, and not about market access, the point was made that if a Member did not implement any of the provisions of the transparency agreement, Members would not be seeking concessions or retaliation, but compliance.⁷²

37. It was suggested that while there was a need for enforcement measures, that did not mean that they had to be identical to the existing rules in the DSU. There could be specific provisions on implementation of the DSU tailored to the scope of the transparency agreement.⁷³ There were already a number of WTO agreements with specific provisions relating to the application of the DSU, for instance, Article XXII:4 of the plurilateral Agreement on Government Procurement dealing with consultations and dispute settlement with regard to cross-retaliation.⁷⁴ It was suggested that the

⁶⁵ M/17, paras. 14 and 19.

⁶⁶ M/17, para. 66.

⁶⁷ M/17, paras. 30 and 31; M/18, para. 43.

⁶⁸ M/17, para. 30.

⁶⁹ M/17, para. 16.

⁷⁰ M/17, para. 25.

⁷¹ M/17, para. 26.

⁷² M/17, para. 32.

⁷³ M/17, paras. 66, 71 and 74.

⁷⁴ M/17, para. 71.

Working Group consider the flexibilities provided in the provisions of the DSU and in other agreements, for instance Article 17 of the Anti-dumping Agreement.⁷⁵ It was also suggested that there may not be a need for sanctions or suspension of concessions or cross-retaliation to ensure that the agreement was enforced.⁷⁶ Members should identify provisions that might be more difficult for Members to implement and, perhaps, such provisions could be subject to transition periods.⁷⁷

38. It was suggested that certain provisions of a transparency agreement could be phased in for developing countries and that, consequently, the application of the DSU for such countries would also be phased-in.⁷⁸ It was suggested that the Working Group should assess which provisions could be problematic to implement for some countries and that a flexible approach should be adopted to phasing-in those provisions.⁷⁹

39. As to the *circumstances in which the DSU might apply under a transparency agreement*, the view was expressed that the DSU would be available for systemic failures to comply with or a high level of disregard to the agreement, for instance, if there were refusals to ever publish a notice, or refusals to ever make information available about procurement methods.⁸⁰ Nevertheless, based on Members' experience with transparency provisions in other WTO Agreements, it was suggested that the likelihood of a transparency provision being challenged in the DSU was very low.⁸¹

40. In response, while it was acknowledged that in all probability a case under the agreement on transparency in government procurement would not be raised under the DSU, if Members included any provisions relating to application of the DSU in the agreement, they had to be absolutely clear as to what could potentially happen in the event that non-compliance was established. For example, a Member could be found by a panel and the Appellate Body to be in systematic violation of a commitment in the transparency agreement. However, it might not be in a position to comply with the recommendation of the DSB to bring its legislation into conformity with the agreement because of the refusal of its congress to adopt the relevant legislation.⁸² Responding to this scenario, it was suggested that if there were a case where a Member reported to the WTO that it could not change its laws, other Members would not rush to take that Member to dispute settlement as that was not going to be in any Member's interest. Members would be more likely to determine how they could work together in an attempt to address the problem at issue. The overall goal was not to retaliate and penalise Members; it was to develop a common set of transparency obligations that would apply across the membership of the WTO.⁸³

41. As regards the *interaction between the domestic review procedures and the application of the WTO Dispute Settlement Understanding*, the view was expressed that the respective roles of the two mechanisms that served different purposes should be made explicit in the future agreement.⁸⁴ Domestic review procedures and the application of the DSU were two distinct phases in a dispute resolution process and there was not much scope for their interaction.⁸⁵ Further, domestic review procedures and WTO dispute settlement procedures served different purposes, and there could be no overlap between the two.⁸⁶ The transparency agreement should contain provisions allowing a supplier to challenge, through domestic procedures, a procurement in breach of the provisions related to transparency of the procurement process. At the WTO level, the DSU would only apply to the

⁷⁵ M/17, para. 72.

⁸⁰ M/17, paras. 29 and 66.

⁸¹ M/17, para. 66.

⁸² M/17, para. 67.

⁸³ M/17, para. 68.

⁸⁴ M/17, para. 38.

⁸⁵ M/17, para. 39.

⁸⁶ M/17, para. 41.

implementation of the transparency provisions in the agreement.⁸⁷ It was also suggested that the transparency agreement could explicitly provide that resort to the DSU would not be available to challenge how a procurement authority had handled a specific procurement or to overturn a contract decision.⁸⁸ The DSU would not be available to WTO Members to question national authorities' procurement decisions. Members could invoke WTO dispute settlement procedures only for repeated failures to comply with the rules in the agreement or to implement its basic obligations. If there was a question about how a procurement was being conducted, it would be up to the relevant supplier to take that issue up under the domestic review mechanism.⁸⁹

42. Clarification was sought as to whether a transparency agreement would require the exhaustion of domestic review procedures before any recourse could be made to WTO dispute settlement procedures.⁹⁰ The point was made that, until the full contours of an agreement had been determined, the issue of the link between domestic review procedures and application of the DSU could not be fully examined.⁹¹

Special and Differential Treatment, Technical Assistance and Capacity Building

43. With respect to the issue of *special and differential treatment*, the view was expressed that exceptions from transparency obligations should apply in certain circumstances and longer implementation periods should be provided.⁹² However, it was pointed out that transitional periods or other types of flexibilities contained in the Uruguay Round agreements had proven to be inadequate for effectively addressing complex and multi-dimensional issues facing developing countries.⁹³ Traditional ways of ensuring special and differential treatment that had been proposed in this area were inadequate as they did not allow developing countries the needed policy flexibility.⁹⁴ There were still a number of Uruguay Round agreements that Members had not been able to implement due to lack of technical assistance, and, in fact, some Members had still not understood the commitments which they had signed up to. Therefore, the Working Group had to give serious attention to the issue of technical assistance, developing new ways of addressing the concerns of developing countries as well increasing efforts to try to make the process move forward beyond Cancun.⁹⁵ It was suggested that a more holistic approach to the issue of special and differential treatment for developing countries was needed.⁹⁶

44. The need for technical assistance during and after the negotiations – as was agreed in the Doha Declaration – was emphasized. It was an important element in ensuring that such countries would be in a position to implement a multilateral agreement of transparency in government procurement.⁹⁷ Commitment was also expressed to providing support through the WTO and other institutions.⁹⁸

45. While the commitment to provide technical assistance and capacity building was welcomed⁹⁹, it was suggested that the provision of technical assistance by some proponents might be tied to an eventual agreement on transparency in government procurement or to the demonstration of a readiness to negotiate. The point was made that, if donors of technical assistance were genuine about

⁹⁹ M/18, para. 35.

helping the developing countries, transition economies and LDCs to improve their government procurement regimes through making them more transparent and more efficient, then technical assistance should be provided even in the absence of an agreement or in the absence of an agreement to negotiate. In this regard, technical assistance should not be aimed at helping countries to understand the elements of a transparency agreement, what it would mean and its implications. Rather, it should be aimed at assisting with the establishment of a more efficient government procurement regime through the adoption of procurement rules that would enhance transparency.¹⁰⁰ In response, the point was made that technical assistance was already being provided through multilateral and bilateral channels when genuine requests for technical assistance were made. Technical assistance had been provided to various developing countries to help them develop and modernise their procurement systems for a long period of time independently of the work undertaken in the Working Group to develop a transparency agreement.¹⁰¹

Status of the Working Group's Work and the Way Forward

46. Reflecting on the work undertaken by the Working Group during the past six years and on the way forward, the view was expressed that the study phase had been valuable and fruitful. In particular, it had enabled Members to identify advantages of a transparency agreement as well as some difficulties, which confronted members in the lead-up to negotiations.¹⁰² The study phase had been completed because the elements were clear and the differences of positions were clear. What remained was for work to commence on negotiations. It was necessary in this respect to make "bridges" during the negotiation phase.¹⁰³

47. In response, the point was made that the identification of elements by the Working Group as reflected in the informal note by the Chairman's "List of Issues Made and Points Raised" (JOB(99)6782 of November 1999) did not imply any form of agreement, or tacit understanding, or consensus to include those elements in a future agreement.¹⁰⁴ While some level of consensus had emerged in relation to several of the elements in the informal note by the Chairman containing the "List of Issues Raised and Points Made"¹⁰⁵, the work of clarifying the issues had not yet been completed.¹⁰⁶ The Working Group was not in a pre-negotiation stage but still in an educational and clarification stage.¹⁰⁷ In order to have a mandate in Cancun to negotiate, there needed to be agreement in the Working Group on the elements of a future transparency agreement and, pursuant to paragraph 26 of the Doha Ministerial Declaration, there had to be an explicit consensus to move on to negotiations.¹⁰⁸

48. However, the point was also made that divergence of views existed in relation to most issues. It was suggested that these issues, which were systemic in nature, could have serious implications in terms of the costs associated with implementation, the effect on national policy, and flexibility. Such issues included the scope and coverage of an agreement on transparency in government procurement (that is, *inter alia* whether the agreement should be limited to goods or include services and concessions), the meaning of "transparency", the relationship between transparency and particular procurement methods, the application of domestic review procedures and the DSU mechanism and the form that special and differential treatment would take. It was suggested that some elements were not concerned with transparency and should not be a part of an agreement on transparency in government procurement.¹⁰⁹ Before entering into a negotiating phase, there needed to be a clear

¹⁰⁰ M/18, para. 36.

¹⁰¹ M/18, para. 37.

¹⁰² M/18, para. 3.

¹⁰³ M/18, paras. 15, 16, 18 and 46.

¹⁰⁴ M/17, para. 94.

¹⁰⁵ JOB(99)6782 of November 1999.

¹⁰⁶ M/18, paras. 12, 19, 48 and 49.

¹⁰⁷ M/17, paras. 3, 77, 78, 86, 90 and 92.

¹⁰⁸ M/17, paras. 77, 78 and 85.

¹⁰⁹ M/18, paras. 12, 19, 48 and 49.

conception of what would be involved if there was to be any discussion to launch negotiations on a future agreement on transparency.¹¹⁰

49. The view was expressed that it was not necessarily the case that negotiations could not proceed before convergence on all elements had been achieved. It was suggested that achieving such convergence was the purpose of negotiations and not of the study phase.¹¹¹ The view was also expressed that the existence of divergence of views on some issues should not be, in itself, an impediment to moving forward. Rather, a certain consistency in approach was required.¹¹² A similar view was that all that was necessary before Members moved to negotiations was the identification of the core issues at stake. Agreement could then be reached through negotiations.¹¹³

50. The view was expressed that the Doha Declaration clearly stated that negotiations on transparency in government procurement would take place after the Cancun Ministerial Conference on the basis of Ministers' decisions on modalities of negotiations, and that the negotiation would be treated as part of the single undertaking.¹¹⁴ It was suggested that this view was supported by the Doha Ministerial Declaration, the relevant section of which read "...a decision on modalities of negotiations..."¹¹⁵ rather than "...a decision on negotiations...". Further, the view was expressed that the Doha Ministerial Declaration clearly stated that a decision on modalities would be taken at the Fifth Ministerial Conference and not after that.¹¹⁶

51. In order to ensure that a multilateral agreement on transparency in government that was acceptable to all could be negotiated, it was suggested that it was crucial to adjust the level of ambition and to address the interests of developing countries in an effective and balanced manner.¹¹⁷ In order to take full account of the concerns, burdens and obligations of developing and LDCs, S&D, TA and support for capacity building should be fully reflected in the negotiations process.¹¹⁸

52. It was suggested that the following steps were necessary in the context of the Working Group in the lead-up to the Cancun Ministerial Conference. First, it was necessary to reiterate that an agreement on transparency in government procurement would only be limited to transparency; it would exclude market access commitments and would have no impact on Members' rights to use government procurement to support domestic enterprises and purchasing national goods. Secondly, the elements of the agreement needed to be identified. Thirdly, the Working Group should establish a timetable for an agreement on transparency in government procurement, which did not specify a deadline for the conclusion of the agreement. Finally, S&D treatment should be ensured for developing countries, given that the respective levels of development of government administrations amongst Members differed. In particular, exceptions from transparency obligations should apply in certain circumstances and longer implementation periods should be provided.¹¹⁹

53. The point was made that developing countries wanted to be able to properly participate in the negotiation process. However, they lacked sufficient skills to negotiate at the current point in time. Before an agreement on transparency in government procurement was considered, such countries wanted to be clear about what would be entailed. The agreement had to be a win-win agreement that was beneficial to all and was truly balanced.¹²⁰

¹¹⁰ M/18, para. 13.

¹¹¹ M/18, para. 18.

¹¹² M/18, para. 50.

¹¹⁶ M/17, para. 91.

¹¹⁷ M/18, para. 41.

¹¹⁸ M/18, para. 41.

¹¹⁹ M/18, paras. 43 and 45.

¹²⁰ M/18, para. 47.

54. With respect to the future implementation of a transparency agreement, it was noted that many countries, including developing countries, already had transparency rules in place. It was suggested that, accordingly, the implementation of any future multilateral agreement should not be a major difficulty for those countries. It was further suggested that for those countries that did not have a procurement system in place, the costs that might be associated with the introduction of such a system would be far outweighed by the resulting benefits.¹²¹ Another view was that the cost of implementation of any agreement on transparency in government procurement might be extremely high. The point was made that as long as Members did not know exactly how the future agreement would look like and, in particular, what the scope and coverage would be, it was difficult to have a precise idea of the costs involved in the setting up of transparency system.¹²²

55. The view has been expressed, on the one hand, that the four Singapore issues, including transparency in government procurement, were part of the Single Undertaking.¹²³ The contrary view has also been expressed that the Singapore issues were not part of the Single Undertaking and, therefore, required a negotiating mandate.¹²⁴ Yet another view expressed was that the debate as to whether the Singapore issues were part of the Single Undertaking was not productive for the work of the Working Group¹²⁵ and was beside the point. In this regard, the point was made that Ministers had agreed to a work programme that included these issues which had given rise to expectations amongst delegations that their concerns would be addressed irrespective of whether or not they were part of the Single Undertaking.¹²⁶

B. TECHNICAL ASSISTANCE AND CAPACITY BUILDING

56. The WTO Secretariat informed the Working Group at each of its meetings of the technical assistance and capacity building activities undertaken by it as well as those activities foreseen in the period leading up to the Cancun Ministerial Conference. The main focus of the Secretariat's activities was on regional events organized in cooperation with the multilateral development banks. In addition, a number of broader technical co-operation activities organised by the Secretariat had a government procurement component, and a limited number of national seminars had been held. An Information Session was held in Geneva on the morning of 19 June 2003 on technical co-operation and capacity building activities of inter-governmental organisations in the area of government procurement at which a number of inter-governmental organisations shared information on activities undertaken by them. That Information Session was followed on the afternoon of 19 June 2003 by a workshop on capacity-building in government procurement at which a number of developing countries shared information on their respective experiences and needs.¹²⁷ Further information on the Secretariat's technical assistance activities can be found in Section B of the minutes of the Working Groups Meetings (WT/WGTCP/M/17 and WT/WGTGP/M/18).

57. The point was made that a number of countries lacked capacity in this area. Some did not even have procurement laws. The view was expressed that, accordingly, the provision of technical assistance through seminars and conferences was insufficient. A concerted effort was needed to provide technical assistance on a case-by-case basis rather than making it general or adopting a one-size-fit-all approach. Such an approach would ensure that such assistance would really build capacity, it would help countries to participate in the current and possibly future process at the WTO on this issue.¹²⁸

C. OBSERVER STATUS OF INTERNATIONAL INTERGOVERNMENTAL ORGANIZATIONS

58. The Working Group considered requests for observer status from three international intergovernmental organizations (OECD, SELA and the Organization of the Islamic Conference) and agreed to revert to these requests in the light of the ongoing consultations in the framework of the General Council.¹²⁹

**REPORT (2002) OF THE WORKING GROUP ON TRANSPARENCY IN
GOVERNMENT PROCUREMENT TO THE GENERAL COUNCIL**

1. The period covered in this report is October 2001 to November 2002. During the review period, the Working Group has continued its work pursuant to the mandate given to it by the Singapore and Doha Ministerial Declarations. The Group held three formal meetings, respectively on 29 May, 10-11 October and 29 November 2002, under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica) and an informal meeting on 12 March 2002. The meeting on 29 November 2002 was primarily to discuss the adoption of this report to the General Council. The reports of these meetings have been circulated in documents WT/WGTGP/M/14, 15 and 16.

2. At the May meeting, the Working Group reverted to the discussion of the issues under the agenda item "transparency-related provisions of the existing international instruments on government procurement and national procedures and practices". As agreed at the informal meeting of 12 March 2002, the principal focus of discussion under this agenda item were sub-items I to V which correspond to these headings of the Chairman's note "List of the Issues Raised and Points Made" of November 1999 (JOB(99)/6782), namely definition and scope of government procurement; publication of information on national legislation and procedures; information on procurement opportunities, tendering and qualification procedures; time-periods. To facilitate the discussion, the Group had before it a summary note on these matters prepared at its request by the Secretariat. This aimed to provide a more concise description of the work done than the note by the Chairman as well as to take into account subsequent discussion in the Group and papers relating to these sub-items (WT/WGTGP/W/32). A submission was made by Australia on procurement methods (WT/WGTGP/W/31). The Working Group heard views of a number of Members regarding items I to V. It also heard an exchange of views on the mandate of the Group and the experience of a number of Members in relation to transparency in government procurement.

3. At the October meeting, the Working Group resumed the discussion of the issues under the agenda item "transparency-related provisions of the existing international instruments on government procurement and national procedures and practices", the principal focus of discussion being sub-items VI to XII, namely transparency of decisions on qualification; transparency of decisions on contract awards; domestic review procedures; other matters related to transparency; information to be provided to other governments (notification); WTO dispute settlement procedures; and technical cooperation and special and differential treatment for developing countries. In addition to the note by the Secretariat summarizing the work of the Working Group on these items (WT/WGTGP/W/33), the Group had before it a communication by Canada on transparency of contract awards (WT/WGTGP/W/36). The Working Group heard views of a number of Members regarding sub-items VI to XII. At this meeting, the Group also addressed two communications submitted by the United States which contained, respectively, a proposal for a work plan to build on the progress of work in the Working Group (WT/WGTGP/W/35) and a note on capacity-building considerations relating to transparency in government procurement (WT/WGTGP/W/34); and a communication by Japan on its views on transparency in government procurement (WT/WGTGP/W/37). In addition, Australia presented a non-paper on the transparency of decisions on qualifications (JOB(02)/142).

4. The other substantive agenda item at the May and October meetings related to technical assistance and capacity-building pursuant to paragraph 26 of the Doha Declaration under which the Group heard oral reports by the Secretariat on the status of work in this respect and comments were made and questions put by delegations.

5. A Symposium on Transparency in Government Procurement was held in Geneva on 9 and 10 (a.m.) October 2002 which many capital-based experts including experts from the majority of least-developed countries attended.

6. The IMF, the World Bank, the United Nations represented by the United Nations Commission for International Trade Law (UNCITRAL) and UNCTAD have observer status in the Working Group. The ITC also attends the Working Group meetings. During the period covered in this report, the Working Group considered requests for observer status from OECD, SELA and OIC (the Organization for Islamic Conference) and agreed to revert to these requests in light of the consultations on this matter by the Chairman of the General Council.

**REPORT (2001) OF THE WORKING GROUP ON TRANSPARENCY IN
GOVERNMENT PROCUREMENT TO THE GENERAL COUNCIL**

1. The Working Group on Transparency in Government Procurement was established by a decision at the WTO Ministerial Conference held in December 1996 "to conduct a study on transparency in government procurement practices, taking into account national policies, and, based on this study, to develop elements for inclusion in an appropriate agreement".
2. The period covered in this report is October 2000 - September 2001. The work of the Working Group up to October 2000 is described in the reports of the Working Group for 1997, 1998, 1999 and 2000 to the General Council (WT/WGTGP/1-4). The Working Group held two meetings, respectively on 4 May and 17 September 2001 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica). The reports of these meetings have been circulated in document WT/WGTGP/M/12 and 13¹.
3. At the May meeting, the Working Group reverted to the issues before it on the basis of the note by the Chair "List of the Issues Raised and Points Made" (JOB(99)/6782), last revised in November 1999. The Chairman also made available, on his own responsibility, an annotated draft agenda which aimed to facilitate discussion by suggesting issues under each of the substantive agenda items that, in his view, could be the subject of further discussion (JOB(00)/3231). As an auxiliary informal paper for the use of Members wanting to draw on it, delegates had available to them a revision of the informal note by the Secretariat, "List of Proposals on Items III-VII of the Checklist" (JOB(00)/3276), reflecting the proposals made on items III-VII in a succinct form, which identified the source of the different proposals and summarized the written and oral comments made on these proposals. The Working Group heard views of a number of Members regarding the items in the note by the Chair, "List of the Issues Raised and Points Made", and, in particular on the "definition and scope of government procurement" and on "other matters related to transparency". The Working Group also heard an exchange of views on the experience of a number of Parties regarding the application of information technology to government procurement in their countries. Also, information was provided on the establishment and operation of electronic procurement system in Chile. At this meeting, under a new agenda item "Transparency-related Provisions in Regional Agreements on Government Procurement and National Experiences, Parties to some regional agreements reported on the recent developments in the work of regional fora on government procurement, in particular in the context of the FTAA (Free Trade Area of the Americas) negotiations and the APEC GPEG (Government Procurement Experts Group). Moreover, information was provided on the treatment of government procurement in some regional trade agreements.
4. At the September meeting the Working Group adopted its report to the General Council.
5. The IMF, the World Bank, the United Nations represented by the United Nations Commission for International Trade Law (UNCITRAL), UNCTAD and the ITC have observer status in the Working Group. During the period covered in this report, the Working Group considered requests for observer status from OECD, SELA and OIC (the Organization for Islamic Conference) and agreed to revert to these requests in light of the consultations on this matter by the Chairman of the General Council.

¹ To be issued shortly.

**REPORT (2000) OF THE WORKING GROUP ON TRANSPARENCY IN
GOVERNMENT PROCUREMENT TO THE GENERAL COUNCIL**

1. The Working Group on Transparency in Government Procurement was established by a decision at the WTO Ministerial Conference held in December 1996 "to conduct a study on transparency in government procurement practices, taking into account national policies, and, based on this study, to develop elements for inclusion in an appropriate agreement".

2. The period covered in this report is November 1999 - September 2000. The work of the Working Group up to November 1999 is described in the reports of the Working Group for 1997, 1998 and 1999 to the General Council (WT/WGTGP/1, 2 and 3). The Working Group held formal meetings on 7 June 2000 and 25 September 2000 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica). In addition, two informal meetings were held on 15 November 1999 and 17 April 2000, respectively. Reports on the formal meetings have been circulated in documents WT/WGTGP/M/10-11.¹

3. At its June and September meetings, the Working Group reverted to the issues before it on the basis of the note by the Chair "List of the Issues Raised and Points Made" (Job(99)/6782). The Chairman also made available, on his own responsibility, an annotated draft agenda which aimed to facilitate discussion by suggesting issues under each of the substantive agenda items that, in his view, could be the subject of further discussion (Job(00)/3231). As an auxiliary informal paper for the use of Members wanting to draw on it, delegates had available to them a revision of the informal note by the Secretariat, "List of Proposals on Items III-VII of the Checklist" (Job(00)/3276), reflecting the proposals made on items III-VII in a succinct form, which identified the source of the different proposals and summarized the written and oral comments on these proposals. The Working Group heard views on each of the items in the note by the Chair, "List of the Issues Raised and Points Made", namely: (i) definition and scope of government procurement; (ii) procurement methods; (iii) publication of information on national legislation and procedures; (iv) information on procurement opportunities, tendering and qualification procedures; (v) time-periods; (vi) transparency of decisions on qualification; (vii) transparency of decisions on contract awards; (viii) domestic review procedures; (ix) other matters related to transparency; (x) information to be provided to other governments (notification); (xi) WTO dispute settlement procedures; and (xii) technical cooperation and special and differential treatment for developing countries.

4. At these meetings, the Working Group also had before it: a proposal by the United States for a work programme for coordinating international technical assistance with implementation of a potential agreement on transparency in government procurement (WT/WGTGP/W/28); a note by the Secretariat summarizing the information that had been made available to the Group on the technical cooperation activities of intergovernmental organizations in the area of government procurement (WT/WGTGP/W/29); a non-paper by Switzerland entitled "Why the Scope of a Future Agreement on Transparency in Government Procurement Should Cover Goods and Services" (Job(00)/5645); and a note by the Secretariat identifying the various issues involved in concessions and BOT (build-operate

¹ WT/WGTGP/M/11 to be circulated shortly.

and transfer) contracts from the perspective of their treatment or not as a form of government procurement (Job(00)/5657).

5. The IMF, the World Bank, the United Nations represented by the United Nations Commission for International Trade Law (UNCITRAL), UNCTAD and the ITC have observer status in the Working Group. During the period covered in this report, the Working Group considered requests for observer status from OECD, SELA and OIC (the Organization for Islamic Conference) and agreed to revert to these requests in light of the consultations on this matter by the Chairman of the General Council.

REPORT (1999) TO THE GENERAL COUNCIL

1. The Working Group on Transparency in Government Procurement was established by a decision at the WTO Ministerial Conference held in December 1996 "to conduct a study on transparency in government procurement practices, taking into account national policies, and, based on this study, to develop elements for inclusion in an appropriate agreement".
2. The period covered in this report is November 1998-October 1999. The work of the Working Group up to November 1998 is described in the reports of the Working Group for 1997 and 1998 to the General Council (WT/WGTGP/1 and 2). The Working Group held formal meetings on 24-25 February, 28 June and 6 October 1999 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica). Reports on these meetings have been circulated in documents WT/WGTGP/M/7-9.¹
3. At its meeting of 24-25 February 1999, the Working Group had a detailed discussion of transparency-related provisions in existing international instruments on government procurement and national procedures and practices. For its discussion of this item, the Working Group had before it the informal note by the Chair, entitled "List of Issues Raised and Points Made", listing the issues that had been raised, together with the points made on these issues, under each of the items that were discussed by the Group at its meetings held since November 1997. Under the relevant sections of the note, written contributions were presented by the delegations of the European Community on methods of procurement (Job No. 699), Norway on publication of information on national legislation and procedures (Job No. 1067), the United States on evaluation criteria and technical specifications (Job No. 1027) and Australia on rights and responsibilities of government as a buyer, value for money in government procurement, accountability and due process (Job No. 1043). As an auxiliary informal paper for the use of Members wanting to draw on it, delegations also had available to them a revision of the informal note by the Secretariat, "List of Proposals on Items III-VII of the Checklist" reflecting the proposals made on items III-VII in a succinct form, which identified the source of the different proposals and summarized the written and oral comments on these proposals. Also under this item the representative of Venezuela introduced a non-paper on transparency in government procurement and the fight against bribery (Job No. 481). In response to the requests by some delegations, it was agreed that the Secretariat would make available to delegations, upon request, the texts of the OAS Inter-American Convention against Corruption and the OECD Convention on Combating Bribery of Foreign Public Officials in International Business Transactions. During the meeting, the Group also heard general statements made by a number of delegations expressing their views regarding the discussion in the General Council intersessional meetings of January and February 1999 on the subject of government procurement, the Singapore mandate and the relationship between the substance of the Group's work on transparency and the rules of the plurilateral Agreement on Government Procurement.

¹ WT/WGTGP/M/9 to be circulated shortly

4. At its meeting of 28 June 1999, the Working Group reverted to its discussion of transparency-related provisions in existing international instruments on government procurement and national procedures and practices on the basis of a further revision of the informal note "List of the Issues Raised and Points Made" which had been updated in the light of the discussion at the previous meeting and the new papers submitted. Under the relevant sections in the note, written contributions were presented by the delegations of Poland on time-limits (Job No. 3777), Australia on transparency of decisions on qualification (Job No. 1781), Canada on contract award information (Job No. 3131) and the United States on domestic review mechanisms (WT/WGTGP/W/23). Points made were reflected in a revision of this document and also in a revised version of the "List of Proposals on Items III-VII of the Checklist". A communication from the Chairperson of the APEC Government Procurement Experts Group containing APEC non-binding principles of accountability and due process was also made available to the Group (WT/WGTGP/W/22). In the context of the discussion under the item on "definition and scope of government procurement", it was agreed that the documentation of the Working Party on GATS Rules relating to the subject of concessions would be made available to the Group (WT/WGTGP/W/25). Moreover, interested Members were invited to make submissions providing information on their national legislation and practices in regard to concessions from the perspective of government procurement.

5. At its meeting on 6 October 1999, the Working Group reverted to the issues before it on the basis of a further revision of the Chairman's informal note, "List of the Issues Raised and Points Made" (the latest version of which is attached to this report, Job (99)/5534). The Group also had before it non-papers submitted by the delegations of the European Community (Job No. 4519); Hungary, Korea and the United States (Job No. 4510); Japan (Job (99)/5239); and Australia (Job (99)/5803), containing draft texts of an agreement on transparency in government procurement. The Group received a communication from the Chairperson of the APEC Government Procurement Experts Group, forwarding the APEC non-binding principles on government procurement recently developed by the Experts Group (WT/WGTGP/W/24).

6. The IMF, the World Bank, the United Nations represented by the United Nations Commission for International Trade Law (UNCITRAL), UNCTAD and the ITC have observer status in the Working Group. During the period covered in this report, the Working Group considered requests for observer status from OECD, SELA and OIC (the Organization for Islamic Conference) and agreed to revert to these requests in light of the consultations that are being held on this matter by the Chairman of the General Council.

in Government Procurement**

24 September 1999

LIST OF THE ISSUES RAISED AND POINTS MADE

Informal Note by the Chair

Fifth Revision

1. This note attempts to set out the issues that have been raised, together with the points made on these issues, under each of the items that were discussed by the Working Group at its meetings of 3-4 November 1997, 19-20 February 1998, 22 June 1998, 8-9 October 1998 and 24-25 February and 28 June 1999. This non-paper is without prejudice to the position of any delegation and, in particular, to whether the Working Group would decide to include or exclude any particular aspect addressed in it from the elements that it will develop for inclusion in an appropriate agreement.

I. DEFINITION AND SCOPE OF GOVERNMENT PROCUREMENT

2. It has been recalled that the mandate of the Group is confined to issues of transparency in government procurement practices. The view has been expressed that a distinction should be made between obligations on transparency and market access commitments in the area of government procurement. As regards national practices limiting market access, their transparency but not their substance should be covered. The view has also been held that rules on transparency in government procurement should only apply on a non-discriminatory basis and obligations on transparency should only be applicable to the extent that market access for foreign supplies and suppliers was permitted by domestic law. For example, procurement from local markets, to be paid in local currency, might be distinguished from procurement from international markets, for which foreign exchange was available. The question has been asked whether transparency of procurement processes would be of any interest to foreign suppliers when access was reserved to domestic suppliers. It has also been said that the application of the rules of a transparency agreement to procurements, open only to domestic suppliers, would be unduly burdensome.

3. Another view expressed in this connection has been that transparency disciplines should apply to government procurement practices as broadly as possible. One of the purposes of developing rules on transparency was to create national procurement systems that were not only transparent but also perceived to be transparent; if the scope of requirements on transparency would be limited to open procurement markets, procurement systems would not be seen to be transparent. It was in the interest of all concerned, domestic as well as foreign suppliers and entities, that information on what procurement was open to international competition and what was not should be readily available to all. The view has also been expressed that the distinction that had been suggested would give rise to an imbalance in rights and obligations since transparency obligations would apply more widely in those Members whose procurement markets were more open to international competition; the distinction would also narrow the scope of a transparency agreement. Moreover, the point has also been made that, given the variety of ways by which market access was limited in national practices, for example in the form of absolute exclusions of foreign suppliers and supplies, price preferences or the awarding of contracts to foreign suppliers only in the absence of competitive bidding from domestic suppliers, it would be technically difficult to identify those government practices that should be exempted from transparency obligations. It has also been said that, if the underlying reason for the suggestion to limit the application of transparency disciplines to open procurement markets was

concerns about excessive burdens, these concerns should be addressed in their own right in the course of the Group's work.

4. As regards the issue of the definition and scope of government procurement, a distinction has been made between the definition and scope that should be used by the Working Group for working purposes and those which might be used to govern the scope of application of the elements to be developed for inclusion in an appropriate agreement. In regard to the former aspect, a view has been expressed that a broad approach, without preconceived limitations, should be employed, sufficiently wide to accommodate the differing meanings and levels of detail given to the term "government procurement" in national legislation and practices in individual Members and compatible with innovative procurement procedures and new types of government structures. This would enable the Group to study the full range of issues relating to an eventual agreement on transparency in government procurement and, as regards the latter aspect referred to above, to develop a more exact definition for the purposes of the scope of an eventual agreement on transparency. Another view expressed has been that there would be an interrelationship between the scope of a transparency agreement and the level of detail that its elements would contain. A transparency agreement, incorporating simple and straightforward core principles, could have a very broad coverage. It has also been said that the work of the Group on this issue would need to reflect the realities of procurement practices in individual countries in order to guarantee an effective implementation of an eventual agreement. In this connection, a range of issues that would need to be taken into account has been identified. These are summarized below.

5. It has been suggested that a useful way of approaching these issues was to draw a distinction between the following questions:

- Who is doing the procuring?
- What is being procured?
- What types of transactions are covered?

A. WHO IS DOING THE PROCURING?

6. In regard to the first of these questions, who is doing the procuring, the following views have been put forward:

- entities at all levels of government, including at sub-central levels of government and enterprises owned or influenced by government, might be covered by a transparency agreement;
- the rules of a transparency agreement should extend to procurement by entities at the central and sub-central levels of government;
- the degree of coverage of sub-federal entities should take account of differences in government structures;
- the rules of a transparency agreement should only extend to procurement by entities at the central or federal government level. It would be difficult to frame international rules that would ensure transparency at sub-central levels in countries with complex government structures. In countries with federative administrative systems, the authority of federal governments to undertake obligations on transparency in respect of entities at the state or local levels of government equivalent to those of the central government level might be limited by the constitution. Another view expressed has

been that a limitation of the obligations of a transparency agreement only to central government level would give rise to an issue of equity among countries with different government structures. A further point made has been that a number of provisions in various WTO agreements, for instance GATS Article I:3(a)(i), addressed the issue of obligations undertaken with respect to sub-central levels of government;

- the coverage of state enterprises should depend on how they were operated. One view that has been expressed is that public enterprises required to run on the basis of the same economic considerations as private enterprises should not be subject to requirements on transparency, at least where they did not fall within the ambit of GATT Article XVII. Another view has been that a distinction should be drawn between state enterprises that operated in a competitive environment and others, even if run on the basis of commercial considerations;
- in the light of experience, consideration might be given to extending the coverage further, for instance to public enterprises.

7. It has also been suggested that, in defining the scope of a transparency agreement, the Group would need to define criteria for determining when an entity should be considered as one engaged in government procurement for the purposes of a transparency agreement. For example, it has been suggested that government ownership of less than 50 per cent should mean that it was excluded. It has also been suggested that account should also be taken of national legislation which conferred on entities the legal right to conduct government procurement activities or gave governments the power to exercise control over the procurement decisions of entities and enterprises.

8. Another suggestion has been that the substance of a relevant provision should determine the scope of the application of the specific requirements in a transparency agreement. For example, requirements on publication of laws and procedures might be applied across the board to entities at all levels of government.

B. WHAT IS BEING PROCURED?

9. In regard to the question of what is being procured, the suggestion has been made that the scope of a transparency agreement might extend to all goods and services and any combination of goods and services. It has been said that Article I of the plurilateral Agreement on Government Procurement might be a useful reference in the discussion regarding this aspect of coverage. The view has also been expressed that the scope of a transparency agreement should extend only to the goods sector.

10. With respect to the use of threshold values in determining the coverage of a transparency agreement, the view has been expressed that, in principle, the coverage of a transparency agreement should not be limited to contracts above a certain threshold level, but that certain provisions might be more flexibly applied for smaller contracts. Also, it would not be appropriate to exclude low-value procurement from the requirements relating to the provision of information on national legislation or to procedures for the qualification of suppliers on the basis of threshold values. On the other hand, requirements on the publication of tender notices, particularly in a foreign language, might be relatively less strict for low-value procurement. Suggestions have also been made that transparency obligations should only apply to procurement above certain threshold levels in order to avoid burdensome procedures and costs related to publication of all procurement opportunities and that the work of the Group should take account of national practices in this respect. Minimum threshold values could vary according to the level of government and be used for defining the scope of application of the rules to entities at sub-central levels of government. The suggestion has also been made that thresholds might differ according to the level of development of Members.

C. WHAT TYPES OF TRANSACTIONS ARE COVERED?

11. As regards the issues relating to what types of transactions should be covered, it has been suggested that acquisition by any contractual means, including, for example, through lease or rental, might be covered. Questions have been raised as to whether, and, if so, to what extent, concessions and build-operate-transfer (BOT) contracts should be covered. The point has also been made that privatization should not be covered.

12. Concerning concessions - in the sense of the grant of certain exclusive rights by a government to a private party for a set period of time in order to produce a product or offer a service to the public on its behalf (for example for building and operating motorways or airports) - one view expressed has been that government consumption of certain services (for instance, contracts awarded to private companies for the provision of cafeteria services or cleaning services in public buildings), although sometimes referred to as concessions, should more appropriately be considered as government procurement and should, therefore, be addressed in the discussion of definitions and scope of a transparency agreement. A further view has been that, even if not considered as government procurement transactions *per se*, concessions should be addressed under the scope of a transparency agreement to the extent that principles of transparency should apply to the procedures used for the award of concessions.

13. The question has been asked whether concessions were more properly treated as a matter of investment or the supply of services on behalf of the government and, therefore, should be covered under the scope of other relevant agreements or initiatives. Those concessions that fell within the definition of GATS mode three supply of services might be subject to the disciplines of GATS Article III. In this connection, it has also been said that GATS Article III would not apply to concessions that were not within the scope of GATS Article I.

14. The view has been expressed that concessions should not be included in the coverage of a transparency agreement. Rules which governed concessions and government procurement were separate sets of legislation in national practice. National legislation on government procurement did not apply to procurement by private companies that operated concessions granted by a government. In this regard, the following comparisons between government procurement on the one hand and concession-granting, awarding of BOT (build-operate-transfer) contracts and privatization on the other have been made:

- with regard to definitions, government procurement was a procedure intended to regulate the selection of contractors for the supply of goods, the execution of works and the provision of services. The granting of a concession took the form of a unilateral act of the State giving a private party the right to manage, on its behalf, facilities, properties, public works or resources that were under government ownership or to offer a public service that was within the exclusive competence of a government, for example for mining or exploitation of natural gas. In the area of public procurement, no such authorization was given to a private party supplying the service. Privatization involved a sale of a state-owned company or assets;
- with regard to legal form, government procurement was made effective through an administrative act of the procuring entity. Concessions and privatization were made effective through a decree of the executive power at the level of the head of government or State, and, in some cases, subject to authorization by the legislature;
- with regard to subject-matter, government procurement covered goods, public works and services; concessions covered public works or services; and privatization covered state corporations, property and assets;

- in the case of concessions, the State regulated the operation of the services under concessions, set and controlled the prices that were paid by the public for those services, defined the rights of users and ensured the effectiveness and continuity of the services provided. In government procurement, suppliers offered bid prices based on their own calculation of estimated costs and profits;
- concessionaires were considered as owners of the goods affected to the exploitation of the services during the period of concessions, whereas procurement contractors did not have ownership of the procured goods, services or works carried out;
- with regard to the methods, open, restrictive or limited tendering methods were used in the area of government procurement. Open, restrictive or limited tendering or auctioning were used in the granting of concessions. Public sale or auctioning and liquidation of debt in return for a share of the company were the methods used in privatization;
- as regards the application of the GPA, procurement by concessionaires listed in Appendix I was covered but the granting of a concession was not. The act of privatization was not covered but enterprises in which government control or influence had been withdrawn through privatization could be excluded from the coverage of the GPA;
- as regards spending of funds, concessionaires were responsible for providing the economic resources necessary for the expenses related to the operation and exploitation of concessions, whereas the governmental authorities disbursed the state funds related to government procurement transactions or the execution of public works contracts. Whether a service provided was a government procurement or a concession was related to the question of who had the financial liability;
- governments did not necessarily enter into contracts with private parties in the process of granting concessions;
- a BOT contract could be considered as a form of concession. The distinction between these two types of government action should be clarified;
- in general, concessions took the form of monopolies. However, more than one concession could be granted for the operation of a public service, for example for different end-users, regions or types of exploitations. Contracts for the procurement of goods, services and works were awarded to one supplier who might use sub-contractors to carry out parts of the contract;
- a distinction should be made between the granting of a concession or concluding a BOT contract and transactions entered into by the concessionaires or BOT contractors subsequent to the granting of concessions or awarding of BOT contracts;
- in some countries, only national companies were allowed to operate concessions;

15. It has been suggested that Members should provide information on national legislation and practice as regards concessions in their countries. A view has been expressed that the issue of concessions raised complex questions to which the answers were not clear as yet. It has been said that some concessions could be outside the scope of a government procurement. Nevertheless, the Group should maintain a broad approach to their coverage at this stage, pending further study of the issue. In

this connection, reference has been made to the information-gathering activities in the GATS Rules Group.

D. OTHER MATTERS RELATING TO DEFINITION AND SCOPE

16. The issue of the exceptions that might be allowed to the basic coverage of a transparency agreement has been raised. One suggestion has been that there may be reason to allow the exclusion of those areas that track general exceptions in GATT 1994, such as national security exceptions. It has also been suggested that exceptions on development grounds might be envisaged. The view has been expressed that the question of permissible exemptions was better left for discussion at a stage when a better idea of the general definition that might be employed would be available.

17. In regard to developmental aspects, in addition to the points reflected above, the general point has been made that the function of national laws in taking into account social and developmental needs, for instance promotion of small and medium-sized enterprises, balanced regional development or technological development, should be considered in the definition of government procurement to be employed in a transparency agreement. In this connection, it has been said that a transparency agreement should not include provisions setting out the objectives that should be sought through government procurement policies. Rather, the purpose of a transparency agreement should be to ensure that Members provided transparency of the domestic objectives sought through the use of their various government procurement policies. On the other hand, it has been said that a Member should not be required to provide transparency of the objectives sought in procurement which was open only to domestic suppliers. A transparency agreement should not have provisions that could limit the scope of procurement policy objectives or decisions.

II. PROCUREMENT METHODS

18. The point has been made that, from a transparency perspective, the method of procurement employed was less important than ensuring that it conformed with basic principles on transparency and maximized the level of competition feasible under the particular circumstances. The point has also been made that the method of procurement used should not undermine the principles and objectives of a transparency agreement to encourage open and competitive regimes. Other views expressed have been that an eventual transparency agreement should aim at transparency with regard to the methods employed in different countries rather than seek to limit or modify those methods. According to these views, specific circumstances governing a given procurement dictated the choice of a particular method among alternative methods. Rather than prescribing which method should be the preferred method, a transparency agreement should allow procurement authorities to choose the best method for meeting the objectives of the procuring entity as well as in the interests of efficiency, competition and transparency. General principles of transparency should be developed with respect to the choice and application of procurement methods. Further disciplines might need to be developed to cater for the particular circumstances of individual methods. Whilst the methods used by WTO Members - at least for larger value contracts - mostly seemed to be based on the principle of tendering (open, selective, limited), they were not necessarily limited to this (e.g. purchase cards, electronic catalogues). In this connection, it has been said that setting forth provisions specifying the differences inherent between various procurement methods as regards transparency would allow more flexibility in the use of those methods.

19. The view has been expressed that the Group should consider the issue of procurement methods from the perspective of transparency. The Group's examination of the transparency aspects of procurement methods could focus on the following three categories: where information on the procurement opportunity and selection criteria was made publicly available to all interested suppliers; where a pre-selection of qualified suppliers was made and information was transmitted only to those suppliers; and where no information was made publicly available but the procuring entity negotiated with an individual supplier. Such a categorization, focused on transparency aspects, would avoid getting into the details of procurement methods. It has also been said that the method to be used in a procurement process should be specified in advance, for instance by giving a reference to the relevant provisions of the UNCITRAL Model Law. On this point, it has also been said that such a requirement might be too prescriptive since only a few countries had adopted the Model Law.

20. With respect to the main procurement methods used, the view has been expressed that open or international bidding in which there was no limit to the number of potential bidders was the most transparent method; selective procedures were justifiable where it would not be feasible or efficient to consider and evaluate a large number of potential bids, as long as all potential interested suppliers were given the same opportunity to seek access to information on a procurement and seek to be invited to bid. Another view has been that open and selective tendering should be regarded as equally transparent, provided selective tendering was conducted in accordance with the appropriate principles. One view has been that, while open tendering was the most transparent method, it might not be the most cost-effective, in particular in the case of complex procurements. As regards the third main procurement method, limited tendering (e.g. individual, sole-source, single-source or direct tendering), it has been suggested that, since information opportunities and selection criteria were not made publicly available, this method should only be used in justified and exceptional circumstances. International instruments and national practice commonly accepted a range of circumstances and conditions under which the use of limited tendering would be warranted. A further point has been that it might not be possible to provide information on procurement opportunities under each type of tendering method. It has been suggested that general principles of transparency regarding the choice and application of procurement methods should be developed. Should those procedures be deemed inadequate, further elements on transparency could be developed to cater for the particular circumstances of individual procurement methods.

21. Based on the written and oral proposals, the following options and alternative approaches for addressing the issue of procurement methods have been identified. These various options and the comments made on them are as follows:

- Option 1. There should be sufficient flexibility to accommodate the differing procurement methods used in national practice, and the possibility of using methods which are not based on tendering should also be provided for. As such there should be no limitation on the choice of procurement method except limitations that exist in domestic legislation.

It has been said that the scope of option 1 was too wide and would not contribute to the objective of improved transparency in government procurement.

- Option 2 – first alternative. Whilst wishing to ensure flexibility and providing for the use of methods which are not based on tendering, there should be a requirement that the method of procurement used should not undermine the principles and objectives of a transparent procurement regime.
- Option 2 – second alternative. Whilst wishing to ensure flexibility and providing for the use of methods which are not based on tendering, there should be a requirement: (i) that the procurement method used conforms with basic transparency principles [to

be defined]; and/or (ii) that transparency is maximized at each stage of the procurement process for the particular method used.

Views have been expressed supporting this option. It has also been said that the aim of the provisions of a transparency agreement should not be to determine the validity of the procurement methods chosen by entities but rather to guarantee that, when inherently less transparent methods were used, circumstances justifying their use should be made known to all interested parties. One view has been that this option would also take into account national practices that determined the choice of procurement methods based on threshold values.

- Option 3 – first alternative. As for option 2, first or second alternative. In addition, there would be a further requirement that methods which are considered to be inherently less transparent (e.g. single-source procurement or limited tendering) should only be used in exceptional and justifiable cases.

Views have been expressed supporting this alternative.

- Option 3 – second alternative. As for option 3, first alternative, but the additional requirement would be further developed through the use of an illustrative list (examples which could be included in such a list are given in paragraph 24 below) of such exceptional cases.

It has been said that this approach in this alternative was flexible enough to take account of the existing and any future procurement practices. It also provided safeguards against loopholes in transparency by the choice of the method used. From this perspective, this option should be the preferred way of dealing with the issue of procurement methods. The use of methods, other than tendering, should be allowed only in narrowly defined circumstances because of their potential for circumventing transparency. Other views have been expressed supporting this option.

Questions have been asked regarding the treatment of those circumstances that might be envisaged in national legislation but not included in the illustrative list; whether the illustrative list would set some guidelines for justifying the use of limited tendering or would consist of an exhaustive list of all possible exceptional circumstances; and the difference in practice between the first and second alternatives of option 3.

- Option 4. There should be greater prescription as to the type of procurement method which can be used. For example, there could be a requirement that methods based on the so-called open and selective tendering procedures are used and that limited tendering is only used in exceptional and justifiable cases (with or without the use of an illustrative list as suggested in option 3, second alternative).

It has been said that this approach was far too prescriptive regarding the types of procurement methods that could be used and did not sufficiently take into account diversity in the existing national practices.

22. Views have also been expressed stating that it would be premature to support any of the options above before the principles and objectives of a transparency agreement were clearly defined.

23. The following approaches to how limited tendering should be dealt with in a transparency agreement have been suggested:

- since the use of the method permitted procurement authorities to dispense with many of the procedural guarantees associated with transparency, a transparency agreement should set forth an illustrative list of the specific circumstances and conditions justifying the use of this method;
- provisions of a transparency agreement should not impinge upon the right of procuring entities to use this method in circumstances that dictated its use. Spelling out the exact circumstances and conditions justifying the use of this type of method might go beyond the scope of a transparency agreement. It had to be taken into account that governments had other policy objectives apart from transparency;
- while not limiting the circumstances under which limited tendering might be allowed, the Group should develop disciplines to be included in a transparency agreement to ensure that, when used in appropriate circumstances, limited tendering procedures should be employed in a way which maximized transparency at each stage of the procurement process;
- rather than describing in detail the circumstances justifying the use of limited tendering, disciplines should be developed ensuring transparency in the use of this method;
- a distinction might be made between a situation in which the purpose of using this method was precisely to avoid transparency, e.g. for national security reasons, and other cases where the purpose of using limited tendering was to meet needs that might arise from special circumstances of the procurement;
- a transparency agreement should not cover procurement not open to tendering.

24. A range of circumstances which might figure in an illustrative list or define the general circumstances under which limited tendering would be justified has been referred to. These are:

- for reasons of extreme urgency brought about by circumstances unforeseeable by the procurement authority (e.g. natural disasters); such circumstances should not be caused by the procuring entity itself, for instance as a result of its negligence;
- in the absence of responsive tenders, under tendering procedures which do not restrict competition;
- when tenders already submitted have been collusive;
- when it is clear at the outset of a procurement that only one supplier or a limited group of suppliers has the proprietary rights to goods or services being procured, for example procurements involving the protection of patents, copyrights or other exclusive rights, or for other technical or artistic considerations;
- in commodity markets where there may be no individual suppliers since the market is the supplier;
- in so-called "fire sales" where the procurement authority can realize exceptional savings at a one-time event (e.g. liquidation sales);
- when a product or a service is supplied by a supplier with a monopolistic position in the market;

- when a product or a service can only be procured in a specific geographical location or place of production;
- when a procurement is for research or experimental purposes and not for commercial use;
- for national security reasons;
- for other reasons which should be published in law or regulations.

25. Reference has also been made to the circumstances justifying the use of the limited tendering method contained in Article XV:1(a)-(j) of the plurilateral Agreement on Government Procurement.

26. With regard to ensuring that limited tendering, when employed, is used in a way which maximizes transparency, the following suggestions have been made:

- a procuring entity should generally seek more than one bid if circumstances permitted;
- a procuring entity should be required to document the specific circumstances giving rise to the need for such limited tendering;
- public notices of contract awards should disclose the specific circumstances and reasons for contacting a particular supplier.

III. PUBLICATION OF INFORMATION ON NATIONAL LEGISLATION AND PROCEDURES

27. The point has been made that transparency meant ensuring that information on procurement rules, practices and opportunities was made widely available in an easily usable form to all interested parties (and particularly potential suppliers), as well as ensuring the right of access to that information. Publication of information regarding the general environment in which public procurement took place and interested parties were expected to operate was an essential component of transparency. Publication of national legislation not only provided a clear roadmap for potential suppliers but also a check against arbitrary practices within the procurement regime. The resulting procedural certainty also reduced costs in the procurement cycle.

28. The point has also been made that there were two questions regarding this matter: the scope of the information that should be made available and in what way.

29. On the first issue, it has been said that there appeared to be two approaches to establishing the scope of the information that should be made available: a formal approach that would require, for example, that all laws, ministerial ordinances, administrative guides or internal rules and procedures should be published; and an approach that would consist of determining the substance of the information that should be made available, irrespective of the legal form. This second approach might be preferable since what was of importance was the substance of the information to be made available. The key substantive information that should be made available was that which defined what rules of general application had to be followed in determining participation in the tender and making the decision on the award of the tender and what remained at the discretion of the procuring entity. The second approach would have merit in that the objective of transparency would not be achieved if the publications that contained the relevant laws and regulations did not cover important aspects of national procurement practices and procedures.

30. It has also been suggested that all laws, regulations, judicial decisions, policy guidance, and administrative and other procedures on government procurement should be published promptly or be readily and easily accessible in a usable form to all interested parties, including potential foreign suppliers and other Members. Any changes to such laws and regulations should also be published promptly or generally made available through an accessible source. Concerning publication of administrative guidelines, it has been said that it might not be appropriate to publish information relating to internal procedures of government agencies since their disclosure might prejudice the position of a purchasing agency for instance in its negotiations with suppliers; rather, the relevant obligation should be limited to publication of administrative guides to the operation of the procurement systems. It has also been said that publication of regulations of each individual procuring entity would incur burdensome administrative costs.

31. In regard to the second issue, how the information should be made available, the following points have been made:

- the important point was that information should be made publicly available, not how it should be made available;
- a distinction should be made between publication of information and accessibility of information. It has been suggested that laws, regulations and measures having the force and effect of law should be published. Regarding judicial decisions, it has been stated that publication requirements in an agreement had to take into account the different ways of developing national legislation and procedures. For instance, in judicial systems where laws were developed on the basis of case law, judicial decisions could play a central role in defining national legislation and procedures;
- publishing information on judicial decisions, policy guidance and administrative guides could be onerous. But any judicial decisions that would have a bearing on procurement practices and that were not customarily published should be made accessible within the country;
- publication requirements could be met through publication in printed or electronic media. The choice should be left to the discretion of Members. There should be no mandatory provisions requiring the use of electronic media. It has also been suggested the two forms of publication should not be mutually exclusive.

32. The view has been expressed that publication obligations, including in the area of government procurement, already existed in the goods area under Article X of GATT 1994 and in the services area under Article III of the GATS. The provisions of these two Agreements which exempted government procurement from the scope of certain GATT 1994 and GATS obligations (Articles III:8(a) and XVII:2 of GATT 1994 and Article XIII of the GATS) did not apply to these transparency provisions.

33. The suggestion has also been made that information on national legislation and procedures should be provided at no more than cost. It has been said that the matter of fees charged was not within the ambit of a transparency exercise. Government entities should have the discretion to charge fees above cost price. However, any fees for provision of information on national legislation and procedures should be charged on a non-discriminatory basis.

34. The point has also been made in connection with the publication of laws and regulations that the obligation to publish should be limited to publication in a national language and should not involve burdensome and costly translation obligations. It has been stated that some domestic public agencies provided information on legislation in a foreign language or a summary of specific legislation in a WTO language.

35. The suggestion has been made that interested parties should know either where to go to locate this information, or who to ask. A transparency agreement might provide for Members to notify either the source of this information and/or to establish and notify contact or enquiry points (which could take the form of an Internet website), from which other Members and maybe interested suppliers could obtain explanations about national legislation and procedures, including information on the practical steps involved in tendering, any preferential treatment of national suppliers and domestic review mechanisms. In this connection, reference was made to the provision of Article III:4 of the GATS, and also to that of Article IV:2 of that Agreement which requires developed country Members, and to the extent possible other Members, to establish contact points to facilitate the access of developing countries suppliers to information. It has been stated that the feasibility of providing contact or enquiry points in respect of decentralized procurement systems, especially in federal States, would have to be studied carefully. Any obligations should be without prejudice to decentralized procurement systems. In this connection, the suggestion has been made that in decentralized national procurement systems a central office should be designated for keeping a list of the contact points at sub-central levels. One view in this respect has been that the establishment of enquiry points at sub-central levels might incur burdensome administrative costs.

36. In the discussion of this item, the relevance of the overall coverage of a transparency agreement has been recalled. In this regard, it has been suggested that the publication obligation should only relate to situations where access was open to foreign supplies and suppliers. The opposite view has also been expressed, with the argument that it would be essential to have information on any policies including preferences in favour of national suppliers in order to determine whether procurement markets were open to foreign suppliers. In respect of the term "foreign suppliers", the point has been made that in some national practices government procurement was used as an instrument for the promotion of domestic supplies and suppliers and national treatment would not be granted to those suppliers who did not have a commercial presence in the country of the procuring entity.

37. The link between this item and that in Section X, concerning the provisions on notification of information to other governments under an appropriate transparency agreement, has been referred to.

38. A number of comments have been made on specific proposals put forward by Members as reflected in the note by the Secretariat entitled "List of Proposals on Items III-VII of the Checklist".

39. A non-paper synthesizing the alternative approaches that have been suggested in the Working Group has been circulated as Job No. 1067.

IV. INFORMATION ON PROCUREMENT OPPORTUNITIES, TENDERING AND QUALIFICATION PROCEDURES

40. The point has been made that advance information on government procurement opportunities enhanced the participation of potential bidders in a procurement procedure. Broad participation of bidders in the procuring process contributed to improved efficiency in government procurement. In order for the best level of participation from the market to be achieved, information about procurement opportunities must be available in notices of invitation to tender and in tender documents.

41. The point has also been made that information on procurement opportunities in notices of invitation to tender should be sufficient to allow potential suppliers to assess their interests in participating in the proposed procurement procedure and to seek tender documents; and that information in tender documents should be sufficiently specific to enable suppliers to prepare responsive bids if they participated in the procurement process. The application of these core

principles would save efforts and resources of suppliers in preparing bids for procurements in which they did not have sufficient interest and of procuring entities in considering unresponsive bids.

42. It has been recognized that national practices concerning the amount of detail included, respectively, in initial tender notices and in the subsequent tender documentation, varied considerably and that it might not be necessary to have precise minimum requirements concerning their specific contents or to seek harmonization on this point. It would be sufficient for a transparency agreement to develop elements in the form of general principles.

43. In this connection, views have been expressed suggesting that the level of detail of information to be supplied might also vary among the different stages of tendering and procurement methods used. Whereas detailed information should be given under open procurement procedures, the requirements to publish tendering information in a widely available medium under selective tendering procedures should be flexible to enable tender documents to be sent directly to registered suppliers. Information provided to prequalified suppliers could be more specific than information in public notices available to all suppliers. It has also been said that, notwithstanding the flexibility regarding the amount of detail that should be provided in tender notices, certain basic types of information should be provided under all methods for the purpose of achieving maximum transparency whatever the method used. Certain minimum standard requirements, reflecting the core principles of transparency, should apply horizontally to all procurement methods.

44. In regard to tender documentation, it has been said that their contents should provide all information relevant to submitting responsive bids that was not provided in the tender notices. They should set forth the parameters for evaluating bids and awarding the contract, including requirements in respect of technical specifications and any preferences granted to national suppliers and suppliers and on any other assessment criteria based on socio-economic considerations. It has also been said that the information contained in tender documents should be comprehensive enough to lead to the submission of bids that would enable procuring entities to compare them and to allocate their resources efficiently.

45. The view has been expressed that rules on information on tendering opportunities in a transparency agreement should apply on a non-discriminatory basis but only in cases where national markets were open to foreign suppliers; otherwise domestic procedures would be applicable.

46. Another view expressed was that provision of information on procurement opportunities was an essential element of transparency in procurement irrespective of the entitlement of foreign suppliers to participate and that such prior information had benefits both from domestic and from foreign suppliers' perspectives. Points made regarding this view have been:

- the obligations of a transparency agreement should apply to all procurement within its scope, whether or not suppliers had access to procurement opportunities. The principle of non-discriminatory access to information would need to be observed regardless of any policies excluding foreign suppliers from access to procurement opportunities or the existence of preferences for domestic suppliers. The establishment of the conditions of competition and transparency in domestic markets was essential to achieving transparency at the international level;
- access to information on any policies, including preferences in favour of domestic suppliers, would allow suppliers to determine whether the procurement markets were in fact open to foreign suppliers. From the government's perspective, transparency in the extent to which markets were open would prevent further requests for information from foreign suppliers on market access matters. Such information would also

benefit suppliers who would know in advance whether it would be worthwhile for them to prepare tenders;

- if the obligations on transparency applied only to the extent that foreign bidders were provided access to procurement markets, this would give rise to inequity among Members to a transparency agreement. The end result would be an agreement which would require those countries that had their markets fully open to foreign suppliers and had no rules in place regarding national preference to undertake a much greater level of obligations as regards transparency. On the other hand, other countries that had relatively closed markets and excluded foreign suppliers in a large number of sectors would take on lesser obligations;
- since a transparency agreement would not prevent government procurement from being limited to domestic suppliers, the rights of other Members would not be breached by a Member limiting transparency obligations to government procurement open to international competition because foreign suppliers would not have any interest in obtaining information on a procurement that was not open to them;
- a requirement for transparency in procurement, irrespective of the openness of markets, would result in a transposition of obligations on market access into a transparency agreement. The arguments in favour of transparency in all procurement would imply that all Members should be required equally to provide access to their markets since, by keeping their markets closed, they would assume lesser obligations on transparency. Any country was free to undertake greater obligations on transparency by opening its markets if it chose to do so;
- a decision to open a country's market was independent of the requirements of an agreement on transparency. The balance in a transparency agreement was to be found in obligations with respect to transparency and not in those with respect to market access. In undertaking obligations on transparency, countries had to take into account their individual national practices;
- this matter was better dealt with in regard to the overall scope of an agreement (c.f. Section I);
- participants in the Working Group should be encouraged to provide information on their national practices in regard to the provision of information in respect of procurement not open to international competition.

47. The question has been raised as to whether openness would depend only on general criteria prescribed by law or whether it could depend on a case-by-case decision of the procuring authority. In this regard, the following views have been expressed:

- to the extent that procurement contracts would be decided on a case-by-case basis, it would be the prerogative of a government authority not to open a specific procurement contract to foreign suppliers;
- it would defeat the objective of a transparency agreement if the question of whether a given procurement would be open to foreign suppliers were to be decided on a case-by-case basis;
- in those countries where decisions to open procurement to foreign suppliers were made on a case-by-case basis, such decisions could be taken, either at the onset of a

tendering process or at the time of the award of a contract. With the latter type of case-by-case decision, it would be significantly non-transparent should a governmental authority decide to award contracts only to domestic suppliers. Disciplines should be developed in order to provide maximum transparency in those situations in which the decisions were taken on a case-by-case basis.

A. PUBLICATION

48. On advance information on tender opportunities, it has been suggested that there are two key issues: where the information can be found (publication) and content. With regard to where the information can be found (publication) by potential suppliers, the following points have been made:

- procurement opportunities and procedural requirements relating to those opportunities should be made known and be generally available to interested parties, including the general public and other Members, through an easily accessible source;
- the source used to make information on procurement opportunities generally available should be left to the discretion of WTO Members, but its level of availability should be proportionate to the likely level of interest in the procurement. In other words, where a procurement opportunity was likely to attract international interest, procurement opportunities should be published through a source which potential foreign suppliers and service providers had access to, as opposed, for example, to posting a notice in a town hall. It has also been stated that it would not seem necessary to have a requirement to publish tender notices in an international publication; rather, interested suppliers should be expected to keep track of national publications;
- publication of tender opportunities should be made available in printed and/or in electronic media. Printed media could be an official gazette or a national newspaper of wide circulation;
- electronic publication should be used where feasible and taking into account the level of development of individual WTO Members. The internet address of electronic publications could be made available. It has also been stated that electronic publication offered significant benefits in terms of both time and costs, and based on current trends would be used increasingly in the coming years (see also Section IX B);
- the choice should be available to each WTO Member to publish in the appropriate media and electronic publication should be an option rather than an obligation. This would permit account to be taken of the divergences in the capability to make use of electronic means of publication between WTO Members and between regions within a WTO Member and between suppliers;
- allowances should be made for systems by which information was furnished by private sector service providers acting on behalf of procuring entities;
- under limited tendering procedures where a procuring entity contacted the prequalified suppliers directly, advance publication of tender notices did not seem to be necessary;
- some Members' notices of invitation to tender and to prequalify were published also under selective procedures;

- requirements for publication of tender notices might be less strict for low-value procurements in order to avoid burdensome administrative costs;
- publication of tender opportunities should not be limited to contracts above a certain threshold level (see also Section I).

49. The view has been expressed that exceptions to the obligation to publish procurement opportunities (e.g. to take account of limited tendering in the case of some national practices) should only be permitted in exceptional and justified cases. These circumstances should be the same as those set out for the use of procurement methods which severely restrict competition. Some suggestions have been made concerning situations where publication should not be required. This could be the case for purchases below threshold levels and for purchases not made through open tendering procedures for instance for limited tendering. The point has been made that, in the latter instance, it would be important that information on how to qualify for selective tendering procedures be adequately available, and that post-contract award notices should be published. Another view has been that, for transparency reasons, publication of procurement opportunities should in principle not be limited to contracts above a certain threshold level.

B. CONTENTS OF INFORMATION

50. With regard to minimum requirements for the information to be published on procurement opportunities, the point has been made that, while national practices with regard to the amount of information to be included might differ, information on procurement opportunities in notices of invitation to tender and tender documents notices should be sufficient to allow potential suppliers to assess their interests in participating in the proposed procurement or in a qualification system and enable them to prepare responsive bids or proposals for qualification. Members should be able to decide whether the provision of information on procurement opportunities or its availability to interested parties through an accessible source should be done just through the use of tender notices, or whether the bulk of information should be contained in the tender documentation or be made available by other means.

51. The suggestion has been made that an illustrative list of the types of information that such documents should contain should be developed to provide at least:

regarding the procuring entity:

- full contact details (the name and the address) of the procuring entity (the buying department or agency, the location of the responsible office and the division or branch of the department or agency);
- coordinates of a contact point or document centre from which additional information including on technical and commercial requirements and any other relevant information or documents may be requested and obtained, the final date for making such requests and, if applicable, the cost of such information; unique reference number identifying the request in the department or agency's records;

regarding suppliers:

- any requirements relating to the supplier or service provider, for example economic or qualification requirements;

regarding the intended procurement:

- an identifiable description (nature) of the goods and/or services to be provided, together with their quantity or an indication of their extent;
- the place of delivery, site or place of performance of the service and, if applicable, the time-limit for delivery, completion or duration of the contract;

regarding evaluation of tenders:

- the procurement procedure envisaged to be used (open, selective, whether negotiations are involved, etc.);
- the criteria for the award of the contract including factors other than the price that are to be considered in the evaluation of tenders (economically most advantageous bid) in the evaluation of tenders;
- information on the existence of any conditions in favour of national suppliers in awarding contracts, such as price preferences, local content requirements or any other policies of discriminatory nature. In this connection, it has also been said that provision of such information would not be necessary if a description of national preferences or discriminatory policies was already published in the Official Gazette;
- any technical specifications required;
- where applicable, the location, date and time of any public briefing on the requirements;

regarding submission, receipt and opening of tenders:

- the final date for the submission/receipt of tenders or requests to be invited to participate in a qualification system;
- the address to which submission of tenders or requests to be invited to participate in a qualification system must be sent;
- details of any language requirements in respect of submission of tenders;
- date and place of opening of tenders.

52. The view has been expressed that such a list might be excessively burdensome and costly, in particular in those countries in which the number of tenders issued by government entities was high.

53. In addition, it has been suggested that entities might publish, on a voluntary basis, a summary of information on their intended procurements at regular intervals. The point has been made that only those entities which could sufficiently plan their procurement activities ahead could have such procedures.

C. EVALUATION CRITERIA

54. With regard to the specification of criteria for the evaluation of tenders and awarding of contracts in public notices and/or tender documents, it has been said that all relevant evaluation criteria should be accessible to interested suppliers, whether through publication of procurement

opportunities, specifications laid down in tender documentation, or by giving references to applicable laws and regulations. It has been recalled that the question of whether national preferences, or other policies underlying practices of a discriminatory nature should be part of such criteria, was not within the scope of the work of the Group. However, emphasis has been put on the importance of information on such national preferences and other measures in favour of domestic supplies or suppliers, for instance offsets, being made known in advance in the tender documents and/or tender notices. The point has been made that transparency in regard to the existence of preferences or other discriminatory requirements would enable potential foreign tenderers to determine whether they had an interest in entering a specific procurement process in spite of discriminatory national policies. Interested suppliers would only be able to distinguish between procurement opportunities that were reserved for domestic suppliers and those that were open to international competition if information on any discriminatory policies were made available to them in advance. Provision of information upfront on price preferences or qualification requirements favouring domestic suppliers would enable suppliers to gauge their interest and assess the real opportunity to win a contract. Such information would also allow interested suppliers to make the appropriate decisions in preparing bids that would be responsive to the conditions set out in this respect in tender documentation. By avoiding participation in procurement processes in which their bids would be ultimately dismissed, suppliers would save not only their own resources but also those of procuring entities. Moreover, the clear specification of requirements based on socio-economic considerations in the tender documentation would facilitate the implementation of such policies by providing transparency in respect of the nature of the socio-economic needs applicable to specific procurements.

55. One view has been that information on preferences to national supplies and suppliers need only be included in tender notices and/or tender documents when it was not adequately provided through laws or regulations of general application, either through setting out the relevant information or through an explicit reference to the applicable legislation. It has also been said that, according to national practice in one country, information on national preferences or other discriminatory policies were supplied in response to requests by individual suppliers. Another view has been that clear references to any national policies, including any preferences applied, should always be included in tender notices and/or tender documents. In this regard, the point has been made that the establishment of links between electronically published tender documents and relevant laws and regulations would enable suppliers to search easily for further information on any applicable discriminatory policies.

56. In regard to offsets, for instance domestic content, technology transfer, export earnings or similar requirements, the view has been expressed that, although procurement policies in many countries incorporated such requirements, they had the effect of distorting procurement decisions. It was important to ensure that such requirements were applied in a transparent manner. If used at all, they should form part of the qualification criteria rather than the criteria for evaluating tenders. Suppliers should be informed of the offset requirements laid out by the procurement entity at the outset, which should define how such requirements could be met, for example certain percentage of domestic content in total procurement or certain value of export earnings, before they participated in the bidding. Offset requirements that were used as part of evaluation criteria were inherently non-transparent because this would not give suppliers a clear indication at the outset of what requirements they would be expected to meet so that they could prepare responsive bids.

57. Another view has been that a requirement regarding offsets might go beyond transparency matters and appeared not to be a main element of transparency. The comment has also been made that, rather than an element of a transparency agreement, the provisions relating to offsets should be seen as measures against circumventing the non-discrimination principle. However, since a transparency agreement would confer on Members an explicit right to use discriminatory measures, including conditions such as local content requirements, any such anti-circumvention provisions would not be warranted. A paradoxical result of more stringent obligations in a transparency

agreement might be to encourage Member countries to make their procurement markets less accessible rather than be obliged to comply with obligations that might be too strict.

58. The point has been made that technical specifications were an important element of evaluation criteria. Only those bids that met the technical specifications included in the tender documentation were considered as responsive bids. The role of technical specifications in procurement processes would become even more significant in future with increasingly complex procurements. Technical specifications should avoid specifying one technology over others and should not be developed in such a way as to require the use of technology only available to a limited number of suppliers. Another view in this connection has been that in certain circumstances, for example advanced medical technology used in hospitals, entities should be allowed to specify their preferred type of technology in order to fulfil the objectives of a given procurement, provided that this was done in advance in notices of invitation to tender. Further views have been expressed that a transparency agreement should have provisions encouraging the use of performance-based specifications over those that were design-based; and wherever possible, basing technical specifications on existing internationally agreed or other relevant standards. Comments have been made questioning the relevance of the requirements to use performance-based specifications to transparency. It has also been said that any changes in technical specifications should be made known to all interested suppliers.

59. It has also been said that any changes in evaluation criteria during the course of the procurement should be communicated to all interested suppliers, or in the case of selective or limited tendering, to all suppliers participating in the procurement process.

D. CLARIFICATION AND MODIFICATIONS

60. With respect to clarifications of tender documents given by procuring entities to potential suppliers, it has been stated that any questions raised by interested suppliers should be responded to in good faith by the procuring entity. Any information provided in response to requests for clarification from one supplier should be transmitted simultaneously to all other suppliers participating in the procurement process. Another view has been that it would be impracticable to provide the responses to requests for information from suppliers that were received at different contact points disseminated around the country to all other suppliers participating in the procurement process. This might only be feasible in the case of high value procurements, for example in the context of projects financed under the World Bank loans, in which the number of participants were usually limited.

61. It has also been said that all potential suppliers or all participants in selective tendering should be informed of any changes to information contained in tender notices and tender documents, including those regarding evaluation criteria and technical specifications. Another view has been that such information should be made available to interested parties through an accessible source. In this connection, it has also been said that a transparency agreement should clearly specify that all those suppliers who had originally ordered tender documents or had indicated an interest in the procurement opportunity should have any additional information transmitted to them through the same means as the one used for providing the original information.

E. LANGUAGE

62. The suggestion has been made that requirements concerning publication of notices of invitation to tender should be limited to publication in an official national language. The translation of the whole publication into a WTO language could become too burdensome. Another suggestion has been that, where possible, tender notices should be published in a WTO language. It has also been suggested that procuring authorities should have the discretion to decide whether translation of

tender notices should be limited to those tendering opportunities that might be of interest to international suppliers.

63. It has been suggested that, in addition to the publication of the whole information in the official national language of the WTO Member concerned, consideration might be given to whether a summary of the main elements of the information in an invitation to tender might also be published in one of the official WTO languages. Such a summary might contain the following elements:

- the name and address of the procuring entity;
- the nature (subject-matter) of the contract;
- the time-limits for submission of tender or application to be invited to tender;
- the address from where further information can be obtained.

64. It has also been suggested that there could be a limited requirement for giving a summary of tender notices in one of the WTO official languages allowing, for example, the exemption of tender notices for small-value procurements which might be of limited interest to international suppliers. One view has been that providing a summary of every tender notice would incur undue administrative costs (see also Section IX C).

65. A number of comments have been made on specific proposals put forward by Members as reflected in the note by the Secretariat entitled "List of Proposals on Items III-VII of the Checklist".

V. TIME-PERIODS

66. In regard to minimum time-periods to be available to potential suppliers to fulfil the requirements of the different stages of the procurement process, the point has been made that time-periods in existing international instruments and national practice varied significantly. A transparency agreement should not be overly prescriptive in this respect. Any provisions on time-limits should be accepted only as recommendations. A Member government or procuring entity should retain the discretion for the establishment of appropriate time-limits on a case-by-case basis and in the light of the responses from the market. On the other hand, it has been said that time-limits should be specified in national legislation in order to avoid any subjective actions by entities in this respect. National legislation could set out a number of criteria relating to time-limits that would define the parameters of discretion that entities could have in this respect. This would provide procuring entities with the flexibility for using shorter time-limits under certain circumstances, for instance during the actual tendering procedures, if a prior tender notice with all the relevant information had been issued. The suggestion has been made that, rather than establishing specific minimum time-periods in a transparency agreement, the Group might agree on a general principle, as in the UNCITRAL Model Law or in Article XI:1 of the GPA.¹

67. It has been said that sufficient time should be allowed for the preparation, submission and receipt of responsive bids to individual procurement opportunities. Any time-limits which are set should not undermine the principles and objectives of a transparency agreement. They should be

¹ Article XI.1(a) of the GPA reads as follows:

"Any prescribed time-limit shall be adequate to allow suppliers of other Parties as well as domestic suppliers to prepare and submit tenders before the closing of the tendering procedures. In determining any such time-limit, entities shall, consistent with their own reasonable needs, take into account such factors as the complexity of the intended procurement, the extent of subcontracting anticipated and the normal time for transmitting tenders by mail from foreign as well as domestic points."

determined with due consideration to the particular circumstances of the procurement (including the likely level of interest), type of procurement method used and the capacity of the market to act on the information in tender notices, as well as the complexity of the procurement. In this connection it has also been said that a balance should be found in setting any requirements on time-limits; with longer time-periods, procuring entities might resort to limited tendering procedures more frequently. The point in this connection has been that Members should not be required to set time-periods to suit foreign suppliers, who should be treated on a national treatment and MFN basis. A further point has been made that time-periods should be sufficiently long to give both foreign and domestic suppliers a meaningful opportunity to avail themselves of the relevant information and to submit responsive bids. It has further been said that a proposed requirement to provide adequate time-limits might be biased towards allowing suppliers including foreign suppliers to prepare and submit bids. The term "reasonable" should be used to provide, for instance, for emergency situations in which it might not be possible to provide for adequate or sufficient time-limits. Moreover, it has been said that there should be non-discrimination between potential suppliers with respect to the application of time-limits. Another view has been that the time-periods allowed for the preparation and submission of tenders should be the same for all qualified suppliers provided they had access to procurement opportunity. It has further been said that any changes in the time-periods should be made known to all suppliers or the relevant information be made generally accessible from an available source.

68. A number of comments have been made on specific proposals put forward by Members as reflected in the note by the Secretariat entitled "List of Proposals on Items III-VII of the Checklist".

VI. TRANSPARENCY OF DECISIONS ON QUALIFICATION

69. The point has been made that registration and qualification systems had a useful role in the procurement process provided that they were run in a fully transparent manner. The qualification procedures enabled purchasing entities to assess potential suppliers' capacities for meeting their requirements and also expedited the tender review process by reducing costs to purchasers and suppliers. It has also been said that qualification procedures facilitated the achievement of the overall government policy objectives of the community or the industry. The transparency of criteria for qualification should reinforce the objective of an open, transparent, efficient and equitable selection process; ensure uniform provision of information to potential suppliers; and encourage the receipt of sufficient information from suppliers. The key principle of transparency as regards this issue was that decisions on registration and qualification of suppliers should be taken only on the basis of criteria that had been identified early in the process and predisclosed to suppliers sufficiently in advance. Any changes in qualification requirements should be made known to all interested suppliers. Qualification decisions should be taken in a manner that would build a two-way confidence between the procuring entity and the market including potential suppliers.

70. The point has been made that prequalification systems should not be exclusive: new suppliers meeting the qualification criteria in time to participate in a tender should be given the same (or, in one view, at least a reasonable) opportunity to be included on a qualification list as had been enjoyed by those already qualified.

71. Moreover, a distinction has been made between qualification systems which potentially could cover a number of different procurements and qualification on a procurement-by-procurement basis. It has also been noted that the issue of qualification of suppliers could play a greater role in the procurement of services than in the procurement of goods.

72. It has been said that the qualification of suppliers should be undertaken well in advance of the tendering process involved in order to ensure the efficiency and fairness of the government procurement process. It has further been said that the criteria for qualification could include such factors as: technical capability; client satisfaction; financial capacity; contracting and partnering

issues; quality control; performance requirements relating to occupational health and safety; compliance with an associated code of practice for potential suppliers; human resource management (including skill formation); compliance with domestic legislative requirements; and commitment to continuous improvement. On the other hand, views have been expressed stating that there should be sufficient flexibility to allow for the development of appropriate qualification criteria for different types of procurement and sectors. The point has been made that the establishment of any harmonized qualification criteria at the multilateral level would not be feasible and was outside the ambit of the Group's work. The prescription of any binding criteria or an illustrative listing of criteria for qualification in an agreement did not have any bearing on the work on transparency.

73. It has further been said that qualification decisions should be made by expert bodies constituted for that purpose within procuring entities. The basis for selecting members for such bodies and the way in which the decision-making process was conducted should be publicly available to all potential suppliers. On the other hand, it has been said that the setting up of an expert body on qualifications was a matter within the purview of national authorities. Another issue with respect to transparency to which attention has been drawn is the situation in which a supplier who had applied under the predisclosed qualification criteria had received no decision on its application. All applicants should be informed of the qualification decision in advance of the call for tenders.

74. The point has been made that, once the qualification criteria were set out in invitations to prequalify or tender documents, they should be applied in a non-discriminatory way as regards transparency. Prequalification criteria should be made known to all potential suppliers in a non-discriminatory way. This would not prevent preferential elements in favour of domestic supplies or suppliers from other countries being built into the criteria themselves.

75. The point has also been made that transparency in qualification procedures involved matters of due process. Suppliers should have the right to challenge qualification decisions if the rules of the system had not been followed. The view has also been expressed that application of the principles of objectivity and non-discrimination to prequalification criteria extended beyond the concept of transparency. There could be non-discrimination as regards transparency notwithstanding discrimination in favour of national suppliers pursuant to preferences or other domestic sourcing requirements. It has been said that all decisions relating to qualification should be notified to all interested parties. It has also been said that, under certain tendering methods, it was not possible to overturn decisions on qualification even if certain other suppliers could be considered to be qualified in terms of the published criteria.

76. A number of comments have been made on specific proposals put forward by Members as reflected in the note by the Secretariat entitled "List of Proposals on Items III-VII of the Checklist".

VII. TRANSPARENCY OF DECISIONS ON CONTRACT AWARDS

77. The point has been made that an essential feature of transparency in decision-making on the award of procurement contracts was that such decisions be taken strictly on the basis of the evaluation criteria (including in relation to technical specifications) which had been set forth in advance in the tender documents and in accordance with the information provided on how those criteria would be applied. Furthermore, in order to ensure that decisions were seen to be taken in this way, criteria should be set out in such a way as to ensure as objective an application as possible. The view has also been expressed that a transparency agreement would not, as a general rule, set out what those criteria should be. The point has been made that allowance would need to be made for cases where, for reasons of *force majeure*, for example in the case of the lifting or imposition of an embargo, the criteria set out in tender documents could not be strictly adhered to.

78. Concerning the receipt and opening of tenders, the view has been expressed that, while it may not be necessary to require public opening of tenders to ensure transparency, procuring entities should have procedures in place to ensure the regularity and impartiality of the procurement process and that there was no opportunity to manipulate the specific elements of tenders or to provide a particular tenderer with information on other tenders. In this respect, the view has been expressed that the details of the procedures on how tenders received by procuring entities should be handled were not within the ambit of the Group's work. Another view has been that further consideration should be given to whether it would be sufficient to embody these concepts in general principles or whether more specific requirements should be envisaged.

79. With respect to *ex post* information on contract awards, the point has been made that the right to such information was a crucial element of transparency in the area of government procurement. The procurement procedures might provide for some form of public announcement of the contract awards and also give tenderers the opportunity to be debriefed, for example on written request from an unsuccessful tenderer. A public announcement on contracts awarded was also of interest to industry generally (as potential future bidders) and to other governments which would want to see the transparency agreement working in practice. One approach suggested to this matter has been that the provision of *ex post* information was particularly important in cases where certain information had not been provided *ex ante*. It has also been said that decisions on contract awards need not include the types of information that had been included in the relevant notices of invitation to tender, provided that a reference was made linking the *ex post* information to the earlier information.

80. As to the purpose of *ex post* information, it has been said that contract award information provided unsuccessful tenderers and other Members with the opportunity to ensure that they had been treated equitably according to the specific requirements and the assurance that criteria set forth in the tender documentation and the applicable national rules and procedures had indeed been properly followed in the procurement proceedings; this type of information also provided unsuccessful bidders with the opportunity to improve their future bids.

81. Based on the written and oral proposals, a number of options and alternative approaches for addressing the issue of the provision of information on contract awards have been identified. These various options and the comments made on them are as follows:

- Option 1. As provided in national legislation. There would be no requirement to make contract award information available, except that which existed in domestic legislation.

It has been said that national practices would determine whether *ex post* information on contract awards should be given through prompt publication of contract award notices or directly by writing to individual tenderers; unsuccessful bidders should be informed but it would be burdensome and costly to publish this information or otherwise make it publicly available.

It has also been said that the existing practice in some countries was to send a standard regret letter to unsuccessful bidders and to give the reasons for rejecting their offers only where possible.

Other views have been expressed questioning whether this option would meet adequately the objectives sought by a transparency agreement. An obligation to provide *ex post* information should be considered as a powerful incentive to awarding authorities to abide by the rules and procedures in national legislation.

- Option 2. There would be an option for individual Members to determine whether to provide debriefs to unsuccessful tenderers or to publish contract award information. The mechanism chosen should be made known to interested parties. A provision should be included safeguarding the confidentiality of information on contract awards or debriefings, the release of which would prejudice the legitimate commercial interests (whether general public or private).

A view expressed has been that debriefing should be a complementary measure rather than a substitute for public availability of the contract award information. Another view expressed has been that it would be time-consuming and burdensome to inform unsuccessful bidders individually of the outcome of their bids.

It has also been said that, with a view to striking a balance between the need for rules on transparency and the administrative burden of providing *ex post* information, the information to be provided in contract award notices should be less detailed than that provided through briefings.

With regard to protecting the confidentiality of tenders, it has been said that the obligation to provide new information related to tenders, such as the name of the winning supplier, the value of the contract and any technical details, need not undermine the confidentiality of information. Entities could brief unsuccessful tenderers without necessarily releasing confidential information supplied by successful bidders. Another view has been that requirements on debriefing of unsuccessful tenderers would not be useful since most tender information was commercially sensitive and could not be disclosed without the consent of the tenderer concerned. Another point made has been that a starting point for consideration of the confidentiality of information could be the provisions of other WTO agreements on the matter.

Other views have been expressed stating that debriefing of all unsuccessful tenderers on the reasons why they had not obtained an award was unnecessary.

- Option 2(a). Information provided would be in line with the principles and objectives of a transparent procurement regime and provided within a fixed time-frame (which may be different between countries).

Views have been expressed supporting this sub-option.

- Option 2(b). Information would be based on an illustrative list² and provided within a fixed time-frame.

² The following specific elements for contract award notices have been suggested: the procuring entity, the location of the responsible office, division or branch of the department or agency and its address; description of the supplies including the department or agency for which they are required, if different from the above, and in enough detail to identify their nature, quantity and any period that may be applicable; a unique reference number identifying the contract, purchase or agreement in the department or agency's records and the date of the purchase or agreement; the value of the winning bid or the total liability of the contract at the date of entering into the contract; or where it is not possible to predict accurately the total liability with precision because of the basis of the contract, for example cost escalation, labour and materials, or schedule of rates, the total estimated value or liability; the value of the lowest and the highest bid, the type of procurement method used, the name of the winning supplier(s), their postal address and the date of the award should be published. Where a panel contract has been made, details of all suppliers should be notified. However, if this is impractical, a contact address within the agency should be published for persons seeking further information; and relevant product and service code.

- Option 2(c). Unsuccessful bidders should be informed of the outcome of their bids and debriefed, when they themselves requested it, as to why their bid had been rejected and/or the winning bid had been chosen. Information given to unsuccessful tenderers on where their bids were deficient and why they were not selected would provide them with the assurance that they had been treated fairly and equitably in accordance with the requirements and criteria of the tender documentation and that proper procedures and rules had been followed and would indicate where a bid was deficient and why it had not been selected. This was an important guarantee of transparency, particularly in circumstances where limited information on the contract awarded was provided. Moreover, it has been said that debriefings had an educational role. Debriefings allowed unsuccessful tenderers to assess their bids against the winning bid and to be informed about the shortcomings of their bids.

- Option 3. Publish contract award information. There would be a requirement to publish contract award information within a fixed time-frame, with the provisions for making the mechanism known and confidentiality included in Option 2.

Views have been expressed supporting this option.

- Option 3(a). Information included in a list (see footnote 2) would be provided.

A view has been expressed supporting this sub-option.

Another view has been expressed questioning the need for a prescriptive listing of the type of information that contract award notices should contain. The provision of this type of information would be outside the scope of a transparency agreement. The point has also been made that any illustrative list to be annexed to a transparency agreement should be non-binding. The Group would need to consider whether laying down general principles would be sufficient in this respect or whether the minimum types of information that should be given on contract award notices should be set out in a transparency agreement.

- Option 3(b). There would be a requirement to provide the information based on the list (see footnote 2) and, where the contract was awarded using a method considered to be inherently less transparent (e.g. single-source procurement or limited tendering), to explain why this method was used and, where applicable, to explain why the information was not given at the start of the procurement process.

A view has been expressed supporting this sub-option.

Another comment has been that *ex post* information on contract awards should be given regardless of the procurement method used.

On the other hand, it has been said that the provisions suggested in this sub-option were not within the ambit of a transparency agreement.

82. A comment with respect to the operation of *ex post* information has been that *ex post* information on contract awards should be given regardless of the procurement method used.

83. It has been noted that a number of other WTO agreements, for example the Agreement on Customs Valuation and the Agreement on Preshipment Inspection, included requirements on the provision of *ex post* information to economic agents. The link between the provision of *ex post* information and item VII on review and item VIII(a) on maintenance of records of procurement proceedings has been referred to.

84. A number of comments have been made on specific proposals put forward by Members as reflected in the note by the Secretariat entitled "List of Proposals on Items III-VII of the Checklist".

VIII. DOMESTIC REVIEW PROCEDURES

85. The view has been expressed that it was not sufficient for rules to be introduced to ensure transparency in government procurement practices; there must also be a domestic review mechanism to introduce accountability into the process and to ensure that the rules were respected by everyone involved in a procurement process. The availability of an avenue for review of procurement processes was a key element of transparency. The mechanism for review of complaints by suppliers or a bid challenge system guaranteed due process and public accountability throughout a procurement process and enabled the process to be seen as transparent. The existence of a review mechanism might make public procurement authorities more aware of the need to ensure the consistency of the procedures used in a particular procurement with the applicable laws and regulations. The view has also been expressed that a well-defined and transparent bid challenge mechanism added to the transparency of any decision-making process, ensured that procurement decisions were reviewed openly and increased confidence in the effective functioning of the overall procurement system. It has also been said that a bid challenge system would be a last resort that occurred when, despite good and transparent processes and best endeavours, a potential supplier alleged that the procedures had not been applied correctly and a breach had occurred.

86. It has been suggested that precedents for review or appeal mechanisms could be found in a number of WTO agreements, for example the Agreements on Countervailing Measures and Anti-Dumping Practices, Customs Valuation, Import Licensing, Rules of Origin, Preshipment Inspection and TRIPS. Additionally, paragraph 3(b) of Article X of the GATT 1994 on publication and administration of trade regulations provided for "judicial, arbitral or administrative tribunals or procedures for the purpose, *inter alia*, of the prompt review and correction of administrative action relating to customs matters" to ensure that complaints or appeals could be resolved under the jurisdiction of individual WTO Members pursuant to national laws. Other views expressed in this connection have been that issues involved in procurement practices could not be compared with the issues that might constitute the grounds for the review provisions in other WTO agreements. It might not be feasible to transpose the provisions regarding review mechanisms in other WTO agreements into a transparency agreement since the scope of the rules under those agreements went beyond simple transparency obligations.

87. Reference has also been made to the element of due process in the APEC non-binding principles on transparency in government procurement.³ It has been said that, in the APEC context, the existence of a domestic bid challenge mechanism was viewed as an important element of a transparent procurement system. On the other hand, it has also been said that the substance of the APEC non-binding principles went beyond transparency matters.

³ Circulated in document WT/WGTGP/W/11

88. Moreover, the view has been expressed that governments should ensure that scrutiny mechanisms were independent, appropriate to their circumstances, scope, topic and objectives, including "internal" scrutiny of actions or decisions of a procurement official or area within a government organization by another official or area of that organization, for instance, an organization investigating a complaint by an aggrieved supplier; scrutiny by other "external" government organizations, which may or may not be independent of government influence, such as an ombudsman, government audit organization; or representatives of an elected assembly; or scrutiny by judiciary, non-government bodies or bodies independent of government influence.

89. It has also been suggested that elements of a future transparency agreement should include the establishment of domestic legal mechanisms, whether administrative or judicial, available to any national or foreign person in order to challenge government procurement procedures flawed by bribery.

90. It has been stated that any obligation to provide for review procedures in a transparency agreement should only concern actions within the scope of that agreement, not the substance of preferential measures relating to market access in government procurement. While it might often be difficult to dissociate transparency aspects of government procurement from other aspects, the mandate of the Group should guide its work on this matter as on others.

91. The point has been made that a domestic review mechanism could be achieved through a variety of means. It has been noted that administrative or judicial review procedures in the interest of assuring due process and public accountability were common to most national regimes, which in consequence already contained the main features that might be applicable to domestic review procedures in a transparency agreement. The view has been expressed that any obligation to provide for domestic review procedures in a transparency agreement should take into account such national practices and procedures; no attempts should be made to develop special review mechanisms where appropriate domestic administrative or judicial procedures already existed. The view has also been expressed that a transparency agreement should not have provisions requesting Members to adapt their domestic systems to certain prescribed criteria and the existing national systems should be fully respected. The Group should guard against developing overly prescriptive provisions on the specific characteristics that national systems must have. Any provisions should be flexible enough to allow Members to design their domestic review mechanisms in accordance with their national legislation and to rely on administrative or judicial review mechanisms that were appropriate to their national legal systems. They could be in the form of an exhortation to Members of a transparency agreement or a best endeavours obligation to provide for domestic review mechanisms. The choice of review procedure should be left to individual Members provided the review mechanism itself was transparent and provided a guarantee of independence. In this connection, the suggestion has been made that, as a first step, Members should provide information on whether their domestic administrative or judicial review systems addressed government procurement-related matters and, if so, under what conditions.

92. The point has also been made that domestic review procedures could be used to review either the consistency of the procurement practices or an individual procurement process with the domestic laws or regulations in force or the consistency of the procurement practices with the rules of a transparency agreement. Review of complaints or other dispute settlement mechanisms were often initiated after the contract had been awarded, making it impossible to overturn a procurement decision, cancel a contract and start the procurement process all over again. A mechanism established under the terms of a transparency agreement might be limited to reviewing the consistency of the laws and whether they should be amended or removed. While WTO dispute settlement was available to resolve differences between WTO Members relating to the implementation of WTO obligations, domestic review mechanisms were established with the purpose of addressing complaints by suppliers under the domestic jurisdiction of a particular country. Under a WTO enforcement system, complaints should only relate to the compliance of Members with their obligations under a

transparency agreement whereas domestic reviews mostly concerned specific award decisions. The WTO review procedures should not give rise to situations in which the procurement decisions of government authorities could be overturned.

93. The view has been expressed that the issue of review went beyond that of transparency and therefore the mandate of the Working Group. It has been said that domestic administrative or judicial review mechanisms were in place in national systems for the purpose of public accountability at the domestic level, a matter not within the ambit of a transparency agreement. Concerns have been expressed that review provisions in a transparency agreement might be used as a means by certain vocal private parties to create complications in the domestic political arena; and additional review procedures might increase the number of challenges and give rise to unnecessary costs. Since the purpose of domestic procedures in many countries was to review whether procurement had been made in accordance with domestic law and procedures, the scope of which went further than the obligations that might be agreed in a transparency agreement, it might not be feasible to limit the application of review procedures to specific transparency obligations in a WTO agreement on transparency. It has been suggested that transparency requirements in respect of review procedures, under the scope of a transparency agreement, should be limited to the provision of information to suppliers in regard to the domestic national review mechanisms and procedures.

94. The view has also been expressed that a review should be available to all potential suppliers including suppliers from other WTO Members. Another view has been that a review should be available to all suppliers who were involved in the procurement process. In this connection, the question has been asked whether foreign interested parties could file complaints against domestic governmental authorities under existing national administrative and judicial mechanisms or whether there would be need for special procedures under a transparency agreement to guarantee the receivability of complaints by foreign suppliers.

95. While some delegations have indicated that they had not yet formulated their views on the specifics of a review mechanism, attention has been drawn to the following features of review mechanisms that might be studied by the Working Group:

- encouraging suppliers, in the first instance, to take up the matter directly with the procuring entity for an early resolution. Agencies might have procedures in place to handle complaints directly;
- in some cases, the mediation or good offices of an independent authority might be sought;
- if the matter was not resolved mutually, provisions enabling suppliers to bring an action against the procuring entity before a judicial or administrative authority or other independent body; the point has been made that review provisions should allow flexibility to Member governments to choose whether to designate judicial or administrative bodies or both;
- review provisions should require that review bodies be impartial and independent of the procurement process itself. The point has also been made that Article X:3(b) of GATT 1994 provided some guidance in this regard;
- account should be taken of such principles as objective legality, ex officio action and material delegation in the review procedures;

- in addition to procedures based on formal complaints, initiation of review procedures by competent public authorities on an ex officio basis or national mechanisms for monitoring procurement proceedings;
- the review procedure should result in a published and reasoned conclusion that should be notified to interested suppliers in writing;
- review procedures should be published in a medium that is publicly available.

96. As regards the approach to be taken on the matter of domestic review in a transparency agreement, it has been said that an agreement should include a simple and flexible provision that could accommodate different Members' existing independent administrative or judicial tribunals and review procedures. Such a provision should ensure that there were transparent, timely and independent decisions on complaints or appeals relating to the transparency of procuring entities' actions and procedures. The scope of review of this provision under WTO procedures should be limited to actions relating to the implementation, through domestic laws and procedures, of the requirements of the transparency agreement.

97. The view has been expressed that procurement decisions were different from many other administrative decisions, in that review or dispute settlement mechanisms often had to function after the contract had been awarded. A review provision should ensure that claims from interested suppliers could be heard and decided upon in a manner that did not prejudice their interests in the procurements in question. Such guarantees could be available through rapid decisions on challenges or through suspension of the procurement process while claims were pending. In this regard, the point has been made that suspension of a procurement process upon a challenge by a supplier could hold up the whole procurement process until a decision had been reached concerning the challenge. Since this could be detrimental to the public interest and create difficulties in cases of urgent procurements, most national review procedures and the provisions of the GPA provided for exceptions enabling, in circumstances so warranting, public interest considerations to override the interest in suspending a procurement process. In cases in which the procurement process might be suspended, there could therefore be provisions in a transparency agreement for continuing nonetheless with the award of procurement in the public interest.

98. In connection with remedies that might be provided under review provisions, the following views have been expressed:

- most national review systems already provided remedies for suppliers whose rights had been denied under the applicable laws and regulations;
- review provisions should provide for adequate remedies that would protect the interests of suppliers and would deter procurement entities from engaging in future actions that would be inconsistent with the provisions of an eventual agreement on transparency;
- remedies should include the possibility of corrections including altering the inconsistent procurement process, re-tendering for the procurement or awarding damages to cover legitimate claims;
- an independent review should review complaints about tendering procedures in order to determine possible damages or administrative responsibility;
- account should be taken of the fact that review systems might provide for remedies which could include compensation only after administrative or judicial procedures

had determined that an injury or an economic loss had flowed from the inconsistency of a procurement process with the applicable legislation.

99. Another view expressed on remedies has been that a transparency agreement should not specify them for the following reasons:

- provisions requiring adequate remedies would fall outside the scope of the work on transparency. It would be sufficient to have provisions requiring the establishment of a review procedure without specifying the remedies that should be available;
- obligations on remedies might have counter-productive repercussions on the procurement practices of governmental authorities; to the extent that procuring authorities would be liable to remedies, they might have a tendency to restrict access to foreign suppliers in order to minimize any such risks.

100. It has also been suggested that a transparency agreement should require procurement entities to maintain written records of the procurement process in order to ensure that review bodies had an adequate factual basis for review (see Section IX A). As another possible means of review mechanism, provision of *ex post* information to unsuccessful suppliers and debriefing by procuring authorities have also been mentioned (see also Section VII).

101. As regards the content of a domestic review provision in a transparency agreement, the following text has been suggested: "Members shall maintain judicial, arbitral or administrative tribunals or procedures for the purpose of the prompt review and correction of procurement actions that may be inconsistent with the requirements of this Agreement, as implemented in Members' laws. Such tribunals or procedures shall be independent of the agencies responsible for procurements covered under this Agreement and shall provide for rapid decisions that, as appropriate, can affect the modification or reversal of any inconsistent actions." The following comments have been made concerning this text:

- other types of remedial actions such as imposition of fines or banning suppliers from participating in future procurements for a given period of time, could be envisaged;
- the word "correction" should be deleted in the first sentence. Existing administrative procedures were used for dealing with requests for the revision of formal or material errors;
- the phrase "as implemented in Members' laws" at the end of the first sentence required clarification;
- the last phrase in the second sentence after the words "as appropriate" should be replaced by the phrase "can provide appropriate relief in accordance with national law or practice";
- the text suggested above was more complicated than the approach taken to this issue in other WTO agreements.

102. The question has been asked how a review, modification or reversal of inconsistent procurement actions could be envisaged in the context of an agreement on transparency in government procurement. In this connection, it has been said that, while sometimes impractical or inappropriate, for example when contracts had already been awarded or the public interest dictated otherwise, corrective actions were often feasible. For instance, upon a complaint lodged by a supplier, a procuring entity that had not published a notice of procurement opportunity at the outset of

a procurement process could be asked to do so, or a procuring entity that had provided certain tender information to one supplier could be asked to provide the same information to all interested suppliers.

IX. OTHER MATTERS RELATED TO TRANSPARENCY

A. MAINTENANCE OF RECORD OF PROCEEDINGS

103. The view has been expressed that openness and transparency, through appropriate public access to information for external scrutiny, are essential elements of accountability. Government procurement records and information and mechanisms for collecting, assessing and scrutinizing those records and that information, should enable effective external scrutiny. Information recorded on authorizations, procurement systems, actions and decisions should be sufficient to justify decisions taken in the procurement process and to demonstrate that procurement activity was consistent with government requirements.

104. The view has also been expressed that procuring authorities should maintain a proper record of decisions and actions taken during the procurement process and the reasons for them. The maintenance of a record of procurement proceedings and the availability of non-confidential information contained in it to interested parties was one of the principal mechanisms for ensuring adherence to agreed rules and was of particular importance in the functioning of an administrative or judicial review process. Such records provided the basis for an audit trail and supported any evaluation of the procurement⁴ and thus introduced an element of accountability into the process. It has also been said that maintenance of records for a pre-established minimum length of time was also essential in order to enable bribery to be proved in legal proceedings. With regard to the length of time that records of proceedings should be maintained, it has been said that the requirements in this respect could be linked to the time provided to domestic suppliers in domestic legislation to challenge a procurement decision and to seek a review of a procurement process. It might not be necessary to keep a record of proceedings beyond that period. Another view in this connection has been that a transparency agreement should not have provisions stating explicitly in what form and for how long records should be maintained by entities. It has also been suggested that information should be provided on the national practices of those Members in which procuring entities were required to maintain records of procurement proceedings.

105. The question has been asked whether record maintenance should be treated as a separate element providing an additional guarantee of transparency or whether this item would be sufficiently addressed under other elements.

106. By way of general comments under this Section, a view has been expressed that prescription of stringent rules on transparency and review could be counter-productive to market access. Having no obligations on market access in the area of government procurement, national governments would have the tendency to close their procurement markets to foreign suppliers in order not to run the risk of breaching these rules on transparency.

⁴ The following details of the matters that should be documented have been suggested: approval to make the procurement; the selection criteria upon which evaluation and selection decisions will be based; discussions with potential bidders before bids close; details of clarification of bids during evaluations; reasons for variations to a tender; steps to provide all bidders with an equal opportunity to revise their bids; agreements reached during negotiations; authorization and signing of a contract; details of debriefings; reasons for varying a contract; and records of contractor performance.

B. INFORMATION TECHNOLOGY

107. It has been suggested that the work of the Group in developing a transparency agreement should take full account of innovative government procurement practices. Information technology was already being rapidly adopted by procurement communities and offered tremendous opportunities to level the playing field by increasing access to information at low cost to all suppliers. To the greatest extent possible, a transparency agreement should encourage the use of information technology tools to disseminate information on procurement opportunities and contracts awarded as an alternative to more traditional methods of communication (see also Section IV above). The view has also been expressed that, for the time being, procuring entities should be able to continue to maintain paper-based tendering procedures.

108. On the other hand, it has been suggested that, because of the lack of uniformity among countries' stages of development in this area, any requirements for the use of information technology in government procurement should be optional and that the use of information technology tools should not undermine the basic transparency principle of guaranteeing access to information for all, including small and medium-sized suppliers and suppliers from countries less advanced in the use of information technology. A balance should be found whereby a transparency agreement would not constitute an unnecessary barrier to progress in the area of information technology and would accommodate the increasing use of information technology in government procurement in Members, while ensuring that the use of information technology would not result in discrimination against countries which did not have a competitive edge in this area. Electronic tendering using Internet-based systems facilitated access of suppliers worldwide with a minimum requirement of equipment and technological know-how and was the most efficient way of ensuring non-discriminatory access to tender information.

109. It has been said that one of the issues that had to be dealt with in electronic procurement concerned procedures for opening tenders when they were submitted electronically. It has been noted that there was scope for international cooperation in the area of information technology, for example in developing electronic databases or maintaining lists of qualified suppliers.⁵ The point has also been made that procuring entities should be allowed to charge for electronic access to information and tender documentation and other tendering procedures, in particular if the information was supplied by a private service provider. It has also been said that the Group would need to consider at a later stage whether it would be appropriate to cover such specific matters as information technology in a transparency agreement. In this connection, it has been noted that information technology was an area where there was scope for technical cooperation (see Section XII).

C. LANGUAGE

110. It has been said that information on national practices showed that documents and other information relating to tendering proceedings were generally provided in the official language(s) of the country of the procuring entity. As a rule, documents and other information relating to procurement procedures and individual procurements should be allowed to be provided to potential suppliers and service providers in an official language of the country of the procuring entity. In general, potential suppliers wishing to do business in another country would have the necessary language facilities available to them; there should not be a specific requirement to provide such information in a WTO language. Nevertheless, procuring entities could be encouraged to provide information, where possible, in a WTO language where a particular procurement opportunity was likely to attract international interest (see also Section IV).

⁵ It has been mentioned that the APEC Group of Experts in Government Procurement has established a Home Page with linkages to existing databases on government procurement in member economies (www.apecsec.org.sg/govtproc/gphome.html).

D. FIGHT AGAINST BRIBERY AND CORRUPTION

111. It has been said that all governments were committed to combatting corruption and were engaged in efforts towards diminishing and, ultimately, eliminating bribery. Bribery in government procurement processes was currently a source of serious concern to the international community. It involved, not only political considerations such as legal insecurity, good governance and ethical problems, but also considerations of an economic nature such as efficiency of resource management, the negative impact of bribery on investment and the ensuing distortions of national competitive conditions.

112. The view has been held that there was an important relationship between transparency in government procurement and reducing the incidence of bribery and corruption in government procurement practices. Because governments had recognized the importance of this matter, the Working Group had been given the mandate by Members to develop elements relating to transparency in this area. Attention has been drawn to international instruments aimed at fighting corruption and bribery established by a number of international fora, including the OAS and the OECD. The point has been made that, while such initiatives had been useful in attacking the problem from various angles, so far there had not been any studies, negotiations or agreements on the relationship between the fight against bribery and transparency in government procurement in a specific and systematic manner. The view has also been expressed that transparency, by itself, was not enough and therefore needed to be supplemented by specific appropriate action and measures related, among others, to bribery of public officials, transnational bribery, tax deductibility of bribes paid to foreign officials, retention of records of procurement proceedings, establishment of bid challenge systems, lifting of banking secrecy, mutual legal assistance and technical and financial cooperation.

113. Views have been expressed that an agreement on transparency in government procurement would be an important and effective contribution to reducing the incidence of bribery and corruption in procurement practices as well as to the broader efforts to fight bribery. There was a real need to address bribery in all its forms provided that any possible measures genuinely fell within the scope of the WTO activities. It has also been said that the outcome of the work in other international fora as well as in the Working Group could bring about systemic changes that would reduce opportunities for corruption. The task of the Working Group was to improve transparency by creating a rules-based environment and the procedures that were necessary for that purpose. As a secondary goal, the fight against bribery and corruption could be achieved through increased transparency in government procurement procedures. The work in several WTO bodies that was aimed at achieving systemic improvements and a rules-based environment in trade matters had already made a meaningful contribution to advancing the fight against corruption. It has been suggested that, with the aim of creating the necessary safeguards against corruption in this area, the Group should focus on those aspects which most easily lent themselves to abuse in the area of government procurement. For instance, consideration should be given to requirements in regard to the retention of government procurement records for a pre-established minimum period and establishment of domestic administrative or judicial actions available to any national or foreign person in order to challenge government procurement procedures flawed by bribery. Such measures were common elements of international instruments on government procurement as well as of national legislation (see Sections IX A and VIII, respectively, above). A future agreement on transparency in government procurement should include such measures.

114. Views have been expressed questioning the appropriateness of expanding the scope of the work of the Working Group to the matters of bribery and corruption. Although its effects were often very severe in government procurement, corruption was far from being strictly confined to this area of economic activity. While transparency in government procurement would contribute to the fight against corruption and bribery, the issue itself was not within the mandate of the Group and was also outside the ambit of the WTO. The objective of the fight against corruption and bribery should not be

stated explicitly in an agreement on transparency in government procurement. Members should deal with such issues through their own national legislation concerning this area.

115. Other views in this connection have been that the work of the Working Group should not be overloaded with too many issues that, while important, might be dealt with more appropriately in other fora. Establishing a link between the issues of trade and corruption in the WTO might give Members the possibility of justifying trade measures or sanctions on grounds of alleged corrupt practices in other Member countries.

X. INFORMATION TO BE PROVIDED TO OTHER GOVERNMENTS (NOTIFICATION)

116. The view has been expressed that it was somewhat premature to discuss in detail this aspect, which might be better taken up once a clearer notion of the nature of a transparency agreement had been generated. Nonetheless, a number of issues have been raised relating to the possible notification arrangements under a transparency agreement and other mechanisms by which information can be exchanged between Member governments.

117. While some views expressed have put emphasis on the importance of adequate information on relevant national legislation and any amendments thereof being notified to other Members of a transparency agreement, other views have drawn attention to difficulties that would have to be addressed in this connection. It has been suggested that the notification of all national laws, regulations and administrative guidelines, including those of sub-central and other levels of government covered, might prove to be unduly burdensome. This would particularly be the case if they all had to be notified in a WTO language. An additional concern that has been expressed was that it was doubtful that Members would be ready to share confidential information. A number of possible ways of overcoming these difficulties have been put forward:

- Members might be expected to notify their basic law on government procurement, but not each and every law and regulation;
- an approach of employing a checklist of points, or questionnaire, to elicit basic information on how the national laws and regulations of each Member responded to the requirements of a transparency agreement might be employed;
- each Member might be required to respond to requests from any other Member for specific information on its laws, regulations, procedures and practices regarding transparency in government procurement. Contact points might be established by each Member for this purpose. In this connection, reference has been made to the discussion on this point reflected in item III of this note;
- greater use of electronic databases might be made for providing information on procurement procedures at sub-central levels;
- the government of an unsuccessful tenderer might be entitled to seek information on the contract award in question from the government whose entity conducted the procurement. This could be a vehicle for forestalling disputes. The view has also been expressed that the information sought should relate to how the commitments on transparency had been complied with in the contract award process. Another view was that the provision of such post-contract award information might not be necessary in an agreement on transparency, since it would not extend to matters of market access;

- enhanced use could be made of existing WTO transparency mechanisms, including the Trade Policy Review Mechanism;
- the question has been raised as to whether the existing provisions of Article X of GATT 1994 and Article III of the GATS were sufficient for the purposes of a transparency agreement on government procurement or whether additional rules should be provided for. Should there be, for example, a requirement to specify where the relevant laws were published? In this regard, the view has been expressed that the provisions of the GATT 1994 and GATS that had been referred to would not be adequate for the purposes of notification in an eventual transparency agreement.

118. It has also been suggested that Members might provide information identifying government departments, agencies and enterprises subject to the rules in a transparency agreement. The point has been made that this could be done through notification of a positive list of such entities or through notification of a negative list of those entities not subject to the agreement. It has been suggested that the latter approach might have the advantage of avoiding the problem of frequent changes in lists resulting from changes of a formal nature, such as the renaming or restructuring of departments. The issue of the most appropriate technique for the presentation of the coverage of entities would depend on the outcome of discussions on the scope of the agreement, in particular which type of entities were covered. It has also been said that it was premature to consider the form in which the coverage of entities should be presented.

119. On statistical reporting, the following points have been made:

- such provisions should not be included in a transparency agreement;
- there should not be an obligation, but governments might be invited to provide what information they have available, for example on the size of their procurement market;
- the issue should be put aside for the time being.

120. The view has been expressed that any requirements relating to the provision to other Members of information on and explanation of national procurement rules and procedures should apply only to the extent that such rules and procedures were within the scope of a transparency agreement. Requirements on the provision of information and explanations should be limited to those relating to transparency matters, and not otherwise relate to market access questions.

XI. WTO DISPUTE SETTLEMENT PROCEDURES

121. With regard to dispute settlement between governments, the general view has been that it would be premature to consider the applicability of provisions on dispute settlement before the elements of a transparency agreement had been more clearly identified. However, the view has also been expressed that any commitments on transparency should be subject to the DSU in the same way as the existing clauses on transparency in any other WTO agreement. Another view has been that it was questionable that the dispute settlement system could apply, with significant results, to obligations on transparency in the absence of commitments with respect to market access. For example, it has been asked whether any decision resulting from a dispute regarding the provision of transparency in a government procurement process could apply retroactively. A view has also been expressed in this connection that the Group's mandate was to discuss the elements of an appropriate agreement on transparency which could be in the form of guidelines or a code; only an agreement with binding obligations should be subject to WTO dispute settlement procedures. It would be sufficient to invoke Article X of GATT 1994 in dispute cases involving a violation of obligations on

transparency. The creation of a linkage between a transparency agreement and the WTO dispute settlement procedures was not warranted.

122. Regarding the relationship between domestic review procedures and the WTO dispute settlement mechanism, it was said that a distinction should be made between domestic review mechanisms which involved responding to complaints by suppliers against procuring authorities under the law of a country and dispute settlement procedures between governments under the law and procedures of the WTO. The legal criteria for domestic reviews and WTO dispute settlement were different. In the case of domestic procedures, a review related to the consistency of a procurement process with the domestic laws and regulations, whereas in the case of WTO dispute settlement the grounds for a dispute were an alleged breach of the commitments under a WTO agreement. The view has been expressed that the possibility for foreign suppliers to have recourse to effective and independent domestic review procedures, as a first avenue for resolving complaints, would minimize the likelihood that such complaints might eventually rise to the level of a government-to-government dispute.

123. In regard to the way in which national review procedures and the WTO dispute settlement procedures might interact, it has been suggested that the Group might wish to examine the approach to this matter adopted in the Agreement on Implementation of Article VI of GATT 1994. Another view expressed was that there should be no particular relationship between a domestic review process and government-to-government dispute settlement. WTO dispute settlement procedures should apply to issues relating to the consistency of laws of general application with the rules of a transparency agreement and should not be invoked with regard to decisions resulting from national review procedures concerning a particular procurement. The view has also been expressed that national practices would not allow the WTO dispute settlement process to override a specific procurement decision taken by a national judicial body. In this connection, a further view has been that a transparency agreement could have provisions setting minimum standards regarding the legal framework for domestic review procedures. The objective of WTO dispute settlement procedures would be to enforce the effective implementation of such provisions. WTO dispute settlement procedures should only apply in respect of obligations of governments in their capacity as regulators. Any procurement decision taken by them, including contract award decisions, in their capacity as purchasing entities should not be subject to WTO dispute settlement procedures. Any complaint in this respect should be addressed under domestic review procedures. The question has been asked whether there had ever been a case in the history of GATT/WTO where dispute settlement procedures had been invoked based on allegations of breach of the rules on transparency. A comment has been made stating that challenges of individual award decisions under the provisions of a transparency agreement were unlikely. However, Members should be able to invoke dispute settlement procedures with the objective of achieving improved transparency, if a purchasing entity had breached the rules of a transparency agreement, for instance if it had persisted in not publishing notices of procurement opportunities. It has also been said that provisions should reflect the principle of exhaustion of domestic judicial review mechanisms before recourse to WTO dispute settlement procedures. Moreover, the point has been made that recourse to WTO dispute settlement procedures, being a prerogative of governments, could not be initiated by suppliers who might challenge procurement procedures of government entities.

XII. TECHNICAL COOPERATION AND SPECIAL AND DIFFERENTIAL TREATMENT FOR DEVELOPING COUNTRIES

124. The point has been made that technical cooperation was important for ensuring the successful implementation of a future transparency agreement. It could also play an important role in helping Members to develop domestic procurement regimes and in taking practical steps to enhance transparency of procurement policies and practices. The view has been expressed that, in discussing a framework for technical cooperation, inspiration might be drawn from the language of Article 67 of

the Agreement on TRIPS. This required developed country Members to make available technical and financial cooperation, on mutually agreed terms, in response to requests from developing country Members. It also listed specific areas where such cooperation should be provided, including assistance in the preparation of laws and regulations and support regarding the establishment of domestic offices and agencies, including the training of personnel. Technical cooperation plans could be drawn up identifying the needs of individual developing and least-developed countries in meeting their obligations under a transparency agreement and targeting technical cooperation activities to specific purposes, for instance for the establishment of contact points. The view has been expressed that the provisions on technical cooperation should match the specific requirements in a transparency agreement; compliance with the rules of a transparency agreement might require changes in national legislation and procedures and the building up of new institutions in individual countries. The following types of areas in which technical cooperation would be beneficial have been suggested:

regarding development of national legislation and procedures:

- legal advice and assistance in drawing up national legislation;
- administrative and policy option analysis and guidance;
- drawing up procedures on publication;
- establishment and implementation of bid challenge systems;
- taking practical steps to make procurement more user-friendly by developing standard forms for tender notices and fill-in-the-blank bid forms, as well as developing a common procurement vocabulary;

regarding training:

- training for those who have to implement, use or enforce new legislation, procedures and/or practices, training the judiciary, and training local trainers who would continue training programmes in, for example, business schools or colleges of public administration in the beneficiary country;
- exchange of officers;
- training of purchasers and suppliers;

regarding institution building:

- administrative cooperation to enhance institution building and the exchange of information;

regarding access to information by suppliers:

- workshops, seminars and the production of user guides, including the development of Internet websites, search engines and databases, to help provide information about opportunities to do business with governments at home and abroad, and to facilitate access to that information; in particular, such assistance could benefit small and medium-sized enterprises, by increasing their confidence and effectiveness in successfully entering procurement markets at home and abroad;

regarding use of information technology:

- the development of information technology tools which could be used to disseminate information about procurement opportunities and practices, and/or to establish full electronic tendering, as well as to facilitate the collection of relevant economic data and statistics;
- the provision of office, information technology and/or other equipment necessary for the implementation and enforcement of legislation, procedures and/or practices.

125. The view has been expressed that the practices under the TRIPS Agreement might also be useful in assessing and monitoring assistance on an ongoing basis, while avoiding the creation of additional bureaucratic structures and red tape. The point has also been made that the issue of technical cooperation should be discussed not only in terms of ensuring compliance of developing countries with the requirements of a future agreement, but also in terms of the practical steps that could be taken to enhance transparency in developed as well as developing countries.

126. It has also been suggested that requirements similar to the provisions of Article 66.2 of the Agreement on TRIPS might be included in an agreement on transparency. Developed country Members might be required to provide incentives to enterprises and institutions in their territories for the purpose of promoting and encouraging technology transfer to developing country suppliers in order to enable them to participate in bidding for public contracts in developed countries. In comparison with Article 67 of that Agreement, under which technical cooperation depended on the mutually agreed terms and conditions between developed and developing country Members, technical cooperation under Article 66.2 was provided unilaterally and at the initiative of developed countries. Technical cooperation could be useful in achieving the objective of economic efficiency in government procurement. For instance, providing information to developing countries as to what governments usually procure and information as to worldwide sources would be relevant in this regard.

127. The point has been made that the technical cooperation activities of international intergovernmental organizations and fora, including international financial institutions and regional development banks, in the field of government procurement could contribute to transparency and the implementation of a transparency agreement. It has been suggested that consideration should be given to developing a framework under a transparency agreement for rationalizing the various activities in this area at the bilateral, regional and multilateral levels. In this respect, it has been suggested that the Secretariat would prepare a background paper containing information on technical cooperation programmes of international and regional intergovernmental organizations related to government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical cooperation in this area.⁶

128. It has been suggested that potential recipient and donor countries should be encouraged to share their views on particular needs and the available forms of technical cooperation in the area of government procurement. It has also been suggested that special attention should be paid to the problems of institution building, in particular in least developed countries. The Chair invited Members to provide information in writing to the Working Group on their needs and on the technical cooperation already available.

⁶ The information communicated from UNCITRAL, OECD, the World Bank, the Asian Development Bank, the African Development Bank, IMF, the APEC Government Procurement Experts Group, the European Bank for Reconstruction and Development, ITC and UNDP on their respective technical cooperation activities in the area of government procurement has been circulated in documents WT/WGTGP/W/20 and Addenda 1-8.

129. With regard to special and differential treatment for developing countries, the view has been expressed that this issue might be addressed once the elements of an eventual agreement were more clearly defined. In this connection, it has been said that the substantive provisions of a transparency agreement should reflect in particular the special circumstances in developing country Members. The formulation of the provisions of a transparency agreement should not be too ambitious in order to enable all Members to adhere to an eventual agreement without the need for lengthy transitional periods.

130. The suggestion has also been made that transitional periods in respect of developing countries might be provided. On the other hand, it has been said that provisions on transitional periods would not be sufficient for special and differential treatment of developing countries. In the light of the divergence among individual Members' practices in this area, any meaningful special and differential provisions should require developing countries to comply with the provisions in a transparency agreement, only to the extent that they were capable of undertaking the relevant obligations. Certain objective criteria should be developed for this purpose.

**Working Group on Transparency
in Government Procurement**

REPORT (1998) TO THE GENERAL COUNCIL

1. The Working Group on Transparency in Government Procurement was established by a decision at the WTO Ministerial Conference held in December 1996 "to conduct a study on transparency in government procurement practices, taking into account national policies, and, based on this study, to develop elements for inclusion in an appropriate agreement".

2. The period covered in this report is November 1997-October 1998. The work of the Working Group up to November 1997 is described in the Working Group's Report (1997) to the General Council (WT/WGTGP/W1). The Working Group held formal meetings on 19-20 February 1998, 22 June 1998 and 8-9 October 1998. Reports on these meetings have been circulated in documents WT/WGTGP/M/4-6.

3. At its meeting of 19-20 February 1998, the Working Group had a detailed discussion of transparency-related provisions in existing international instruments on government procurement and national procedures and practices on the basis of an informal note by the Chair listing the issues that had been raised, and points made on these issues at the Group's November 1997 meeting ("List of the Issues Raised and Points Made" - Job No. 73). The Working Group took up in turn each of the headings to this note, which correspond to those used in the earlier Secretariat note "Synthesis of the Information Available on Transparency-Related Provisions in Existing International Instruments on Government Procurement Procedures and National Practices" (WT/WGTGP/W/6), with the addition of headings on technical cooperation and special and differential treatment. The list of headings of the Chairman's note, the latest version of which is annexed, has formed the structure of the Working Group's substantive work. Written submissions were presented by Hong Kong, China; the Czech Republic; Uruguay; and Australia containing factual information on their national procedures and practices (WT/WGTGP/W/10, 12, 13 and 14 respectively). Other written contributions were submitted by Australia relating to the principles of government procurement (Job No. 136) and by the United States on review mechanisms and transparency in procurement methods (WT/WGTGP/15 and 16). The Group was also presented with a communication from the Chair of the APEC Government Procurement Expert Group (WT/WGTGP/W/11).

4. At its meeting of 22 June 1998, the Working Group reverted to its discussion of transparency-related provisions in existing international instruments on government procurement and national procedures and practices on the basis of the informal note "List of the Issues Raised and Points Made" (Job No. 1860) which had been revised in light of the discussion at the February 1998 meeting. Written submissions were presented by Morocco and Slovenia, containing factual information on their national procedures and practices (WT/WGTGP/W/19 and Job No. 3387 respectively). Other written contributions were submitted by the European Community and Norway, addressing the issue of how one might ensure that transparency in procurement policies and practices is achieved (WT/WGTGP/W/17 and Job No. 3245), by Switzerland on minimum requirements for relevant information to be published in tender notices (Job No. 3436), by Venezuela on particular characteristics of government procurement, privatization and concession-granting systems (Job No. 3295), and by the European Community on technical assistance (WT/WGTGP/W/18).

5. At its meeting on 8-9 October 1998, the Working Group reverted to the issues before it on the basis of the Chairman's informal note, "List of the Issues Raised and Points Made" (Job No. 4281). It also had before it an informal factual note by the Secretariat, prepared in response to a request at the Group's June meeting, reflecting the written and oral proposals made under items III-VII of the topics before the Working Group (Job No. 4695). A written submission was presented by Turkey, containing factual information on its national procedures and practices (WT/WGTGP/W/21). In response to a request by the Group to the Secretariat to provide information on the availability of technical cooperation programmes in the area of government procurement, communications received from UNCITRAL, OECD, the Asian Development Bank, the African Development Bank, IMF, APEC Government Procurement Experts Group, the European Bank for Reconstruction and Development, ITC and UNDP were circulated in documents WT/WGTGP/W/20 and Addenda 1 to 7.

6. At its next meeting, the Working Group will revert to the issues contained in the annexed revised version of the Chairman's informal note, "List of Issues Raised and Points Made", using this note as the basis for its discussions. As an auxiliary informal paper for the use of Members wanting to draw on it, delegates will also have available to them a revision of the Secretariat informal note reflecting the proposals made on items III-VII in a succinct form, which will identify the source of the different proposals and summarize the comments made at the October meeting on those proposals.

7. The IMF, the World Bank, the United Nations represented by the United Nations Commission for International Trade Law (UNCITRAL) and UNCTAD have observer status in the Working Group. During the period covered in this report, the Working Group considered requests for observer status from OECD, SELA and OIC (the Organization for Islamic Conference) and agreed to revert to these requests in light of the consultations that are being held on this matter by the Chairman of the General Council.

8. There will be three meetings of the Working Group in 1999, the first two of which will be held on 24-25 February and 28-29 June 1999.

ANNEX

LIST OF THE ISSUES RAISED AND POINTS MADE

Informal Note by the Chair

Third Revision

1. This note attempts to set out the issues that have been raised, together with the points made on these issues, under each of the items that were discussed by the Working Group at its meetings of 3-4 November 1997, 19-20 February 1998, 22 June 1998 and 8-9 October 1998. This non-paper is without prejudice to the position of any delegation and, in particular, to whether the Working Group would decide to include or exclude any particular aspect addressed in it from the elements that it will develop for inclusion in an appropriate agreement.

I. DEFINITION AND SCOPE OF GOVERNMENT PROCUREMENT

2. It has been recalled that the mandate of the Group is confined to issues of transparency in government procurement practices. The view has been expressed that, as regards national practices limiting market access, their transparency but not their substance should be covered; rules on transparency in government procurement should only apply on a non-discriminatory basis and obligations on transparency should only be applicable to the extent that market access for foreign supplies and suppliers was permitted. For example, procurement from local markets, to be paid in local currency, might be distinguished from procurement from international markets, for which foreign exchange was available. The question has been asked whether transparency of procurement processes would be of any interest to foreign suppliers when access was reserved to domestic suppliers.

3. Another view expressed in this connection has been that transparency disciplines should apply to government procurement practices as broadly as possible. One of the purposes of developing rules on transparency was to create national procurement systems that were not only transparent but also perceived to be transparent; if the scope of requirements on transparency would be limited to open procurement markets, procurement systems would not be seen to be transparent. It was in the interest of all concerned, domestic as well as foreign suppliers and entities, that information on what procurement was open to international competition and what was not should be readily available to all. The view has also been expressed that the distinction that had been suggested would give rise to an imbalance in rights and obligations since transparency obligations would apply more widely in those Members whose procurement markets were more open to international competition; the distinction would also narrow the scope of a transparency agreement. Moreover, the point has also been made that, given the variety of ways by which market access was limited in national practices, for example in the form of absolute exclusions of foreign suppliers and supplies, price preferences or the awarding of contracts to foreign suppliers only in the absence of competitive bidding from domestic suppliers, it would be technically difficult to identify those government practices that should be exempted from transparency obligations. It has also been said that, if the underlying reason for the suggestion to limit the application of transparency disciplines to open procurement markets was concerns about excessive burdens, these concerns should be addressed in their own right in the course of the Group's work.

4. As regards the issue of the definition and scope of government procurement, a distinction has been made between the definition and scope that should be used by the Working Group for working purposes and those which might be used to govern the scope of application of the elements to be developed for inclusion in an appropriate agreement. In regard to the former aspect, a view has been expressed that a broad approach, without preconceived limitations, should be employed, sufficiently wide to accommodate the differing meanings and levels of detail given to the term "government procurement" in national legislation and practices in individual Members and compatible with innovative procurement procedures and new types of government structures. This would enable the Group to study the full range of issues relating to an eventual agreement on transparency in government procurement and, as regards the latter aspect referred to above, to develop a more exact definition for the purposes of the scope of an eventual agreement on transparency. Another view expressed has been that there would be an interrelationship between the scope of a transparency agreement and the level of detail that its elements would contain. A transparency agreement, incorporating simple and straightforward core principles, could have a very broad coverage. It has also been said that the work of the Group on this issue would need to reflect the realities of procurement practices in individual countries in order to guarantee an effective implementation of an eventual agreement. In this connection, a range of issues that would need to be taken into account has been identified. These are summarized below.

5. It has been suggested that a useful way of approaching these issues was to draw a distinction between the following questions:

- Who is doing the procuring?
- What is being procured?
- What types of transactions are covered?

A. WHO IS DOING THE PROCURING?

6. In regard to the first of these questions, who is doing the procuring, the following views have been put forward:

- entities at all levels of government, including at sub-central levels of government and enterprises owned or influenced by government, might be covered by a transparency agreement;
- the rules of a transparency agreement should extend to procurement by entities at the central and sub-central levels of government;
- the degree of coverage of sub-federal entities should take account of differences in government structures;
- the rules of a transparency agreement should only extend to procurement by entities at the central or federal government level. It would be difficult to frame international rules that would ensure transparency at sub-central levels in countries with complex government structures. In countries with federative administrative systems, the authority of federal governments to undertake obligations on transparency in respect of entities at the state or local levels of government equivalent to those of the central government level might be limited by the constitution. Another view expressed has been that the limitation of the obligations of a transparency agreement only to central government level would give rise to an issue of equity among countries with different government structures. A further point made has been that a number of provisions in

various WTO agreements, for instance GATS Article I:3(a)(i), addressed the issue of obligations undertaken with respect to sub-central levels of government;

- the coverage of state enterprises should depend on how they were operated. One view that has been expressed is that public enterprises required to run on the basis of the same economic considerations as private enterprises should not be subject to requirements on transparency, at least where they did not fall within the ambit of GATT Article XVII. Another view has been that a distinction should be drawn between state enterprises that operated in a competitive environment and others, even if run on the basis of commercial considerations;
- in the light of experience, consideration might be given to extending the coverage further.

7. It has also been suggested that, in defining the scope of a transparency agreement, the Group would need to define criteria for determining when an entity should be considered as one engaged in government procurement for the purposes of a transparency agreement. For example, it has been suggested that government ownership of less than 50 per cent should mean that it was excluded. It has also been suggested that account should also be taken of national legislation which conferred on entities the legal right to conduct government procurement activities or gave governments the power to exercise control over the procurement decisions of entities and enterprises.

8. Another suggestion has been that the substance of a relevant provision should determine the scope of the application of the specific requirements in a transparency agreement. For example, requirements on publication of laws and procedures might be applied across the board to entities at all levels of government.

B. WHAT IS BEING PROCURED?

9. In regard to the question of what is being procured, the suggestion has been made that the scope of a transparency agreement might extend to all goods and services and any combination of goods and services.

10. With respect to the use of threshold values in determining the coverage of a transparency agreement, the view has been expressed that, in principle, the coverage of a transparency agreement should not be limited to contracts above a certain threshold level, but that certain provisions might be more flexibly applied for smaller contracts. Also, it would not be appropriate to exclude low-value procurement from the requirements relating to the provision of information on national legislation or to procedures for the qualification of suppliers on the basis of threshold values. On the other hand, requirements on the publication of tender notices, particularly in a foreign language, might be relatively less strict for low-value procurement. Suggestions have also been made that, transparency obligations should only apply to procurement above certain threshold levels in order to avoid burdensome procedures and costs related to publication of all procurement opportunities and that the work of the Group should take account of national practices in this respect. Minimum threshold values could vary according to the level of government and be used for defining the scope of application of the rules to entities at sub-central levels of government. The suggestion has also been made that thresholds might differ according to the level of development of Members.

C. WHAT TYPES OF TRANSACTIONS ARE COVERED?

11. As regards the issues relating to what types of transactions should be covered, it has been suggested that acquisition by any contractual means, including, for example, through lease or rental, might be covered. Questions have been raised as to whether, and, if so, to what extent, concessions and build-operate-transfer (BOT) contracts should be covered. The point has also been made that privatization should not be covered.

12. Concerning concessions - in the sense of the grant of certain exclusive rights by a government to a private party for a set period of time in order to produce a product or offer a service to the public on its behalf (for example for building and operating motorways or airports) - one view expressed has been that, even if not considered as government procurement transactions *per se*, concessions should be addressed under the scope of a transparency agreement to the extent that principles of transparency should apply to the procedures used for the award of concessions.

13. The question has been asked whether concessions were more properly treated as a matter of investment or the supply of services on behalf of the government and, therefore, should be covered under the scope of other relevant agreements or initiatives. Those concessions that fell within the definition of GATS mode three supply of services might be subject to the disciplines of GATS Article III. It has been said that GATS Article III would not apply to concessions that were not within the scope of GATS Article I.

14. The view has been expressed that concessions should not be included in the coverage of a transparency agreement. Rules which governed concessions and government procurement were separate sets of legislation in national practice. National legislation on government procurement did not apply to procurement by private companies that operated concessions granted by a government. In this regard, the following comparisons between government procurement on the one hand and concession-granting and privatization on the other have been made:

- with regard to definitions, government procurement was a procedure intended to regulate the selection of contractors for the supply of goods, the execution of works and the provision of services. The granting of a concession took the form of a unilateral act of the State giving a private party the right to manage public works or offer a public service that is within the exclusive competence of a government, for example for mining or exploitation of natural gas. Privatization involved a sale of a state-owned company or assets. A question has been asked seeking further clarification of this distinction;
- with regard to form, government procurement was made effective through an administrative act of the procuring entity. Concessions and privatization were made effective through a decree of the executive power at the level of the head of government or State, and, in some cases, subject to authorization by the legislature;
- with regard to subject-matter, government procurement covered goods, public works and services; concessions covered public works or services; and privatization covered state corporations, property and assets;
- with regard to the methods, open, restrictive or limited tendering methods were used in the area of government procurement. Open, restrictive or limited tendering or auctioning were used in the granting of concessions. Public sale or auctioning and liquidation of debt in return for a share of the company were the methods used in privatization;

- as regards the application of the GPA, procurement by concessionaires listed in Appendix I was covered but the granting of a concession was not. The act of privatization was not covered but enterprises in which government control or influence had been withdrawn through privatization could be excluded from the coverage of the GPA;
- moreover, it has been said that government procurement transactions were reflected in government expenditure. Governments did not necessarily enter into contracts with private parties in the process of granting concessions.

15. It has been suggested that Members should provide information on national legislation and practice as regards concessions in their countries. A view has been expressed that the issue of concessions raised complex questions to which the answers were not clear as yet. It has been said that some concessions could be outside the scope of a government procurement. Nevertheless, the Group should maintain a broad approach to their coverage at this stage, pending further study of the issue. In this connection, reference has been made to the information-gathering activities in the GATS Rules Group.

D. OTHER MATTERS RELATING TO DEFINITION AND SCOPE

16. The issue of the exceptions that might be allowed to the basic coverage of a transparency agreement has been raised. One suggestion has been that there may be reason to allow the exclusion of those areas that track general exceptions in GATT 1994, such as national security exceptions. It has also been suggested that exceptions on development grounds might be envisaged. The view has been expressed that the question of permissible exemptions was better left for discussion at a stage when a better idea of the general definition that might be employed would be available.

17. In regard to developmental aspects, in addition to the points reflected above, the general point has been made that the function of national laws in taking into account social and developmental needs should be considered in the definition of government procurement to be employed in a transparency agreement.

II. PROCUREMENT METHODS

18. The point has been made that, from a transparency perspective, the method of procurement employed was less important than ensuring that it conformed with basic principles on transparency and maximized the level of competition feasible under the particular circumstances. The point has also been made that the method of procurement used should not undermine the principles and objectives of a transparency agreement to encourage open and competitive regimes. Other views expressed have been that an eventual transparency agreement should aim at transparency with regard to the methods employed in different countries rather than seek to limit or modify those methods. According to these views, specific circumstances governing a given procurement dictated the choice of a particular method among alternative methods and procurement authorities should retain the flexibility to use the best method in the interests of efficiency and competition as well as of transparency. Any provisions in a transparency agreement should be sufficiently flexible to accommodate the differing procurement methods used in national practices, and should allow for the possibility of using methods which were not based on tendering. Whilst the methods used by WTO Members - at least for larger value contracts - mostly seemed to be based on the principle of tendering (open, selective, limited), they were not necessarily limited to this (e.g. purchase cards, electronic catalogues).

19. The view has been expressed that the Group should consider the issue of procurement methods from the perspective of transparency. The Group's examination of the transparency aspects of procurement methods could focus on the following three categories: where information on the procurement opportunity and selection criteria was made publicly available to all interested suppliers; where a pre-selection of qualified suppliers was made and information was transmitted only to those suppliers; and where no information was made publicly available but the procuring entity negotiated with an individual supplier. Such a categorization, focused on transparency aspects, would avoid getting into the details of procurement methods.

20. With respect to the main procurement methods used, the view has been expressed that open or international bidding in which there was no limit to the number of potential bidders was the most transparent method; selective procedures were justifiable where it would not be feasible or efficient to consider and evaluate a large number of potential bids, as long as all potential interested suppliers were given the same opportunity to seek access to information on a procurement and seek to be invited to bid. Another view has been that open and selective tendering should be regarded as equally transparent, provided selective tendering was conducted in accordance with the appropriate principles. One view has been that, while open tendering was the most transparent method, it might not be the most cost-effective, in particular in the case of complex procurements. As regards the third main procurement method, limited tendering (e.g. individual, sole-source, single-source or direct tendering), it has been suggested that, since information opportunities and selection criteria were not made publicly available, this method should only be used in justified and exceptional circumstances. International instruments and national practice commonly accepted a range of circumstances and conditions under which the use of limited tendering would be warranted.

21. The following approaches to how limited tendering should be dealt with in a transparency agreement have been suggested:

- since the use of the method permitted procurement authorities to dispense with many of the procedural guarantees associated with transparency, a transparency agreement should set forth an illustrative list of the specific circumstances and conditions justifying the use of this method;
- provisions of a transparency agreement should not impinge upon the right of procuring entities to use this method. Spelling out the exact circumstances and conditions justifying the use of this type of method might go beyond the scope of a transparency agreement. It had to be taken into account that governments had other policy objectives apart from transparency;
- while not limiting the circumstances under which limited tendering might be allowed, the Group should develop disciplines to be included in a transparency agreement to ensure that, when used, limited tendering procedures should be employed in a way which maximized transparency at each stage of the procurement process;
- a distinction might be made between a situation in which the purpose of using this method was precisely to avoid transparency, e.g. for national security reasons, and other cases where the purpose of using limited tendering was to meet needs that might arise from special circumstances of the procurement;
- a transparency agreement should not cover procurement not open to tendering.

22. A range of circumstances which might figure in an illustrative list or define the general circumstances under which limited tendering would be justified has been referred to. These are:

- for reasons of extreme urgency brought about by circumstances unforeseeable by the procurement authority (e.g. natural disasters); such circumstances should not be caused by the procuring entity itself, for instance as a result of its negligence;
- in the absence of responsive tenders, under tendering procedures which do not restrict competition;
- when tenders already submitted have been collusive;
- when it is clear at the outset of a procurement that only one supplier or a limited group of suppliers has the proprietary rights to goods or services being procured, for example procurements involving the protection of patents, copyrights or other exclusive rights, or for other technical or artistic considerations;
- in commodity markets where there may be no individual suppliers since the market is the supplier;
- in so-called "fire sales" where the procurement authority can realize exceptional savings at a one-time event (e.g. liquidation sales);
- when a product or a service is supplied by a supplier with a monopolistic position in the market;
- when a product or a service can only be procured in a specific geographical location or place of production;
- when a procurement is for research or experimental purposes and not for commercial use;
- for national security reasons.

23. Reference has also been made to the circumstances justifying the use of the limited tendering method contained in Article XV:1(a)-(j) of the plurilateral Agreement on Government Procurement.

24. With regard to ensuring that limited tendering, when employed, is used in a way which maximizes transparency, the following suggestions have been made:

- a procuring entity should generally seek more than one bid if circumstances permitted;
- a procuring entity should be required to document the specific circumstances giving rise to the need for such limited tendering;
- public notices of contract awards should disclose the specific circumstances and reasons for contacting a particular supplier.

III. PUBLICATION OF INFORMATION ON NATIONAL LEGISLATION AND PROCEDURES

25. The point has been made that transparency meant ensuring that information on procurement rules, practices and opportunities was made widely available in an easily usable form to all interested parties (and particularly potential suppliers), as well as ensuring the right of access to that information. Publication of information regarding the general environment in which public procurement took place and interested parties were expected to operate was an essential component of transparency. Publication of national legislation not only provided a clear roadmap for potential suppliers but also a check against arbitrary practices within the procurement regime. The resulting procedural certainty also reduced costs in the procurement cycle.

26. The point has also been made that there were two questions regarding this matter: the scope of the information that should be made available and in what way.

27. On the first issue, it has been said that there appeared to be two approaches to establishing the scope of the information that should be made available: a formal approach that would require, for example, that all laws, ministerial ordinances, administrative guides or internal rules and procedures should be published; and an approach that would consist of determining the substance of the information that should be made available, irrespective of the legal form. This second approach might be preferable since what was of importance was the substance of the information to be made available. The key substantive information that should be made available was that which defined what rules of general application had to be followed in determining participation in the tender and making the decision on the award of the tender and what remained at the discretion of the procuring entity. The second approach would have merit in that the objective of transparency would not be achieved if the publications that contained the relevant laws and regulations did not cover important aspects of national procurement practices and procedures.

28. It has also been suggested that all laws, regulations, judicial decisions, policy guidance, and administrative and other procedures on government procurement should be published promptly or be readily and easily accessible in a usable form to all interested parties, including potential foreign suppliers and other Members. Any changes to such laws and regulations should also be published promptly. Concerning publication of administrative guidelines, it has been said that it might not be appropriate to publish information relating to internal procedures of government agencies since their disclosure might prejudice the position of a purchasing agency for instance in its negotiations with suppliers; rather, the relevant obligation should be limited to publication of administrative guides to the operation of the procurement systems. It has also been said that publication of regulations of each individual procuring entity would incur burdensome administrative costs.

29. In regard to the second issue, how the information should be made available, the following points have been made:

- the important point was that information should be made publicly available, not how it should be made available;
- a distinction should be made between publication of information and accessibility of information. It has been suggested that laws, regulations and measures having the force and effect of law should be published. Regarding judicial decisions, it has been stated that publication requirements in an agreement had to take into account the different ways of developing national legislation and procedures. For instance, in judicial systems where laws were developed on the basis of case law, judicial decisions could play a central role in defining national legislation and procedures;

- publishing information on judicial decisions, policy guidance and administrative guides could be onerous. But any judicial decisions that would have a bearing on procurement practices and that were not customarily published should be made accessible within the country;
- publication requirements could be met through publication in printed or electronic media. The choice should be left to the discretion of Members. There should be no mandatory provisions requiring the use of electronic media. It has also been suggested the two forms of publication should not be mutually exclusive.

30. The view has been expressed that publication obligations, including in the area of government procurement, already existed in the goods area under Article X of GATT 1994 and in the services area under Article III of the GATS. The provisions of these two Agreements which exempted government procurement from the scope of certain GATT 1994 and GATS obligations (Articles III:8(a) and XVII:2 of GATT 1994 and Article XIII of the GATS) did not apply to these transparency provisions.

31. The suggestion has also been made that information on national legislation and procedures should be provided at no more than cost. It has been said that the matter of fees charged was not within the ambit of a transparency exercise. Government entities should have the discretion to charge fees above cost price. However, any fees for provision of information on national legislation and procedures should be charged on a non-discriminatory basis.

32. The point has also been made in connection with the publication of laws and regulations that the obligation to publish should be limited to publication in a national language and should not involve burdensome and costly translation obligations. It has been stated that some domestic public agencies provided information on legislation in a foreign language or a summary of specific legislation in a WTO language.

33. The suggestion has been made that interested parties should know either where to go to locate this information, or who to ask. A transparency agreement might provide for Members to notify either the source of this information and/or to establish and notify contact or enquiry points (which could take the form of an Internet Website), from which other Members and maybe interested suppliers could obtain explanations about national legislation and procedures, including information on the practical steps involved in tendering, any preferential treatment of national suppliers and domestic review mechanisms. In this connection, reference was made to the provision of Article III:4 of the GATS, and also to that of Article IV:2 of that Agreement which requires developed country Members, and to the extent possible other Members, to establish contact points to facilitate the access of developing countries suppliers to information. It has been stated that the feasibility of providing contact or enquiry points in respect of decentralized procurement systems, especially in federal States, would have to be studied carefully. Any obligations should be without prejudice to decentralized procurement systems. In this connection, the suggestion has been made that in decentralized national procurement systems a central office should be designated for keeping a list of the contact points at sub-central levels. One view in this respect has been that the establishment of enquiry points at sub-central levels might incur burdensome administrative costs.

34. In the discussion of this item, the relevance of the overall coverage of a transparency agreement has been recalled. In this regard, it has been suggested that the publication obligation should only relate to situations where access was open to foreign supplies and suppliers. The opposite view has also been expressed, with the argument that it would be essential to have information on any policies including preferences in favour of national suppliers in order to determine whether procurement markets were open to foreign suppliers. In respect of the term "foreign suppliers", the point has been made that in some national practices government procurement was used as an instrument for the promotion of domestic supplies and suppliers and national treatment would not be

granted to those suppliers who did not have a commercial presence in the country of the procuring entity.

35. The link between this item and that in Section X, concerning the provisions on notification of information to other governments under an appropriate transparency agreement, has been referred to.

36. A number of comments have been made on specific proposals put forward by Members as reflected in the note by the Secretariat entitled "List of Proposals on Items III-VII of the Checklist". These comments will be incorporated in the revision of this note under preparation.

IV. INFORMATION ON PROCUREMENT OPPORTUNITIES, TENDERING AND QUALIFICATION PROCEDURES

37. The point has been made that advance information on government procurement opportunities enhanced the participation of potential bidders in a procurement procedure. Broad participation of bidders in the procuring process contributed to improved efficiency in government procurement. In order for such participation to be achieved, information about procurement opportunities must be available in notices of invitation to tender and in tender documents.

38. The point has also been made that information on procurement opportunities in notices of invitation to tender should be sufficient to allow potential suppliers to assess their interests in participating in the proposed procurement procedure and to seek tender documents; and that information in tender documents should be sufficiently specific to enable suppliers to prepare responsive bids. It has been recognized that national practices concerning the amount of detail included, respectively, in initial tender notices and in the subsequent tender documentation, varied considerably and that it might not be necessary to have precise minimum requirements concerning their specific contents or to seek harmonization on this point. It would be sufficient for a transparency agreement to develop elements in the form of general principles.

39. In this connection, views have been expressed suggesting that the level of detail of information to be supplied might also vary among the different stages of tendering and procurement methods used. Whereas detailed information should be given under open procurement procedures, the requirements to publish tendering information in a widely available medium under selective tendering procedures should be flexible to enable tender documents to be sent directly to registered suppliers. Information provided to prequalified suppliers could be more specific than information in public notices available to all suppliers.

40. In regard to tender documentation, it has been said that their contents should provide all information relevant to submitting responsive bids that was not provided in the tender notices. They should set forth the parameters for evaluating bids and awarding the contract, including requirements in respect of technical specifications and any preferences granted to national suppliers and suppliers and on any other assessment criteria based on socio-economic considerations. It has also been said that the information contained in tender documents should be comprehensive enough to lead to the submission of bids that would enable procuring entities to compare them and to allocate their resources efficiently.

41. The view has been expressed that rules on information on tendering opportunities in a transparency agreement should apply on a non-discriminatory basis but only in cases where national markets were open to foreign suppliers; otherwise domestic procedures would be applicable.

42. Another view expressed was that provision of information on procurement opportunities was an essential element of transparency in procurement irrespective of the entitlement of foreign suppliers to participate and that such prior information had benefits both from domestic and from foreign suppliers' perspectives. Points made regarding this view have been:

- the obligations of a transparency agreement should apply to all procurement within its scope, whether or not suppliers had access to procurement opportunities. The principle of non-discriminatory access to information would need to be observed regardless of any policies excluding foreign suppliers from access to procurement opportunities or the existence of preferences for domestic suppliers. The establishment of the conditions of competition and transparency in domestic markets was essential to achieving transparency at the international level;
- access to information on any policies, including preferences in favour of domestic suppliers would allow suppliers to determine whether the procurement markets were in fact open to foreign suppliers. From the government's perspective, transparency in the extent to which markets were open would prevent further requests for information from foreign suppliers on market access matters. Such information would also benefit suppliers who would know in advance whether it would be worthwhile for them to prepare tenders;
- if the obligations on transparency applied only to the extent that foreign bidders were provided access to procurement markets, this would give rise to inequity among Members to a transparency agreement. The end result would be an agreement which would require those countries that had their markets fully open to foreign suppliers and had no rules in place regarding national preference to undertake a much greater level of obligations as regards transparency. On the other hand, other countries that had relatively closed markets and excluded foreign suppliers in a large number of sectors would take on lesser obligations;
- since a transparency agreement would not prevent government procurement from being limited to domestic suppliers, the rights of other Members would not be breached by a Member limiting transparency obligations to government procurement open to international competition because foreign suppliers would not have any interest in obtaining information on a procurement that was not open to them;
- a requirement for transparency in procurement, irrespective of the openness of markets, would result in a transposition of obligations on market access into a transparency agreement. The arguments in favour of transparency in all procurement would imply that all Members should be required equally to provide access to their markets since, by keeping their markets closed, they would assume lesser obligations on transparency. Any country was free to undertake greater obligations on transparency by opening its markets if it chose to do so;
- a decision to open a country's market was independent of the requirements of an agreement on transparency. The balance in a transparency agreement was to be found in obligations with respect to transparency and not in those with respect to market access. In undertaking obligations on transparency, countries had to take into account their individual national practices;
- this matter was better dealt with in regard to the overall scope of an agreement (c.f. Section I);

- participants in the Working Group should be encouraged to provide information on their national practices in regard to the provision of information in respect of procurement not open to international competition.

43. The question has been raised as to whether openness would depend only on general criteria prescribed by law or whether it could depend on a case-by-case decision of the procuring authority. In this regard, the following views have been expressed:

- to the extent that procurement contracts would be decided on a case-by-case basis, it would be the prerogative of a government authority not to open a specific procurement contract to foreign suppliers;
- it would defeat the objective of a transparency agreement if the question of whether a given procurement would be open to foreign suppliers were to be decided on a case-by-case basis;
- in those countries where decisions to open procurement to foreign suppliers were made on a case-by-case basis, such decisions could be taken, either at the onset of a tendering process or at the time of the award of a contract. With the latter type of case-by case decision, it would be significantly non-transparent should a governmental authority decide to award contracts only to domestic suppliers. Disciplines should be developed in order to provide maximum transparency in those situations in which the decisions were taken on a case-by-case basis.

A. PUBLICATION

44. On advance information on tender opportunities, it has been suggested that there are two key issues: where the information can be found (publication) and content. With regard to where the information can be found (publication) by potential suppliers, the following points have been made:

- procurement opportunities and procedural requirements relating to those opportunities should be made known and be generally available to interested parties through an accessible source;
- the source used to make information on procurement opportunities generally available should be left to the discretion of WTO Members, but its level of availability should be proportionate to the likely level of interest in the procurement. In other words, where a procurement opportunity was likely to attract international interest, procurement opportunities should be published through a source which potential foreign suppliers and service providers had access to, as opposed, for example, to posting a notice in a town hall. It has also been stated that it would not seem necessary to have a requirement to publish tender notices in an international publication; rather, interested suppliers should be expected to keep track of national publications;
- publication of tender opportunities should be made available in printed and/or in electronic media. Printed media could be an official gazette or a national newspaper of wide circulation;
- electronic publication should be used where feasible and taking into account the level of development of individual WTO Members. The internet address of electronic publications could be made available. It has also been stated that electronic publication offered significant benefits in terms of both time and costs, and based on current trends would be used increasingly in the coming years (see also Section IX B);

- the choice should be available to each WTO Member to publish in the appropriate media and electronic publication should be an option rather than an obligation. This would permit account to be taken of the divergences in the capability to make use of electronic means of publication between WTO Members and between regions within a WTO Member and between suppliers;
- allowances should be made for systems by which information was furnished by private sector service providers acting on behalf of procuring entities;
- under limited tendering procedures where a procuring entity contacted the prequalified suppliers directly, advance publication of tender notices did not seem to be necessary;
- some Members' notices of invitation to tender and to prequalify were published also under selective procedures;
- requirements for publication of tender notices might be less strict for low-value procurements in order to avoid burdensome administrative costs;
- publication of tender opportunities should not be limited to contracts above a certain threshold level (see also Section I).

45. The view has been expressed that exceptions to the obligation to publish procurement opportunities (e.g. to take account of limited tendering in the case of some national practices) should only be permitted in exceptional and justified cases. These circumstances should be the same as those set out for the use of procurement methods which severely restrict competition. Some suggestions have been made concerning situations where publication should not be required. This could be the case for purchases below threshold levels and for purchases not made through open tendering procedures for instance for limited tendering. The point has been made that, in the latter instance, it would be important that information on how to qualify for selective tendering procedures be adequately available, and that post-contract award notices should be published. Another view has been that, for transparency reasons, publication of procurement opportunities should in principle not be limited to contracts above a certain threshold level.

B. CONTENTS OF INFORMATION

46. With regard to minimum requirements for the information to be published on procurement opportunities, the point has been made that, while national practices with regard to the amount of information to be included might differ, information on procurement opportunities in notices of invitation to tender and tender documents notices should be sufficient to allow potential suppliers to assess their interests in participating in the proposed procurement or in a qualification system and enable them to prepare responsive bids or proposals for qualification. Members should be able to decide whether the provision of information on procurement opportunities should be done just through the use of tender notices, or whether the bulk of information should be contained in the tender documentation or be made available by other means.

47. The suggestion has been made that an illustrative list of the types of information that such documents should contain should be developed to provide at least:

regarding the procuring entity:

- full contact details (the name and the address) of the procuring entity (the buying department or agency, the location of the responsible office and the division or branch of the department or agency);
- coordinates of a contact point or document centre from which additional information including on technical and commercial requirements and any other relevant information or documents may be requested and obtained, the final date for making such requests and, if applicable, the cost of such information; unique reference number identifying the request in the department or agency's records;

regarding suppliers:

- any requirements relating to the supplier or service provider, for example economic or qualification requirements;

regarding the intended procurement:

- an identifiable description (nature) of the goods and/or services to be provided, together with their quantity or an indication of their extent;
- the place of delivery, site or place of performance of the service and, if applicable, the time-limit for delivery, completion or duration of the contract;

regarding evaluation of tenders:

- the procurement procedure envisaged to be used (open, selective, whether negotiations are involved, etc.);
- the criteria for the award of the contract including factors other than the price that are to be considered in the evaluation of tenders (economically most advantageous bid) in the evaluation of tenders;
- information on the existence of any conditions in favour of national suppliers in awarding contracts, such as price preferences, local content requirements or any other policies of discriminatory nature. In this connection, it has also been said that provision of such information would not be necessary if a description of national preferences or discriminatory policies was already published in the Official Gazette;
- any technical specifications required;
- where applicable, the location, date and time of any public briefing on the requirements;

regarding submission, receipt and opening of tenders:

- the final date for the submission/receipt of tenders or requests to be invited to participate in a qualification system;

- the address to which submission of tenders or requests to be invited to participate in a qualification system must be sent;
- details of any language requirements in respect of submission of tenders;
- date and place of opening of tenders.

48. The view has been expressed that such a list might be excessively burdensome and costly, in particular in those countries in which the number of tenders issued by government entities was high.

49. In addition, it has been suggested that entities might publish, on a voluntary basis, a summary of information on their intended procurements at regular intervals. The point has been made that only those entities which could sufficiently plan their procurement activities ahead could have such procedures.

C. EVALUATION CRITERIA

50. With regard to the specification of criteria for the evaluation of tenders and awarding of contracts in public notices and/or tender documents, it has been recalled that the question of whether national preferences, or other policies underlying practices of a discriminatory nature should be part of such criteria, was not within the scope of the work of the Group. However, emphasis has been put on the importance of information on such national preferences and other measures in favour of domestic supplies or suppliers being made known in advance in the tender documents and/or tender notices. The point has been made that transparency in regard to the existence of preferences or other discriminatory requirements would enable potential foreign tenderers to determine whether they had an interest in entering a specific procurement process in spite of discriminatory national policies. Interested suppliers would only be able to distinguish between procurement opportunities that were reserved for domestic suppliers and those that were open to international competition if information on any discriminatory policies were made available to them in advance. Provision of information upfront on price preferences or qualification requirements favouring domestic suppliers would enable suppliers to gauge their interest and assess the real opportunity to win a contract. Such information would also allow interested suppliers to make the appropriate decisions in preparing bids that would be responsive to the conditions set out in this respect in tender documentation. By avoiding participation in procurement processes in which their bids would be ultimately dismissed, suppliers would save not only their own resources but also those of procuring entities. Moreover, the clear specification of requirements based on socio-economic considerations in the tender documentation would facilitate the implementation of such policies by providing transparency in respect of the nature of the socio-economic needs applicable to specific procurements. One view has been that information on preferences to national supplies and suppliers need only be included in tender notices and/or tender documents when it was not adequately provided through laws or regulations of general application, either through setting out the relevant information or through an explicit reference to the applicable legislation. Another view has been that clear references to any national policies, including any preferences applied, should always be included in tender notices and/or tender documents. In this regard, the point has been made that the establishment of links between electronically published tender documents and relevant laws and regulations would enable suppliers to search easily for further information on any applicable discriminatory policies. In regard to offsets, the view has been expressed that, if used at all, they should form part of the qualification criteria rather than the criteria for evaluating bids.

51. The point has been made that technical specifications were an important element of evaluation criteria and their role in procurements would become even more significant in future with increasingly complex procurements. Another point made has been that technical specifications should not be developed in such a way as to require the use of technology only available to a limited number of suppliers. Views have been expressed that a transparency agreement should have provisions

encouraging the use of performance-based specifications in preference to design-based specifications; and wherever possible, basing technical specifications on existing internationally agreed or other relevant standards. It has also been said that any changes in technical specifications should be made known to all interested suppliers.

D. CLARIFICATION AND MODIFICATIONS

52. With respect to clarifications of tender documents given by procuring entities to potential suppliers, it has been stated that any questions raised by interested suppliers should be responded to in good faith by the procuring entity. Any information provided in response to requests for clarification from one supplier should be transmitted simultaneously to all other suppliers participating in the procurement process.

53. It has also been said that all potential suppliers should be informed of any changes to information contained in tender notices and tender documents. In this connection, it has also been said that a transparency agreement should clearly specify that all those suppliers who had originally ordered tender documents or had indicated an interest in the procurement opportunity should have any additional information transmitted to them through the same means as the one used for providing the original information.

E. LANGUAGE

54. The suggestion has been made that requirements concerning publication of notices of invitation to tender should be limited to publication in an official national language. The translation of the whole publication into a WTO language could become too burdensome. Another suggestion has been that, where possible, tender notices should be published in a WTO language. It has also been suggested that procuring authorities should have the discretion to decide whether translation of tender notices should be limited to those tendering opportunities that might be of interest to international suppliers.

55. It has been suggested that, in addition to the publication of the whole information in the official national language of the WTO Member concerned, consideration might be given to whether a summary of the main elements of the information in an invitation to tender might also be published in one of the official WTO languages. Such a summary might contain the following elements:

- the name and address of the procuring entity;
- the nature (subject-matter) of the contract;
- the time-limits for submission of tender or application to be invited to tender;
- the address from where further information can be obtained.

56. It has also been suggested that there could be a limited requirement for giving a summary of tender notices in one of the WTO official languages allowing, for example, the exemption of tender notices for small-value procurements which might be of limited interest to international suppliers. One view has been that providing a summary of every tender notice would incur undue administrative costs (see also Section IX C).

57. A number of comments have been made on specific proposals put forward by Members as reflected in the note by the Secretariat entitled "List of Proposals on Items III-VII of the Checklist". These comments will be incorporated in the revision of this note under preparation.

V. TIME-PERIODS

58. In regard to minimum time-periods to be available to potential suppliers to fulfil the requirements of the different stages of the procurement process, the point has been made that time-periods in existing international instruments and national practice varied significantly. The suggestion has been made that, rather than establishing specific minimum time-periods in a transparency agreement, the Group might agree on a general principle, as in the UNCITRAL Model Law or in Article XI:1 of the GPA.¹ A transparency agreement should not be overly prescriptive in this respect. Any provisions on time-limits should be accepted only as recommendations. Time-periods should be sufficiently long to give both foreign and domestic suppliers a meaningful opportunity to avail themselves of the relevant information and to submit responsive bids. It has also been said that a balance should be found in setting any requirements on time-limits; with longer time-periods, procuring entities might resort to limited tendering procedures more frequently. A further point in this connection has been that Members should not be required to set time-periods to suit foreign suppliers, who should be treated on a national treatment and MFN basis.

59. Sufficient time should be allowed for the preparation, submission and receipt of responsive bids to individual procurement opportunities. Any time-limits which are set should not undermine the principles and objectives of a transparency agreement. They should be determined with due consideration to the particular circumstances of the procurement (including the likely level of interest) as well as the complexity of the procurement. Any changes in the time-periods should be made known to all suppliers.

60. A number of comments have been made on specific proposals put forward by Members as reflected in the note by the Secretariat entitled "List of Proposals on Items III-VII of the Checklist". These comments will be incorporated in the revision of this note under preparation.

VI. TRANSPARENCY OF DECISIONS ON QUALIFICATION

61. The point has been made that registration and qualification systems had a useful role in the procurement process provided that they were run in a fully transparent manner. The key principle of transparency as regards this issue was that decisions on registration and qualification of suppliers should be taken only on the basis of criteria that had been identified early in the process and prediscovered to suppliers sufficiently in advance. Any changes in qualification requirements should be made known to all interested suppliers. Another point has been made that prequalification systems should not be exclusive: new suppliers should be given the same (or, in one view, at least a reasonable) opportunity to be included on a qualification list as had been enjoyed by those already qualified. A distinction has been made between qualification systems which potentially could cover a number of different procurements and qualification on a procurement-by-procurement basis. It has also been noted that the issue of qualification of suppliers could play a greater role in the procurement of services than in the procurement of goods.

62. The point has been made that, once the qualification criteria were set out in invitations to prequalify or tender documents, they should be applied in a non-discriminatory way as regards transparency. Prequalification criteria should be made known to all suppliers in a non-discriminatory way. This would not prevent preferential elements in favour of domestic supplies or suppliers from being built into the criteria themselves. The point has also been made that transparency in

¹ Article XI.1(a) of the GPA reads as follows:

"Any prescribed time-limit shall be adequate to allow suppliers of other Parties as well as domestic suppliers to prepare and submit tenders before the closing of the tendering procedures. In determining any such time-limit, entities shall, consistent with their own reasonable needs, take into account such factors as the complexity of the intended procurement, the extent of subcontracting anticipated and the normal time for transmitting tenders by mail from foreign as well as domestic points."

qualification procedures involved matters of due process. Suppliers should have the right to challenge qualification decisions if the rules of the system had not been followed. The view has also been expressed that application of the principles of objectivity and non-discrimination to prequalification criteria extended beyond the concept of transparency. There could be non-discrimination as regards transparency notwithstanding discrimination in favour of national suppliers pursuant to preferences or other domestic sourcing requirements. It has also been said that under certain tendering methods it was not possible to overturn decisions on qualification even if certain other suppliers could be considered to be qualified in terms of the published criteria. Another issue with respect to transparency to which attention has been drawn is the situation in which a supplier who had applied under the predisclosed qualification criteria had received no decision on its application.

63. A number of comments have been made on specific proposals put forward by Members as reflected in the note by the Secretariat entitled "List of Proposals on Items III-VII of the Checklist". These comments will be incorporated in the revision of this note under preparation.

VII. TRANSPARENCY OF DECISIONS ON CONTRACT AWARDS

64. The point has been made that an essential feature of transparency in decision-making on the award of procurement contracts was that such decisions be taken strictly on the basis of the evaluation criteria (including in relation to technical specifications) which had been set forth in advance in the tender documents and in accordance with the information provided on how those criteria would be applied. Furthermore, in order to ensure that decisions were seen to be taken in this way, criteria should be set out in such a way as to ensure as objective an application as possible. The view has also been expressed that a transparency agreement would not, as a general rule, set out what those criteria should be. The point has been made that allowance would need to be made for cases where, for reasons of *force majeure*, for example in the case of the lifting or imposition of an embargo, the criteria set out in tender documents could not be strictly adhered to.

65. Concerning the receipt and opening of tenders, the view has been expressed that, while it may not be necessary to require public opening of tenders to ensure transparency, procuring entities should have procedures in place to ensure the regularity and impartiality of the procurement process and that there was no opportunity to manipulate the specific elements of tenders or to provide a particular tenderer with information on other tenders. In this respect, the view has been expressed that the details of the procedures on how tenders received by procuring entities should be handled were not within the ambit of the Group's work. Another view has been that further consideration should be given to whether it would be sufficient to embody these concepts in general principles or whether more specific requirements should be envisaged.

66. With respect to *ex post* information on contract awards, the point has been made that procurement procedures might provide for some form of public announcement of the contract awards and also give tenderers the opportunity to be debriefed, for example on written request from an unsuccessful tenderer. A public announcement on contracts awarded was also of interest to industry generally (as potential future bidders) and to other governments which would want to see the transparency agreement working in practice. The Group would need to consider whether laying down general principles would be sufficient in this respect or whether the minimum types of information that should be given on contract award notices should be set out.² It has also been said that decisions

² The following specific elements for contract award notices have been suggested: the buying department or agency, the location of the arranging office and the division or branch of the department or agency; description of the supplies including the department or agency for which they are required, if different from the above, and in enough detail to identify their nature, quantity and any period that may be applicable; the unique reference number identifying the purchase or agreement in the department or agency's records and the date of the purchase or agreement; the total liability of the contract at the date of entering into the contract. Where it is not possible to predict accurately the total liability with precision because of the basis of the contract, for example cost escalation, labour and materials, or schedule of rates, the total estimated liability

on contract awards need not include the types of information that had been included in the relevant notices of invitation to tender, provided that a reference was made linking the *ex post* information to the earlier information.

67. As to the purpose and operation of *ex post* information, the following points have also been made:

- this type of information provided losing tenderers with the opportunity to ensure that they had been treated equitably according to the specific requirements and to assess that criteria set forth in the tender documentation and that the applicable rules and practices had indeed been properly followed in the procurement proceedings;
- the means by which such information was given should be a matter of choice for individual Members, but it should be known to interested parties. In this connection, the view has been expressed that it would be time-consuming and burdensome to inform unsuccessful bidders individually of the outcome of their bids. Another view expressed has been that unsuccessful bidders should be informed but it would be burdensome and costly to make this information publicly available;
- unsuccessful bidders should be informed of the outcome of their bids and debriefed, when they themselves requested it, as to why their bid had been rejected and/or the winning bid had been chosen. This was an important guarantee of transparency, particularly in circumstances where limited information on the contract awarded was provided;
- *ex post* information on contract awards should be given regardless of the procurement method used;
- under limited tendering, the information should explain the reasons why that method had been used. In this connection, another view expressed has been that the provision of this type of information would be outside the scope of a transparency agreement. Another approach suggested to this matter has been that the provision of *ex post* information was particularly important in cases where certain information had not been provided *ex ante*. This would include an explanation of the reasons why such information had not been given at the start of the procurement process;
- national practices would determine whether *ex post* information on contract awards should be given through prompt publication of contract award notices or directly by writing to individual tenderers;
- *ex post* information should be provided within a fixed time-frame. The comment has been made that this should not preclude the fixed time-frame differing between countries.

68. In the debriefing process, purchasing authorities should follow the evaluation criteria and indicate where each bid had been deficient and why it had not been selected. On the other hand, it has also been stated that debriefing of all unsuccessful tenderers on the reasons why they had not obtained an award would be time-consuming.

should be published; the name of the suppliers, location and postcode. Where a panel contract has been made, details of all suppliers should be notified. However, if this is impractical, a contact address within the agency should be published for persons seeking further information; and relevant product and service code.

69. It has been noted that a number of other WTO agreements, for example the Agreement on Customs Valuation and the Agreement on Preshipment Inspection, included requirements on the provision of *ex post* information to economic agents. The link between the provision of *ex post* information and item VII on review and item VIII(a) on maintenance of records of procurement proceedings has been referred to.

70. In connection with *ex post* information, it has been suggested that it might be necessary to include a provision safeguarding the confidentiality of information on contract awards in order to protect the legitimate commercial interests of parties concerned (whether public or private) or for public interest reasons. In this connection, a starting point for consideration of this matter could be the provisions of other WTO agreements on confidential information. Procuring entities should not be obliged to provide confidential information which would prejudice the legitimate commercial interests of particular enterprises (whether public or private).

71. A number of comments have been made on specific proposals put forward by Members as reflected in the note by the Secretariat entitled "List of Proposals on Items III-VII of the Checklist". These comments will be incorporated in the revision of this note under preparation.

VIII. DOMESTIC REVIEW PROCEDURES

72. The view has been expressed that it was not sufficient for rules to be introduced to ensure transparency in government procurement practices; there must also be a domestic review mechanism to introduce accountability into the process and to ensure that the rules were respected by everyone involved in a procurement process. The availability of an avenue for review of procurement processes was a key element of transparency. The mechanism for review of complaints by suppliers or a bid challenge system guaranteed due process and public accountability throughout a procurement process and enabled the process to be seen as transparent. The existence of a review mechanism might make public procurement authorities more aware of the need to ensure the consistency of the procedures used in a particular procurement with the applicable laws and regulations.

73. It has been suggested that precedents for review or appeal mechanisms could be found in a number of WTO agreements, for example the Agreements on Anti-Dumping, Customs Valuation, Preshipment Inspection and TRIPS. Additionally, Article X of the GATT 1994 on publication and administration of trade regulations contained a general provision requiring independent review of administrative action relating to customs matters. Reference has also been made to the element of due process in the APEC non-binding principles on transparency in government procurement.³

74. It has been stated that any obligation to provide for review procedures in a transparency agreement should only concern actions within the scope of that agreement, not the substance of preferential measures relating to market access in government procurement. While it might often be difficult to dissociate transparency aspects of government procurement from other aspects, the mandate of the Group should guide its work on this matter as on others.

75. The suggestion has also been made that a domestic review mechanism could be achieved through a variety of means. It has been noted that administrative or judicial review procedures in the interest of assuring due process and public accountability were common to most national regimes, which in consequence already contained the main features that might be applicable to domestic review procedures in a transparency agreement. The view has been expressed that any obligation to provide for domestic review procedures in a transparency agreement should take into account such national practices and procedures; no attempts should be made to develop special review mechanisms where appropriate domestic administrative or judicial procedures already existed. The view has also been expressed that a transparency agreement should not have provisions requesting Members to

³ Circulated in document WT/WGTGP/W/11

adapt their domestic systems to certain prescribed criteria and the existing national systems should be fully respected. The Group should guard against developing overly prescriptive provisions on the specific characteristics that national systems must have. Any provisions should be flexible enough to allow Members to design their domestic review mechanisms in accordance with their national legislation and to rely on administrative or judicial review mechanisms that were appropriate to their national legal systems. They could be in the form of an exhortation to Members of a transparency agreement to provide for domestic review mechanisms. The choice of review procedure should be left to individual Members provided the review mechanism itself was transparent and provided a guarantee of independence. In this connection, the suggestion has been made that, as a first step, Members should provide information on whether their domestic administrative or judicial review systems addressed government procurement-related matters and, if so, under what conditions.

76. The view has been expressed that the issue of review went beyond that of transparency and therefore the mandate of the Working Group and that it was premature to take up this question. It has been said that domestic administrative or judicial review mechanisms were in place in national systems for the purpose of public accountability at the domestic level, a matter not within the ambit of a transparency agreement. Concerns have been expressed that review provisions in a transparency agreement might be used as a means by certain vocal private parties to create complications in the domestic political arena; and additional review procedures might increase the number of challenges and give rise to unnecessary costs. Since the purpose of domestic procedures in many countries was to review whether procurement had been made in accordance with domestic law and procedures, the scope of which went further than the obligations that might be agreed in a transparency agreement, it might not be feasible to limit the application of review procedures to specific transparency obligations in a WTO agreement on transparency. It has been suggested that transparency requirements in respect of review procedures should be limited to the provision of information on the possibilities available under national review procedures.

77. The view has been expressed that a review should be available to all potential suppliers including suppliers from other WTO Members. In this connection, the question has been asked whether foreign interested parties could file complaints against domestic governmental authorities under existing national administrative and judicial mechanisms or whether there would be need for special procedures under a transparency agreement to guarantee the receivability of complaints by foreign suppliers.

78. While some delegations have indicated that they had not yet formulated their views on the specifics of a review mechanism, attention has been drawn to the following features of review mechanisms that might be studied by the Working Group:

- encouraging suppliers, in the first instance, to take up the matter directly with the procuring entity for an early resolution. Agencies might have procedures in place to handle complaints directly;
- in some cases, the mediation or good offices of an independent authority might be sought;
- if the matter was not resolved mutually, provisions enabling suppliers to bring an action against the procuring entity before a judicial authority or other independent body; the point has been made that review provisions should allow flexibility to Member governments to choose whether to designate judicial or administrative bodies or both;
- review provisions should require that review bodies be impartial and independent of the procurement process itself. The point has also been made that Article X:3(b) of GATT 1994 provided some guidance in this regard;

- account should be taken of such principles as objective legality, ex officio action and material delegation in the review procedures;
- in addition to procedures based on formal complaints, initiation of review procedures by competent public authorities on an ex officio basis or national mechanisms for monitoring procurement proceedings;
- the review procedure should result in a published and reasoned conclusion.

79. The view has been expressed that procurement decisions were different from many other administrative decisions, in that review mechanisms often had to function after the contract had been awarded. A review provision should ensure that claims from interested suppliers could be heard and decided upon in a manner that did not prejudice their interests in the procurements in question. Such guarantees could be available through rapid decisions on challenges or through suspension of the procurement process while claims were pending. In this regard, the point has been made that suspension of a procurement process upon a challenge by a supplier could hold up the whole procurement process until a decision had been reached concerning the challenge. Since this could be detrimental to the public interest and create difficulties in cases of urgent procurements, most national review procedures and the provisions of the GPA provided for exceptions enabling, in circumstances so warranting, public interest considerations to override the interest in suspending a procurement process. In cases in which the procurement process might be suspended, there could therefore be provisions in a transparency agreement for continuing nonetheless with the award of procurement in the public interest.

80. In connection with remedies that might be provided under review provisions, the following views have been expressed:

- most national review systems already provided remedies for suppliers whose rights had been denied under the applicable laws and regulations;
- review provisions should provide for adequate remedies that would protect the interests of suppliers and would deter procurement entities from engaging in future actions that would be inconsistent with the provisions of an eventual agreement on transparency;
- remedies should include the possibility of corrections including altering the procurement process, re-tendering for the procurement or awarding damages to cover legitimate claims;
- an independent review should review complaints about tendering procedures in order to determine possible damages or administrative responsibility;
- account should be taken of the fact that review systems might provide for remedies which could include compensation only after administrative or judicial procedures had determined that an injury or an economic loss had flowed from the inconsistency of a procurement process with the applicable legislation.

81. Another view expressed on remedies has been that a transparency agreement should not specify them for the following reasons:

- provisions requiring adequate remedies would fall outside the scope of the work on transparency. It would be sufficient to have provisions requiring the establishment of a review procedure without specifying the remedies that should be available;
- obligations on remedies might have counter-productive repercussions on the procurement practices of governmental authorities; to the extent that procuring authorities would be liable to remedies, they might have a tendency to restrict access to foreign suppliers in order to minimize any such risks.

82. It has also been suggested that a transparency agreement should require procurement entities to maintain written records of the procurement process in order to ensure that review bodies had an adequate factual basis for review (see Section IX A). As another possible means of review mechanism provision of *ex post* information to unsuccessful suppliers and debriefing by procuring authorities have also been mentioned (see also Section VII).

IX. OTHER MATTERS RELATED TO TRANSPARENCY

A. MAINTENANCE OF RECORD OF PROCEEDINGS

83. The view has been expressed that procuring authorities should maintain a proper record of decisions and actions taken during the procurement process and the reasons for them. The maintenance of a record of procurement proceedings and the availability of non-confidential information contained in it to interested parties was one of the principal mechanisms for ensuring adherence to agreed rules and was of particular importance in the functioning of an administrative or judicial review process. Such records provided the basis for an audit trail and supported any evaluation of the procurement⁴ and thus introduced an element of accountability into the process. With regard to the length of time that records of proceedings should be maintained, it has been said that the requirements in this respect could be linked to the time provided to domestic suppliers in domestic legislation to challenge a procurement decision and to seek a review of a procurement process. It might not be necessary to keep a record of proceedings beyond that period. It has also been suggested that information should be provided on the national practices of those Members in which procuring entities were required to maintain records of procurement proceedings.

84. The question has been asked whether record maintenance should be treated as a separate element providing an additional guarantee of transparency or whether this item would be sufficiently addressed under other elements.

85. By way of general comments under this Section, a view has been expressed that prescription of stringent rules on transparency and review could be counter-productive to market access. Having no obligations on market access in the area of government procurement, national governments would have the tendency to close their procurement markets to foreign suppliers in order not to run the risk of breaching these rules on transparency.

⁴ The following details of the matters that should be documented have been suggested: approval to make the procurement; the selection criteria upon which evaluation and selection decisions will be based; discussions with potential bidders before bids close; details of clarification of bids during evaluations; reasons for variations to a tender; steps to provide all bidders with an equal opportunity to revise their bids; agreements reached during negotiations; authorization and signing of a contract; details of debriefings; reasons for varying a contract; and records of contractor performance.

B. INFORMATION TECHNOLOGY

86. It has been suggested that the work of the Group in developing a transparency agreement should take full account of innovative government procurement practices. Information technology was already being rapidly adopted by procurement communities and offered tremendous opportunities to level the playing field by increasing access to information at low cost to all suppliers. A transparency agreement should provide for the possibility of using information technology tools to disseminate information on procurement opportunities and contracts awarded as an alternative to more traditional methods of communication (see also Section IV above). The view has also been expressed that, for the time being, procuring entities should be able to continue to maintain paper-based tendering procedures.

87. On the other hand, it has been suggested that, because of the lack of uniformity among countries' stages of development in this area, any requirements for the use of information technology in government procurement should be optional and that the use of information technology tools should not undermine the basic transparency principle of guaranteeing access to information for all, including small and medium-sized suppliers and suppliers from countries less advanced in the use of information technology. A balance should be found whereby a transparency agreement would not constitute an unnecessary barrier to progress in the area of information technology and would accommodate the increasing use of information technology in government procurement in Members, while ensuring that the use of information technology would not result in discrimination against countries which did not have a competitive edge in this area. Electronic tendering using Internet-based systems facilitated access of suppliers worldwide with a minimum requirement of equipment and technological know-how and was the most efficient way of ensuring non-discriminatory access to tender information.

88. It has been said that one of the issues that had to be dealt with in electronic procurement concerned procedures for opening tenders when they were submitted electronically. It has been noted that there was scope for international cooperation in the area of information technology, for example in developing electronic databases or maintaining lists of qualified suppliers.⁵ The point has also been made that procuring entities should be allowed to charge for electronic access to information and tender documentation and other tendering procedures, in particular if the information was supplied by a private service provider. It has also been said that the Group would need to consider at a later stage whether it would be appropriate to cover such specific matters as information technology in a transparency agreement. In this connection, it has been noted that information technology was an area where there was scope for technical cooperation (see Section XII).

C. LANGUAGE

89. It has been said that information on national practices showed that documents and other information relating to tendering proceedings were generally provided in the official language(s) of the country of the procuring entity. As a rule, documents and other information relating to procurement procedures and individual procurements should be allowed to be provided to potential suppliers and service providers in an official language of the country of the procuring entity. In general, potential suppliers wishing to do business in another country would have the necessary language facilities available to them; there should not be a specific requirement to provide such information in a WTO language. Nevertheless, procuring entities could be encouraged to provide information, where possible, in a WTO language where a particular procurement opportunity was likely to attract international interest (see also Section IV).

⁵ It has been mentioned that the APEC Group of Experts in Government Procurement has established a Home Page with linkages to existing databases on government procurement in member economies (www.apecsec.org.sg/govtproc/gphome.html).

X. INFORMATION TO BE PROVIDED TO OTHER GOVERNMENTS (NOTIFICATION)

90. The view has been expressed that it was somewhat premature to discuss in detail this aspect, which might be better taken up once a clearer notion of the nature of a transparency agreement had been generated. Nonetheless, a number of issues have been raised relating to the possible notification arrangements under a transparency agreement and other mechanisms by which information can be exchanged between Member governments.

91. While some views expressed have put emphasis on the importance of adequate information on relevant national legislation and any amendments thereof being notified to other Members of a transparency agreement, other views have drawn attention to difficulties that would have to be addressed in this connection. It has been suggested that the notification of all national laws, regulations and administrative guidelines, including those of sub-central and other levels of government covered, might prove to be unduly burdensome. This would particularly be the case if they all had to be notified in a WTO language. An additional concern that has been expressed was that it was doubtful that Members would be ready to share confidential information. A number of possible ways of overcoming these difficulties have been put forward:

- Members might be expected to notify their basic law on government procurement, but not each and every law and regulation;
- an approach of employing a checklist of points, or questionnaire, to elicit basic information on how the national laws and regulations of each member responded to the requirements of a transparency agreement might be employed;
- each Member might be required to respond to requests from any other Member for specific information on its laws, regulations, procedures and practices regarding transparency in government procurement. Contact points might be established by each member for this purpose. In this connection, reference has been made to the discussion on this point reflected in item III of this note;
- greater use of electronic databases might be made for providing information on procurement procedures at sub-central levels;
- the government of an unsuccessful tenderer might be entitled to seek information on the contract award in question from the government whose entity conducted the procurement. This could be a vehicle for forestalling disputes. The view has also been expressed that the information sought should relate to how the commitments on transparency had been complied with in the contract award process. Another view was that the provision of such post-contract award information might not be necessary in an agreement on transparency, since it would not extend to matters of market access;
- enhanced use could be made of existing WTO transparency mechanisms, including the Trade Policy Review Mechanism;
- the question has been raised as to whether the existing provisions of Article X of GATT 1994 and Article III of the GATS were sufficient for the purposes of a transparency agreement on government procurement or whether additional rules should be provided for. Should there be, for example, a requirement to specify where the relevant laws were published? In this regard, the view has been expressed that the provisions of the GATT 1994 and GATS that had been referred to would not be adequate for the purposes of notification in an eventual transparency agreement.

92. It has also been suggested that Members might provide information identifying government departments, agencies and enterprises subject to the rules in a transparency agreement. The point has been made that this could be done through notification of a positive list of such entities or through notification of a negative list of those entities not subject to the agreement. It has been suggested that the latter approach might have the advantage of avoiding the problem of frequent changes in lists resulting from changes of a formal nature, such as the renaming or restructuring of departments. The issue of the most appropriate technique for the presentation of the coverage of entities would depend on the outcome of discussions on the scope of the agreement, in particular which type of entities were covered. It has also been said that it was premature to consider the form in which the coverage of entities should be presented.

93. On statistical reporting, the following points have been made:

- such provisions should not be included in a transparency agreement;
- there should not be an obligation, but governments might be invited to provide what information they have available, for example on the size of their procurement market;
- the issue should be put aside for the time being.

94. The view has been expressed that any requirements relating to the provision to other Members of information on and explanation of national procurement rules and procedures should apply only to the extent that such rules and procedures were within the scope of a transparency agreement. Requirements on the provision of information and explanations should be limited to those relating to transparency matters, and not otherwise relate to market access questions.

XI. WTO DISPUTE SETTLEMENT PROCEDURES

95. With regard to dispute settlement between governments, the general view has been that it would be premature to consider the applicability of provisions on dispute settlement before the elements of a transparency agreement had been more clearly identified. However, the view has also been expressed that any commitments on transparency should be subject to the DSU in the same way as the existing clauses on transparency in any other WTO agreement. Another view has been that it was questionable that the dispute settlement system should apply to obligations on transparency in the absence of commitments with respect to market access. For example, it has been asked whether any decision resulting from a dispute regarding the provision of transparency in a government procurement process could apply retroactively. A further view expressed in this connection has been that the Group's mandate was to discuss the elements of an appropriate agreement on transparency which could be in the form of guidelines or a code; only an agreement with binding obligations should be subject to WTO dispute settlement procedures.

96. Regarding the relationship between domestic review procedures and the WTO dispute settlement mechanism, it was said that a distinction should be made between domestic review mechanisms which involved responding to complaints by suppliers against procuring authorities under the law of a country and dispute settlement procedures between governments under the law and procedures of the WTO. The legal criteria for domestic reviews and WTO dispute settlement were different. In the case of domestic procedures, a review related to the consistency of a procurement process with the domestic laws and regulations, whereas in the case of WTO dispute settlement the grounds for a dispute were an alleged breach of a WTO agreement. The view has been expressed that the possibility for foreign suppliers to have recourse to effective and independent domestic review procedures, as a first avenue for resolving complaints, would minimize the likelihood that such complaints might eventually rise to the level of a government-to-government dispute.

97. In regard to the way in which national review procedures and the WTO dispute settlement procedures might interact, it has been suggested that the Group might wish to examine the approach to this matter adopted in the Agreement on Implementation of Article VI of GATT 1994. Another view expressed was that there should be no particular relationship between a domestic review process and government-to-government dispute settlement. WTO dispute settlement procedures should apply to issues relating to the consistency of laws of general application and should not be invoked with regard to decisions resulting from national review procedures concerning a particular procurement. In this connection, the view has been expressed that national practices would not allow the WTO dispute settlement process to override a specific procurement decision taken by a national judicial body. WTO dispute settlement procedures should only apply in respect of obligations of governments in their capacity as regulators. Any procurement decision taken by them in their capacity as purchasing entities should not be subject to dispute settlement procedures. It has also been said that provisions should reflect the principle of exhaustion of domestic judicial review mechanisms before recourse to WTO dispute settlement procedures. Moreover, the point has been made that recourse to WTO dispute settlement procedures, being a prerogative of governments, could not be initiated by suppliers who might challenge procurement procedures of government entities.

XII. TECHNICAL COOPERATION AND SPECIAL AND DIFFERENTIAL TREATMENT FOR DEVELOPING COUNTRIES

98. The point has been made that technical cooperation was important for ensuring the successful implementation of a future transparency agreement. It could also play an important role in helping Members to develop domestic procurement regimes and in taking practical steps to enhance transparency of procurement policies and practices. The view has been expressed that, in discussing a framework for technical cooperation, inspiration might be drawn from the language of Article 67 of the Agreement on TRIPS. This required developed country Members to make available technical and financial cooperation, on mutually agreed terms, in response to requests from developing country Members. It also listed specific areas where such cooperation should be provided, including assistance in the preparation of laws and regulations and support regarding the establishment of domestic offices and agencies, including the training of personnel. Technical cooperation plans could be drawn up identifying the needs of individual developing and least-developed countries in meeting their obligations under a transparency agreement and targeting technical cooperation activities to specific purposes, for instance for the establishment of contact points. The view has been expressed that the provisions on technical cooperation should match the specific requirements in a transparency agreement; compliance with the rules of a transparency agreement might require changes in national legislation and procedures and the building up of new institutions in individual countries. The following types of areas in which technical cooperation would be beneficial have been suggested:

regarding development of national legislation and procedures:

- legal advice and assistance in drawing up national legislation;
- administrative and policy option analysis and guidance;
- drawing up procedures on publication;
- establishment and implementation of bid challenge systems;
- taking practical steps to make procurement more user-friendly by developing standard forms for tender notices and fill-in-the-blank bid forms, as well as developing a common procurement vocabulary;

regarding training:

- training for those who have to implement, use or enforce new legislation, procedures and/or practices, training the judiciary, and training local trainers who would continue training programmes in, for example, business schools or colleges of public administration in the beneficiary country;
- exchange of officers;
- training of purchasers and suppliers;

regarding institution building:

- administrative cooperation to enhance institution building and the exchange of information;

regarding access to information by suppliers:

- workshops, seminars and the production of user guides, including the development of Internet Websites, search engines and databases, to help provide information about opportunities to do business with governments at home and abroad, and to facilitate access to that information; in particular, such assistance could benefit small- and medium-sized enterprises, by increasing their confidence and effectiveness in successfully entering procurement markets at home and abroad;

regarding use of information technology:

- the development of information technology tools which could be used to disseminate information about procurement opportunities and practices, and/or to establish full electronic tendering, as well as to facilitate the collection of relevant economic data and statistics;
- the provision of office, information technology and/or other equipment necessary for the implementation and enforcement of legislation, procedures and/or practices.

99. The view has been expressed that the practices under the TRIPS Agreement might also be useful in assessing and monitoring assistance on an ongoing basis, while avoiding the creation of additional bureaucratic structures and red tape. The point has also been made that the issue of technical cooperation should be discussed not only in terms of ensuring compliance of developing countries with the requirements of a future agreement, but also in terms of the practical steps that could be taken to enhance transparency in developed as well as developing countries.

100. It has also been suggested that requirements similar to the provisions of Article 66.2 of the Agreement on TRIPS might be included in an agreement on transparency. Developed country Members might be required to provide incentives to enterprises and institutions in their territories for the purpose of promoting and encouraging technology transfer to developing country suppliers in order to enable them to participate in bidding for public contracts in developed countries. In comparison with Article 67 of that Agreement, under which technical cooperation depended on the mutually agreed terms and conditions between developed and developing country Members, technical cooperation under Article 66.2 was provided unilaterally and at the initiative of developed countries. Technical cooperation could be useful in achieving the objective of economic efficiency in government procurement. For instance, providing information to developing countries as to what governments usually procure and information as to worldwide sources would be relevant in this regard.

101. The point has been made that the technical cooperation activities of international intergovernmental organizations and fora, including international financial institutions and regional development banks, in the field of government procurement could contribute to transparency and the implementation of a transparency agreement. It has been suggested that consideration should be given to developing a framework under a transparency agreement for rationalizing the various activities in this area at the bilateral, regional and multilateral levels. In this respect it has been suggested that the Secretariat would prepare a background paper containing information on technical cooperation programmes of international and regional intergovernmental organizations related to government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical cooperation in this area.⁶

102. It has been suggested that potential recipient and donor countries should be encouraged to share their views on particular needs and the available forms of technical cooperation in the area of government procurement. It has also been suggested that special attention should be paid to the problems of institution-building, in particular in least developed countries. The Chair invited Members to provide information in writing to the Working Group on their needs and on the technical cooperation already available.

103. With regard to special and differential treatment for developing countries, the view has been expressed that this issue might be addressed once the elements of an eventual agreement were more clearly defined. In this connection the suggestion has been made that transitional periods in respect of developing countries might be provided.

⁶ The information communicated from UNCITRAL, OECD, the Asian Development Bank, the African Development Bank, IMF, the APEC Government Procurement Experts Group, European Bank for Reconstruction and Development, ITC and UNDP on their respective technical cooperation activities in the area of government procurement has been circulated in documents WT/WGTGP/W/20 and Addenda 1-7.

WORLD TRADE
ORGANIZATION

WT|WGTGP|1
19 November 1997

(97-5099)

**Working Group on Transparency
in Government Procurement**

REPORT (1997) TO THE GENERAL COUNCIL

1) *The Working Group on Transparency in Government Procurement was established by a decision at the WTO Ministerial Conference held in December 1996, to conduct a study on transparency in government procurement practices, taking into account national policies, and, based on this study, to develop elements for inclusion in an appropriate agreement.*

2) *Following the agreement by the General Council at its meeting of 24 April 1997 to the appointment of Ambassador Werner Corrales Leal (Venezuela) as Chairman of the Working Group on Transparency in Government Procurement¹, the Working Group held formal meetings on 23 May 1997, 21 July 1997 and 3 and 4 November 1997. Reports on these meetings have been circulated in documents WT|WGTGP|M|1-3.²*

3) *At the meeting of 23 May, presentations were made by the representatives of the UNCITRAL (the United Nations Commission on International Trade Law) and the World Bank on the relevant instruments and activities relating to government procurement in their organizations (WT|WGTGP|W|1 and 2), followed by comments and questions and answers with regard to these presentations (WT|WGTGP|M|1, Annex). Members made general remarks on how the Working Group could proceed in the study phase of its mandate. Japan made a written submission on elements of transparency in government procurement (Job No. 2860). The Working Group requested the Secretariat to prepare a paper presenting factual information on the provisions related to transparency in international instruments on government procurement procedures (the UNCITRAL Model Law on Procurement of Goods, Construction and Services; the World Bank Procurement Guidelines; the Plurilateral WTO Agreement on Government Procurement) and in WTO agreements. With regard to the information already collected on national practices by other bodies, the Working Group asked the Secretariat to make contact with APEC and the FTAA*

¹See document WT|L|215

²WT|WGTGP|M|3 to be distributed

to invite them to make available what information they could share with the Group regarding the surveys they had undertaken. With regard to the relationship between the mandate of the Working Group and that of the Working Party on GATS Rules, the Working Group agreed that, while the Working Group's independence should be maintained vis-à-vis the Working Party on GATS Rules, the Chairman would seek to maintain contact with the Chair of that Working Party so as to facilitate any necessary coordination on practical matters. The Working Group noted that the IMF and the World Bank had observer status in this Working Group pursuant to the cooperation agreements concluded between the WTO and these organizations and agreed to invite UNCITRAL to attend its next meeting.

4) *At the meeting of 21 July, Members made general statements regarding the definition of the concept of transparency in government procurement in the study phase of the Working Group's mandate; ways of achieving the objective of transparency in the light of the diversity of procurement regimes of Members; and the aspects of transparency that the Working Group should cover in its study. The delegations of Canada and the United States made written submissions on elements relating to transparency in government procurement and on guiding principles respectively (Job Nos. 4099 and 4133). With regard to national procedures and practices, the Working Group had available to it information received from the APEC Government Procurement Experts Group (WT|WGTGP|W|4 and S|WPGR|W|21) and a note by the Secretariat •Synthesis of the Responses to the Questionnaire on Government Procurement of Services•, which had been prepared at the request of the Working Party on GATS Rules (S|WPGR|W|20). The Working Group was presented factual contributions by the delegations of the European Community and New Zealand, describing their national procedures and practices relating to transparency in government procurement, (WT|WGTGP|W|5 and Job No. 5616) and invited other Members to provide similar information. The Working Group considered a note by the Secretariat on •Transparency-Related Provisions in Existing International Instruments on Government Procurement Procedures and in WTO Agreements• (WT|WGTGP|W|3) and agreed that the Secretariat would prepare a paper synthesizing the factual information on national procedures and practices available to the Working Group together with the information on the transparency-related provisions in existing international instruments. The Working Group agreed to invite the OECD and SELA to attend its next meeting on an ad hoc basis.*

5) *At its meeting of 3 and 4 November, the Working Group had before it a Secretariat note synthesizing the information on national procedures and practices relating to transparency available in the responses to the questionnaire on government procurement of services in the Working Party on GATS Rules, the surveys of government procurement systems of APEC economies, the sections on government procurement in the various Trade Policy Review Reports and the contributions submitted by delegations together with the information in the earlier note by the Secretariat on the transparency-related provisions in existing international instruments (WT|WGTGP|W|6). It discussed the issues before it by taking up in turn the subjects of sections II-X of the note, together with topic of special and differential treatment for developing countries and technical assistance. Written submissions were presented by Korea, Tunisia and Hungary containing factual information on their national procedures and practices*

(WT|WGTGP|W|7-9 respectively) and other written submissions were submitted by Norway, Switzerland and Japan (Job Nos. 5220, 6328 and 6329 respectively). The Working Group agreed that the Chairman would draw up, with the assistance of the Secretariat, a list of the issues that had been raised and the points that had been made on these issues, under each of the items that it had discussed. In response to a request by UNCITRAL, the Working Group agreed to grant observer status to the United Nations represented by UNCITRAL.

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 18 JUNE 2003

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its eighteenth meeting on 18 June 2003 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica).

2. The agenda for the meeting consisted of: (i) transparency-related provisions in existing international instruments on government procurement and national procedures and practices; (ii) technical assistance and capacity building as called for by paragraph 26 of the Doha Ministerial Declaration; and (iii) other business, in particular the preparation of the Group's Report to the General Council before the Cancun Ministerial Conference. The Working Group agreed to adopt the agenda as proposed.

A. TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES

3. The representative of the European Communities introduced a written contribution relevant to this item (entitled "Positive Effects of Transparency in Government Procurement and Its Implementation") contained in document WT/WGTGP/W/41. In so doing, he reminded Members of the Working Group that the Group had been undertaking work since 1997 "to develop elements for inclusion in an appropriate Agreement"¹ on the basis of a mandate which had been agreed upon at the Singapore Ministerial Meeting. He considered that this meeting would be the last step of the Working Group's study phase and that, on the next occasion, following the Cancun Ministerial Conference, Members would have a negotiating mandate. Reflecting on the work undertaken during the past six years, he considered that the study phase had been valuable and fruitful. He noted that written and oral contributions made by Members on many areas related to transparency in government procurement, including descriptions of national procurement systems, had enabled Members to identify advantages of a transparency agreement as well as some difficulties, which confronted Members in the lead-up to negotiations. He suggested that Members discuss what the advantages and disadvantages of a transparency agreement were, and identify the difficulties associated with the implementation of a multilateral agreement covering this subject-matter. He noted that the work of the Working Group concentrated on 12 issues identified by Members set out in the Chairman's "List of Issues Raised and Points Made" (JOB(99)6782 of November 1999), and that those issues would be of paramount value during the negotiating phase.

4. For his delegation, transparency meant ensuring that information about a government's procurement regime and individual procurement opportunities were made available to all interested parties, particularly potential suppliers and service providers. Further, it meant that such parties were provided the right to access that information. It also meant ensuring that procurement policies and practices were transparent and that information provided was respected by all in order to provide confidence and legal certainty. In international trade, suppliers needed legal certainty and

¹ Singapore Ministerial Declaration, WT/MIN(96)/DEC, para. 21.

predictability, regardless of whether they were participating in tendering procedures in their own country or abroad.

5. While transparency in government procurement was not *per se* a difficult issue, at least not technically, it was perceived as politically controversial by some Members. However, he considered that it should not be so perceived given the numerous benefits associated with transparency in government procurement and given that the issue of market access did not arise. Rather than the focus being on market-access commitments, it was on a rules-based agreement that would render more transparent a part of international trade currently outside the scope of the WTO. He stated that transparency was one of the key governing principles of the WTO and the GATT, and it was embedded in all WTO agreements. Noting that all Member governments purchased goods and services both domestically and abroad, he stated that there was a significant amount of international trade generated by public entities when, in the exercise of their sovereign powers, they decided to purchase internationally. Given the volume of international trade generated by such activity, transparency in public procurement was fully justified and, accordingly, rules ensuring transparency should be negotiated in the WTO. He stressed that his delegation would not seek negotiation of market access; nor would his delegation seek to limit countries' ability to decide which procurement opportunities would be open to foreign bidding. In this regard, he noted that paragraph 26 of the Doha Declaration was clear on these issues and they were, therefore, not contestable. However, while the scope of negotiations would be limited to transparency issues and would not extend to market access issues, in his delegation's view, the outcome of future negotiations would have an impact on Members' trade relations. Some of the benefits in trade relations that transparency in government procurement would yield were contained in his delegation's communication. He suggested that the price to be paid for a transparency agreement was relatively low compared to the potential benefits deriving from the optimisation of public expenditure.

6. His delegation's communication highlighted some of the major benefits associated with a future multilateral agreement on transparency in government procurement that would accrue not only to procuring entities, but also to participating bidders. First, transparency would result in enhanced efficiency and increased innovation. Specifically, public procurement applied in a transparent environment with a clear set of rules defined in advance and respected by all parties might allow tendering companies from both developed and developing countries to foster enhanced competition, which would, in turn, stimulate innovation amongst bidders. Secondly, a multilateral agreement would result in better value-for-money. In particular, transparent tendering should lead to effective competition between bidders (in some cases from foreign bidders). The differences in terms of value and quality offered in the various bids would often reduce the level of bids. This, in turn, would reduce the amount of public expenditure. Thirdly, transparency rules would encourage investment and partnership. He stated that this was of particular importance for developing countries that were trying to develop their markets. Fourthly, a transparency agreement would have the effect of reducing corruption. While his delegation did not consider that this would be the objective of the future multilateral agreement on transparency in procurement, it was, nevertheless, considered as a welcome side-effect for all countries.

7. Turning to the future implementation of a transparency agreement, he stated that his delegation had examined the legislation and regulations of many Members of the WTO. On the basis of the information available, his delegation had established that many countries, including developing countries, already had transparency rules in place. Accordingly, the implementation of any future multilateral agreement would not be a major difficulty for those countries. For countries that did not have a procurement system in place, the costs that might be associated with the introduction of such a system would be far outweighed by the resulting benefits. He also emphasized that a future multilateral agreement on transparency in government procurement would not in any way affect or reduce countries' ability to give preference to domestic supplies – in other words, to limit the scope of tendering procedures to national bidders. Nevertheless, the rules contained in a transparency agreement should apply without distinction between national or international bidders. In other words,

transparency should be ensured even when a tender was not open to foreign bidders. More particularly, foreign bidders should have information regarding tendering opportunities that were not open to foreign participation.

8. He noted that his delegation's contribution suggested that the Working Group focus on thresholds above which the rules would apply and below which such rules would not apply. He stated that different thresholds might apply for developing countries or, at least, for least-developed countries, if that was considered the way to accommodate such countries' concerns.

9. Finally, he emphasized the need for technical assistance during and after the negotiations – as was agreed in the Doha Declaration. His delegation was committed to providing technical assistance to developing countries, acknowledging that it was an important element in ensuring that such countries were in a position to implement a multilateral agreement of transparency in government procurement.

10. The representative of Brazil, responding to the paper submitted by the European Communities, stated that while the paper contained a convincing argument for transparency in government procurement, it failed to make a strong case for an agreement on transparency and government procurement. He stated that the general concepts and proposals were, on the whole, not controversial. No delegation had put forward the view in the Working Group that transparency in the procurement process was not a good thing; nor had they denied the benefits for Members associated with transparency in government procurement. His delegation had been firmly committed to open and transparent rules in the public sector for many years. It was also conscious of the many benefits that had accrued to the government and to entities through the application of such open and transparent rules. It was necessary to demonstrate and understand how an agreement on transparency in government procurement would enhance relations among Members and how one Member applying enhanced transparency in government procurement affected and benefited its trading partners.

11. The representative of Malaysia, also responding to the contribution made by the European Communities, stated that that contribution had been useful insofar as it expounded the position of the European Communities on certain issues and their level of ambition and aspirations in this area. At the very least, the European Communities had reiterated that the mandate given by Ministers in the Doha Declaration was limited to transparency and did not extend to market access. He also expressed appreciation for the reference in that contribution to the concept of thresholds. It was his delegation together with a few other developing countries that had emphasized the need for thresholds since the inception of the work of the Working Group. A transparency agreement would become too onerous without the inclusion of thresholds, particularly for developing countries given that otherwise the agreement would apply even to the smallest procurements. Given the reference to the notion of thresholds in the European Communities' contribution, it had gained acceptance at least by the European Communities and perhaps by other major proponents, as well.

12. Nevertheless, his delegation did not agree with the statement in the paper that Members were "on the verge of a decision on modalities".² This was not true given the continuing disagreement in the Working Group. He acknowledged that a larger degree of consensus existed in the Working Group as compared with Working Groups on other Singapore issues or, at least, those concerned with investment and competition policy. He also acknowledged that some level of consensus had emerged in relation to several of the elements in the informal note by the Chairman containing the "List of Issues Raised and Points Made".³ However, convergence had not yet been achieved in relation to a large number of those elements. In particular, convergence had not been achieved in relation to the definition of transparency and the issue of whether the scope of the agreement should be limited to goods or include services and concessions. In addition, there were two elements that his delegation –

² WT/WGTGP/W/41, p. 1.

³ JOB(99)6782 of November 1999.

together with those of other developing countries – had repeatedly emphasised, namely domestic review procedures as well as linkage to the WTO's DSU. In his view, these elements were not concerned with transparency and should never be a part of an agreement on transparency in government procurement.

13. Continuing, he emphasized that while Members were not on the "verge of a decision on modalities"⁴, they were on the verge of a discussion on modalities, a process which would be undertaken by the Chairman of the Working Group as a "friend" of the Chairman of the General Council in an informal setting and not as part of the Working Group. He emphasized that precision was necessary given that developing countries would be seriously disadvantaged if they were required to enter into negotiations without understanding what they were negotiating about. Having emphasized the need for precision as regards the parameters of negotiations, he conceded that pre-negotiation of every element was not necessary. For example, once it had been accepted that the concept of a threshold should be incorporated into the scope of the agreement, the actual value of the threshold could be left to the negotiations. Similarly, the representative of India stated that her delegation could not share the view expressed by the European Communities that Members were "on the verge of a decision on modalities".⁵ Despite the fact that the Working Group had had a long study phase, a number of crucial issues remained for which clarification was still necessary. These issues could not be clarified during the negotiating phase. Before entering into a negotiating phase, there needed to be a clear conception of what would be involved if there was to be any agreement on transparency. Her delegation did not even know precisely what transparency would entail, nor what the scope or coverage of an agreement would be. The representative of the Philippines noted that the European Communities had made it clear that it was not seeking market access. Indeed, it had provided assurances about national preferences and the issue of thresholds, although the devil lay in the detail. Despite confirmation that the European Communities was not seeking market access, the paper contained a plethora of reassurances regarding national sovereignty, the use of national preferences, thresholds, proportionality, technical assistance and capacity building, which had the effect, if anything, of raising doubts on the issue. Further, while the European Communities concluded in its paper that Members were on the verge of a decision on modalities for the negotiations, for his delegation, a few fundamental considerations precluded such a conclusion. He stated that leaving such considerations to be addressed during the negotiating stage would be highly imprudent if not irresponsible. In particular, the paper submitted by the European Communities did not address the issue of domestic review and dispute settlement, although it was acknowledged that the nature of the subject-matter of that paper did not call for such elaboration. Nevertheless, these issues were of fundamental concern to his delegation. Moreover, the European Communities already benefited from positive moves towards institutionalised and greater transparency in many developing countries, whose procurement markets were presumed to be of considerable importance. The question, therefore, arose as to why the European Communities and other proponents required payment for something developing countries had already determined for themselves that they required. In response, the representative of the European Communities stated that while the comment that "Members are on the verge of a decision on modalities"⁶ might sound optimistic, that was the way his delegation viewed the current situation.

14. The representative of Egypt, also responding to the contribution by the European Communities, noted that the paper appeared to be based on the premise of a future agreement on transparency in government procurement. The mandate from the Singapore Ministerial Conference as affirmed at the Doha Ministerial Conference was to conduct a study, on the basis of which the Working Group would develop elements for inclusion in an appropriate agreement on transparency in government procurement. Therefore, it was of utmost importance to recognise that any future agreement would depend on the outcome of the study exercise rather than simply on the expiration of

⁴ WT/WGTGP/W/41, p. 1.

⁵ WT/WGTGP/W/41, p. 1.

⁶ WT/WGTGP/W/41, p. 1.

time. Furthermore, the Doha Declaration imposed another condition, being to develop and agree by explicit consensus on the modalities of negotiations. This could only be achieved following the conclusion of the study process.

15. The representative of Switzerland stated that his delegation considered that the contribution submitted by the European Communities was extremely useful and timely insofar as it allowed Members to refresh their memories on the various elements that had been studied by the Working Group. His delegation agreed that the issues of scope and coverage and enforcement mechanisms were perhaps the most sensitive and difficult to tackle in future negotiations. His delegation agreed with the European Communities that the study phase was over because the elements and the differences of positions were clear. What remained was to make "bridges" during the negotiations phase. The representative of Poland, expressing support for the paper submitted by the European Communities, stated that his delegation was in favour of establishing a multilateral framework for transparency in government procurement. Many important benefits would flow from such an approach. His delegation also shared the view that the study phase should be concluded and that the Working Group should commence work on the modalities of negotiations for a future agreement. The representative of Hungary stated that her delegation supported the aim and content of the European Communities' contribution. After a seven-year study phase, it was a good time to underline the general aims to be achieved by establishing an agreement on transparency in government procurement while recognizing difficulties that could be caused by the absence of transparency in government procurement. Her delegation was convinced that an agreement on transparency in government procurement would be an important addition to the rules-based international trading system in that it would set out basic transparency obligations that suppliers throughout the world could expect to find in the government procurement systems of all Members.

16. The representative of Japan stated that her delegation generally shared the views reflected in the European Communities' contribution. The Working Group had completed a study of transparency in government procurement practices and had made progress to develop elements for inclusion in an appropriate agreement during the last six years. Her delegation was also aware of difficulties for developing countries to implement a future agreement. Therefore, the framework of such an agreement should be simple, focussing on core principles such as transparency in procurement opportunities and other elements as illustrated in the items in the Chairman's "List of Issues Raised and Points Made" (JOB(99)6782 of November 1999). The details of tendering procedures should be dealt with in each Member's domestic laws and a transparency agreement should ensure that such procedures were transparent. The representative of Morocco stated that his delegation welcomed the work done so far in the Working Group, whatever the decision adopted in Cancun as to negotiations on a future agreement. The agreement could contain the principles referred to by Japan, which would help contracting entities to transpose transparency rules into national regimes in a manner that took account of national conditions. His delegation agreed that the agreement should be simple and flexible, placing emphasis on transparency. Such an approach would greatly facilitate the negotiation of the future agreement.

17. The representative of Australia stated that his delegation viewed the contribution by the European Communities as a good basis that supporters of a transparency in government procurement agreement could endorse. The contribution clearly explained the benefits deriving from a transparency agreement. It emphasized the point that implementing transparency rules should not be viewed as onerous; it underlined that the freedom of Members to provide preferences to domestic suppliers was not being challenged; and it recognized the need for technical assistance to ensure that developing countries were in a position to abide by obligations that would flow from such an agreement. His delegation strongly endorsed the conclusion reached by the European Communities that the real benefit of an agreement would derive from the construction of a minimum set of rules applicable world-wide that would have the effect of introducing legal certainty to existing procurement procedures. More generally, his delegation considered that the discussion to date in the Working Group had been extremely valuable in fleshing out the objectives and expectations of

Members. Australia continued to support the development of an agreement in transparency in government procurement and saw value for all Members in its development. An agreement should encompass a robust principles-based approach both with respect to transparency and due process aspects, but which at the same time was not prescriptive and which did not confer a right to challenge tender outcomes. Such an agreement could be the first step towards a genuine multilateral instrument designed to facilitate companies' access to information about procurement opportunities, processes and practices and, at the same time, could provide the benefit of a more competitive procurement market.

18. The representative of the United States believed that an agreement on transparency in government procurement would yield important benefits for suppliers in Members' countries. Such an agreement would establish core transparency elements that suppliers throughout the world could be assured of finding in the procurement systems of every WTO Member. Such an agreement would also be an important addition to the rules-based international trading system, building upon the transparency elements found in other agreements within the WTO. Her delegation also considered that predictability and certainty provided by a transparent, rules-based government procurement system would build on other efforts within the WTO to ensure full integration of all Members into the global trading system. She noted that some Members considered that convergence existed in respect of many of the elements in the Chairman's "List of Issues Raised and Points Made" (JOB(99)6782 of November 1999) but that a divergence of views existed in relation to particular elements, and that some Members had suggested that Members should not move forward until convergence on all elements had been achieved. However, that was the purpose of negotiations and not of the study phase. Her delegation considered that Members had exhausted the study phase and that it was now time to move to the development of an agreement, taking on those issues for which convergence had not yet been achieved with the objective of working through differences.

19. Reflecting on the specific benefits associated with transparency in government that had been identified by the European Communities' paper, the representative of Thailand stated that government procurement not only involved the government but also investors, bidders and other local people. It was for that reason that Members tended to be more protective and conservative in approaching the issue of transparency in government procurement. Nonetheless, his delegation advocated that transparency, being one of the cornerstones of the WTO, was something it was mindful of. The enhancement of transparency in government procurement attracted more international bidders and foreign investment. In Thailand, all government agencies including local and national government entities alike were required to observe the same rules and regulations governing government procurement. He acknowledged that local government agencies still found it more difficult to implement transparency principles as compared to national government agencies. He also stated that there was a need to restrict international bids in favour of domestic bids in some cases. However, he suggested that procurement for very large projects should be open to all bidders on a non-discriminatory basis. Procurement of services could be the subject of further study. He also stressed that Members could not pre-empt what Ministers would decide on modalities at Cancun.

20. The representative of Colombia stated that, over the last few years, Colombia had undertaken substantial reforms in the area of government procurement that were primarily aimed at enhancing transparency. By way of example, he noted recent action by the government to implement concrete measures to fight administrative corruption, particularly in the area of government procurement. Additionally, the public had been involved in the development of procurement processes through "citizen watch" organizations. The use of information technology had been promoted to, *inter alia*, optimise the management of this process, to reduce costs of transactions and to eliminate corrupt practices through an integrated electronic system for government procurement. On the basis of Colombia's experience, his delegation considered that governments could, through a general scheme for transparent procurement, ensure more efficient public expenditure. Despite the foregoing, he acknowledged that this was not necessarily a sufficient basis upon which to create multilateral rules in the area.

21. The representative of India stated that her delegation considered transparent, rules-based procurement procedures to be extremely important. India constantly sought improvements in the procurement systems and the relevant procedures. Such improvements included the adoption of the latest technologies, taking into consideration capacity and funding constraints, for the purposes of disseminating information. India had significantly decentralized its procurement regime and the major procuring entities had been provided with flexibility to carry out the procurement procedure within the guiding financial rules and on the basis of standardized documents and procedures. Decentralization had, in her delegation's view, made procurement more efficient in that it provided better value-for-money to citizens. Such experience had made her delegation sceptical of any effort to be prescriptive in terms of procurement procedures and systems given that there was no way that the diverse nature of the WTO membership could lend itself to such a process. Nevertheless, sharing experiences regarding procurement systems used by various Members would, no doubt, be very useful given that some of the practices described could be adopted by others with suitable modifications reflecting domestic particularities. Additionally, her delegation fully agreed that the provision of timely information was crucial and that all Members had to endeavour to provide such information in an easily accessible format and place. However, it was a moot question as to whether a comprehensive binding agreement was needed to achieve this purpose. In this regard, she noted that her delegation had repeatedly expressed its reservations regarding any binding obligations, particularly because the issue at stake was only one of transparency.

22. The representative of Peru stated that while the reduction of corruption, better administration, and more efficient allocation of public budgets were important objectives, his delegation was not necessarily convinced of the usefulness, particularly for developing countries, of a multilateral agreement on transparency in government procurement. His delegation had encountered serious problems in other areas of negotiations and considered that the inclusion of a new area of negotiations, particularly transparency in government procurement, would further complicate those difficulties. Similarly, the representative of Cuba stated that his delegation attached great importance to transparency in government procurement since this constituted one of the basic principles of the WTO. While recognizing efforts made by the European Communities in identifying in their contribution the benefits that might accrue from a possible multilateral agreement, his delegation considered that this was not sufficient to demonstrate the need of a multilateral agreement at this stage. The representative of Brazil also stated that value-for-money was not always the most important factor in public procurement. In some cases, technical aspects and/or strategic considerations were more significant than the cost of the procurement. The representative of the Philippines stated that his delegation did not deny that there were valuable benefits associated with a system of transparency in government procurement, even in the area of corruption, although, as many delegations had said, this was beyond the WTO's competence and mandate. Undoubtedly, many developing countries had already applied rules on transparency in government procurement. In fact, the Philippines, was increasingly relying on electronic means for procurement purposes, and the experience thus far had been quite positive.

23. The representative of Canada stated that her delegation shared the views expressed by the European Communities on the positive effects associated with a multilateral agreement on transparency in government procurement. In her delegation's view, an agreement on transparency in government procurement would improve the efficiency of the international trading system; improve economic efficiency, including improved competition and best value-for-money; and improve confidence in the procurement system, including through the reduction of the possibility of corruption. In noting that his delegation supported the adoption of a multilateral agreement on transparency in government procurement, the representative of Chinese Taipei stated that, in an effort to ensure greater economic efficiency in government expenditure and in order to reduce corruption, the threshold for open tendering had been reduced from US\$140,000 to US\$3,000 in May 1999. Opinion polls revealed that 80 per cent of people surveyed considered that this measure had had a considerable positive effect on government expenditure and also on the reduction of corruption. Further, it was discovered that the average percentage cost reduction of open tenders as compared

with non-open tenders was more than 15 per cent. The representative of Switzerland expressed appreciation for the fact that the European Communities' contribution put forward compelling arguments in favour of an agreement on transparency in government procurement. His delegation agreed that transparency would ensure better value-for-money. While the use of transparency to increase investment and partnership through joint ventures and transparency rules in the government procurement area was a market access issue, it was possible to find new investment possibilities. Switzerland, as a major investment country, was interested in access to government procurement through joint ventures. In his delegation's view, an agreement on transparency in government procurement would increase investment and partnership, including for countries that maintained domestic preferences and/or would not allow direct competition with domestic companies.

24. As to the limitation of a multilateral agreement to transparency issues, the representative of Thailand stated that his delegation was satisfied with the confirmation by the European Communities in its contribution that transparency in government procurement would not lead to market access issues being taken up. His delegation was also comforted with the confirmation that government entities might apply restrictions on bidding procedures, provided that such restrictions were made known to foreign bidders prior to their entry into the bidding process. The representative of Peru supported the statement made by the European Communities in its paper that the coverage of a possible multilateral agreement in the area of transparency in government procurement would be clearly limited to transparency and would not reduce the ability of countries to grant preferences to domestic suppliers or to impose market access conditions. The representative of Colombia reiterated the sentiment emphasized in the European Communities' contribution that a future multilateral agreement would be limited to issues of transparency and would not seek to open up new markets nor to increase existing ones. This was fully consistent with basis of the Doha Declaration as it concerned transparency in government procurement. In principle, his delegation supported the view that a future agreement on transparency in government procurement should apply to all procurement without distinction between nationals and foreigners. However, the issue of coverage required further analysis if consensus was to be reached in Cancun.

25. The representative of Brazil noted that the European Communities' paper referred to procurement for which foreign bids were allowed. However, while foreign access might be granted to procurement markets in some cases, the Working Group's mandate did not entail a market access component. The representative of Egypt referred to what he considered a contradiction in the European Communities' contribution. The paper suggested application of an agreement on transparency in government procurement to all procurement without drawing a distinction between cases where bids were restricted to national bidders and those where international bids were accepted. Simultaneously, the paper recalled the Doha mandate according to which the scope of the Working Group's work was clearly limited to transparency – without limiting the ability of countries to provide preferences to domestic supplies and suppliers. The representative of Nigeria sought clarification as to whether the European Communities would seek progression from a transparency agreement to one aimed at securing market access in the future. The representative of India also sought clarification as to whether the European Communities intended a future agreement on transparency to be applied without distinction between tenders open to international bids and those that were not.

26. In response to requests for more clarification regarding the scope for transparency, the representative of the European Communities expressed his scepticism about the likelihood of an agreement defining such parameters. Further, he stated that his delegation would fully respect preferences to domestic suppliers because that had already been made clear in the Doha Declaration. It was for that reason that his delegation's contribution did not contain much detail in this regard. He also noted that it had been stated in his delegation's paper that the future agreement on transparency in government procurement should be applicable without making a distinction between the national and the international level because his delegation believed that the rules should apply, but without impinging upon the right of governments to decide what ultimately would remain exclusively reserved for national bidders.

27. As regards the level of government that might be covered by a transparency agreement, the representative of Malaysia stated that his delegation disagreed with the suggestion in the European Communities' contribution that an agreement on transparency in government procurement would be extended to the sub-federal level. He noted that while his delegation's views had evolved on this issue, the current position was that a multilateral agreement on transparency in government procurement should be limited to procurement by federal entities and should not extend to procurement by entities at the sub-federal level. Similarly, the representative of Morocco stated the future agreement on transparency in government procurement should be limited to central authorities, particularly in countries where local entities encountered capacity problems. The representative of India sought clarification as to whether the European Communities sought coverage of provinces municipalities, and the like at the sub-federal level. In response, the representative of the European Communities stated that the transparency agreement would be applicable at the federal level as well as the sub-federal and municipal levels.

28. In relation to the issue of thresholds, the representative of Brazil questioned the concept of thresholds in the context of transparency in government procurement. He noted that transparency should yield benefits for each and every procurement conducted by Members. Accordingly, he questioned whether an appropriate message was being sent to Members by suggesting that transparency was good only above a certain limit and that below that limit Members were free to act in a non-transparent manner. In his view, Members needed to be flexible to adopt the most appropriate procurement method. However, there should be a commitment to transparency and openness even for small tenders. He noted that the concept of thresholds in the European Communities' contribution appeared to be inconsistent with the opinion in that contribution that the future agreement on transparency in government procurement should apply to all procurement.

29. The representative of Switzerland stated that while theoretically thresholds had nothing to do with transparency, for reasons of flexibility, it might be useful to have thresholds. In addition, he indicated that his delegation could also support flexibility in a future agreement that ensured that undue burden was not placed on countries implementing such an agreement. He emphasized the importance of taking practical measures to help developing countries to live up to possible future obligations. The representative of Morocco agreed that transparency was relevant for all procurement, whatever the threshold. Nevertheless, thresholds would allow rules to be avoided in cases in which they were not essential.

30. The representative of Malaysia expressed disagreement with the point made in the European Communities' contribution that all procurement above the prescribed threshold should be subjected to a multilateral agreement. In Malaysia's view, only procurement open for foreign bidding and above the prescribed threshold would be subject to the disciplines of a multilateral agreement on transparency. The decision of whether a particular procurement should be open to foreign bidders or should only be limited to its nationals or local suppliers was one that should be left to the discretion of the procuring entity. If such discretion was not respected, market access issues would arise. Nevertheless, he stated that if the intention of the European Communities in its contribution was to ensure that in cases when a tender was closed to foreign competition and only limited to domestic suppliers, information to that effect should be provided *a priori*, his delegation certainly agreed. The representative of Nigeria sought clarification as to whether the European Communities had any views on the value of thresholds that would apply to developed and developing countries.

31. In response, the representative of the European Communities stated that on the basis of years of experience in the European Communities, his delegation had discovered that thresholds could be practical and useful. Questions remained as to what the specific levels of those thresholds should be? Should a distinction be drawn between threshold levels for developed countries on the one hand and for developing or the least-developed countries on the other? Should different thresholds apply to different sectors and to entities at different levels of a governmental hierarchy? He noted that more

detail regarding the European Communities' position on these issues were contained in previous papers by his delegation.

32. With respect to the implementation of a transparency agreement, the representative of Switzerland noted that the contribution by the European Communities stated that most countries already had transparency rules. Therefore, given that many or most Members already applied certain kinds of transparency rules, it would not be particularly difficult to establish a multilateral agreement in the area. His delegation considered this to be an important issue because a future agreement on transparency should be made on the basis of a cost-benefit analysis. If transparency rules already existed in many countries, this cost-benefit analysis would obviously yield more benefits than incurring costs. The representative of Canada stated that her delegation believed that the implementation of an agreement on transparency in government procurement could produce benefits that outweighed the potential administrative costs. Her delegation agreed that thresholds could contribute to achieving this result. Canada was committed to providing support through the WTO and other institutions to enable Members to develop the capacity to implement their obligations. Her delegation was of the view that the scope and elements of an agreement would be refined through negotiations.

33. The representative of Egypt referred to what he considered to be another contradiction in the European Communities' contribution. On the one hand, the European Communities' paper contained the statement that the cost of applying new and additional WTO rules on government procurement would be "minimal, if any"⁷, while in another paragraph the paper recognized that "a minimum of infrastructure will be needed to respond to these future obligations in an efficient manner: publications, notifications, etc".⁸ The representative of Cuba sought clarification on the cost of implementing an agreement on transparency in government procurement. He suggested that this cost might be extremely high and well beyond his country's national budget. Further, the content of an agreement would affect human resource and equipment requirements. The publication of rules and regulations applying to each of the procuring entities might also prove to be burdensome. He suggested that further clarification was required on this issue. The representative of Nigeria sought clarification as to whether the European Communities was amenable to providing assistance to developing countries that might need support in implementing an agreement on government procurement. The representative of the European Communities stated that the issue of cost was a legitimate concern. However, as long as Members did not know exactly how the future agreement would look like and, in particular, what its scope and coverage would be, it was difficult to have a precise idea of the costs involved in setting up a transparency system. His delegation was ready to do what was necessary to make implementation of the rules the least cumbersome and costly as possible through technical assistance and capacity building.

34. The representative of Thailand noted that, in its paper, the European Communities stated that the procurement process used in a particular case should be proportionate to the value of the goods or services to be purchased. Clarification was sought as to how the proportionality principle would work in practice in this context. It was his delegation's understanding that certain principles should apply as a minimum regardless of the magnitude of the project in question. In response to the question posed by the representative of Thailand, the representative of the European Communities stated that tenders for major works often required complex rules in order to ensure an effective and efficient tendering procedure. It was for that reason that the concept of proportionality had been introduced.

35. In relation to technical assistance and capacity building, the representative of Thailand expressed appreciation for the commitment expressed by the European Communities regarding the provision of assistance on capacity building. His delegation considered that such assistance would be meaningful if it was designed according to the requirements prescribed by recipient countries. As a

⁷ WT/WGTGP/W/41, p. 2.

⁸ WT/WGTGP/W/41, p. 3.

related point, the representative of Colombia sought the views of the European Communities and other Members on the development priorities mentioned in the Doha Declaration. It was necessary to further explore that part of the mandate, particularly for the sake of creating incentives for developing countries such as his own. The representative of Morocco noted that his country had never ceased making efforts to improve transparency in government procurement; however, authorities had encountered difficulties in this regard. Hence his countries' interest in technical assistance. His delegation welcomed the mention of technical assistance in the paper submitted by the European Communities.

36. The representative of Malaysia stated that the European Communities tied the provision of technical assistance to an eventual agreement on transparency in government procurement or to the demonstration of a readiness to negotiate. He stated that if the European Communities was genuine about helping the developing countries, transition economies and LDCs to improve their government procurement regimes through making them more transparent and more efficient, they should provide technical assistance even in the absence of an agreement or in the absence of an agreement to negotiate. He was not referring to technical assistance to help countries understand the elements of a transparency agreement, what they would mean and their implications. Rather, he was talking about assisting developing countries generally, particularly those that needed assistance in the establishment of a more efficient government procurement regime through the adoption of procurement rules that would enhance transparency. He encouraged the European Communities to de-link the provision of technical assistance from the multilateral agreement process.

37. In response, the representative of the European Communities noted that his delegation was the biggest contributor of technical assistance in many areas, be it through multilateral or bilateral channels. His delegation tended to respond positively when genuine requests for technical assistance were made, which outlined the relevant country's needs. In counter-response, the representative of Malaysia stated that his delegation did not require assistance given that laws and regime were in place and government procurement processes were transparent in Malaysia. In any event, his statement was more general, seeking technical assistance in the absence of an agreement or in the absence of an agreement to negotiate. The representative of the United States noted that his delegation had been engaged in the provision of technical assistance to various developing countries to help them develop and modernize their procurement systems for a long time. That assistance had been provided independently of the work undertaken in the Working Group to develop a transparency agreement. Rather, the assistance had been provided because his delegation believed that all countries benefited from having predictable and rule-based procurement systems.

38. With regard to the reference to the reduction of corruption in the European Communities' paper, the representative of Switzerland stated that corruption was something that existed in all countries, even following the application of transparency rules. Nevertheless, rules on transparency had allowed his delegation to better tackle that problem. In his delegation's view, the rationale underlying a future agreement on transparency in government procurement was not to reduce corruption. Rather, the reduction of corruption would be a side-effect of the agreement.

39. The representative of Brazil stated that reduction of corruption was not a principal objective, nor something that would be built into any possible agreement on transparency in government procurement. Similarly, the representative of Thailand stated that his delegation saw the benefit of reducing corruption but bearing in mind that the reduction or elimination of corruption was not part of the objectives of the WTO, his delegation firmly believed that corruption could not be properly addressed without the full cooperation of those who offered and received bribes. The representative of Morocco stated that the fact that a transparency agreement had the consequence of combating corruption could only be seen as a positive consequence of transparency under the future agreement. However, it could not be considered as an element of that agreement. The representative of China stated that the issue of corruption raised a variety of complicated issues. In addition, there was no assurance that an agreement on transparency in government procurement would reduce corruption.

The representative of Egypt expressed regret at the fact that the European Communities' contribution dealt with corruption. His delegation did not consider that the inclusion of this element in the Working Group's discussion would be conducive to Members' work, particularly at this stage. Likewise, the representative of Malaysia stated that his delegation considered that this was not an issue that the WTO should deal with. Rather, it was a moral issue. His delegation had always maintained that moral, social and similar kinds of issues were not the domain of the WTO. The representative of India noted that while reducing corruption is a laudable objective for all national governments, the WTO was not necessarily the appropriate forum to pursue that objective. While recognising that Members should have efficient and effective national legislation to fight corruption, the representative of Cuba stated that this issue was outside the domain of the WTO and should be addressed by each Member in accordance with its own respective legislation. The representative of Peru expressed support for the statement made by the representative of Thailand to the effect that the reduction of corruption, being an objective shared by all, necessitated a cooperation agreement covering both those who offered and those who received bribes. Nevertheless, he could not see how a multilateral agreement as described in the European Communities' contribution could assist Members in combating such practices.

40. In response, the representative of the European Communities stated that that a future multilateral agreement would not contain specific provisions on corruption, nor would it be an objective of the future negotiations. However, he emphasized that reduction of corruption was one of the side-effects of such an agreement.

41. As for the way forward to Cancun, the representative of Korea stated that after almost seven years since Ministers in Singapore agreed to establish a Working Group to conduct a study on transparency in government procurement practices, the preparatory work of the Working Group on transparency in government procurement was nearing completion. In full accordance with the instructions given by the Ministers in Singapore and Doha, Members had made meaningful progress in developing the core elements of a multilateral agreement on transparency in government procurement in this Working Group. Korea believed that it was time to proceed to the next phase of work as agreed by the Ministers in Doha. It was clearly stated in the Doha Declaration that negotiations on transparency in government procurement would take place after the Cancun Ministerial Conference on the basis of Ministers' decisions on modalities of negotiations and that negotiations would be treated as part of the single undertaking. Korea's aim was to establish a multilateral agreement on transparency in government procurement that was acceptable to all. To this end, it was crucial to adjust the level of ambition and to address the interests of developing countries in an effective and balanced manner. In this context, he emphasized the following points. First, his delegation was aware that a number of Members had reservations on the establishment of a multilateral agreement on transparency in government procurement. However, considering the positive contribution of the GATT and WTO to the world economy in the past, the outcome of the negotiations on transparency in government procurement would also yield benefits to developing countries and LDCs alike. As noted in the European Communities' contribution, a number of benefits would result from a multilateral agreement on transparency in government procurement, benefits that were produced not just for domestic and foreign suppliers. In addition, ensuring transparency in government procurement was a core element of good governance, which was essential to economic development. Second, the Doha mandate clearly stated that the future multilateral agreement on transparency in government procurement would be limited to transparency without hindering national preferences to domestic suppliers and suppliers. He noted that the European Communities indicated in its contribution that the aim in an agreement on transparency in government procurement would be to establish a minimum set of rules that would have the effect of introducing legal certainty in the existing procedural process, an aim fully shared by all WTO Members. Third, Ministers also instructed that negotiations should take into account Members' development priorities, especially those of LDC participants. Korea believed that in order to take full account of the concerns, burdens and obligations of developing and LDCs, S&D, TA and support for capacity building should be fully reflected in the negotiations process.

42. The representative of China stated that his delegation attached great importance to transparency in government procurement. The Chinese law on government procurement had been implemented since 1 January 2003. Detailed regulations were currently being drafted so as to enhance publicity of procurement processes. In addition, his delegation recognised the importance of a multilateral agreement on transparency in government procurement in the WTO. Although Members had not achieved consensus on many issues, the results of discussions in the Working Group had been valuable and could form the basis for future work.

43. Continuing, he noted that in his delegation's view the following steps were necessary in the context of the Working Group in the lead-up to the Cancun Ministerial Conference. First, it was necessary to reiterate that an agreement on transparency in government procurement would only be limited to transparency, it would exclude market access commitments and would have no impact on Members' rights to use government procurement to support domestic enterprises and purchasing national goods. Second, the elements of the agreement needed to be identified. His delegation considered that transparency in government procurement required Members to publicize information on laws, regulations and procedures on government procurement through appropriate media. The requirements on publication of procurement information, such as procurement opportunities and contract awards, should be flexible and limited in scope. Review mechanisms should be consistent with domestic legal regulations. Further, given the close relationship with market access, the application of the DSU should be excluded from an agreement on transparency in government procurement. Third, the Working Group should establish a timetable for an agreement on transparency in government procurement, which did not specify a deadline for the conclusion of the agreement. Nevertheless, the Working Group should fully consider the complexities and difficulties of the negotiations when setting the timetable. Finally, S&D treatment should be ensured for developing countries, given the different levels of development of Members' government administrations. In particular, exceptions from transparency obligations should apply in certain circumstances and longer implementation periods should be provided.

44. The representative of the Dominican Republic reiterated that his delegation was in favour of negotiations being launched in Cancun for a multilateral agreement on transparency in government procurement. In line with the Doha Declaration, his delegation expected that such negotiations would take into account Members' development priorities and would be limited to transparency aspects only. He indicated his delegation's readiness to cooperate with Members to move forward during the period until Cancun by agreeing on the modalities of negotiations.

45. The representative of Australia stated that in the lead-up to and following Cancun, it would be important for Members to focus on ways to assist developing countries and least-developed country Members to identify technical assistance needs aimed at capacity building. The representative of Nigeria stated that his delegation was of the view that it would not be helpful to rush the process. Rather, a "step-by-step" approach was preferable, although clarification of the European Communities' interpretation of a "step-by-step" approach was sought.

46. The representative of the European Communities stated that it was his delegation's view that the study phase of the Working Group's work was completed. It was necessary for Members to move to a negotiating phase with the objective of establishing a multilateral agreement. His delegation was convinced that it was appropriate to work towards a multilateral agreement. He also stated that, for his delegation, this issue would be part of the single undertaking.

47. The representative of Cuba noted that the Doha mandate indicated that it was necessary to achieve consensus before negotiations could be launched. A number of developing countries wanted to be able to properly participate in the process. However, they still lacked sufficient skills to negotiate. Before an agreement was considered, such countries wanted to be clear about what would be entailed. The agreement had to be a win-win agreement, which was beneficial to all and was truly balanced.

48. The representative of Nigeria stated that the discussions that had taken place in the context of the Working Group had reinforced his delegation's view that the issues were complex and that the work of clarifying the issues had not yet been completed. Divergence of views existed in relation to most issues. These issues, which were systemic in nature, would have serious implications in terms of the costs associated with implementation, the effect on national policy, and flexibility. Such issues included the meaning of "transparency" and the application of the DSU mechanism. Views on these issues could not be dismissed easily and needed to be properly addressed. His delegation valued greatly the opportunity to take part more actively in the discussion. However, more time was needed to build capacity. One of the key issues of concern for his delegation was market access. Paragraph 26 of the Doha mandate clearly stated that negotiations would be limited to transparency. His delegation was opposed to any attempts to expand that mandate. His delegation was also concerned about the cost of implementing any potential transparency agreement. On the scope and definition of transparency, his delegation was concerned by any attempt to go beyond the provision of information on laws, regulations and tenders. It should not extend to other areas entailing substantive decisions rather than pure transparency matters, such as the evaluation of offers, decision-making processes, provision of relief to unsuccessful tenderers, and review of procuring entities' decisions, etc. His delegation was also of the view that the process should result in a win-win situation for all Members and not just to some.

49. The representative of Cuba stated that the debate in the Working Group demonstrated that many aspects of the Chairman's "List of Issues Raised and Points Made" still required more in-depth work and study. The central aspect of a future agreement, namely scope and coverage, had not yet been clarified, and significant divergence existed between Members' views in this regard. In addition, differences existed in relation to domestic review procedures and the application of the DSU to a possible agreement on transparency. With respect to account being taken of the special situation of developing countries, it was not obvious that a transition period would suffice. Also, further work was required to show the relationship between transparency and the use of particular methods of procurement; the prescriptions relating to time-limits; contract award procedures; and bids in cases where there was no consensus. It was necessary to recognise that Members were far from having concluded the study that they had been asked to undertake. Developing countries wanted more clarification on each of those aspects during the study phase, which should not be concluded until adequate clarification had been provided.

50. The representative of Brazil stated that he was encouraged by the fact that a number of delegations, including the European Communities, had expressed the view that the existence of a divergence of views on some issues should not be, in itself, an impediment to moving forward. His delegation fully shared that approach. His delegation considered that all that was required was a certain consistency in approach with regard to the various issues.

B. TECHNICAL ASSISTANCE AND CAPACITY BUILDING

51. The representative of the Secretariat stated that technical co-operation activities had been undertaken by the Secretariat to fulfil the requirements of the Doha Declaration. The emphasis had been on regional activities organised, wherever possible, in conjunction with the multilateral development banks and the regional development banks. As regards Africa, a workshop for the English-speaking African countries had been held in Dar-es-Salaam, Tanzania in January 2003. A workshop for French-speaking African countries would be held in Dakar, Senegal on 8-11 July 2003. The latter was being organized in cooperation with the World Bank and the African Development Bank as well as the Government of Senegal. As regards Latin America and the Caribbean, information had previously been provided to Members about sub-regional events held for the Central American countries and the Caribbean countries in 2002. In addition, a workshop would be conducted in Buenos Aires, Argentina on 28-30 July in cooperation with the IADB for the Latin American countries that had not already been covered by the sub-regional events that had taken place in 2002. As regards Asia factors beyond the Secretariat's control had had some effect on the planning

and carrying out of technical co-operation activities in recent months. Accordingly, it had not been possible to proceed with a regional government procurement workshop in cooperation with the Asian Development Bank that had been planned for May 2003. The Secretariat was seeking to reschedule that activity as soon as practical. In addition, a number of other broader technical cooperation activities had been organized by the Secretariat, which had not been exclusively dedicated to government procurement, but included components on government procurement. In particular, a regional Doha Development Agenda Advanced Training Course had been held in Johannesburg, South Africa on 24 June. This course had been for senior government officials from the African countries. A similar type of activity would take place in the first half of July in Tbilisi, Georgia for government officials from the Caucasian and Central Asian countries. Further, trade policy courses conducted in Geneva in March and June 2003 had also included a government procurement component. Similarly, the 2nd Regional Trade Policy Course for English-speaking African countries had been held in Nairobi, Kenya. It was also foreseen that a regional trade policy course for OIC member countries in Jeddah, Saudi Arabia in early July would also contain a government procurement component. The representative of the Secretariat also recalled that on 19 June two other events were being organized in Geneva that fell within the overall ambit of technical cooperation and capacity building. An Information Session was planned on technical co-operation and capacity building activities of intergovernmental organizations in the area of government procurement at which a number of intergovernmental organizations would be sharing information on activities undertaken by them. Further, a workshop on capacity building in government procurement at which a number of developing countries would be sharing information on their respective experiences and needs would take place. In conclusion, the representative of the Secretariat noted that general feedback from the activities that had been undertaken by the WTO Secretariat had been positive. That feedback was being used to improve activities in the area.

52. The representative of Nigeria noted that a number of countries lacked capacity in the area of government procurement. Some did not even have procurement laws. Accordingly, his delegation believed that the provision of technical assistance through seminars and conferences was insufficient. A concerted effort was needed to provide technical assistance on a case-by-case basis rather than making it general or adopting a one-size-fits-all approach. Such an approach would ensure that assistance would really build capacity, and it would help Members to participate in the current and possibly future process at the WTO on this issue.

C. OTHER BUSINESS

53. Regarding the nature and process for preparation of the Working Group's report to the General Council on its activities in 2003, the Working Group agreed that the Secretariat be asked to prepare a draft report of the type that had been prepared for the Working Groups on competition policy, and investment. The draft report would be circulated to Members during the first week of July. The report would then be approved by written procedure. The Chairman requested that Members submit any necessary corrections to the document to the Secretariat within seven days of the circulation of the draft. The report would then be forwarded to the General Council by 14 July. If the changes proposed by Members made it necessary, a short meeting would be convened to discuss and approve the report.

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 7 FEBRUARY 2003

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its seventeenth meeting on 7 February 2003 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica).

2. The agenda for the meeting consisted of: (i) transparency-related provisions in existing international instruments on government procurement and national procedures and practices; (ii) technical assistance and capacity building; (iii) observer status of international intergovernmental organizations; and (iv) date of the next meeting. The Working Group agreed to adopt the agenda as proposed.

A. TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES

3. By way of a general statement under this agenda item, the representative of Sri Lanka said that his Government attached great importance to transparency in government procurement, which it considered as being critical to good governance, and building confidence in the management of government affairs. A transparent government procurement system helped governments to achieve greater value for money, ensure efficient use of public resources, and purchase better quality goods and services. Commenting on the work done in the Working Group, he said that his Government had carefully examined many aspects of transparency in government procurement. As reflected by the documentation before the Working Group, since its establishment in 1996, considerable progress had been made in examining the issues related to transparency in government procurement; a large number of submissions on relevant specific issues had been made; Members had exchanged information on national procedures and practices; and information had been provided on transparency-related provisions in international instruments. Considering that the procurement systems of many countries were based on the UNCITRAL Model Law on Procurement of Goods, Construction and Services, and that many countries followed the World Bank Guidelines when undertaking certain types of procurements, those instruments could be drawn upon by the Working Group to advance its work. A multilateral agreement on transparency in government procurement did not need to be a complex undertaking and the Doha Ministerial Declaration had narrowed its scope by limiting the parameters to transparency aspects and by providing explicitly that an agreement neither restrict domestic preference nor require market access commitments. Further, publication of information on national legislation and procedures was a necessary element of a transparent procurement system. While its views were flexible with regard to the issues pertaining to information on procurement opportunities, tendering and qualification procedures, time-periods, transparency of qualification procedures and transparency of decisions on contract awards, his delegation believed that there was a need for more focused discussions on the elements relating to definition and scope, procurement methods and domestic review procedures and its relationship to the WTO Dispute Settlement Understanding so as to allow further clarity to emerge on these four issues. Finally, his

delegation recognized the importance of a multilateral agreement on transparency in government procurement, and believed that the elements contained in the submissions made so far and the work in the Working Group would contribute to positive decisions at the Cancun Ministerial Conference on this important subject.

4. The Working Group took up the items in the informal note by the Chairman "List of Issues Raised and Points Made" contained in JOB(99)6782 of November 1999. Comments were made on items I, VIII and XI.

5. In relation to item I, namely definition and scope of government procurement, the representative of Sri Lanka said that higher threshold values should be applied in respect of requirements for developing countries on account of their limited administrative and technical capacity to apply the future requirements.

6. Addressing the issue of whether both goods and services should be covered by a possible future multilateral agreement, the representative of Sri Lanka said that there might be a need to provide flexibility for developing countries in the procurement of services, as small-sized developing countries did not procure services of a significant nature. However, his delegation also recognized that procurement of goods was often associated with procurement of services and, therefore, there was a need to find a way to accommodate this aspect.

7. The representative of Switzerland said that the Working Group might need to explore further the possibility of applying different threshold values and including flexibility for developing countries in the area of services in a future agreement.

8. The representative of Malaysia, joined by the representatives of Venezuela, India, Pakistan, and Egypt, reiterated their delegations' position that any eventual agreement should be limited in scope to goods only and should not include services. Supported by the representative of Pakistan, the representative of India said that bringing the issue of transparency in procurement of services within the ambit of the discussion of the Working Group went beyond its mandate. The representatives of Pakistan and Egypt said that the Group should seek to build on the progress made in the discussions pertaining to transparency in relation to goods procurement. Reopening the issue of transparency in procurement of services might be counter-productive.

9. The representative of India asked whether all the elements identified in the Group related to transparency in their entirety. Even on those elements where such a relationship had been established, the purely transparency-related aspects of procurement procedures as against application of transparency in the larger context of the procurement activity needed further clarification. India continued to remain unconvinced about considering any future obligations on transparency in procurement of services or a combination of goods and services.

10. The representative of the European Communities, joined by the representatives of Chinese Taipei and the United States, said that the substance of the Working Group's discussion was transparency in the procurement process, irrespective of whether this related to contracts for goods, services or a combination of both. The representative of Chinese Taipei said that, since a future agreement would not have a market access component, it should have a broad coverage extending to goods, services and construction services. The representative of the United States said that, given the difficulty of distinguishing between procurement that should be subject to transparency rules and others that should not and that procurement regimes in most countries applied the same rules to procurement of both goods and services, it was important that the whole system, including goods and services, be transparent. The United States therefore considered it important that the coverage of a future agreement be extended to both goods and services.

11. The representative of Brazil said that the divergence of views on the issue of scope and coverage was a problem that was likely to recur throughout most of the other provisions, the more prescriptive a future agreement tended to be. The Group should reflect upon whether there was a need for a future agreement to specify whether it covered goods and services. In Brazil there was one legislation which covered goods, works and services. Commitment to transparency in a procurement legislation implied agreeing to transparency in all sectors.

12. Continuing with the discussion of the items in the informal note by the Chairman, the Group took up items VIII and XI, namely domestic review procedures and application of WTO Dispute Settlement Procedures. For the discussion of these items, the Group had before it a communication by the United States entitled "Considerations related to Enforcement of an Agreement on Transparency in Government Procurement" and a communication from the European Communities entitled "Domestic Review Mechanisms Related to Transparency in Government Procurement" contained in documents WT/WGTGP/W/38 and 39, respectively.

13. The representatives of the United States and the European Communities introduced their delegations' respective communications.

14. The Working Group heard comments related to the suggestion by the United States that the obligations of a transparency agreement should be subject to the same types of enforcement as existing commitments in other WTO agreements.

15. The representative of Sri Lanka considered that the approach presented in the communication by the United States in document WT/WGTGP/W/38, which sought to draw on the provisions on domestic review mechanisms currently available in a number of WTO agreements was helpful.

16. The representative of Brazil, noting that the nature of an agreement on transparency in government procurement would be inherently different from any existing WTO agreement, wondered why the United States had made this presumption from the outset. Unlike other WTO agreements, an agreement on transparency in government procurement which, in terms of the Doha mandate, would allow Members to continue to discriminate in favour of national suppliers, would not seek to address trade relations among Members. The WTO dispute settlement mechanism was based on the presumption that a violation of an obligation would have an effect on the trade of Members, whereas in the context of an agreement on transparency in government procurement, there could be no such presumption. Further, under the DSU, the way to correct non-compliance was through compensation or retaliation. It would be difficult to base any dispute settlement system on that premise because there would be no violation of trade rights in the case of a transparency agreement.

17. The representative of Canada said that the listing of the provisions on domestic review in other WTO agreements in the communications by the United States and the European Community had clearly highlighted the widespread applicability of that concept to trade matters. Procurement involved domestic implementation of trade-related matters and, in that sense, procurement rules were similar to the rules in other WTO agreements. Members should work towards identifying the models of enforcement mechanisms that could be appropriately applied to a transparency agreement.

18. The representative of Korea said that domestic review procedures and the DSU should be among the core elements of the future transparency agreement. The appropriate content of the appropriate provisions could be discussed in future negotiations. Members had fully recognized the importance of the domestic review process as stipulated in other WTO agreements. In the context of transparency, domestic review procedures were important not only for foreign suppliers, but also for domestic constituencies.

19. The representative of Japan said that her delegation agreed with the United States that an agreement on transparency in government procurement would be an important addition to the rules-based international trading system, and its obligations should be subject to the same types of enforcement procedures as existing commitments in other WTO agreements. Joined by the representatives of Hungary and Jordan, she said that Japan attached great importance to enforcement mechanisms and, as underlined in its submission (document WT/WGTGP/W/37), her delegation regarded domestic review procedures and application of WTO dispute settlement procedures as important elements of a future transparency agreement.

20. The representative of Australia said that the establishment and maintenance of a transparent procurement system provided confidence to potential suppliers that they would be treated fairly in a procurement process. When procurement processes became clouded and decisions were perceived not to follow a logical outcome, suppliers could lose confidence in the system. Therefore, availability of domestic review procedures was an important requirement in a transparency agreement.

21. The representative of the United States noted that most Members already had domestic review procedures, not because WTO had imposed them but because such Members had determined within their own system that that was in their best interest, and that their suppliers required a means to challenge procurement decisions. The United States had had a domestic review mechanism for many years, which had preceded the requirements in the plurilateral Agreement on Government Procurement, and existed because suppliers wanted to have an opportunity to challenge, when necessary, how procuring entities had handled procurements. That mechanism was available for foreign suppliers as well as domestic suppliers. In the experience of countries that had domestic review procedures, those kinds of procedures provided credibility and gave assurance to suppliers that, if they had a complaint against a decision of a procuring entity, they would have the means for having that decision reviewed by an impartial body. Domestic review procedures should therefore be part of a transparency agreement.

22. The representative of Malaysia, joined by the representative of Pakistan, said that the WTO agreements providing for domestic review procedures that were mentioned in the communications by the European Communities and the United States were related to market access in contrast to the mandate of the Working Group which was limited to transparency.

23. The representative of Malaysia reiterated his delegation's view that the issues of domestic review procedures and application of the DSU had nothing to do with transparency and were therefore outside the scope of a transparency agreement. As long as those two elements were on the table, there would be no consensus at the Cancun Ministerial Conference to negotiate an agreement in this area. Any eventual agreement on transparency in government procurement should be limited in scope, should not be prescriptive, and should not have provisions on domestic procurement review that could be used to question the decisions of Members' governments, administrations and procuring entities. The idea of domestic review procedures was fundamentally flawed in the context of a transparency agreement, the provisions of which would basically allow the provision of information on what Members did and how they did it, under what procedures, what time-periods, and what requirements for potential bidders. Without a reassurance that domestic review procedures would not question the decision of domestic authorities, his delegation could not agree to including such procedures in a transparency agreement.

24. Noting the statement by the representative of Malaysia that an agreement on transparency in government procurement should not make it possible for a procurement decision to be revoked or called into question, the representative of Chile said that this raised the question of what sort of measures would go into a future agreement focusing on transparency. In particular, what sort of measures could make it possible for a procurement-related decision to be renounced, or stopped by a review authority at the national level.

25. The representative of Egypt asked why the proponents believed that the obligations of a transparency agreement should be subject to the same type of enforcement as existing commitments in other WTO agreements. Existing enforcement mechanisms had been devised to ensure fair trade, and to avoid the creation of unnecessary obstacles to trade which were market access issues. Without obligations on market access, an agreement on transparency in government procurement should not be treated like other WTO agreements. There should be requirements to put in place domestic enforcement mechanisms.

26. The representative of Switzerland noted that the communications by the United States and the European Communities made a strong case for ensuring adequate enforcement mechanisms, in particular by demonstrating that availability of domestic review mechanisms were current requirements in existing WTO agreements. Concerning the argument that enforcement mechanisms in existing WTO agreements related more to market access, he opined that, similar to other WTO agreements, a transparency agreement would stipulate obligations and requirements, and an enforcement mechanism was needed in order to make them meaningful. Therefore, while accepting the distinction between market access and transparency, which had been made in the Doha mandate, he disagreed with Malaysia's point that enforcement mechanisms were unnecessary for the transparency obligations in a future agreement.

27. The representative of India said that, while various domestic review provisions existed in a number of WTO agreements, those agreements were not related to transparency. A transparency agreement would basically require making available certain information on Members' relevant rules, regulations and procedures. Accordingly, domestic challenge procedures did not have their place in a transparency agreement. The Working Group had run through the list of issues in the informal note by the Chairman, without having a focused discussion on what Members meant by transparency. The issues raised by the two communications did not figure on her delegation's list of priorities. Joined by the representatives of Pakistan and Egypt, she went on to say that the Working Group was still in the study phase and was trying to define what transparency would entail, and until the contours of transparency were clarified, there was not much point in discussing whether domestic review procedures should or should not be available.

28. The representative of Pakistan said that the proponents should elaborate more on what was meant by "challenge" and "enforcement" in the context of transparency disciplines.

29. The representative of the European Communities said that, in an agreement without market access, in practical terms, the only possibility for disputes was when a Member would omit to publish a tender notice or would be late in publishing some procurement rules. He agreed that there was very little to implement and the costs were quite reduced. However, the Working Group was discussing principles, and Members had to agree on the principles even if the implementation of the future rules would not be problematic.

30. Commenting on application of WTO dispute settlement procedures to a transparency agreement, the representative of Egypt reiterated his delegation's position that the dispute settlement mechanism in whole or in part should not apply to a transparency agreement. Members had to abide by the mandate given to the Working Group, namely to clarify and define transparency, and not what would apply in case Members did not abide by transparency rules. Urging Members to focus on the issue of transparency, he said that it was inappropriate to discuss the questions of application of DSU and market access in the Working Group.

31. The representative of India said that her delegation maintained its position that application of WTO dispute settlement procedures had no place in the Working Group's discussion.

32. The representative of the United States said that, as well as having market access as their principal focus, many WTO agreements included transparency elements. The agreement on transparency in government procurement would be unique in the sense that it would not cover market access; at the same time, it was similar to other WTO agreements in that it would cover transparency. The agreements that had transparency elements did not carve out the transparency elements to provide that such elements were not subject to WTO dispute settlement procedures. Any Member could challenge another Member's implementation of such transparency provisions. Her delegation was seeking the same kind of enforcement with regard to an agreement on transparency in government procurement as in transparency provisions in other WTO agreements. Agreeing that the agreement was about transparency, and not about market access, she said that if a Member did not implement any of the provisions of the transparency agreement, Members would not be seeking concessions or retaliation, but compliance. Further, as opposed to just arguing for a carve-out from the application of dispute settlement procedures, Members should be thinking about ways of increasing the capacity of Members to comply with the requirements in a transparency agreement. Also, the Working Group should try to identify provisions that might be more difficult for Members to implement, and perhaps such provisions should be subject to transition periods.

33. The representatives of Australia, Canada, Switzerland and Pakistan endorsed the suggestion by the United States that a transparency agreement could include simple and flexible provisions on domestic review procedures that accommodated different Members' existing independent administrative or judicial tribunals and review procedures. The representative of Australia expressed his delegation's preference for strong but non-prescriptive domestic review obligations.

34. The representative of Sri Lanka said that, in many countries, in particular in parliamentary democracies, adequate domestic administrative, audit and judicial mechanisms were already in place to ensure that all participants in the procurement process acted in conformity with the applicable rules and procedures. Such a mechanism would need to be in place in a country to ensure the enforcement of the underlying rules. The need for the establishment of a domestic review mechanism in a Member would arise only if that Member's currently available system did not guarantee the overall transparency of government procurement.

35. The representative of Australia said that his delegation recognized the relevance of domestic review procedures and application of WTO dispute settlement procedures to a future agreement on transparency in government procurement. At the same time, he acknowledged that the scope of application of such provisions would need to be addressed in future negotiations. The final outcome on dispute settlement would be determined by the rules that might emerge from the negotiations and had to be consistent with the governance objectives of Members. Noting that the United States had not chosen to identify in its communication which levels of government might be covered by domestic review procedures, he said that this underscored the difficulty of delving into domestic review and dispute settlement issues except in a rather general way until Members knew the content, coverage and elements of a transparency agreement. In response, the representative of the United States said that her delegation was not suggesting having domestic review at the local level. Whether or not obligations in this respect would apply at the sub-central level, related to the scope of the overall agreement.

36. The representative of Brazil said that, while his delegation regarded domestic review procedures as an essential element in any viable government procurement regime at the domestic level, his authorities' experience had been that suppliers who lost a procurement would use each and every possible recourse, administratively and judicially, to delay the procurement, perhaps even feel that if they could protract a process long enough the whole bidding process could be declared null and void and they could get a second chance. Domestic procurement systems would become too complicated if they were allowed to be bogged down by too many and abusive challenge procedures. Joined by the representative of Pakistan, he continued by saying that the various submissions before the Working Group emphasized the issue of suppliers' rights, and that the Working Group had to

balance those rights with the interests of governments in conducting efficient procurement processes. Not only the rights of suppliers and the rights of governments would need to be balanced but the purpose of having a transparent and open procurement system, a more efficient allocation of public resources, should also be guaranteed.

37. The representative of Switzerland said that Switzerland had had the same concerns expressed by the representative of Brazil but, subsequently, its experience had been that bidders normally did not use domestic review procedures very often, possibly because they wished to avoid problems in future tenders. Therefore, he was not convinced that the availability of an avenue for recourse to domestic review procedures would result in significant administrative burden. In response to the comment by the representative of Switzerland, the representative of Brazil noted that suppliers were perfectly aware of their rights under legislation and they used them to the extent they could without any fear of being sidelined in future procurements because the government authority might be upset.

38. Turning to the issue of the interaction between domestic review procedures and the application of the WTO Dispute Settlement Understanding, the representative of Sri Lanka said that the respective roles of the two mechanisms should be made explicit in the future agreement. Noting the statement in the communication by the United States that the provisions of domestic review procedures and application of the DSU should serve different purposes and that their different roles should be reflected in a possible agreement, he said that this suggestion might provide an answer to the question of whether there was a need to apply the WTO dispute settlement procedures to a transparency agreement when there was adequate existing domestic review mechanisms.

39. The representative of Brazil said that domestic review procedures and application of the DSU were two distinct phases in a dispute resolution process and there was not much scope for their interaction. Domestic review procedures had the purpose of ensuring that the interests of individual suppliers were protected at the domestic level. This went above and beyond the minimum standards for domestic review procedures that could be agreed to in the context of a WTO agreement. The communication by the United States made it clear that the DSU would not be used to address problems of individual suppliers, since resort to the DSU would not be available to challenge individual procurement decisions. Taking a case against a Member under the DSU for a violation of its obligations in the agreement was an entirely different matter than taking a case against a government entity under domestic review procedures for not respecting its obligations *vis-à-vis* a supplier under national legislation.

40. The representative of Korea asked whether there would be two separate enforcement mechanisms for different types of disputes, or whether the rules would require the exhaustion of domestic review procedures before any recourse to WTO dispute settlement procedures.

41. The representative of the United States emphasized that domestic review and WTO dispute settlement procedures should serve different purposes, and that there could be no overlap between the two. The transparency agreement could provide, explicitly, that resort to the DSU would not be available to challenge how a procurement authority had handled a specific procurement or to overturn a contract decision. The representatives of Sri Lanka, Korea, Japan and Switzerland supported the suggestion by the United States. The representative of Sri Lanka added that the WTO Dispute Settlement Body could not overturn the decisions of the domestic review mechanisms. The representative of Switzerland said that bidders would not have the possibility of having award decisions reversed under the DSU, and recourse to the DSU would be open only to WTO Members.

42. The representative of Pakistan asked whether WTO dispute settlement procedures would review the applicable laws and domestic review procedures would review specific procurements, or would a particular procurement dispute be subjected to two parallel mechanisms.

43. In response, the representative of the United States stressed that the United States did not intend to have two bites of the same apple. Rather, her delegation suggested that, if there was a question about how a procurement was being conducted, it would be up to the supplier to take that issue up with the domestic review mechanism. Such procedures would be available only for suppliers participating in a procurement, and DSU could not be used by WTO Members to question national authorities' procurement decisions. Members could invoke WTO dispute settlement procedures only for repeated failures to comply with the rules in the agreement or to implement its basic obligations.

44. Agreeing with the representatives of the United States and Australia that the Group would not need to decide the particulars of an enforcement mechanism until the full contours of an agreement had been determined, the representative of Switzerland said that this consideration also applied to the issue of the link between domestic review procedures and application of the DSU.

45. The representatives of Japan, Korea and Switzerland supported the suggestion by the United States for phasing-in application of certain provisions of a transparency agreement and thus application of the DSU for developing countries. The representative of Korea asked whether phasing-in applications of the DSU would entail the phasing-in application of certain provisions of the future agreement and, if so, what type of provisions. In response, the representative of the United States said that Members could not foresee which provisions would lend themselves to phasing-in application until the Working Group had discussed the exact content of those provisions. In the context of a transparency agreement, some provisions would be easy to implement as most Members already had transparent procurement systems. At the same time, the Working Group should assess which provisions could be problematic for some countries. She urged Members to approach this whole discussion by focusing on what they considered they needed as elements of an agreement, and then looking at which Members would have problems, how much time such Members would need to bring their systems into compliance, and to develop a flexible approach to phasing-in those provisions.

46. The representative of Canada, joined by the representative of Switzerland, said that the communication by the European Communities made a useful distinction between obligations aimed at ensuring transparency in domestic review procedures maintained by Members and ensuring suppliers' rights to challenge a procurement in breach of transparency provisions. Transparency of domestic review procedures should include making information available on the decisions of review bodies which should be independent.

47. The representative of Switzerland agreed with the suggestion by the European Communities that the agreement should contain provisions allowing a supplier to challenge a procurement in breach of the provisions related to transparency of the procurement process. At the WTO level, the DSU would only apply to the implementation of the transparency provisions in the agreement.

48. The representative of Korea noted that establishment of domestic review mechanisms was an area where developing countries might be able to seek technical assistance for capacity building.

49. The representatives of Sri Lanka, Canada and Japan said that, consistent with the Doha mandate, which explicitly excluded domestic preference schemes, enforcement mechanisms in a transparency agreement could not be used to challenge them.

50. The representative of Chile asked for clarification on the kind of situations in which a decision by a national authority could be called into question or revoked, bearing in mind that the agreement would not in any way limit the power of national authorities to accord preference to domestic suppliers.

51. With regard to access to domestic review procedures, the representative of Brazil said that he had no objection to the basic principle that suppliers' rights to challenge a procurement procedure must be ensured. Nevertheless, it had to be made clear that only those suppliers who were eligible for that particular procurement had such rights. If a national procurement system allowed governments to maintain domestic preferences, the right to challenge a procurement procedure should be limited to national suppliers.

52. The representative of Chinese Taipei pointed out that, although the transparency agreement would exclude market access, government authorities in WTO Members did not only meet their procurement needs from domestic suppliers or domestic sources but also from foreign suppliers. Therefore, foreign suppliers' interests should also be protected. The representative of Japan said that the transparency agreement should require Members to make available domestic review procedures for both domestic and foreign suppliers who had concerns that a particular procurement was not in compliance with the transparency provisions of the agreement. The representative of Switzerland said that domestic enforcement mechanisms should be open to all bidders who have an interest and the possibility to bid in a particular tender.

53. Asking for clarification on the suggestion by the European Communities on access to review procedures rules, more particularly of the phrase "suppliers affected by a measure" (point 2.1 in document WT/WGTGP/W/39), the representative of Hong Kong, China asked whether the intention was to cover suppliers whom the procuring entity had intended to award, or had awarded a contract, or those who were affected by a decision of the review body. For example, if a review body had found that a procuring entity had failed to publish an invitation to apply for pre-qualification in the appropriate newspaper, whether the bidders who had not had notice of the invitation due to the procuring entity's breach of publication obligation be regarded as bidders who were affected by the measure. In response, the representative of the European Communities said that, if a contract award decision by a procuring entity was challenged by another supplier, and the domestic review mechanism found that the procurement process was void and should be repeated, that decision was, in principle, in response to the complainant; however, it should also be transmitted to other interested suppliers because the measure also affected other suppliers and they would be interested to know that the process had been cancelled and would be repeated.

54. The representative of Egypt asked why it was important that the possibility to challenge be available to all suppliers given that the Working Group's work had nothing to do with market access.

55. The representative of Australia asked the representative of the European Communities whether a supplier affected by a measure would have the right to bring a challenge during the procurement process prior to any decision, or he also would have that right after the conclusion of the process. In response, the representative of the European Communities said that each Member should be left to have its own meaning of the term "procurement process". He noted that, for some Members, the procurement process ended at the stage of a contract award decision while, for other Members, it ended at the signature of the contract. It was not for the agreement to decide on the duration and scope of a procurement process; that should be left to each national regime.

56. The representative of Switzerland endorsed the suggestion by the European Communities that it was important to secure sufficient independence of the domestic review bodies whether they be administrative, judicial or arbitral.

57. The representative of Switzerland endorsed the suggestion by the European Communities that the choice of domestic review procedures should be left to individual countries; however, the procedures chosen should be governed by certain common principles stipulated in the agreement. This would be an effective way of ensuring application of those principles while accommodating the disciplines in existing domestic procedures.

58. The representative of India said that most WTO Members had fairly reasonable and adequate administrative, arbitral and/or judicial mechanisms to suit their domestic needs, and to ensure that all players in the procurement process acted in conformity with the relevant rules and procedures. Since each WTO Member had domestic review procedures suited to its own specific situation, level of development and requirements, the stipulation of any mandatory rules or prescriptive guidelines in a transparency agreement would not be feasible. The primacy of domestic laws and procedures had to be preserved, and there should be no requirement to change them. Considering that the Working Group's work was to study the transparency aspects of procurement, as long as Members had a review mechanism that should satisfy any transparency requirements.

59. The representative of Egypt asked whether there would be common obligations on domestic review procedures or whether it would be left to each Member to establish its own procedures. The provisions of existing WTO agreements on domestic review provisions did not require that all Members have or apply common rules but that rules were consistent with their commitments in the WTO. His delegation was not in a position to accept the stipulation of common obligations, common procedures and common mechanisms in the agreement.

60. The representative of Australia, noting that the statement in the communication by the European Communities that government procurement regimes contained legislative and regulatory provisions to review decisions of procuring entities, suggested that the Secretariat review the existing submissions that had been made to the Working Group to determine whether there was a broadly representative body of information available on Members' domestic review processes. If such was not the case, he urged Members to provide, briefly, information on their national experience with domestic review procedures.

61. The representative of Venezuela pointed out that, whereas his Government attached great importance to the issue of transparency, the WTO should not impose on Members a uniform system. Venezuela had enacted a new procurement legislation and had been implementing it over the past few years. Before the adoption of the new procurement laws, an intense internal debate had taken place with all the sectors involved and it had received mixed reactions from various sectors, which was quite normal in a democracy. It would be unacceptable to Venezuela if the WTO, as some sort of supranational body, would tell his Government to disregard the domestic discussions over past years by prescribing how Venezuela should deal with the issue of transparency. Venezuela had its own legislation, procedures and its own concept of transparency, which had been recently reviewed by the WTO in the context of Trade Policy Review.

62. Commenting on the procedural points made by the representative of Venezuela, the Chairman noted that, in the Working Group, Members were working on the basis of a Ministerial mandate, and that work would be submitted to Ministers for their decision. The WTO operated on the basis of decisions taken by Members, and it would be a serious misunderstanding to see it as a supranational body. Many Members had been working on their legislation, and it was the Members that took decisions whether or not to ratify agreements. From a procedural point of view, the WTO did not impose any positions; it was Members themselves that took any decisions emanating from the WTO. It was clear that, independently of the type of system a government had, all decisions in the WTO were made by its Members. Finally, he recalled that the mandate of the Working Group clearly required the explicit consensus of Members for any kind of agreement.

63. The representative of Venezuela said that, as a matter of principle, the Constitution of Venezuela provided full support to the work of supranational bodies and intergovernmental organizations. Further, having supported the Doha Declaration, his delegation had to take into account everything that was being discussed in the Working Group as if it was an internal discussion in Venezuela. The decisions taken in the Working Group at the supranational level could have an effect on the debate on government procurement at the national level. Whether at the Cancun Ministerial Conference or in any other forum, his delegation would not support any decision that

would require abrupt changes in its national legislation, which had been discussed in a transparent way.

64. The representative of the United States said that her delegation was open to the question of how detailed the provisions on domestic review procedures should be. As the communication by her delegation indicated, the mechanism should be flexible and simple. The level of detail that should be provided in the provisions on domestic review in an agreement could be discussed later in the negotiations. In any event, other parts of the agreement would not prescribe how the agreement should be implemented. Rather, it should set out general obligations, and each Member would then have to implement it in the way that worked best within its domestic system.

65. Reverting to the relationship between a transparency agreement and domestic laws, she noted that there was perhaps an unnecessary fear that the Working Group would come up with one model that would fit all. Many countries had used the UNCITRAL Model Law as their guide for developing their procurement systems. Others had used the World Bank Guidelines, while others had developed their laws in other ways. All Members had developed procurement systems that worked best for them based on their legal traditions, experiences and background. For instance, the United States had an incredibly complex system, which it was trying to simplify, and her delegation was not suggesting that that was the best model.

66. Continuing, she said that the DSU would be available for systemic failures to comply with, or a high level of disregard to, the agreement, for instance if there were refusals to ever publish a notice, or refusals to ever make information available about procurement methods. She went on to say that the likelihood of a transparency provision being challenged in the DSU was very low. Referring to transparency provisions in other WTO agreements, she said that there had been very few cases of dispute settlement, if any, relating strictly to transparency obligations. So, that was probably not likely to happen under the transparency agreement either. Without a link to the DSU, an agreement could not be effective. Members would simply ignore the requirements of the agreement knowing that they would face no detriment to doing so. Even if the DSU might not be ideally suited to a transparency agreement, that did not mean that Members should not be looking at how they could make the agreement effective. Her delegation's overall concern was that there should be some means of ensuring enforceability, and was looking forward to suggestions from other delegations as to how this issue could be best approached.

67. The representative of Brazil agreed with the representative of the United States that, in all probability, a case under the agreement on transparency in government procurement would not be raised under the DSU. Referring to a note prepared by the Secretariat on Article X of GATT in the context of the discussions on trade facilitation, he said that, according to that note, transparency-related cases had been raised in a couple of instances but had never moved beyond the consultation phase. Therefore, he agreed with the representative of the United States that it was very unlikely that a transparency issue would go to a panel. However, if Members included any provisions relating to application of the DSU in the agreement, they had to be absolutely clear as to what could potentially happen. Joined by the representative of Egypt, he said that Members had to be aware of certain types of situations before moving forward on the issue of application of the DSU to a future agreement. For instance, a Member who was found, by a panel and the Appellate Body, to be in systematic violation of a commitment in the agreement, might not be in a position to comply with the recommendation of the DSB to bring its legislation into conformity with the agreement because of the refusal of its Congress to adopt the relevant legislation. Such a situation in which there was no nullification or impairment of trade rights could create an impasse in the DSB.

68. The representative of the United States said that, over the long course of discussions in the Working Group on these issues, she had never heard any Member saying that its procurement system was completely non-transparent or that it would prefer to have a non-transparent procurement system. The basic understanding and general acceptance that transparency was a good thing was common to

all Members, albeit perhaps to varying degrees with some Members. Turning more specifically to the scenario outlined by the representative of Brazil, she opined that such a scenario was not very likely. If there was a case where a Member reported to the WTO that it could not change its laws, other Members would not rush to take that Member to dispute settlement as that was not going to be in any Member's interest. She believed that Members would be more likely to ask how they could work together to try to address those issues. The overall goal was not to try to retaliate and penalize Members; it was to develop a common set of transparency obligations that would go across the whole membership of the WTO. Instead of looking at this as a confrontational issue, Members could look at it as an issue where they would try to reach the common goal of raising procurement procedures to the same level of transparency in all Members.

69. In response, the representative of Brazil said that his delegation was as committed to transparency as any other Member. This was evident from the presentation his delegation had made at the WTO Symposium on Transparency in Government Procurement in October 2002. He had been trying to get the Working Group to consider whether the DSU was the best way to ensure enforcement. He agreed that his scenario was hypothetical and very unlikely, but it highlighted the fact that perhaps application of the DSU could not ensure enforceability of an agreement on transparency.

70. The representative of Venezuela noted that the DSU did not include a mechanism to ensure enforceability of a transparency agreement. His delegation considered the DSU as the cornerstone of the WTO. There should be some sort of dispute settlement mechanism to ensure the enforcement of the agreement. Perhaps it would be more interesting to have this discussion within the framework of the ongoing negotiations on the DSU.

71. The representative of the European Communities said that the Working Group was confronted with a unique case. Indeed, there was no government procurement regime in the world with transparency provisions isolated from the rest of the procurement rules. Members were trying to develop rules on transparency without having rules on procurement, and this was extremely complicated. They had difficulty in understanding how transparency provisions isolated from the rest of the procurement process could be implemented in practice and how they could be enforced, in the absence of market access obligations, through domestic review procedures and application of the DSU. There was no precedent for the exercise that the Working Group had been engaging in for six years. This was also unique in the WTO, for instance the DSU had been conceived in the WTO to be applied to agreements related to market access, and, in principle, the DSU did not apply to agreements with no market access or clear economic impact. Further, it was difficult to develop rules on enforcement without having an idea on the scope of the underlying rules or the contours of the agreement itself. Most of the questions that had been raised by Members had been related to the difficulty of not having sufficient basis for discussion. Members were thinking that this would affect the link to market access because there were economic and trade issues in the background. Members could not imagine transparency rules alone because there was a procurement process in the background with economic and trade impact. He maintained that the transparency agreement should include dispute settlement procedures. This was primarily a matter of principle because the agreement would be part of the WTO system of rules. Nevertheless, the fact that there was a need for enforcement measures did not mean that they had to be identical to the existing rules in the DSU. There could be specific provisions on implementation of the DSU tailored to the scope of the transparency agreement. There were already a number of WTO agreements with specific provisions relating to application of the DSU, for instance, Article XXII:4 of the plurilateral Agreement on Government Procurement on Consultations and Dispute Settlement with regard to cross-retaliation. His delegation's aim was to secure the existence of domestic procedures allowing bidders to challenge a procurement decision. Finally, he said that enforcement was a difficult issue, but he believed it was the core of the future agreement because, without enforcement provisions, the agreement would be merely a general list of requirements. The WTO would not impose any decisions on domestic review bodies because domestic review bodies would review on the basis of the domestic rules on

transparency which, in principle, would be in line with the rules in a transparency agreement. Provisions on application of the DSU should be included in the agreement like in any other WTO agreement, although he recognized the difficulty with finding appropriate sanctions for a breach of transparency rules. He was not convinced that Members needed sanctions or suspension of concessions or cross-retaliation to ensure that the agreement was enforced. When negotiating the agreement, Members could engage in an imaginative exercise to find an appropriate way to apply the DSU to the transparency agreement.

72. The representative of Korea said that the Working Group might consider the flexibilities provided in the provisions of the DSU and in other agreements, for instance Article 17 of the Anti-dumping Agreement.

73. Commenting on the linkage between application of domestic review procedures and the scope of the agreement, the representative of the European Communities said that the agreement might include some provisions that would apply to procurement in general. For instance, he had difficulty in imagining that only the rules applying to the scope of the agreement should be transparent and the others should not. In principle, all the rules of all WTO Members were publicly available, sometimes even notified. Thus, some provisions of the agreement would be applicable to all government procurement independently of thresholds, whether the agreement covered goods only or also services and whether it applied also at sub-central levels. At the same time, some provisions, including those relating to domestic review procedures, would apply only to procurement within the scope of the agreement to be defined.

74. The representative of Brazil said the debate had made it evident that application of the DSU might not be an efficient way to ensure enforceability, and that Members would have to be creative in finding other ways. One possible way was to develop specific provisions in the agreement relating to how dispute settlement should be conducted within the context of the transparency agreement. The general thrust of having a provision on domestic review in a transparency agreement would be to ensure that each Member's domestic legislation incorporated provisions that ensured that all suppliers participating in a procurement had the legal right to challenge, independently of whether that issue was covered or not by the agreement. He believed that that was independent of the scope of the agreement. For example, even if a procurement was subject to a national preference, and even if only a Member's national suppliers had the right to have recourse to domestic review, the limitation of the scope of the agreement to transparency should not affect the ability of a national supplier to challenge procurement decisions. There should be non-prescriptive provisions stating that domestic mechanisms existed to ensure the right of suppliers to challenge bids. If it was a case for national suppliers only, then those suppliers were the eligible suppliers; if it was an open or international tender, then all suppliers should have recourse to those instruments. He noted that the last indent under point 3.2 of the communication by the European Communities stating "challenge procedures provid[ing] for adequate measures to correct proven infringements of the agreement" was mixing up Member's rights in the WTO with supplier's rights at the domestic level. The infringements of the agreement had to be dealt with at the WTO by whatever mechanisms Members agreed on, whereas supplier's interests had to be assured through domestic review procedures. Thus, the discussion on the two concepts had to be kept separate so that the Working Group could move forward on both.

75. In response, the representative of the European Communities said that he could not imagine that a Member would set up rules on transparency consistent with the agreement only for goods, only above a certain threshold and only for the federal level. He believed that, to be logical, consistent and simple, most Members would apply a general framework of rules applying to all kinds of procurements at all levels and for all thresholds without making a distinction between services and goods. He noted that, in most cases, transparency rules would apply to all goods and services without distinction. He was wondering why the Working Group had spent so much time discussing the scope of the agreement while it recognized that, in practice, most Members applied transparency rules horizontally. His delegation took into consideration the concerns of those Members that wished to

have a reduced scope by agreeing that Members could limit the implementation of the transparency rules, including the domestic review procedures, to that scope. For instance, even if the domestic rules provided that a supplier had a right to challenge a procurement decision, a foreigner could not invoke the agreement in the case of a tender that did not fall under the scope of the agreement. It would be up to the domestic judicial system to decide whether the agreement had been breached, but since the particular tender did not fall under the scope of the agreement, the domestic review mechanism would not take into consideration the WTO agreement.

76. After the conclusion of the discussion of items I, VIII and XI in the informal note by the Chairman, the Working Group took up the communication from Korea entitled "Work Ahead up to the Cancun Ministerial", circulated in document WT/WGTGP/W/40. The representative of Korea introduced the communication.

77. The representative of Malaysia expressed regret that Korea had tabled its communication because of its timing as well as its content. The paper was not helpful to the process and could add to the confusion in the Working Group, given that there appeared to be confusion which related to many elements as evidenced by the discussions on domestic review procedures and application of the WTO DSU even though there seemed to be emerging consensus on some elements. The Working Group was not in a pre-negotiation stage, but still in an educational and clarification stage. In order to have a mandate at Cancun to move on to the negotiations, there had to be agreement in the Working Group on the elements of a future transparency agreement. There had to be an explicit consensus to move on to the negotiations. Referring to the interlinkages between the work of the Working Group and other WTO activities, he remarked that Korea seemed to be enthusiastic about making progress in the area of government procurement, where there was not yet an explicit consensus for negotiations, but apparently not so enthusiastic in the area of agriculture where there was a clear mandate.

78. The representative of Brazil said that the whole concept of a round of multilateral trade negotiations was to facilitate interlinkages and trade-offs and the Working Group had to be very attuned to developments in the rest of the WTO in order to move the process forward beyond Cancun. While welcoming Korea's suggestion to discuss what the Working Group should do in the period leading up to Cancun, Brazil nevertheless fully agreed with the representative of Malaysia that the current phase of the Working Group's work was educational. The discussion at the present meeting showed that there was still some lack of clarity on the issues of domestic review and application of the WTO dispute settlement procedures and further debate was necessary to have a clearer view on the concepts related to those issues. Recalling that paragraph 26 of the Doha Ministerial Declaration required explicit consensus before a decision could be taken on negotiations, he said that it should be highlighted to Ministers that the Working Group had reached a higher level of consensus on some issues than on some others.

79. As regards Korea's proposals to address developing country concerns, the representative of Brazil said that his country's experience from the Uruguay Round was that transitional periods or other types of flexibilities had proven to be inadequate for addressing effectively those concerns. There were still a number of Uruguay Round agreements that Members had not been able to implement due to lack of technical assistance, and, in fact, some Members had still not understood the commitments to which they had signed up to then. He said that the Working Group therefore had to give serious attention to the issue of technical assistance as well increasing efforts to try to make the process move forward beyond Cancun.

80. The representative of the Philippines said that the Korean communication proposed traditional ways of addressing the issue which were inadequate as they did not allow developing countries the needed policy space.

81. The representative of Morocco said that transitional periods had proved ineffective in the past in solving problems of substance and his delegation favoured a more holistic approach to the issue of special and differential treatment for developing countries.

82. The representative of Pakistan said that temporary suspension of obligations or transitional periods were not adequate in addressing what were complex and multi-dimensional issues of development.

83. The representative of Switzerland supported the views in the communication from Korea regarding new ways of addressing the concerns of developing countries.

84. The representative of Switzerland said that the communication from Korea was timely and shared the views expressed therein. As regards the current phase of the Group's work, the period before Doha represented an educational phase, the period between Doha and Cancun a pre-negotiation phase, and in the period after Cancun the work would move into a negotiating phase. On some issues where the positions had been clear, there was no need for further educational work. It was not necessary to have convergence on all issues before moving on to the negotiations, but rather to identify the core issues and reach an agreement through negotiations. Only future negotiations would show how to make the elements acceptable to Members.

85. The representatives of the Philippines, India, Morocco and Pakistan said that they shared the views expressed by the representative of Malaysia.

86. Expressing her delegation's perception of what was mandated at Doha in relation to transparency in government procurement, the representative of India said that the work being undertaken by the Working Group was on the basis of the Singapore Ministerial Declaration. The Doha Ministerial Declaration mandated the continuation of the work. As evidenced in the discussions at the present meeting, there was still a considerable divergence of views among Members on elements such as domestic review procedures and application of the WTO DSU. India was therefore of the view that the Group was still in an educational phase and greater clarity was required on a number of issues.

87. The representative of the Philippines, supported by the representative of Malaysia, said that the Singapore issues were not part of the Single Undertaking and thus still required a negotiating mandate.

88. The representative of Brazil said that, as it had been the case with the issues put forward by developing countries such as implementation and special and differential treatment, the debate as to whether the Singapore issues were part of the Single Undertaking was beside the point. Ministers had agreed to a work programme that included these issues which had given rise to expectations amongst delegations that their concerns would be addressed; that they were not being addressed, irrespective of whether or not they were part of the Single Undertaking, created a less positive environment for discussions or negotiations in other areas.

89. The representative of the United States said that the debate as to what was or was not part of the Single Undertaking was not productive for the work of the Working Group.

90. The representative of Pakistan said that, while the questions raised in the communication from Korea were relevant, his delegation was not in total agreement with the answers it provided. He said that the Doha Ministerial Declaration did not provide a clear indication as to what needed to take place at Cancun. Noting that there were gaps amongst Members on various issues, he said that much further thought and reflection needed to go into some of the items identified as core elements in Korea's communication including definition and scope, domestic review, application of the DSU and special and differential treatment for developing countries. Pakistan would hesitate to commit itself to

any agreement without fully understanding the contours of the elements. While Korea considered that multilateral rules on transparency in government procurement should be legally binding and subject to the WTO DSU, the present discussion was clear evidence of divergences of views among delegations regarding application of the DSU.

91. The representative of the European Communities welcomed the communication from Korea suggesting ways of moving forward with the process, an issue which had also been addressed in the earlier proposals by Japan and the United States (WT/WGTGP/W/37 and 35, respectively). Korea's communication presented ways of looking not only at the technical issues before the Group but also to the overall context of the Working Group's work and how the negotiations should be shaped in the future. Korea's suggestion to developing countries to outline their concerns would enable the Group to further address the outstanding issues and clarify them before the Cancun Ministerial Conference. With regard to the comments concerning the negotiating mandate, his delegation's view was that there was an agreement on negotiations and that this was supported by the Doha Ministerial Declaration, the relevant section of which would have read "...a decision on modalities of negotiations..." and not "...a decision on negotiations..." if the case had been otherwise. The Decision clearly stated that a decision on modalities would be taken at the Fifth Ministerial Conference and not after that. All four Singapore issues were part of the Single Undertaking and transparency in government procurement was one of the key elements of the Doha Development Agenda. The suggestion by Korea to examine the core elements to be included in the negotiations by no means pre-empted the outcome of the negotiations. There would be sufficient flexibility in the process of negotiations to consider what is acceptable to all Members regarding a specific element.

92. The representative of Malaysia said that Members could not move into the phase of negotiations without having reached an agreement on the basic elements to be incorporated in a future agreement, for instance on its scope, domestic review procedures and application of the WTO dispute settlement procedures.

93. The representative of Chinese Taipei said that the fact that the APEC principles on government procurement were non-binding enabled the members of the APEC Group of Experts on Government Procurement to share their experience on transparency in a useful way. With respect to Korea's communication, he suggested that other elements, such as valuation methods for threshold levels and a common website for providing information on national practices, could also be considered.

94. The representative of the United States said that the elements identified by the Working Group had been included in the informal note by the Chairman "List of Issues Made and Points Raised". The Working Group was not yet in a negotiating phase and Members could continue to have divergent views. In response, the representative of Malaysia said that the identification of possible elements in the Chairman's note did not imply any form of agreement, or tacit understanding, or consensus to include those elements in a future agreement. For instance, the inclusion of domestic review procedures and the WTO DSU in the List of Issues did not mean that there was any convergence of views on them.

95. Referring to the comments on the current status of the Working Group's work, the representative of Korea said that the important point was that Members exchanged views on the core elements to be included in a multilateral framework in preparation for negotiations. Suggestions on new and more effective ways of addressing developing country concerns were welcome. Finally, the list of elements suggested in Korea's communication was not final and the Group should be open to discuss other possible elements.

B. TECHNICAL ASSISTANCE AND CAPACITY BUILDING

96. The representative of the Secretariat provided information on the technical cooperation and capacity building activities that the Secretariat had undertaken since the October 2002 meeting, as well as on the activities foreseen in the period leading up to the Cancun Ministerial Conference. Since the October 2002 meeting, the main focus of the Secretariat's technical cooperation activities had been on regional events organized in cooperation with the multilateral development banks. On 12-14 November 2002, a sub-regional workshop for participants from 14 Caribbean countries had been organized in Kingston, Jamaica with funding provided by the Inter-American Development Bank through its affiliate INTAL and with the cooperation of the Government of Jamaica. On 14-17 January 2003, a workshop had been held in Dar es Salaam, Tanzania for participants from 20 English-speaking African countries. It had been organized jointly with the World Bank in cooperation with the African Development Bank and the Government of Tanzania. Officials participating in both of these workshops represented both the trade and procurement communities. Turning to the plans for 2003, she said that the Secretariat would continue with the regional workshops, where possible, in order to ensure that, before Cancun, there would have been one regional workshop held in each of the developing country regions. In the coming months, similar to the events organized for the Central American and Caribbean countries, a workshop was expected to be held in Buenos Aires, Argentina for the Latin-American countries that had not yet been covered by the sub-regional events in 2002, using IADB/INTAL funds; another workshop for the Asia-Pacific region, in cooperation with the Asian Development Bank was foreseen in May in Manila, the Philippines; and a further workshop was being planned jointly with the World Bank in early July for French-speaking African countries. There were a number of general Secretariat training activities of a regional and national kind for high-level officials, for instance, one recently held in Cairo for Arab countries, and upcoming ones in Tbilisi, Georgia for the Caucasian and Central Asian countries and for Chinese officials in Beijing.¹ These activities covered WTO issues as a whole, and the Secretariat was contributing to them with regard to government procurement matters. Thirdly, there were also requests from a number of countries for national events contained in the Secretariat's Coordinated Programme for 2003. The Secretariat was in the process of contacting the delegations concerned about these activities. Finally, the Secretariat was planning to hold a further Geneva event on 19 June 2003 which would be held back-to-back with the meeting of the Working Group on 20 June, so as to facilitate the participation of as many interested delegations as possible. The Secretariat's intention was to allocate the first half of the day to an Information Session on the activities of the IGOs involved in government procurement work, which would be held in response to a suggestion made by some delegations at the October 2002 meeting. Presentations had been made by representatives from the World Bank and the UNCITRAL Secretariat at the first meeting of the Working Group in 1997 and by the representatives from the World Bank and the African Development Bank as well as the Chairman of the FTAA Negotiating Group on Government Procurement at the October 2002 Symposium. The second half of that day would be devoted to issues related to capacity building, with the participation of government experts from developing countries.

97. The representative of India asked about the benefits which had accrued to the beneficiary countries as a result of the technical cooperation activities, for instance, in what way the technical assistance had been of use in their national systems or had helped countries to identify gaps, if any, a matter which might be taken up at the June workshop.

98. The representative of Switzerland provided information on a pilot project that had been developed in Ghana. Switzerland had provided external support to the project, the main objective of which was to set up a mechanism for monitoring the progress of implementation of the new procurement legislation in a manner that was transparent to all actors including the private sector, civil society, and the international community including the donors. Switzerland considered this to be

¹ The latter two events were subsequently postponed.

an important way of raising confidence in the public procurement system, presenting benefits at both the national and international levels.

C. OTHER BUSINESS

99. Taking the floor under this item, the representative of Turkey gave a brief account of the recent procurement reform in his country which had been undertaken as a component of public sector reforms carried out since 1999. The first aspect of the reform involved changing the role and function of the Government in the public procurement market to ensure the effectiveness of the system. This had been done by putting into place mechanisms, rules and procedures that followed the principles of transparency, accountability and predictability. The second aspect related to opening up the procurement market to international competition. The new public procurement law was adopted by the Turkish Parliament in January 2002 and had entered into force on 1 January 2003. The law aimed at enhancing transparency and curbing corruption and provided for equality of treatment, impartiality, accountability, competition and predictability, while, at the same time, ensuring a more effective and efficient utilization of public resources. The principal functions of the Public Procurement Authority that had been established under the Law were the preparation and development of, and provision of guidance on, implementing legislation and the preparation of standard tender documents. As of January 2003, the PPA had completed the secondary legislation, and had begun its work on settling procurement disputes. The adoption of the new public procurement law was a big step forward for Turkey, bringing its legislation in line with contemporary international standards and the EU "*acquis*".

D. OBSERVER STATUS OF INTERNATIONAL INTERGOVERNMENTAL ORGANIZATIONS

100. The Chairman said that, at its past meetings, the Working Group had considered requests for observer status from three international intergovernmental organizations (OECD, SELA and the Organization of the Islamic Conference) and agreed to revert to these requests in the light of the ongoing consultations in the framework of the General Council. Given the overall status in the WTO regarding this matter, he suggested that the Working Group revert to this matter at its next meeting in the light of developments in those consultations.

E. DATE OF THE NEXT MEETING

101. The Chairman said that the second meeting of the Working Group would be held on 20 June 2003.

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 10-11 OCTOBER 2002

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its fifteenth meeting on 10-11 October 2002 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica).
2. The agenda for the meeting consisted of: (i) transparency-related provisions in existing international instruments on government procurement and national procedures and practices; (ii) technical assistance and capacity building; (iii) observer status of international intergovernmental organizations; and (iv) date of the next meeting. The Working Group agreed to adopt the agenda as proposed.
 - A. TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES
3. By way of general comments under this agenda item, the representative of China said that transparent procurement procedures enabled governments to obtain the greatest value for expenditure, contributed to a predictable and stable investment environment and to reducing and eliminating corruption. As part of its WTO accession process, China had made commitments to ensure transparency in its government procurement system. Since its accession to the WTO, China had promulgated the National Procurement Law on 29 June 2002 which would enter into effect on 1 January 2003. The Law stipulated the transparency principle both in the general chapters and under specific chapters relating to qualification of suppliers, contract awards, bid challenge and supervision. China believed that the new Law and the detailed implementing regulations had ensured the establishment of a fully open and predictable procurement environment. All laws and regulations relating to government procurement procedures had been published in the Gazette and on the Internet. Turning to the work of the Working Group, he said that the discussions should be limited to the transparency aspects of government procurement as per the Doha Ministerial Declaration. Considering that transparency was a complicated issue and that the obligations on transparency in other WTO areas entailed a heavy burden on developing countries, the Working Group should be cautious in defining the scope and coverage of future transparency obligations. The Group's current work should focus on agreeing on general principles of transparency rather than on developing detailed provisions.
4. The representative of Japan introduced the communication from her delegation stating Japan's position with respect to an agreement on transparency in government procurement contained in document WT/WGTGP/W/37.
5. The representative of Malaysia disagreed with the view expressed in the communication by Japan that the Working Group had largely accomplished the study mandated by the Singapore Ministerial Conference which implied that the Group's work could move into the next phase without a consensus. The Group should continue its study of elements based on the "List of Issues Raised and

Points Made". The representative of the Philippines said that it would be premature to discuss a framework agreement at the present stage.

6. The representatives of the European Community, Switzerland and Australia said that their delegations supported the thrust of the views expressed by Japan in its communication.

7. The representative of the European Community said that the Group had exhausted the discussion of the items in the List of Issues. The work should now focus on identifying the elements to be included in a transparency agreement even though the matter of how those issues could be reflected in a future agreement should be left aside for the time being. Developing countries should be provided flexibility in the application of the future obligations but how this should be done was a matter that should be addressed in the negotiations.

8. With regard to the six elements suggested by Japan, the representative of Switzerland said that some additional elements could be considered. The representative of Pakistan asked how the elements proposed by Japan fitted in with the twelve elements under discussion in the Group. The representative of Korea supported the elements listed by Japan.

9. Referring to the non-discrimination principle listed by Japan as being an important element of a future agreement, the representative of Malaysia asked how Japan saw the relationship of this principle to transparency. The representative of Egypt asked how the non-discrimination principle could be made compatible with the future provisions on special and differential treatment. In response, the representative of Japan said that foreign suppliers should be granted non-discriminatory treatment in the application of transparency rules and procedures. However, this should not preclude the right of countries to give preferences to domestic suppliers.

10. The representative of the United States introduced the communication by her delegation setting forth its ideas regarding the organization of the work of the Group over the period leading up to the Cancún Ministerial Conference contained in document WT/WGTGP/W/35. She said that the proposed organization of the discussion under four categories of elements would help to refine the debate on the outstanding issues and could provide a basis for the identification of the elements that could be included in a future agreement.

11. The representatives of Korea; Brazil; Hungary; the European Community; Israel; Canada; Switzerland; Australia; and Hong Kong, China supported the suggestion of the United States as a basis for moving the Group's work forward.

12. The representative of Brazil said that the work should focus on the Group's mandate to identify the elements of an agreement although it might be difficult to agree on the appropriateness of including certain elements.

13. The representative of Malaysia said that, while a convergence of views seemed to be emerging in some areas, it was premature to begin the categorization of issues at this stage. The Group had yet to conclude its work on the clarification of certain issues before it could reach consensus on any of the elements pursuant to the Doha Ministerial mandate. Developing countries had difficulties essentially with two elements, namely domestic review procedures and the application of WTO dispute settlement procedures. Although the details of some of the other elements might also cause some difficulties, by and large, they were acceptable. The categorization of elements could only be feasible if there were an explicit consensus to proceed with the negotiations at the Cancún Ministerial meeting built on the progress achieved by that time.

14. The representative of the Philippines said that the submissions by the United States and Japan sought to introduce a qualitative change in the discussion of the twelve elements.

15. The representative of Singapore said that a transparency agreement would benefit all countries including developing countries. The application of transparency principles to procurement helped to achieve the objective of better value for money in government procurement and improved procurement decisions. However, the Group would need to take into account developing country concerns on certain issues. For instance, the application of the WTO Dispute Settlement Understanding (DSU) to a transparency agreement needed to be carefully considered. Supported by the representative of Egypt, she added that any reference to the issue of corruption in public procurement might not be helpful to the process under way.

16. The representative of the European Community said that the time had come to build consensus in the Group around the basic principles that should be included in a future transparency agreement and to identify the elements to be negotiated. The work plan proposed by the United States was in line with the reference to the modalities for negotiations in the Doha mandate. It was crucial to use the time-period until the Cancún Ministerial Conference to address the issues before the Group. If the discussion in the Group were left open-ended, the Ministers would not be able to reach a decision on modalities of negotiations, such as the content of the future discussions and the time-frame for the negotiations. Basic transparency principles included, among others, subjecting national rules and practices to domestic review procedures.

17. The representative of Canada said that the United States suggestion to pursue the discussion of the elements under four categories would help to reach a better understanding of the progress made in the Group on the study of these elements. The final form and the contents of an agreement could only be refined through negotiations.

18. The representative of Switzerland said that the approach suggested by the United States would enable the Group to have a more in-depth examination of any outstanding issues. The Group should consider the modalities of future negotiations, which could include a time-frame for negotiations and the possible elements.

19. The representative of Australia said that the Group's work should be speeded up. The suggested categorization of the elements would enable a more substantive discussion of the items in the List of Issues.

20. The representative of Hong Kong, China said that transparency in government procurement fostered competition. Her delegation supported the early conclusion of a multilateral agreement.

21. The representative of Egypt said that the Group's mandate excluded any commitments on market access. Supported by the representatives of Pakistan and the Philippines, he said that, although the issues before the Group had been discussed several times, there was no convergence of views among delegations on certain issues, for instance relating to definition and scope, procurement methods, time-periods, domestic review procedures and the application of WTO dispute settlement procedures.

22. The representative of India said that the categorization of elements was premature. The Group's main task was to achieve a better understanding of what transparency in government procurement meant. Matters relating to administration of domestic laws and regulations did not fall within the purview of transparency. The Working Group should address any burden that future requirements might incur on developing countries. One question with respect to the benefits of transparency was whether the additional cost of a transparent procurement system could be justified by its incremental benefits. Transparency could not be the overriding priority in all procurement cases. It might have to be balanced against certain other objectives, for example providing local manufacturers with certain advantages under employment-generating programmes or better utilising locally available factors of production. The Group's work should focus on the type of information that should be provided to suppliers on a Member's government procurement system. On the other

hand, the need for transparency in specific procurements would depend on the purpose of the procurement and the policy objectives sought. While the information provided in tender notices would have to be adequate for the preparation of responsive bids and should be uniformly provided to all suppliers, the provision of information on who should be eligible to respond to a particular tender should take into account policies targeting certain suppliers. As to the ramifications of transparency beyond government procurement, the fight against corruption required better policing, a matter which went beyond the concern of the WTO. Finally, Members generally agreed to the benefits of transparency but several elements discussed in the Group did not pertain to transparency at all and some only to the extent that the future requirements would be limited to provision of information. Whether a future agreement would be a binding agreement or a principle-based one could be decided once Members had a clearer view of what transparency meant. Her delegation was not convinced of the need for any linkage to the WTO Dispute Settlement Understanding given that only transparency in government procurement was under consideration.

23. The representative of Cuba said that, in order to comply with the Doha mandate which referred to development priorities, the Group should carry out its work on the basis of the List of Issues. If the discussions were to be speeded up, the Group would find itself with the same problems that it had faced with the proposals that had been tabled prior to the Seattle Ministerial Conference. At that time, a number of developing country Members had not been in a position to go along with the proposals that had gone beyond the Singapore mandate.

24. The representative of the United States said that, under the mandates of both the Singapore and the Doha Ministerial Declarations, the Group was not required to decide on how the specific details of the elements under discussion would be reflected in a future agreement. The Group was still carrying out its work under the Singapore Ministerial mandate. Members would only be able to build on the progress made in the Working Group as per the Doha Ministerial mandate if the Group could examine in more detail those issues that were of particular concern to developing countries, for instance the linkage to the WTO Dispute Settlement Understanding. Her delegation believed that any agreement had to be a legally binding one in order to fit into the overall WTO system. However, a special mechanism could be envisaged to address any developing country issues before invoking WTO dispute settlement procedures. The Group's work should be geared to developing a constructive approach aimed at accommodating the concerns of developing countries in the negotiations.

25. The Working Group took up items VI-XII in the informal note by the Chairman "List of Issues Raised and Points Made" contained in JOB(99)6782 of November 1999, commenting on each item in turn and using the summary note by the Secretariat "Work of the Working Group on Matters Related to Items VI-XII of the List of Issues Raised and Points Made" contained in document WT/WGTGP/W/33. The Group also had before it a communication by Canada on contract awards contained in document WT/WGTGP/W/36 and a note by the United States on capacity-building considerations relating to transparency in government procurement contained in document WT/WGTGP/W/34. In addition, a non-paper was presented by Australia on the transparency of decisions on qualification contained in JOB(02)/142.

Transparency of Decisions on Qualification

26. The representative of Canada introduced the communication by her delegation on transparency of contract award decisions which also addressed the issue of transparency of qualification decisions contained in document WT/WGTGP/W/36. She said that a transparency agreement should allow for flexibility in respect of the establishment of the criteria for qualification and registration processes.

27. The representative of the European Community, joined by the representatives of Switzerland and Brazil, said that, notwithstanding entities' rights to define the evaluation criteria, a future agreement should ensure that decisions on qualification and contract awards were taken based on

clear and objective criteria that were pre-disclosed and made known to all interested suppliers well in advance.

28. The representative of the European Community said that time-limits were an important aspect of transparency and they should be taken into account in the qualification process, for instance in relation to transmission and receipt of certificates related to qualification and other relevant documents.

29. The representative of Japan said that transparency in qualification and in contract award decisions was among the core transparency principles in the area of government procurement.

30. The representative of the United States, joined by the representatives of Canada, Switzerland, Australia, Japan and Brazil, supported the views expressed in Canada's submission. The representative of Switzerland said that transparency in decisions at the qualification stage was important. Procuring entities should be required to declare any limitations to participation on the basis of nationality and any new information should be made available in a non-discriminatory manner. The procedures for qualification and the basis for selecting suppliers in the lists of qualification systems should be made available to all interested parties. Participation in qualification lists should not be exclusive and should be regularly updated with new suppliers meeting the qualification criteria.

31. The representative of Australia introduced the non-paper recently submitted by his delegation on qualification decisions contained in JOB(02)/142.

32. The representative of Brazil said that the provisions on qualification in a transparency agreement should be limited to setting out general principles and criteria and should not be overly prescriptive. While it should be up to national legislation to define the general criteria for the qualification of potential suppliers, such criteria should not have the effect of restricting access of any supplier who demonstrated capability to fulfil the requirements of the tender. The main objective of qualification procedures was to facilitate the work of procuring entities in identifying suitable suppliers for their needs. Maintenance of qualification systems was not incompatible with the general concept of transparency as long as related decisions were not used as barriers to access by interested suppliers. While it may be desirable to have a common national system for qualification, this should not exclude the possibility of setting forth specific criteria in individual tenders. There was no need to address the issue of time-periods that applied to the different stages of administrative procedures. Under the draft procurement Bill that was before the Brazilian Congress, tendering procedures could occur before the stage of qualification procedures as a way of speeding up the tendering process and making it less burdensome for the procuring entities.

33. The representative of Thailand said that his delegation had questions regarding the extent to which information on qualification criteria could be made available since confidential information would not be disclosed under a transparency agreement, and also on how confidential information related to government policies would be treated.

Transparency of Contract Award Decisions

34. Referring to her delegation's communication contained in document WT/WGTGP/W/36, the representative of Canada said that the transparency of contract award decisions was one of the main elements of a future agreement. The award criteria expressed the government's needs and priorities as they were to be carried out in a procurement process. Members therefore needed the flexibility to establish the appropriate criteria, such as price, the preferred characteristics of the product and other preferences. The Doha Ministerial mandate made it clear that Members had flexibility to establish criteria for the award of a contract. The transparency agreement would not restrict the scope of Members to give preferences to domestic supplies and suppliers as per the Doha Declaration. The

Working Group should address the means by which such flexibility could be implemented while ensuring transparency of decisions. There should be provisions assuring that transparency of award decisions be achieved by specifying the award criteria and other requirements in the tender documents; taking award decisions solely on the basis of the criteria provided; and making award decision information available to suppliers and other parties. There was general agreement that governments should not have to disclose confidential information. Turning to the question of benefits, she said that transparency of award decisions was consistent with the rules-based trading environment embodied in the international trading system. The importance of transparency, predictability and consistency in the application of measures relating to international trade had been recognized since the inception of the GATT 1947. The benefits of the transparency of award decisions included economic efficiency for procuring entities, taxpayers and suppliers as well as predictability and confidence in the procurement system.

35. The representative of Switzerland said that Members should have flexibility in choosing the criteria but full transparency should be provided of the chosen criteria. The possibility of changing the criteria during an ongoing procurement process should be allowed only under limited conditions and in clearly defined circumstances. The criteria should be made available to all involved in the procurement process. Any new information, for instance any negotiations foreseen or clarification given during the process, should be made known to all interested parties.

36. With respect to *ex post* information, the representative of Switzerland said that decisions of procurement entities should be made public or, at least, made known to interested parties. The representative of the European Community, joined by the representative of the United States, said that a future transparency agreement should have a provision requiring that unsuccessful bidders be informed of the rejection of their bid, and, on request, be given information as to the reasons why their bid had been rejected and the winning bid had been chosen.

37. The representative of Malaysia said his country responded to requests for information from unsuccessful bidders. However, a mandatory requirement in a multilateral agreement in this respect should be should be drafted in such a way as to avoid burden on developing countries.

38. The representative of Canada said the Working Group seemed close to reaching a consensus on the value of making information on award decisions available to suppliers and other interested parties. Future requirements in this respect should cover both successful and unsuccessful suppliers, as the information provided was helpful to both.

39. The representative of Brazil said that, in order to allow flexibility in the application of the agreement, the provisions in respect of contract award decisions should be limited to general principles and criteria, leaving more detailed regulation to national legislation.

40. Referring to the issue of negotiations in the procurement process, the representative of Brazil said that a transparency agreement should not preclude the use of negotiations in accordance with national legislation subject to conditions of transparency. This method was used to great effect in his country as a means of achieving enhanced conditions, in both technical and financial terms, in tenders. The representative of the United States said that it was important that suppliers were made aware of the possibility of negotiations in advance, for instance by stating this in tender documents.

Domestic Review Procedures

41. The representative of the European Community said that a transparency agreement should have provisions to ensure the existence of an independent domestic review body which could either be a judicial or an administrative body. Members should have flexibility regarding the way in which they would implement domestic review procedures. The purpose of the provisions would not be to address the substance of the decisions made by a procurement entity but to set out certain principles for access to reviews by bidders. Since many Members appeared to have domestic review systems in place, complying with a requirement to ensure the independence of the review bodies should not entail any additional burden on them.

42. The representative of Singapore considered that a bid challenge mechanism was an integral part of national procurement systems.

43. The representative of Brazil said the Group should avoid adopting an overly prescriptive approach to domestic review procedures. Since the agreement would be limited to transparency, there should not be any presumption or indication that it was creating commitments between Members in this respect. There was no need for provisions prescribing a common system of review for Members. However, it was essential to have a provision requiring the existence of review mechanisms and setting forth some general principles that should be respected, such as transparency, legality and equality of treatment. It was important to ensure that national legislation established appropriate mechanisms for reviews of complaints by suppliers. Further, recourse to an administrative review body should not preclude suppliers who felt that their complaint had not been adequately addressed from having recourse to judicial review. Foreign suppliers should have the same access to national administrative and judicial reviews as national suppliers. In the case of tenders limited to national suppliers, only those national suppliers that were entitled to take part in the tender should be eligible for an administrative or judicial review.

44. The representative of India said that most WTO Members had reasonably adequate domestic administrative audit and judicial mechanisms to ensure that actions of all parties involved in a procurement process complied with the relevant rules and procedures. The primacy of domestic laws and procedures should be preserved, and there should be no requirements to change such laws and procedures. Given that the Group's work was on the transparency aspects of procurement, the existence of domestic mechanisms should be adequate to satisfy any transparency requirements. The development of a uniform review mechanism would involve an administrative burden for developing countries. The cost of challenge procedures and obtaining remedies would outweigh the benefits of the *ex post* information that this mechanism provided to suppliers. In addition to the availability of recourse to national courts or independent surveillance bodies, entities had in place audit teams for large procurements. The establishment of separate review bodies may be far too expensive and impractical.

45. The representative of China said that many Members had review mechanisms in place under their domestic laws or regulations. The creation of a uniform mechanism under the agreement would go beyond transparency.

46. The representative of Cuba said that transparency in this respect should mean providing information to suppliers on the existence and operation of Members' domestic review procedures. The type of review mechanisms and procedures to be used should be left up to each Member on the understanding that the mechanism itself was transparent.

47. The representative of Malaysia said that the issue of domestic review procedures delved into the realm of market access. Questioning the procurement decisions of a procurement authority went beyond transparency.

48. The representative of Pakistan said that Members had their own domestic legislation and administrative arrangements to guarantee that aggrieved parties had the possibility of seeking redress. It would be counterproductive to go beyond transparency-related issues into the realm of sovereign decisions by governments.

49. The representative of the United States said that domestic review procedures could be an important means of ensuring compliance with the basic obligations of an agreement. However, there should be flexibility to implement the procedures in accordance with Members' own domestic systems provided that they met certain basic standards which should be negotiated as part of the transparency agreement. Meanwhile, all Members needed to agree that a domestic review procedure was an important element of the future agreement.

Other Matters Related to Transparency

(i) Maintenance of records

50. The representative of Brazil, joined by the representatives of China, Morocco and India, said that, while it was important to maintain records of procurement proceedings, any provisions in a future agreement should allow domestic legislation to determine the periods and the means of maintaining the records.

51. The representative of the European Community said maintenance of records by procuring entities and domestic review bodies was essential to facilitating access to information by unsuccessful suppliers about how the procurement had been carried out.

52. The representative of the United States, joined by the representative of Japan, noted that, though an important requirement, at this stage the maintenance of records needed only to be recognized as one of the elements of an agreement, leaving details such as time-periods to be addressed in the negotiations.

(ii) Information technology

53. The representative of Switzerland said his delegation had been impressed by the presentations made by the speakers from Singapore and Brazil in the Symposium held the previous day on the benefits of information technology in promoting transparency. Supported by the representative of China, he suggested that a future agreement should incorporate, at least, a best-efforts clause in relation to the use of information technology. The representative of Brazil said that his country considered information technology to be very useful for increasing transparency, reducing costs, and for the speeding up of procurement processes. However, since Members were at different levels of development, rather than setting forth any prescriptive provisions in this area, the future agreement could encourage the application of information technology. Brazil would be willing to extend technical cooperation in this area, within its means, to interested parties.

54. The representative of India said that procuring agencies in a great number of Members provided information electronically through websites. This improved efficiency of the system, added value to its users and also helped in controlling bribery. However any international rules in this respect should take into account local conditions in developing countries.

55. The representatives of the European Community, the United States, Rwanda, China and Morocco supported a best-efforts type obligation in respect of application of information technology to government procurement.

56. The representatives of Rwanda, Mali and China said that, although the application of information technology to government procurement was cost effective and enabled the dissemination of information widely, developing countries lacked capacity, both in terms of human resources and technology, to apply the new systems. To be on the same footing with the systems in developed countries would require technical assistance.

(iii) *Language*

57. The representative of Brazil, joined by the representatives of the United States and China, said that the national language should prevail in procurement-related matters. Any requirements to provide information in one of the WTO official languages would impose overly burdensome obligations on those Members whose national language was not a WTO language. This would not preclude any Member that had an interest in attracting foreign suppliers from issuing tenders in foreign languages. The representative of the United States said that suppliers wishing to operate in foreign markets needed to have language capability.

58. The representative of the European Community said that, although it may be burdensome, Members should be encouraged to use at least one of the WTO languages in order to make those tenders that might be of interest to foreign bidders widely accessible.

59. The representatives of Japan, Korea and Morocco said that, notwithstanding the need for flexibility in this regard, certain types of information, such as the notification of enquiry points, and matters to do with dispute settlement or consultations, should be made available in a WTO official language.

60. The representative of Korea, joined by the representative of the European Community, said that at least a list of national laws and regulations should be notified and made public in a WTO official language.

(iv) *Fight against bribery and corruption*

61. The representative of the European Community, joined by the representative of the United States, said that the issue of bribery and corruption did not need to be dealt with in a transparency agreement, notwithstanding the fact that a meaningful transparency agreement would indirectly contribute to the fight against bribery and corruption.

62. The representative of Mali said that the President of his country had urged the entire administration to fight financial corruption and financial offences, factors that were directly related to transparency in government procurement.

Information to be Provided to Other Governments (Notification)

63. The representative of the European Community said that, as was the case with other WTO agreements, Members should promptly notify laws and regulations relating to transparency to the WTO Secretariat in one of the original languages and, if available, in other languages. Joined by the representative of the United States, he said that, since the submission of legislation in a WTO language might be too burdensome, at least a list of the relevant laws and regulations should be made available in a WTO language. The representative of the United States, supported by the representative of Pakistan, said that a balance should be found between the need for improved understanding of the procurement systems of Members and the burden of providing the necessary information. The representative of Pakistan said that there was a need to balance future obligations with Members' capacity to meet them.

64. The representative of Brazil noted that the principle of ensuring transparency of legislation applicable to procurement was broadly accepted. Though notification was useful, providing translations of legislation could be unduly burdensome. Supported by the representatives of the United States and Switzerland, he suggested that an alternative approach could be envisaged such as the use of a questionnaire or a checklist of points to allow Members to broadly describe their systems. A similar approach was applied in the Trade Policy Review process and in the FTAA context.

65. The representative of Switzerland said that notification of national legislation remained one of the cornerstones of a future transparency agreement. The representative of Japan said that notification should be an element in a future agreement but the discussion of the details of the relevant provisions should be left to a later stage.

66. The representative of India said that the requirement to provide information on national legislation was widely accepted as a transparency issue. However, any requirements to provide full and complete information should be tempered with practicality, and should take into account the capacity of Members to provide such information. Any examination of the national rules and laws in view of prescribing amendments to laws would go beyond the mandate of the Working Group.

67. The representative of Pakistan said the Working Group could base its work on this matter on the provisions of GATT 1994 Article X, noting that any provisions which went beyond those provisions would be burdensome to developing countries.

68. The representative of the European Community said that Members should provide explanations of laws, regulations, procedures and practices on request by other Members. With regard to requirements on the establishment of enquiry points, the representative of Switzerland said that his delegation considered enquiry points an important element of transparency especially for small countries. The representative of Korea said that there should be a single access point in each country for obtaining information. The difficulties associated with obtaining appropriate information in advance could become a barrier to suppliers' access to the international government procurement market.

69. The representative of Brazil said that the practice of accessing information through enquiry points was not new to the Parties to the Agreement on Government Procurement or to APEC Members and should be encouraged. The representative of the United States supported the establishment of enquiry points in individual Members. The representative of Japan said that the requirements on the establishment of enquiry points could be similar to the obligations under the Agreement on Technical Barriers to Trade and, therefore, would not be too burdensome. The representative of Pakistan said that, in the case of Pakistan, and possibly other countries, the involvement of various government departments in the tendering process imposed practical difficulties that made it virtually impossible to set up enquiry points. In response to the representative of Pakistan, the representative of Switzerland said that an enquiry point should not have to answer all technical questions, but should be the gateway to ensuring questions went to the right place and answers came back within a suitable time-period. The representative of Korea said that the use of electronic media could be one way of overcoming the difficulties of coordination between agencies and departments, in particular in Members with decentralized systems.

70. On notification of procurement statistics, the representatives of Brazil, Cuba and Malaysia said that any requirement for notification of statistical data on individual procurement processes would be burdensome and would go beyond the mandate of the Working Group. The representative of the United States said that statistical reporting had not been particularly effective under the Agreement on Government Procurement. Her delegation did not anticipate that a transparency agreement would include requirements in this respect. The representative of Switzerland said that, although it might be burdensome, statistical reporting was an important tool to show the effectiveness

of a procurement system and therefore, if the information was available, it would be useful to share it with WTO Members on a voluntary basis.

WTO Dispute Settlement Procedures

71. The representatives of the European Community, Switzerland and the United States said that the WTO DSU should apply to a future agreement in order to ensure the consistency of the overall WTO system.

72. The representative of Brazil said that, notwithstanding the systemic importance of a transparency agreement, his delegation had doubts about the efficiency of the linkage between a transparency agreement and the DSU. Any disputes would have to be limited to issues of compliance with the requirements of a transparency agreement. However, he did not see how subjecting an agreement to the DSU would ensure the enforceability of the rules, for instance through recourse to compensation or retaliation, in the absence of market trade interests.

73. The representative of the European Community said that the DSU should only apply to ensure compliance with basic transparency principles. While his delegation recognized that the absence of market access obligations made it more difficult to conceive application of dispute settlement, the existence of the dispute settlement mechanism in itself had some value-added in a transparency agreement. The DSU should apply in order to respect the integrity of the WTO system. The fact that the DSU could apply to the agreement could contribute towards establishing confidence in its application and operability. It would also help to ensure uniform interpretation of the obligations under the Agreement.

74. The representative of Switzerland said that the possibility of being taken before the DSB was a sufficient deterrent against any breach of transparency obligations.

75. The representative of Hungary said that her delegation considered that the application of dispute settlement procedures was an important component of a future agreement on transparency in government procurement.

76. The representative of the United States said that application of the DSU was an issue that required special consideration within the Working Group. For instance, the types of disputes that would arise under a transparency agreement, appropriate remedies and the possibility for cross-retaliation needed further discussion. Her delegation suggested that this issue be the subject of focused discussions at the next meeting of the Working Group based on submissions by Members.

77. The representative of Japan said that a future transparency agreement should contain provisions on dispute settlement including provisions on consultations and the application of additional and specific procedures. However, the application of those procedures could not be discussed in detail before the framework of the future transparency agreement and its specific obligations were known.

78. The representative of India, joined by the representatives of Egypt, Malaysia, China and Pakistan, said that transparency-related provisions would not call for a linkage to the DSU and there was no need for further work in the Working Group on this issue.

79. Commenting on the implications of the application of the DSU to a transparency agreement, the representative of Egypt said that the absence of market access commitments in itself was not a safeguard against a threat of cross-retaliation. His delegation had reservations on leaving the details of this issue to negotiations, and was convinced that the proper way would be to reach consensus beforehand.

80. The representative of Canada said that the issue of how the application of the DSU could work in the context of a transparency agreement should be explored further.

81. The representative of Pakistan said that Members should rethink the usefulness of applying dispute settlement to a future agreement, as the issue, being contentious, could prove to be a deal-breaker.

82. The representative of Nigeria said that his delegation remained unconvinced about the relevance of dispute settlement to transparency-related issues. Members should look at the possibility of developing generally acceptable principles and guidelines that could facilitate transparency.

83. The representative of Malaysia said that his delegation remained unconvinced of the need to have a linkage to the DSU since it would not apply to individual procurement decisions but to transparency practices. Whether or not an element on enforcement would be necessary would depend on the nature of the future agreement. The future provisions could be in the form of a declaration, an understanding among Members or an agreement with no linkage to the DSU. In his delegation's view, there was no need to have a binding agreement in the WTO on this subject.

84. The representative of the European Community said that the Singapore Ministerial Conference mandated the development of elements to be included in an appropriate agreement and not in an understanding. The transparency agreement would be an agreement that would fit within the WTO system. There was no reason to treat this agreement differently from all other WTO agreements which were subject to the DSU. How would compliance with the future agreement be assured without the possibility of recourse to the DSU?

Technical Cooperation and Special and Differential Treatment

85. On special and differential treatment, the representative of Brazil, joined by the representatives of the United States and Japan, said that the concept was important but the detailed examination of specific provisions should take place at an appropriate stage. The representative of the United States said that transitional periods rather than exclusions from obligations should be considered.

86. The representatives of Jordan, Morocco and China supported special and differential treatment for developing countries including transitional periods for the implementation of the obligations.

87. The representative of Malaysia said that the structure of a future agreement on transparency should reflect the developmental needs of developing countries, noting that transitional provisions for compliance with the obligations were no longer sufficient.

88. The representative of Rwanda, referring to economic, human resource and technical capacity constraints in some developing countries, underscored the need for capacity building to assist such countries to attain a good standard of transparency in their procurement systems. He called on donor agencies and other countries which had developed systems to help build capacity to ensure transparency.

89. The representative of Brazil said that his country had put considerable effort into improving its government procurement system. In addition to the achievements in the application of information technology, other key areas of progress had included legislative reform, capacity and institution building and human resource development. Brazil would be available to provide technical cooperation and capacity building within its limited resources. Interested Members could contact his authorities to determine the areas of cooperation.

90. The representative of China said that technical assistance should be provided to enhance the competitiveness of suppliers from developing countries in procurement markets of developed countries. Furthermore, cooperation among international agencies should be enhanced.

91. The representative of the European Community identified two key areas where technical cooperation was required: first, to address any potential conflict between a future agreement and domestic legislation of Members; and second, to build institutional capacity to comply with the provisions of a future agreement. The guiding principles of technical cooperation in these two areas should be, concerning the first area, the promotion of good governance and the rule of law, and, concerning the second, the development and strengthening of a modern and effective public administration. The European Community was open to specific requests for advice and assistance in this area.

B. TECHNICAL ASSISTANCE AND CAPACITY BUILDING

92. The representative of the United States introduced her delegation's communication entitled "Capacity Building Considerations relating to Transparency in Government Procurement" contained in document WT/WGTGP/W/34.

93. The representative of Brazil said that the United States communication underscored the important role technical cooperation could play in the process embarked upon in the Working Group. In Brazil's experience, developing capacity in government procurement, including legislation, development and information technology aspects, required time and considerable effort. Brazil therefore considered the issue of technical assistance and capacity building to be both a vital and urgent requirement, noting that the sooner that this could be embarked upon, the greater would be the ease in working in the Working Group. The work that the WTO was doing was very important but it was limited to the aspect of building awareness. It should also have a complement of getting technical cooperation working on the ground. Joined by the representative of India, he suggested that the stakeholders in this area, including the multilateral agencies, donors and recipients should be brought together. It could be a useful contribution to the work of this Group if the Secretariat could build in a component on technical cooperation in the Symposium planned for next year to allow discussion on possible ways and solutions to enhance cooperation among the bilateral and multilateral donors and interested recipients.

94. The representative of Canada said that her delegation encouraged all Members to consider the answers to the practical questions raised in the United States paper related to implementation within their own economies. Many of these questions had also been identified in the communication by Canada on transparency of contract awards contained in document WT/WGTGP/W/36.

95. The representative of the Secretariat provided information on the technical assistance activities that it had been engaged in since the May 2002 meeting. A sub-regional workshop for the Central American countries had been organized jointly with the Inter-American Development Bank in San José, Costa Rica on 5-6 September 2002. Twenty-five participants from the seven countries in the region, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama and the Dominican Republic, and representatives from Ecuador and Colombia had participated in the Workshop. The Secretariat would hold a similar workshop for the Caribbean countries in Kingston, Jamaica on 12-14 November 2002 with the funding provided by the Inter-American Development Bank through its affiliate INTAL. Furthermore, the Secretariat had organized a Symposium in Geneva for Geneva-based delegations on 9-10 October 2002. A considerable number of capital-based delegates had also taken advantage of this activity, and to facilitate the participation of such delegates from least-developed countries the Secretariat had been able to draw upon the Global Trust Fund for Technical Cooperation. The Secretariat was exploring the possibility of organizing a couple of national workshops before the end of 2002 for the countries which were on the list of the Secretariat's Coordinated Plan for 2002. Turning to the plans for 2003, he said that the Secretariat had four types

of activities in mind. Probably the most important were regional workshops. The Secretariat's intention was that before Cancún there would have been one regional workshop in each of the developing country regions. The Secretariat would do this, wherever possible, in cooperation with other intergovernmental organizations, in particular with the World Bank and the regional development banks who had the expertise in this area. In the first quarter of 2003, the Secretariat would have two regional events in Africa, one in mid-January for the English-speaking African countries, and another one in April for French-speaking African countries. In the second quarter of 2003, the Secretariat would have a regional event in the Asia-Pacific region, and a regional seminar for the Latin American countries that had not already been covered by the sub-regional events in 2002. The Secretariat would also like to have a regional event for the Central and Eastern European countries and the Central Asian countries, which had expressed their interest. This event would probably have to be held after the Cancún Meeting. The second line of activity of the Secretariat would be national events. The Secretariat had a number of countries inscribed in the plan for 2003. Thirdly, the Secretariat was planning to hold a further Geneva symposium in July 2003 which would be held back-to-back with a meeting of the Working Group, so as to facilitate the participation of as many interested people as possible. Fourthly, there were a large and quite rapidly increasing number of general Secretariat training activities of a national or regional kind, both in Geneva and in developing countries. These covered either WTO issues as a whole or Singapore issues, and the Secretariat would be contributing to these activities with regard to government procurement matters. Finally, in response to the point that had been raised by Brazil, he recalled that, precisely for the reasons identified by the representative of Brazil, in March 2002 the Secretariat had had an inter-agency meeting in Washington in order to try to maximize coordination and cooperation, and to seek the assistance of other intergovernmental organizations who were active in this area to help in responding to the terms of the Doha Declaration. That had been an inter-Secretariat event, which was not in itself a replacement for the broader concept referred to by the representative of Brazil. If there were an interest in organizing an event of that sort, the Secretariat would be ready to help in organizing it.

96. The representative of Korea said that more efforts should be devoted to strengthening developing countries' capacity through symposia and regional seminars. In parallel with this effort, a more systematic way to help build transparency into their procurement systems should also be considered. In this vein, efforts were also needed by developing countries to identify their specific needs because a demand-driven approach for capacity building was more effective.

97. The representative of Morocco said that capacity building and technical assistance would be crucial to enable governments to benefit from transparency. Technical assistance could focus on certain specific issues, such as the application of information technology to government procurement, the training of procurement professionals, the preparation of handbooks and management guides.

98. The representative of Lesotho said that the Symposium had come at a time when Lesotho was actively engaged in a rigorous and comprehensive programme to reform government procurement. He requested further assistance for Lesotho in terms of pursuing that reform initiative which his government was deeply committed to.

99. The representative of Malawi said that his country had recently embarked on procurement reforms with the assistance of the World Bank. Capacity building was an important element of that reform. He therefore called on the WTO and developed country Members to provide the necessary assistance, for instance to train procurement officials to carry out procurement transparently. Malawi viewed capacity building as an important tool not only for promoting transparency in government procurement, but also for the successful implementation of an eventual transparency agreement. Not all developing countries were at the same level of development and those developing countries that were advanced in their government procurement reforms could assist Malawi in this area.

100. The representative of Australia said that his delegation was encouraged by the positive reports on the range of technical assistance activities undertaken by the WTO. Australia acknowledged the important role of technical assistance and capacity building but also believed that developing and least-developed countries were best placed to assess their own technical assistance and capacity-building needs. Therefore, he encouraged those countries to articulate and communicate their specific needs and priorities to both the Secretariat and to the Working Group. Technical assistance should stay focused on WTO-specific issues, particularly enhancing Members' understanding of the implications of a multilateral agreement on transparency in government procurement. The Working Group should focus on issues directly related to decisions that would be taken at the Fifth Ministerial Conference.

101. The representative of Canada expressed his delegation's satisfaction with the collaborative efforts of the WTO with the Inter-American Development Bank. She encouraged the Secretariat's plans for further inter-agency collaboration to ensure that human and financial resources dedicated to technical assistance and capacity building be fully and effectively utilised. Further, she agreed that developing and least-developed countries were best placed to identify their technical assistance and capacity-building needs. Canada remained ready to contribute to the collective effort to address those needs as they were identified by developing and least-developed countries.

102. The representative of Mali said that human resources development was important to ensure sufficient capacity for seeking as well as awarding government contracts. Therefore, it was desirable to strengthen companies' capacity. In Mali there was a gap between the information available for awarding contracts and the ability of enterprises and companies to use that information. Appropriate ways should be developed to bridge that gap for the small and medium enterprises and local communities.

103. The representative of the European Community said that the United States submission was a useful contribution to the debate on technical assistance and capacity building. The organization of the Symposium back to back with the meeting of the Working Group was welcome because the discussions in the Working Group also had a pedagogic component, which was very useful for many countries that often did not have the opportunity to attend the meetings of the Group. He hoped that capital-based participants would be able to continue attending the meetings of the Working Group.

104. The representative of Nigeria said that the communication by the United States had raised thought-provoking issues and showed that the United States was really taking time to look at technical assistance and capacity building. Notwithstanding the question raised by the representative of India about measuring the benefits of transparency, his delegation believed that the benefits were tangible and enormous. The problem lay with the transparency of the procurement rules and procedures, and obtaining information on specific procurements. Referring to the issues raised in the session on technical cooperation and capacity building at the Symposium the previous day, he said that there was a mismatch between the commitments to be undertaken and the capabilities that were available. Furthermore, resource shortage, limited expertise, weak public administrations and the lack of supporting institutions were all critical issues that went beyond the kind of technical assistance that the WTO could provide. The issues related to infrastructures in place in capitals were crucial and should be addressed in cooperation with multilateral development banks.

105. The representative of Brazil said that, although he agreed with the view that enhancing awareness of the benefits of an agreement on transparency in government procurement was a fundamental aspect of technical assistance, he could not agree that technical assistance should be limited to that, for the following reasons. First, in light of the experience of the Uruguay Round, there were still several developing and least-developed countries requesting assistance to understand the agreements they had signed up to and to implement the commitments they had undertaken. Whatever measure one took, seven-and-a-half years to get things working could only be described as a failure of the negotiating process, and Members should avoid repeating the same mistake in the forthcoming

Round. Second, Members needed to be more ambitious in technical cooperation because awareness gave Members a theoretical, abstract knowledge of the issues. In contrast, technical cooperation would give them a hands-on experience of the issues being dealt with. There was nothing that contributed to hesitation more than lack of knowledge. Therefore, the best service to the work of the Group would be to get concrete and practical knowledge into all developing and least-developed countries as to the mechanics of transparency in government procurement.

C. OBSERVER STATUS OF INTERNATIONAL INTERGOVERNMENTAL ORGANIZATIONS

106. The Chairman said that, at its past meetings, the Working Group had considered requests for observer status from three international intergovernmental organizations (OECD, SELA and the Organization of the Islamic Conference) and agreed to revert to these requests in the light of the ongoing consultations in the framework of the General Council. Given the overall status in the WTO regarding this matter, he suggested that the Working Group revert to this matter at its next meeting in the light of developments in those consultations.

D. DATE OF THE NEXT MEETING

107. The Chairman said that, as agreed at the informal meeting held in March, the third meeting of the Working Group would be held on 29 November 2002. The meeting would be primarily for the purpose of approving the Group's Report to the General Council on its activities in 2002.

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 29 NOVEMBER 2002

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its sixteenth meeting on 29 November 2002 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica).
2. The agenda for the meeting consisted of: (i) review and approval of the draft report (2002); and (ii) other business.
 - A. ANNUAL REPORT
 3. The Working Group adopted its Annual Report for 2002 to the General Council on the basis of a draft prepared by the Secretariat. The report was subsequently circulated as document WT/WGTGP/6.
 - B. OTHER BUSINESS
 - (i) *Statement by the Dominican Republic*
 4. The representative of the Dominican Republic confirmed her Government's commitment to paragraph 26 of the Doha Ministerial Declaration that negotiations be held on a multilateral agreement on transparency in government procurement, on the basis of a decision to be taken, by explicit consensus, at the 5th Ministerial Conference with regard to modalities of holding such negotiations. The Dominican Republic undertook to participate in the work of the Working Group identifying the elements that the agreement should include, on the basis of the precepts of the Doha Ministerial Declaration that negotiations should take account of the priorities of developing country Members and that negotiations should be confined to transparency. She recognized that the work of the Working Group on Transparency in Government Procurement had made significant progress over the last six years in identifying and developing the elements of an agreement on transparency in government procurement and she reiterated her Government's undertaking to cooperate in furthering that progress.
 - (ii) *Scheduling of meetings in 2003*
 5. The Working Group agreed to hold two substantive meetings before the Cancun Ministerial Conference. The first substantive meeting would be held on 7 February and the second in June 2003. There would be a third meeting in late Autumn which would be primarily for the purpose of approving the Annual Report for 2003 to the General Council.

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 29 MAY 2002

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its fourteenth meeting on 29 May 2002 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica).

2. The agenda for the meeting consisted of: (i) transparency-related provisions in existing international instruments on government procurement and national procedures and practices; (ii) technical assistance and capacity building; (iii) observer status of international intergovernmental organizations; and (iv) date of the next meeting. In response to a suggestion by the representative of India, the Chairman said that those delegations who wished to make general comments could do so at the beginning of the meeting. The Working Group agreed to adopt the agenda as proposed.

A. GENERAL COMMENTS

3. Recalling the mandate in paragraph 26 of the Doha Ministerial Declaration, the representative of Honduras said that negotiations on transparency in government procurement after the Fifth Ministerial Conference shall be held on the basis of a decision to be adopted by explicit consensus concerning the modalities of those negotiations, take into account developmental priorities, and be limited to transparency aspects of government procurement. Honduras considered that the Group had made significant progress in identifying and developing elements for inclusion in an agreement on transparency in government procurement, and therefore its delegation reiterated its commitment to participating in the negotiations after the Fifth Ministerial Conference.

4. The representative of India said that the mandate in the Doha Ministerial Declaration had to be read in conjunction with the statement by the Chairman of the Ministerial Conference prior to the adoption of the Declaration expressing his understanding in relation to Singapore issues. Since the Chairman's Understanding had been arrived at on the basis of consultations with Members and had not been opposed by any delegation, his delegation believed that it was binding on all Members even though it had not been included in the text of the Ministerial Declaration. His delegation therefore believed that there should be no attempt at consensus building on the various issues before the Working Group. Any Member would have the right to take a position that would prevent a decision on launching negotiations in this area at the Fifth Ministerial Conference. The study phase was solely aimed at furthering the understanding of Members on various issues. The representative of Malaysia said the Group was still at the study phase. The Ministers would have to agree on the modalities for negotiations by explicit consensus at the next Ministerial meeting before moving on to the negotiating phase.

5. The representative of India said that the mandate of the Working Group did not extend to market access issues, such as the grant of preferences to domestic suppliers and supplies. Therefore the main issue before the Group was to gain a greater understanding of the meaning of transparency in the context of government procurement. All the elements identified in the informal note by the Chair "List of Issues Raised and Points Made", were in fact elements common to procurement systems in place in any of the Members, but there had been differences among Members in identifying the transparency-related aspects of these elements. Elements such as procurement methods, time-periods, decisions relating to evaluation of offers and awarding of contracts, domestic

review mechanism, and application of the WTO Dispute Settlement Understanding were not directly related to the issue of transparency, and hence should not form part of the work of the Group. In the context of the WTO, transparency involved the obligation to make information on related laws and regulations available and the obligation to provide notifications to WTO Members of these laws and regulations, including any changes thereto, without questioning the fairness and reasonableness of the laws themselves. The issue of the administration of laws and regulations related to government procurement did not fall within the purview of transparency. The representative of Malaysia said that there were elements in the Note by the Chairman "List of Issues Raised and Points Made" that were not related to transparency *per se*, and delved into the area of market access. In addition to the elements relating to domestic review procedures and making a transparency agreement subject to the WTO Dispute Settlement Understanding, his delegation was prepared to consider other elements that may need to be deleted from the "List of Issues Raised and Points Made" for the purposes of the transparency agreement.

6. The representative of the United States said that his delegation recognized that that discussion on transparency aspects could to an extent creep into market access questions and consideration could be given to how this could be limited. It had to be recognized also that even issues that may delve into market access also had transparency components. In the course of its examination of individual elements, the Group should try to identify the specific characteristics which related to transparency. The delegation of Switzerland recognized that, although transparency and market access questions were not sometimes easy to separate, given the quantity of work accomplished on the basis of the "List of Issues Raised and Points Made", Switzerland believed that the Group should continue discussion on the basis of the issues listed in that document.

7. Joined by the representative of Malaysia, the representative said that government procurement played an important role in nation building. It was an important policy tool in relation to social and economic development in developing countries in particular for promoting the development of small and medium enterprises and disadvantaged regions. Given this aspect of government procurement, caution was required in moving forward in this area, albeit the work was limited to transparency. A transparency agreement should impose no obligation on Members to change their domestic laws and regulations given the near unanimous view in the Working Group that the primacy of the domestic rules and regulations should be fully preserved. In this regard, the representative of Malaysia added that the mandates on transparency in the Singapore and Doha Declarations recognized that any eventual agreement shall be based on national practices. The representative of India said that, in spite of the generally shared view that transparency was important in all fields including in government procurement, differences remained among Members with regard to consideration of future obligations in this area. The issue was complex for India since numerous government departments were involved in government procurement. The complexity would remain even if future obligations were to be limited to central or federal government departments. The representative of the United States said that his delegation agreed with the delegation of India that government procurement was an important policy tool for realizing socio-economic and other benefits associated with nation building; however it remained unclear whether a lack of transparency in pursuing such a policy tool provided any benefits. He recognized that, although transparency was critical to nation building, the issue was more a question of the orientation of government procurement as a policy tool. In responding to the representative of the United States, the representative of India considered that the available policy options should be preserved in the context of government procurement. The domestic procurement process in India was as transparent as similar systems in other countries, including those existing in the United States.

8. Regarding the Group's ongoing work, the representative of India said that some developing country Members would be interested in continuing the study process in all Singapore issues with a view to achieving a better understanding of the complex issues involved. In his view, developing countries did not have capacity to take on additional obligations and the provision of technical assistance would not be sufficient to implement future obligations. Moreover it was difficult to

estimate the technical assistance needs of developing countries in this area during the study phase. Developing countries faced problems regarding the implementation of the existing WTO agreements and the ongoing work programme under the Doha Development Agenda increased the burden on smaller Members. Many of the existing special and differential treatment provisions in WTO agreements were not mandatory and developing countries therefore did not reap the benefits anticipated at the conclusion of the Uruguay Round. In response, the representative of the United States, joined by the representatives of the European Community and Canada, said that the issues before the Working Group had been covered in considerable detail in the Group. Discussions had been ongoing for five years, numerous documents had been produced both by developed and developing countries, and the "List of Issues Raised and Points Made" had been revised six times. There had been active engagement by many delegations from both developing and developed countries, and there had been extensive repetition in recent meetings of positions associated with the elements in the "List of Issues Raised and Points Made". His delegation therefore considered that most countries had gained a sufficient understanding of the issues. Divergences could only be resolved through negotiation. The representative of the European Community considered that the work programme in the informal note by the Chairman had been agreed by all Members so as to ensure further discussion of the key issues, and that the extra time available to discuss the issues before the Group should lead to a better understanding of the fundamental principles on which an agreement could be based, and should provide the Group with a springboard to move on to the next stage. Technical assistance had an important role in view of the differing levels of development of Members. The delegation of Canada considered that at present the Group should work towards achieving a clearer understanding of what a future transparency agreement would look like. The delegation of Switzerland said that decisions should be made and negotiations initiated shortly, and encouraged Members believing that the study process was continuing to make contributions on the issues in question in order to undertake further discussions. His delegation encouraged the setting out of explicit problems that would be faced by developing country Members concluding a multilateral agreement so that no time was lost in tackling these issues.

9. The representative of India expressed concern that the main agenda for the European Community was to use an eventual agreement on transparency to address market access issues. He noted that the representative of the European Community had referred to a 'springboard to move on to the next stage' and stated that the threat contained therein, to move further on market access issues on completion of the work of the Group on Transparency, diminished the support from developing countries for the development of rules on transparency. He said that India, as well as other delegations sharing similar concerns, were opposed to any such movement. In that connection, he reiterated that the Doha Ministerial mandate had excluded any discussion which went beyond transparency. In response, the representative of the European Community said that the statement made by his delegation had been misunderstood, since the reference to using the discussions which would take place in the Working Group during the first and second meetings of 2002 as a 'springboard for the next stage' referred to the work which would be ongoing in 2003 and onwards towards the fifth Ministerial Conference. He reiterated that the European Community supported the mandate as it stood, including the reference to any agreement being limited to transparency issues.

10. The representative of Chile said that there appeared to be a certain agreement within the Group that the mandate did not extend to market access issues. Chile accepted the mandate as it stood. The representative of Venezuela stated that the Group should concentrate strictly on what was said in the mandate, that is to say merely transparency. Joined by Switzerland, the representative of the European Community recalled the importance of the commitment made at Doha on the need to provide technical assistance and capacity building. The representative of Canada said that her delegation supported, had supported and continued to support both the Singapore and Doha mandates, and was supportive of the work programme developed at the March informal meeting. Transparency could be pursued in government procurement in a way which did not restrict, using the words from the mandate, "the scope for countries to give preference to domestic supplies and suppliers".

11. Joined by the representative of Malaysia, the representative of India suggested that, at the next meeting of the Working Group, a separate agenda item be listed for a discussion aimed at reaching a consensus on those elements that could be categorized as directly related to transparency and were appropriate to include in a transparency agreement. In response, the United States joined by the representative of Switzerland, said that further reflection was warranted on the necessity of such an agenda item.

12. The Chairman noted that the discussion on the 12 issues should give all delegations an opportunity to voice their opinions about the inclusion of these elements within a possible outcome of the work of the Group.

13. In response to the suggestion by the representative of India that the Doha Ministerial mandate in relation to the work of the Working Group be discussed, the representative of the European Community, supported by the representative of Switzerland, said that neither the mandate itself nor the part related to modalities for negotiations formed part of the work programme agreed to by the Group at the March informal meeting. The European Community remained committed to achieving a transparency agreement in government procurement. The ground had already been covered in considerable detail. A work programme covering all the issues in the informal note by the Chairman of November 1999 had been agreed by the Group. His delegation considered, given the differences among Members' systems, that a non-prescriptive, principles-oriented approach allowing for some flexibility would best take into account the special needs of developing countries and help to create a rules-based environment characterized by transparency and access to all relevant information. He added that in the long run an agreement on transparency would strengthen domestic industry by encouraging competition, an effect that had already been witnessed in the European Community. Public expenditure would be reduced, purchasers would obtain better value for money, and undesirable practices would be discouraged.

14. The representative of Morocco said that since the recently introduced Moroccan legislation on government procurement was largely in conformity with international standards and rules, Morocco's support of a multilateral agreement would not appear to pose any problem. Morocco had notified its national legislation in the area of government procurement in document WT/WGTGP/W/19 dated 20 July 1998. He said that an agreement should be limited to stipulating transparency and there should be no attempt at developing prescriptive rules in regard to different situations. It would be important to recognize the utility and productivity of rules on transparency agreed to between countries. Given the different stages of development of transparency and competition systems among countries, an agreement should not impinge on national specificities in that the mechanism of national preferences should be confirmed, and a time-frame should be put into place for the application of the different measures. Taking into account 'Special and Differential' provisions was an integral part of the full exercise of the Group. Such an approach would be in line with the concept of flexibility and progressivity. Morocco believed that the application of paragraph 26 of the Doha Declaration was essential in order to implement technical assistance and to enhance capacity building so as to permit Members to achieve explicit consensus on a multilateral agreement.

15. Reporting on developments in relation to national procurement systems, the representative of Venezuela emphasized the importance of government procurement and transparency to Venezuela, stating that in 2000, expenditure on government procurement had amounted to U.S. \$9.0 billion. National legislation of Venezuela had been enacted at the end of 2001.

B. TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES

16. For the discussion of this agenda item, the Working Group had before it a discussion paper from Australia on Procurement Methods (WT/WGTGP/W/31) and the note by the Secretariat "Work

of the Working Group on Matters Related to Items I-V of the List of Issues Raised and Points Made" (WT/WGTGP/W/32). The note by the Secretariat had been prepared in response to the request made by the Group at its informal meeting held in March. It aimed to facilitate discussion in the Working Group by providing a more concise note than the Informal Note by the Chairman "List of Issues Raised and Points Made", as well as taking into account subsequent discussions in the Group and submissions made by Members. Being a summary, the note did not contain all the details of the points made and explanations given. For more detailed information, delegations should consult additional documents such as the informal note by the Chairman and other documentation such as the minutes of meetings. The note also contained an Annex listing the documents, categorized under a number of headings, that had been presented to the Working Group so far.

17. The representative of the European Community, joined by the representatives of the United States, Switzerland, Canada, Venezuela, Indonesia, Chile and Australia, thanked the Secretariat for its summary note. The representatives of the United States, the European Community, and Chile said that the note would help to provide a more concise focus for future discussions, as well as clearly identifying the issues discussed in the past. The representative of India commented that the note was useful to the extent of assisting delegations that had not been able to actively participate in the discussions so far. Joined by the representatives of the United States and Chile, he said that the basic working document should remain the "List of Issues Raised and Points Made" (JOB(99)6782) of November 1999, supplemented by the minutes of the meetings. The representative of Indonesia said that the note did not contain all the points made by his delegation previously.

18. The representative of the United States commented that with respect to the items covered by the summary there appeared to be few areas where there were significant variations in practice, and that the information on international instruments and practices suggested the existence of a common minimum level of procedures and practices associated with transparency. Additionally, many details of each element had been identified which had been discussed at length in the Group. The United States believed that there would be greater convergence on these elements through negotiation, as exemplified by the item relating to Definition and Scope.

19. The delegation of Venezuela said that, in the study phase, Members could review national legislation relating to government procurement. Venezuela was willing to submit information on its legislation to other Members. The Chairman pointed out that only ten delegations had so far shared information on their national procurement systems and practice and encouraged delegations to continue providing information to the Group on their national practice. The representative of the United States commented that the exchange of information in national legislation should be a continuous process in the Working Group. Surveys had been carried out regarding national legislation, and the relevant documents had been identified in the summary note by the Secretariat. The representatives of Malaysia and India encouraged greater participation of Members in the discussions of the Working Group, given the Group's engagement in the study phase.

20. The Working Group took up the items I-IV in the informal note by the Chairman "List of Issues Raised and Points Made" (JOB(99)6782) of November 1999, commenting on each item in turn and using the summary in the note by the Secretariat "Work of the Working Group on Matters Related to Items I-V of the List of Issues Raised and Points Made" (WT/WGTGP/W/32).

Definition and Scope of Government Procurement

21. The representative of the European Community, joined by the representative of the United States, said that, in the absence of lists of covered entities which provided certainty about the scope and coverage of rules, a definition of government procurement was especially important in a transparency agreement. His delegation considered that, although the contours of a definition remained a matter for further discussion, any definition which was eventually arrived at should be as broad as most Members could agree to. The representative of India, joined by the representative of

Malaysia, said that a wide divergence remained in the Group on the question of definition. The study phase should be used for a better understanding of the various issues related to definition. This issue should be resolved through discussions in the Working Group rather than through negotiations.

22. The representative of India, joined by the representative of Indonesia, disagreed with the statement in paragraph 10 of the summary note, that there appeared to have been a general acceptance that a broad conception could be employed for the purposes of the study phase. No distinction should be made in the Group between definition and scope of government procurement for the study phase and for the purpose of rules that may be negotiated. By way of clarification, the Chairman said that the reference in paragraph 10 of the summary note to a broad conception was concerned with and related to the study phase of the Working Group. The representative of the European Community added that the wording used in the 'List of Issues Raised and Points Made' was very similar to that used in the summary note.

23. The representative of Indonesia said that, in regard to the definition and scope of government procurement, many delegations, especially those from developing countries, had yet to fully understand the implications of an eventual transparency agreement. Further, the Group must be convinced that the implementation of an agreement would not be unbalanced as between developing and developed countries.

24. The representative of the United States commented that guidance was lacking in relation to a definition in the context of an agreement which did not contain lists of covered entities, but noted that GATT Article III:8 and GATS Article XIII could potentially provide such guidance.

25. Commenting on the coverage of a transparency agreement, the representative of India said that coverage should reflect the common minimum standards of national procurement systems, and that commitments undertaken should not be onerous or self-defeating in reference to the ultimate goal of improving the transparency of Members' procurement systems. The representative of Switzerland said that, since the agreement was concerned with transparency, he considered that it was logical that coverage should be as extensive as possible, although flexibility was required in order to manage the implementation of any future agreement.

26. Observations were made on the question of whether the rules of a transparency agreement should extend to procurement by entities at all levels of government or at the central level of government only. The representative of India, joined by the representative of Indonesia, said that the scope of a transparency agreement should be limited to central/federal government entities. The representative of India said that, in India, multiple governmental departments at different levels procured according to rules and procedures tailored to suit individual operational ability, and that therefore procurement practice was not uniform nationally. Decentralized procurement was encouraged as reflective of the local conditions and enhanced efficiency, and state governments had enacted procurement-related laws according to their needs. Nationally, general financial rules provided the outline within which procurement was undertaken by federal Ministries and departments. Most public procurement contracts were checked through a post-audit system, and main procuring departments had dedicated audit teams permanently monitoring procurement activities. There was considerable difficulty in listing out all procuring entities, or providing details of the quantum of procurement taking place due to the vast numbers involved, and hence universal coverage of procuring entities at India's various levels of government was not feasible. Despite the difficulties outlined above, independent assessment of the system in India had shown the existing system to be delivering efficiently and in a cost-effective manner. The applicability of procurement rules and regulations to public utilities and public sector entities was currently in a state of flux in India, due to privatization currently under way; therefore there was little or no governmental control over the purchasing decisions of such entities. Even where the government was the majority stakeholder, almost all sectors in which such entities operated had been opened to private sector participation, which had caused public entities to lose their monopoly character and operate on commercial terms.

Under these circumstances, the application of transparency requirements solely to public entities without private-sector competitors being subject to the same requirements would result in unfairness. In India, even if obligations were limited to central government entities only, coordination between the numerous departments would involve difficulty.

27. The representative of the United States said that sub-central entities should be covered under a transparency agreement. The comments by the delegation of India on the challenges faced by state-owned enterprises were very useful, and noted that information of this kind could inform the positions eventually taken in the negotiations. The representative of Venezuela said that the coverage of legislation introduced in Venezuela in 2002 extended to both central and sub-central entities.

28. On the question of threshold levels, the representative of India, joined by the representatives of Malaysia, Indonesia and the European Community, supported the use of threshold levels for the purposes of the application of requirements in a transparency agreement. The representative of Indonesia added that the inclusion of minor procurements within the scope of a transparency agreement could impose an undue burden on entities in developing countries. The representative of India, supported by the representative of Malaysia, suggested having a higher threshold for contracts subject to any future obligations as a 'Special and Differential Treatment' provision for developing countries.

29. The representative of the European Community said that his delegation believed that there was scope in the area of thresholds for differential treatment. Agreeing with the representative of India, he said that there was merit in having higher thresholds for those developing countries with reasons, such as insufficient administrative capacity, which would prevent them from complying with the provisions that would apply to developed countries. The representative of Switzerland said that the flexibility required in order to manage the implementation of any future agreement could be achieved through the use of thresholds or exceptions. The formulation of these possibilities should be carried out in the Working Group through negotiations and should depend on the level of commitments undertaken by Members requesting flexibility.

30. With regard to exceptions from coverage, the representative of India said that the possibility of exempting procurements related to social, economic and developmental policies from the ambit of the exercise of the Working Group be recognized, and a 'Special and Differential Treatment' provision for developing countries considered in this context. He said that many Members of the Working Group recognized that the exceptions to the GATT 1994 and the GATS on grounds of security or other grounds should be similarly built into any future multilateral transparency provisions on government procurement. The Working Group could consider exceptions for regional and social development, in the light of the role of government procurement as a policy tool.

31. With regard to the question of whether the scope of an agreement should include both goods and services, the representatives of India, Malaysia and Indonesia stated that procurement of services should be excluded from the scope of the work of the Working Group. The representative of India said a combination of goods and services should also be excluded given that the relationship between elements identified as related to the transparency aspect of procurement and their application in the larger context of procurement required further examination and clarification. The representative of India added that the services sectors in developing countries were not as advanced as those in developed countries. The representative of Indonesia said that, although his delegation recognized that in practice it could be difficult to distinguish between services and goods, and that often mixed contracts involved both goods and services, procurement in the services sector in developing countries was less systematized than that in the goods sector. There should be differentiation with regard to the procurement of services, given that the scope and coverage was different to that of goods. The United States, joined by the representative of Switzerland, stated that scope should include services. The representative of Switzerland recalled the submission made by his delegation in 2000 to the Working Group (JOB(00)/5645) on this subject.

32. The representatives of India and Malaysia stated that the issue of services procurement was currently being discussed in the Working Party on GATS Rules. The representative of Switzerland said that the overlap which existed to some extent between the work of the respective forums should not exclude the possibility of the issue of services being addressed in the Working Group, due to the close link between services and goods. He added that it would be more complicated, especially for developing country Members, to separate, in many cases artificially, services from goods procurement.

33. The representative of India, joined by the representative of Malaysia, said that procurement not open to foreign suppliers should not form part of the discussions of the Working Group. In this regard, India had suggested the possibility of having different rules for procurement open to foreign suppliers and procurement reserved for domestic suppliers. In relation to the grant of preferences to domestic suppliers and supplies, and also in regard to pursuing policies of economic, social and regional development, there should be no restriction concerning procurement policy *per se*. The representative of the United States asked how a procurement that was not open to foreign suppliers would be defined. Would preferences to national suppliers qualify a procurement as open to foreign suppliers? Would a procurement restricted to domestic suppliers, goods or services, except where there was no domestic supplier, good or service, qualify that procurement as closed to foreign participation? In response, the representative of Malaysia said that, in its national practice, price preferences were clearly set out in the tender documents. If there was a price preference, the tender must necessarily be open to foreign suppliers. Transparency was in this way achieved, since foreign suppliers were not deceived into believing that they could make a successful bid without meeting these conditions. This national practice would continue to be followed as long as it remained to the developmental benefit of Malaysia. Supporting the view expressed by the representative of Malaysia, the representative of India added that procuring entities were free to determine whether individual tenders should be open to foreign suppliers. Where tenders were restricted to domestic suppliers, foreign suppliers would not submit their tenders. His delegation could not understand why any other WTO Member should be interested in these specific procurements. Entities should also be entitled to provide preferences, where procurements were open to foreign suppliers.

34. The representative of the United States said that his delegation had noted some concerns in regard to the perceived principle that under no circumstances should a transparency agreement alter domestic law or regulation. He asked whether, in an extreme situation in which there was no existing legislation on transparency, a transparency agreement would not lead to the development of national laws or regulations.

35. The representative of Chile said that the Indian delegation should define what would be included in the scope and definition of government procurement and what would be the percentage of government procurement in India that would be subjected to a transparency agreement according to the definition suggested by India. In response, the representative of India said that its position was designed to address its national concerns, and that the exercise of the Group was not simply a matter of assuming negotiations on transparency.

36. The representative of the United States questioned the suggestion by the delegation of India that there should be convergence of views in all respects through the current process, because this would suggest that all questions of scope were to be negotiated at the present stage. His delegation hoped that progress could be made in understanding positions more during the study phase before proceeding with negotiations after the next Ministerial Conference. In that regard he said that the comments by the delegation of India on the challenges faced by state-owned enterprises were useful, and noted that this was the kind of information that could inform the positions eventually taken into negotiations.

37. The representative of Malaysia said that his delegation recognized the importance of transparency. Joined by the representative of India, he emphasized the accountability of Members to

their citizens and the existence of audit systems designed to ensure transparency. The representative of India said that the divergences on the specific elements were not a question of developing countries versus developed; rather, it was a question of the implementation of any future obligations.

Procurement Methods

38. In introducing her delegation's submission on procurement methods (WT/WGTGP/W/31), the representative of Australia said her delegation supported a principles-based approach and had encouraged such an approach since pre-Seattle as the best way to achieve an agreement, given the differing systems of Members. Its submission on procurement methods focused on the benefits of a flexible, non-prescriptive approach to the selection of method of procurement. Governments should have the flexibility to choose from among a range of recognized procurement methods according to the circumstances of each individual procurement, and to this end prescribed conditions or monetary thresholds should not be attached to a specific method in a multilateral agreement. A non-prescriptive approach enabled governments to fully consider the particular requirements and market conditions relating to each procurement. A transparent and robust accountability and probity framework within which the process of selection could occur was required in order to ensure objective, fair and consistent treatment of tenderers, regardless of the procurement method selected. The provision of appropriate documentation of key decisions in the procurement process, including details of the methods selected, was an important element of such a transparent framework. Procurement as a policy tool was an important component of the overall performance of a government. Joined by the representatives of Malaysia and India, she said that a flexible non-prescriptive approach within a transparent process allowed governments to ensure the efficient and effective delivery of procurement objectives. The representatives of Malaysia and India said that any multilateral agreement should not question the right of a government to employ whatever method chosen by it, be prescriptive to the extent that the right to employ a particular method was questioned, or require that the reasons for having employed a particular method be divulged.

39. The representative of the United States, joined by the representatives of Canada, European Community and Switzerland, said that, in general terms and in the context of an agreement on transparency, their delegations shared the view of Australia with regard to the principle that governments should have flexibility to select the method best suited to their objectives and the situation of the procurement in question. The representative of the United States, joined by the representatives of Switzerland and the European Community said that procurement methods should be applied in a transparent and predictable manner. The representative of the European Community, supported by the representatives of the United States, Canada and Switzerland supported an approach covering any kind of procurement under transparency rules independently of the method used. They emphasized that the method of procurement chosen should not undermine the principles and objectives of any future agreement on transparency. The representatives of Switzerland and Canada said that open procurement should be the principal method used, as was pointed out in the international instruments referred to in the summary note. The delegation of Switzerland said that the UNCITRAL Model Law referred to exceptional and well-defined circumstances in which open procurement was not considered appropriate and alternative methods were offered. The use of the most transparent method, as well as encouraging open competition, would result in obtaining the best possible price from the supplier. The representative of India said that open tendering was the preferred method of procurement in most cases in India. However, factors which could influence the choice of method, such as the time available, the nature of the goods, and value of the procurement were also taken into consideration. In this regard, the emphasis in an agreement should be exclusively to provide information on the procurement method employed.

40. The representative of Switzerland, joined by the delegations of the European Community and Malaysia, said that their delegations supported the emphasis put by Australia in its communication on the need to embed the procurement process within a robust accountability and probity framework. The representative of Malaysia said that his delegation was opposed to any requirements in a

multilateral framework relating to accountability through judicial procedures or audit requirements giving WTO Members the right to question why a certain method had been selected. He said that such requirements were outside the ambit of a multilateral agreement, and reiterated in that regard the existence of domestic mechanisms and procedures designed to ensure accountability and transparency.

41. The representative of Malaysia, supported by the representative of India, asked whether, as per the approach suggested by Australia, there was agreement within the Group that the choice of the procurement method was a sovereign decision to be taken by the government of the procuring authority. If there were no interventions to the contrary, Malaysia would assume that agreement existed as to the appropriateness of the flexible approach advocated by Australia. The representative of India said that there seemed to be unanimity in the Group that governments should have the flexibility to choose from among a range of procurement methods according to the circumstances of each individual procurement. His delegation requested that this item be deleted from the "List of Issues Raised and Points Made", on the grounds that the item was not *per se* directly related to transparency, that a common understanding existed among Members of the Group that procurement entities should have the flexibility to choose from among a range of procurement methods according to the circumstances of each individual procurement and that there was no value in prescription, even in relation to guidelines. The representative of the United States said that his delegation disagreed with the suggestion that the item on procurement methods be removed from the "List of Issues Raised and Points Made", given that there was an interest that the choice of procurement method should be carried out on a transparent, predictable and non-arbitrary basis. The question should be discussed further within the Working Group.

Publication of Information on National Legislation and Procedures

42. The representative of India said that providing information on any aspect of the procurement process, whether information on national legislation and procedures or on procurement opportunities, was a transparency-related element, since complete disclosure of information aided efficient and fair procurement. Several countries had detailed web sites providing information on their procurement systems. Any efforts to expand the scope of information-related elements by proposing examination of the rules and laws, prescribing amendments to the laws, or listing out the content of the information would go beyond the mandate of the Working Group. The representative of Malaysia said that publication of information on national legislation and procedures was a key element in any transparency agreement. The representative of the European Community said that there appeared to be agreement in the Working Group that the availability of information on national legislation and procedures to all interested parties aided the efficiency of procurement and that common ground within the Group on this issue should be relatively easy to achieve.

43. On the question of the type of information to be made available, the representative of India said that requirements relating to the provision of complete information should take into account the administrative capacity of the procuring entity. The representative of the European Community considered that, at a minimum, all rules of general application should be published so as to increase procurement efficiency. The representative of Brazil said that this approach appeared to be similar to that in the provisions of Article X of GATT. The representative of Malaysia said that while it could be feasible to provide selected information on a particular procedure, providing complete information regarding national regulations and procedures, especially in one of the WTO languages, would be too onerous. He considered that it would be sufficient to state that the relevant information was available and to list the salient or most important features of the particular regulation or law. The representative of the European Community said that, while his delegation recognized the concerns of some Members with regard to the capacity of certain entities to provide information where information requirements were burdensome, he nonetheless emphasized that an essential element of transparency was the facilitation of access to laws, regulations and rules applicable to procurement.

44. With regard to the media to be used for the provision of information, the representatives of India, the European Community and the United States said that a non-prescriptive approach should be pursued in this respect. The representative of Australia said that, in Australia, each jurisdiction had a web site from which information about procurement policy and procedures, including complaints processes, could be accessed by potential suppliers.

45. The representative of the United States said that the summary note by the Secretariat did not fully reflect the national practices with respect to the way in which information on which laws, regulations and guidelines was published. The relevant information which was available in submissions and in the replies to the questionnaire of the GATS Working Group of 1997 could be provided in the course of a meeting. The representative of the Secretariat pointed out that the summary note was designed to provide an overview of the types of legal instruments that had been indicated in the information available to the Secretariat as relevant to the national procurement regimes. The question of publication had not been specifically dealt with in the note.

46. The representative of the European Community said that many Members had already put electronic procurement systems into practice. The European Community considered that each country should adopt the approach according best with its capacities. The representative of the United States joined by the representative of Brazil, said that the use of electronic media could ease administrative burdens and lower costs. The representative of Brazil said that there should be obligation to publish in some form of media, accompanied by a degree of flexibility as to how each Member shall implement such a provision. In Brazil legislation was published both in the official gazette and on the Internet.. The representative of Korea suggested that the requirement to publish could be met through publication in printed or electronic media, and considered that it was desirable to encourage the use of electronic means of publication to the greatest extent possible. The delegation of India stated that Members should be entitled to decide whether or not to publish the information electronically, and that the emphasis should be on making information available.

47. With regard to the use of electronic media, the representative of the European Community said that, in the light of the difficulties that could be encountered by developing countries with regard to capacity in this area, it was possible that developed countries could be required to apply a higher standard of information dissemination than would be required from developing countries, in particular with regard to use of electronic means of communication. In response to a question by the representative of Korea, the representative of the European Community said that a detailed proposal had not yet been prepared regarding the possible distinction referred to between developed and developing countries on the general application of electronic procurement, but that there were a number of ways of achieving the objective of allowing developing countries less stringent obligations in this area.

48. On the question of cost of accessing information, the representative of the United States said that prohibitive costs associated with obtaining information may reduce opportunities for interested suppliers to obtain information, which would in turn affect transparency. The representative of Malaysia, joined by the representative of India, stated that the issue of costs was more a matter of observance of the principles of non-discrimination and national treatment rather than of whether fees were charged and their level if they were. Governments should not be denied the possibility of charging appropriate fees provided these were charged in a non-discriminatory manner.

49. On the question of translation of information on national legislation and procedures, the representative of Venezuela said that, while his delegation was opposed to a general requirement of translation into a WTO language, translation could be considered in the case of an international tendering opportunity for the provision of goods not available domestically, although the onus for translation should remain on the private sector. The representative of Australia said that, in the first instance, information should be made available in the national language and that it should be at the discretion of Members whether to publish information in other languages. By way of clarification, the

representative of the European Community said that its proposal on the use of a WTO language had been intended only as one of the possibilities that could be examined. He recognized that a requirement of publication in all WTO languages would be unreasonable for many developing countries because of specific difficulties in terms of capacity that could be faced by them in this respect.

50. On the question of whether there should be a requirement for the establishment of an enquiry point from which information on national legislation or procedures could be obtained by interested parties, the representative of Australia, joined by the delegation of India, said that the establishment of enquiry points would be impractical, in the light of the decentralized nature of the national procurement systems. The representative of India added that an obligation to set up an enquiry point would be burdensome for developing countries. The representative of Korea said that an enquiry point was necessary to obtain information on national legislation or procedures. He highlighted the need for an enquiry point in decentralized procurement systems, where information was more difficult to obtain, and considered that an enquiry point could be a simple matter of having a designated agency set up a web site.

Information on Procurement Opportunities, Tendering and Qualification Requirements

51. The representative of the European Community, joined by the representatives of Thailand and Brazil, considered that any requirement for a list of essential procurement information should attempt to meet a minimum set of information requirements without being overly prescriptive. The representative of the United States emphasized that the principle contained in paragraph 41 of the summary note, that information should be sufficient to enable suppliers to assess their interest in the procurement and to submit responsive bids, was a basic principle associated with the provision of information on specific procurement opportunities. The representative of Brazil considered that the overriding principle in this area should be that the level of information required for a particular procurement be compatible with the procurement method chosen.

52. The representative of the United States said that further examination was required of issues such as how information should be provided, the type of information to be provided, whether there should be a distinction between open and selective procurement procedures, information associated with preferences to national supplies and suppliers, what could be considered as a criterion in the award of a contract, and information to be provided on small-value procurements.

53. The representative of India stated that the information content of tender opportunities should be left to that prescribed in the applicable national laws or in the procedures of the entities themselves. He said that any prescription regarding information on individual procurement opportunities had to be examined carefully, and that the requirement for providing information should take into account that limitations on providing information may exist due to low value of the procurement, the technology available to the procuring agency to disseminate the information, the cost of making such information available, and the tender being addressed to a small group of locally based contractors. He considered that several countries had detailed web sites providing information, including on individual procurement opportunities. The representative of the European Community said his delegation appreciated the difficulties that could be encountered by developing countries with regard to capacity in this area. His delegation recognized the possibility that developed countries could be required to apply a higher standard of information disclosure than that required from developing countries.

54. The representative of Thailand said that since government agencies in Thailand issued notices of invitation to tender throughout the year, translation requirements should be limited to big projects; otherwise, the requirement could become burdensome. The representative of Brazil, joined by the representative of Thailand, said that translation of all requests for tenders into an official WTO

language would be problematic. In this regard, the representative of Brazil noted the existence of 2,500 entities at the federal level authorized to conduct government procurement in Brazil.

55. With regard to how information on procurement opportunities should be made available, the representative of Brazil said that there should be publication in some form of media, accompanied by a degree of flexibility as to how each Member should implement such a provision. He said that in Brazil every notice of invitation was published in the official gazette and on the internet. Electronic publication of tenders resulted in cost savings, because entities could access past records of procurements of similar items, in order to find the lowest cost. The representative of Venezuela said that Venezuela had also introduced an electronic procurement system aimed at achieving greater transparency.

Time-periods

56. The representatives of India and Jamaica said that prescription of time-periods was not a matter of transparency. The representative of India said that time-periods should be set in a non-discriminatory manner and that entities should be able to decide time-periods on a case-by-case basis. The representative of Jamaica, joined by the representative of the United States, said that making known the specific time-periods applicable to a particular procurement was a transparency matter. The representative of India, joined by the European Community, said that information on time-periods, including any changes thereto, should be made available to suppliers. The representative of the United States said that time-periods should be sufficient to allow for responsive bidding, but that the period itself should be determined by national authorities or procurement entities as appropriate. The representative of Malaysia said that his delegation shared the view of the United States that the issue of time-limits was related to transparency to the extent that, if sufficient time was not provided or if sufficient time was provided to one party and not to others, transparency would be affected. Joined by the representative of Malaysia, the representative of India said that harmonization on this issue would not be advisable, on the basis of the wide divergence existing among national practices in this regard, as reflected in the "List of Issues Raised and Points Made". The representatives of Jamaica and Malaysia said that a transparency agreement should not have provisions setting out specific time-periods for each procurement method. The representative of the United States said that the United States was not seeking a specific regulatory framework on this issue, and had not advocated positions that suggested a harmonization or standardization of procurement practices.

57. The representative of India said that, since time-periods *per se* were not an element of transparency for the purposes of the work of the Group, they should be deleted from the "List of Issues Raised and Points Made". The representative of the United States, joined by the representative of Malaysia, said that the issue of time-periods required further debate. The representative of the European Community said that the question of time-periods had to be discussed in light of the use of electronic means of communication which allowed quicker responses to tenders than in the past.

Other Items in the List of Issues Raised and Points Made

58. The representative of India made comments relating to two other items in the "List of Issues Raised and Points Made", namely domestic review procedures and application of WTO dispute settlement procedures. On the question of whether there should be a requirement that a domestic review procedure be maintained, the representative of India reiterated that all WTO Members had adequate domestic administrative, audit and judicial mechanisms aimed at ensuring that all participants in the procurement process acted in conformity with the relevant rules and procedures. The primacy of domestic laws and procedures regarding this matter should be preserved and there should be no requirement to change them. India believed that developing countries within the Group were unanimously opposed to the prescription of minimum standards relating to domestic review mechanisms, and on that basis requested that the element be deleted from the Chairman's Checklist.

59. Regarding application of WTO dispute settlement procedures, the representative of India said that his delegation remained unconvinced of the need for any linkage between an agreement and the WTO Dispute Settlement Understanding, given the focus of the Group on transparency. The proponents of such a linkage were themselves not clear about how it would work, and there was no assurance that making the agreement subject to the Dispute Settlement Understanding would not lead to the overturning of procurement contracts already awarded. India's view was that the present system of redressal of complaints concerning procurement contracts through domestic mechanisms should continue. India believed that developing countries were concerned about a linkage with the WTO Dispute Settlement Understanding. In view of this, he suggested that the element be eliminated from the Chairman's Checklist.

60. The Chairman said that, as agreed at the March informal meeting, sub-items VI to XII of the Chairman's List of Issues Raised and Points made would be the principal focus of discussion at the next substantive meeting. These items were related to transparency of decisions on qualification (VI); transparency of decisions on contract awards (transparency of criteria, receipt and opening of tenders, *ex post* information on contract awards) (VII); domestic review procedures (VIII); other matters related to transparency (IX); information to be provided to other governments (information on national legislation, notification of national legislation, information on contract awards, statistical information) (X); WTO Dispute settlement procedures (XI); 'Special and Differential Treatment' and technical assistance (XII). He emphasized that the designation of the items VI to XIII as being the focus of the discussion for the next meeting did not exclude the possibility of the Group's discussing any of the other sub-items, which would remain part of the formal agenda for the next meeting. As agreed at the informal meeting, the Secretariat would prepare a short background note summarizing the work that had already taken place in the Working Group on the matters related to the sub-items VI to XII, drawing on and listing the documentation of the Group. He added that, given that the quality of discussions in the Group depended on written submissions to the Group, Members should make all possible efforts to prepare written contributions in advance of the meeting, and that these should be circulated through the Secretariat as soon as possible.

C. TECHNICAL ASSISTANCE AND CAPACITY BUILDING

61. Reporting on the activities in relation to technical assistance and capacity building in the area of government procurement pursuant to paragraph 26 of the Doha Ministerial Declaration, the representative of the Secretariat said that an informal note had been circulated at the Working Group's informal meeting on 12 March 2002 setting out the activities and plans in the area of transparency in government procurement. The note reflected the relevant information that had been made available to Members in the Coordinated WTO Secretariat Annual Technical Assistance Plan for 2002 (WT/COMTD/W/95/Rev.3). The financial constraint mentioned at the March informal meeting relating to the availability of adequate finance in order to execute the technical cooperation plan in the area of transparency in government procurement, had since been removed pursuant to the WTO pledging conference. Furthermore, the Secretariat was currently engaged, through recruitment, in reinforcing its human resource capacity for providing technical cooperation and capacity building in this area. With regard to cooperation with other intergovernmental organizations, the WTO Secretariat had hosted a meeting with the representatives of intergovernmental agencies on the subject of inter-agency cooperation on technical cooperation and capacity-building in the area of government procurement. The meeting had been held in Washington D.C. on 27-28 March 2002, back to back with a meeting of heads of procurement of the World Bank and Regional Development Banks, and had been attended by representatives of the World Bank, the African Development Bank, the Asian Development Bank, the Inter-American Development Bank, the Caribbean Development Bank, the European Bank for Reconstruction and Development, UNCTAD, UNCITRAL, ITC, OECD, and UNDP. The meeting had served as an opportunity to inform the procurement officials in other intergovernmental organizations of the WTO activities taking place in the area of government procurement. With a view to identifying areas of possible cooperation and coordination, information

relating to the plans and activities concerning government procurement of the organizations present had been exchanged. One of the possibilities of particular interest to the Secretariat was that of holding joint regional activities in cooperation with the regional development banks and the World Bank. The response on these proposed initiatives had been generally positive and the Secretariat was currently in the process of fleshing out the programme including the following events: joint projects planned with the IADB included a regional workshop for Central American countries in early September 2002 in Costa Rica, a regional workshop for Caribbean countries in mid-November 2002 and a regional workshop for the remaining countries in Latin America in early 2003. As regards Africa, a regional workshop had been foreseen for COMESA countries in cooperation with the African Development Bank, the World Bank and the COMESA secretariat in late 2002 or early 2003. It was hoped that there would be other joint projects with the African Development Bank and the World Bank for the countries in other sub-regions in Africa. As regards the Asian countries, joint activity with the Asian Development Bank was still under consideration. Furthermore, a Symposium was planned for October 2002 in Geneva back to back with the next meeting of the Working Group, intended for capital-based delegations as well as Geneva-based delegations. The Secretariat was also in contact with a number of the countries requesting national workshops and seminars, and it was hoped that as many as possible of these could be held before the end of 2002. The Secretariat had attended a meeting of the OECD Development Assistance Committee (OECD/DAC) on 14 March 2002. The meeting had discussed the organization of a workshop amongst OECD member countries and invited developing countries on the subject of capacity building and technical cooperation in the area of government procurement. The interest of the OECD/DAC was a follow-up to the OECD Recommendation for the Untying of Development Aid to Least-Developed Countries, which had increased interest in the reform of national procurement systems. The representative of Kenya, joined by the representatives of India, Colombia, the European Community and Thailand thanked the Secretariat for its report on planned technical assistance and capacity-building activities.

62. The Chairman said that developing countries were encouraged to clearly state their needs so that the technical assistance and capacity building process could take them into account. He invited comments from both developing and developed countries regarding initiatives and programmes.

63. The European Community said that the efforts made by the Secretariat in the area of training and technical assistance were complementary to the work carried out in the Working Group. His delegation reiterated the importance of technical assistance and capacity building, independently of the commitment undertaken pursuant to the Doha Ministerial Declaration. The representative of Canada said that Canada recognized that, in order to make progress towards a multilateral agreement and to ensure effective implementation of obligations and exercise of rights, full participation of the participants in the negotiation of the framework of such an agreement was required.

64. The representative of Venezuela said that technical assistance and capacity-building programmes should focus on issues of substantive nature including such issues as supporting domestic employment and development of small and medium enterprises as well as identifying ways in which suppliers in developing countries could participate in procurement by government entities in developed countries. While Venezuela supported the importance of curbing corruption and had to this end presented a submission to the Working Group. His delegation was concerned that the focus of the intergovernmental organizations participating in and funding regional workshops would be limited to concentrating on the avoidance of corruption in tendering procedures. Technical assistance and capacity-building programmes related to regional workshops should go beyond addressing concerns related to corruption. The sub-regional seminars in Latin America could serve as a means of divulging information and informing civil servants as to how government procurement could influence employment and development in general. He added that including considerations such as these would not constitute a diversion from the goals of the work of the Working Group.

65. The representative of Kenya supported by the representatives of the United States and India, said that the planned workshops and seminars aimed at providing technical assistance and capacity

building would enable his authorities to better understand the subject of government procurement and to assess its relevance in the WTO context. The delegation of India said his delegation was unsure as to what were the technical assistance needs, given that the Group was in the study phase, and that there were divergent views among Members on issues. The representative of Malaysia said that the provision of technical assistance should enable developing countries to achieve a better understanding of the implications of a transparency agreement on their developmental aspirations, which would allow them to assess whether to proceed towards a multilateral agreement. In the area of government procurement, as well as in the areas of trade and investment and trade and competition policy, technical assistance should not be related to the need for explicit consensus at the next Ministerial meeting on negotiations. In response to the reference by the representative of Malaysia to other Singapore issues, the representative of the United States said that each of the Singapore issues should be considered in terms of their individual merits, and in this regard added that technical assistance and capacity building could provide an opportunity for individual delegations to consider the issue of government procurement on its particular merits. The representative of Kenya, joined by the delegation of India, said that technical assistance should not lead the recipients to adopt a certain line of thought; rather, it should place them in a position to make an independent decision about whether the subject-matter merits further consideration. The representative of Malaysia shared the concerns expressed by the delegation of Kenya, particularly with regard to any notion that, once technical assistance was provided, as mandated in the Doha Ministerial Declaration, there would be a degree of automaticity with regard to entering negotiations. In response, the European Community stated that technical assistance should help the recipients arrive at independent judgements, and that constructive debate in full knowledge of the facts was the crux of the technical assistance programme.

66. The delegation of Kenya, joined by the representatives of Malaysia, the United States, Japan, Colombia, Canada, Jamaica and Turkey, said that consideration should be given to facilitating the participation of capital-based officials in the discussions ongoing in Geneva. Making progress and enhancing understanding in the area of transparency in government procurement depended to a large extent on substantial capital-based participation. The representative of Kenya added that this was the only way to build capacity. For instance, capital-based as well as Geneva-based participants should participate in the Symposium in October. The Chairman said there had been interest in gaining the participation of both Geneva- and capital-based representatives, which however depended on financial limitations. In response to a question on the participation of capital-based experts in the Symposium in October, the representative of the Secretariat said that any delegates from capitals intending to participate in the next meeting were entitled to attend the Symposium provided they covered their own expenses. On the question of whether the Secretariat could assist in financing the participation of a number of capital-based delegates at both the Symposium and the meeting of the Working Group, he said that some officials from least-developed countries might be included in this way, but he was not in a position to make a commitment as to such a possibility. He added that remarks on the importance of the presence of capital-based officials had been noted, and should be of some assistance in securing funding.

67. As regards the content of the technical assistance programmes, the Secretariat said that the WTO contribution in this phase should be linked to helping developing countries make informed decisions about their interest in and the implications of a possible multilateral framework in the area of government procurement. In this regard, the comparative advantage of the WTO Secretariat lay in assisting capital-based officials to fully understand the discussions going on in the Working Group, to assess the implications thereof, and to advise decision-makers in their countries. He recognized that governments might, when considering their interests in future work in the WTO, need also to examine a wider set of issues regarding institution building and possible reform in the area of government procurement. Therefore, the Secretariat emphasized the importance of cooperation with other intergovernmental organizations in order to organize events providing a broader perspective than that offered solely by the WTO, a point also raised at the recent inter-agency meeting hosted by the Secretariat. On the need to tailor the content of the planned events to the specific needs of recipient countries, suggestions had been received that it would be useful, for countries in Latin America and

the Caribbean, to have events addressing also activities at the regional and bilateral levels as well as WTO-related activity on transparency in government procurement. A broad perspective for the discussion of issues was important, given that policy-makers often considered the same questions at various levels, and the usefulness of bringing together trade officials and government procurement experts so that interaction and reciprocal learning could take place. On the basis of another point raised at the inter-agency meeting, regarding the diversity of the positions of developing countries according to their different stages of development and different needs, the IADB had advised the Secretariat that it would be preferable to hold, instead of one regional event for Latin America and the Caribbean, three separate events which could be focused directly on the specific needs of the different groups of these countries.

68. The representative of Japan said that the Ministry of Foreign Affairs had initiated contacts with the national development agency, as a result of which Japan was able to contribute to funding one Geneva-based seminar for each Singapore issue. Japan shared the view expressed by the representatives of Kenya and the United States that it was important to have capital-based experts from developing countries at the October meeting as well as the Symposium. Her delegation requested that its offer for funding the travel cost of approximately 20 experts from capitals in developing countries as contribution to the work of the Working Group be considered. The delegation of India, joined by the representative of Colombia, thanked the delegation of Japan for the generous offer of its government to fund the participation of officials from developing countries. The representative of Colombia added that the Symposium in October would be an excellent opportunity for officials from developing countries to get to know the advances made in the Working Group and become involved in the discussions. Regarding Japan's offer of funding, he said that this would to an extent help to respond to the views expressed on the importance of having capital-based participation at the October Symposium. The representative of the Secretariat welcomed Japan's generous offer which would help to cover the cost of participation of capital-based delegations in the Symposium.

69. The representative of Canada said that developing and least-developed countries were best placed to identify their capacity-building and technical assistance needs. Canada's approach to technical assistance and capacity building in the Working Group would continue to be guided by the needs expressed by these countries. Over the past decade, based on expressed needs, Canada had committed to working with developing countries to remove obstacles to trade and development through participating in over 200 trade-related technical assistance and capacity-building projects. The Secretariat was encouraged to continue to work together with other groups and organizations such as the World Bank, Regional Development Banks, UNCTAD and others, so as to ensure that the human and financial resources dedicated to capacity building and technical assistance were fully and effectively utilized. While recognizing that capacity-building and technical assistance needs were linked to broader issues of development, Canada was confident that a focused discussion on capacity-building and technical assistance needs related to transparency in government procurement had the potential to contribute to attainable achievements in the area of government procurement prior to and beyond the next Ministerial Conference.

70. The representative of Jamaica said that her authorities were interested in understanding the extent and scope of assistance that could be provided in relation to provision of information on national legislation and procedures and asked whether there was the possibility of assistance to address the need for hardware, software and the expertise necessary to develop the electronic publication of procurement information.

71. The representative of Turkey said that, as well as technical advice and financial contributions, other experience-sharing types of experiences such as 'twinning' practiced by the European Community or study tours and assistance with application of information technology could be useful.

72. With reference to the issue of technical cooperation relating to the application of information technology raised by the representatives of Jamaica and Turkey, the representative of the Secretariat

said that the Secretariat had in the past organized two events in Geneva on the use of information technology in government procurement and noted that, although the events had been open to other interested delegations, interest at the time had primarily been from Parties to the plurilateral Agreement on Government Procurement. Participants had learnt about the different techniques in use and become aware of the varying degrees of advancement among countries in the introduction and use of electronic procurement systems. Should there be sufficient interest, the possibility of organizing another such event could be considered. More detailed assistance in designing and introducing information technology systems was out of the reach of the WTO Secretariat, and would be a matter of approaching regional development banks, the World Bank, or seeking bilateral assistance.

73. The representative of the European Community said that his authorities were preparing a seminar for negotiators from developing countries. It would last three or four weeks and would include a module on transparency in government procurement. The seminar was designed for officials from Ministries in developing countries, and was scheduled to take place towards the end of the year. The transparency in government procurement component of the seminar was aimed at improving understanding of the impact of transparency in the public administration tendering process; identifying administrative costs and potential obstacles to future implementation of multilateral rules on transparency; helping officials from developing countries to identify the strengths and weaknesses of their legal frameworks; and assessing the extent to which common ground existed between them. On conclusion of the module on transparency, participants should have reached an understanding of all elements related to transparency in government procurement, should be in a position to assess the impact of the relevant proposals on their national legal regimes, and should be able to prepare their own contributions on the debates ongoing in Geneva and elsewhere. Training in negotiation techniques and skills would also be included in the seminar. The European Community considered that this was a substantial contribution towards the commitment undertaken pursuant to the Doha Ministerial Declaration, and hoped for a significant participation from developing countries. In response to a question put by the delegation of Malaysia, the delegation of the said that the event would include other issues apart from government procurement, possibly other Singapore issues, or a mix between Singapore issues and other issues under discussion post-Doha. At the present time, their exact nature could not be confirmed. However, relevant information would be released as soon as funding had been secured.

74. The representative of Thailand welcomed the initiative by the European Community to hold seminars for negotiators. With regard to the planned workshops or seminars on technical assistance and capacity building to be held on a regional basis, Thailand requested that these be open not only to government officials but also to the private sector, given the latter's important role in regard to government procurement. The Chairman noted that this issue seemed to depend on the policy of the countries themselves regarding the involvement of the private sector. The representative of Malaysia said that his delegation was opposed to Thailand's suggestion of inclusion of private-sector participation. On the question of inviting private-sector participants, the representative of the Secretariat said that events of this kind were designed primarily for government officials. Should the government of a country in which a regional event was taking place wish to include such additional participants, these would be accommodated to the extent that the interactivity of the event was not upset. In regard to national seminars and workshops, he considered that often governments sought to include participation from the private sector, non-governmental community, and academic community, and that some sessions were more public in nature than others, which were limited to government officials

D. OBSERVER STATUS OF INTERNATIONAL INTERGOVERNMENTAL ORGANIZATIONS

75. The Chairman said that, at its past meetings, the Working Group had considered requests for observer status from three international intergovernmental organizations (OECD, SELA and the Organization of the Islamic Conference) and agreed to revert to these requests in the light of the ongoing consultations in the framework of the General Council. Given the overall status in the WTO

regarding this matter, he suggested that the Working Group revert to this matter at its next meeting in the light of developments in those consultations.

E. DATE OF THE NEXT MEETING

76. The Chairman said that, as agreed at the informal meeting held in March, the second substantive meeting of the Working Group would be held on 10 October (in the afternoon) and 11 October 2002. The meeting would be preceded by a Symposium to be held in Geneva on 9 October and the morning of 10 October. Also, as agreed at the March informal meeting, there would be a third meeting in November which would be primarily for the purpose of approving the Annual Report to the General Council.

Working Group on Transparency in Government Procurement

REPORT ON THE MEETING OF 17 SEPTEMBER 2001

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its thirteenth meeting on 17 September 2001 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica).
 2. The Working Group agreed to the arrangements for the adoption of its Annual Report for 2001 to the General Council on the basis of a draft prepared by the Secretariat. A number of amendments were made to the draft. The report was subsequently circulated as document WT/WGTGP/5.
-

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 4 MAY 2001

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its twelfth meeting on 4 May 2001 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica).

2. The agenda for this meeting consisted of: (i) transparency-related provisions in existing international instruments on government procurement and national procedures and practices; (ii) transparency-related provisions in regional agreements on government procurement and national experiences; (iii) observer status of international intergovernmental organizations; and (iv) date of the next meeting.

I. TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES

3. For its discussion of this agenda item, the Working Group had before it the report of the meeting held on 25 September 2001 (WT/WGTGP/M/11); the informal note by the Chair "List of the Issues Raised and Points Made" (JOB(99)/6782), last revised in November 1999; the informal note by the Secretariat "List of Proposals on Items II-VII of the Checklist" (JOB(00)/3276), last revised in June 2000; and a note by the Secretariat on Concessions and BOT Contracts (JOB(00)/5657), circulated in September 2000. The Group also had available to it a submission by the delegation of Tunisia, which described its government procurement regime (WT/WGTGP/W/30).

4. By way of general comments under this agenda item, the representative of India stated that the problems faced by developing countries regarding the implementation of the existing WTO agreements showed the necessity for WTO Members, especially developing country Members, to be fully aware of the issues involved in new areas under discussion in the WTO, including the issue of transparency in government procurement, in order to enable them to take decisions on new obligations with full knowledge of what they were being required to undertake. India considered that the Working Group had not reached an advanced stage in its examination of the issues, especially from the perspective of developing countries. Hence, the Working Group should continue with the study process for a longer period, before it could reach conclusions, based upon which, elements, if considered necessary, could be drawn up as per the Singapore Ministerial mandate. Unlike other issues covered by the existing WTO agreements, the issue of transparency in government procurement was not the sole responsibility of one or two central government departments, even if obligations fell on central or federal government entities. There were numerous government departments, both big and small, which dealt with technical and non-technical issues when making purchases on behalf of governments. They were all accountable to the public at large in the country concerned since their purchases were subject to overall audit. However, in terms of the practical application of any WTO rules, it would be too tall an order for developing countries to ensure proper and efficient coordination among procuring entities. Reiterating India's position that had been stated in the previous meetings of the Working Group, he said that the scope of the exercise should be limited only to procurement of goods by central or federal government departments to the exclusion of other governmental entities involved in the procurement process. There was no need to include

services procurement in the study process and such procurement was best left to be discussed in the Working Party on GATS Rules. The transparency exercise should only deal with procurement that was open to foreign suppliers and the domestic price/purchase preference should continue to be available. Procurement methods were not part of the transparency exercise and the choice of method should be left to the discretion of procuring entities. Developing countries should also have the flexibility to continue with social and other development programmes through the procurement process. Domestic review procedures and linkage to the WTO Dispute Settlement Understanding were outside the scope of the Working Group's exercise and, hence, should be removed from the List of Issues. Finally, the current exercise should deal only with the issue of transparency and its extension to market access issues was unacceptable to India.

5. The representatives of Malaysia, Pakistan and Egypt supported the statement made by the representative of India. The representative of Egypt said that the discussion that had taken place so far on the basis of the Chairman's "List of Issues" had disclosed a divergence of views among Members on the subject and did not lay any basis for negotiations on a multilateral agreement on transparency in government procurement.

6. Commenting on the question of scope and coverage, the representative of Malaysia stated that any future agreement should cover procurement undertaken at the sub-federal levels of government, with the exception of state-owned enterprises, as well as at the federal government level.

7. The representative of the Philippines stated that there was a need for further understanding in relation to certain issues, for example the application of the DSU to a possible agreement. While the Working Group had discussed the various technical issues, the underlying issue as to why an agreement on transparency in government procurement would be beneficial to all Members had not been discussed. The proponents should help to sell the idea of transparency in government procurement to Members' domestic constituencies. They needed to identify what benefits developing countries would derive from such an agreement. The relevance of an agreement on transparency in government procurement in the context of a trade organization would also need to be explained. The Philippines would continue to participate constructively in the Working Group. The proponents of an agreement on transparency in government procurement were now aware of the areas in relation to which the Philippines remained unconvinced.

8. The representative of Morocco said that Morocco's legislation of 1976 was, to a great extent, compliant with standards contained in existing international instruments. Therefore, in principle, Morocco's adherence to a multilateral agreement would not give rise to any difficulties. However, such an agreement should be limited to principles on transparency and competition. The agreement should not get bogged down in details and should not attempt to cover every situation that might arise. What was important was the recognition of the usefulness of the principles of transparency that could be applied between Members. Finally, such a transparency agreement should take into account existing domestic practices, for instance national preferences. It should also include a time-frame for application of measures in light of the fact that Members were at different levels in terms of the implementation of rules on transparency and competition.

9. The representative of Tunisia noted that Tunisia had compared Tunisian legislation with possible elements that could be included in an agreement on transparency in government procurement. The conclusion drawn from that comparison was that the main principles and procedures contained in the present WTO Agreement on Government Procurement or in a future possible agreement on transparency would not give rise to any difficulties as far as Tunisia was concerned. However, it was necessary to specify that all countries used government procurement as a special economic and social development tool. Like all other developing countries, Tunisian regulations included a whole series of measures that supported the domestic economy. Therefore, in order to maintain such practices, it was necessary to include a reference to special and differential treatment for developing countries in the negotiation of an agreement on government procurement.

Developing countries would then be able to accept such an agreement without having to ensure that all of their regulations were in conformity with the agreement at the very outset. For instance, measures could be included in the agreement which would encourage the development of local production by allowing sub-contracting between foreign and local companies, thus providing the opportunity for developing country suppliers to bid together with developed country suppliers.

10. Taking up the sub-item "Other Matters Related to Transparency", the representative of Chile gave information on the electronic government procurement system in Chile and the government procurement system in general. He said that, historically, the public procurement system had been administered in Chile in such a way that no answers had been found to the following questions: Who buys? Who is responsible for making procurement decisions in the different sectors? From whom does the government procure? Who are the suppliers? Which goods and services are being procured by the government? What is the value and volume of government procurement? When did the government procure? Where did the government procure? In terms of efficient allocation of resources, the main concern of the government had been the control of and the justification for government expenditure. Today in Chile, information was available on where government resources had been allocated but information on how those resources had been distributed as between physical goods and services was not yet sufficiently detailed to ensure that the procurement system was adequately administered. Describing the current procurement system in Chile, he said that there were three modes of procurement: (i) open tendering; (ii) private purchasing, where calls for tenders were limited to a given number of potential suppliers; and (iii) direct purchasing, which was limited to specific situations or cases. Bids could be received through public calls for tenders or price-quotation procedures. From the government's perspective, information on both public tendering and the price quotation procedures had to be available at one single enquiry point. That was achieved through the creation of entities, which acted as intermediaries between suppliers and buyers. This structure facilitated the collection, gathering and dissemination of information relating to the various processes. The solution that Chile had adopted was available to the public free of charge on the Internet at the website www.g2b.cl. That website aimed to ensure the maximum amount of transparency possible in all procurement processes and that non-discriminatory access was available to all potential suppliers. The system respected the existing practice in Chile of decentralized government purchasing. The website www.g2b.cl also contained a link to the www.chilecompra.cl website¹, which was the main website for public procurement in Chile. Regarding obligations imposed on entities with respect to the site, it was obligatory to supply certain information in cases of public tendering. In cases of private tendering or price quotation, the information to be provided included quantity, price and the selected supplier. Information also had to be provided on all contract awards, including the various suppliers that had taken part in the tendering process, details of their bids and the reason why the contract was awarded to the selected supplier. In all cases, it was necessary to clearly state whether or not, upon completion of a contract, the contract terms had been complied with fully, the time-period for completion and the costs involved. The site itself contained information on tenders including a description of the procuring entity's requirements, the identity of the procuring entity, the date of publication of the call for tenders, the closure date for tenders, the date of award of the contract if that had already occurred and a description of the winning bid. The government was exploring ways in which it could centralize information regarding expert services and certain public services in order to optimize the use of services in terms of negotiation, advisory services and training of public officials. The site also sought to consolidate demand since that would result in savings on overall costs and expenditure. In addition to listing procuring public entities, the site identified suppliers by providing access to their home pages. This facilitated the exchange of information and the transaction process between potential suppliers in the private sector and the public sector. In order to be registered on the system, suppliers were required to provide certification that they had complied with certain legal requirements. Such a certificate was then made available automatically to interested procuring entities. Registration was free of charge. When registering, the supplier was required to declare in which sector he wished to participate. He then automatically received information every time the

¹ Link available on the government procurement page on the WTO website.

relevant public service called for a tender. This was an important transparency element. Altogether, there were four market-place sites where private operators could publish prices and receive price offers from public sector procuring entities. It was believed that an incentive was needed to encourage use of the site given that cultural barriers, rather than technological or financial ones, were likely to be the main limitation in relation to usage. If the pattern of usage was not given adequate attention, the system would not be successful in the long run. In designing the technical operation of the system, the first consideration was that the system had to be as simple as possible. That ensured certain advantages in terms of training operators and in terms of the overall operating costs. The system also performed a supervisory role for the public entity using it, for those responsible for the system as a whole and also for the central monitoring or control system of Chile, that is, the general auditing system.

11. In response to a question by the representative of the United States as to Chile's evaluation of the costs and benefits associated with its electronic procurement as compared with the more traditional systems involving, for example, paper publication, the representative of Chile stated that the initial development of the system (including study and preparation) cost \$300,000. Thereafter, \$200,000 had been invested in actually building the system which included the hardware and licence of the software. The system had been developed by the private sector on the basis of an invitation to tender by the Chilean Government. The Government did not incur costs in relation to the operation of the system given that the basic statistical information was free of charge for all public entities as well as for private suppliers. On the other hand, the private operator of the system had the possibility of obtaining income through the provision of more sophisticated statistical information. Regarding operating costs, savings of the order of 10-15 per cent were possible through the establishment and use of databases. Such databases enabled potential suppliers throughout the world to have access to invitations to tender.

12. The representative of Brazil noted that Brazil had adopted a similar system to the one that had been adopted by Chile. From Brazil's point of view, the gains from the system did not derive principally from operational savings since, in Brazil, there was still an obligation to publish tenders in paper form. Therefore, effectively, there was a "double cost". The concurrent existence of the electronic and paper systems responded to the fact that not every supplier was, as yet, capable of using the electronic alternative. However, the greatest cost savings appeared to come from the centralized way in which the system operated. This enhanced transparency and generated savings both for the government and for suppliers. In relation to suppliers, the main savings came from the fact that once they had registered on the system, they were issued yearly with a certificate stating that they were up-to-date with their tax payments and social security payments etc. and that, therefore, they were eligible for government contracts. They accrued savings from not having to prepare that documentation for every tender in which they wished to participate. From the government's point of view, savings accrued from information available from the system such as the minimum prices paid by each government entity for specific products. Specifically, when an entity planned to make a purchase, it could see what had been the lowest price paid for the good in question. The use of electronic system had undeniable benefits both in terms of transparency and in terms of efficiency of allocation of government resources.

13. The representative of Malaysia stated that many aspects of government procurement in Malaysia were increasingly electronically based. However, there was a large number of developing countries and least-developed countries that were not in a position to implement electronic procurement methods.

14. The representative of Mexico said that, an electronic government procurement system, called Compranet, had existed for some years in Mexico. Not only was it one of the pillars for ensuring transparency in Mexico, it had also been very useful in making the entire procurement process more efficient and agile. The system allowed broad dissemination of information on procurement procedures, which enabled both purchasers and suppliers to participate adequately. The site also set

out the legal framework that applied in respect of procurements and contained information regarding the award of contracts, the results of any bid challenge that might have taken place with regard to specific contracts and also information on the various regional agreements that Mexico had signed in the area of government procurement.

15. The representative of the United States commented that the benefits of using electronic systems were being increasingly recognized and utilised in a wide range of countries. In addition, it was important to recognize that the use of electronic communications may not be the only way to achieve transparency and that there were alternative means of achieving transparency that were more appropriate in certain circumstances. In fact, in the United States, there were still government jurisdictions that used either both electronic and paper communications or just paper communications and still achieved a high level of transparency in that way. The United States agreed that it would be advantageous to use electronic systems but it should not be obligatory nor was it necessary to use those types of systems to achieve a high level of transparency.

II. TRANSPARENCY-RELATED PROVISIONS IN REGIONAL AGREEMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL EXPERIENCES

16. The representative of the United States commented that, in light of the progress that had been made in the Working Group so far, it would also be useful to take stock of the progress that had been made elsewhere in the world recently on the issue of government procurement. Reporting on the developments in the FTAA (Free Trade Area of the Americas) negotiations, he said that at a summit of leaders of 34 countries in South, Central, and North America held in December 1994, it had been agreed to establish a free trade area in which barriers to trade would progressively be eliminated. The FTAA represented a major contribution to the strengthening and expansion of the international rules-based trading system. In 1998, leaders approved the structure and the general principles and objectives for the FTAA process and formally launched negotiations which would include the progressive removal of barriers to trade in government procurement markets in the free trade area. At the end of 1999, trade ministers instructed negotiating groups to begin the drafting of negotiating texts for each chapter of the FTAA. Those texts, including a draft chapter on government procurement, had been submitted to Ministers in April 2001. The United States believed that negotiations on government procurement were particularly significant in the FTAA process. First, a large number of countries had agreed to move forward in this area. Secondly, the free trade area involved a diverse group of countries, both in terms of the size and structure of their respective economies. It had become clear that transparency was considered a key element amongst all countries that had made submissions for the inclusion of government procurement in the FTAA process. At the same time, the United States had been participating in some fruitful work within the APEC (Asia-Pacific Economic Cooperation) Forum. The APEC GPEG (Government Procurement Experts Group) had previously submitted to the WTO Working Group the APEC non-binding principles that reflected consensus within that region on the elements of transparency that all APEC economies had agreed were important to the government procurement process. Recently, APEC member economies had exchanged reports on how the non-binding principles were being addressed and implemented in each of their individual systems. The United States was encouraged by its experiences in those regional fora which it believed represented and reflected the progress made in the area of government procurement around the world. The work in those fora also reflected the widespread recognition and interest in achieving transparency in procurement and had also greatly contributed to many countries' familiarity with substantive issues. In that context, the United States believed that the time was ripe for the WTO to move forward in this area, given the great deal of constructive work that had been done within the Working Group. The United States would be interested in moving forward on the issue as it continued its preparations for developing a future agenda for the WTO.

17. Sharing Switzerland's experience on how transparency was being dealt outside the WTO in the context of regional efforts involving different Members, the representative of Switzerland stated that an agreement on government procurement was part of the bilateral agreements that had been

concluded with the European Community in December 1998. The agreement had been approved by the Swiss Parliament in October 1999 and was expected to come into effect in 2002 after its ratification by the European Union Member States. The government procurement agreement was quite ambitious in terms of market access since, for example, it expanded the application of the rules of the WTO Agreement on Government Procurement to purchases by communes. It was also ambitious in terms of transparency, because besides commitments to inform parties about all future modifications to legislation, the agreement provided for the creation of national, regional and local contact points from which all relevant legislative information was to be provided. Another interesting feature of the agreement was the establishment of cooperation mechanism that allowed for access to all relevant government databases by taking advantage of new information technologies. Switzerland had played an active role in the development of the SIMAP (Système d'Information pour les Marchés Publics) project with the European Community. Turning to the recent regional trade agreements between the EFTA members and other countries, he said that the EFTA-Mexico Free Trade Agreement, which had been concluded in November 2000, included a chapter on government procurement. In addition to providing detailed rules concerning procurement methods and procedures, the EFTA Members and Mexico had reciprocally agreed to open up procurement in goods, services and construction at the national level and in certain specific sectors. Other mandatory provisions related to the availability of domestic review procedures for unsuccessful tenderers; the provision of information on national legislation and procedures; the establishment of enquiry points; and the annual exchange of statistical information on procurement. The experience showed that creative solutions could be found between partners that had agreed to make their procurement regimes more transparent, despite the fact that there could be some sizeable differences among national systems. The few mentioned examples of provisions of regional trade agreements suggested the importance of transparency in the context of trade and, particularly, in the context of government procurement. Finally, he reiterated Switzerland's support for the negotiation of a WTO agreement on transparency in the area of government procurement based on the principle of non-discrimination. Switzerland also believed that the time was ripe for constructively engaging in discussions in the lead up to the Qatar Ministerial Conference.

18. Commenting on Chile's experience of its participation in the FTAA negotiations, the representative of Chile said that three key elements of discussion had been identified by the FTAA Negotiating Group on Government Procurement. The first was development of electronic procurement, which Chile considered would assist in producing a text that contained fewer procedural details. The second was statistical reporting. The standardization of procedures in collecting information would facilitate development of electronic procurement within countries in the regional grouping. The third was the principle of special and differential treatment which was a cross-cutting issue throughout the FTAA negotiations given the difference in the levels and phases of development amongst participating countries as well as in the size and the importance of their trade. In the area of government procurement, the principle of special and differential treatment could be reflected in the negotiating text by means of exception clauses or a gradual phasing in period for certain obligations as well as through technical cooperation. A chapter on government procurement had also been negotiated as part of the free trade agreement that Chile had recently signed with five Central American countries, namely, Guatemala, Nicaragua, Honduras, El Salvador and Costa Rica. This was the first binding international agreement that Chile had entered into on the subject of government procurement and it contained provisions on market access as well on transparency. Parties to the agreement had undertaken commitments to ensure that their entities would provide information to the private sector and to all interested parties relating to the characteristics of the respective government procurement systems, business opportunities and the outcome of procurement processes. Parties also agreed to ensure that the award procedures would faithfully comply with and take into account the criteria that had previously been set out in the texts. Other obligations related to the exchange of relevant legislation, the provision of information on any modification to that legislation and the promotion of the use of information technology, particularly in relation to dissemination of information regarding business opportunities. In view of the fact that the contracting parties to the agreement were all developing countries, an interesting innovation in the area was that the parties to

the agreement had agreed to implement an electronic system that would provide information on the procurement markets in their countries. Chile was also in the process of negotiating chapters on government procurement in proposed free trade agreements with the United States, the European Union and Korea. Negotiations with EFTA would be initiated in the near future. In the furtherance of the free trade agreement between Chile and Mexico, negotiations had commenced on a chapter on government procurement. Article 20 of the Economic Cooperation Agreement with Peru also established an obligation to initiate negotiations in the area of government procurement. Finally, Chile was participating in the APEC GPEG which had recently discussed the principle of transparency in accordance with its work programme.

19. The representative of Australia said that Australia was also a participant in the APEC GPEG. Moreover, Australia had a government procurement agreement with New Zealand, which dealt with government procurement issues between New Zealand, Australia and each of the States in Australia. Australia was currently cooperating with Thailand with a view to developing Thailand's government procurement system. Finally, negotiations were under way between Australia and Singapore on the development of a free trade agreement which would include a chapter on government procurement.

20. The representative of India said that the regional initiatives such as APEC and FTAA were separate from the WTO process. The rules on procurement in the regional agreements went beyond transparency issues. In the context of the Working Group, it was important for all the developing countries, including least-developed countries, to come to grips with all the issues relevant to the WTO context. India did not share the view expressed by the United States that the time was ripe for the WTO to move forward in the current process. India strongly opposed any suggestion for moving ahead simply because preparations for the fourth Ministerial Conference had commenced. The study process had to be completed. It was necessary to analyse all the problems and implications for all developing country Members before drawing up the elements of transparency. Regional initiatives were limited to a few countries and could not be imposed upon the entire membership. Not many developing Members were able to speak up in the WTO and their silence could not be taken as acceptance of the interest expressed by some delegations to abandon the study process. Any process for negotiations should be taken up by the full membership only after a consensus between Members existed upon completion of a study and only after the problems and needs of developing countries had been fully taken into account. For India, the effective and comprehensive resolution of implementation problems with regard to the existing WTO agreements was of utmost priority.

21. The representative of Mexico said that Mexico participated in the FTAA and APEC negotiating processes as well as in a number of regional agreements in this area. Both involved provisions on government procurement, including provisions related to transparency. For the most part, the provisions on transparency required the publication of rules, regulations and laws relating to government procurement, exchange of statistical information between the parties involved as well as the establishment of contact points for exchange of procurement information obtained from suppliers or procuring entities. Mexico attached great importance to disciplines relating to transparency since it believed that it was an appropriate way of guaranteeing integrity and efficiency in the conduct of government procurement, not only at the international level but also at the domestic level. This was one of the reasons why Mexico had decided to take part in those types of regional agreements and initiatives. Conducting government procurement according to clear standards ensured the accountability of the process and ensured that the procurement procedures were as efficient as possible in the distribution of the countries' resources. This was beneficial for all parties concerned – the suppliers who participated, the procuring authorities, as well as society as a whole. Mexico merely wanted to share its experience in this area which had been very positive but did not claim that its regional initiatives or arrangements could be easily transposed to other countries.

22. The representative of Malaysia stated that it was possible to be transparent and accountable to one's own government and people and not necessarily to the world community. The priority was to be

accountable to one's own people. It was possible to be accountable also to the world community without being a party to an agreement on transparency in government procurement.

23. The representative of Canada stated that Canada was also a participant in the FTAA Negotiating Group on Government Procurement and in the APEC GPEG. One of the objectives of the FTAA Negotiating Group was to achieve a framework that would ensure transparency of government procurement processes. Canada had made proposals to the FTAA Negotiating Group relating to certain elements of transparency and fully supported the full range of transparency measures in that context. Canada was pleased to note the wide and extensive use of transparency measures in APEC countries. Canada continued to support the work in the Working Group towards the achievement of a WTO agreement on transparency in government procurement.

24. The representative of the European Communities noted that the Community also participated in a number of regional and bilateral agreements. The Community had a government procurement regime, which had been adopted centrally at the Community level and which had been implemented by the member States. As a result of a number of years of experience, the European Community was currently in the process of reviewing directives in the area of government procurement. The existing Community regime had three separate sets of legislation for procurement relating, respectively, to the procurement of goods, services and construction services (or "works"). In evaluating the directives, it had been noted that the procurement rules, in particular the rules that related to transparency, were virtually identical for all three types of procurement. Therefore, the European Community was currently consolidating the three sets of legislation into one single piece of legislation. This would make it a much easier instrument both for procuring entities and for businesses to use. The other two main elements of the revision exercise were, firstly, to simplify and clarify the directives with the aim of making them more transparent and more user-friendly and, secondly, to adapt the European Community's procurement regime that had, to date, been a paper-based regime, to take account of modern administrative needs and in recognition of the fact that, in the European Community and elsewhere, more and more people had access to the Internet and were conducting their business using electronic means. As regards simplification, as well as consolidating the three legislative texts, the EC was also setting out the new text in a manner that reflected the normal order of an award procedure, so that it covered first the publication of the tender, then the submission of the bids, and then the award of the contract. This made the text much easier to understand for procuring entities and business users. With regard to the work of the Working Group, she said that it was important to continue the process that had been embarked upon following the Singapore Ministerial Conference. There was a huge body of work that was available to the Working Group as a result of that process. The European Community would be looking at continuing and building on that work in the coming months. Referring to the view that the Working Group should continue the study phase, she noted that during the past eighteen months, although nominally the Group had been in a study phase, there had been no new elements brought to the Group's work, particularly by those delegations who had advocated continuation of the study phase. It was difficult to know how to carry on a study phase when there was no contribution as to how that should be done.

25. The representative of Malaysia noted that Malaysia also participated in the APEC GPEG. The experiences that had been referred to were regional and had nothing to do with the mandate of the Working Group per se. In any event, the APEC principles on government procurement were non-binding. As regards the preparatory process for Qatar Ministerial Conference, Malaysia was unable to agree to anything on government procurement in the Qatar negotiating agenda. The need to address the implementation-related issues was of importance to Malaysia. There needed to be consensus on any additional work programme in the WTO. If there was no consensus emerging on transparency in government procurement, that issue should be put aside. Malaysia had not heard any additional new arguments, on the part of the proponents of such an agreement, that could assuage Malaysia's fears regarding an agreement on transparency in government procurement. The elements that posed problems for Malaysia and for large number of developing countries were scope, definition, coverage, domestic review process and linkage to WTO dispute settlement procedures.

26. The representative of Indonesia said that Indonesia was also a participant in the APEC GPEG. However, the work programme of that forum should not be imposed upon the Working Group. It was preferable to focus on the mandate of the WTO Working Group which was to study transparency in government procurement practices. Indonesia did not share the view that the time was ripe for the Working Group to move forward on this issue. It was necessary to further study the elements of transparency in government procurement.

27. The representative of Morocco stated that Morocco shared the concerns expressed by developing countries. Regional initiatives in government procurement did not have any direct connection with the work in the Working Group. Morocco was not a *demandeur* of a possible multilateral agreement on transparency in government procurement.

III. OBSERVER STATUS OF INTERNATIONAL INTERGOVERNMENTAL ORGANIZATIONS

28. The Working Group agreed to revert to the requests from intergovernmental organizations for observer status (OECD, SELA and OIC) in the light of the consultations that were currently being held by the Chairman of the General Council on this matter.

IV. DATE OF THE NEXT MEETING

29. The Chairman noted that the work programme in the WTO generally was uncertain due to the various negotiations that were currently being held and also due to the preparations for the Qatar Ministerial Conference. He would hold consultations before the summer break about the possibility of a meeting to be held following the summer break.

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 25 SEPTEMBER 2000

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its eleventh meeting on 25 September 2000 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica).

2. The agenda for this meeting consisted of: (i) transparency-related provisions in existing international instruments on government procurement and national procedures and practices; (ii) observer status of international intergovernmental organizations; (iii) annual report to the General Council; and (iv) date of the next meeting.

A. TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES

3. For its discussion of this agenda item, the Working Group had before it the informal note by the Chair, entitled "List of Issues Raised and Points Made" (Job(99)6782) and an annotated draft agenda which had been made available by the Chairman, on his own responsibility, at the previous meeting and which aimed to facilitate discussion in the Working Group by suggesting issues under each of the substantive agenda items that, in his view, could be the subject of further discussion. As an auxiliary informal paper for the use of Members wanting to draw on it, delegates had available to them a revision of the informal note by the Secretariat, "List of Proposals on Items III-VII of the Checklist" (Job(00)/3276). The Group also had available to it a non-paper by Switzerland entitled "Why the Scope of a Future Agreement on Transparency in Government Procurement Should Cover Goods and Services" (Job(00)/5645); a note by the Secretariat identifying the various issues involved in concessions and BOT (build-operate and transfer) (Job(00)/5657); a proposal by the United States for a work programme for coordinating international technical assistance with implementation of a potential agreement on transparency in government procurement (WT/WGTGP/W/28); and a note by the Secretariat summarizing the information that had been made available to the Group on the technical cooperation activities of intergovernmental organizations in the area of government procurement (WT/WGTGP/W/29).

4. Under this agenda item, the Working Group took up the sub-items in the List of Issues Raised and Points Made. Comments were made on those relating to definition and scope of government procurement, procurement methods, time-periods, domestic review procedures, WTO dispute settlement procedures and special and differential treatment.

Definition and scope of government procurement

5. The representative of Switzerland introduced the non-paper submitted by his delegation entitled "Why the Scope of a Future Agreement on Transparency in Government Procurement Should Cover Goods and Services" (Job(00)/5645). The representatives of New Zealand; Hong Kong, China; the United States; the European Community; Australia; Chile; Canada; Mexico; Japan;

and Korea said that their delegations endorsed the basic thrust of the various arguments set forth in the non-paper in favour of a broad approach to the coverage of a future transparency agreement including both goods and services within its scope.

6. The representatives of the United States, Switzerland, Chile and Australia said that, in the context of current procurement practices, it was often difficult and impractical to draw a distinction between goods and services procurement. In many cases, procurement contracts involved both goods and services and, in particular, many services contracts had a significant goods component. This would increasingly be so with the use of new technologies, for instance with the procurement of computer systems. A corollary to that fact was that an agreement on transparency which excluded services could potentially also exclude a large goods component of services contracts. The representative of Switzerland said that the UNCITRAL Model Law and the Procurement Guidelines of the World Bank and the Regional Development Banks did not foresee the possibility of excluding services from their coverage. The representatives of Australia and Switzerland stated that an agreement on transparency in government procurement that would cover only goods could not be envisaged, since to have a WTO agreement that was half-way in scope compared to that of other international agreements in this area would be a step backwards. The representative of the United States, joined by the representative of Canada, said that the governing factor regarding the coverage of services was that the overall transparency principles should apply to the procurement of services as well as of goods. There was no intrinsic reason for providing less transparency in services procurement than in goods procurement. The representative of Malaysia said that his delegation recognized that there would be difficulties in the consideration of grey areas such as computer maintenance and repairs where the question could be asked whether the transaction was a service procurement or whether it was a service linked to the purchase of a good. The representative of Argentina recognized that the difficulty would arise not so much in distinguishing between the goods and services components of a procurement but the fact that the supply of goods and services could be within the same package and by the same supplier. For instance, a state could conclude a goods contract for the purchase of a computer. However, a program in the computer or the provision of after-sales service under the same contract would constitute a service. The representative of Hong Kong, China said that the exact scope of services coverage would need to be determined in the negotiation of a future agreement.

7. The representatives of India and Egypt stated that, for developing countries, it was difficult to consider a transparency agreement with a broad scope of obligations including services. The representative of Indonesia, joined by the representative of Pakistan, said that the Group should pursue further the study process that it had been engaged in to enhance Members' understanding on the issues of transparency in government procurement related to goods. The representative of Malaysia said that there were many complexities regarding services and Malaysia preferred that the emphasis be on reaching a consensus as to what constituted goods. Joined by the representative of Indonesia, he said that expanding the scope of the agreement to services would make it harder for developing country Members who still faced difficulties in grasping the issues related to transparency in the goods area. Accordingly, the discussion should be limited to goods and the issue of services could be tackled perhaps much later when the issues became clearer in the area of goods.

8. The representative of the Philippines stated that his delegation had an open approach to the question of inclusion of services in a transparency agreement. While there had been a technical debate in the Group, for instance regarding the distinction between goods procurement and services procurement, enough time had not been spent on the underlying debate of why it was to Members' benefit to have a WTO agreement on transparency in government procurement in the first place, covering either goods or services or both. As long as Members had not been convinced on this matter, the technical debate would need to continue. He also stated that the discussions as to whether goods or services should be covered would be influenced to a large extent by another aspect of the scope of coverage, that is whether the obligations on transparency would be applicable to procurement which, under national law, was only open to nationals.

9. The representative of the United States said that he objected to the arguments that seemed to imply that supporting the coverage of services in a transparency agreement constituted the addition of services to the Group's discussion. Since the inception of the Working Group, his delegation had considered services as well as goods to be part of the coverage of a transparency agreement.

10. The representative of Chile stated that governments often procured services, including data processing, travel and professional services. There was no reason for services not to be included within the mandate of the Group or in a WTO agreement on transparency. The representative of Switzerland said that, since the mandate was focused on transparency, it was obvious that both goods and services should be included within its scope. Moreover, given the way the mandate was formulated it could be assumed that there were no a priori exclusions. Switzerland's non-paper was an attempt to further the study process before the elements of an agreement could be discussed. Joined by the representatives of Japan and Korea, he also said that it was necessary for those Members who maintained that services should not be included within the scope of an agreement to explain the substance of their position, especially to illustrate how in relation to the grey area between goods and services procurement the two components could be separated.

11. The representative of Pakistan said that taking up the issue of services in the Working Group would be over-stretching the mandate given to it in Singapore. The representative of Indonesia said that there was no need to overburden the Working Group with additional issues. The representative of Malaysia stated that, despite some minor differences, the national procurement system in Malaysia for services and goods was basically the same. However, his delegation's position on accepting disciplines at the international level was completely different. The Singapore Ministerial mandate merely referred to studying the elements of an appropriate agreement and did not refer to its scope in relation to services. At the Singapore Conference, Ministers had before them the provision of GATS Article XIII that mandated multilateral negotiations on government procurement in services within two years from the date of entry into force of the WTO Agreement. It has been the clear understanding of Ministers in Singapore that the work on transparency should be in the area of goods while rules should be developed in the area of services.

12. The representatives of India, Malaysia, Indonesia and Pakistan said that the issue of services procurement was currently being discussed in the Working Party on GATS Rules. The representative of India said that his delegation preferred to await the outcome of those discussions as it might enable developing country Members to be better informed regarding services procurement. The representative of Pakistan said that the Working Party on GATS Rules regarding government procurement as mandated under Article XIII of the GATS was still grappling with very basic conceptual issues. Hence it was premature to address the services in the Working Group. The representative of Malaysia said that the work in the Working Party on GATS Rules should be pursued prior to the work on the inclusion of services in the scope of a possible agreement on transparency, unless Members agreed by consensus to disband the Working Party on GATS Rules and to focus the discussions on procurement in the Working Group on Transparency in Government Procurement.

13. The representative of the European Community said his delegation had made it sufficiently clear in the context of the Working Party on GATS Rules that it believed that the basic principle of transparency that was already contained in Article III and Article VI:2 of GATS constituted a starting point for transparency in government procurement of services. GATT Article X, which was essentially the same as GATS Article III, was also relevant. The Working Group had a unique chance to agree on a comprehensive agreement including both goods and services. It would be artificial to split up the work by referring to the mandate in GATS Article XIII which was by no means clear. In the view of the European Community, the wording of the Singapore mandate was sufficiently open to cover both goods and services and the plain and open-ended language could not justify the position of some Members that the mandate covered nothing but goods. The Group had always worked on the basis that services were part of the discussion. His delegation was surprised that some Members were now questioning this issue. Also, there was an inconsistency between the statements made by some

Members in different fora. For instance a Member who had opposed the coverage of services in the context of the Working Group on Transparency in Government Procurement had, however, stated in the Working Party on GATS Rules context that the Working Group on Transparency was a far better place to address transparency in relation to services.

14. Supporting the views expressed by the representative of the European Community, the representatives of the United States and Switzerland stated that, to date, there had not been much discussion in the GATS Working Party about potential disciplines, including with respect to transparency. However, quite a lot of discussion had taken place in the Working Group and the Group had reached a point where there was quite a good understanding throughout the membership regarding what the potential elements of an agreement on transparency were, what their meaning was and what the various implications of agreeing on those elements would be. Having discussed the issue at length in this Group, it was impractical and redundant to suggest that the discussion of the issue should be moved to another forum. The representative of Argentina said that it was important to maintain the coherence between the mandate of this Group and those of others which involved negotiations on government procurement disciplines. It was not advisable to end up with two negotiating exercises having two distinct sets of disciplines covering the same activity.

15. Regarding the section of the non-paper by Switzerland suggesting flexibility to address Members' concerns in relation to administrative and technical burdens in the application of a future transparency agreement, the representatives of Hong Kong, China; the European Community; and Japan said that the matter of flexibility would need to be addressed in the broader context of the agreement once its basic outline had become apparent. The representatives of Australia, Chile, and the European Community asked for clarification of the circumstances in which flexibility might be applied to transparency principles, for instance for national security reasons or for safeguarding confidential information.

16. In the context of the discussion on definitions and scope, the Group also addressed the issue of concessions and BOT contracts on the basis of a note by the Secretariat entitled "Concessions and BOT Contracts" (Job(00)/5657). The representatives of New Zealand, the European Community, India, Canada, Malaysia, Mexico, Indonesia, Egypt, Pakistan, Japan, Korea and Argentina said that their delegations were still in the process of reviewing the note.

17. The representative of the United States stated that his delegation considered that it would be useful to include in a future agreement on transparency in procurement a definition of procurement such as the ones contained in GATT Article III:8 or in GATS Article XIII. Joined by the representative of Australia, he also said that further clarification of some of the existing definitions would be useful, specifically the reference in GATT Article III:8 and GATS Article XIII to the term "for governmental purposes". The Secretariat note had pointed out that, in some cases, contracts that were referred to as concessions frequently related to the procurement of services. In the view of the United States, a purchase made for governmental purposes, in principle, was a purchase made pursuant to a specific public policy mandate of the government and, therefore, in principle, should be considered to be government procurement. The existing definitions of government procurement that referred to purchases for commercial resale sought to exclude, for example, purely commercial activities of state-owned enterprises. The United States considered that that was the only exception to the basic principle that purchases that were made for governmental purposes should be considered to be government procurement. One example of government procurement was when a governmental entity purchased medicines to distribute to needy citizens. A similar example was referred to in the Secretariat note regarding garbage collection services, where the government procured the services although the services were supplied to the general public rather than to the government. That kind of activity would not normally be considered to be a commercial activity but, rather, government procurement or procurement for governmental services. The representative of Hong Kong, China said that there could be interpretative difficulties in respect of the term "governmental purposes" in the existing language of GATT and GATS. Further discussion and a common understanding in relation

to that term was essential to avoid any unnecessary disputes during the implementation of a future agreement. The representative of Australia stated that Members could try to determine exactly what types of procurements would be considered to be for governmental purposes and those that would be for commercial resale. Joined by the representative of Hong Kong, China, she said that the preparation of an illustrative list containing examples of what was meant by procurement for "governmental purposes" and for "commercial resale" could be useful.

18. The representative of the European Community stated that the European Communities' Public Works Directive contained specific provisions on concessions, whereas in the other Directives, there was no specific legislation that addressed the issue of concessions. That had led to a mixed situation where the basic treaty principles applied to concessions. However, the question of whether the issue should be dealt with under procurement rules or separately has been left open. A communication by the European Commission had made it clear that within the Community there was no clear regime for concessions. The European Community believed that, if concessions were considered not to be part of government procurement, they were covered by the basic GATT and GATS rules. His delegation had a preference to first address the issue of definition and, if necessary, to discuss the broader framework of a transparency agreement and to leave the issue of concessions to a stage where Members had a clear idea of what the definition of government procurement would be.

19. The representative of Chile stated that concessions should be included in an agreement on government procurement for the purposes of achieving greater transparency. With reductions in government budgets and increased social requirements, the level of transparency had to be higher, for instance in relation to public works concessions. In Chile, solutions were being sought for private sector financing of the treatment of water, building of telephone networks, etc. The objectives of good public governance in this respect and greater transparency for the use of public resources would require clear and uniform rules. Hence, it was also necessary to define certain criteria to determine whether those procedures fitted within the subject of government procurement. The representative of Switzerland commented that outsourcing of government activities to the private sector was becoming increasingly common. It would, therefore, be interesting to take up these issues under scope and definition. The representative of Japan stated that Japan had recently introduced a private finance initiative scheme with the objective of obtaining value for money in relation to procurement. However, Japan had encountered some difficulty in interpreting whether those types of transactions should be covered by a future WTO agreement given that some of the procurements undertaken according to the private finance initiative scheme seemed to amount to government procurement whereas others were more like concessions.

20. The representative of Mexico stated that Mexico considered that the Secretariat note enabled the Group to pinpoint some of the types of contracts that could be considered as concessions within the different legal systems and to identify the criteria that might be helpful in defining government procurement. There were important differences between the various possibilities that fell within the term "concessions" and its relationship with various factors that had to be taken into consideration in the definition of government procurement.

21. The representative of the United States stated that, while as the representative of the European Community had suggested, the Group should focus on the definition of procurement, at the same time, the United States considered that some discussion regarding the relationship of concessions to procurement could help to respond to Members that had asked for greater clarity about the definition of procurement. The United States agreed with the statement made in paragraph 3 of the Secretariat note that the term "concessions" was perhaps not very useful as a guide to whether the contract in question was to be considered a form of government procurement. It was clear to the United States from discussions in the GATS Working Party and other groups that there were many different views throughout the membership on what the term "concessions" meant. Therefore, it was not meaningful to say whether or not concessions were covered by the definition of government procurement because many Members were referring to different concepts when that term was being used. The question

was, whether, having a clearer understanding of the issue could shed more light on what Members collectively meant by "government procurement". The representative of Switzerland said that the notion of concessions also depended upon the background of each country, which could lead to a different understanding of what was a concession and what was a procurement of services.

22. With respect to the issue of BOT contracts, the representative of the United States said that his delegation questioned the appropriateness of the categorization of BOT contracts as a sub-set of concessions in paragraph 5 of the Secretariat note. The United States believed that there were BOT contracts that constituted procurement and that were, according to any Member's definition, not concessions. The representative of Korea stated that the inclusion of concessions and BOT contracts within the coverage of the Agreement should be considered in light of the definition of government procurement. If a definition of government procurement turned out to include concessions and BOT contracts, then they should be included in the coverage of the agreement.

23. Commenting on the note by the Secretariat, the representative of Switzerland said that Switzerland would appropriately identify as a concession Case 2 referred to in the note. The legal form would normally be a lease, as referred to in paragraph 5 of the note, and it could occur at the level of the national government entity, sub-national or even at the communal level. Further, Switzerland fully agreed with some of the criteria referred to in paragraph 7 to determine whether or not government procurement had occurred, namely the involvement of a government entity and payment for the supply of goods and/or services for governmental purposes. However, the criteria referred to in paragraph 8 might be more relevant to determine whether or not a concession had taken place and not whether government procurement had occurred.

24. The representatives of India, Malaysia and Egypt stated that concessions should not be part of a transparency agreement on government procurement. The representative of India stated that India's preliminary view was that BOT contracts should also be excluded from the purview of a possible agreement on transparency in government procurement.

Procurement methods

25. The representative of India reiterated India's position that there was no need for rules on procurement methods in a transparency agreement. The work on transparency within the mandate of the Working Group was with regard to the availability of information on domestic legislation to foreign bidders. Joined by the representative of Egypt, he said that Members had full rights and freedom to choose procurement methods best suited to the objectives of a particular procurement, provided that the methods as specified in domestic legislation were followed in a transparent manner.

26. The representative of the United States said that his delegation considered that there clearly was a relationship between the use of non-transparent procurement methods and a basic commitment to transparency since some procurement methods were, by definition, non-transparent. For instance, if a particular government office used limited tendering for 80 per cent of its procurement, there was normally no transparency in the process related to those purchases. He agreed with the view that entities should be allowed within the context of domestic law to use the procurement methods that were appropriate to individual circumstances. In some rare cases, that could involve procurement that was not made in a transparent way because of the necessities of the particular circumstances. For that reason, the United States believed that it was appropriate to have clarity of rules as to, at least, when non-transparent procurement methods were permitted within a given Members' domestic system.

Time-periods

27. The representative of India reiterated that India was opposed to the issue of time-periods to be included in the list of issues. Joined by the representative of Egypt, he said that, given the wide

divergence of national practices, procuring entities should have flexibility to decide time-periods on a case-by-case basis according to the circumstances of a particular procurement.

28. The representative of the United States said that there should be no explicit definition of time-periods or prescriptive rules on what time-periods should be in a future agreement because the varying circumstances in each procurement might require flexibility. However, for the United States there was a relationship between this issue and transparency because a time-period that was too short could defeat the purposes of transparency.

Transparency of decisions on qualification

29. The representative of India stated that decisions on registration and qualification of suppliers should be taken only on the basis of criteria that had been made known to suppliers in advance. India felt that the registration of suppliers could be opened at specified intervals to allow new suppliers to be pre-qualified on a non-discriminatory basis. However, in many cases, ex post provision of information on qualification might be impracticable in developing countries, especially when a large number of suppliers was involved. However, a supplier who had been aggrieved because of not having been short-listed could have recourse to the domestic review mechanism under national legislation.

Domestic review procedures

30. The representative of India said that the primacy of national legislation should be maintained with regard to domestic review procedures. The Group should not attempt to develop any special domestic review mechanisms. From the discussions that had taken place so far in the Working Group, it had become apparent that most Members had their own domestic administrative and judicial review mechanisms to ensure domestic rules and regulations governing procurement were observed by those involved in the procurement process. Joined by the representatives of Pakistan and Egypt, the representative of India said that he was concerned about the inclusion of this element in the Chairman's list of issues since the matter was fully within the purview of domestic legislation.

31. By way of clarification of the view that domestic review procedures should not be an element of a possible agreement, the representative of Malaysia stated that the discussions within the Group related to a transparency agreement that would impose obligations on Members to ensure that the procurement process was undertaken in a transparent manner and did not involve reviewing the decisions on individual awards. Hence, Malaysia did not consider that it was necessary to have domestic review procedures that conferred rights on individuals suppliers to challenge awards that they perceived to be the outcome of a non-transparent process. The office of an ombudsman or auditor-general might be sufficient to deal with that kind of domestic review. Furthermore, the following questions could be raised with respect to domestic review procedures: whether they should be accessible to all suppliers, including foreign suppliers that did not have a juridical presence in the country in question; whether the mechanism would be limited to reviewing the consistency of laws; and whether the use of domestic review procedures that would result in overturning an award decision or granting an injunction to the plaintiff would not be too costly and time-consuming, thus delaying the entire process and seriously disrupting development projects. Finally, it had to be borne in mind that not all WTO agreements contained requirements on domestic review procedures. The representative of the United States requested that the points raised by Malaysia should be provided to Members in writing. He also stressed that the domestic review process was integral to ensuring the overall transparency of a procurement system.

32. The representative of the United States commented that, within the context of APEC, Ministers had endorsed the principles which made it clear that domestic review was an important element of transparency (WT/WGTGP/W/24). The representative of the European Community asked how those APEC members that considered that domestic review was not an element of transparency

in procurement in the present Working Group had implemented the APEC non-binding principles on domestic review in their economies. That type of information could be a good basis for future work on the domestic review provision in the Working Group. In response, the representative of Malaysia stated that countries tended to have a more relaxed attitude towards the APEC principles since they were non-binding and best-endeavour in nature. Hence, the true meaning of the principles and the implications of the inclusion of certain words or phrases in those principles would not necessarily be scrutinized in the APEC context as thoroughly as in the WTO, which was a completely different playing field in which all the major developed countries were present.

WTO dispute settlement procedures

33. The representative of India stated that his delegation was opposed to making any linkage between the WTO Dispute Settlement Understanding and a possible agreement on transparency. Furthermore, the proponents of such a linkage were themselves not clear as to what they aimed to achieve by it. Joined by the representatives of Pakistan, Egypt and Malaysia, he said that the item should be deleted from the Chairman's list of issues. Domestic review mechanisms that existed in most Member countries would be sufficient to deal with procurement-related disputes under the transparency exercise. The representative of Malaysia, joined by the representatives of Pakistan, Egypt and Indonesia said that, given that there were so many difficulties and complexities faced by many developing countries in this area, the agreement should be a best-endeavours agreement. Hence, the inclusion of provisions on dispute settlement procedures under an agreement on transparency was not necessary. There was no need for any discussion on the DSU in the Working Group for the reason that it would be impossible to implement any decision reached by the DSU. However, Malaysia was willing to consider the examination of the possible application of DSU to GATT Article X in cases that involved violation of obligations on transparency.

34. The representative of the European Community said that, without a clear provision on dispute settlement, an agreement would essentially lose its merits. Therefore, the issue should remain on the list of issues for further study. Article 13 of the draft agreement that had been proposed by the European Community attempted to make clear that a dispute settlement provision should not apply to individual cases but only address issues that related to the interpretation of the transparency agreement itself (WT/WGTGP/W/26).

35. The representative of Australia, joined by the representative of Switzerland, said that it would be useful to have an in-depth discussion of how and in what circumstances the WTO dispute settlement procedures could apply to any obligations under an eventual transparency agreement.

36. The representative of the Philippines noted that his delegation looked forward to a debate on how WTO dispute settlement procedures could apply to an agreement on transparency, in particular, how the obligation of transparency could be fully enforced, consistent and integrated into the concepts contained in the WTO Dispute Settlement Understanding, such as suspension of concessions.

37. The representative of the United States, joined by the representative of Switzerland, commented that it was critical for a WTO agreement on transparency to be subject to the DSU. This was necessary not only for the transparency agreement but also for the system as a whole. Like the provisions on domestic review procedures, the provisions on WTO dispute settlement procedures were intended to guarantee the integrity and consistency of the system and to create confidence in the system. Having a mechanism for resolving differences was necessary in order to ensure that all Members had a consistent understanding of what they were committed to under an agreement. Many WTO agreements dealt with situations where individual transactions were subject to procedural disciplines. The United States expected that the DSU would apply to a transparency agreement in the same way as it did to the other WTO agreements. He also commented that Malaysia's reference to Article X of the GATT could provide an interesting point of comparison. The WTO dispute settlement procedures already applied to Article X and to other similar types of provisions within the

system that not only addressed transparency but other procedural aspects of the trading system. The expectation was that the Dispute Settlement Understanding would apply to a transparency agreement in the same way that it applied to Article X.

38. In response to the comments made by the representative of the Philippines, the representative of the United States said that the issue of potential sanctions, for instance in the form of suspension of concessions, was perhaps not necessarily the most important issue that needed to be considered in relation to the relationship between the DSU and transparency. The United States found it difficult to envisage a situation where this would be likely to occur under a transparency agreement. He recalled that, in accordance with Article 3 of the DSU, any decisions under the DSU would not alter the rights and obligations of Members. Furthermore, this Article emphasized that the aim of a dispute settlement mechanism was to secure a positive outcome to a dispute.

39. The representative of the Philippines noted that the WTO agreements were one single undertaking and the DSU was part of that. If Members wanted the WTO dispute settlement disciplines to fully apply to a transparency agreement, it was necessary to ensure that its obligations could be fully integrated into the whole concept. Otherwise, the conclusion could be reached that the agreement had no place in the WTO in the first place.

40. The representative of Argentina stated that Argentina was concerned whether and how dispute settlement would apply to many of the questions that had been raised, for example methods of procurement, definitions and scope and time-periods. Moreover, Argentina wanted to know how the dispute settlement mechanism would be applied when there were no commitments with regard to access to markets. Argentina was not convinced that there was any need for having a provision on dispute settlement until its scope of application would be clear. That scope would depend upon the final contents of a possible agreement.

Technical cooperation and special and differential treatment for developing countries

41. The representative of India stated that specific proposals on technical cooperation would be necessary to ensure that the relevant provisions did not remain a best-efforts clause and were operational. The provisions on special and differential treatment could allow developing countries to have a transitional period of 10-15 years, a higher threshold level, and exemptions for coverage of sub-central entities and services.

42. The representative of the European Community, joined by the representatives of Japan and the United States, said that it was essential that technical cooperation process be demand-driven. He encouraged Members that felt the need for technical cooperation or provisions on special and differential treatment to come up with specific proposals on what should be covered in that context. While the European Community would be willing to examine the implications of setting higher thresholds for developing countries, the likely effect of different threshold levels would be to create more obligations for industrialized countries and to diminish obligations for developing countries in which the average amount of government procurement was located at a lower level than in industrialized countries.

43. Commenting on the proposal by the United States (WT/WGTGP/W/28), the representative of Switzerland, joined by the representative of Australia, considered that the proposal was timely given that it tackled concerns that had been raised by a number of delegations during discussions in the Working Group. The proposal that the work programme proceed simultaneously with the ongoing work in the Working Group would neither be premature nor would it prejudice the outcome of an agreement. On the contrary, it would mean that a gradual and parallel approach would be introduced, making it possible to be mutually beneficial. Technical assistance would be a possible attempt to respond to some of the administrative and technical challenges in fulfilling the obligation on transparency. Switzerland found that the proposed method of proceeding by starting with assessing

the needs and then identifying potential resources for addressing those needs made sense. In order to make this a successful approach, countries that faced the challenges mentioned earlier in relation to the various areas under discussion should come up with proposals, identifying concerns that should be addressed through technical assistance. He also stated that the note by the Secretariat providing an overview of the existing technical cooperation activities could be used as a basis for the first phase described by the United States proposal. The representative of Australia stated that the key interest of the Australian suppliers was to see greater transparency in government procurement, whether or not there was an agreement. Accordingly, Australia was very supportive of capacity building with a view to producing a practical outcome of the work of the Working Group. The representative of Japan stated that Japan generally supported the approach in the United States proposal to advance the issue of technical cooperation in parallel with the discussion in the Working Group. More specific proposals would be essential to ensure that special and differential treatment in the field of government procurement would be operationalized.

44. The representative of Malaysia stated that it was premature to discuss technical assistance at this point until Members had negotiated a consensus on the elements of an agreement. He acknowledged that the United States proposal for a concurrent approach regarding technical assistance was an attractive one. However, even if the Group wanted to adopt a concurrent approach, it should only occur when the Group had a Ministerial mandate to shift into the mode of negotiating the elements. Perhaps, then, a concurrent approach would allow Members to see what problems the developing countries were faced with.

45. The representative of Canada agreed with the substance of the proposal by the United States that there were steps that could be taken in the area before the content of the agreement was known. By working concurrently, progress could be achieved that could help to advance the discussions that were continuing in the Group. In terms of the work programme, Canada agreed that the work should be based on real needs for capacity building and development of government infrastructure.

46. The representative of the United States said that the majority of Members had recognized that, irrespective of the particular elements that might be decided upon for an agreement, progress in the area of transparency in general was beneficial. Addressing the issue of capacity building on a needs, demand-driven basis, was an opportunity for all the Members to make progress on the overall issue. If that were done concurrently, the United States did not consider that that would prejudice any particular Member's position with respect to the particular items or elements of an agreement.

B. OBSERVER STATUS OF INTERNATIONAL INTERGOVERNMENTAL ORGANIZATIONS

47. The Working Group agreed to revert to the requests from intergovernmental organizations for observer status (OECD, SELA and OIC) in the light of the consultations that were currently being held by the Chairman of the General Council on this matter.

C. ANNUAL REPORT

48. The Working Group agreed to the arrangements for the adoption of its Annual Report for 2000 to the General Council on the basis of a draft prepared by the Secretariat. The report was subsequently adopted and circulated as document WT/WGTGP/4.

D. DATE OF THE NEXT MEETING

49. The Working Group agreed to hold its next meeting in early 2001.

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 7 JUNE 2000

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its tenth meeting on 7 June 2000 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica).

2. The agenda for this meeting consisted of: (i) transparency-related provisions in existing international instruments on government procurement and national procedures and practices; (ii) observer status of international intergovernmental organizations; and (iii) other business.

A. TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES

3. The Chairman said that he had made available, on his own responsibility, an annotated draft agenda which aimed to facilitate discussion in the Working Group by suggesting issues under each of the substantive agenda items that, in his view, could be the subject of further discussion. The list of issues in the annotated agenda did not purport to be exhaustive and delegations should feel free to raise other issues which they considered important. The note by the Chair "List of the Issues Raised and Points Made" (Job(99)/6782) continued to be the basis of the discussion of the Working Group. As an auxiliary informal paper for the use of Members wanting to draw on it, delegates also had available to them a revision of the informal note by the Secretariat "List of Proposals on Items II-VII of the Checklist" (Job(00)/3276).

(a) Proposal for a work programme on technical assistance

4. Before the Working Group took up the discussion of the substantive agenda items, the representative of the United States introduced a proposal for a work programme for coordinating international technical assistance with implementation of a potential agreement on transparency in government procurement (WT/WGTGP/W/28). The work programme would proceed simultaneously with ongoing work of the Group in developing the elements of an appropriate agreement. The United States believed that working concurrently in both those areas would help the Group to move forward and would help to ensure that all Members could fully benefit from the results of the work undertaken by the Group. The need for capacity building in this area had already been raised by some delegations during the past discussions of the Working Group. Capacity-building issues had already been factored into many of the proposals that had been made with respect to specific elements of transparency. Those proposals were intended to be flexible enough to be effectively implemented in a wide range of circumstances in different Members' domestic procurement systems. Nevertheless, it was understood that there were concerns about the capacity of some national systems to consistently apply the elements that had been discussed throughout their procurement systems. To address that issue, the United States envisaged a work programme that would be designed, first, to identify specific capacity-building needs relating directly to the transparency elements that had been discussed

and, second, to identify available international sources of technical assistance which were best suited to addressing such needs. This phase of work could draw on the previous submissions made to the Working Group on this issue in 1997 and 1998 (listed in document Job No. 3414). In order to make the best practical use of the information that would be gathered, the information could be organized into categories, such as issues relating to the development of legal and administrative rules and procedures, human resources development, and physical infrastructure and other technical needs. Once that work had been completed, a second phase of the work programme could focus on finding ways to operationalize the information as efficiently as possible. He suggested that the Chairman might hold informal consultations on this issue prior to the next meeting so as to enable the Working Group to agree on a concrete plan of action for addressing the issue of capacity building at the next meeting.

5. The representative of Pakistan, joined by the representatives of Malaysia, India and Egypt, said that the proposal by the United States to provide technical assistance in relation to the elements of an appropriate agreement made the assumption that there was already such an agreement and, hence, was premature. The representative of Brazil stated that the proposed work programme should not prejudice the final establishment of an agreement.

6. The representatives of the European Communities, Switzerland, Venezuela, Norway, Canada, Australia, Iceland, New Zealand, Hungary, the Czech Republic, Iceland, Israel, Korea and Hong Kong, China said that their delegations supported the broad thrust of the United States proposal. It was an attempt to address some of the administrative and technical challenges in applying the principles of transparency in government procurement that had been raised in the Working Group and were reflected in the Chair's note "List of the Issues Raised and Points Made". The representative of New Zealand said the work programme could help to point out the elements that should be addressed in the Group and thus could be seen as working in parallel with the Group's discussions. The representative of Australia stated that Members' capacity to implement a future agreement was an issue that needed to be examined seriously in the context of drawing up any potential agreement. The representative of Korea said that there was a need to address the work programme as soon as possible.

7. The representatives of the European Communities, New Zealand and Australia said that Members would need to have a better understanding of a number of issues in relation to the United States proposal, for instance how the technical cooperation would work in practice and how it would be financed. The representative of Norway said that the question of financing in the long run should be borne in mind in developing a work programme.

8. The representative of Switzerland suggested that the work programme should be demand-driven. Those countries that faced challenges in relation to the various areas under discussion in the Working Group should come up with proposals identifying their concerns that could be addressed through technical assistance.

9. The representative of Indonesia stated that technical assistance and capacity building were not issues exclusive to the area of government procurement. They should be considered in a comprehensive manner since the same problems existed in many areas covered by WTO agreements.

10. The representatives of Canada, Argentina and the Czech Republic said that there would be value in the Chair conducting informal consultations in advance of the next meeting to explore the most efficient way the work programme might be structured. The representatives of Malaysia, Pakistan and Egypt said that they were not in a position to join any consensus to request the Chair to hold informal consultations on this issue prior to the next meeting.

11. The representative of Pakistan said that basic information on the technical assistance activities of international intergovernmental organizations had been made available to the Group (WT/WGTGP/W/20 and Addenda 1-8). Supported by the representatives of Hong Kong, China and Korea, he suggested that the Secretariat might be requested to prepare a note compiling this information in a succinct form in order to enable delegations to consider how this issue could be developed further. The representative of Argentina said that the Group should also consider the survey recently initiated by the Secretariat, through the Director-General, in which all Members and intergovernmental organizations were invited to identify sources of technical assistance relating to WTO agreements.

12. The representative of the United States stated that its proposal was intended to be a positive response to the concerns that some delegations had raised in the past. The United States supported the view that a demand-driven work programme would enable delegations that had specific problems related to capacity building to contribute to the establishment of a framework for proceeding with the work in this area. He stressed that his delegation had deliberately left open a number of questions, including how this type of work programme might be developed, because the United States wanted to hear the views of other delegations as to how a process, that the Group would be comfortable with, could be developed by consensus. His delegation saw benefit in addressing these issues proactively during the process leading up to a potential agreement and to mitigate future problems rather than waiting until the Working Group finalized its work. This process would be without prejudice to what might be included in a future agreement.

13. In concluding the discussion on the proposal by the United States, the Chairman said that the Group should revert to the proposal by the United States at its next meeting. The Secretariat would prepare a note summarizing the information that had been made available to the Group or elsewhere to the WTO on technical cooperation activities of intergovernmental organizations in the area of government procurement.

(b) General comments

14. By way of general comments under this agenda item, the representative of India reiterated the views that his delegation had expressed at the earlier meetings of the Working Group. He said that the Working Group should confine itself to the Singapore mandate. The Group's work was still in the study phase which Members, especially developing country Members, would use to fully understand the issues involved and to appreciate their rights and obligations. As indicated by the note by the Chair "List of the Issues Raised and Points Made", there were serious differences of view among Members on basic issues. Not all Members were at the same level of development and, therefore, it should be appreciated that Members at lower levels of development would find it difficult to agree on some of the elements that might appear to be very basic to other Members. It was important for the developed country Members to appreciate the concerns and problems of developing country Members before reaching a common understanding regarding the various elements of transparency in government procurement. He also stressed the following points as important to his delegation. First, government procurement was an important tool available to governments to pursue their social and developmental objectives. Governments should be able to retain flexibility in this regard as they were fully obliged to pursue these objectives to deal with problems such as poverty, illiteracy, social backwardness and to provide food security. Secondly, the transparency exercise should not include procurement that was open only to domestic bidders. Members, especially developing country Members, should retain the flexibility of providing price preferences to domestic bidders. Thirdly, India was opposed to introducing market access issues into the work of the Working Group. Fourthly, the right of governments to make domestic public procurement rules and regulations and to modify them should be maintained. He added that India was committed to transparency in government procurement and that, in fact, that principle was being broadly followed in India's domestic policy.

15. The representative of Egypt stated that Egypt agreed with the main thrust of India's statement, in particular the reference to the need to pursue social and developmental objectives in developing countries.

16. The representative of Malaysia said that the agreement should not be prescriptive in nature; it should merely serve to ensure the provision of information on the procurement practices of governments.

17. The representative of Canada stated that Canada supported continuing work on the elements of an agreement in transparency as outlined in the Singapore mandate. In relation to transparency, a simple and realistic approach with regard to what could be achieved was preferable from Canada's point of view.

18. The representative of Indonesia stated that the Working Group needed to continue exploring the issues that were being discussed with the intention of increasing awareness as well as creating a certain level of confidence for delegations. Thus the study, as mandated by the Singapore Ministerial Declaration, should be carried out before the Group could embark upon any negotiations on an agreement. Discussions should be limited to transparency issues. A transparency agreement should not be seen as a building block for an agreement on market access. There should be no review provisions in the agreement allowing the possibility of further negotiations on market access. The discussion on transparency should be based on national policies and objectives and should respect Members' domestic legislation and their right to regulate in this area.

(c) Issues raised

(i) Definition and scope of government procurement

19. A number of observations were made on the question of whether, in order to determine the scope of any commitments, a general definition of government procurement was necessary and, if so, whether this could be achieved by reference to the definitions in GATT Article III:8 and GATS Article XIII:2 or whether it would be sufficient to rely on the definition used by each Member as it was established in its national legislation. The representative of the United States, joined by the representatives of Canada, the European Communities, Egypt, Brazil and Mexico said that the Group could draw on the existing definitions of government procurement in GATT Article III:8 and GATS Article XIII:2 as a basis for its work to develop an appropriate definition in a transparency agreement. The representative of Korea, joined by the representatives of Brazil, Argentina and New Zealand, said that, while it would be useful to draw on the existing language in GATT and GATS, a mere reference to GATT Article III:8 and GATS Article XIII:2 would not be sufficient for the purposes of a future agreement. The representatives of Korea and Hong Kong, China said that, for example, the interpretation of the term "governmental purposes" in the relevant GATT and GATS Articles might cause problems. The representative of Brazil, joined by the representative of Indonesia, said that the Group should also consider the feasibility of relying on the definitions stipulated in the respective national legislation of Members. The representative of Mexico said that the definition of government procurement would depend on what was agreed in respect of other elements of the agreement as well as its scope.

20. Observations were made on the question of whether the rules of a transparency agreement should extend to procurement by entities at all levels of government or at the central level of government only. The representatives of Malaysia, Switzerland, Hong Kong, China, the European Communities and Norway stated that an agreement should cover entities at all levels of government including at sub-central levels. The representative of Switzerland said that, otherwise, a large part of government procurement would be left outside the scope of the transparency agreement. The representatives of Australia, Korea and Japan said an agreement should be applied to procurement by

central government entities and to entities at the highest level of sub-central governments. The representative of Argentina said that, even in the case of an agreement that focused on transparency, it would be difficult to ensure compliance at all levels of government. Developing countries with federal government structures should be accorded special and differential treatment with regard to obligations of entities at sub-central levels. The representatives of India, Egypt, Canada, Mexico, Indonesia and Brazil said that the scope of the agreement should be limited to procurement by central/federal government entities. The representative of Brazil stated that it would not be feasible to negotiate an international agreement on behalf of sub-central entities in his country without a mandate from them.

21. With regard to the question of whether purchases by state enterprises should be covered, and, if so, which, the representatives of the European Communities, Norway, Mexico and Switzerland stated that coverage should also include procurement by such enterprises. The representative of Switzerland said that state enterprises often had monopoly positions and, therefore, did not always pursue commercial interests. The representative of the United States stated that his delegation's preference would be to provide for coverage of state enterprises through an agreed definition of procurement. For instance, a state-owned enterprise that purchased for governmental purposes would presumably be covered under a definition of procurement which would refer to "procurement for governmental purposes". The representative of Argentina stated that, since in other WTO fora transparency was seen as a key to dealing with monopolies, the issue of coverage of state enterprises in an agreement focused on transparency might be further explored. The representatives of India and Egypt said that procurement by state enterprises should be excluded from the coverage of a transparency agreement. The representative of Korea stated that including state enterprises in the coverage of a transparency agreement might be burdensome for some Members. The representative of Indonesia stated that state enterprises should not be covered under a transparency agreement as GATT Article XVII already dealt with the issue.

22. With regard to the question of what the scope of an agreement should be in terms of coverage of goods and services, the representatives of Malaysia, India, Indonesia and Egypt stated that the scope should be limited to goods. The representative of Egypt said that the Group should consider, however, how to deal with cases where it was difficult to de-link goods procurements from services procurements. The representative of India said that public procurement in the services sector in the case of most developing countries was less systematized than that in the goods sector. He also said that the issue of procurement of services was already being handled by the Working Party on GATS Rules. The representatives of the United States, Australia, Switzerland, Brazil, Hong Kong, China, Canada, Norway, Argentina and New Zealand stated that the agreement should encompass both goods and services. There was no good reason not to apply transparency rules to services as well as to goods. Moreover, there were often mixed contracts that involved both goods and related services or services and related goods. In practice, it might be difficult in many situations to distinguish between a goods procurement and a services procurement. The representative of the United States said that any commitments that Members might make with respect to transparency would be without prejudice to other aspects of the trade regime including, for example, GATS commitments or border measures.

23. Observations were made on the question of whether the coverage of an agreement should be limited to procurements above a certain threshold level and, if so, what should that level be and should it differ according to the level of government, the level of development of the Member in question and/or the nature of the obligation in question? The representatives of Malaysia, India, Egypt, Korea, Japan, the European Communities, Brazil, Hong Kong, China and Canada stated that there should be a minimum threshold level below which transparency obligations would not apply. The representatives of India, Egypt, Malaysia and Indonesia said that threshold levels should be higher for developing countries. Including minor procurements within the scope of a transparency agreement might impose an undue burden on entities in developing countries. The representative of Mexico said that the objective of setting thresholds below which the rules would not apply was

important from the point of view of efficiency. Different threshold levels might apply according to the purchasing entity, whether a federal or central entity or a state enterprise, on the basis of the objective of the procurement or depending upon whether the procurement was for goods, services or construction services. Compliance with transparency obligations should not result in a situation that would be too onerous for the procuring entity, nor should the rules be a hindrance to the proper functioning of government procurement systems. The representative of Norway stated that, while, in principle, an agreement should not be limited to procurement contracts above a certain threshold level, certain provisions could be included to provide flexibility in the application of rules to small-value contracts.

24. The representatives of the United States, Australia and Switzerland stated that their delegations had an open mind on the issue of thresholds. The representative of the United States said that, for the purposes of transparency, particularly for open tendering procedures, the costs of transparency were generally very low and the benefits were very high. For that reason, it did not make sense to apply a high level of threshold for procurement under open tendering procedures. The representatives of Argentina and New Zealand stated that there should be transparency in all public procurement transactions whatever the size of procurement contracts. It was unclear why different levels of thresholds would be necessary in an agreement which would not set obligations on market access.

25. In response to the question of the extent to which concessions and BOT (build-operate-transfer) contracts should be covered and, if covered, how they should be defined, the representatives of Brazil, Malaysia, India and Mexico stated that the scope of the agreement should not extend to concessions. The representative of Mexico stated that, in Mexico's system, concessions were not regarded as falling within the scope of government procurement given that there were a number of juridical and legal differences between the two. The representative of Brazil said that the difficulty associated with extending the scope of an agreement to concessions was not simply a legal problem stemming from the fact that concessions and government procurement were regulated under different legislation. The philosophy and objectives underlying concessions were completely distinct from the philosophy and objectives of government procurement. In some cases involving concessions, what occurred was exactly the opposite of what occurred in the case of procurements. The representative of Argentina said that there might be services that were contracted by a government for its own purposes that were not concessions. The representative of the United States stated that the definition of a "concession" varied from system to system. In some systems, what was considered to be a concession was a fairly narrow range of government activities and, in other systems, it could be almost synonymous with the term "services". He also said that his delegation would be very concerned by suggestions that all services that were called "concessions" in some jurisdictions would not be subject to basic transparency requirements. It would be useful to consider this issue in more detail.

26. The representatives of Egypt, India and Argentina stated that BOT contracts should not be covered under a future agreement. The representative of the United States said that, in his delegation's view, arrangements relating to BOT contracts were simply a different arrangement of payment for a procurement of facilities. To the extent that that was the case, the United States could not see why these arrangements would be treated differently from a general procurement involving a simple transfer of funds. BOT arrangements might simply be a way of compensation other than a direct transfer of funds. If that were the case, the United States considered that such arrangements should be subject to general transparency requirements.

27. Following a suggestion by the representative of Pakistan, supported by the representative of New Zealand, the Working Group agreed to request the Secretariat to prepare a note identifying the various issues that were involved in concessions and BOT contracts from the perspective their treatment or not as a form of government procurement.

28. With regard to the question of whether there should be a general exception clause along the lines of GATT 1994 Articles XX and XXI, the representatives of Argentina, Canada, Egypt and Indonesia stated that an agreement should have a general exception clause along the lines of GATT Articles XX and XXI. The representative of Switzerland, supported by the representative of New Zealand, stated that whether or not exceptions were necessary would depend upon the specific commitments to be undertaken by Members. In an agreement with obligations limited to transparency, it might be unnecessary to include a general exception clause along the lines of GATT Articles XX and XXI. The representative of India stated that, in addition to the general exceptions provisions contained in GATT relating to security and other matters, Members should have the freedom to indicate additional exceptions such as procurement for public distribution systems, procurement for achieving social and development objectives and procurement for domestic price stabilization of essential commodities. With regard to procurement involving social policy and other objectives, the representative of the United States noted that a number of jurisdictions in the United States imposed, for example, recycled content requirements or energy efficiency requirements, which were aimed at meeting social and public policy goals in undertaking procurement. Nevertheless, the United States questioned why the use of those types of procurement objectives would in any way diminish a government's interest or capacity to achieve transparency. The United States believed that the interest to achieve transparency would be the same whether or not those types of objectives were incorporated into a procurement procedure.

29. Comments were made on the question of whether transparency obligations should be applicable only to the extent that procurement was open to suppliers from other Members. The representatives of Japan, Mexico, Canada and Switzerland stated that a transparency agreement should apply to all procurement irrespective of whether or not a procurement was open to foreign suppliers. The representative of Argentina, joined by the representative of Canada, stated that the agreement should not call into question the preferences that a Member granted to domestic suppliers and should not require Members to modify their legislation in this regard. However, that did not mean that other Members could not have information made available to them on the relevant national legislation and procedures in other Members. The representatives of Malaysia, India and Egypt stated that an agreement on transparency should exclude procurement limited to domestic bidders. The representative of the European Communities asked for clarification as to how a transparency agreement which only applied to procurements that were open to foreign participation would work. Would there be two different legal systems relating to transparency in public procurement, one system that applied in cases where only domestic participants could participate in the procurement and a second system in cases where procurement was open to other countries? In response, the representative of India stated that India considered that there was no transparency issue involved in relation to procurement that was not open to foreign competition. The representative of Pakistan stated that Pakistan would have a separate system of rules for the two types of procurement. The representative of Malaysia stated that in his country transparency principles were applicable whether or not procurements were open to foreign participation. However, that did not mean that it should be agreed that contracts that were open for domestic bidding only should be subjected to the same rigorous obligations that would have to be adhered to under a WTO transparency agreement for procurement that involved foreign participation.

30. The representative of New Zealand said that a number of questions raised under definition and scope were intrinsically linked with some of the other elements under consideration in the Group. Accordingly, some of his delegation's views on the scope of an agreement might be affected by the outcome of the discussion on those other issues.

(ii) Procurement methods

31. Comments were made on the question of whether an approach should be adopted which called upon Member governments to be transparent about their actual use of limited tendering. The

representatives of the United States and Venezuela said that procuring entities in different Members used different criteria for determining which type of method would be appropriately used in the circumstances of a given procurement. National legislation set out such criteria based on national conditions and procurement policy objectives. The representative of the United States, joined by the representative of the European Communities, said that the most important consideration for ensuring transparency in the use of procurement methods was that, notwithstanding the difference in the selection criteria used by procurement entities in different Members, the decisions regarding the choice of a particular procurement method should be taken on the basis of the criteria that were established in national legislation and which were made known to suppliers in advance. The representative of India, joined by the representatives of Mexico, Egypt and the European Communities, said that a transparency agreement should not have provisions prescribing the particular method that should be used in a particular circumstance. The provisions should allow procuring entities to retain flexibility in applying the procurement method that was best suited to their objectives in a particular procurement in the interests of efficiency, competition and transparency. Procuring entities should decide which method to choose provided that they followed the criteria established in national legislation. The representative of New Zealand stated that transparency disciplines in a future agreement should not affect a Member's practice regarding the application of various procurement methods. The representative of the United States said that the draft text for an agreement of November 1999, submitted by the delegations of Hungary, Korea, Singapore and the United States, contained a provision requiring Members to have rules in their national legislation describing the conditions under which it was appropriate to use different procurement methods (WT/WGTGP/W/27, paragraph V.2). No provisions were suggested on what those conditions should be. On the question of whether an effort should be made to define the circumstances in which limited tendering could be employed, the representatives of India, Indonesia, Mexico and Egypt said that drawing up an illustrative list of such circumstances would not allow any flexibility to procuring entities in the use of this method. The representatives of Mexico, the United States, Venezuela and Egypt said that a transparency agreement should have a provision requiring Members to indicate in their national legislation the exceptional circumstances warranting the use of limited tendering.

32. With regard to procurement methods, the representative of Pakistan asked how the use of "Requests for Proposals" method where there could be direct negotiations between suppliers and the procuring entities after the receipt of initial proposals could be accommodated within a transparency agreement. In response, the representative of the United States stated that procedures or any requirements decided upon by the Group must be flexible enough to incorporate procurement procedures that may involve negotiations given that such procedures could be an extremely effective way for entities to achieve the value for money that taxpayers expected. There were at least three ways in which transparency was particularly important when those types of procedures were used: the first being at the initial announcement of a particular procurement opportunity or the announcement that a procedure was under way, as in the case of other procurement procedures; the second being that participating suppliers should have access on a non-discriminatory basis to information. Thirdly, there should be information on the contract award so that interested parties had information on the results of the procurement procedure and also were given an opportunity for receiving an explanation of the reason for the contract award.

(iii) Publication of information on national legislation and procedures

33. On the question of whether there should be a requirement for the establishment of an enquiry point from which information on national legislation or procedures could be obtained by interested parties, the representative of India said that the establishment of enquiry points would require coordination among numerous government departments, hence the need for a careful study of its feasibility. The representative of Bolivia said that there was no need for the establishment of an enquiry point in his country since the relevant information was available in official publications.

34. Comments were made on a number of issues on points of detail such as the scope of the information on national legislation and procedures that should be made available, the mode through which this should be done and the treatment, if any, of costs. The representative of the United States said that the draft text for an agreement of November 1999, submitted by the delegations of Hungary, Korea, Singapore and the United States (WT/WGTGP/W/27, paragraph V.1), suggested that all national laws, regulations, and requirements of general application should be published. Joined by the representative of Bolivia, he said that this did not call for the publication of the details of the procurement procedures of individual procurement entities, but covered legislation and administration guidelines that applied to a broad range of procurement decisions. The representative of India said that the publication of information relating to judicial decisions, policy guidance and administrative guidelines would be onerous. The representative of Hong Kong, China said that there should be no requirement to publish or make available to the public in any other form administrative rules and regulations internal to the government. The representative of India said that Members should have flexibility in respect of the mode through which information should be made available. On the treatment of costs, he said that government entities should have the flexibility to impose appropriate fees for the provision of information on national legislation, provided that such fees were charged on a non-discriminatory basis. The representative of Hong Kong, China said that there should be a general exceptions provision with regard to the obligations on publication of information on national legislation and procedures along the lines of the provisions in Article XX and GATS Article XIV.

(iv) *Information on procurement opportunities, tendering and qualification procedures*

35. Comments were made on the question of the minimum information that should be made available on procurement opportunities during the procurement process. The representatives of the European Communities, Australia and Canada said an agreement should set out certain guiding principles regarding the minimum information content of the documentation on procurement opportunities. The representative of Argentina said that, rather than specifying in a transparency agreement what the minimum information content should be, there should be a provision requiring Members to set out the minimum information that should be made available in national legislation. The representative of India, joined by the representatives of Hong Kong, China and Indonesia, said that any provisions establishing a uniform set of rules in the agreement in respect of provision of information on procuring opportunities would be too prescriptive. The representative of India further said that the level of detail of information varied considerably in national practices depending on the particular procurement contract or the procurement methods used.

36. Comments were made on the question of whether national preferences or other measures favouring certain supplies or suppliers should be made known in advance in the tender notices and/or tender documents and, if so, whether such information should be set out in full; or whether it would be sufficient to make an explicit reference to the applicable legislation in those documents; or whether such information should only be required when it had not already been adequately provided through laws or regulations of general application. The representatives of Canada, the European Communities, Switzerland and Australia said that provision of advance information on national preferences allowing suppliers to make decisions on whether or not to bid for a procurement opportunity was critical. The representative of the European Communities said that a reference to the applicable legislation in the tender documentation would not be sufficient. Procedures relating to the application of national preferences should be clearly stated in tender documents. The representative of Switzerland said that an explicit reference to the applicable legislation could be considered adequate, although detailed information on the preferences would be preferable.

37. In regard to the question of what guidance should be included as regards the media used for the provision of information on procurement opportunities, tendering and qualification procedures, the representatives of India, Canada, the European Communities and Switzerland said that procuring entities should have the flexibility to choose the medium for providing information on procurement

opportunities. The representative of Canada said that it was important to specify the source through which the relevant information was made available.

38. On the issue of transparency on lists of qualified suppliers, the representative of Australia said that Members should be encouraged to provide information periodically on the timing and the frequency of the opening of qualification lists so as to enable the inclusion of new suppliers.

39. With regard to technical specifications, the representatives of Argentina and Indonesia said that, since in their view, they were not within the scope of a transparency agreement, any transparency agreement should thus not have any provisions relating to this matter.

40. In addressing the question of whether there should be a requirement to provide summary information on procurement opportunities in a WTO language, the representative of Switzerland said that this would enhance transparency. The representatives of Brazil, Australia, Argentina and Indonesia said that a mandatory requirement to publish tender notices in a language other than in a Member's national language would entail Members incurring burdensome translation costs.

41. The representative of India said that the obligation on provision of information on procurement opportunities should be limited to procurement open to foreign suppliers. The representative of Argentina said that procuring entities should provide such information regardless of whether the procurement opportunity was open or not to foreign suppliers and even under direct procurement procedures. The representative of Hong Kong, China said that there should be a general exception provision regarding the obligations on provision of information on procurement opportunities along the lines of GATT Article XX and GATS Article XIV.

(v) Time-periods

42. Comments were made on the question of whether it was accepted that a transparency agreement should have a provision on time-periods couched in terms of the considerations that should be taken into account in setting those periods rather than in terms of prescribing minimum periods and, if so, what those considerations should be. The representatives of Argentina, Australia, the United States, Egypt, the European Communities and Mexico said that an agreement should not have provisions prescribing minimum time-periods. The representatives of Australia, the European Communities and Mexico said that a principles-based approach would be preferable. Joined by the representatives of the United States, Egypt and Cuba, the representative of Mexico said that procuring entities should retain flexibility to set appropriate time-frames according to the nature and the specific circumstances of a particular procurement. The representative of Indonesia said that provisions on time-periods should make reference to national legislation. The representative of India said that the issue of time-periods was not related to transparency. Given the divergences in national legislation in this respect, procuring entities should be able to decide time-periods on a case-by-case basis. The representative of the European Communities said that allowing procuring entities to take decisions on time-periods on a case-by-case basis would create uncertainty. The representative of Mexico said that, under national legislation, procuring entities might not be able to set time-periods in a discretionary manner and on a case-by-case basis.

43. With regard to the question of what consideration should be taken into account in setting time-periods, the representatives of Australia and Mexico said that suppliers should be allowed sufficient time for the preparation and submission of bids and the same time-periods should be applied to all bidders. The representative of the European Communities said that time-periods should be commensurate with the particular circumstances of the procurement and the complexity of the intended procurement. The representative of Mexico said that there should be provisions foreseeing the application of reduced time-periods in emergency situations.

(vi) Transparency of decisions on qualification

44. With respect to the transparency of decisions on registration and qualification of suppliers, the representative of the United States said that, whatever the qualification criteria procuring entities may use, the key principle was that the decisions be taken only on the basis of criteria that had been made known to suppliers in advance.

(vii) Transparency of decisions on contract awards

45. In addressing the question of whether the minimum information that contract award notices should contain should be specified and, if so, what should be included, the representative of the United States said that most national legislation contained a requirement to provide certain basic information in the notices of contract awards. The representative of India said that the type of information that contract award notices should contain should be left to the discretion of procuring entities.

46. In regard to the method for the provision of *ex post* information on contract awards, the representatives of the European Communities and the United States said that unsuccessful bidders should have the possibility to obtain information on the reasons for the rejection of their bids. Interested parties should have the ability to request explanations or additional information on contract award decisions. The representative of India said that decisions on contract awards should be conveyed to the bidders in accordance with national practices.

(viii) Domestic review procedures

47. On the question of whether there should be a requirement that a domestic review procedure be maintained, the representative of India said that the specification of minimum characteristics of domestic review mechanisms would go beyond the scope of a transparency agreement. Members should retain the right to design their own domestic administrative and judicial review mechanisms for ensuring that applicable domestic rules and regulations had been followed by all involved in a procurement process. The representative of Egypt said that there should be no provisions on domestic review mechanisms in a transparency agreement.

(ix) Other matters related to transparency

48. With regard to the question of whether there should be provisions stating in what form and for how long records of decisions and actions taken during the procurement process should be maintained by entities, the representative of Mexico said that the maintenance of records of procurement proceedings was an important guarantee of transparency. Record keeping was particularly useful in the review process of procurement decisions. The representatives of Brazil and Indonesia said that an agreement should not specify in what form and for how long records should be maintained by procuring entities.

49. On the question of how a transparency agreement might promote the use of information technology in government procurement, the representatives of the European Communities, Korea, Pakistan, Brazil, India, Egypt, Mexico, Indonesia and Cuba said that an agreement should have a best-efforts clause in this respect encouraging the use of information technology. The representatives of Pakistan, Australia and Cuba said that information technology was an area where technical cooperation might be relevant. The representative of Mexico said that Mexico had carried out technical cooperation in this area sharing its recent experience in the establishment of systems with other countries.

50. As regards the question of whether the link between transparency in government procurement and the fight against corruption and bribery should be explicitly recognized in a transparency agreement, the representatives of Hong Kong, China, Cuba, Pakistan, India and Indonesia said that the issue was not within the ambit of a WTO working group and was not within the scope of a transparency agreement. The representatives of Egypt and Indonesia said that the matters related to the fight against corruption might be best handled by Members at the domestic level. The representative of Brazil said that transparency in government procurement and the fight against corruption were separate matters. There should be no explicit recognition of the linkage that might exist between the two in a transparency agreement. The representative of Mexico said that, while her delegation considered that the WTO was not the appropriate forum for dealing with the subject, the establishment of an agreement on transparency in government procurement would be one of the best ways to fight corruption. The representative of Australia said that greater transparency was the key to removing corruption. The representative of Venezuela said that improving transparency in government procurement and the fight against corruption were complementary. Believing that all countries would benefit from transparency in the fight against corruption, he recalled that his delegation had submitted a non-paper that identified the elements of transparency that could contribute to the fight against corruption.

(x) *Information to be provided to other governments*

51. With regard to a requirement on the establishment of enquiry point(s) by each Member, the representative of Korea said that there should be a single access point for obtaining information free of charge. The representative of India said that the establishment of enquiry points would involve coordination with different government departments and agencies. The issue might need to be reconsidered once Members had a clearer idea of the scope and coverage of an agreement. The representative of Brazil said that, notwithstanding the difficulties of coordination among national authorities, the establishment of enquiry points would be useful.

52. Addressing the question of how adequate notification of laws and regulations should be secured, while ensuring that such requirements were not unduly burdensome, especially in regard to translation into a WTO language, the representative of Brazil said that an agreement should require Members to notify only the lists of basic laws and regulations in a WTO language. The representative of the European Communities said that according to the proposal submitted by his delegation in November 1999 concerning the notification of laws and regulations, Members should only be required to provide a list in one of the WTO languages of the relevant generally applicable instruments (WT/WGTGP/W/26, Article 11 on notification requirements).

53. On any statistical reporting requirements, the representatives of Brazil and Canada said that a transparency agreement should not have provisions in this respect.

54. In responding to the question of whether the government of an unsuccessful tenderer should be entitled to seek information on a contract award from the government whose entity had conducted the procurement in question, the representatives of Brazil and the European Communities said that this matter was linked to the issues under the item on the WTO dispute settlement procedures.

(xi) *WTO dispute settlement procedures*

55. The representatives of India, Egypt, Indonesia and Pakistan said that their delegations were opposed to the creation of a link between the rules on transparency and the WTO dispute settlement procedures. Members had domestic review mechanisms to address procurement disputes adequately.

56. The representatives of the United States, Switzerland and Japan said that disputes under a future transparency agreement should be governed by the DSU. Government-to-government dispute settlement procedures applied to the Agreement Establishing the WTO and other WTO agreements which incorporated procedural rules. The representative of the United States further said that any concern about the perceived implication that dispute settlement procedures might be used to pursue objectives that went beyond transparency had no basis in light of paragraphs 3.2 and 19.2 of the DSU. Under these paragraphs, the recommendations and rulings of the DSB or panel and appellate body recommendations could not add to or diminish the rights and obligations provided in the covered agreements.

57. The representative of Brazil, joined by the representatives of Japan, Bolivia and Argentina said the Working Group should discuss how and in what circumstances the WTO dispute settlement procedures could apply to the obligations under a transparency agreement.

(xii) *Technical cooperation and special and differential treatment for developing countries*

58. Addressing the question of whether transitional periods should be provided for developing countries, the representative of India said that provisions on special and differential treatment were necessary in light of the differences in capacity of WTO Members in the area of government procurement. The representatives of Indonesia and Egypt said developing countries should be provided long transitional periods. The representatives of Egypt, Malaysia and India said that transitional periods alone were not adequate for a meaningful special and differential treatment of developing countries.

59. On the question of what other forms of special and differential treatment might be provided, the representatives of Indonesia and Malaysia said that the issue of higher threshold values for developing countries and the extent to which sub-central governments should be covered for developing countries should be addressed. The representative of Bolivia said that any provisions on special and differential treatment should be formulated on a contractual basis and not as a statement of intent.

60. On the issue of technical cooperation, the representative of the European Communities said that all technical assistance should be based on requests formulated by recipient Members. This formulation of the needs by the recipient countries would minimize the cost involved as well as giving a certain focus in addressing such needs. The representative of Indonesia said that the provisions on technical cooperation should specify the areas in which technical cooperation might be provided, the form it might take and the resources available. There should be provisions for multilateral procedures aimed at monitoring the provisions of technical assistance on an ongoing basis under a WTO body.

B. OBSERVER STATUS OF INTERGOVERNMENTAL ORGANIZATIONS

61. The Working Group agreed to revert to the requests from intergovernmental organizations for observer status (OECD, SELA and OIC) in the light of the consultations that were currently being held by the Chairman of the General Council on this matter.

C. DATE OF THE NEXT MEETING

62. The Working Group agreed to hold its next meeting in late September 2000.

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 6 OCTOBER 1999

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its ninth meeting on 6 October 1999 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica).

2. The agenda for this meeting consisted of: (i) transparency-related provisions in existing international instruments on government procurement and national procedures and practices; (ii) requests for observer status by international intergovernmental organizations; and (iii) report of the Working Group for 1999 to the General Council. In addition, at the outset of the meeting there was an exchange of views with regard to the draft texts for an agreement on transparency in government procurement submitted respectively by a number of delegations.

A. DRAFT TEXTS FOR AN AGREEMENT ON TRANSPARENCY IN GOVERNMENT PROCUREMENT

3. The representative of the United States introduced the draft text for an agreement submitted jointly by Hungary, Korea and the United States (Job No. 4510). He said that discussions in the Working Group during the past few years had indicated that there was broad agreement within the Group in respect of both the nature of transparency in procurement and the elements that were important in ensuring transparency. The draft proposed text reflected the work undertaken by the Group and sought to summarize in concrete terms the common views that had been formed among Members on the core elements of transparency. One of the key objectives of the draft proposal was to provide adequate flexibility to accommodate the diversity of conditions prevailing in Member countries. The Group had been successful in identifying the key elements of transparency in procurement and it was presently in a position to move forward. Concluding an agreement around the core elements of transparency could make an important contribution towards the Members' broader efforts to restore confidence and stability in global markets. Such an agreement would have immediate and concrete benefits for all including taxpayers, citizens who relied on public goods and services as well as suppliers. It would also respond to the call by Ministers for greater coherence between the WTO and the work of the main international financial institutions which, for some time, had recognized the need to establish consistent standards of good practice in the area of government procurement. There was growing support for moving forward in this area as had been evidenced by the APEC Ministers' endorsement in Auckland on 9-10 September 1999 of the efforts to reach an agreement on transparency in government procurement at Seattle. The WTO should take advantage of the work accomplished in the Working Group and the opportunity that was currently available to make an important contribution in this area. He added that, in response to requests by some delegations, the United States had put together, in a tabular form, the draft texts for an agreement on transparency submitted so far (Job No. 5898). The purpose of the paper was to assist delegations in their comparison of the ways in which the draft texts addressed the core elements.

4. The representative of the European Community, in introducing his delegation's submission of a draft text for an agreement on transparency in government procurement (Job No. 4519), said that the

paper was based on the proposals that the European Community had previously submitted to the Working Group and which had also been incorporated in the List of the Issues Raised and Points Made. Simplicity was the starting point of the Community's proposal. A transparency agreement should set out a number of core principles that were to be reflected in Members' legal systems and should not prescribe in detail the way in which each principle should be applied. Transparency should be guaranteed throughout the government procurement process on a non-discriminatory basis. The work of the Working Group had revealed that transparency requirements could not be considered in isolation but were part of a broader context. This suggested that there would be need for work in future towards multilateral rules on government procurement. The European Community considered that government procurement disputes should be addressed under domestic systems and WTO dispute settlement procedures should apply in cases of blatant violations of the transparency agreement. His delegation also favoured the application of information technology in government procurement which was a key element in ensuring transparency.

5. The representative of Australia introduced her delegation's submission of a draft agreement on transparency in government procurement which reflected the procurement system in Australia and the importance attached to the existence of transparency throughout every stage of the procurement process at the level of federal and state governments (Job No. 5803). The main aim of the proposed text was to focus on transparency *per se* given that suppliers around the world believed that transparency in government procurement was the most important issue in the context of international project work. The principles reflected, to a great extent, the commonalities that had been evident in the List of the Issues Raised. These principles were set out in as flexible and concise a manner as possible so as to avoid over-prescriptiveness while incorporating enough detail in the agreement to facilitate its understanding and implementation.

6. In introducing the submission by his delegation of a draft text for an agreement on transparency in government procurement (Job No. 5239), the representative of Japan said that a simple, flexible and non-prescriptive agreement focusing on core principles would reduce the cost of implementation, minimize the burden of translating the principles into Members' respective national systems and ensure wide application of the agreement. This approach would also facilitate any necessary amendments to the agreement, for instance with a view to accommodating new developments in procurement methods. Japan believed that a multilateral agreement could be concluded at an early stage. However, to be effective and meaningful, the agreement should be legally binding and should contain monitoring and enforcement mechanisms, including provisions on domestic challenge procedures and intergovernmental dispute settlement. The proposal by Japan also contained transitional arrangements to address the problems of implementation that might arise in developing countries.

7. The representative of Venezuela said that, as part of the educational process, the Group should proceed with its work of developing the possible elements of a transparency agreement by taking up each of the proposed texts in turn as well by using the List of the Issues Raised which summarized the discussions in the Group so far.

8. The representative of India, joined by the representatives of Brazil, Egypt, Cuba, Honduras, Indonesia, Malaysia, Pakistan, Thailand and Turkey, said that the Venezuelan approach of discussing the proposed texts would go beyond the mandate of the Working Group. The study phase of the Singapore mandate had not yet been concluded. There was still a wide divergence of views among Members in respect of several concepts and principles, including definitions and scope, procurement methods, application of dispute settlement and the question of whether all the issues under discussion related to transparency. Rather than reflecting a common view, the proposed texts reflected the transparency elements as they were understood by the delegations that had advanced those proposals. In the absence of consensus among Members regarding the basic elements that should be part of an agreement on transparency, it would be premature to move on to the discussion of the proposed texts

for an agreement. The representative of the Philippines, supported by the representative of Thailand, said that the Group should not disregard the fact that a significant number of Members did not fully appreciate the implications of the issues involved and were not sufficiently satisfied that the educational phase had allowed them to make sound and concrete decisions with respect to elements of a transparency agreement.

9. The representative of India, joined by the representatives of Egypt, Indonesia and Pakistan, further said that since procurement was an important tool used by governmental authorities in developing countries to pursue their social and development objectives, developing countries had a need to retain flexibility in this area. While the principle of transparency, in itself, was good, the Group would need to have a more focused discussion on the implications for developing countries of the various obligations regarding transparency in a future WTO agreement. The representative of Pakistan, joined by the representatives of Egypt, India, Indonesia and Thailand, said that the submission of draft proposals implied that the Working Group was ready and willing to negotiate texts in specific terms, notwithstanding the fact that the time was not ripe for moving on to the discussion of negotiating proposals at this stage. The mandate of the Working Group was to conduct a study and not to conduct negotiations. The Working Group should continue with its study based on the List of the Issues Raised with a view to reaching a common understanding on the various elements of transparency. The representative of India said that there should be no discussions on any proposals concerning a draft agreement on transparency in government procurement even outside the Working Group, until the Working Group had completed its study and had reached a common understanding on the elements of transparency. Neither should the Seattle Ministerial Conference mandate the Working Group to negotiate an agreement given that Members of the Working Group held differing views.

10. The representative of Hungary, joined by the representatives of Canada and Chile, said that it was evident from the relatively stable state of the List of the Issues Raised during the recent Working Group meetings that the educational process including the identification of core elements of a transparency agreement had come close to a conclusion. While, as yet, no consensus had been reached in respect of all the issues relevant to transparency, this was not the objective underlying the educational process. The time had come to move on to the next phase of the mandate and to begin considering concrete proposals for the development of elements of an appropriate agreement. The representative of Hong Kong, China said that transparency in government procurement helped to create and maintain an open and predictable market environment and to foster open and effective competition. Accordingly, Hong Kong, China supported the conclusion of a multilateral agreement on transparency in government procurement by the third WTO Ministerial Conference. The representative of Mexico said that Mexico favoured early conclusion of an agreement on procurement. A future agreement should be confined to transparency in accordance with the Singapore mandate. The discussion of the elements of an agreement was clearly part of the Working Group's mandate. The List of the Issues Raised could also be used to help the process move forward. The core elements of an agreement had been identified in the List of the Issues Raised and were reflected in the proposals submitted by various delegations. This did not necessarily mean that there was consensus on all of the relevant issues. While it was important to continue the analysis of these issues, discussions should become more focused in order to expedite the Group's work. Joined by the representative of Japan, she said that her delegation was ready to enter into a more detailed discussion of the negotiating proposals. The discussion of the elements of an agreement was clearly part of the mandate of the Group. The representative of Japan stated that his authorities were committed to concluding a transparency agreement at the Seattle Ministerial Conference. However, consensus in respect of all the elements should be achieved and the Working Group should take the time necessary to ensure that this occurred. Transparency was in everyone's interests and not just in the interests of developed countries.

11. The representative of Argentina said that the consensus on the Singapore Ministerial mandate for the establishment of the Working Group had been achieved on the basis of two basic guarantees. First, the Working Group would only deal with the issue of transparency and not with the broader topic of due process. Second, Members would not be compelled to amend their national legislation pursuant to a future agreement. However, at least two of the draft proposals implied changes in legislation for certain Members. Further, there was a suggestion that discussions might move from transparency to market access. The representative of Pakistan, joined by the representatives of Egypt, India, Indonesia and Malaysia, said that the European Community's proposition that an agreement on transparency in government procurement was merely a building block towards the establishment of a multilateral framework for government procurement went well beyond the mandate of the Working Group. An all-encompassing government procurement agreement containing rules on market access would be another way of forcing the plurilateral Agreement on Government Procurement on developing countries. Joined by the representative of the United States, the representative of Hungary emphasized that the exercise engaged in by the Working Group was confined to transparency and was not linked in any way to market access. The joint proposal submitted by his delegation was focused on achieving transparency in government procurement and was not intended to be a stepping stone towards a future market access agreement. The representative of the European Community stated that clearly the current task of the Working Group was to discuss transparency. However, while the European Community did not expect that any substantive rules on procurement could be agreed at this point, the option of investigating multilateral rules on public procurement in future should be kept open.

12. The representative of Hong Kong, China said that, through a communication submitted by his delegation, the Chairperson of the APEC Government Procurement Experts Group (GPEG) had forwarded to the Working Group for reference the set of non-binding principles which had been completed in August 1999 (WT/WGTGP/W/24). Those elements and illustrative practices were non-binding and should not be used to prejudge the position of individual APEC Members in the discussions regarding a transparency agreement in the WTO. The representative of the United States said the APEC non-binding principles on procurement reflected a strong sense of commonality of view within the WTO membership on the nature of the elements of transparency in procurement.

13. In response to a clarification sought by the representative of the European Community regarding the respective positions taken by some delegations within the Working Group and in the APEC context, the representative of Malaysia said that APEC operated on a voluntary basis and that the agreed principles were non-binding. Furthermore, the APEC Ministerial Declaration had clearly stated that Ministers had merely supported efforts to reach an agreement on transparency. The representative of India said that the Chair's summary at the G15 Ministerial meeting in Bangalore, India in August 1999 had categorically stated that the work of the Working Group on Transparency in Government Procurement should continue in an analytical mode.

B. TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES

14. The Group took up, in turn, each of the sections in the informal note by the Chairman "List of the Issues Raised and Points Made" (Job (99)/5534). In the discussion under the relevant headings of this document reference was also made to the proposed texts submitted by Australia (Job (99)/5803); the European Community (Job No. 4519); Hungary, Korea and the United States (Job No. 4510); and Japan (Job (99)/5239). The points made will be reflected in the sixth revision of the note by the Chairman.¹

¹ To be issued shortly

C. OBSERVER STATUS OF INTERGOVERNMENTAL ORGANIZATIONS

15. The Working Group agreed to revert to the requests from intergovernmental organizations for observer status (OECD, SELA and OIC) in the light of the consultations that were currently being held by the Chairman of the General Council on this matter.

D. REPORT TO THE GENERAL COUNCIL

16. Before taking up the discussion of the draft text of the Report for 1999, the Chairman said that, regarding the situation in the work on transparency in government procurement, it was clear that some delegations were interested in actively pursuing work on the elaboration of a transparency agreement for submission to Ministers at Seattle in the coming days and weeks, while some other delegations had indicated that they considered this to be premature. Given this situation, the extent to which it would be possible for those delegations who wished to complete that work in time for Seattle to engage in a viable process to that end would have to be seen. If that did not appear to be the case, then that was that. However, if there was evidence of a process taking place that might lead to significant developments, it might prove necessary to take steps to ensure the transparency of that process so that adequate opportunities were provided for all delegations to be informed about the work that was being undertaken and to have their views taken into account, and some further meetings of the Working Group might need to be held.

17. The representatives of Pakistan, India, Indonesia and Egypt said that discussion of a proposal for a decision at the Seattle Ministerial Conference fell under the ambit of the General Council. It was up to the General Council to decide whether the Working Group should be mandated to conduct negotiations with a view to concluding an agreement at the Seattle Ministerial Conference. The representative of Pakistan said that, even though some Members might wish to proceed with efforts to conclude an agreement by Seattle, the mandate of the Group did not prescribe a specific time-frame within which the Group was required to conclude its work. Further meetings should be held only in connection with a demand driven within the context of the General Council.

18. By way of clarification, the Chairman said that, given that a number of delegations had indicated that they were willing to present elements that could be included in a possible agreement, and to the extent that this was within the mandate of the Working Group, it was appropriate to consider the possibility of having informal meetings to allow this to happen. The mandate of the Working Group was broader than the mandates for the other Working Groups established at the Singapore Ministerial Conference. Accordingly, he considered it his duty to make it possible for the mandate to be pursued and to leave the door open for delegations wishing to put forward certain elements to be able to do so in the Working Group. Any process that involved the identification of elements that might go into a possible agreement should be conducted in as transparent a manner as possible. There was no contradiction or overlap between the work done by the General Council and by the Working Group. Any future activity in the Working Group framework did not preclude delegations from raising issues of transparency in government procurement in the General Council.

19. The representative of Japan stated that the momentum that had been built up thus far in the Group should be maintained and further meetings should be held before the Seattle Ministerial Conference. The representative from Guatemala said that her delegation supported the view that the decisions within the WTO should be made in a transparent manner. The Working Group might need to hold informal meetings as referred to by the Chairman with a view to informing the General Council appropriately of developments relating to the Group's work. The representative of the European Community said that the possibility of continuing discussions in the context of the Working Group should be retained. The mandate of the Singapore Ministerial Conference to develop elements of a future transparency agreement was separate from the work done by the General Council. The representative of the United States said that both the General Council and the Working Group had

their roles to play within their respective mandates. The Singapore mandate did not require that the Group's work should or should not be completed by any particular point in time. An opportunity should be provided for all Members to be aware of the work that was under way within the mandate of the Group. The possibility of continuing the work at any time in future should be left open.

20. After a brief discussion of a draft prepared by the Secretariat, the Working Group adopted its Report for 1999 to the General Council which was subsequently circulated in document WT/WGTGP/3.

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 28 JUNE 1999

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its eighth meeting on 28 June 1999 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica).
2. The agenda for this meeting consisted of: (i) transparency-related provisions of the existing international instruments on government procurement and national procedures and practices; and (ii) observer status of international intergovernmental organizations.
 - A. **TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES**
3. For its discussion of this item, the Working Group had before it the informal note by the Chair, entitled "List of Issues Raised and Points Made", listing the issues that had been raised, together with the points made on these issues, under each of the items that were discussed by the Group at its meetings in November 1997, February, June and October 1998 and February 1999 (circulated as Job No. 2934). As an auxiliary informal paper for the use of Members wanting to draw on it, delegations also had available to them a revision of the informal note by the Secretariat, "List of Proposals on Items III-VII of the Checklist" reflecting the proposals made on items III-VII in a succinct form, which identified the source of the different proposals and summarized the written and oral comments on these proposals (circulated as Job No. 2950). The Group also had available to it a communication from the Chairperson of the APEC Government Procurement Experts Group containing APEC non-binding principles of accountability and due process (WT/WGTGP/W/22).
4. The Group took up, in turn, each of the sections in the note "List of the Issues Raised and Points Made". Under the relevant sections, the following representatives introduced their written contributions: the representative of Poland on time-limits (Job No. 3777), the representative of Australia on transparency of decisions on qualification (Job No. 1781), the representative of Canada on contract award information (Job No. 3131) and the representative of the United States on domestic review mechanisms (WT/WGTGP/W/23). Points made will be reflected in a revision of this document and also in a revised version of the "List of Proposals on Items III-VII of the Checklist".
5. In the context of the discussion of the subject of concessions under the item on "definition and scope of government procurement", the Working Group agreed that the Secretariat would make available to the Working Group the documentation of the Working Party on GATS Rules relating to this subject. Moreover, interested Members were invited to make submissions providing information on their national legislation and practices in regard to concessions from the perspective of government procurement (WTO/AIR/1132).
6. The Working Group agreed that, at the next meeting, it would pursue its work under this agenda item in the following way: (i) it would revert to the issues contained in the "List of Issues Raised and Points Made", on the basis of a further version of this note updated in the light of the

discussion at the present meeting and the new papers submitted; and (ii) delegations would also have available to them a revised version of the informal note reflecting the proposals made on items III-VII.

B. OBSERVER STATUS OF INTERGOVERNMENTAL ORGANIZATIONS

7. The Working Group agreed to revert to the requests from intergovernmental organizations for observer status (OECD, SELA and OIC) in the light of the consultations that were currently being held by the Chairman of the General Council on this matter.

C. DATE OF THE NEXT MEETING

8. The Working Group agreed to hold its next meeting on 6-7 October 1999, without prejudice to any informal consultations that the Chair may call prior to this date.

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 24-25 FEBRUARY 1999

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its seventh meeting on 24-25 February 1999 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica).

2. The agenda for this meeting consisted of: (i) transparency-related provisions in existing international instruments on government procurement and national procedures and practices; and (ii) requests for observer status by international intergovernmental organizations. In addition, a number of delegations made general statements at the outset of the meeting.

A. GENERAL STATEMENTS

3. The representative of the United States said that, at the discussion in the General Council intersessional meetings of 27 January and 2 February 1999 on issues pertaining to paragraph 9(b) of the 1998 Ministerial Declaration, there had appeared to be broad support, both among developed and developing country Members, for pursuing an agreement on transparency in government procurement. It had been understood by all Members that the Singapore mandate was strictly limited to transparency and did not extend to market access in the area of government procurement. The requirements in an eventual agreement should not call into question national policies, including those that were deemed necessary to achieve certain socio-economic and development objectives, such as domestic preferences, provided that they were administered in a transparent manner. Without prejudging the views of Members with regard to the plurilateral Agreement on Government Procurement, his delegation considered that the detailed procedural requirements of that Agreement should not be replicated in an agreement on transparency. Instead, a future agreement should set forth a flexible framework of procedural rules that would be focused on the core principles of transparency without sacrificing the basic disciplines in this respect. Having successfully completed its task of analysis, at least with regard to certain elements, the Group was well placed to begin focused work on the development of a number of elements, for example those raised in Sections III to VIII of the List of Issues. It would need to continue its analytical work on some of the more complicated issues raised which would need more in-depth study.

4. The representative of the European Community said that her delegation supported the views expressed by the representative of the United States. The work of the Working Group on Transparency in Government Procurement was separate from the work related to the Agreement on Government Procurement. The rules of a future transparency agreement might be more flexible than those prescribed in the plurilateral Agreement. While the European Community was a Party to the plurilateral Agreement, its approach in the work of the Working Group had always been to look at the basic principles of transparency in government procurement. If those principles turned out to be the same as those of the plurilateral Agreement, this would simply mean the Agreement on Government Procurement reflected them adequately and should not be taken to imply that the rules of the

Agreement on Government Procurement had been imposed on Members that were not Parties to that Agreement.

B. TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES

5. For its discussion of this item, the Working Group had before it the informal note by the Chair, entitled "List of Issues Raised and Points Made", listing the issues that had been raised, together with the points made on these issues, under each of the items that were discussed by the Group at its meetings in November 1997, February, June and October 1998 (Annex to the Report of the Working Group to the General Council for 1998, circulated in document WT/WGTGP/2). As an auxiliary informal paper for the use of Members wanting to draw on it, delegations also had available to them a revision of the informal note by the Secretariat, "List of Proposals on Items III-VII of the Checklist" reflecting the proposals made on items III-VII in a succinct form, which identified the source of the different proposals and summarized the written and oral comments on these proposals (Job No. 690).

6. The Group took up, in turn, each of the sections in the note "List of the Issues Raised and Points Made". Under the relevant sections, the following representatives introduced their written contributions: the representative of the European Community on methods of procurement (Job No. 699), the representative of Norway on publication of information on national legislation and procedures (Job No. 1067), the representative of the United States on evaluation criteria and technical specifications (Job No. 1027), the representative of Australia, respectively, on rights and responsibilities of government as a buyer, value for money in government procurement, accountability and due process (Job No. 1043). Points made are reflected in a revision of this document and also in a revised version of the "List of Proposals on Items III-VII of the Checklist" (Job Nos. 2934 and 2950, respectively).

7. After discussion of the sections of the note "List of the Issues Raised and Points Made", the representative of Venezuela introduced a non-paper on transparency in government procurement and the fight against bribery (Job No. 481). He said that the purpose of the non-paper was to provide a basis for a discussion in the Working Group of the relation of the phenomenon of bribery to its work. His delegation was aware that the fight against bribery and corruption was a difficult matter as well as a politically delicate one. However, his delegation sought the cooperation of Members in finding solutions to problems that were common to all countries.

8. In response to the requests by some delegations, the Working Group agreed that the Secretariat would make available to delegations, upon request, the texts of the OAS Inter-American Convention against Corruption and the OECD Convention on Combating Bribery of Foreign Public Officials in International Business Transactions.¹

9. The Working Group agreed that at the next meeting it would pursue its work under this agenda item in the following way: (i) it would revert to the issues contained in the "List of Issues Raised and Points Made", on the basis of a further version of this note updated in the light of the discussion at the present meeting and the new papers submitted; and (ii) delegations would also have available to them a revised version of the informal note reflecting the proposals made on items III-VII.

¹ Available, on request, from Office No. 3014 (tel. 739 51 87).

C. OBSERVER STATUS OF INTERGOVERNMENTAL ORGANIZATIONS

10. The Working Group agreed to revert to the requests from intergovernmental organizations for observer status (OECD, SELA and OIC) in the light of the consultations that were currently being held by the Chairman of the General Council on this matter.

D. DATE OF THE NEXT MEETING

11. The Working Group agreed to hold its next meeting on 28-29 June 1999, without prejudice to any informal consultations that may prove to be necessary in the interval.

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 24-25 FEBRUARY 1999

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its seventh meeting on 24-25 February 1999 under the chairmanship of Ambassador Ronald Saborío Soto (Costa Rica).

2. The agenda for this meeting consisted of: (i) transparency-related provisions in existing international instruments on government procurement and national procedures and practices; and (ii) requests for observer status by international intergovernmental organizations. In addition, a number of delegations made general statements at the outset of the meeting.

A. GENERAL STATEMENTS

3. The representative of the United States said that, at the discussion in the General Council intersessional meetings of 27 January and 2 February 1999 on issues pertaining to paragraph 9(b) of the 1998 Ministerial Declaration, there had appeared to be broad support, both among developed and developing country Members, for pursuing an agreement on transparency in government procurement. It had been understood by all Members that the Singapore mandate was strictly limited to transparency and did not extend to market access in the area of government procurement. The requirements in an eventual agreement should not call into question national policies, including those that were deemed necessary to achieve certain socio-economic and development objectives, such as domestic preferences, provided that they were administered in a transparent manner. Without prejudging the views of Members with regard to the plurilateral Agreement on Government Procurement, his delegation considered that the detailed procedural requirements of that Agreement should not be replicated in an agreement on transparency. Instead, a future agreement should set forth a flexible framework of procedural rules that would be focused on the core principles of transparency without sacrificing the basic disciplines in this respect. Having successfully completed its task of analysis, at least with regard to certain elements, the Group was well placed to begin focused work on the development of a number of elements, for example those raised in Sections III to VIII of the List of Issues. It would need to continue its analytical work on some of the more complicated issues raised which would need more in-depth study.

4. The representative of the European Community said that her delegation supported the views expressed by the representative of the United States. The work of the Working Group on Transparency in Government Procurement was separate from the work related to the Agreement on Government Procurement. The rules of a future transparency agreement might be more flexible than those prescribed in the plurilateral Agreement. While the European Community was a Party to the plurilateral Agreement, its approach in the work of the Working Group had always been to look at the basic principles of transparency in government procurement. If those principles turned out to be the same as those of the plurilateral Agreement, this would simply mean the Agreement on Government Procurement reflected them adequately and should not be taken to imply that the rules of the

Agreement on Government Procurement had been imposed on Members that were not Parties to that Agreement.

B. TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES

5. For its discussion of this item, the Working Group had before it the informal note by the Chair, entitled "List of Issues Raised and Points Made", listing the issues that had been raised, together with the points made on these issues, under each of the items that were discussed by the Group at its meetings in November 1997, February, June and October 1998 (Annex to the Report of the Working Group to the General Council for 1998, circulated in document WT/WGTGP/2). As an auxiliary informal paper for the use of Members wanting to draw on it, delegations also had available to them a revision of the informal note by the Secretariat, "List of Proposals on Items III-VII of the Checklist" reflecting the proposals made on items III-VII in a succinct form, which identified the source of the different proposals and summarized the written and oral comments on these proposals (Job No. 690).

6. The Group took up, in turn, each of the sections in the note "List of the Issues Raised and Points Made". Under the relevant sections, the following representatives introduced their written contributions: the representative of the European Community on methods of procurement (Job No. 699), the representative of Norway on publication of information on national legislation and procedures (Job No. 1067), the representative of the United States on evaluation criteria and technical specifications (Job No. 1027), the representative of Australia, respectively, on rights and responsibilities of government as a buyer, value for money in government procurement, accountability and due process (Job No. 1043). Points made are reflected in a revision of this document and also in a revised version of the "List of Proposals on Items III-VII of the Checklist" (Job Nos. 2934 and 2950, respectively).

7. After discussion of the sections of the note "List of the Issues Raised and Points Made", the representative of Venezuela introduced a non-paper on transparency in government procurement and the fight against bribery (Job No. 481). He said that the purpose of the non-paper was to provide a basis for a discussion in the Working Group of the relation of the phenomenon of bribery to its work. His delegation was aware that the fight against bribery and corruption was a difficult matter as well as a politically delicate one. However, his delegation sought the cooperation of Members in finding solutions to problems that were common to all countries.

8. In response to the requests by some delegations, the Working Group agreed that the Secretariat would make available to delegations, upon request, the texts of the OAS Inter-American Convention against Corruption and the OECD Convention on Combating Bribery of Foreign Public Officials in International Business Transactions.¹

9. The Working Group agreed that at the next meeting it would pursue its work under this agenda item in the following way: (i) it would revert to the issues contained in the "List of Issues Raised and Points Made", on the basis of a further version of this note updated in the light of the discussion at the present meeting and the new papers submitted; and (ii) delegations would also have available to them a revised version of the informal note reflecting the proposals made on items III-VII.

¹ Available, on request, from Office No. 3014 (tel. 739 51 87).

C. OBSERVER STATUS OF INTERGOVERNMENTAL ORGANIZATIONS

10. The Working Group agreed to revert to the requests from intergovernmental organizations for observer status (OECD, SELA and OIC) in the light of the consultations that were currently being held by the Chairman of the General Council on this matter.

D. DATE OF THE NEXT MEETING

11. The Working Group agreed to hold its next meeting on 28-29 June 1999, without prejudice to any informal consultations that may prove to be necessary in the interval.

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 8-9 OCTOBER 1998

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its sixth meeting on 8-9 October 1998 under the chairmanship of Ambassador Werner Corrales Leal (Venezuela).
- A. **TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES**
2. For its discussion of this item, the Working Group had before it the informal note by the Chair, entitled "List of Issues Raised and Points Made", listing the issues that had been raised, together with the points made on these issues, under each of the items that were discussed by the Group at its meetings of 3-4 November 1997, 19-20 February and 22 June 1998 (Job No. 4281) and an informal factual note by the Secretariat, prepared in response to a request at the Group's June meeting, reflecting the written and oral proposals made under these sections (Job No. 4695). On the latter document, some delegations expressed a concern that the use of square brackets in the document made it have an appearance similar to that of a negotiating document. It was also said that it would have been preferable if the sources of the proposals presented had been indicated in detail. Some other delegations were of the view that the note by the Secretariat was a mere distillation of the proposals made and consistent with the mandate given to it. After discussion, the Working Group agreed that it would take up the issues before it on the basis of the "List of Issues Raised and Points Made" and that, in the discussion of Sections III-VIII of that note, delegations so wishing would be free to refer to the "List of Proposals on Items III-VII of the Checklist".
3. The Group took up, in turn, each of the sections in the note "List of the Issues Raised and Points Made". Points made will be reflected in a revision of this document and also in a revised version of the "List of Proposals on Items III-VII of the Checklist".
4. With regard to Section XII on Technical Cooperation and Special and Differential Treatment of Developing Countries, the Group had before it the communications received from UNCITRAL, OECD, the Asian Development Bank, the African Development Bank, IMF, APEC Government Procurement Experts Group, the European Bank for Reconstruction and Development, ITC and UNDP, circulated in documents WT/WGTGP/W/20 and Addenda 1 to 7, which had been circulated in response to a request by the Group to the Secretariat to provide information on the availability of technical cooperation programmes in the area of government procurement.
5. The representative of Turkey introduced a written contribution on his country's national procedures and practices (document WT/WGTGP/W/21).

6. Following an exchange of views regarding the work at the next meeting under this agenda item, the Group agreed that: (i) it would revert to the issues contained in the "List of Issues Raised and Points Made", using this note as the basis for its discussions; and (ii) as an auxiliary informal paper for the use of Members wanting to draw on it, delegations would also have available to them a revision of the informal note reflecting the proposals made on items III-VII in a succinct form, which would identify the source of the different proposals and summarize the comments at the present meeting on these proposals.

B. OBSERVER STATUS OF INTERGOVERNMENTAL ORGANIZATIONS

7. The Working Group agreed to revert to the requests from other intergovernmental organizations (OECD, SELA and OIC) in the light of the consultations that were currently being held by the Chairman of the General Council on this matter.

C. REPORT TO THE GENERAL COUNCIL

8. The Working Group adopted its report for 1998 to the General Council which was subsequently circulated in document WT/WGTGP/2.

D. MEETINGS IN 1999

9. The Working Group agreed to hold three meetings in 1999 and that the first two of these would be held on 24-25 February and 28-29 June 1999. Informal meetings would also be held as necessary.

Working Group on Transparency in Government Procurement

REPORT ON THE MEETING OF 22 JUNE 1998

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its fifth meeting on 22 June 1998 under the Chairmanship of Ambassador Werner Corrales Leal (Venezuela).
- A. **TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES**
2. For its consideration of this agenda item, the Working Group had before it an informal note by the Chair, entitled "List of Issues Raised and Points Made", listing the issues that had been raised, together with the points made on these issues, under each of the items that were discussed by the Group at its meetings of 3-4 November 1997 and 19-20 February 1998 (Job No. 1860).
3. The representatives of Morocco and Slovenia summarized the main points of new submissions containing factual information on their national procedures and practices (WT/WGTGP/W/19 and Job. No 3387).
4. The following representatives introduced written contributions: the European Community and Norway addressing the issue of ensuring that transparency in procurement policies and practices is achieved (WT/WGTGP/W/17 and Job No. 3245); the representative of Switzerland on minimal requirements for relevant information to be published in tender notices (Job No. 3436); the representative of Venezuela on particular characteristics of government procurement, privatization and concession-granting systems (Job No. 3295); and the representative of the European Community on technical assistance (WT/WGTGP/ W/18).
5. The Working Group pursued its detailed discussion, taking up in turn the subject of each section of the informal note "List of Issues Raised and Points Made".
6. During the discussion, the representative of Mexico suggested that delegations might provide contributions showing their experience in respect of the treatment of concessions and the maintenance of record of procurement proceedings.
7. With regard to the item on technical cooperation, the Working Group agreed to request the Secretariat to prepare a background paper containing information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.
8. Following informal consultations, the Group agreed that the work at the next meeting under this agenda item would be carried forward in the following way: (i) the informal note on the list of issues raised and points made would be revised to reflect the discussion at the present meeting and the

written submissions made by various delegations on these issues¹; (ii) delegations would submit written contributions on specific issues as a basis for more focused discussion of the items under consideration in the Group by early September; (iii) the Secretariat would prepare an informal factual note reflecting the written and oral proposals made under items III to VI of the "List of Issues Raised and Points Made"², indicating where both common ground and differences existed.³

B. REQUESTS FOR OBSERVER STATUS FROM INTERGOVERNMENTAL ORGANIZATIONS

9. In response to a request by UNCTAD, the Working Group agreed to grant observer status to UNCTAD, on the basis of reciprocity with respect to access to proceedings, documents and other aspects of observership. It agreed to revert to the requests from other intergovernmental organizations (OECD, SELA and OIC) in the light of the consultations that were currently being held by the Chairman of the General Council on this matter.

C. NEXT MEETING

10. The Working Group agreed to hold its third meeting in 1998 on 8 and 9 October.

¹ To be circulated shortly.

² Items III to VII following the insertion of item V on "time periods" in the latest version of the "List of Issues Raised and Points Made"

³ This decision, initially accepted on an ad referendum basis, was subsequently adopted since no objections were communicated to the Secretariat by delegations within the deadline of one week agreed by the Working Group for any such objections.

Working Group on Transparency in Government Procurement

REPORT ON THE MEETING OF 19-20 FEBRUARY 1998

Note by the Secretariat

1. The Working Group on Transparency in Government Procurement held its fourth meeting on 19 and 20 February 1998 under the Chairmanship of Ambassador Werner Corrales Leal.
2. The substantive agenda for this meeting comprised transparency-related provisions in existing international instruments on government procurement and national procedures and practices. In addition, the Working Group considered requests for observer status by international intergovernmental organizations. Under "other business", the Working Group considered a proposal for a demonstration session on the use of information technology, a communication from Japan, reporting by the Group to the 1998 Ministerial Conference and the dates of future meetings.
 - A. **TRANSPARENCY-RELATED PROVISIONS IN EXISTING INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES**
3. For its consideration of this agenda item, the Working Group had before it an informal note by the Chair, entitled "List of Issues Raised and Points Made", listing the issues that had been raised, together with the points made on these issues, under each of the items discussed at the Group's meeting of 3-4 November 1997 (Job No. 73). Also before the Working Group was the note by the Secretariat, "Synthesis of the Information Available on Transparency-Related Provisions in Existing International Instruments on Government Procurement Procedures and National Practices" (WT/WGTGP/W/6).
4. The representatives of Hong Kong, China, the Czech Republic, Uruguay and Australia summarized the main points of new submissions containing factual information on their national procedures and practices (WT/WGTGP/W/10, 12, 13 and 14 respectively).
5. The representative of Australia introduced a written contribution relating to principles of transparency in government procurement (Job No. 136), and the representative of the United States two contributions respectively on review mechanisms and transparency in procurement methods (WT/WGTGP/W/15 and 16). The Group was also presented with a communication from the Chair of the APEC Government Procurement Expert Group (WT/WGTGP/W/11).
6. The Working Group pursued its detailed discussion, taking up in turn the subject of each section of the informal note by the Chair, "List of Issues Raised and Points Made". The points made will be reflected in a revision of the informal note in the light of the discussion at the meeting and the written submissions made by various delegations on these issues. The revised note¹ would be without prejudice to whether the position of any delegation and, in particular, to whether the Working Group would decide to include or exclude any particular aspect addressed in it from the elements that it

¹ To be circulated with Job No. 1860.

might eventually develop for inclusion in an appropriate agreement. The Chairman urged delegations, wherever possible, to make written contributions on the issues before the Group prior to its next meeting.

B. REQUESTS FOR OBSERVER STATUS FROM INTERGOVERNMENTAL ORGANIZATIONS

7. The Working Group considered requests for observer status received from the UNCTAD, the OECD, the SELA and the OIC (Organization for Islamic Conference). It agreed to take up the question of observer status for UNCTAD at its next meeting and to revert to the requests by other international intergovernmental organizations in the light of the consultations that were currently being held by the Chairman of the General Council on this matter.

C. OTHER BUSINESS

(i) *Demonstration on the use of information technology*

8. Following a suggestion by the representative of Canada, the Group noted that the Secretariat would organize, in conjunction with interested delegations, a demonstration session on the application of information technology in the area of transparency in government procurement, to be held the day after the next meeting of the Group. Members interested in making presentations on the operation of the systems in their countries were invited to contact the Secretariat.

(ii) *Japan: transparency-related proposal by Japanese Central Council on Construction Contracting Business to the Government of Japan*

9. The representative of Japan informed the Working Group of a transparency-related proposal submitted by the Central Council on Construction Contracting Business of Japan to the Government of Japan (Job No. 939). In response to a request by the delegation of Mexico, the Secretariat was requested by the Chair to provide the Group with any information on work relating to transparency in the area of procurement of construction services in the context of the Working Party on GATS Rules.

(iii) *Report to the 1998 Ministerial Conference*

10. The Working Group noted that, at its meeting of 10 December 1997, the General Council had agreed that its report to the 1998 Ministerial Conference would consist of the 1997 Annual Reports of the General Council and its subsidiary bodies together with a brief update report of the General Council concerning developments in the first months of 1998, and that Chairpersons of subsidiary bodies would be invited to report orally on work done since 1997 at its final meeting before the Ministerial Conference to the General Council (WT/GC/M/25). The Working Group noted that, while the oral presentation would be made on the Chair's own responsibility, it would be circulated in advance to Members for comments.

(iv) *Dates of meetings*

11. The Working Group agreed that its next meeting would be held on 22-23 June and its autumn meeting on 8-9 October 1998. The demonstration session on information technology would be held on 24 June 1998.

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 3-4 NOVEMBER 1997

Note by the Secretariat

1) *The Working Group on Transparency in Government Procurement held its third meeting on 3 and 4 November 1997 under the Chairmanship of Ambassador Werner Corrales Leal.*

2) *The substantive agenda for this meeting comprised general statements on the work of the Working Group and transparency-related provisions in existing international instruments on government procurement and national procedures and practices. In addition, the Working Group considered requests for observer status by international intergovernmental organizations. Under other business, the Working Group considered a draft of the report by the Working Group to the General Council and the organization of its work during 1998.*

A. GENERAL STATEMENTS

3) *The representatives of Norway and Switzerland introduced non-papers relating to elements of transparency in government procurement (Job Nos. 5220 and 6328 respectively). By way of clarification of her delegation's non-paper (Job No. 5220), the representative of Norway stated that her delegation had received preliminary comments on this non-paper which seemed to indicate that some of the objectives sought therein were judged as going too far, while others were seen as not going far enough. Norway's initiative was meant to be a constructive contribution to the Group's discussion and was not intended to go beyond its mandate. The aim of Part I of the non-paper had been to share Norway's positive experience as a party to the WTO Agreement on Government Procurement and the European Economic Area Agreement. Norway's participation in these international agreements had contributed to more efficient procurement through cheaper and more competitive bids, as well as through professional procuring entities and suppliers. This win-win situation to the benefit of all parties concerned, not least the consumers and taxpayers, was to a considerable degree the result of increased transparency in government procurement. Thus, the points*

made regarding possible objectives and effects of a transparency agreement in Part II of the non-paper had to be seen in the light of the positive experience gained through Norway's participation in international agreements in the field of government procurement. In the long term, similar benefits might reasonably be expected from a WTO agreement on transparency in government procurement. The third tiret in Part II should be understood more as a potential effect than as a primary goal. Norway did not wish to pre-empt the discussion on this point. A transparency agreement should confine itself to transparency questions in government procurement. Suggestions to this end were to be found in Part III of the non-paper, which contained a list of elements that might be included in a transparency agreement. In Norway's view, such an agreement should also contain provisions on enforcement. Regarding the scope of the transparency agreement in Part IV, Norway's thinking was tentative and her delegation did not want to prejudge any specific limitations at this stage.

*B. TRANSPARENCY-RELATED PROVISIONS IN EXISTING
INTERNATIONAL INSTRUMENTS ON GOVERNMENT
PROCUREMENT AND NATIONAL PROCEDURES AND PRACTICES*

4) The representatives of Korea, Tunisia, Hungary, Japan and Poland summarized the main points of their submissions containing factual information on their national procedures and practices (WT/WGTGP/W/7-9 and Job Nos. 6329 and 6691 respectively).

5) For its consideration of this agenda item, the Working Group had before it a Secretariat note, •Synthesis of the Information Available on Transparency-Related Provisions in Existing International Instruments on Government Procurement Procedures and National Practices• (WT/WGTGP/W/6). The Working Group had a detailed discussion taking up in turn the subjects of Sections II-X of the Secretariat note, together with the topics of special and differential treatment for developing countries and technical cooperation. In order to facilitate further discussion of these items at its next meeting, the Working Group noted that the Chairman would draw up, with the assistance of the Secretariat, a list of the issues that had been raised, together with the points made on these issues, under each of the items that it had discussed.¹ The list would be without prejudice to whether the Group would decide to include or exclude any particular aspect from the elements that it might eventually develop. The Chairman urged delegations, wherever possible, to make written contributions on the issues before the Group prior to its next meeting.

¹To be circulated in Job No. 73

C. REQUESTS FOR OBSERVER STATUS FROM INTERGOVERNMENTAL ORGANIZATIONS

6) *In response to a request by UNCITRAL, the Working Group agreed to grant observer status to the United Nations, represented by UNCITRAL, on the basis of reciprocity with respect to access to proceedings, documents and other aspects of observership. The Working Group agreed to invite on an ad hoc basis the OECD and SELA to attend its next meeting as observers.*

D. OTHER BUSINESS

(i) Report to the General Council

7) *The Working Group considered a draft of its report to the General Council which was subsequently circulated to and adopted by Members.²*

(ii) Organization of work during 1998

8) *The Working Group agreed to hold three substantive meetings in 1998, it being understood that the third meeting would have a focus on the adoption of the report to the General Council but with flexibility to take up other matters. Informal meetings would be held as necessary but their number would be kept to a minimum. The first two meetings of the Group in 1998 will be held on 19-20 February and on 11-12 June.*

²*Subsequently circulated in WT/WGTGP/1*

***Working Group on Transparency
in Government Procurement***

REPORT ON THE MEETING OF 21 JULY 1997

Note by the Secretariat

- 1) *The Working Group on Transparency in Government Procurement held its second meeting on 21 July 1997 under the Chairmanship of Ambassador Werner Corrales Leal.*
- 2) *The agenda for this meeting consisted of the following items: (i) general statements; (ii) information on national procedures and practices; (iii) transparency-related provisions in existing international instruments on government procurement procedures and in WTO Agreements; (iv) requests for observer status from intergovernmental organizations; and (v) organization of work.*

General statements

- 3) *Some delegations said that, in the study phase of its work, the Group should adopt a wide approach to the definition of the term •transparency•, leaving any narrowing of its scope to the negotiations phase. Some delegations, emphasizing the educational nature of the first phase of the Group's mandate, said that in the study phase the Working Group should lay the path towards a common understanding of the concept of transparency in government procurement. It was also suggested that the Group's work should be guided by the meaning of transparency that was implicit in the relevant provisions of international instruments on government procurement procedures. The point was made that an over-ambitious interpretation of the term •transparency• would imply a change in the scope of the mandate of the Working Group.*
- 4) *Some delegations stated that governments had developed a variety of procurement regimes in order to meet their various social and economic policy goals. Given that the objective of transparency was achieved through a diversity of ways, the Working Group should not seek to be over-prescriptive about how to ensure transparency. One delegation said that an agreement on transparency*

should allow sufficient flexibility so that those countries which had successfully combined decentralization with openness and non-discrimination would not be required to re-regulate procurement in a way that would have the effect of compromising public sector management policy reforms and incurring unnecessary costs.

5) *Delegations also identified a number of aspects of transparency that they believed the Working Group should cover in its study. These included access to procurement laws, regulations and procedures, public notices of procurement opportunities, information on qualification of suppliers, information on award decisions and criteria including national preferences, adequate time-limits for submission of bids, entities and threshold values to be subjected to the requirements of transparency, mechanisms for domestic review and procedures for the settlement of disputes between governments. The need to address the way in which national policy objectives were taken into account, for example through exceptions to the principle of national treatment and technical assistance to less developed countries was also mentioned.*

6) *With regard to the relationship of the work of the Working Group to that of other WTO bodies, one delegation said that the Working Group was set up to develop elements on transparency in government procurement at the multilateral level given that the plurilateral Agreement on Government Procurement with its limited membership had failed to adequately ensure transparency in all WTO Members and that the mandate of the Working Party on GATS Rules was limited to government procurement in the services sector.*

7) *The delegations of Canada and the United States introduced non-papers setting out a number of guiding principles that they considered important for developing elements on transparency in government procurement (Job Nos. 4099 and 4133).*

Information on national procedures and practices

8) *The Chairman informed the Working Group that, following its request at its previous meeting, the Secretariat had invited the APEC and the FTAA to make available information regarding the surveys they had undertaken of national government procurement regimes. The information that had been received from the Chairman of the APEC Government Procurement Experts Group had been made available to the Group (WT/WGTGP/W/4 and S/SPGR/W/21). The Secretariat had been informed that similar information from the FTAA would be available in the autumn. A note by the Secretariat •Synthesis of the Responses to the Questionnaire on Government Procurement of Services• had been prepared at the request of the Working Party on GATS Rules (S/SPGR/W/20). The Working Group expressed its appreciation for the information provided by the APEC Government Procurement Experts Group.*

9) *The representative of the European Community introduced a note setting out the procedures and practices relating to transparency in the European*

Community (WT/WGTGP/W/6). Another delegation made an oral statement describing its •best practice guidelines• approach that constituted the basis of its decentralized and deregulated procurement regime.

10) *The Chairman encouraged Members to make written contributions providing information on their national procedures and practices on transparency in government procurement.*

11) *A number of delegations suggested that the Secretariat prepare a synthesis document based on the factual information on national procedures and practices relating to transparency available in the various sources mentioned under this item together with the information in the note by the Secretariat on transparency-related provisions of the existing international instruments (WT/WGTGP/W/3).*

Transparency-related provisions in existing international instruments on government procurement procedures and in WTO Agreements

12) *The Group had before it a note prepared by the Secretariat •Transparency-Related Provisions in Existing International Instruments on Government Procurement Procedures and in WTO Agreements• (WT/WGTGP/W/3). It was stated that the note was instructive in demonstrating the large degree of commonality in the transparency provisions in existing international instruments on government procurement. With regard to information in the note on the importance transparency could have for the objective of giving all suppliers equal opportunity to compete regardless of nationality and thereby promoting liberalization of trade, a Member commented that the two issues were not linked. In this respect some other Members said that the Group should recognize that transparency was essential in terms of market access even when national preferences were applied. Access to information on preferences or other conditions favouring national suppliers would enable potential bidders to assess whether to bid for a contract in full knowledge of the conditions applying to a bid and thus enhance the predictability and certainty of the overall procurement process.*

13) *Some delegations said that the note could have been amplified on the provisions of the existing international instruments that gave leeway to adoption of policies aimed at achieving legitimate social and economic goals, for example offsets or other measures providing special treatment for developing countries. The existing international instruments were designed taking into account the diversity of national procurement systems and regimes. One delegation said that the note could have more detailed information on minimum threshold values for procurement. Another delegation emphasized the importance of the topics in the note relating to maintenance of records and information technology. One other delegation also mentioned that, transparency was important to purchasers, as well as to the other interested parties mentioned in paragraph 4 of WT/WGTGP/W/3, since it facilitated comparing the price paid as a result of procurement policies with the market price of a procurement.*

Request for observer status from intergovernmental organizations

14) *The Working Group considered requests for observer status received from the OECD and the SELA and agreed to invite these organizations to attend its next meeting in an observer capacity. At that meeting the Group would revert to the issue of granting these organizations a more permanent observer status in accordance with the normal guidelines for observer status for intergovernmental organizations in the WTO which call for case-by-case consideration of requests for observership by each WTO body to which a request has been addressed (WT/L/161, Annex 3).*

Organization of work

15) *On the basis of the discussion under the above items, the Chairman suggested the following regarding the organization of the work of the Group. Delegations would provide information on their national procedures and practices relating to transparency in government procurement. The Group would request the Secretariat to prepare a paper synthesizing the factual information on national procedures and practices relating to transparency available in the responses to the questionnaire on government procurement of services in the Working Party on GATS Rules, the surveys of national legislation of APEC economies and contributions to be submitted by delegations together with the information in the note by the Secretariat on the transparency-related provisions in existing international instruments. Further, in response to a suggestion by one delegation, the Secretariat would make contact with the International Trade Centre in order to obtain information on its technical assistance activities in the area of government procurement for circulation to delegations. The Group would hold its next meeting on 3-4 November 1997. Prior to that meeting, the Working Group would hold informal consultations in mid-October to organize the discussion.*

16) *The Working Group agreed to proceed as suggested by the Chairman.*

**Working Group on Transparency
in Government Procurement**

REPORT ON THE MEETING OF 23 MAY 1997

Note by the Secretariat

1) *The Working Group on Transparency in Government Procurement held its first meeting on 23 May 1997 under the Chairmanship of Ambassador Werner Corrales Leal.*

2) *The agenda for this meeting consisted of the following items: (i) existing international instruments and activities; (ii) organization of work; (iii) arrangements for cooperation with other intergovernmental fora; (iv) general statements.*

Existing international instruments and activities

3) *Presentations were made by the representatives of the UNCITRAL and the World Bank on the relevant instruments and activities relating to government procurement in their organizations. The Working Group expressed its appreciation for these presentations. Documents WT/WGTGP/W/1 and WT/WGTGP/W/2 contain the presentations of the representatives of the UNCITRAL and of the World Bank, respectively. The annex to this note contains a record of the specific comments made and questions raised with regard to these presentations and the answers provided by the representatives of the organizations.*

Organization of work

4) *On the basis of consultations with Members, the Chairman proposed the following regarding the work of the Group. The Group would limit itself for the time being to the organization of the work required under the first stage of its mandate under the Ministerial Decision, namely the study of transparency in government procurement practices, taking into account national policies. The Group would request the Secretariat to prepare a paper presenting factual information on the provisions related to transparency in international instruments*

on government procurement procedures (e.g. UNCITRAL Model Law on Procurement of Goods, Construction and Services; World Bank Procurement Guidelines; the Plurilateral WTO Agreement on Government Procurement) and in WTO agreements. Given the widespread view that a way should be found of taking advantage of the information collected on national practices by other bodies, the Group would ask the Secretariat to make contact with APEC and the FTAA to invite them to make available what information they could share with the Group regarding the surveys they had undertaken. As for the replies to the questionnaire of the Working Party on GATS Rules, these were already available in the S/WPGR/W/- series of documents. As regards the timing of meetings, the Group would hold its first full-scale substantive meeting on 21 and 22 July 1997. The Group would take a decision on a subsequent meeting or meetings this year in July, by which time it would have a clearer idea as to the amount of work that had to be undertaken. Finally, the Working Group would note the view of a number of delegations that the mandate of this Group was independent of those of the GATS Rules Group and the Committee on Government Procurement. While this Group's independence should be maintained vis-à-vis the GATS Rules Group, the Chairman would seek to maintain contact with the Chair of that Group so as to facilitate any necessary coordination on practical matters.

- 5) The Working Group agreed to proceed as suggested by the Chairman.
- 6) The Chairman encouraged delegations to submit written contributions.

Arrangements for cooperation with other intergovernmental fora

7) The Working Group noted that the IMF and the World Bank had observer status in this Working Group pursuant to the cooperation agreements concluded by the WTO with these organizations (WT/L/195) and agreed that requests for observer status from other intergovernmental organizations would be considered in accordance with the normal guidelines for observer status for international intergovernmental organizations in the WTO (WT/L/161, Annex 3). The Group agreed to invite UNCITRAL to attend its next meeting.

General statements

8) After the conclusion reached on the organization of work, some Members took the opportunity to make remarks of a general nature. It was stated that in its further work the Group would need to clarify the elements that constituted transparency in government procurement. The information gathering and analysis phase of the Group's mandate would facilitate the identification of these elements. A wide participation of Members in the work of the Group was urged and the hope was expressed that many delegations would bring forward views and proposals that would guide the Group in proceeding with the study phase of its work.

9) Regarding coordination of work with that of the Working Party on GATS Rules, the point was made that, notwithstanding the separate mandates of the two

fora, the duplication of work in this area should be avoided by allowing the possibility of exchanging information on the respective work of the two fora.

10) The delegation of Japan introduced a non-paper regarding the development of elements on transparency in government procurement. In response to a question, the representative of Japan clarified that the views expressed in the paper were based on Japan's experience with the implementation of the relevant provisions of its domestic laws and regulations in force, including the procedures relating to an enforcement mechanism which had been established under the Agreement on Government Procurement.

ANNEX

Comments Made and Questions Raised in Respect of the Presentations Made by
the
Representatives of the UNCITRAL and the World Bank

UNCITRAL

11) *In response to a question on how many countries had incorporated the Model Law, either in whole or in part, in their legislation, the representative of UNCITRAL responded that between 15 to 20 countries either had completed or were in the midst of the legislative process necessary for the application of the Model Law. The countries with economies in transition constituted the main group of countries using the Model Law, but the Model Law could well be applied in other countries and regions.*

12) *In response to a question on the reason why the Model Law had not been used as a basis for the procurement legislation in more countries, the representative of the UNCITRAL responded that the Model Law had only been concluded in 1994 and, given the limited time since then, had been used rather extensively. Harmonization and modernization of national laws in the framework of international conventions was a lengthy process.*

13) *In response to a question on whether government representatives participated in the work of the UNCITRAL, the representative of the UNCITRAL responded that the Commission was composed of representatives of governments. Government representatives had also been directly involved in the preparation of the Model Law which their governments had subsequently agreed by consensus. During the initial drafting stage of the Model Law, the UNCITRAL Secretariat had occasionally consulted experts in a particular field but these experts had often been government officials or delegates. The governments' involvement in the initial drafting stage of the legislative instruments of UNCITRAL was a key to the success of their adoption.*

14) *In response to a question on the way the Model Law was different from the World Bank Guidelines, the representative of the UNCITRAL responded that the scope of the Model Law was broader. The Model Law was a legislative instrument for use by governments as a basis for their national laws applicable to all their procurement activities, whereas the World Bank Guidelines were designed specifically for procurement under projects financed by World Bank loans. Moreover, by virtue of its adoption by governments through the UN decision-making process, the Model Law could be seen as having a particularly significant juridical status. The World Bank Guidelines had juridical effect pursuant to loan agreements between the World Bank and the Borrower countries given treaty status.*

15) A question was asked regarding the range of national procurement laws that the drafters of the Model Laws had used as a source of factual information. The representative of the UNCITRAL responded that the process of the preparation of the Model Law had been initiated in the mid- to late 1980s with a solicitation by the Secretary of the Commission to all the member states of the United Nations and observer governments requesting them to provide the UNCITRAL secretariat with copies of their procurement legislation. The large collection of national procurement legislation thus gathered had been used by the UNCITRAL secretariat as an input to the preparation of the background studies and initial drafts of the Model Law.

16) A question was asked whether the drafters of the Model Law had considered a definition for the terms •public purchase•, •public buyer• and •public sector•. The representative of the UNCITRAL responded that the relevant article under the General Provisions of the Model Law merely indicated that the national legislature would define the term •procuring entity• for the purposes of the enacting law in accordance with the public law of the individual enacting State. In the Guide to Enactment of the Model Law, UNCITRAL indicated certain factors that the legislature might take into account in determining the type of entities that should be covered within the scope of the Model Law.

17) In response to a question on the scope of the procurement covered by the Model Law, the representative of the UNCITRAL responded that the different methods of procurement set forth in the Model Law were intended to apply as broadly as possible to goods, works and services. The design of a procurement method for intellectual and consultancy services in the Model Law was a useful contribution of UNCITRAL to the development of legislation on procurement.

18) A question was raised as to whether the Model Law set forth procedures for dispute settlement and for arbitration. The representative of the UNCITRAL responded that Chapter VI of the Model Law provided model provisions for the establishment of a review mechanism to handle complaints by bidders who considered that they had not been treated in accordance with the requirements of the Model Law. The review mechanism in the Model Law was essentially a three-stage process. In the first instance, the review was to be sought, prior to the entry into force of the procurement contract, through a direct petition to the procuring entity itself. This initial step had been included to allow the resolution of the problem between the complainant and the entity before the matter was submitted to an administrative review body. Finally, the Model Law gave an aggrieved bidder the right to seek judicial review. The Model Law did not provide in detail the requirements for a judicial review process because the mandate of the Commission did not extend to any matters that might involve impinging in this respect on national laws and procedures. With regard to arbitration, while the Model Law did not preclude a state from providing arbitration in the contractor selection phase, it did not expressly envisage arbitration at that stage of the government procurement process. Arbitration had a more significant role in settling disputes that related to the implementation or performance phase of contracts.

19) *In response to a question whether the Model Law was universally applicable by all countries irrespective of the stage of their development, the representative of the UNCITRAL responded that the composition of the Commission was based on a geographical distribution formula of the UN General Assembly which ensured the representation of governments with diverse economic and political systems in its deliberations. While there were differences in the way major legal systems in the world treated procurement, by codifying those procurement practices recognized as the best in the world, the Model Law was susceptible of application by governments in all regions and at different levels of economic development.*

20) *In response to a question on the relationship between ex-ante and ex-post elements of transparency and the notion of public accountability, the representative of UNCITRAL responded that the Model Law contained provisions that were designed to ensure that entities refrained from taking decisions that were important to individual bidders rights and to the integrity of the entire procurement process in an arbitrary or secretive fashion. For example, the procuring entity should include all relevant information about the qualification process in the record of procurement proceedings and, when a supplier's application to qualify was rejected, the entity should provide the supplier with the grounds for his disqualification. A further example of transparency disciplines would be that a procuring entity that had automatically cancelled the bid of a bidder who had offered an improper inducement to influence the procurement process had to inform the bidder of its decision and had to give him an opportunity to challenge any unjustified decision.*

21) *In response to a question whether UNCITRAL had prepared any studies on the transparency aspects of government procurement procedures, the representative of the UNCITRAL responded that while examination of transparency aspects had been at the heart of the process of preparation of the Model Law and had permeated many of the studies and reports of the working group, there were no studies that were exclusively devoted to the topic of transparency.*

World Bank

22) *A question was asked whether the World Bank had been promoting the development of government procurement legislation based on legislative instruments such as the UNCITRAL Model Law in the context of structural adjustment programs. The representative of the World Bank responded that, while there was no direct relationship between the development procurement legislation and the purpose of structural adjustment programs, modernization of procurement law might be included as a condition of a structural adjustment loan or of an investment loan in a given Borrower country. The World Bank provided technical assistance in the area of government procurement. In addition, a grant*

from a special fund established by the World Bank was available for governments• use of experts in this area.

23) In response to a question on whether the World Bank Guidelines were applicable to all procurement financed by World Bank loans irrespective of the size of the procurement, the representative of the World Bank responded that the International Competitive Bidding method was used for large-sized procurement contracts. For contracts of small value, the loan agreements allowed the procuring government to apply its local laws, to the extent that the procedures under the local laws were sufficiently clear and transparent.

24) In response to a question on the guidelines used by the regional development banks in the context of their loan agreements, the representative of the World Bank responded that the basic principles of the guidelines of the regional banks were essentially the same as those of the World Bank Guidelines. In particular the requirements on transparency in the guidelines of the regional banks were very similar to those set forth in the World Bank Guidelines.

25) A question was asked as to the reason for the existence of two separate World Bank Guidelines for procurement of goods and works and for selection and employment of consultants, respectively. The representative of the World Bank responded that different principles applied to procurement of goods and works and procurement of intellectual services. Price was the main evaluation criterion in purchasing goods or works. Therefore, open competitive bidding was the best method for this type of procurement. On the other hand, it was universally agreed by specialists on procurement that open competition based on price was not the best way of procuring intellectual services, which essentially consisted of the experience, knowledge and advice of consultants. Since it would not be feasible for the public purchaser to evaluate proposals from all bidders worldwide who had the necessary experience to provide a certain intellectual service, the procuring authorities usually established a shortlist of consultants who would be capable of fulfilling the terms of reference in question. Those service providers were asked to submit their proposals with a detailed explanation of their experience, staff, work plan, etc. The proposals were evaluated by using a methodology according to which merit points were allocated to quality and price. The total score was obtained by adding up the weighted quality and price scores, where price was given a lower weight than quality. The bidder with the highest points would then be invited to negotiate the contract.

26) In response to a question on whether any services other than intellectual services were covered by the Guidelines on goods and works, the representative of the World Bank responded that the Guidelines also applied to services which were bid and contracted on the basis of performance of a measurable physical output such as drilling, mapping and similar operations. The principles applying to the procurement of such services were similar to those applying to the procurement of civil works.

27) *In response to a question on whether the list of consultants shortlisted by the Borrower government had to be endorsed by the World Bank, the representative of the World Bank responded that while governments established the shortlist, the World Bank had to agree that the consultancy firms on the shortlist had the necessary experience and qualifications to fulfil the terms of reference in question and that there was an equitable geographical spread among the shortlisted firms. In cases where governments did not have the necessary knowledge or experience to develop a shortlist, for example for a consultancy service of a highly specialized nature, the Bank would be willing, at the request of the Borrower, to suggest a shortlist of consultants. For this purpose, the Bank would normally set up an ad hoc committee of Bank staff members to draw up the list.*

28) *In response to a question on whether the World Bank Guidelines on Selection and Employment of Consultants contained different requirements on transparency, the representative of the World Bank responded that, to the extent possible, those Guidelines incorporated the same basic principles of transparency as the Procurement Guidelines. For instance, at the stage of invitation of proposals from consultants, the •Information for Consultants• document must provide adequate information on the selection procedures including a listing of the technical evaluation criteria and other factors that would be applied in the evaluation of proposals. This would enable a consultancy firm to assess the points that it should emphasize and should enumerate in the preparation of a responsive proposal. However, there were no detailed requirements for advertising because bidding was limited to shortlisted firms.*

29) *In response to a question on whether the World Bank had studied the cost of promoting transparency in procurement procedures and its share in the total value of contracts, the representative of the World Bank responded that, for big contracts, the cost of applying transparency procedures was negligible in proportion to the benefits the Borrower achieved in terms of improved competition and therefore economy and efficiency in a procurement process. Small contracts were not subject to any extensive transparency procedures.*

30) *A question was asked on whether the transparency requirements contained in the national legislation of countries with economies in transition went further than the similar requirements in the World Bank Guidelines. The representative of the World Bank responded that newly developed national legislation was often based on the UNCITRAL Model Law which had certain additional requirements in the area of transparency. For instance, certain national legislation provided that contract awards must be announced to all bidders through publication in the press, whereas there was no such requirement under the World Bank Guidelines.*

31) *In response to a question on how the World Bank determined whether a contract should be subject to a prior review or a post review, the representative of the World Bank responded that the Bank applied prior review to expensive or complex contracts. However, because it was costly and time-consuming, the Bank used the prior review process only for procurement above a certain set value. This value was lower in the case of countries with limited experience with procurement.*

The prior review of the Bank assisted the Borrower country in ensuring the regularity of the procurement process. There was now a tendency to use post review more often. Interestingly, some countries found the prior review so helpful that they sometimes asked for it without being contractually obliged to do so.

32) In response to a question on how the World Bank Guidelines treated preferences granted to domestic suppliers, the representative of the World Bank responded that the World Bank Guidelines recognize that many governments grant preferences to protect their domestic manufacturers in pursuit of economic or social policy goals. Under the rules on international competitive bidding, governments were allowed to grant a margin of preference to domestic bidders in procurement of goods which was equivalent to the applicable import duty or 15% of the value of the contract if import duties exceeded 15% of such value.

33) In response to a question on whether domestic preferences were compatible with the principle of transparency, the representative of the World Bank said that giving domestic preferences did not violate the principle of transparency provided that the procurement legislation and the bidding documents stated the existence of any such preferences. The Bank would not allow a government to apply a preference to a procurement unless the bidding document indicated clearly that in the evaluation of the bid in question the local bidders would get the benefit of a margin of preference. However, by increasing the cost of the project for agencies in charge of project execution, granting of domestic preferences conflicted with the objective of economy and efficiency in procurement - getting the best possible value for price in a particular procurement.

34) In response to a question on whether the Bank had carried out a study on the distribution of the procurement contracts financed by World Bank loans among national and foreign firms, the representative of the World Bank said that the Appendices to the World Bank Annual Report contained the lists of procurement contracts by types of goods and works and also showed the distribution of contract awards between local and foreign suppliers/contractors.

35) A question was asked on whether the World Bank had encountered any cases of alleged and proven cases of corruption in the procurement activities under a project financed by a World Bank loan and how the Bank dealt with such a situation. The representative of the World Bank responded that the World Bank considered that there was essentially no room for corruption in case of procurement of goods and works if the detailed rules of International Competitive Bidding were followed in a procurement process. The prior review by the Bank also ensured the regularity of the process. Moreover, the availability of information on the rules of procurement made the whole process self-enforcing since bidders would notify the Bank of any attempt at irregularity by a bidder and/or a procurement official. The World Bank would intervene with the Borrower to ensure that it would withdraw any recommendation that was not in favour of the bidder with the lowest evaluated bid. If the Borrower country insisted on its decision, the Bank would refuse to finance the contract in question and cancel the portion of the loan allocated to the procurement by declaring

misprocurement. Under the Procurement Guidelines and under the Guidelines for Selection and Employment of Consultants, the Bank would declare a supplier or consultant ineligible to be awarded a contract financed by the Bank, either indefinitely or for a stated period of time, if the Bank determined that the supplier or consultant had engaged in corrupt or fraudulent practices. The World Bank had come across a number of cases of corrupt activities in this area. In one case, a major consultancy firm had submitted fraudulent curricula vitae of its staff and had falsified documents consistently, thus winning contracts fraudulently over the years. That firm had been blacklisted for a period of two years.

36) *A comment was also made that the practices of countries seemed to vary in respect of commissions paid in government procurement. Certain countries specifically prohibited the payment of commissions in public tendering while in certain other countries it appeared that commissions were tax-deductible as part of overall costs. The representative of the World Bank responded that the World Bank had amended the Guidelines in August 1996 in order to fight corruption and fraud more intensely. Under the new rules, a firm would be blacklisted if the Bank at any time determined that the firm had engaged in corrupt or fraudulent practices in competing for or in executing a Bank-financed contract. At the same, the Bank required that a provision be included in bidding documents requiring that a bidder declare in the bid form whether he had or had not paid a commission in competing for the contracts and giving details on the purpose of the commission, to whom it was paid and the amount paid. However, the World Bank Guidelines did not preclude a bidder from paying commission fees to an agent for handling a procurement contract. The commission would naturally be included in his price by the bidder, thereby increasing the overall price and decreasing the chances of the bidder to win the contract. A somewhat related problem was the fact that most countries still allowed their nationals to treat bribes paid to foreign officials as tax-deductible business expenditures. The OECD was working on this problem as part of their anti-corruption efforts.*

**POSITIVE EFFECTS OF TRANSPARENCY IN GOVERNMENT PROCUREMENT
AND ITS IMPLEMENTATION**

Communication from the European Communities

The following communication, dated 13 June 2003, has been received from the Permanent Delegation of the European Commission with the request that it be distributed to all Members.

Since the launch of the study phase on Transparency in Government Procurement after the Ministerial Conference of Singapore in 1996, WTO Parties have identified and discussed in detail all elements related to TGP capable of being included in a future WTO Agreement. As Members are on the verge of a decision on modalities for these negotiations, the EC would like to emphasize the general aims to be achieved by these negotiations and the cost that the absence of WTO rules in TGP could imply for WTO Members and in particular for developing countries (DCs).

I. THE BENEFITS OF A MULTILATERAL AGREEMENT ON TRANSPARENCY IN GOVERNMENT PROCUREMENT

More efficiency and innovation

1. In a commercial environment it is difficult to know what the market strategy is or how to assess the economic advantages of our competitors. A lead in a given market is not permanent and is constantly subject to pressure from competitors looking for a share in that market. This situation calls for a continuous analysis of industrial, commercial or marketing strategies in an increasingly complex environment.

2. Public procurement applied in a transparent environment with a clear set of rules defined in advance and respected by all participants may allow tendering companies from both developed and developing countries to foster enhanced competition thus stimulating innovation amongst bidders.

Better value for money

3. Transparent tendering should lead to effective competition by comparing offers from different bidders. When tenders are to be opened to foreign bidders, the differences in terms of value and quality regularly brings prices down, as in any other auction system.

4. Governments and public entities have a political duty to purchase goods, services and works through the most economically advantageous offer. More transparency in procurement open to foreign suppliers contributes to increased competition and governments obtain lower prices, thereby reducing budget expenditure.

Encouraging investment and partnership

5. Access to a foreign market when tenders are to be opened to foreign bidders, is always difficult, requiring, as it does, previous market research, the setting-up of a distribution system, the opening of local branches and/or the appointing of representatives. It is usually the case for foreign bidders wishing to win a public contract to set up a joint venture or similar partnership with local suppliers who are more familiar with domestic law, rules and procedures thus increasing the chances of success. Transparency will increase investment and partnership.

Reducing corruption

6. Amongst the different forms of corruption affecting foreign trade (judicial corruption, political corruption), bribery (to officials and politicians) during the tendering process is one of the most significant and distorting of all corruption practices: extra expenditure for public budgets ultimately borne by tax payers, reducing free competition and quality of deliverables, discouraging investment, etc.

7. Publishing calls for tenders, notifying contract awards, including the successful bidder's name and final price, and making award criteria more transparent and accountable are some of the basic principles of transparency in government procurement which directly affect corruption practices. Although TGP will not eliminate corruption (more sophisticated practices will be used), it will reduce it.

II. IMPLEMENTING RULES ON TGP

Most WTO Members already apply rules on TGP

8. All developed countries and many developing countries already apply rules on TGP which enable procuring entities to attract sufficient bidders and introduce competition, and thus improve the quality of the goods and services supplied while reducing public expenditure. The cost for these countries of introducing WTO rules on TGP would be minimal, if any.

9. Developing countries not applying procurement rules (where transparency would just be a missing element) may justify this by claiming that the absence of rules reduces administrative costs. But it is difficult to find countries where there is a complete lack of rules in government procurement and, even where there are such cases, the savings obtained by introducing competition will more than offset administrative costs. Where procuring rules already exist, the transparency exercise is limited to making such rules available by whatever means and introducing a minimum number of items that should be made public to obtain sufficient participation and accountability. Where procuring rules do not exist, are insufficient or when the introduction of these rules represents an important cost, the Doha mandate obliges to provide the necessary assistance for implementation.

New multilateral rules in TGP will not place institutional constraints on developing countries

10. It is not the case, as it is often claimed, that new multilateral TGP rules will open DC procuring markets to suppliers from developed countries and will limit the ability to give preferences to domestic suppliers. This debate has been closed since Doha, where the scope of TGP was clearly limited to transparency only, without reducing the option of countries to give preference to domestic suppliers.

11. The EC is in favour of minimising the impact of TGP rules on small entities in DCs by making these rules only applicable above a given threshold, which could even be higher for DCs. Good governance and efficient management in the public sector need a selection process that is proportionate to the value of the goods or services to be purchased. A procuring entity launching major works or purchasing high-value goods cannot justify the absence of rules and transparency by claiming insufficient institutional capacity or human resources.

Practical measures to be taken to help developing countries live up to possible future obligations

12. Firstly, by explaining what the future WTO rules might be, and, secondly, by helping to put in place the necessary legislative changes (if any) and new methods. This second aspect is the most sensitive as it covers a wide audience of procuring officials, not only in many central government entities, but also in regions, provinces and municipalities. Thirdly, a minimum of infrastructure will be needed to respond to these future obligations in an efficient manner: publications, notifications, etc.

13. The EC is committed to provide assistance during and after negotiations and is already providing assistance on capacity building to many WTO Members. The EC will enhance assistance in the field of Information Technologies (IT) thus providing easier access to procurement opportunities worldwide.

Conclusion

14. A future multilateral agreement on TGP which, as agreed at Doha, will be limited to transparency, will not open up new markets or increase existing ones. In some cases it could encourage entities to accept foreign bids, but this would only happen on a case-by-case basis. The real benefit for all, procuring entities and bidders alike, is the construction of a minimum set of rules, applicable worldwide, introducing legal certainty in the existing procurement procedure and allowing entities to compare alternative offers and thus obtain better value for money.

15. The EC is of the opinion that the future Agreement on TGP should apply to all procurement, without distinction between national or international (on account, for one thing, of the problem of defining the borderline between national and international bidders), thus allowing domestic bidders also to benefit from a more open and transparent process and clearly indicating to international bidders when a tender is limited to nationals, thus avoiding unnecessary cost.

16. Making government procurement more transparent does not mean renouncing national sovereignty. On the contrary, it should lead to better public opinion control of government action, and also facilitate judicial review. Corruption operates in opaque environments and transparency is the opposite of opacity.

**DOMESTIC REVIEW MECHANISMS RELATED TO TRANSPARENCY
IN GOVERNMENT PROCUREMENT**

Communication from the European Communities

The following communication, dated 30 January 2003, has been received from the Permanent Delegation of the European Commission with the request that it be distributed to all Members.

1. Introduction

The Chairman's checklist of issues¹ refers to domestic review procedures in point VIII. This issue was the object of a communication from the United States of 24 June 1999 (WT/WGTGP/W/23) and has been discussed at the Working Group on several occasions.

In the light of previous discussions and submissions, the European Communities (EC) want to contribute to the further elaboration of this issue in full consideration of the new Doha mandate, in particular the limited scope of the future agreement to transparency only. In this perspective, this paper intends to cover all aspects relating to transparency of domestic review procedures in government procurement. In addition, it examines the kind of provisions that should be envisaged in the future agreement on transparency in government procurement to ensure that parties' measures subject to a future agreement can be reviewed through domestic procedures.

A future agreement would thus, on the one hand, ensure the transparency of the domestic review procedure and, on the other hand, ensure suppliers' right to challenge a procurement in breach of transparency provisions.

2. Transparency of domestic review procedures

All government procurement regimes contain legislative and regulatory provisions to review decisions of procuring entities although the extent, details and procedures may vary in each country.

¹ Last update of the note by the Chairman, "List of Issues Raised and Points Made", JOB(99)/6782, dated 13 November 1999.

The future agreement would ensure that domestic review procedures are transparent. This is nothing new: the GATS², the GATT³, the Agreement on Rules of Origin⁴, the Agreement on Import Licensing⁵, the Agreement on Customs Valuation⁶ and the Agreement on Trade-Related Aspects of Intellectual Property Rights⁷ all contain provisions relating to the transparency of domestic review procedures. Document WT/WGTGP/W/3 prepared by the Secretariat reproduces all these relevant provisions.

Issues requiring further elaboration are as follows:

2.1 Access to review procedure rules

The parties would ensure that existing rules governing the review process for a given tender are available to any bidder who has an interest in this particular tender. Suppliers affected by a measure during the procurement process should also have access to existing rules allowing them to exert their right to launch a challenge.

2.2 Decisions taken by the domestic review body

Decisions taken or the lack of decision taken by the review body should be communicated to the complainant bidder and to any other bidder who may be affected by the decision or lack of decision in writing, in a timely and comprehensive manner allowing complainants to respond accurately to any decision.

3. Challenge procedures within a future agreement on transparency in government procurement

A future agreement on transparency in government procurement should contain provisions allowing suppliers to challenge a procurement in breach of the provisions related to transparency of the procurement process (i.e. breach of obligation to publish a tender notice or contract award notice or any other obligation arising from the Agreement).

This is nothing new: the GATS⁸, the GATT⁹, the Agreement on Rules of Origin¹⁰, the Agreement on Customs Valuation¹¹ and the Agreement on Trade-Related Aspects of Intellectual Property Rights¹² all contain rules requiring Members to have in place domestic review bodies, and the plurilateral Agreement on Government Procurement (GPA)¹³ contains provisions for domestic review procedures where it is alleged that the GPA has been breached. Document WT/WGTGP/W/3 prepared by the Secretariat reproduces all these relevant provisions.

⁹ Article X:3(b).

¹⁰ Articles 2(j) and 3(h).

¹¹ Article 11.

¹² Articles 41 to 61.

¹³ Article XX.

3.1 Independence of the review body

Decisions on procurement covered by a future agreement should be subject to review by a body independent from the procuring entity. Discussions with WTO Members have brought to light the differences of understanding about the independence, objectivity and impartiality of the review body. The EC considers that sufficient independence from the procuring entity would be secured if this independence is foreseen at any one step of the review procedure.

3.2 Challenge procedure

WTO Members would remain sovereign to maintain any judicial, arbitral or administrative procedures to review the correct implementation of the provisions and principles related to transparency in government procurement following a similar approach to the GATS¹⁴ and the TRIPS Agreement.¹⁵

The challenge procedure could be governed by the following principles:

- the review body renders prompt and timely decisions, preserving suppliers' commercial interests,
- no discrimination between domestic bidders and those from other parties;
- decisions taken by the review body are effective and enforceable;
- challenge procedures provide for adequate measures to correct proven infringements of the agreement and to protect suppliers' interests in a tender.

Domestic review bodies in many WTO parties often apply provisional measures such as the suspension of the tendering process or provide for remedies such as compensation for the loss or damage suffered (i.e. cost of tender documents). The EC is conscious of the heterogeneity of parties' legal regimes and level of development and consequently understands the difficulties to discuss remedies at this stage. Reference to provisional measures and remedies in this paragraph is intended to provide more clarity and illustrate what the borders are around the domestic review procedures related to transparency in government procurement.

4. Special and differential treatment for developing countries

Within a specific chapter on special and differential treatment that the future agreement may contain, the EC would propose a flexible approach to implement domestic review provisions taking into consideration the outcome of the future agreement.

WORK AHEAD UP TO THE CANCUN MINISTERIAL

Communication from the Republic of Korea

The following communication, dated 30 January 2003, has been received from the Permanent Mission of the Republic of Korea with the request that it be distributed to all Members.

Korea has put forward its specific ideas on transparency in government procurement in the preparatory process leading up to the Seattle Ministerial (WT/WGTGP/W/27). It was mainly on what should be addressed in establishing multilateral rules on transparency in government procurement. The following focuses more on how to deal with this issue in accordance with the specific mandate given at Doha.

A. ASSESSMENT OF CURRENT SITUATION

Significant work had been done during the process up to the Seattle Ministerial. A number of substantive ideas were tabled and discussed. The Working Group on Transparency in Government Procurement (WGTGP) had identified key elements to be included in the multilateral rules as well as related issues, and conducted in-depth discussions thereupon.

The WGTGP reviewed all the specific issues through another full round of discussions last year. However, there still seem to be gaps among Members mainly on the following issues:

- Where we stand: Are we engaged in pre-negotiations? Or are we just exchanging information and/or conducting a series of educational sessions?
- What would be the outcome of all our discussions: Are we aiming at a set of multilateral rules to be subject to DSU? Or a political commitment and/or best-endeavour sort of soft law?
- What would be the elements to be included in the final outcome of this series of negotiations. What would be the core rules to ensure transparency in government procurement?

Korea is of the view that Doha Ministerial Declaration offers a straightforward answer to the first question. Paragraph 26 of the Doha Declaration states that "we agree that negotiations will take place after the Fifth Session of the Ministerial Conference[...]". Thus, it is clear that we should start

the negotiations after the Cancun Ministerial. Accordingly, the process up the Cancun Ministerial will be characterized as a preparation for negotiation.

Korea also believes that the multilateral rules on TGP should be legally binding and subject to the DSU. Otherwise, it would be difficult to ensure effective implementation of the rules, substantially diminishing the benefits of such rules.

At the same time, Korea also believes that the legitimate concerns of the countries should be addressed without compromising the core elements of the rules on TGP.

B. THE WAY FORWARD

Taking into account the current situation, Korea is of the view that more focused and practical work should be done, as the deadline for establishing modalities for negotiations quickly approaches. The following work should be the core business of the Working Group in the next six months:

- Identify the core elements to be negotiated after the Cancun Ministerial. They do not have to be exhaustive and detailed down to the negotiating text.
- Identify issues of particular concerns to developing countries, based on the core elements as above. Developing countries are urged to come forward with specific inputs.
- Explore ways to address those specific concerns.

With a view to facilitating the Members' deliberations, Korea would like to provide the following starters:

- The core elements to be included:
 - Scope and definition.
 - Non-discrimination.
 - Measures to ensure transparency through publication of procurement-related measures (*inter alia* laws and regulations and including setting up focal points for enquiry), publication of procurement opportunities (invitations, tender documentation and technical qualifications, etc.).
 - Measures to ensure transparency in the procedures for award decision(including review of qualification, time-limits).
 - Transparent domestic review process.
 - Exceptions.
 - Dispute settlement and consultations.
 - Special and differential treatment for developing countries.
 - Technical assistance.
- Ways to address concerns of developing countries:
 - Transitional period (e.g. temporary suspension of the application of the DSU).
 - A set of flexibilities for developing countries and their phase-out.
 - Programmed technical assistance.

Korea reserves its rights to amend or add more specific ideas and would like to ask the Members to provide constructive comments on the ideas above.

**CONSIDERATIONS RELATED TO ENFORCEMENT OF AN AGREEMENT ON
TRANSPARENCY IN GOVERNMENT PROCUREMENT**

Communication from the United States

The following communication, dated 27 January 2003, has been received from the Permanent Mission of the United States with the request that it be distributed to all Members.

Introduction

In September 2002, the United States proposed a work plan for the Working Group to build on the progress that it has made over the past several years (WT/WGTGP/W/35). In furtherance of that proposal, the United States makes this submission to address two potential elements of an agreement on transparency in government procurement (TGP agreement) that several Members, in particular developing countries, have singled out as of particular concern. Both elements relate to the enforcement of an agreement: the requirement of domestic review procedures and application of the WTO's *Understanding on Rules and Procedures Governing the Settlement of Disputes* (DSU) to a TGP agreement.

Enforcement provisions in a TGP agreement

A TGP agreement would be an important addition to the rules-based international trading system by setting out basic transparency obligations that suppliers throughout the world could expect to find in the government procurement systems of all Members. These obligations should be subject to the same types of enforcement as existing commitments in other WTO agreements. However, it is important to emphasize that regardless of the enforcement mechanisms that may be built into a TGP agreement, such mechanisms could not be used to challenge domestic preference programmes, which the Doha Declaration has explicitly excluded from a TGP agreement.

With respect to the enforcement mechanisms in a TGP agreement, several Members have raised questions about the interaction between domestic review procedures and application of the DSU. Questions have also been raised about the relationship between application of the DSU and specific procurement decisions. These have included the potential overturning of procurement decisions and the authorization of sanctions if a dispute settlement panel were to find a Member to be in violation of the agreement and authorized retaliation in other sectors. To assist the Members in addressing these concerns, the United States offers the following considerations related to tailoring the most appropriate enforcement provisions for a TGP agreement.

While the Working Group need not decide the particulars of an enforcement mechanism for a TGP agreement until the full contours of the agreement are determined, it could consider how to structure the interaction between domestic review procedures and the application of the DSU in an agreement. The United States suggests that these provisions should serve different purposes and that the different roles should be reflected in a TGP agreement.

Domestic Review Procedures

A TGP agreement should require that Members make available domestic review procedures for both domestic and foreign suppliers to use if they had concerns that a particular procurement was not in compliance with the transparency provisions of an agreement. An agreement could specify that the use of such procedures would be the only method through which a specific procurement could be challenged.

As has been observed repeatedly in the Working Group, and most recently in the Secretariat's note (WT/WGTGP/W/33) of 3 October 2002, many Members maintain domestic review procedures "which allow aggrieved suppliers to lodge complaints against any alleged breaches of the applicable rules and to seek review of the procurement proceedings of an entity, including award decisions". Some Members have administrative mechanisms, while others have judicial mechanisms. Some Members have both.

Many WTO agreements provide for domestic review mechanisms to ensure that complaints or appeals can be raised and resolved under the jurisdiction of an individual WTO Member pursuant to national or local laws. The following are examples:

- GATT Article X:3(b) provides for "judicial, arbitral or administrative tribunals or procedures for the purpose, *inter alia*, of the prompt review and correction of administrative action relating to customs matters".
- Article 2(j) and Article 3(h) of the Rules of Origin Agreement provide that administrative actions related to determinations of origin shall be "reviewable promptly by judicial, arbitral or administrative tribunals or procedures, independent of the authority issuing the determination, which can effect the modification or reversal of the determination".
- Article 5(e) of the Import Licensing Agreement requires that applicants for licenses "shall have the right of appeal or review in accordance with the domestic legislation or procedures of the importing Member".
- Article 11 of the Customs Valuation Agreement (Agreement on Implementation of Article VII of the GATT 1994) provides the right of appeal for valuation determinations. An "initial right of appeal" may be to the customs administration or an independent body, but legislation must also provide "for the right of appeal without penalty to a judicial authority".

Similarly, the Agreement on Technical Barriers to Trade and the Agreements on Subsidies and Countervailing Measures and Anti-Dumping Practices contain domestic review provisions. The TRIPS Agreement contains very elaborate provisions for domestic review and enforcement.

Drawing on these provisions, a TGP agreement could include a simple and flexible provision on domestic review procedures that would accommodate different Members' existing independent administrative or judicial tribunals and review procedures.

Application of the DSU

To address Members' concerns with regard to WTO dispute settlement for a TGP agreement, Members should consider the following:

- phasing-in application of certain provisions of a TGP agreement (and thus application of the DSU) for developing countries, linked to capacity building; and
- providing explicitly in an agreement that resort to the DSU would not be available to challenge a specific procurement, and thus could not be used to overturn a contract award.

Conclusion

The United States recommends that the Working Group at its February 2003 meeting specifically address Members' concerns related to enforcement of a TGP agreement. To frame the discussion related to the enforcement of a TGP agreement, the United States offers this submission.

JAPAN'S VIEW ON TRANSPARENCY IN GOVERNMENT PROCUREMENT

Communication from Japan

The following communication, dated 10 October 2002, has been received from the Permanent Mission of Japan with the request that it be distributed to all Members.

I. OVERVIEW

The Working Group on Transparency in Government Procurement was established in 1996, with a view to ensuring transparent, open and appropriate procedures in government procurement, thereby combating corruption, which is an impediment against competition. The Working Group held 14 meetings in the last six years.

(Reference)

Singapore Ministerial Declaration (December 1996)

21. We further agree to establish a working group to conduct a study on transparency in government procurement practices, taking into account national policies, and, based on this study, to develop elements for inclusion in an appropriate agreement.

Doha Ministerial Declaration (November 2001)

26. Recognizing the case for a multilateral agreement on transparency in government procurement and the need for enhanced technical assistance and capacity-building in this area, we agree that negotiations will take place after the Fifth Session of the Ministerial Conference on the basis of a decision to be taken, by explicit consensus, at that session on modalities of negotiations. These negotiations will build on the progress made in the Working Group on Transparency in Government Procurement by that time and take into account participants' development priorities, especially those of least-developed country participants. Negotiations shall be limited to the transparency aspects and therefore will not restrict the scope for countries to give preferences to domestic supplies and suppliers. We commit ourselves to ensuring adequate technical assistance and support for capacity building both during the negotiations and after their conclusion.

Japan's position towards an agreement on transparency in government procurement

1. The Working Group has made considerable progress in examining elements for inclusion in a transparency agreement, and discussing main issues and options as to how to deal with those issues. With regard to the mandates stated in the Singapore Ministerial Declaration, Japan recognizes that the Working Group has largely accomplished "a study on transparency in government procurement practices" and made fundamental progress to "develop elements for inclusion in an appropriate agreement", during the last six years.

2. As for an appropriate agreement on transparency in government procurement, Japan attaches a great importance to the following:

- (1) Since the transparency provisions in the Agreement on Government Procurement in Annex IV of the WTO Agreement are difficult for developing country Members to follow as it stands, the provisions of a transparency agreement should be flexible enough, so that all WTO Members could accept them.
- (2) A transparency agreement should be legally binding and effective.
- (3) It is a prerequisite that all WTO Members participate in a transparency agreement. Therefore, the framework of such an agreement should be simple, focusing on core principles such as transparency in procurement opportunities (see paragraph 4 below). For example, details of tendering procedures should be dealt with in each Member's domestic laws, and a transparency agreement should ensure that such procedures are transparent.

3. Japan wishes to contribute to establishing a "flexible, effective, and simple" framework for a transparency agreement. In 1999, Japan tabled a draft framework for a transparency agreement and updated it twice (JOB(99)/5239).

4. Elements of a transparency agreement:

Japan considers that important elements are, *inter alia*, the following:

- (1) Non-discrimination in transparency.
 - (2) Definition and scope.
 - (3) Core transparency principles:
 - preparation and publication of procurement rules and enquiry point;
 - publication of procurement opportunities;
 - transparency in decisions on contract awards.
 - (4) Domestic review.
 - (5) Consultations and dispute settlement.
 - (6) Technical cooperation and special and differential treatment for developing countries.
-

**Working Group on Transparency
in Government Procurement**

**WORK OF THE WORKING GROUP ON THE MATTERS RELATED TO ITEMS VI-XII
OF THE LIST OF THE ISSUES RAISED AND POINTS MADE**

Note by the Secretariat

This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

1. This note has been prepared in response to a request made at the informal meeting that was held on 12 March 2002 that the Secretariat prepare, for each of the two substantive meetings in 2002, short background papers summarizing the work that has already taken place in the Working Group on the matters related to the sub-items to be discussed, drawing on and listing the documentation of the Group. A note on items I to V prepared for the May 2002 meeting of the Working Group has been circulated in document WT/WGTGP/W32.
2. This note covers items VI to XII of the Informal Note by the Chairman, "List of the Issues Raised and Points Made" (JOB(99)/6782, dated 12 November 1999), namely Transparency of Decisions on Qualification, Transparency of Decisions on Contract Awards; Domestic Review Procedures; Other Matters Related to Transparency; Information to be Provided to Other Governments (Notification); WTO Dispute Settlement Procedures; and Technical Cooperation and Special and Differential Treatment for Developing Countries.
3. Similar to the approach taken in the note on items I to V, the aim is to provide a more concise note than the Informal Note by the Chairman as well as to take into account subsequent discussions in the Working Group and papers submitted. Being a summary, this note does not contain all the details of the points made and explanations given. For this information delegations should consult the Informal Note by the Chairman and the other documentation of the Working Group, a list of which can be found in the Annex to WT/WGTGP/W/32.
4. This note first briefly sets out the information that was considered by the Working Group on provisions in existing international instruments¹ and on national procedures and practices concerning items VI to XII. It will be recalled that at the outset of its work the Working Group sought information from other intergovernmental organizations on relevant international instruments (in particular from UNCITRAL and the World Bank² and requested the Secretariat to provide a note synthesizing the information available on transparency related provisions in existing international

¹ The United Nations Commission on International Trade Law (UNCITRAL) Model Law on Procurement of Goods, Construction and Services of 1993; the Guidelines for Procurement under IBRD Loans and IDA Credits and the Guidelines for Selection and Employment of Consultants by the World Bank Borrowers, last revised in 1999; and the WTO Agreement on Government Procurement of 1994.

² WT/WGTGP/W/1-2.

instruments on government procurement procedures and on national practices.³ Under each of the items, this note then summarizes the discussions in the Working Group, outlining the issues raised and main points made.

VI. TRANSPARENCY OF DECISIONS ON QUALIFICATION

(a) Information on provisions in existing international instruments and national procedures and practices

5. In international instruments and national legislation provisions with respect to transparency of procedures for qualification of suppliers relate to four main issues: qualification criteria; fair and non-discriminatory application of qualification procedures; listing and registration of suppliers; and notification of qualification decisions.

6. With regard to qualification criteria, a key transparency requirement is that the evaluation of suppliers and decisions relating to their qualification be based on criteria which have been previously set forth in the pre-qualification documents and pre-disclosed.⁴ These provisions also emphasize that qualification criteria be linked to the capability of interested suppliers to perform and be capable of objective application.⁵ The UNCITRAL Model Law sets forth the range of criteria that procuring entities may require the suppliers to meet in order to qualify for participation in procurement proceedings.⁶ The World Bank Guidelines stipulate that the qualification criteria should be geared to establishing the capability and resources of the supplier to perform in relation to the requirements of the contract and lists the factors that should be taken into account.⁷ The Agreement on Government Procurement (GPA) requires that any conditions for participation in tendering procedures be limited to those which are essential to ensure the firm's capability to fulfil the contract in question.⁸

7. In national practice, any particular requirements and conditions regarding qualification procedures are normally set forth in invitations to tender and tender documents, thereby ensuring that all suppliers are informed in advance of the relevant requirements.⁹ Qualification criteria employed may include information needed to establish a supplier's professional and technical capability to perform the terms of the contract and may also include additional requirements, such as pertaining to legal capacity to enter into procurement contracts, financial capacity and stability of suppliers, tax obligations or professional risk indemnity insurance.¹⁰ Additionally, entities may base their qualification requirements on some other considerations, for example protection of health and safety of workers and employment equity for men and women. Entities sometimes use negative criteria for disqualifying suppliers.¹¹

8. All three international instruments prescribe a number of procedures to ensure that the qualification process is fair and does not lead to discrimination among suppliers. The Model Law requires that same criteria must be applied to all suppliers participating in the procurement process.¹² The GPA emphasizes that entities must not discriminate among suppliers of other GPA Parties and between domestic suppliers and suppliers of other Parties and among suppliers of other Parties with regard to conditions of participation. In certain cases, countries make the eligibility of suppliers of

⁵ WT/WGTGP/W/6, paragraphs 68-70.

⁶ WT/WGTGP/W/6, paragraph 69.

⁷ WT/WGTGP/W/6, paragraph 69.

⁸ WT/WGTGP/W/6, paragraph 69.

⁹ WT/WGTGP/W/6, paragraph 74.

¹⁰ WT/WGTGP/W/6, paragraph 72.

¹¹ WT/WGTGP/W/6, paragraph 73.

¹² WT/WGTGP/W/6, paragraph 70.

other countries to participate in a procurement depend on these countries providing reciprocal treatment to its suppliers.¹³

9. All three instruments have specific requirements on the provision of information on qualification decisions. Under the Model Law, each supplier that has submitted an application to pre-qualify must be notified whether or not it has been pre-qualified. The GPA requires the entity concerned to advise any supplier having requested to become a qualified supplier of its decision in this regard. The World Bank Guidelines require Borrowers to inform all applicants of the results of the pre-qualification. Under the Model Law and the GPA, the procuring entity must, upon request, communicate to suppliers whose application to qualify was rejected or whose qualification has been brought to an end the grounds therefor.¹⁴ The information available to the Group to date on national systems does not provide details of how decisions on qualification systems are notified to suppliers.

10. Many procuring entities maintain either permanent or occasional lists of qualified suppliers for procurement of specific categories of products, services and public works, in particular in the case of complex projects.¹⁵ Such lists serve to create a pool of readily available information on approved suppliers which the procuring entities may use to request proposals for bids or to evaluate bids. In the case of selective tendering procedures under the GPA, entities maintaining lists of qualified suppliers are required to publish the conditions to be fulfilled by suppliers, the methods of verification of the conditions by entities, up-to-date approved lists of qualified suppliers and the period of validity of the lists.¹⁶ Entities are required to notify the qualified suppliers included on permanent lists of the termination of any such lists or of their removal from them.¹⁷ In order to avoid exclusivity in the preparation and maintaining of lists of qualified suppliers and in the procurement process itself, new suppliers are provided with an opportunity to be admitted to the lists of qualified suppliers at any time.¹⁸ The APEC Non-binding Principles require entities to ensure access for potential new suppliers to procurement opportunities.¹⁹

11. In some national practices, tenderers applying for qualification may be required to prove their enrolment in a professional or trade register.²⁰ In certain countries, all potential suppliers, both local and foreign, are required to be enrolled in a centralized registration system as a prerequisite for participation in government procurement contracts in certain categories of tenders, for instance related to public works. In some countries, foreign natural persons without domicile in the country or foreign legal persons without a branch in the country are required to accredit an agent domiciled in the country who is duly empowered to submit tenders and sign contracts and also to represent them both legally and in non-legal matters.

(b) Discussions in the Working Group

12. The discussions in the Working Group on this matter have focused on three broad issues, namely qualification criteria; lists of qualified suppliers; and provision of information on qualification decisions.

¹³ WT/WGTGP/W/6, paragraph 72.

¹⁴ WT/WGTGP/W/6, paragraph 80.

¹⁵ WT/WGTGP/W/6, paragraph 82.

¹⁶ GPA Articles IX:9 and VIII(a).

¹⁷ GPA Article VIII (f).

¹⁸ GPA Article VIII (d)-(e).

¹⁹ WT/WGTGP/W/24.

²⁰ WT/WGTGP/W/6, paragraph 72.

(i) *Qualification criteria*

13. On the first of these issues, the point has been made that transparency of qualification criteria should reinforce the objective of an open, transparent, efficient and equitable procurement process; ensure uniform provision of information to potential suppliers; and secure sufficient information in relation to suppliers. A key principle of transparency in this respect is that decisions on qualification of suppliers should be taken only on the basis of criteria that had been identified and established early in the procurement process and pre-disclosed to suppliers sufficiently in advance.²¹ In this respect, the suggestion has been made that decisions on supplier pre-qualification should be taken on the basis of conditions and criteria including technical specifications²² and other requirements²³ which have been made known in advance (e.g. through a tender notice or tender documentation)²⁴, or that have been specified in the qualification documentation or other information that has been provided to all participating suppliers.²⁵ Also, any changes in qualification requirements should be made known to all interested suppliers.

14. The view has also been expressed that qualification criteria should be limited to necessary requirements only, such as the relevant financial, commercial and technical capacities of suppliers.²⁶ On the other hand, the view has been held that establishment of qualification criteria should be left within the purview of procuring entities and national authorities which should have sufficient flexibility in developing qualification criteria suited to different types of procurement, sectors and circumstances.²⁷ Also, the prescription of any harmonized qualification criteria or an illustrative listing in an agreement would not be feasible and did not have any bearing on the work on transparency.²⁸

15. With regard to application of qualification criteria, one view has been that the qualification criteria that are set out in invitations to pre-qualify or in tender documents should be applied in a non-discriminatory manner as regards transparency. There could be non-discrimination as regards transparency notwithstanding discriminatory treatment in favour of domestic suppliers, or suppliers from other countries, being built into the criteria themselves pursuant to, for instance, preferences or other domestic sourcing requirements.²⁹ In response, it has been said that application of the principles of objectivity and non-discrimination to pre-qualification criteria went beyond the concept of transparency.³⁰

(ii) *Lists of qualified suppliers*

16. On the second of these issues, the point has been made that, where pre-qualification and registration systems are maintained, such systems should not be exclusive. New suppliers meeting the qualification criteria in time to participate in a tender should be given the same or, in one view, at least a reasonable opportunity to participate in that and subsequent tenders. Qualification systems could be re-opened at periodic intervals to new suppliers.³¹

³⁰ JOB(99)/6782, paragraph 79.

³¹ WT/WGTGP/M/11, paragraph 29; JOB(99)/6782, paragraph 74.

(iii) Provision of information on qualification decisions

17. With regard to transparency of qualification decisions, it has been suggested that information on the basis for selecting suppliers and the way in which the qualification process is conducted should be publicly available to all potential suppliers³² or on request from a supplier of a Member.³³ Moreover, entities should provide unsuccessful suppliers, upon request, with information as to the reasons for the denial of their request to become a qualified supplier.³⁴ On the other hand, the view has been held that provision of *ex post information* on qualification decisions could be impracticable in developing countries especially where a large number of suppliers are involved.³⁵

18. The view has been expressed that suppliers should have the right to challenge qualification decisions if the rules of the system have not been followed. In response, it has also been said that, under certain tendering methods, it is not possible to overturn decisions on qualification even if certain other suppliers could be considered to be qualified in terms of the pre-published criteria.³⁶

VII. TRANSPARENCY OF DECISIONS ON CONTRACT AWARDS**(a) Information on provisions in existing international instruments and national procedures and practices**

19. Government procurement regimes and each of the three instruments put great emphasis on decisions on the award of the contracts not only being objective but also being seen to be objective. Being seen to be objective in decision-making requires, first, that the evaluation criteria, including technical specifications, be objective in nature and publicly announced in advance and, second, that arrangements for the receipt and opening of tenders are such as to ensure their regularity. Transparency in decision-making further entails the availability *ex post* of information on the decisions taken.

(i) Transparency of evaluation criteria

20. All three instruments covered by the Secretariat's note on the Synthesis of the Information Available in WT/WGTGP/W/6 provide that tender documents should contain the criteria, including any factor other than price, to be considered by the procuring entity in determining the successful tender and for awarding the contract. They also emphasize that entities should evaluate tenders only on the basis of the criteria that have been previously published. The provisions of the Model Law on examination, evaluation and comparison of tenders require the procuring entity to evaluate and compare the tenders in order to ascertain the successful tender in accordance with the procedures and criteria set forth in the tender documents and prohibit the use of any criterion that has not been set forth in the tender solicitation documents.³⁷ The GPA also explicitly provides that awards should be made in accordance with the criteria and essential requirements specified in the tender documentation.³⁸ The World Bank Guidelines require that bidding documents shall specify the relevant factors, in addition to price, to be considered in bid evaluation and the manner in which they will be applied for the purpose of determining the lowest evaluated bid.³⁹

³⁴ WT/WGTGP/W/27, VIII.2.2; Job No. 5803, IV.3.

³⁵ WT/WGTGP/M/11, paragraph 29; JOB(99)/6782, paragraph 79.

³⁶ JOB(99)/6782, paragraph 79.

³⁷ Model Law Article 34(4)(a), Article 39(1) and Article 48(3).

³⁸ GPA, Article XIII:4(c).

³⁹ World Bank Guidelines on goods and works, paragraph 2.51.

21. Particular attention is given in the three instruments to ensuring the transparency and objectivity of technical specifications criteria and their evaluation. The GPA and the Model Law stipulate that technical specifications⁴⁰ prescribed by procuring entities shall not be prepared, adopted or applied with a view to, or with the effect of, creating unnecessary obstacles to international trade.⁴¹ The GPA and the World Bank Guidelines require that technical specifications prescribed by procuring entities shall be based on international standards, where such exist, otherwise, on national technical regulations, recognized national standards or other equivalent standards, or building codes.⁴² The GPA has an explicit preference for the use of specifications based on performance rather than design or descriptive characteristics. The Model Law requires that any specifications, plans, drawings, designs and requirements or descriptions be based on the relevant objective technical and quality characteristics of the goods.⁴³

22. As regards national practices to guarantee the transparency of evaluation criteria, in some countries, the basic principles and criteria for selecting tenders are established in the procurement legislation⁴⁴; in others, there are no centrally prescribed contract award criteria and agencies determine the criteria that are appropriate in the context of individual procurements.⁴⁵ Certain criteria and procedures are common to the process of evaluation of tenders in most countries. It is invariably required that all evaluation criteria be made available in advance to suppliers in the tender notice or in the tender documents⁴⁶; that only those criteria previously announced be taken into account in the evaluation of bids⁴⁷; and that selection of the winning tender be made in accordance with the evaluation criteria and relative importance of each criterion previously announced. It may be required that the criteria that are communicated to the potential suppliers in the invitation to tender and tender documents cannot be modified without notifying all of the potential bidders through the same channels used to transmit the invitations and the tender documents.⁴⁸ Contracts are awarded, in general, to the tenders which have the *lowest price* or to the tenders determined to be *economically the most advantageous* in terms of the specific evaluation criteria.

23. All three instruments have provisions regarding the application of the principle of non-discrimination in respect of participation in tenders and award of contracts. The Model Law provides that any restrictions on procurement from foreign sources with the purpose of protecting certain economic sectors or on account of certain legal obligations should only be on grounds specified in the procurement regulations or should be pursuant to other provisions of law.⁴⁹ The objective of transparency is promoted by requiring a procuring entity to declare any limitations on participation on the basis of nationality in the invitations to tender and to include in the record of the procurement proceedings a statement of the grounds and circumstances on which a procurement entity has relied for limitation of participation on the basis of nationality. In these cases, the procuring entity is exempted from the obligation to give wide international circulation to the invitation to tender or invitation to pre-qualify.⁵⁰ The Model Law also provides for the possibility that, in evaluating and comparing tenders, a procuring entity may grant a margin of preference in favour of local goods, services and suppliers which permits the procuring entity to select the overall lowest-priced tender of

⁴⁰ Such as quality, performance, safety and dimensions, symbols, terminology, packaging, marking and labelling, or the procedures and methods for their production and requirements relating to conformity assessment procedures prescribed by procuring entities.

⁵⁰ Model Law Article 23.

a local supplier when the difference in price between that tender and the lowest-priced tender falls within the range of margin of preference.⁵¹ The rules for calculation of such preference margins should be set forth in the procurement regulations. Moreover, the use of a margin of preference is to be pre-disclosed in the tender documents and reflected in the record of the procurement proceedings.⁵²

24. Under the International Competitive Bidding (ICB) procedures, the World Bank Guidelines provide that a margin of preference may be granted to domestically manufactured goods and domestic contractors in the evaluation of bids at the request of the Borrower and under conditions to be agreed under the Loan Agreement.⁵³ The bidding documents should clearly indicate any preferences to be granted, the information required to establish the eligibility of a bid for such preference, and the method that will be followed in the evaluation and comparison of bids.⁵⁴ Moreover, for procurement of goods and works, which by its nature or scope is not expected to be of interest to foreign bidders, the competitive bidding procedure normally used for public procurement in the country of the borrower, National Competitive Bidding (NCB), may be preferred to the ICB procedures but the use of this procedure is subject to specified conditions.

25. Under the GPA and in respect of procurement covered by the Agreement, governments Parties to the Agreement are required to give the products, services and suppliers of any other Party to the Agreement treatment "no less favourable" than that given to their domestic products, services and suppliers and not to discriminate among the goods, services and suppliers of other Parties (Article III:1). Furthermore, each Party is required to ensure that its entities do not treat a locally established supplier less favourably than another locally established supplier on the basis of the degree of foreign affiliation or ownership and do not discriminate against a locally established supplier on the basis of the country of production of the good or service being supplied (Article III:2). Certain derogations from the fundamental principles of the Agreement are provided for in national schedules appended to the Agreement. In addition, special and differential treatment for developing countries under Article V of the GPA allows for agreed exclusions from the requirement of national treatment under the GPA. Furthermore, the GPA prohibits the use of offsets which are defined as measures used to encourage local development or improve the balance-of-payments accounts by means of domestic content, licensing of technology, investment requirements, counter-trade or similar requirements.⁵⁵ However, a developing country may at the time of its accession negotiate conditions for the use of offset requirements, to be used only for qualification of suppliers and not as criteria for awarding contracts.⁵⁶

26. The procurement practices of a number of countries provide for award criteria to take into account considerations such as the promotion of domestic supplies and/or suppliers. To this end, the criteria may include factors such as price preference margins, offset requirements, set-asides for small and medium-sized enterprises or for minority business. Some countries have stated that the procuring entity must give suppliers prior information at the invitation to tender stage of the procedures if domestic preferences or any other conditions in a procurement proceeding are applied.⁵⁷

(ii) *Receipt and opening of tenders*

27. All the three instruments have provisions to ensure the regularity of the receipt and opening of tenders and awarding of contracts. The GPA provisions require that procedures and conditions for the receipt and opening of tenders guarantee the regularity of the openings and be consistent with the national treatment and non-discrimination provisions of the GPA.⁵⁸ The Model Law and the World Bank Guidelines set forth detailed conditions which are aimed at preventing any non-transparent action or decision by the procuring entity in the process of the opening of tenders and at enabling suppliers to observe that the entity complies with the procurement criteria and procedures.

28. The three instruments set forth a number of other provisions that safeguard transparency at the bid evaluation stage. The procuring entity may ask bidders for clarifications of their tenders that are needed to evaluate them, but no changes are to be asked or permitted with a view to making unresponsive bids responsive except for the correction of arithmetical errors appearing in the tender.⁵⁹ The GPA requires that any opportunity that may be given to tenderers to correct unintentional errors of form between the opening of tenders and the awarding of the contract shall not be permitted to give rise to any discriminatory practice.⁶⁰ The World Bank Guidelines preclude the alteration of bids after the deadline for receipt of bids.⁶¹ Under the GPA, negotiations with entities may only take place where prior notice has been given or where no one tender is obviously the most advantageous in terms of the specific evaluation criteria set forth earlier in the notices or tender documentation.⁶² The Model Law prohibits negotiations between the procuring entity and a supplier with respect to a tender submitted by the supplier.⁶³

29. With regard to the confidentiality of tenders, the World Bank Guidelines require that information relating to the examination, clarification, and evaluation of bids and recommendations concerning awards shall not be disclosed to bidders or other persons not officially concerned with the bidding process until the successful bidder is notified of the award.⁶⁴ Under the procedures on negotiations in the Model Law and in the GPA, entities are required to treat information in tenders, in particular any technical, price or other market information, confidentially and not to provide information intended to assist particular participants to bring their tenders up to the level of other participants.⁶⁵

30. As regards, national practices on receipt and opening of tenders and award of contracts, the countries on which information is available follow procedures that are set forth in the generally applicable procurement laws⁶⁶ or established by individual procuring agencies for their own use.⁶⁷ The details of the procedures and practices on submission and receipt and opening of tenders can be found in paragraphs 109 to 113 of WT/WGTGP/W/6.

⁶⁷ S/WPGR/W/11/Add.4, Add.8, Add.11.

(iii) *Ex post information on contract awards*

31. The three instruments lay down provisions requiring procuring entities to inform the public and, in particular, the suppliers that have participated in the procurement process of their award decisions. The Model Law and the GPA require entities to publish a notice award after the award of each contract.⁶⁸ The publications in which individual GPA Parties publish such notices are identified in Appendix II to the GPA. The GPA sets forth in detail the type of information that such notices, to be published within a specified time-limit after the award of each contract, must contain. In addition to the publication of a notice of contract award, the GPA goes on to require entities to promptly inform directly those suppliers that have participated in a tender of the decision on the contract award, in writing if requested.⁶⁹ Under the Model Law, the procuring entity is required to give a notice to other suppliers after it has entered into a contract with a supplier, specifying the name and address of the supplier and the contract price.⁷⁰ Furthermore, the Model Law and the GPA allow an unsuccessful tenderer to seek and obtain pertinent information concerning the reasons why its tender was not selected. The GPA also requires the provision of information on the characteristics and relative advantages of the tender selected as well as the name of the winning tenderer. Under the Model Law, however, the procuring entity is not required to justify the grounds for its rejection of tenders.⁷¹

32. As regards the treatment of confidential information on contract awards, the GPA foresees that entities may decide to withhold certain information on contract awards where release of such information may impede law enforcement or otherwise be contrary to public interest or would prejudice the legitimate commercial interests of particular enterprises or might prejudice fair competition between suppliers.⁷² The provisions of the Model Law bar the procuring entity from disclosing certain information, including that relating to the examination, evaluation and comparison of tenders so as to safeguard the public interest or the commercial interest of parties involved in the proceedings.⁷³

33. As regards national practice on *ex post* information, the information available suggests that in most countries, entities are required to announce publicly the results of the contract award periodically or within stipulated time periods which varies from three days to three months.⁷⁴ The content of the information may be specified in national procurement legislation, regulations or guidelines, as well as the media for publication which in some cases may be the same as that for the procurement notice. In addition to the award notification, some countries require the procuring entity to inform all unsuccessful tenderers of the results of the contract award.⁷⁵ In some countries, unsuccessful suppliers may be entitled to a debriefing by the procuring entity as to how their tenders performed. Further details of national practices can be found in paragraphs 120 to 122 of WT/WGTGP/W/6.

34. As regards confidentiality of information on contracts awarded, in some national practices a procuring entity may decide that certain information on the contract award be withheld where divulgence of such information would prejudice the legitimate commercial interests of the winning tenderer or would be contrary to the public interest.⁷⁶

(b) Discussions in the Working Group

(i) *Evaluation criteria*

35. The point has been made that a key requirement with regard to transparency of evaluation criteria is that the evaluation of tenders be conducted⁷⁷ and contract award decisions based strictly on evaluation criteria, including technical specifications and other relevant information, conditions or other requirements⁷⁸, which have been pre-established and made known in advance⁷⁹, for example through a tender notice or tender documentation.⁸⁰ Such criteria should be clear and be capable of objective application, and should be communicated and applied non-discriminately. In this connection, the view has also been expressed that a transparency agreement would not, as a general rule, set out what those criteria should be.

36. The point has also been made that it is necessary to adopt a flexible approach in order to allow for certain situations – for instance, where negotiations may have to be held in order to obtain better terms, or in cases of *force majeure*⁸¹ where the criteria set out in tender documents cannot be strictly adhered to.⁸² Other aspects of the transparency of evaluation criteria are also discussed under item IV in document WT/WGTGP/W/32 relating to Information on Procurement Opportunities, Tendering and Qualification Procedures and under item VI in the present document on Qualification Procedures.

(ii) *Receipt and opening of tenders awarding of contracts*

37. The view has been expressed that procuring entities should have appropriate procedures to ensure that all tenders are received and opened under procedures and conditions guaranteeing the regularity and impartiality of the opening process⁸³ and that there is no opportunity to manipulate the specific elements of tenders or to provide a particular tenderer with information on other tenders.⁸⁴ In response, it has been said that setting out the procedures on how tenders received by procuring entities should be handled to ensure the regularity and impartiality of the procurement proceedings is not within the ambit of the work on transparency. The objective sought can be achieved through *ex post* information.⁸⁵

38. The suggestion has been made that each Member should ensure that only bids of suppliers whose tenders have been received before the previously published final date for submission of tenders may be considered.⁸⁶

39. The point has been made that each Member shall ensure that its governmental agencies treat tenders in confidence.⁸⁷

⁸⁷ Job No. 5239, 4.2.

(iii) *Ex post information on contract awards*

40. The provision of *ex post* information on contract awards has been said to be one of the crucial elements of transparency in government procurement especially in cases where certain information might not have been provided *ex ante*.⁸⁸

41. The suggestion has been made that entities should make information on contract awards publicly⁸⁹ available.⁹⁰ Such information should be made available publicly for a reasonable period of time.⁹¹ One view has been that any requirement to publish contract award decisions should only be in cases of "less transparent" procurement methods such as single-source procurement or limited tendering. Another view has been that they should be published regardless of the procurement method used.⁹² On the other hand, the view has been held that decisions on contract awards should be provided in accordance with national practices.⁹³ Individual Members should be able to determine whether to notify or debrief unsuccessful tenderers on the outcome of their bids or to publish contract award information as provided in national legislation.⁹⁴

42. There has been exchange of views in the Working Group in relation to the minimum content of *ex post* information to be published. It has been suggested that it should include:

- the name of the procuring entity⁹⁵;
- a description of the goods and services procured⁹⁶;
- other information necessary to identify the procurement⁹⁷;
- if a contract is awarded, the name of the awarded⁹⁸/winning⁹⁹ supplier and the value of the winning award¹⁰⁰;
- if a contract is not awarded to any supplier, the reasons for the decision.¹⁰¹

43. A further view in this connection has been that the *ex post* information in contract award notices could be less detailed than the information to be provided directly to individual suppliers. Another view expressed in this connection has been that the type of information to be provided should be left to the discretion of the procuring entity.¹⁰²

¹⁰¹ Job No. 5239, 4.4(c).

¹⁰² WT/WGTGP/M/10, paragraph 45.

44. A further suggestion with regard to *ex post* information has been that, upon request, unsuccessful suppliers should be provided with more detailed¹⁰³ information and explanation as to the reasons for their non-selection and/or why the winning bid has been chosen.¹⁰⁴ It has also been suggested that any debriefing provided by the entity should be available to all participating suppliers on a non-discriminatory basis.¹⁰⁵ A further point has been that debriefing should be a complementary measure rather than a substitute for public availability of contract award information.¹⁰⁶

45. In response, the point has been made that *ex post* provision of information to unsuccessful bidders could be burdensome and costly for procuring entities, and that some national practices do not provide for this.¹⁰⁷

46. The point has been generally made that information considered confidential, on grounds of commercial or public interest, should be treated as such, and a number of the proposals submitted make provision for this.¹⁰⁸

VIII. DOMESTIC REVIEW PROCEDURES

(a) Information on provisions in existing international instruments and national procedures and practices

47. Review procedures are often considered a key component of transparency and accountability of government procurement practices. The rules set out in the Model Law and the GPA establish the basic features that national review mechanisms must have without going into great detail. The purpose of these provisions is to give suppliers believing that an entity has breached national law or, in the case of the GPA, the rules of the GPA itself, a right of review.¹⁰⁹

48. Under the Model Law and the GPA, as an initial step, complainants are encouraged to seek resolution of their complaints through consultations with the procuring entity itself prior to recourse to an administrative review body.¹¹⁰ Under the Model Law, unless the complaint is resolved by mutual agreement, the procuring entity shall, within prescribed time-limits, issue a written decision including a statement on the reasons for the decision and indicating any corrective measures that are to be taken.¹¹¹ If the matter is not settled through this procedure, the complainant is entitled, under the Model Law, to seek an administrative review.¹¹² The functions of an administrative review may be vested in an existing appropriate administrative body or a body whose competence is exclusively to resolve disputes in procurement matters and which is independent of the procuring entity. The decisions of the review bodies or failure to make a decision within prescribed time-limits shall be subject to judicial review.¹¹³ The Model Law also lays down certain procedures to ensure the openness and fairness of review procedures.¹¹⁴ Under the GPA, Parties may confer the authority to hear challenges by suppliers on national courts or on an impartial and independent review body of an administrative nature. In the event that a bid challenge is heard by a review body which does not have the status of a court of law, either its decisions must be subject to judicial review or it must follow the

¹⁰⁷ JOB(99)6782, paragraphs 83.

¹⁰⁸ JOB(99)6782, paragraphs 85; WT/WGTGP/W/26, Article 9.

¹⁰⁹ Model Law Article 52; GPA Article XX:1.

¹¹⁰ GPA Article XX:1.

¹¹¹ Model Law Article 53.

¹¹² Model Law Articles 54 and 55.

¹¹³ Model Law Article 57.

¹¹⁴ Model Law Article 55.

criteria laid down in detail in Article XX:6(a)-(g). These minimum standards are mainly designed to ensure the openness, fairness and equity of the proceedings.¹¹⁵ The World Bank carries out prior or post reviews of the procurement documents, bid evaluations, award recommendations and the contract to ensure that the process is carried out in conformity with the Guidelines.¹¹⁶ In addition the World Bank Guidelines allow a bidder or a consultant who wishes to ascertain the grounds on which its bid or proposal is not selected, after notification of award, to address a request for explanation to the Borrower country or agency. If the bidder or consultant is not satisfied with the explanation given, it may seek debriefing with the World Bank.¹¹⁷

49. Under the GPA, a review body must have the authority to order the correction of a breach of the Agreement or compensation for the loss or damages suffered by a supplier, but this may be limited to costs for tender preparation or protest. Pending the outcome of the challenge, the review body must be able to order rapid interim measures, including the suspension of the procurement process, to correct breaches of the GPA and to preserve commercial opportunities.¹¹⁸ However, procedures may provide that overriding adverse consequences for the interests concerned, including the public interest, may be taken into account in deciding whether such measures should be applied. The provisions of the Model Law also provide for the suspension of procurement proceedings which takes account of the need of the procuring entity to conclude a contract in an economic and efficient way without undue disruption and delay in the procurement process.¹¹⁹

50. Many countries have procedures which allow aggrieved suppliers to lodge complaints against any alleged breaches of the applicable rules and to seek review of the procurement proceedings of an entity, including award decisions. The procedures for review of complaints and remedies available to successful complainants are sometimes provided explicitly in procurement legislation¹²⁰ and, in other cases, they may result from more general possibilities to appeal administrative decisions. Regarding the conditions of recourse to review, complaints may be raised on the grounds that the applicable procurement laws and regulations have been violated¹²¹ or, where a country is a party to an international agreement, an alleged breach of the rules of that agreement.¹²² In most cases, procedures are available to any person who has or has had an interest in obtaining a particular contract or who has been or risks being harmed by an alleged infringement.

51. Complaint-based procedures in national practices generally have the following main features. Suppliers are encouraged, in the first instance, to take up the matter directly with the procuring entity for an early resolution.¹²³ In some cases, mediation or good offices of an independent authority can be sought. Finally, suppliers can bring an action against the procuring entity before an independent body or a court. Most countries have designated administrative or judicial authorities to handle procurement-related challenges. The nature of the review authorities varies and, when review bodies are not judicial in character, their decisions are often subject to judicial review.¹²⁴ The review may be handled either by a specialized body established to review challenges in the area of government

procurement, an administrative authority with a broader mandate or courts of law.¹²⁵ Apart from complaint-based procedures, the mechanisms that are used in some instances for monitoring the procurement process include the internal audits of procuring authorities, external control or audits by an administrative body in charge of overseeing the proper conduct of procurement proceedings; or oversight by the legislative authorities in some countries.¹²⁶ In those countries where procurement procedures are decentralized, each entity has its own procedures which may vary from one entity to another.¹²⁷

52. The remedies available to successful complainants differ from country to country and may include the following:

- interim measures, including the suspension of the procurement procedures and of the implementation of any decision of the procuring authority taken unlawfully in order to preserve the rights of suppliers¹²⁸;
- recommendations to entities to bring their procurement proceedings and decisions in line with the rules in force¹²⁹;
- damages awarded to the aggrieved supplier¹³⁰ which are sometimes limited to the financial costs of tendering¹³¹.

National laws sometimes provide for the public interest to be taken into account in deciding whether to suspend or cancel a procurement decision; cancelling of procurement procedures or setting-aside decisions and awards.¹³²

(b) Discussions in the Working Group

53. A widely-held view appears to be that any provisions on review in a transparency agreement should not require one model for every Member or introduce elaborate obligations on the particular characteristics of national systems that should be maintained.¹³³ The matter of domestic review procedures was within the purview of domestic legislation and that the primacy of national legislation should be maintained.¹³⁴ Any provisions should be flexible enough to allow Members to design their domestic review mechanisms in accordance with their national legislation and to rely on administrative or judicial review mechanisms that are appropriate to their national legal systems and to accommodate different Members' existing independent administrative or judicial tribunals and review procedures.¹³⁵

54. Those advocating the inclusion of a requirement in a transparency agreement in relation to domestic review procedures base their arguments on the role of such procedures in guaranteeing the overall transparency of the procurement process and the need for an appropriate mechanisms to ensure the enforcement of underlying rules. With regard to the first of these points, the point has been

¹²⁵ S/WPGR/W/11/Add.1, Add.2, Add.8, Add.10, Add.14, Add.15.

¹²⁶ S/WPGR/W/11/Add.4, Add.15, Add.18, Add.19.

¹²⁸ S/WPGR/W/11/Add.1, Add.2, Add.3, Add.6, Add.13, Add.17.

¹²⁹ In Australia, while compliance by an entity with a recommendation of the review authority for a remedy is not mandatory, the review authority may report to the Prime Minister and then to the Parliament if the entity does not act upon a recommendation adequately.

¹³⁰ S/WPGR/W/11/Add.1, Add.11.

¹³¹ S/WPGR/W/11/Add.2.

¹³² S/WPGR/W/11/Add.1, Add.3, Add.10, Add.12, Add.18.

¹³³ WT/WGTGP/W/15 and 17.

¹³⁴ WT/WGTGP/M/14, para 58.

¹³⁵ WT/WGTGP/M/10, paragraph 47 and WT/WGTGP/M/12.

made that the availability of a bid challenge mechanism adds to the transparency of the decision-making process, increases confidence in the effective functioning of the overall procurement system and enables the system to be seen to be transparent. Review procedures should also be in place in the interest of introducing due process and public accountability of decision-making through the procurement process.¹³⁶ Domestic review mechanisms are necessary to ensure that the applicable transparency rules are respected by all involved in a procurement process.¹³⁷

55. The view has also been expressed that there should be no provisions on domestic review mechanisms in a transparency agreement.¹³⁸ According to this view, domestic administrative or judicial review mechanisms are in place for the purpose of public accountability at the domestic level, a matter not within the ambit of a transparency agreement.¹³⁹ The issue of domestic review goes beyond that of transparency and therefore the mandate of the Working Group. A further comment in this respect has been that, since the purpose of domestic procedures in many countries is to review whether procurement has been made in accordance with domestic law and procedures, it might not be feasible to limit the application of review procedures to obligations in a WTO agreement, the scope of which will be limited to transparency. Moreover, the concern has been expressed in this connection that review provisions in a transparency agreement might be used as a means by certain vocal private parties to create complications in the domestic political arena and that additional review procedures might increase the number of challenges and create unnecessary costs for procuring entities.¹⁴⁰

56. A further approach that has been put forward envisages leaving the choice of review procedure to individual Members provided the review mechanism itself was transparent and provided a guarantee of independence.¹⁴¹ Another view has been that the requirements on domestic review procedures in a transparency agreement should be limited to the provision of information on available national review mechanisms and procedures. All that is necessary is that suppliers are made aware that such national mechanisms exist and are provided with information as to how they work. A further suggestion has been that a transparency agreement could contain an exhortation to Members or a best endeavours obligation to provide on and maintain domestic review mechanisms.¹⁴² It has also been suggested that provision of *ex post* information to unsuccessful suppliers and debriefing by procuring authorities would be sufficient and obviate the need for provisions on review¹⁴³ (see also Section VII and X).

57. By way of precedents for review and appeal mechanisms in the WTO system, attention has been drawn to the mechanisms that can be found in a number of WTO agreements, for example the Agreements on Countervailing Measures and Anti-Dumping Practices, Customs Valuation, Import Licensing, Rules of Origin, Preshipment Inspection and TRIPS and in paragraph 3(b) of Article X of the GATT 1994.¹⁴⁴ A note by the Secretariat that was prepared in response to a request by the Working Group, reproduces the relevant provisions in the WTO Agreements.¹⁴⁵ In response, the point has been made that WTO agreements do not have a consistent approach towards domestic review procedures. It might not be feasible to transpose the provisions regarding review mechanisms in other WTO Agreements into a transparency agreement since the scope of the rules under those Agreements went beyond simple transparency obligations.

¹⁴⁵ WT/WGTGP/W/3.

58. Observations have been made regarding the basic features that domestic review mechanism should have in order to ensure effective, open, fair and transparent review of procurement decisions. While the point has been made that a domestic review mechanism could be achieved through a variety of means, certain features common to most domestic mechanisms and that could be taken into account in developing provisions in this respect have been suggested.¹⁴⁶

59. Regarding the provisions in a transparency agreement on access to review, the point has been made that a review should be available to all interested or potential suppliers or to all suppliers who have participated in the procurement process¹⁴⁷ and are directly or individually affected by the practice or the action¹⁴⁸, including suppliers from other WTO Members.¹⁴⁹

60. Observations have been made on the grounds for domestic review under a transparency agreement. In relation to a transparency agreement, one suggestion has been that reviews should relate to practices and actions that may be inconsistent with the requirements of a future transparency agreement¹⁵⁰, as implemented by Members.¹⁵¹ In this respect, it has been stated that the obligation to provide for review procedures in a transparency agreement should only concern actions within the scope of that agreement, not the substance of preferential measures relating to market access in government procurement.¹⁵²

61. With regard to review bodies, it has been said that a review provision should permit flexibility as to whether a country chooses to provide opportunities to seek review through judicial, arbitral or administrative bodies.¹⁵³ Nevertheless, it should clearly require that such bodies be impartial¹⁵⁴ and operate independently¹⁵⁵ of the procurement entity.

62. With regard to review process itself, the importance of promptness¹⁵⁶ of the process and timeliness of decisions of procuring entities¹⁵⁷, the point has been made that there should be procedures encouraging suppliers, in the first instance, to take up the matter directly with the procuring entity for an early resolution through consultations between the procuring entity and suppliers.¹⁵⁸

63. With regard to *ex post* information, the point has been made that review procedures should result in reasoned conclusions that should be notified to interested suppliers in writing¹⁵⁹ and/or be published in a medium that is publicly or widely available or readily accessible.¹⁶⁰

64. Another suggestion with regard to ensuring transparency of review procedures has been that a transparency agreement should require procurement entities to maintain comprehensive administrative written records of the procurement process¹⁶¹, for instance for a three-year period¹⁶² in order to ensure

¹⁶² WT/WGTGP/W/27.

that review bodies had an adequate factual basis for review. This issue is discussed under item IX A of this note.¹⁶³

65. In connection with remedies, the point has been made that a review provision should provide for adequate remedies to protect the interests of suppliers and to deter procurement entities from engaging in future actions that would be inconsistent with WTO transparency provisions. Remedies should include the possibility of re-tendering procurements or damages to cover legitimate claims¹⁶⁴ and provide relief to complainants. It has been said that most national review systems already provide remedies for suppliers whose rights have been denied under the applicable laws and regulations.¹⁶⁵

66. The point has been made that review of complaints or other dispute settlement mechanisms are often initiated after the contract has been awarded, making it difficult or impossible to overturn a procurement decision, cancel a contract and start the procurement process all over again. A review provision should ensure that claims from interested suppliers could be heard and decided upon in a manner that did not prejudice their interests in the procurements in question. Such guarantees could be available through rapid decisions on challenges or through suspension of the procurement process while claims are pending or remedies which could include compensation after administrative or judicial procedures have determined that an injury or an economic loss has flowed from the inconsistency of a procurement process with the applicable legislation.¹⁶⁶ In cases in which the procurement process may be suspended, there could be provision for continuing with the award of procurements in the public interest.¹⁶⁷ Since suspension could be detrimental to the public interest and create difficulties in cases of urgent procurements, most national review procedures and the provisions of the GPA provided for exceptions enabling, in circumstances so warranting, public interest considerations to override the interest in suspending a procurement process.

67. In response, it has been said provisions requiring adequate remedies would fall outside the scope of the work on transparency. Prescribing obligations on remedies might have counter-productive repercussions on the procurement practices of governmental authorities; to the extent that procuring authorities would be liable to remedies, they might have a tendency to restrict access to foreign suppliers in order to minimize any such risks.¹⁶⁸

68. The Group also had an exchange of views on the way in which WTO dispute settlement procedures and domestic procedures might interact and in particular whether WTO dispute settlement procedures should apply to obligations with respect to domestic review. A common starting point for the discussion on this point appears to be that the legal criteria for domestic reviews and WTO dispute settlement are different. A distinction should be made between domestic review mechanisms which involve responding to complaints by suppliers against procuring authorities under the law of a country and dispute settlement procedures between governments under the law and procedures of the WTO.¹⁶⁹

69. The concern has been expressed that WTO dispute settlement procedures should not give rise to situations in which the procurement decisions of government authorities could be overturned by recourse to them. In this respect, the view has been expressed that WTO dispute settlement should only apply in respect of obligations of governments in their capacity as regulators. Any procurement decisions taken by them, including contract award decisions, in their capacity as purchasing entities should not be subject to WTO dispute settlement procedures but to domestic review procedures. WTO dispute settlement procedures should apply to issues relating to the consistency of laws of

¹⁶³ WT/WGTGP/W/15.

¹⁶⁹ WT/WGTGP/W/26 and WT/WGTGP/M/10.

general application with the rules of a transparency agreement and should not be invoked with regard to decisions resulting from national review procedures concerning a particular procurement. The scope of the application of WTO procedures to domestic review provisions should be limited to actions relating to the implementation, through domestic laws and procedures, of the requirements of the transparency agreement in this respect.¹⁷⁰

70. On the other hand, it has been said that challenges of individual award decisions under the provisions of a transparency agreement were unlikely. Moreover, the point has been made that recourse to WTO dispute settlement procedures being a prerogative of governments, could not be had by suppliers who might challenge procurement procedures of government entities.¹⁷¹

71. The view has also been expressed that provisions should reflect the principles of exhaustion of domestic judicial review mechanisms before recourse to WTO dispute settlement procedures.¹⁷² A further point has been made that the possibility for foreign suppliers to have recourse to effective and independent domestic review procedures, as a first avenue for resolving complaints, would minimize the likelihood that such complaints might eventually rise to the level of government-to-government disputes.¹⁷³

IX. OTHER MATTERS RELATED TO TRANSPARENCY

(a) Information on provisions in existing international instruments and national procedures and practices

72. Four main areas have been identified in the discussions in the Working Group in relation to this item. These are maintenance of records of proceedings; information technology; language; and fight against bribery and corruption. The treatment of these matters in the three international and in national practices are presented in turn in the following sections.

(i) *Maintenance of records of proceedings*

73. Both the Model Law and GPA have provisions for the maintenance of records of procurement proceedings. The GPA requires that this information be retained by procuring entities for use, if required, under various procedures such as provision of information by entities (Article XVIII), between governments (Article XIX), under bid challenge procedures (Article XX) and under dispute settlement (Article XXII).¹⁷⁴ Moreover, where limited tendering – rather than open or selective procedures have been adopted, the GPA requires a specific report to be prepared on each such occasion of limited tendering.¹⁷⁵ The Model Law establishes an explicit requirement for the maintenance of a record of the key decisions and actions taken by the procuring entity during the course of the procurement proceedings. As is explained in the Guide to the Enactment of the Model Law, the maintenance of a record is one of the principal mechanisms for ensuring adherence to the rules and also facilitates the exercise of the right of aggrieved suppliers to seek review.¹⁷⁶ They both also set out the minimum content of information to be maintained; these cover the procurement requirement, the procuring entity, suppliers and evaluation of tenders.¹⁷⁷ APEC Non-binding principles require that

¹⁷⁰ JOB(99)6782, paragraph 102.

¹⁷⁴ WT/WGTGP/W/6, paragraph 138; GPA Article XIII:3.

¹⁷⁵ WT/WGTGP/W/6, paragraph 139.

¹⁷⁶ UNCITRAL Model Law on Procurement of Goods, Construction and Services with Guide to Enactment, pages 61 and 71.

¹⁷⁷ WT/WGTGP/W/6, paragraphs 136, 137; Model law, Guide to Enactment, pages 61 and 71; Model Law Article 11(a)-(m); GPA Article XVIII:1(a)-(g).

records should be kept in relation to every contract awarded. The information recorded should be sufficient to justify decisions taken in the procurement process.¹⁷⁸

74. In two instances where information about national practices has been provided, procuring entities are required to maintain certain minimum records about every procurement or contract award.¹⁷⁹

(ii) *Information technology*

75. Information technology can play, and in some countries is already playing, a major role in enhancing transparency. The GPA recognizes the useful role that information technology could play in government procurement and, at Article XXIV:8, provides for the Committee on Government Procurement to consult regularly in the light of unfolding developments with the aim, in particular, of using information technology to promote transparent, efficient, open and non-discriminatory government procurement.¹⁸⁰ In the context of the renegotiation of the Agreement under Article XXIV:7(b), the Committee on Government Procurement has initiated work on possible amendments to the relevant provisions of the GPA to reflect recent developments in information technology.¹⁸¹

76. In the area of information technology national practices appear to have substantially advanced in recent years. Information available indicates that a substantial number of countries, including developing countries, have implemented electronic procurement, electronic tendering or other forms of application of information technology to government procurement¹⁸², though the use is not uniform.¹⁸³ For instance, Chile, Mexico and Brazil have reported to the Working Group their implementation of electronic tendering and procurement systems. Information available suggests that information technology in government procurement has tended to be focused on the development and maintenance of electronic databases which provide information on tender opportunities, contract award notices and similar information. The information provided, nevertheless, suggest a broad thrust of initiatives to take advantage of the benefits offered by information technology in government procurement.¹⁸⁴ In some electronic procurement implementations reported, a dual system has been adopted, involving the obligation on procuring entities to publish information – and receive tenders – both in paper form and electronically, to cater to the needs of those suppliers who may not have access to appropriate information technology facilities.¹⁸⁵

(iii) *Language*

77. The three international instruments have varying provisions as regards language. Under the Model Law, the language of documentation is generally the official language(s) of the enacting State, or, in certain specified cases, in a language customarily used in international trade. The formulation and submission of tenders can be in any language in which the tender notices have been issued or in any other language stipulated by the procuring entity.¹⁸⁶ Under the GPA, a summary of the invitation to tender has to be submitted in a WTO official language, and, if an entity allows tenders to be submitted in several languages, then one of those must be an official WTO language.¹⁸⁷ The World Bank Guidelines stipulate that qualification and tender documents – and the ensuing contract – in the

¹⁸² WT/WGTGP/M/12, paragraphs 11-15.

¹⁸³ WT/WGTGP/W/6, paragraph 142.

¹⁸⁴ WT/WGTGP/W/6, paragraphs 142-145.

¹⁸⁵ WT/WGTGP/M/12, paragraph 12.

¹⁸⁶ WT/WGTGP/W/6, paragraph 146.

¹⁸⁷ WT/WGTGP/W/6, paragraphs 146- 147; GPA Articles IX:8 and XII:2.

case of international competitive bidding, shall be in either English, French or Spanish, but that a subsequent contract entered exclusively with a local supplier may be in the national language.¹⁸⁸ In the case of local tendering and contracting, such as under national competitive bidding procedures, the World Bank Guidelines provide that the national language may be the medium of communication and also used in documentation.¹⁸⁹

78. As regards national practices, generally procurement information is provided in official national language(s). In some instances, summaries are provided in languages traditionally used in international trade. Where countries have several official languages, the information may be provided in all, or provided in one and summarised in the others.¹⁹⁰

(iv) *Fight against bribery and corruption*

79. Neither the GPA nor the Model Law have explicit provisions specifically directed at the fight against bribery and corruption. The World Bank Guidelines require all participants in Bank-financed projects – including borrower countries together with beneficiary organizations, and bidders, suppliers and contractors - to observe the highest standards of ethics during the procurement and execution of contracts. Where a fraudulent or corrupt practice is determined to have taken place, the Bank's Guidelines provide for a number of measures, including: rejection of a proposed contract award, cancellation of the portion of a loan so affected or declaration of the affected supplier as ineligible to participate in further Bank-financed programmes for a stated or an indefinite period of time.¹⁹¹ The Bank also reserves the right to inspect, under certain circumstances, the records and accounts of suppliers and have these audited by independent auditors appointed by it¹⁹², and in large contracts to have suppliers give an undertaking to observe a borrower country's laws on bribery, fraud and corruption.¹⁹³ A number of international instruments have also been established by international forums for fighting bribery and corruption, including the OAS and the OECD.¹⁹⁴

(b) Discussions in the Working Group

(i) *Maintenance of records of proceedings*

80. The point has been made that the maintenance of a record of procurement proceedings and the availability of non-confidential information contained in it to interested parties is one of the principal mechanisms for ensuring adherence to agreed rules and is of particular importance in the functioning of an administrative or judicial review process. Such records provide the basis for an audit trail and support any evaluation of the procurement and thus introduce an element of accountability into the process. It has also been said that the length of time that records of proceedings should be maintained could be linked to the time provided to domestic suppliers in domestic legislation to challenge a procurement decision and to seek a review of a procurement process. Suggestions have been made as regards the type, form and duration of information to be maintained in records.¹⁹⁵ On the other hand, it has been said that a transparency agreement should not have provisions stating explicitly in what form and for how long records should be maintained by entities.

¹⁹¹ WB Guidelines, paragraph 1.15 (a)-(d).

¹⁹² WB Guidelines, paragraph 1.15(e).

¹⁹³ WB Guidelines, paragraph 1.16.

¹⁹⁴ JOB(99)6782, paragraph 118.

¹⁹⁵ JOB(99)6782, paragraphs 109-112; WT/WGTGP/M/10, paragraph 48; WT/WGTGP/W/26, Part III:6.1; JOB(99)5239, paragraph 6.

(ii) *Information technology*

81. There has been a wide recognition that the use of information technology offers enormous opportunities to level the playing field by increasing access to information at low cost to all suppliers. As such, it has been suggested that a transparency agreement could encourage its use as an alternative means of disseminating information about procurement opportunities and contract awards in comparison to more traditional methods of communication. The view has been expressed that electronic tendering using Internet-based systems provides efficient and non-discriminatory access to tender information with minimum equipment requirements and technological know-how.¹⁹⁶ Amongst the other advantages that can be offered are provision of a single point of registration, access to information by suppliers, access to price information by procuring entities, information on tenders and contract awards, and access to supplier information by procuring entities. In some cases, the national systems also provide useful statistical information on government procurement which assists the monitoring, control and justification of government expenditures.¹⁹⁷

82. The view has also been expressed that given the different stages of development amongst the countries, the use of information technology could disadvantage some suppliers – for instance small and medium-scale enterprises in less developed countries, who may not have access to such technology – and accordingly should be optional. A balance should be found whereby a transparency agreement would not constitute an unnecessary barrier to progress in the area of information technology and would accommodate its increasing application in Members, while ensuring that the use of information technology would not result in discrimination against countries which did not have a competitive edge in this area.¹⁹⁸ In this respect, the suggestion has been made that the use of information technology might be promoted in a transparency agreement through the use of a best endeavours clause.¹⁹⁹

(iii) *Language*

83. The discussion in the Working Group on the issue of language has revolved around whether information on procurement opportunities should be made only in Members' official languages, or additionally should be made in a WTO language. The general view appears to be that information should continue to be provided in the official language(s) of Members. It has been suggested that, where possible, however, information could be provided in a WTO language, where a procurement opportunity is likely to provide international interest.²⁰⁰ Certain types of information, such as notification of enquiry points and matters to do with dispute settlement or consultations, should be made in an official WTO language.²⁰¹

(iv) *Fight against bribery and corruption*

84. The view has been expressed that there is an important relationship between transparency in government procurement and reducing the incidence of bribery and corruption in government procurement practices. In response, the point has been made that, while the initiatives in international fora such as the OAS and the OECD have been useful in attacking the problem from various angles, so far there have not been any studies, negotiations or agreements on the relationship between the fight against bribery and transparency in government procurement in a specific and systematic manner. The view has also been expressed that transparency, by itself, is not enough and therefore

¹⁹⁶ JOB(99)6782, paragraphs 113-114.

²⁰⁰ JOB(99)6782, paragraph 116; WT/WGTGP/W/26, Article 10, JOB(99)5239, paragraph 7; WT/WGTGP/W/27, Article IX:3.

²⁰¹ JOB(99)5239, Part III:7.1 and 2.4.

needed to be supplemented by other appropriate action and measures. A further view has been expressed questioning the appropriateness of expanding the scope of the work of the Working Group to matters of bribery and corruption which might be more appropriately dealt with in other fora. This view suggests that there should be no explicit linkage between transparency and bribery and corruption in a transparency agreement, and Members should deal with this issue through their own national legislation.²⁰²

X. INFORMATION TO BE PROVIDED TO OTHER GOVERNMENTS (NOTIFICATION)

(a) Information on provisions in existing international instruments and national procedures and practices

85. The GPA, being an international instrument that sets contractual rights and obligations between governments in the area of government procurement, includes provision on exchange of procurement-related information between governments. The relevant provisions relate to provision of information on national legislation; notification of national legislation; provision of information on contract awards; and statistical reporting.

86. The GPA Parties are required, in response to a request by any other GPA Party, to explain their government procurement procedures²⁰³; supply copies of laws, regulations, judicial decisions, administrative rulings or other measures relevant to the Agreement; and provide information concerning procurement by covered entities and their individual contract awards.²⁰⁴

87. As regards the establishment of enquiry points, the provisions on special treatment for developing countries in the GPA require developed country Parties to establish information centres to respond to reasonable requests from developing country Parties for information relating to, among others, laws, regulations, procedures and practices regarding government procurement, addresses of the entities covered by the Agreement, and the nature and volume of products or services procured or to be procured, including available information about future tenders.²⁰⁵ The coordinates of the contact points of GPA Parties have been notified to the GPA Committee. Furthermore, contact points have also been designated by individual APEC member countries pursuant to the work of the Group of Experts on Government Procurement. These are included in the APEC Surveys and can be accessed through the APEC Home Page on Government Procurement at the Internet (<http://www.apecsec.org.sg/gphome.html>).

88. As regards the notification of national legislation and any changes, the GPA Committee has adopted relevant procedures for such notifications, including responses to a checklist of issues.²⁰⁶ GPA Parties are required to submit the complete texts of their basic legislation (laws and regulations) on government procurement, including the basic legal instruments pursuant to which effect is given to the provisions of the Agreement, in the original language to the Secretariat. Each Party is also required to provide a summary of the implementing legislation in a WTO language.

²⁰² JOB(99)6782, paragraphs 120-121; WT/WGTGP/M/10, paragraph 50.

²⁰³ GPA Article XIX:1.

²⁰⁴ GPA Article XIX:3.

²⁰⁵ GPA Article V:11.

²⁰⁶ GPA/1/Add.1 and GPA Article XXIV:5(a) and (b).

89. Further to the obligations of entities under the GPA relating to the provision of information by procuring entities to an unsuccessful tenderer²⁰⁷, the GPA allows the government of an unsuccessful tenderer to seek such additional information on the contract award as may be necessary to ensure that the procurement was made fairly and impartially. To this end, the procuring government is required to provide information on both the characteristics and relative advantages of the winning tender and the contract price. The government may disclose the information thus obtained provided it exercises this right with discretion. In cases where the release of such information would prejudice competition in future tenders, this information shall not be disclosed except after consultation with and agreement of the Party which gave the information to the government of the unsuccessful tenderer.²⁰⁸

90. The GPA has a general provision in Article XIX:4, requiring that confidential information provided to any government Party to the GPA shall not be revealed without formal authorization from the Party providing the information.²⁰⁹

91. As a means of monitoring procurement covered by the GPA, Article XIX:5 of the GPA requires each Party to collect and provide to the Committee on an annual basis statistics on its procurements covered by the GPA. The type of information that such reports shall contain is stipulated in detail in Article XIX:5, paragraphs (a) to (d). Statistical reports of GPA Parties can be found on the WTO website.

(b) Discussions in the Working Group

92. The issues that have been raised in regard to the type of information that could be provided to other governments relate to notification of national legislation, provision of information on national legislation and practices upon request from interested parties in other Members, for instance through enquiry points established for this purpose, and statistical reporting. The general remark has been made that any requirements relating to the provision to other governments of information on rules and procedures should apply only to the extent that such rules and procedures are within the scope of a transparency agreement. Attention has been drawn to the distinction between the use of notification and that of publication or availability of laws and regulations (summarized under item III in document WT/WGTGP/W/32).

(i) *Notification of national legislation*

93. A suggestion has been made that Members should be required, on request, to provide relevant information about their laws, regulations, procedures and practices affecting the implementation of a transparency agreement.²¹⁰ The possibility of using the relevant provisions in GATT 1994 Article X and GATS Article III for purposes of a transparency agreement has also been mentioned. With regard to notification of information on basic laws and regulations and any amendments thereof, a suggestion has been made that the relevant information about the laws and regulations be provided to the WTO Secretariat, which should then make it publicly available through an electronic medium.²¹¹ In response, a concern has been expressed that notification of all national laws, regulations and administrative guidelines, including those of sub-central and other levels of government covered, might prove to be unduly burdensome.²¹²

²⁰⁷ GPA Article XVIII:2(c).

²⁰⁸ GPA Article XIX:2.

²⁰⁹ GPA Article XIX:4.

²¹⁰ WT/WGTGP/W/26, Article 12; WT/WGTGP/W/27, Article V:3.

²¹¹ WGT/WGTGP/M/10, paragraph 52; WT/WGTGP/W/26, Article 11.

²¹² JOB(99)/6782, paragraph 123.

94. It has also been suggested that Members should be required to provide a list in one of the WTO languages of the relevant generally applicable instruments²¹³, but not copies of each and every law and regulation.²¹⁴ There has also been a suggestion regarding the use of checklists or questionnaires to obtain relevant information on the responsiveness of national laws and regulations to the requirements of a transparency agreement. A further point that has been made in this connection has been that any requirements for notification should apply only to matters that fell within the scope of a transparency agreement, and otherwise should not apply to market access issues.²¹⁵ The point has been made that a requirement to notify information on national legislation, regulation and administrative procedures might prove burdensome for some Members, for instance, if it included relevant information at the sub-central level, and also had to be notified in a WTO language. Particular concerns have been expressed about sharing of confidential information.²¹⁶

(ii) *Enquiry points*

95. With reference to the establishment of enquiry points, it has been suggested that each Member should establish enquiry point(s) and notify its details to other Members.²¹⁷ Other suggestions in this connection have been that there should be a single access point for obtaining information and it should be free of charge.²¹⁸ On the other hand, the point has been made that the establishment of a single enquiry point might require coordination between different government departments and agencies which might present some difficulties for national authorities.²¹⁹ The issue of enquiry points has also been taken up in relation to item III as noted in document WT/WGTGP/W32.

(iii) *Information on contract awards*

96. The main discussion on this issue has been reflected under item VII of the present note. The suggestion has been made that the government of an unsuccessful tenderer might be entitled to seek information on the contract award in question from the government whose entity conducted the procurement.²²⁰ Such information could be limited to how the commitments on a transparency agreement are being complied with in the contract award process²²¹. On the other hand, the view has been expressed that the provision of such post-contract award decision may not be necessary in a transparency agreement, the scope of which will not extend to market access.²²²

(iv) *Statistical reporting*

97. A view expressed on this matter has been that statistical reporting should not be an obligation in a transparency agreement, but that governments may provide relevant information on a voluntary basis.²²³

XI. WTO DISPUTE SETTLEMENT PROCEDURES

(a) Information on provisions in existing international instruments and national procedures and practices

98. Under the GPA disputes between Parties are subject to the procedures of the WTO Understanding on Rules and Procedures Governing the Settlement of Disputes.²²⁴ Dispute settlement procedures are applicable to all the rules of the Agreement. Because of the area covered and of the plurilateral nature of the Agreement, GPA provisions on dispute settlement contain a number of special rules or procedures, for instance on composition of panels, time-periods for panel proceedings and disallowing cross-retaliation in case of disputes arising under other WTO Agreements.²²⁵ Moreover, under the GPA, the DSB has the authority to authorize consultations among parties to the dispute regarding remedies when withdrawal of violating measures is not possible.²²⁶ By their nature, the issue of government-to-government dispute settlement does not arise in the other two international instruments.

(b) Discussions in the Working Group

99. It has been said that the approach to the application of government-to-government dispute settlement in a transparency agreement should reflect the general approach adopted in the WTO. WTO dispute settlement procedures applied to the provisions in the Agreement Establishing the WTO and transparency-related rules and other procedural disciplines in other WTO agreements, for instance GATT Article X.²²⁷ The view has been held that WTO dispute settlement procedures are intended to guarantee the integrity and consistency of the WTO system and to create confidence in it. Without clear provisions on dispute settlement, a future agreement would not have any merits.²²⁸ An enforcement mechanism is necessary in order to ensure that all Members have a consistent understanding of what their commitments are under an agreement.²²⁹

100. Three of the draft texts of an agreement presented contain proposals suggesting that consultations and settlement of disputes with respect to any matter affecting the implementation and operation of the Agreement should follow the provisions of GATT Articles XXII and XXIII and GATS Articles XX and XXIII, respectively, as elaborated and applied by the Understanding on Rules and Procedures Governing the Settlement of Disputes under WTO Agreements.²³⁰ Two of these proposals set out provisions which take into account the specificity of government procurement disputes, suggesting specific provisions in relation to the composition of panels²³¹ and the non-applicability of decisions of a panel or the Appellate Body regarding the inconsistency of a measure with respect to prior contract awards.²³²

101. On the other hand, comments have been made that the question of whether or not there should be a link between WTO dispute settlement procedure and a future agreement would depend on the nature of the obligations and their substance.²³³ Regarding the nature of obligations, the view has been expressed that provisions subjecting a transparency agreement to dispute settlement procedures would not be necessary if its obligations would be of the 'best-endeavours' type since any decisions reached by the Dispute Settlement Body under such an agreement could not be enforceable²³⁴ An

²³¹ WT/WGTGP/W/26 and 27.

²³² WT/WGTGP/W/27.

²³³ JOB(99)/6782; WT/WGTGP/M/11.

²³⁴ WT/WGTGP/M/11.

agreement on transparency could be in the form of guidelines or a code. A further view has been that WTO agreements and DSU are part of the single undertaking. If WTO dispute settlement procedures were to apply to a future transparency agreement, it would be necessary to ensure that it was incorporated in the single undertaking.²³⁵ A further suggestion has been that Article X of GATT could be the basis for dispute settlement in cases involving violation of obligations on transparency.²³⁶

102. Questions have been asked seeking clarification on the types of measures that would be the subject of a WTO dispute settlement and in what circumstances the WTO dispute settlement procedures would apply,²³⁷ for instance in relation to obligations on scope and definition, procurement methods or time-periods in a transparency agreement.²³⁸ Moreover, a comment has been made questioning the application of dispute settlement procedures with significant results in the absence of commitments on market access.²³⁹ Finally, comments have been made expressing the view that it would be premature to consider the applicability of dispute settlement procedures before the elements of a transparency agreement have been more clearly identified and the rules have been prescribed.²⁴⁰

103. By way of an alternative to the WTO dispute settlement mechanism, one suggestion has been that implementation of the rules could be ensured through a peer review mechanism in the committee administering the agreement. Another view has been that domestic review mechanisms existing in Members provide an adequate mechanism to address disputes related to transparency in government procurement.²⁴¹

104. The following questions have been asked regarding the application of specific aspects of WTO dispute settlement procedures: how would suspension of concessions be envisaged under a transparency agreement²⁴²; whether DSB decisions concerning a breach of transparency obligations could apply retroactively; whether national legislation would need to be adapted to take account of the application of WTO dispute settlement procedures²⁴³; and whether there should be provisions regarding non-violation complaints.²⁴⁴ One observation has been that, in terms of paragraph 3 of the DSU, any decisions under the DSU would not alter the rights and obligations of Members.²⁴⁵

105. The matter of the relationship between dispute settlement procedures and domestic review mechanism have been addressed in two of the draft texts of an agreement presented. One proposal suggests that WTO dispute settlement procedures should apply to decisions of domestic review bodies.²⁴⁶ Another proposal suggests provisions encouraging the use of domestic review procedures before the invocation of WTO dispute settlement procedures. This proposal also suggests that all available formal judicial remedies under domestic laws against the inconsistent measure should be exhausted before WTO dispute settlement procedures can be invoked.²⁴⁷ Another view has been that the WTO dispute settlement procedures should not give rise to situations in which the procurement

decisions of government authorities could be overturned by recourse to them.²⁴⁸ This matter is further discussed under item VIII of the present note.

XII. TECHNICAL COOPERATION AND SPECIAL AND DIFFERENTIAL TREATMENT FOR DEVELOPING COUNTRIES

A. TECHNICAL COOPERATION AND SUPPORT FOR CAPACITY-BUILDING

(a) Information on provisions in existing international instruments, activities of international intergovernmental organizations and national practice

106. The UNCITRAL Model Law and the World Bank Guidelines do not have specific provisions related to technical cooperation. The obligations of GPA Parties in this respect are set out in Article V of the Agreement under which developed countries are required to provide technical assistance which they may deem appropriate to developing countries. The provision of technical assistance is upon request, on mutual agreement between the Party making the request and the donor Party. The types of assistance envisaged in the GPA include the solution of particular technical problems relating to the award of a specific contract, translation of qualification documentation and tenders made by suppliers of developing countries into an official WTO language and resolving any other problems in the field of government procurement.²⁴⁹ There are also specific provisions for technical assistance to least-developed countries. These require developed country Parties to provide assistance to potential tenderers in such countries in submitting their tenders and selecting the products or services which are likely to be of interest to its entities as well as to suppliers, and likewise assist them to comply with technical regulations and standards relating to products or services which are subject of the intended procurement.²⁵⁰

107. An overview of technical cooperation activities of IGOs (intergovernmental organizations) in the area of government procurement is contained in a note by the Secretariat (WT/WGTGP/W/29). This note, which has been prepared in response to a request by the Group in 2000²⁵¹, describes in broad terms the main features of the assistance available and gives examples of activities based on the relevant information that has been made available to the Group or elsewhere in the WTO. In response to an earlier request by the Group²⁵², information was sought by the Secretariat on the relevant activities of ten IGOs (UNCITRAL, OECD, the Asian Development Bank, the African Development Bank, APEC Government Procurement Experts Group, the European Bank for Reconstruction and Development, ITC, UNDP, the World Bank and UNOPS) and was circulated to the Group in 1998 in documents WT/WGTGP/W/20 and Addenda 1 to 9.

108. In light of the information available to the Group, the following appear to be the major aspects of technical cooperation provided by the IGOs: ensuring the proper application of the principles and rules of the organization in question by interested governments; facilitating participation in activities aimed at the development of international disciplines and rules on government procurement to be agreed by governments pursuant to the more general objectives of the respective international or regional agreements or arrangements; providing support to procurement reform activities in individual countries by establishing or improving the regulatory framework of procurement in individual countries, particularly from the perspective of ensuring that such countries are aware of the standards and the principles that are codified in the existing international instruments on government procurement; and strengthening and supporting public procurement institutions to

²⁴⁸ JOB(99)782, paragraph 102.

²⁴⁹ GPA Article V, paragraphs 8-10.

²⁵⁰ GPA Article V:13.

²⁵¹ GPA/M/10.

²⁵² GPA/M/5.

increase their capacity.²⁵³ The latter forms of technical cooperation relate to the formulation of new, or the improvement of existing, laws, regulations, administrative guidelines and procedures and tender documents; and supporting the establishment or reinforcement of public procurement offices and agencies. Furthermore, assistance to the development of human resources to build up and to sustain capacity in the area of public procurement is provided in the form of training of procurement officials and the organization of workshops, seminars and symposia. Application of information technology to government procurement has recently become another important area of technical cooperation.²⁵⁴

109. A number of Members have shared information on their past and future initiatives relating to technical cooperation in the area of government procurement. A submission by one Member gave some of the reasons it provides technical assistance in the area of government procurement.²⁵⁵ By way of contribution towards the commitment undertaken pursuant to Doha Declaration, several new initiatives and programmes have been planned by the Secretariat as well as individual Members.²⁵⁶

(b) Discussions in the Working Group

110. The discussions in the Working Group have related to both technical cooperation and support for capacity-building before and as part of a transparency agreement. This note focuses on the latter aspect.

111. The view has been expressed that ensuring compliance with the rules and requirements of a future transparency agreement might require changes in national rules and procedures and building up of new institutions in individual countries. Technical cooperation and support for capacity-building would help in responding to some of the administrative and technical challenges in fulfilling the obligations in a transparency agreement.²⁵⁷ As regards the types of areas in which technical cooperation and support for capacity-building would be beneficial, the following have been mentioned: development and improvement of national legislation and procedures²⁵⁸; institution building²⁵⁹; access to information by suppliers including establishment of enquiry points, in particular provision of information to developing country suppliers as to what entities in developed countries usually procure²⁶⁰; provision of information on national legislation and procedures²⁶¹; application of information technology including assistance related to hardware, software and the expertise necessary to disseminate procurement information²⁶²; identifying ways in which suppliers in developing countries and small and medium-sized enterprises could participate in procurement by government entities in developed countries²⁶³; training²⁶⁴; divulging information on how government procurement could influence employment and development in general²⁶⁵; technical advice and other experience-sharing activities such as twinning between developed and developing country agencies and study tours.²⁶⁶

²⁵³ WT/WGTGP/W/29, Section I.

²⁵⁴ WT/WGTGP/W/29, Section II.

²⁵⁹ JOB(99)/6782; WT/WGTGP/W/27.

²⁶⁰ JOB(99)/6782; WT/WGTGP/W/27.

²⁶¹ WT/WGTGP/M/14, paragraph 70.

²⁶² JOB(99)/6782; WT/WGTGP/W/26; WT/WGTGP/W/27; WT/WGTGP/M/14, paragraph 70.

²⁶³ WT/WGTGP/M/14, paragraph 64.

²⁶⁴ JOB(99)/6782; WT/WGTGP/W/27; JOB(99)5239.

²⁶⁵ WT/WGTGP/M/14, paragraph 64.

²⁶⁶ WT/WGTGP/M/14, paragraphs 70 and 71.

112. The Working Group has also addressed the issue of the types of provisions on technical cooperation and support for capacity-building that should be included in a transparency agreement. One suggestion has been that the relevant provisions should match the specific requirements in a transparency agreement. In this connection, reference has been made to the provisions of Article 66.2 of TRIPS and Article 67 of TRIPS in terms of which developed country Members should make available technical and financial cooperation, on mutually agreed terms, in response to requests from developing country Members.²⁶⁷ A further suggestion has been that a transparency agreement should specify the areas in which technical cooperation and support for capacity-building could be provided and the form it might take.²⁶⁸ The draft texts of an agreement presented contain provisions on technical assistance. According to these proposals, technical assistance should be provided on request²⁶⁹; on mutually agreed terms and conditions²⁷⁰; and specify the areas in which such assistance could be provided.

113. With respect to the modalities, the view has been expressed that technical assistance and support for capacity-building be based on the needs and requests to be identified by the Members that face challenges in meeting the requirements of a transparency agreement.²⁷¹ It has also been suggested that the committee to be established under a transparency agreement should have procedures in place to monitor and assess technical assistance on an ongoing basis.²⁷² Another suggestion made has been that a framework should be developed under a transparency agreement for keeping track of and rationalizing the various technical assistance activities at the bilateral, regional and multilateral levels.²⁷³ In response, it has been said that establishment of bureaucratic structures in this respect should be avoided.²⁷⁴

B. SPECIAL AND DIFFERENTIAL TREATMENT FOR DEVELOPING COUNTRIES

(a) Information on provisions in existing international instruments, activities of international intergovernmental organizations and national practice

114. The UNCITRAL Model Law and the World Bank Guidelines do not have specific provisions related to special and differential treatment. The provisions of Article V of the GPA on special and differential treatment mainly relate to obligations of developed countries and agreed exclusions for developing countries from the coverage. The first of these are aimed at promoting exports from developing countries. GPA Parties are required, in the preparation and application of laws, regulations and procedures, to facilitate increased imports from developing countries. Moreover, developed countries, in the preparation of their coverage lists under the GPA, are required to endeavour to include entities procuring products and services of export interest to developing countries.²⁷⁵ As to the second of these, the agreed exclusions from coverage granted are in the form of exclusions from the rules on national treatment with respect to selected entities, products and services products. These exclusions can be granted to a developing country either at the time of its accession to the Agreement, i.e. in the negotiations of its Schedule of offers or through modifications of its coverage lists after its accession to the Agreement.²⁷⁶ Moreover, exceptions from the non-discrimination obligation are allowed to developing countries participating in regional or global arrangements among developing countries.²⁷⁷ In addition the provisions in Article V allow

²⁷⁷ GPA Article V:4 and 5.

developing countries at the time of their accession to the agreement to negotiate offset requirements for qualification of suppliers, a measure that is prohibited under the GPA.²⁷⁸

(b) Discussions in the Working Group

115. It has been emphasized that provisions on special and differential treatment are necessary in light of differences in capacity among Members in the area of government procurement and the special circumstances in developing countries.²⁷⁹

116. With regard to the question of how special and differential treatment should be addressed in a transparency agreement, one view has been that it should be reflected in the substantive provisions in order to allow developing countries to comply with them only to the extent that they are capable of undertaking them. The view has also been expressed that the issue of special and differential treatment may be more appropriately addressed once the elements of a future agreement are defined.²⁸⁰

117. As to the types of special and differential treatment in a transparency agreement the suggestions that have been made relate to:

- provision of transitional periods²⁸¹;
- the application of higher level threshold values²⁸²;
- exemptions from coverage, for instance in relation to entities at sub-central levels or services.²⁸³

118. With regard to transitional periods, a suggestion has been made that developing countries and least-developed countries should be allowed respectively one year and two years during which they would apply the agreement on a best endeavours basis. There is also a suggestion that such a transition period could be combined with a standstill clause regarding any modifications to the laws and regulations in the countries that will benefit from it.²⁸⁴

**CAPACITY-BUILDING CONSIDERATIONS RELATING TO TRANSPARENCY
IN GOVERNMENT PROCUREMENT**

Communication from the United States

The following communication, dated 26 September 2002, has been received from the Permanent Mission of the United States with the request that it be distributed to all Members.

1. The Doha Ministerial Declaration recognized the importance of capacity-building in relation to transparency in government procurement "both during the negotiations and after their conclusion". This underscores the importance of understanding the practical implications of building specific elements of transparency into a procurement system. That has been, and will continue to be, a central focus of the Working Group.

2. In response to the Doha Declaration, the WTO Secretariat is offering a Symposium on Transparency in Government Procurement on 9-10 October 2002. The Symposium offers an excellent opportunity for Members to consider the practical implications of building transparency into their procurement systems. These are issues that all Members have to face in developing their procurement systems.

3. The United States looks forward to participating in the WTO Symposium, and hopes that Members will take advantage of the opportunity that it offers to consider questions such as the following:

Assessing the Benefits of a Transparent Procurement System

- Who benefits from a transparent procurement system? Domestic suppliers? Foreign suppliers? Governments? Citizens?
- How can building transparency into a procurement system contribute to a Member's development?
- Can the benefits of a transparent procurement system be measured? Are the benefits tangible?
- Why are transparent procurement systems relevant to the WTO's work?

- Is there a relationship between increased transparency and increased competition?

Transparency of Procurement Rules and Procedures

- What models would be the most useful to follow in developing a transparency procurement system? What steps need to be taken to adapt a model such as the UNCITRAL Model Law to a Member's procurement system?
- Would it be more burdensome for a Member to make all of its procurement system transparent or only parts of its system?
- What kind of information do suppliers need on a Member's government procurement framework?
- How can governments efficiently ensure that they provide the same information on a procurement to all interested suppliers?

Information on Specific Procurements

- What are efficient and cost effective ways to make information on procurement opportunities public?
 - How much information needs to be made public? When and to whom should the information be disclosed?
 - If a procurement is closed to foreign suppliers or preferences are given to domestic suppliers, should the procurement be made public? If so, why? What are the ramifications if such procurements are not made public?
 - Is it necessary to provide suppliers with information as to why they did not win a tender?
 - What kind of records should be maintained with respect to particular procurements? How long should such records be kept? Who should have access to them?
 - If suppliers believe that they have been denied information on a procurement, should they have access to an appeal or review body? What should be the role of such a body?
 - How would establishment of domestic review procedures help ensure procurement transparency?
-

**PROPOSAL FOR A WORK PLAN TO BUILD ON THE PROGRESS
OF THE WORKING GROUP**

Communication from the United States

The following communication, dated 26 September 2002, has been received from the Permanent Mission of the United States with the request that it be distributed to all Members.

Overview

1. The Working Group has made considerable progress since its establishment in 1996 toward fulfilling its mandate: *"to conduct a study on transparency in government procurement practices, taking into account national policies, and, based on this study, to develop elements for inclusion in an appropriate agreement"*. It has examined extensively policies and practices related to transparency in government procurement. The breadth of the Working Group's consideration of these issues is reflected in the Secretariat's May 2002 *"Documents of the Working Group on Transparency in Government Procurement"* (WT/WGTGP/W/32). They include the following:

- Members made 34 submissions on a wide variety of specific issues.
- Members provided information on their national procedures and practices.
- UNCITRAL provided information on its *Model Law on Procurement of Goods, Construction and Services*.
- Intergovernmental organizations provided information on their transparency-related work.
- The Secretariat provided information on transparency-related provisions in existing international instruments on government procurement procedures and national practices.
- The Checklist of Issues has been repeatedly revised and is currently in its sixth iteration.
- The Working Group held 14 formal meetings to consider all of this information.

2. This study had laid the foundation for the substantial progress that the Working Group has made in developing elements of an agreement on transparency in government procurement. The United States makes this submission to offer an approach for the Working Group to build on this progress to complete its work by the Fifth Ministerial.

Benefits of a Transparent Government Procurement System

3. Transparent government procurement systems engender benefits not only for domestic and foreign suppliers, but also ultimately for the governments themselves and their citizens. The full disclosure of information is essential to a predictable and efficient government procurement process. The use of transparent and predictable procedures will help to ensure that governments obtain the greatest value for their money, resulting in the purchase of better quality goods and services and leading to more efficient use of public resources. This will enable Members to provide more social services, economic and social infrastructure and other public goods to their citizens. Transparent procurement systems will also provide an important tool for Members to combat corruption in public procurement.

4. Ensuring transparency of government procurement systems also has ramifications beyond the government procurement sector. Transparent and predictable procurement procedures are a critical element of good economic governance. They help build public confidence in the management of government affairs, establish a stable and predictable commercial and investment environment, encourage long-term business commitments and provide a solid foundation for sustained economic growth and development.

Objective of an Agreement

5. Every WTO Member conducts government procurement and in doing so follows its own procedures and practices. Some of these are formal requirements; others are informal or ad hoc; some are set out in writing; others are not transparent. Some circumscribe the authority of procuring entities; others give wide latitude to the procuring entities, which can affect the transparency of the procurement process.

6. A number of Members have used the *UNCITRAL Model Law on Procurement of Goods, Construction and Services* as the basic model for their procurement systems. Members also follow World Bank Guidelines (*Guidelines for Procurement under IBRD Loans and IDA Credits and the Guidelines for Selection and Employment of Consultants by the World Bank Borrowers*) in undertaking certain types of procurement.

7. While Members use a myriad of procurement procedures and practices, there is no common set of transparency provisions. Thus, the primary focus of the agreement should be to establish core transparency elements that suppliers throughout the world can be assured of finding in the procurement system of every Member.

8. An agreement on transparency in government procurement will be an important addition to the rules-based international trading system. Applying the principles of transparency that lie at the heart of the WTO to government procurement provides an opportunity for Members to extend and build-on their commitments to ensure the transparency of trade-related measures, as reflected in Article X of GATT 1994 and GATS Article III.

Completion of the Mandate of the Working Group

9. A multilateral agreement on transparency in government procurement does not need to be a complex undertaking, nor one that is overly burdensome, in order to accomplish its objective. The Doha Ministerial Declaration has narrowed its scope by limiting its parameters to "transparency aspects" and explicitly providing that an agreement will neither restrict domestic preferences nor require market access commitments.

10. Over the course of the next 12 months, leading up to the Fifth Ministerial, the task before the Working Group is to refine the extensive discussions that it has had on the potential elements of an agreement, as reflected in the Checklist of Issues, and to identify specific elements that are necessary to ensuring the transparency of government procurement procedures and practices. At this juncture, it is not necessary for the Working Group to decide how a particular element would be addressed in the agreement. In the Working Group's first post-Doha meeting in May, the Working Group informally began this process. For example, there appeared to be a general sense that publication of information on national legislation and procedures relating to government procurement is a necessary element of a transparent procurement system.

11. In carrying out this work, the United States suggests that the Working Group consider organizing the elements of an agreement into the following four categories of Elements:

1. General parameters of a potential agreement
2. Transparency of procurement systems
3. Transparency of specific procurements
4. Operational provisions to fulfill the objectives of a potential agreement

12. The Working Group should systematically over the next three to four meetings work through the issues identified in the Checklist of Issues and for each category decide the elements that may be appropriate for inclusion in a transparency agreement.

13. Some issues, such as the application of the WTO Dispute Settlement Understanding to a transparency agreement, may call for special consideration. The United States looks forward to making further contributions on these issues and engaging in discussions in the Working Group.

Conclusion

14. An agreement on transparency in government procurement is no less important now than it was when the Ministers added this issue to its agenda at the Singapore Ministerial. The predictability and certainty provided by a transparent rules-based government procurement system can complement other efforts to ensure the full integration of all Member economies into the global trading system. The United States believes that all Members have a shared interest in accelerating, rather than delaying, progress toward the creation of such an environment.

**PROPOSAL FOR A WORK PLAN TO BUILD ON THE PROGRESS
OF THE WORKING GROUP**

Communication from the United States

The following communication, dated 26 September 2002, has been received from the Permanent Mission of the United States with the request that it be distributed to all Members.

Overview

1. The Working Group has made considerable progress since its establishment in 1996 toward fulfilling its mandate: *"to conduct a study on transparency in government procurement practices, taking into account national policies, and, based on this study, to develop elements for inclusion in an appropriate agreement"*. It has examined extensively policies and practices related to transparency in government procurement. The breadth of the Working Group's consideration of these issues is reflected in the Secretariat's May 2002 *"Documents of the Working Group on Transparency in Government Procurement"* (WT/WGTGP/W/32). They include the following:

- Members made 34 submissions on a wide variety of specific issues.
- Members provided information on their national procedures and practices.
- UNCITRAL provided information on its *Model Law on Procurement of Goods, Construction and Services*.
- Intergovernmental organizations provided information on their transparency-related work.
- The Secretariat provided information on transparency-related provisions in existing international instruments on government procurement procedures and national practices.
- The Checklist of Issues has been repeatedly revised and is currently in its sixth iteration.
- The Working Group held 14 formal meetings to consider all of this information.

2. This study had laid the foundation for the substantial progress that the Working Group has made in developing elements of an agreement on transparency in government procurement. The United States makes this submission to offer an approach for the Working Group to build on this progress to complete its work by the Fifth Ministerial.

Benefits of a Transparent Government Procurement System

3. Transparent government procurement systems engender benefits not only for domestic and foreign suppliers, but also ultimately for the governments themselves and their citizens. The full disclosure of information is essential to a predictable and efficient government procurement process. The use of transparent and predictable procedures will help to ensure that governments obtain the greatest value for their money, resulting in the purchase of better quality goods and services and leading to more efficient use of public resources. This will enable Members to provide more social services, economic and social infrastructure and other public goods to their citizens. Transparent procurement systems will also provide an important tool for Members to combat corruption in public procurement.

4. Ensuring transparency of government procurement systems also has ramifications beyond the government procurement sector. Transparent and predictable procurement procedures are a critical element of good economic governance. They help build public confidence in the management of government affairs, establish a stable and predictable commercial and investment environment, encourage long-term business commitments and provide a solid foundation for sustained economic growth and development.

Objective of an Agreement

5. Every WTO Member conducts government procurement and in doing so follows its own procedures and practices. Some of these are formal requirements; others are informal or ad hoc; some are set out in writing; others are not transparent. Some circumscribe the authority of procuring entities; others give wide latitude to the procuring entities, which can affect the transparency of the procurement process.

6. A number of Members have used the *UNCITRAL Model Law on Procurement of Goods, Construction and Services* as the basic model for their procurement systems. Members also follow World Bank Guidelines (*Guidelines for Procurement under IBRD Loans and IDA Credits and the Guidelines for Selection and Employment of Consultants by the World Bank Borrowers*) in undertaking certain types of procurement.

7. While Members use a myriad of procurement procedures and practices, there is no common set of transparency provisions. Thus, the primary focus of the agreement should be to establish core transparency elements that suppliers throughout the world can be assured of finding in the procurement system of every Member.

8. An agreement on transparency in government procurement will be an important addition to the rules-based international trading system. Applying the principles of transparency that lie at the heart of the WTO to government procurement provides an opportunity for Members to extend and build-on their commitments to ensure the transparency of trade-related measures, as reflected in Article X of GATT 1994 and GATS Article III.

Completion of the Mandate of the Working Group

9. A multilateral agreement on transparency in government procurement does not need to be a complex undertaking, nor one that is overly burdensome, in order to accomplish its objective. The Doha Ministerial Declaration has narrowed its scope by limiting its parameters to "transparency aspects" and explicitly providing that an agreement will neither restrict domestic preferences nor require market access commitments.

10. Over the course of the next 12 months, leading up to the Fifth Ministerial, the task before the Working Group is to refine the extensive discussions that it has had on the potential elements of an agreement, as reflected in the Checklist of Issues, and to identify specific elements that are necessary to ensuring the transparency of government procurement procedures and practices. At this juncture, it is not necessary for the Working Group to decide how a particular element would be addressed in the agreement. In the Working Group's first post-Doha meeting in May, the Working Group informally began this process. For example, there appeared to be a general sense that publication of information on national legislation and procedures relating to government procurement is a necessary element of a transparent procurement system.

11. In carrying out this work, the United States suggests that the Working Group consider organizing the elements of an agreement into the following four categories of Elements:

1. General parameters of a potential agreement
2. Transparency of procurement systems
3. Transparency of specific procurements
4. Operational provisions to fulfill the objectives of a potential agreement

12. The Working Group should systematically over the next three to four meetings work through the issues identified in the Checklist of Issues and for each category decide the elements that may be appropriate for inclusion in a transparency agreement.

13. Some issues, such as the application of the WTO Dispute Settlement Understanding to a transparency agreement, may call for special consideration. The United States looks forward to making further contributions on these issues and engaging in discussions in the Working Group.

Conclusion

14. An agreement on transparency in government procurement is no less important now than it was when the Ministers added this issue to its agenda at the Singapore Ministerial. The predictability and certainty provided by a transparent rules-based government procurement system can complement other efforts to ensure the full integration of all Member economies into the global trading system. The United States believes that all Members have a shared interest in accelerating, rather than delaying, progress toward the creation of such an environment.

TRANSPARENCY OF CONTRACT AWARD DECISIONS

Communication from Canada

The following communication, dated 26 September 2002, has been received from the Permanent Mission of Canada with the request that it be distributed to all Members.

Flexibility to choose criteria for awarding contracts

Members need flexibility to establish the criteria for deciding on the award of a contract. The criteria for awarding a contract express a government's needs and its priorities as they are to be carried out in a procurement. As agreed by Ministers at Doha, a transparency agreement "...will not restrict the scope for countries to give preferences to domestic supplies and suppliers". Therefore, a government may freely make its own choices regarding the award criteria to apply to a procurement, such as price, the preferred characteristics of the product, any preferences for local suppliers¹, the supplier's ability to meet minimum legal and technical requirements and any other requirement considered relevant by the government. Flexibility should also exist to establish the criteria for separate qualification or registration processes (if they are used), since qualification and registration are steps in the determination of which supplier will be awarded a contract.

Transparency of award decisions

Within the context of flexibility for choice of award criteria, transparency of decisions can be assured by:

- specifying the chosen award criteria and other requirements in the tender documentation, registration or qualification documentation or other information that is provided to all participating suppliers;
- basing award decisions solely on the criteria provided to all participating suppliers; and
- making information available to suppliers and other parties on award decisions.

Governments should not be required to disclose confidential information.

¹ Utilized only to the extent consistent with a country's other international trade obligations related to that procurement.

Benefits of transparency of award decisions

1. Efficiency of the international trading system:

- The importance of transparency, predictability and consistency in the application of measures relating to international trade has been recognized since the GATT 1947.
- Government procurement is an important contributor to world trade. Most governments, like Canada, cannot supply all their government needs through domestic sources. Even where bidding can be restricted to domestic sources, those sources will need to draw on inputs from other parts of the world.

2. Economic efficiency:

- Procuring organizations and the taxpayer will get better value for their money through lower prices and better products.
- By providing clear information on the basis for making decisions, potential suppliers will be able to make informed decisions about whether to bid.
- Potential suppliers will be able to make better bids if they understand the government's needs and priorities.
- Providing information on local content or other requirements for domestic benefits permits potential suppliers, domestic and foreign, to seek effective and efficient ways of meeting these requirements;
- Potential suppliers from other countries will understand whether they may bid, thus avoiding wasted effort bidding on requirements for which they are not eligible.
- Potential sub-contractors will be able to make more effective proposals to possible prime contractors.
- Providing feedback on the outcome of an award permits bidders to prepare better bids in the future.

3. Confidence in the procurement system:

- Predictability and confidence in the government procurement system is ensured through consistency in describing applicable criteria and following the criteria for award of contracts.
 - Transparency of award decisions reduces the possibility of corruption.
 - Providing feedback on the outcome of the award of a contract establishes confidence that the criteria have been applied as described.
-

**Working Group on Transparency
in Government Procurement**

**WORK OF THE WORKING GROUP ON THE MATTERS RELATED TO
THE ITEMS I-V OF THE LIST OF THE ISSUES RAISED AND POINTS MADE**

Note by the Secretariat

1. This note has been prepared in response to a request made at the informal meeting that was held on 12 March 2002 that the Secretariat prepare, for each of the two substantive meetings in 2002, short background papers summarizing the work that has already taken place in the Working Group on the matters related to the sub-items to be discussed, drawing on and listing the documentation of the Group.
2. This note covers items I to V of the Informal Note by the Chairman, "List of the Issues Raised and Points Made" (Job(99)/6782, dated 12 November 1999), namely definition and scope; procurement methods; information on national legislation and procedures; information on procurement opportunities, tendering and qualification procedures; and time-periods.
3. The aim is to provide a more concise note than the Informal Note by the Chairman as well as to take into account subsequent discussions in the Working Group and papers submitted. Being a summary, this note does not contain all the details of the points made and explanations given. For this information delegations should consult the Informal Note by the Chairman and the other documentation of the Working Group. As requested, a list of the documentation of the Working Group can be found annexed.
4. On items I to V, this note first briefly sets out the information that was considered by the Working Group on provisions in existing international instruments and on national procedures and practices. It will be recalled that at the outset of its work the Working Group sought information from other intergovernmental organizations on relevant international instruments (in particular from UNCITRAL and the World Bank)¹ and requested the Secretariat to provide a note synthesizing the information available on transparency related provisions in existing international instruments on government procurement procedures and on national practices.² Under each of the items, this note then summarizes the discussions in the Working Group, outlining the issues raised and main points made.

¹ WT/WGTGP/W/1-2

² WT/WGTGP/W/6

I. DEFINITION AND SCOPE OF GOVERNMENT PROCUREMENT

(a) Information on provisions in existing international instruments and national procedures and practices

5. The three instruments vary as to their scope and coverage. The Model Law is designed to be applicable, in principle, to all types of procurement of goods, construction and services. What is meant by "goods", "construction" and "services" is listed in the Model Law. At the same time, it recognizes that an enacting State may wish to exempt certain types of procurement from the coverage of its procurement legislation, for example defence- and security-related procurement. The World Bank Guidelines are applicable to the procurement of goods, works and related services, and to consultants' services for a project that is financed in whole or in part by a loan from the IBRD or a credit from the IDA. The Agreement on Government Procurement (GPA) covers the procurement of goods, and of all services and construction services that are specified in lists, found respectively in Annexes 4 and 5 of Appendix I. General Notes at the end of most Parties' schedules provide for a number of exceptions. The Model Law defines "procurement" as the acquisition by any means of goods, construction and services. The GPA applies to procurement by any contractual means, including through such methods as purchase or lease, rental or hire purchase, with or without an option to buy, including any combination of products or services.³

6. In order to take into account the existence of procurement legislation at different levels of government, the Model Law presents two options as to the levels of government to be covered. The first option brings within the scope of the Model Law all governmental departments, agencies, organs and other units within the enacting State pertaining to the central government as well as to provincial, local or other governmental subdivisions of the enacting State. A second option allows States to enact the Model Law only with respect to the organs of the national government. The GPA obligations under the Agreement apply to procurement by the procuring entities that each Party has listed in its schedule in Annexes 1 to 3 of Appendix I, relating respectively to central government entities, sub-central government entities and other entities such as public utilities.

7. The international instruments provide for the size of procurement contracts to be taken into account in determining the requirements to which they are subject. The provisions of the GPA apply to procurement in respect of procurement contracts above certain threshold values. Each Party indicates such thresholds applying to the procurement of goods and services under Annex 1, 2 and 3 entities. The Model Law allows a procuring entity engaging in low-value procurement in which there is unlikely to be interest on the part of foreign suppliers to forgo certain procedural requirements relating to announcements at the international level. Under the World Bank Guidelines, National Competitive Bidding procedures may be preferred to International Competitive Bidding procedures when contract values are small.⁴

8. As regards national practice, the data available indicates that there is often no detailed legislative or regulatory definition of government procurement. In most cases, government procurement is defined simply as the procurement of goods and services by central, provincial and local governments, as well as by other public entities, which in certain cases include "utilities" - e.g. suppliers of energy, water, transport and telecommunications services. Some countries treat the use of public funds to finance purchases either fully or partially as a defining criterion. Some countries have stated that procurement by any contractual means is covered, including purchases, leasing, rental or hire purchase, with or without an option to buy. Other countries have stated that the term "procurement" includes all stages of the process by which government agencies acquire from external sources the goods and services they need to fulfil their mandates.

³ WT/WGTGP/W/6, paras. 10-11

⁴ WT/WGTGP/W/6, para. 12

(b) Discussions in the Working Group

9. Three main types of questions have arisen in the discussion on definition and scope:

- the definition and scope of government procurement for the purposes of the study phase in the Working Group;
- the definition of government procurement that should be used for the purposes of any commitments that may be negotiated; and
- the extent to which government procurement, as defined, should fall within the scope of commitments.

(i) *Definition and scope of government procurement for the purposes of the study phase in the Working Group*

10. With regard to this matter, there appears to have been a general acceptance that a broad conception, without preconceived limitations, could be employed, it being understood that the focus of work is on the transparency of such government procurement.⁵

(ii) *Definition of government procurement for the purposes of rules that may be negotiated*

11. With regard to this matter, two main sets of issues have been discussed:

- the first is whether a definition should be employed based on the language in the GATT and GATS for defining government procurement;
- the other is the scope of the contractual arrangements or transactions entered into by government entities that should be considered to constitute government procurement for these purposes.

12. With regard to the first of these points, the view has been expressed that the Group could draw on the **existing definitions of government procurement in GATT Article III:8 and GATS Article XIII:2** as a basis for developing an appropriate definition in a transparency agreement. In this regard, the point has been made that, while it would be useful to draw on the existing language in GATT and GATS, the mere reference to these two provisions may not be sufficient for the purposes of a future transparency agreement.⁶ Other questions that have arisen have included whether the term "governmental purposes" as contained in these provisions is by itself sufficiently clear.⁷

13. With regard to the question of the **types of contractual arrangements or transactions** entered into by government entities that should be considered government procurement, it has been suggested that acquisition by any contractual means, including, for example, through lease or rental, should be covered.⁸ The main issue that has arisen in regard to this matter is the extent to which concessions and BOT (build-operate-transfer) contracts should be covered and, if covered, how they should be defined. Differing views have been expressed on these matters. Some have taken the view that BOT contracts and concessions should not be covered, expressing the view that concessions generally have a different legal basis, purpose and philosophy from those underlying government

⁵ JOB(99)/6782, para. 4

⁶ WT/WGTGP/M/10, para. 19; WT/WGTGP/M/11, para. 17; WT/WGTGP/W/26; JOB(99)/6782, para. 18

⁷ WT/WGTGP/M/10, para. 19; WT/WGTGP/M/11, para. 17

⁸ JOB(99)/5803

procurement. Some others have expressed the view that BOT contracts and at least some types of "concessions" should be considered government procurement.⁹ In this regard, the point which has been made in the discussion is that this term could refer to a range of situations which might have different relationships to government procurement. What was important was to have a proper understanding of which BOT contracts and "concessions" fell within the general definition of government procurement, in particular what was for "governmental purposes".¹⁰ The view has also been expressed that, given the increased interest in some countries in securing private sector involvement in the supply of services traditionally supplied by the government itself, there would be merit in exploring the scope for transparency principles to apply to concessions in general.¹¹ At the invitation of the Working Group, the Secretariat circulated a Note on various issues involved in concessions and BOT contracts (Job (00)/5657).

- (iii) *The extent to which government procurement, as defined, should fall within the scope of commitments on transparency in government procurement*

14. On this matter, the following main issues have arisen:

- whether the rules should apply to procurements by all or only some government entities;
- whether procurement of services as well as of goods should be covered;
- whether only procurement contracts above a certain threshold value should be covered;
- whether procurement that is not open to foreign competition should be covered; and
- what provision should be made for exceptions.

15. With regard to the first of these questions, **the governmental entities to which the rules of a transparency agreement might extend**, three main views have been expressed:

- entities at all levels of government, including at sub-central levels, should be covered;
- central government entities and entities at the highest level of sub-central government should be covered;
- only central/federal government entities should be covered.¹²

The suggestion has also been made that coverage of sub-central entities by developing countries with federal government structures could be a subject for special and differential treatment.¹³ In the discussion on these ideas, the issues that have been raised include the feasibility of securing agreement and compliance at all levels of government and the balance of rights and obligations between Members with differing governmental structures.¹⁴

⁹ WT/WGTGP/M/10, paras. 25-26; Job (99)/6782, paras. 12 and 14

¹⁰ JOB(99)/6782, para. 17

¹¹ WT/WGTGP/M/11, paras. 19-21

¹² WT/WGTGP/W/26; WT/WGTGP/W/27; Job (99)/5239; Job (99)/5803; WT/WGTGP/M/10, para. 20; WT/WGTGP/M/12, paras 4-6

¹³ WT/WGTGP/M/10, para. 20

¹⁴ JOB(99)/6782, para. 6

16. Another issue on which differing views have been expressed is the **extent to which procurement by state enterprises should be covered**. Among the issues which have arisen in this context have been the extent to which enterprises enjoy monopolistic positions or operate in a competitive environment, the extent to which their procurements can be regarded as for "governmental purposes", burdens which might be imposed on Members and the relationship with the provisions of GATT Article XVII.¹⁵

17. With regard to the **coverage of goods and services**, differing views have been expressed about the coverage of services. Those advocating that services should not be covered by a transparency agreement have said that the issue of procurement of services is the subject of separate work in the context of GATS and that the inclusion of services, an area for which procurement procedures are less systemized in some countries than they are for goods, would make a transparency agreement more challenging for developing countries.¹⁶ In response, it has been said that there is no basis in the Working Group's mandate for distinguishing between goods and services; that transparency is as much an issue in regard to the procurement of services as it is in relation to goods; that, as a practical matter, it was often difficult to distinguish between a goods procurement and a services procurement since many procurements involved a mixture of goods and services; and that the existing international instruments, including those of UNCITRAL and the World Bank, provide for rules covering both goods and services.¹⁷

18. With regard to the question of the use of **possible threshold values** of procurement contracts for the purposes of determining coverage, the main issue has been whether their use might avoid unnecessary possible burdens resulting from a transparency agreement. The following main views have been expressed:

- there should be a minimum threshold below which transparency obligations would not apply;
- such thresholds might be a subject for special and differential treatment, with higher levels for developing countries;
- there is no need for thresholds of general application, but they might apply to certain rules where burdens might be disproportionate to the benefits accruing;
- the rules of a transparency agreement would not result in burdens that would warrant the use of thresholds.¹⁸

19. With regard to the question of the **coverage of contracts not open to foreign competition**, one view has been that the transparency of such contracts is not a legitimate concern for an international agreement and therefore should not be covered. Another view has been that it is important to cover also such contracts since foreign suppliers have an interest in clear information indicating that certain contracts are not open to them.¹⁹

20. With regard to the **question of exceptions**, there has been discussion of whether a transparency agreement should contain a general exception clause along the lines of GATT Articles XX and XXI. One view has been that such provisions should be provided for. Another view has been to doubt the need for them, given the limited nature of the obligations envisaged in a

¹⁹ WT/WGTGP/M/10, para. 29

transparency agreement. It has also been suggested that exceptions should be envisaged to respond to social and developmental objectives, including procurement for public distribution systems and stabilization programmes for essential commodities. In response, the point has been made that procurement objectives aimed at meeting social and other public policy goals were not inconsistent with the achievement of transparency.²⁰

II. PROCUREMENT METHODS

(a) Information on provisions in existing international instruments and national procedures and practices

21. All three of the international instruments covered by the Secretariat's note on the Synthesis of the Information Available describe the permissible procurement methods and set out the parameters for justified resort to these methods. The principal procurement method foreseen in all three instruments is some form of open procurement. Under certain circumstances, in which the open procurement method is not considered to be appropriate, alternative methods are offered. The special conditions for the use of these other procedures are often related to ensuring adequate transparency. For example, the Model Law contains a requirement that decisions to use alternative methods should be supported in the record of the procurement proceedings by a statement of the grounds and circumstances on which the procuring entity has justified the use of the method in question. Under the GPA, entities are required to prepare a report on each procurement awarded under limited tendering including a statement of the conditions which prevailed.²¹

22. The available information on the national legislation of Members indicates that it generally sets out criteria for determining which type of procurement method would be appropriately used by procuring entities. The basic range of permissible procurement methods is the same in most countries, although there are some variations based on national conditions and procurement policy objectives. Three broad categories of procedures are commonly distinguished: public or open tendering procedures; selective or restricted tendering procedures; and limited tendering, direct contracting, or single tendering procedures. Open and selective tendering procedures appear to be the main procedures in most countries.²² The conditions and circumstances justifying the use of limited tendering commonly specified in national legislation are listed in paragraph 24 of WT/WGTGP/W/6. Typical features of national procedures in regard to the main tendering procedures are set out in paragraphs 22 to 23 of the Synthesis of the Information Available and in the submissions made by Korea, the Czech Republic, Hungary, Japan and Morocco providing information on their respective national procedures and practices.²³

(b) Discussions in the Working Group

23. A common starting-point for the discussion on this matter appears to have been a broad recognition that Members should retain flexibility to use different procurement procedures and that the emphasis should be on ensuring transparency in the choice and use of the method in question rather than on attempting to be prescriptive about the conditions governing which different methods can be used.²⁴

24. In discussions on the relationship between transparency and procurement methods, the following categories of situation have been identified:

²⁰ WT/WGTGP/M/10, paras. 16 and 28; WT/WGTGP/W/26; WT/WGTGP/W/27

²¹ WT/WGTGP/W/6, paras. 14-18

²² WT/WGTGP/W/5; WT/WGTGP/W/6, paras. 20-21

²³ WT/WGTGP/W/7; WT/WGTGP/W/9; WT/WGTGP/W/12; Job No. 939 and WT/WGTGP/W/19

²⁴ JOB(99)/6782; para. 19; WT/WGTGP/W/17; WT/WGTGP/W/26; WT/WGTGP/W/27;; WT/WGTGP/W/31; WT/WGTGP/M/10, para. 31; WT/WGTGP/M/11, para. 25-26

- open procedures under which information on the procurement is made available publicly and all are eligible to participate. It has been said that this method is the most transparent²⁵;
- selective tendering where information on the procurement opportunity is made available publicly as are the selection criteria to be employed. It has been said that this method can be as transparent as the first²⁶;
- selective tendering where information on the procurement opportunity is made available only to pre-selected qualified suppliers²⁷; and
- limited tendering (sometimes called individual, sole source, single source or direct tendering), under which only a single supplier is contacted. It has been said that this method is inherently less transparent. Much of the discussion in the Group on procurement methods has related to the circumstances under which such a method may be employed and how to maximize the transparency in its use.²⁸

25. In regard to possible rules that might be negotiated on procurement methods, the following ideas have been discussed:

- a requirement that each Member should specify in its national legislation the circumstances under which procuring entities may use different procuring methods²⁹;
- an obligation on Members to ensure that their entities comply with these provisions of their national legislation
- a general commitment that, whatever the procurement method used, transparency would be maximized to the extent possible at each stage of the procurement process³⁰;
- in regard to limited tendering:
 - a general requirement that this method only be used in exceptional and justifiable cases;
 - an illustrative list of the circumstances warranting the use of this method;
 - an exhaustive list of the circumstances warranting the use of this method;
 - a requirement to publish notices of invitation to tender and contract award notices; and
 - a requirement on procuring entities to maintain records and provide, in the award of contracts notice, information on the reasons for the use of this method.³¹

²⁵ JOB(99)/6782, para. 22

²⁶ JOB(99)/6782, para. 21

²⁷ JOB(99)/5239

²⁸ JOB(99)/6782, para. 23; WT/WGTGP/W/16

²⁹ JOB(99)/6782, para. 24; WT/WGTGP/M/10, para. 31; WT/WGTGP/W/27

³⁰ JOB(99)/6782, para. 20, WT/WGTGP/M/10, para. 31

³¹ JOB(99)6782, para. 26, WT/WGTGP/W/17

26. With regard to the suggestions made on limited tendering, it has been said that spelling out the exact circumstances and conditions justifying the use of this type of method might go beyond the scope of a transparency agreement and impinge upon the ability of procuring entities to use the most appropriate procurement method in the circumstances of each case.³² In regard to the possible requirement for notices of invitation to tender and contract award notices to be published, the point has been made that this might put undue burdens on procuring entities since limited tendering was often used for small-value procurements.³³

27. A further issue that has been raised in regard to procurement methods is the use of direct negotiation between the procuring entity and suppliers after the submission of initial tenders. In this connection, it has been said that it would be important to retain scope for the use of this method, but that, in its use, transparency should be ensured. This could be done through the provision of advance information on the use of this procedure, through ensuring that all participating suppliers are given information on a non-discriminatory basis and through ex-post information on the contract award.³⁴

III. PUBLICATION OF INFORMATION ON NATIONAL LEGISLATION AND PROCEDURES

28. It should be noted that, in the Chairman's List of Issues on the basis of which the Working Group has been working, the matter of publication is treated separately from that of notification, i.e. the supply of information to other WTO Members. Notification is the subject of Section X in the List of Issues, which will be addressed in a later summary note.

(a) Information on provisions in existing international instruments and national procedures and practices

29. The Model Law and the GPA require the public accessibility of relevant texts. The GPA explicitly requires Parties to publish any law, regulation, judicial decision, administrative rulings of general application and any procedure regarding government procurement in such a manner as to enable other GPA Parties and suppliers to become acquainted with them.³⁵ The Secretariat's note on the Synthesis of the Information Available indicates that the national regulatory frameworks for procurement procedures include: national constitutions; procurement laws; regulations (legislative decrees, cabinet orders, ministerial ordinances implementing various aspects of the basic procurement law); horizontal guidelines on government procurement policies in decentralized procurement regimes; horizontal laws on national budgets or the public sector budget; horizontal laws on financial or budgetary management, public sector control or audit; agency-specific purchasing regulations and guidelines that implement national policies and procedures on procurement; specific laws at the sub-central levels of government; the provisions of regional or other international agreements; separate regulations on procurement of specific goods and services categories and construction works.³⁶

30. Reference has also been made to the existing publication obligations contained in Article X of GATT 1994 and Article III of GATS relating to laws, regulations, judicial decisions and administrative rulings of general application. It has been observed that government procurement is not excluded from the scope of these provisions. The suggestion has been made that any more specific publication requirements that may be negotiated relating to transparency in government procurement should be without prejudice to these existing obligations.³⁷

³² WT/WGTGTP/M/10, para. 31; JOB(99)/6782, para. 26

³³ JOB(99)/6782, para. 26

³⁴ WT/WGTGP/M/10, para. 32

³⁵ WT/WGTGP/W/6, para. 27

³⁶ WT/WGTGP/W/6, para. 30

³⁷ JOB(99)/6782, para. 35; WT/WGTGP/W/26; WT/WGTGP/W/27

(b) Discussions in the Working Group

31. In the discussions on publication, the following main issues have been raised:

- the type of information that should be made available; and
- how this information should be made available.

(i) *The type of information to be made available*

32. The suggestions that have been made generally provide for the publication or public accessibility of laws and regulations.³⁸ In addition, it has been suggested that a number of other types of instrument might be covered by a publication obligation, including requirements that specifically relate to government procurement and are of general application, administrative rulings of general application in connection with procurement, policy guidance and judicial decisions. Some concerns have been raised that an obligation to publish this range of material might be onerous and costly.³⁹ An alternative approach to designating certain types of governmental instruments that has been suggested would be to focus instead on the substance of the information that should be made available rather than on its legal form, namely to require the availability of information which defined the rules of general application to be followed by entities in determining participation in tenders and decisions on awards.⁴⁰

33. Suggestions have also been made specifying that **changes or amendments** to the above material should also be published or made readily and easily available, and indicating the time-frame within which this should be done ("promptly", "in a timely manner").⁴¹

(ii) *How the information should be made available*

34. Two main approaches have been suggested: one is to specify that the information be published, in readily accessible media.⁴² The other would be to require that the information be readily and easily accessible through a public medium, without specifying its "publication". It has been suggested that this latter course could help meet some of the concerns that have been expressed about the burden of publishing administrative rulings and guidelines, judicial decisions, etc.⁴³ It has also been suggested that it should be left up to each Member to decide whether to use electronic media or not.⁴⁴

35. With regard to the **cost** of accessing information, it has been suggested that fees should be levied on a non-discriminatory basis and be limited to the cost of copying and despatch or limited in amount to the approximate value of the service rendered. In response it has been said that the issue of cost is not a matter of transparency. Concern has also been expressed about the need to take into account also the cost of creating the information. Governments should not be denied the possibility of imposing appropriate fees provided that any fees are charged in a non-discriminatory manner.⁴⁵

³⁸ Job Nos. 3245, 4099, 5239, 5803; WT/WGTGP/W/26; WT/WGTGP/W/27; WT/WGTGP/M/10, para. 34

³⁹ JOB(99)/6782, para. 33; WT/WGTGP/M/10, para. 34

⁴⁰ JOB(99)/6782, para. 32

⁴¹ Job Nos. 3245; 4099, 5239, 5803, WT/WGTGP/W/26; WT/WGTGP/W/27

⁴² Job Nos. 5239, 5803; WT/WGTGP/W/27

⁴³ JOB(99)/6782, para. 34; WT/WGTGP/W/26

⁴⁴ JOB(99)/6782, para. 34

⁴⁵ Job No. 5803; WT/WGTGP/W/26; JOB(99)/6782, para. 36; WT/WGTGP/M/10, para. 34

36. With regard to **language**, it has been said that the obligation should be to provide the information in a national language, while leaving Members free to provide information in other languages, including WTO languages.⁴⁶

37. The Working Group has addressed the question of whether there should be a requirement for the establishment of an **enquiry point** from which information on national legislation and procedures can be obtained by interested parties in other Members, including suppliers. Reference has been made to the provisions of Articles III:4 and IV:3 of the GATS and also to those of Article IV:2 of that Agreement and Article V:11 of the GPA which requires that contact/information points be established to facilitate the access of developing countries to information. On this issue, it has been stressed that any requirements for providing contact or enquiry points should be without prejudice to decentralized procurement systems such as those in federal states. The suggestion has been made that, in respect of decentralized national procurement systems, a central enquiry point from which information on individual sub-central enquiry points can be obtained could be designated.⁴⁷

IV. INFORMATION ON PROCUREMENT OPPORTUNITIES, TENDERING AND QUALIFICATION PROCEDURES

(a) Information on provisions in existing international instruments and national procedures and practices

38. The three international instruments that the Working Group has examined each set forth minimum procedures for giving information on tendering opportunities and the relevant procedures that the procurement agency should follow in order to obtain expressions of interest in a specific procurement from potential suppliers. Each of them foresees the publication of a notice of invitation to participate in an official gazette or other official journal. Under the GPA, Parties are required to publish the tender notice in a publicly accessible publication as indicated in each Party's Appendix II to the Agreement. The Model Law and the World Bank Guidelines require procurement notices also to be published in a specialized publication of wide international circulation.⁴⁸ Under the Model Law and the World Bank Guidelines, the procuring entity is required to respond to any request for clarification submitted within a reasonable time, as well as communicating the clarification to all other participating suppliers. Under the GPA, reasonable requests for explanations relating to tender documentation under open and selective procedures must be promptly replied to. Replies to such a request from a participating supplier shall be provided on condition that such information does not give that supplier an advantage over his competitors.⁴⁹

39. The information available to the Group indicates that, although the minimum standard requirements regarding information to be provided are largely the same in international instruments and in national legislation, in national legislation the level of detail of information provided respectively, in initial tender notices and in the subsequent tender documentation, vary from Member to Member.⁵⁰ In national legislation the printed media in which procurement opportunities are advertised differ widely, ranging from government gazettes or official journals to local language newspapers. Additional forms of advertising such as periodic handouts or posting on the notice boards of the procuring entity are also used.⁵¹ Under the GPA, entities must publish also a summary of the main elements of the information in a tender notice in one of the official WTO languages.⁵²

⁴⁶ JOB(99)/6782, para. 37; JOB(99)/5239

⁴⁹ WT/WGTGP/W/6, paras. 56-57

⁵⁰ WT/WGTGP/W/6, paras. 43-55

⁵¹ WT/WGTGP/W/6, paras. 37-42

⁵² WT/WGTGP/W/6, para. 47

(b) Discussions in the Working Group

40. In the discussions in the Working Group, the importance of timely, sufficiently detailed and readily available prior information on procurement opportunities for ensuring transparency in government procurement has been widely emphasized. The discussion has focused on how this should be best achieved and what provisions might be envisaged in a possible multilateral framework.

41. It has been suggested that the information made available should be sufficient to enable suppliers to assess their interest in a particular procurement and, should they wish to participate in it, to submit responsive bids.⁵³ One general issue, on which differing suggestions have been made, is whether a possible multilateral framework should approach this matter by containing rules about the information that should be made available at each stage of the procurement process, in particular at the stage of issuance of notices of invitation to tender and at the stage of tender documentation, or whether the approach of specifying the information that should be made available in general be adopted, leaving it to each Member to determine the stage at which each component of the information might be supplied.⁵⁴

42. With regard to the specific pieces of information that should be made available, a number of approaches have been suggested:

- to include a specific list of minimum requirements (to be met either at each stage of the procurement process or in total - see preceding paragraph)⁵⁵;
- to provide for an illustrative list of the prior information that should be made available⁵⁶;
- to have no list of prior information, on the grounds that this would be unnecessarily prescriptive, but to rely on general guiding principles of the sort set out at the beginning of the preceding paragraph.⁵⁷

43. With regard to the minimum information that might be specified in notices of invitation to tender and in tender documentation, the following main categories of information have been suggested by some of the Members advocating such a course:

- the name of the procuring entity;
- the goods or services to be procured/the procurement outcome to be achieved;
- the procurement procedure used;
- any (pre-)qualification requirements;
- any restrictions on market access and/or domestic preferences granted;
- the deadlines for the submission of tenders;
- the criteria for evaluation of bids and award of contracts, including technical specifications; and

⁵⁵ WT/WGTGP/W/26; WT/WGTGP/W/27; JOB(99)/5239; JOB(99)/5803

⁵⁶ JOB(99)/6782, para. 54

⁵⁷ JOB(99)/6782, para. 45; WT/WGTGP/M/10, para. 35

- the date and time for the opening of tenders.⁵⁸

Those who have suggested stage-by-stage requirements have broadly suggested that the first six pieces of information should be provided in the notice of invitation to tender, while the last two, together with amplification of the first six, could be provided in the tender or bid documentation.⁵⁹

44. A point which has been discussed at some length in the Working Group with regard to evaluation criteria is the suggestion that information should be made available on **preferences to national supplies and suppliers** as well as other measures in favour of domestic supplies or suppliers such as offsets. In this regard, the following views have been expressed:

- while the nature and extent of such preferences is not within the scope of the work of the Working Group, the advance provision of information on such preferences is an essential component of transparency since it enables foreign tenderers to assess the extent to which they might have an interest in entering a specific procurement process⁶⁰;
- rules on information on procurement opportunities should only apply in cases where national markets are open to foreign suppliers.⁶¹

45. In regard to the way information on national preferences might be made available, the following views have been expressed:

- full information should be provided in the notices of invitation to tender/tender documentation, by setting it out in detail and/or by making references to applicable laws and regulations⁶²;
- information on national preferences need only be included to the extent it was not adequately provided through laws or regulations of general application.⁶³

46. In regard to the **way in which information should be made available**, one approach has been to suggest that this should be done through publication in a readily accessible medium⁶⁴ while another has favoured a requirement that the information should be publicized through an accessible source.⁶⁵

47. There has been discussion over the extent to which an effort to make **information available at the international level** should be called for. One view has been that the level of availability should be proportionate to the likely level of interest in the procurement, i.e. that where a procurement opportunity is likely to attract international interest, information should be made available through a source to which potential foreign suppliers had access. Another view was that there should be no requirement to publish in international publications; it was up to interested foreign suppliers to keep track of national publications.⁶⁶

⁶⁴ JOB(99)/5239

⁶⁵ WT/WGTGP/W/26

⁶⁶ JOB(99)/6782, para. 51

48. In regard to the media that might be used, there has been a wide view that each government should be free to use **printed and/or electronic media**, with electronic publication an option and not an obligation.⁶⁷

49. In regard to the question of situations where information obligations might not need to apply, the use of **small-value procurements** has been discussed. It has been suggested that publication requirements might not apply to, or might be less strict for, low-value procurements in order to avoid undue administrative costs. Another view has been that there should be no threshold level and that suitably phrased requirements regarding the availability of information would enable Members to avoid undue administrative burdens.⁶⁸

50. The question of the extent to which prior information requirements should apply to procurement conducted under **selective and limited tendering** methods has also been discussed. In this regard, a number of approaches have been suggested:

- certain basic types of information should be provided whatever the procurement method employed for the purposes of achieving maximum transparency⁶⁹;
- the general rules on prior information should only apply to government procurement through open tendering procedures. This is an approach that was suggested in a number of the proposed texts submitted in 1999. It should be noted that some of these texts also suggested rules regarding the transparency of qualification procedures which might be used in selective tendering.⁷⁰

51. With regard to situations where invitations to tender are supplied only to **pre-qualified or pre-selected suppliers**, it has been suggested that there should be a requirement that information on how to qualify or be selected be published in a readily accessible medium at a timing and in a manner which would reasonably allow eligible suppliers to apply for selection.⁷¹ It has also been suggested that there should be some rules regarding the situation where a qualification process covers multiple procurements over a period of time and is not open at all times to applications from interested suppliers, such as periodic publication of an invitation to apply for qualification and the availability of current lists of current qualified suppliers.⁷² It has further been suggested that, where information is made available only to pre-selected or pre-qualified suppliers, all such suppliers should be treated in a non-discriminatory way in this regard.⁷³

52. Regarding **modifications to and clarification of information**, the emphasis in the Working Group has been on non-discriminatory dissemination of any such information. It has also been suggested that any amendments or re-issue of a notice of invitation to tender pursuant to changes in information contained in tender notices and tender documents including those concerning evaluation criteria and technical specifications, should be made available through the same means used for providing the original information and the relevant publications should be given the same circulation as the original document.⁷⁴ In particular, all those suppliers who had originally ordered tender documents or had indicated an interest in the procurement opportunity should have any additional

⁷¹ JOB(99)/5239; WT/WGTGP/W/27

⁷² WT/WGTGP/W/27

⁷³ JOB(99)/5803

⁷⁴ JOB(99)/5803; WT/WGTGP/W/27

information transmitted to them through the same means as the one used for providing the original information.⁷⁵

53. As regards clarification of information in tender documents, the point has been made that information provided in response to an individual request for clarification should be transmitted simultaneously to all other participating suppliers. However, it has been pointed out that this might in some cases be impracticable, for instance in cases where the requests from suppliers for further information had been received at different contact points and that this might only be feasible in the case of high-value procurements with limited participation.⁷⁶

54. There has been a discussion in the Working Group regarding whether tender information should be published in a **language** other than national language, in particular where there should be a requirement to provide summary information in a WTO language on procurement opportunities and, if so, which opportunities.⁷⁷ The view has been expressed that requirements concerning publication of notices of invitations to tender should be limited to publication in a national language since the translation into a WTO language of every tender notice would entail Members incurring undue administrative costs and could become too burdensome. Another view has been expressed that procuring authorities should have the discretion to decide whether translation of notices should be limited to those procurement opportunities that might be of interest to international suppliers. On the other hand, it has been suggested that, where possible, tender notices should be published in a WTO language.⁷⁸ A further suggestion has been that, in addition to publication in the official national language, a summary might be published in one of the WTO languages containing the main details of the tender information and small-value procurements could be exempted from this requirement.⁷⁹

55. The Working Group has considered the question of the extent to which **the content of specifications** should be addressed in a transparency agreement. Suggestions have been made that requirements should be specified in a clear and objective manner and defined in terms of required functional performance to the extent possible.⁸⁰ It has also been suggested that, wherever possible, technical specifications based on internationally agreed or other relevant standards should be employed. On the other hand, the relevance of such requirements to transparency has been questioned.⁸¹

56. The question of **advice from suppliers on the development of specifications** has been the subject of suggestions. It has been suggested that such advice should be sought and applied in a non-discriminatory manner and that, if advice has been obtained from a particular supplier, other suppliers should be informed or that supplier should be ineligible to participate in the procurement.⁸²

V. TIME-PERIODS

(a) Information on provisions in existing international instruments and national procedures and practices

57. Each of the three international instruments that the Working Group has reviewed provides that suppliers must be granted a sufficient period of time to prepare their tenders. The Model Law recognizes that the length of that period of time may vary from case to case depending on the circumstances of the given procurement and it is left to the procuring entity to fix the deadline by

⁷⁵ JOB(99)/6782, para. 64

⁷⁹ JOB(99)/6782, paras. 66-67

⁸⁰ WT/WGTGP/W/26

⁸¹ JOB(99)/6782, para 61; WT/WGTGP/M/10, para. 39

⁸² Job No. 5803; WT/WGTGP/W/27

which tenders must be submitted. The GPA prescribes certain minimum deadlines that must be allowed for the preparation, submission and receipt of tenders to enable responsive tendering and for potential suppliers to prequalify. The relevant provisions also contain general considerations that should govern when entities set time-periods for tendering and delivery.⁸³ Most Members' procurement legislation establishes minimum time-periods, with which the purchasing entities must comply. In some countries there are no mandatory requirements and individual government agencies have discretion in setting the minimum time-periods.⁸⁴

(b) Discussions in the Working Group

58. Suggestions made in the Working Group have generally favoured provisions on time-periods that would be couched in terms of the considerations that should be taken into account in setting those periods rather than in terms of prescribing minimum periods. The points have been made that time-periods in national practice varied significantly and that procuring entities needed discretion to establish appropriate periods on a case-by-case basis, having regard to the type of procurement.⁸⁵

59. The suggestion has been made that time-periods should be sufficient to enable interested suppliers to obtain qualification documentation where appropriate and tender documentation and to prepare and submit responsive bids in time.⁸⁶ With regard to the criteria of "sufficiency", the concern has been expressed, that the meaning of the term is unclear and that this might have consequences in a dispute settlement context. In response, it has been clarified that the term should be taken to mean that procuring entities retained considerable flexibility to determine time-periods for individual procurements. A further view has been that the term "reasonable" should be used; this would provide, for instance, for emergency situations in which it might not be possible to provide for adequate or sufficient time-periods.⁸⁷

60. It has also been suggested that some considerations taking into account the characteristics of individual procurements might be specified, in particular the circumstance of the procurement, including the likely level of interest, as well as the complexity of the envisaged procurement.⁸⁸ One concern that has been expressed in this connection is how this would relate to situations in many jurisdictions where time-limits are prescribed by national law.⁸⁹

61. Furthermore, it has been stressed that there should be non-discrimination between potential suppliers with respect to the application of time-periods. The proposed texts suggest that the time allowed for the submission of bids should be the same for all suppliers. On the other hand, the view has been expressed that Members should not be required to set time-periods to suit foreign suppliers, who should be treated on a national treatment and MFN basis.⁹⁰ The question has also been raised as to whether time-periods are an aspect of transparency.⁹¹

62. Finally, the point has been made that time-periods should be specified in tender notices to ensure transparency. Any changes in the time-periods should be made known to all suppliers in the tendering process or the relevant information be made generally available from an accessible source.⁹²

ANNEX

**DOCUMENTS OF THE WORKING GROUP ON
TRANSPARENCY IN GOVERNMENT PROCUREMENT**

The Working Group held 13 formal meetings during the period 1997 to 2001. The reports on these meetings (WT/WGTGP/M/1-13) and the annual reports of the Working Group to the General Council (WT/WGTGP/1-5) reflect the work done so far in the Working Group pursuant to the mandate of the Singapore Ministerial Conference in 1996. The discussions in the Working Group on the issues before it have been recorded mainly in the note by the Chair "List of the Issues Raised and Points Made" (Job (99)/6782), last revised in November 1999; and subsequently in the reports of the meetings held in 2000 and 2001, (WT/WGTGP/M/10-12) (List A).

Other documents that have been made available include:

- Members' submissions relating to specific issues. Over the period 1997 to 2000 13 Members have made two or more such submissions. An informal note "List of Proposals on Items III-VII of the Checklist" (JOB(00)/3276), reflecting the proposals made on items III-VII in a succinct form, which identifies the source of the different proposals and summarizes the written and oral comments made on these proposals, most recently revised in May 2000, was prepared by the Secretariat as an auxiliary informal paper for the use of Members wanting to draw on it (List B).
- Information on national procedures and practices submitted by ten Members on national procedures and practices in their countries; the responses to the questionnaire on government procurement of services in the Working Party on GATS Rules and APEC/GPEG Surveys on Government Procurement Systems, updated versions of which are available on the APEC Website (www.apec.sec) (List C).
- Information provided on work in intergovernmental organisations and in the context of regional arrangements (List D).
- Notes by the Secretariat relating to various issues under discussion in the Working Group (List E).

METHODS OF PROCUREMENT

Discussion Paper from Australia

The objective of this paper is to promote discussion in the Working Group on Transparency in Government Procurement on the benefits to any future agreement of a flexible non-prescriptive approach to the selection of methods of procurement.

This objective is premised on the belief that a government going to tender has the right to decide what it wants to achieve for the money it spends. For this reason it is important that governments have the flexibility to select the method of procurement necessary to deliver their procurement objectives.

Procurement Methods

Governments can choose among a range of recognized procurement methods: eg open, selective, pre-qualification, sole source. As no single procurement method suits all situations, the appropriateness of one method over another should be determined by the circumstances of each procurement. Attaching a specific procurement method to either prescribed conditions or a monetary threshold may impede a government's ability to realize the efficient and effective delivery of its objectives.

A non-prescriptive approach enables governments to fully consider the requirements and existing market conditions of each procurement, and to select a procurement method on its merits. For example, there may be no need for complicated, expensive procurement processes when purchasing low-risk, low-value products and/or services. However, a procurement method of some complexity may be appropriate where risks are greater and/or the project is of high value or strategic importance. Accordingly, governments should have the flexibility to select the most suitable procurement method on a case-by-case basis.

Probity/Accountability

The selection of the most appropriate procurement method and the subsequent procurement process need to occur within a robust accountability and probity framework. Such a framework sets out government accountability requirements to ensure objective, fair and consistent treatment of tenderers, regardless of the procurement method selected, and provide guidance on issues such as confidentiality and conflict of interest.

A robust accountability and probity framework also requires appropriate documentation of key decisions in the procurement process, including details of the procurement method selected. This documentation creates an audit trail of the decision-making process, facilitating scrutiny by the relevant bodies and mechanisms outlined in the accountability and probity framework.

Summary

Procurement is an important component of Government's overall performance. A flexible non-prescriptive approach to the selection of a procurement method allows government procurement agencies to design and manage their procurement functions to ensure the efficient and effective delivery of their procurement objectives.

PUBLIC PROCUREMENT REGIME IN TUNISIA

Communication from Tunisia

The following communication, dated 4 May 2001, has been received from the Permanent Mission of Tunisia with the request that it be distributed to all Members.

1. Presentation

Government procurement aims to satisfy the widest possible range of needs in respect of works and the supply of goods and services which influence economic growth and the well-being of the population and has come to represent a major financial challenge. The total volume of public procurement is estimated at around 10-15 per cent of GDP.

In Tunisia, it corresponds to 15 per cent of GDP and around half of the national budget.

It should, however, be pointed out that not only does government procurement have considerable financial influence, but it is also an effective tool for promoting, as a matter of priority, the private sector and trade development.

In an endeavour to ensure that the financial resources involved are allocated in the best possible way and with a view to acquiring goods and services which are competitive in terms of both quality and price, Tunisia has set up an appropriate legal framework defining the rules and procedures to be followed when concluding procurement contracts.

Government procurement is currently regulated by a set of legislative and regulatory texts. The basic regulations, which date from 1989, have been updated on a regular basis to take the economic climate into account. These regulations lay down three basic principles: free competition, transparency in the awarding of contracts and preservation of the principles of sound management.

It is true that this mechanism involves a number of procedures – advertising in the newspapers, submission of tenders in sealed envelopes, opening of the envelopes, examination of the tenders, monitoring by procurement commissions, etc. But however numerous they may be, these procedures are not very complex and in fact amount to ways of ensuring that the three above-mentioned principles are upheld, that public funds are properly managed and that all bidders are treated fairly as far as the award of public contracts is concerned.

2. Free competition and transparency

The regulations cover every aspect of these principles. They ensure that government procurement is exposed as far as possible to the broadest possible competition with a view to obtaining the best possible quality and prices. They have made transparency a fundamental principle, closely linked to free competition. This applies to the different phases of government purchasing.

As regards the tender documents, the technical specifications must define the purpose of the procurement and the conditions under which it is to take place. They must also lay down the conditions for participation, the selection criteria and their relative weight, and the rights and obligations of the parties concerned.

The regulatory selection criteria include the technical merit of the services, professional and financial guarantees offered by each of the bidders, price, completion time, etc. Public purchasers may adopt other selection criteria provided that they are adapted to the purpose of the procurement and the conditions under which it is to take place.

The regulations also stipulate that tender documents must be clear as to what is required: characteristics and content must be indicated precisely. They must be defined with reference to previously established technical specifications and possibly to specifically identified national or international standards. Any indication of a brand name or any other element that could direct the purchase towards a given product is prohibited.

With respect to types of procurement, the regulations favour tendering in order to ensure maximum competition and transparency. Although certain provisions allow for single tendering, this remains an exceptional procedure to be applied only in certain specific cases laid down in the regulations, such as extreme urgency owing to unforeseen circumstances or procurement related to research, testing, experimentation, etc.

Even in the case of single tendering or direct contracting, public purchasers are under an obligation to ensure the freest possible competition except when required to use a particular supplier for well-founded reasons.

Still in connection with free competition and transparency, the regulations stipulate that calls for tenders must be advertised as widely as possible to ensure that all potential bidders are informed.

The Tunisian regulations governing the sending, receipt and opening of tenders include precautions to ensure that the various operations involved are carried out with complete transparency. Thus, all bids must be sent by registered mail within the period of time specified in the tender documents and which cannot be less than 20 days, thereby ensuring that competitors are informed in good time of the government procurement portfolio so that they can prepare to compete and submit high-quality tenders for contracts. Any bids which do not comply with these formal conditions or which are received beyond the deadline are automatically rejected.

The opening of the envelopes is carried out collectively by a commission, in the presence of a management auditor (the controller of expenditure for government procurement and the State controller for procurement by State enterprises) and generally in the presence of the participants.

In exceptional cases where the opening of the tenders is not public, for example for reasons of urgency, the administrator is required to post the results of the opening immediately following the meeting of the commission.

The regulations stipulate that, for reasons of transparency, the examination of the bids and the choice of supplier must be carried out by a commission, which proceeds by considering the bids and

eliminating those which do not meet the established conditions and classifies the remaining offers exclusively and strictly on the basis of the selection criteria and weighting set forth in the tender documents. These documents must be transmitted, against receipt, to all candidates, who may in no circumstances modify their bids retroactively.

The commission then draws up a detailed report describing the key features of the procurement procedure and, on the basis of this classification, proposes the bid that it considers the most suitable, i.e., the best value for money according to the previously established selection criteria.

It should be stressed that the regulations do not confine themselves to establishing general principles such as transparency and organizing the procedures required to put them into practice. They also seek to ensure that those principles are properly applied by providing for control, *inter alia* of compliance with the regulations.

3. System of control

Government procurement involves the use of government funds, the management of which must be accounted for at different stages. In addition to a concomitant control by means of on-the-spot inspections and a post check by the Court of Auditors, the regulations have provided for a prior control mechanism in which the procurement commissions play the key role. The purpose of this control is to ensure that procurement is carried out in a proper and regular manner by bringing to light possible irregularities or shortcomings before they occur, as well as examining disputes between the parties concerned.

These commissions are made up of representatives of the main government departments involved in government procurement.

This preventive control mechanism can come into play at any of the successive stages of the government procurement procedure, from the drawing up of technical specifications to the awarding of the contract.

Such a check is essentially consultative, since it takes the form of reasoned opinions notified to the administrative head or managing director of the State enterprise concerned.

4. Challenges and dispute settlement

According to the regulations, any problem, challenge or dispute must be brought before the competent procurement committee, which examines the claims and grounds of each of the parties in the light of the regulations and gives a reasoned opinion.

If the dispute continues, it can be settled amicably by an ad hoc committee chaired by a member of the administrative court and including among its members one representative of the profession and one of the Higher Procurement Commission. This commission endeavours to find common ground between the two parties and proposes what it considers to be the fairest solution.

If the parties do not accept the committee's amicable solution, they may each request arbitration or bring the case before the Tunisian courts.

5. Protection of the domestic industry through the procurement process

Owing to the diversity of the sectors involved, the amount of public expenditure and its impact on domestic industry, government procurement also constitutes a tool of State intervention in the economy.

Consequently, following the example of other countries, the regulations concerning government procurement include measures for protecting local industry by establishing the obligation for foreign suppliers, in cases of international calls for tender, to form a joint venture with Tunisian enterprises or to subcontract as much as possible of the project to local firms.

It should be noted in this context that international donor organizations, such as the World Bank, accept joint ventures and subcontracting and grant local products a 15 per cent preference.

In the context of the current globalization of trade and opening-up of markets, Tunisian regulations on government procurement have provided for a gradual reduction in the preference margin benefiting products of Tunisian origin and its elimination as of 2004.

Last but not least, I cannot conclude without mentioning the most recent measures taken by Tunisia to enhance the transparency and efficiency of the public procurement system. These measures aim to deploy effective information and management tools by using information technology and organizing the necessary training for all those involved in the procurement process.

**TECHNICAL COOPERATION ACTIVITIES: INFORMATION FROM
OTHER INTERGOVERNMENTAL ORGANIZATIONS**

ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT
(OECD)

Supplement

At its meeting of 22 June 1998, the Working Group agreed to request the Secretariat to provide information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.

In consequence, the Secretariat wrote to relevant international and regional intergovernmental organizations requesting them to provide such information. The information which has been received in response from the Organisation for Economic Co-operation and Development (OECD) was circulated in document WT/WGTGP/W/20/Add.1. The current document reproduces the supplementary information which has been received from the OECD by a communication, dated 9 September 2000.

Technical assistance projects in the procurement field in which **SIGMA** (Support for Improvement in Governance and Management in Central and Eastern Europe) is currently engaged, or projects that are planned, include the following:

- (a) preparation of amendments to public procurement laws in Bulgaria, Romania and Latvia;
- (b) setting up new Public Procurement Offices in the Slovak Republic, Lithuania and Bulgaria;
- (c) advising the Baltic States on how to strengthen their procurement complaints and arbitration procedures;
- (d) providing comparative information on anti-corruption procedures in the area of public procurement;
- (e) setting up a procurement system in Montenegro.

SIGMA has recently completed work, in collaboration with the ILO's International Training Centre in Turin, on developing a training of trainers course in public procurement. The course materials have been translated by several countries and are being used in designing and implementing national training programmes.

It may be of interest to note other work that the OECD is conducting on government procurement even though it does not fall into the category of technical assistance in implementing rules and procedures. The **Development Co-operation Directorate** is undertaking work related to aid-funded procurement.

- **Aid untying:** Agreement on this (via a recommendation focusing on the least developed countries) will help liberalize aid procurement and increase competition, transparency and value for money. It will, of course, also give partner countries greater ownership of the process. By and large, there is broad agreement on the text of a Recommendation, but present work on a mechanism to improve effort sharing among donors is required for approval and implementation. On agreement, there will be an open bulletin board advertising untied aid offers to promote competition and transparency.
- **Strengthening procurement capacities in partner countries:** DAC (Development Assistance Committee) members agree on the importance of building procurement capacities with partner countries in order that the latter can increasingly take over full responsibility for the procurement process. This work, about to commence, will assess essential needs and what donors have done and can do to address them. It will also look at reducing the multiplicity of donor demands on already stretched capacities as well as review ways to encourage more firms in developing countries to successfully bid for aid-funded contracts.
- **Corruption and aid-funded procurement:** The DAC is presently reviewing experience with and the impact of its 1996 Recommendation on this matter. All DAC members have introduced the measures or strengthened procedures as called for by the Recommendation. Preliminary findings suggest that an important role of the Recommendation is the clear and sharp political signal it sends to all that corruption will not be tolerated and will be dealt with in the strictest manner. The DAC is presently addressing proposals made through this review to link up efforts in the DAC and elsewhere in a more concerted and coordinated effort to tackle corruption.
- **"Profiles" of DAC members' procurement regimes:** These profiles set out the essential details of each member's procurement system and have been completed, so far, for the majority of DAC members. They have the objective of improving transparency and, on agreement on a Recommendation on untying, will be linked up to the bulletin board on untied aid offers to provide potential bidders with information on the procurement rules and procedures of the donor supporting the project in question.

The **Working Party of the Trade Committee** examined throughout 1999 and 2000 a series of indicators of the size of government procurement markets in OECD member and non-member countries. The work has concentrated on refining the methodological approaches based on the main aggregates of the 1968 System of National Accounts and in gathering the necessary national statistics.

The various estimates of the size of government procurement markets for OECD member countries are disaggregated by level of government, i.e. general government, central government, local government and social security. Based on the availability of data for non-member countries, a first series of market estimates at the general government level was considered by the Working Party at its meeting which was held on 18-20 September 2000. Work will continue with a view to improving the collection of data and the reliability of the results. Consideration is being given for the preparation of a publication summarizing the work undertaken.

For the moment, the programme of work of the Trade Committee on government procurement does not include activities directly involving technical cooperation between OECD member and non-member countries. Nevertheless, we consider that our quantitative work will be a valuable contribution in the context of ongoing efforts made by various organizations to improve the transparency in government procurement.

TECHNICAL COOPERATION ACTIVITIES: INFORMATION FROM OTHER INTERGOVERNMENTAL ORGANIZATIONS

ASIAN DEVELOPMENT BANK

Supplement

At its meeting of 22 June 1998, the Working Group agreed to request the Secretariat to provide information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.

In consequence, the Secretariat wrote to relevant international and regional intergovernmental organizations requesting them to provide such information. The information which has been received in response from the Asian Development Bank was circulated in document WT/WGTGP/W/20/Add.2. The current document reproduces the supplementary information which has been received from the Asian Development Bank by a communication, dated 6 September 2000.

Attached is a table showing relevant procurement-related Technical Assistance (TA) that have: (i) been implemented; (ii) are ongoing; (iii) are being processed; or (iv) are planned during the period 1998-2000.

Year Approved	TA/Project Number	Country Name	TA/Project Name	Remarks
1998	3019	People's Republic of China	Policies and Regulatory Framework for the Construction Industry	- Additional work is under consideration to extend TA for another 4-5 months.
	3031	Mongolia	Development of Procurement Legislation and Guidelines	- Completion date 31 June 2000; TCR to be finalized. - Public Procurement Law of Mongolia enacted on 14 April 2000.
	2993	Mongolia	Capacity Building in Project Accounting	- Completion date 31 July 2000.
	2992	Nepal	Improvement of Project Implementation	- Completion date 30 September 1999.
	3028	Viet Nam	Capacity Building in Project Financial Management	- Completion date 31 December 1999.
	5782	RETA	1998 Seminars on Project Implementation and Administration	- Completion date 31 December 1999. - Capacity Building of Executing Agencies in ADB developing member countries focusing on loan administration aspects such as recruitment of consultants, procurement and disbursements.
1999	3156	Bhutan	Capacity Building of the Construction Development Board	
	3160	Cambodia	Improvement of Project Implementation in Cambodia	
	5834	RETA	1999 Seminars on Project Implementation and Administration	
	3287	Cambodia	Strengthening External Aid Portfolio Management	
	3306	Nepal	Strengthening Project Implementation Practices	
	3310	Philippines	Capacity Building for Procurement	

Year Approved	TA/Project Number	Country Name	TA/Project Name	Remarks
2000	3471	Indonesia	Improving Public Sector Procurement	
	3457	People's Republic of China	Implementation of the Tendering and Bidding Law and Related Regulations	- Recruitment of consulting firm is ongoing and consultants are expected to start in late October 2000.
	5906	RETA	Seminars on Business Opportunities in 2000-2001	- Focus on eligible potential suppliers of goods, works, services, consultants and advises them of ADB guidelines, policies and procedures.
	2845	People's Republic of China	Establishment of National Procurement Regulations for Public Sector	- Completion date 31 June 2000. - The Tendering & Bidding Law of China was passed by the National People's Congress in August 1999 and became effective on 1 January 2000.
Future TAs	34067	People's Republic of China	Government Procurement Law	- TA paper is circulating to staff concerned for review and concurrence. - Fact-finding mission completed.
	34150	Mongolia	Establishment of a Central Procurement Monitoring Office	- Fact-finding mission completed.
	34454	RETA	Capacity Building and Training in Portfolio Management in Selected DMCs	- Fact-finding to be scheduled.
	34046	India	Capacity Building for Project Implementation	- Fact-finding to be scheduled.
	34505	Sri Lanka	Procurement Support and Management	- Fact-finding to be scheduled.

TECHNICAL COOPERATION ACTIVITIES: INFORMATION FROM OTHER INTERGOVERNMENTAL ORGANIZATIONS

UNITED NATIONS COMMISSION ON INTERNATIONAL
TRADE LAW (UNCITRAL)

Corrigendum

Paragraph 2, last line: Replace document reference A/CN.9/449 with A/CN.9/474.

Paragraph 3, last line: Replace document reference A/CN.9/448 with A/CN.9/473.

**Working Group on Transparency
in Government Procurement**

**TECHNICAL COOPERATION ACTIVITIES OF INTERGOVERNMENTAL
ORGANIZATIONS**

Note by the Secretariat

1. At its meeting of 7 June 2000, the Working Group on Transparency in Government Procurement requested the Secretariat to prepare a note summarizing the information that had been made available, to the Group or elsewhere in the WTO, on the technical cooperation activities of IGOs (intergovernmental organizations) in the area of government procurement (WT/WGTGP/M/10). This note has been prepared in response to this request.
2. The information summarized is that received from ten organizations¹ describing their relevant activities which was circulated to the Group in documents WT/WGTGP/W/20 and addenda 1 to 9 in response to a request of the Group at its June 1998 meeting (WT/WGTGP/M/5). The Secretariat has checked to see what other information might be available, including in response to the recent questionnaire sent by the Secretariat to other IGOs, but this has not yielded anything additional.
3. The objectives of the technical cooperation activities of IGOs vary depending on the mandate and function of each organization. However, there appear to be some features common to these technical assistance activities. The present note attempts to describe in broad terms the main features of the assistance available, and gives examples of activities - without referring to every relevant project of every organization. Section I gives a brief overview of the objectives sought by technical cooperation activities. The presentation of the information on the specific technical cooperation activities in Section II is structured on the basis of the types of such activities.
4. The note focuses on the activities of IGOs that have been specifically characterized as constituting a form of technical cooperation. However, it is worth also recalling that a great deal of useful information has been generated and exchanged among participating countries, including developing and least developed, as the result of the other work of the IGOs, including, for example, that of the Working Group on Transparency in Government Procurement, the Working Party on GATS Rules, the FTAA Working Group on Government Procurement and the APEC/GPEG (Government Procurement Experts Group).

I. CONTEXT AND PURPOSE

5. One of the main objectives of the technical cooperation activities of IGOs is related to ensuring the proper application of the principles and rules of the organization in question by interested governments. For instance, as part of their fiduciary role, the World Bank and the regional development banks focus their cooperation work on the application of their respective guidelines to procurements carried out in the borrower countries under projects funded by their loans. The WTO

¹ UNCITRAL, OECD, the Asian Development Bank, the African Development Bank, APEC Government Procurement Experts Group, the European Bank for Reconstruction and Development, ITC, UNDP, the World Bank and UNOPS.

Secretariat provides technical cooperation relating to the rules and implementation of the GPA (Agreement on Government Procurement) mainly to WTO Members acceding to the GPA and occasionally to other WTO Members seeking information on the GPA.

6. The establishment or improvement of the regulatory framework of procurement in individual countries is another major area of technical cooperation of IGOs, particularly from the perspective of ensuring that such countries are aware of the standards and the principles that are codified in the existing international instruments on government procurement or otherwise providing support to procurement reform activities in individual countries. In this connection, the World Bank has conducted CPAR (Country Procurement Assessment Reviews) in more than six countries in each of the six regions of the Bank. Each review includes the development of an action plan to improve the public procurement system in the country under review. In more general terms, it appears from the submissions that technical cooperation in the area of procurement is often part of the wider efforts of IGOs, for instance of the World Bank, the regional development banks, the OECD/SIGMA (the Programme for Support for Improvement in Governance and Management in Central and Eastern European Countries) and UNDP, to support public sector development, financial and fiscal management, good governance and the fight against corruption.

7. Another aspect of the technical cooperation work of the international and regional IGOs is to facilitate participation in activities aimed at the development of international principles and rules on government procurement to be agreed by governments pursuant to the more general objectives of the respective international or regional agreements or arrangements. Some examples of this type of technical cooperation are related to the APEC non-binding principles on government procurement developed by APEC/GPEG, the development of rules on government procurement in the FTAA Working Group on Government Procurement and the harmonization of procurement legislation in Central and Eastern Europe with that of the European Community by the OECD/SIGMA programme. The main focus of the WTO Secretariat's technical cooperation activities in this area has been on assisting WTO Members to participate fully in the work of the Working Group on Transparency in Government Procurement.

II. FORMS OF TECHNICAL COOPERATION

8. Legislative reforms and strengthening and supporting national public procurement institutions to increase their capacity to manage and monitor procurement systems seem to be the main target of technical assistance efforts. Human resource development is carried out to support this work of capacity building.

Assistance in the preparation of laws and regulations

9. This form of assistance relates to the formulation of new, or the improvement of existing, laws, regulations, administrative guidelines and procedures and tender documents. The UNCITRAL Secretariat provides technical assistance to countries that propose to enact, or have enacted, legislation based on the UNCITRAL Model Law on Procurement of Goods, Construction and Services, 1994. The World Bank and regional development banks have also been heavily engaged in this area of activity in a number of countries worldwide. For instance, the World Bank has assisted in the preparation of new national procurement legislation in, among others, Albania, Indonesia, Jamaica, Jordan, the Kyrgyz Republic and several other Central Asian countries. The Asian Development Bank has been active in China, Mongolia and Bhutan. The OECD/SIGMA programme and the ITC have provided assistance to a number of countries in Central and Eastern Europe and Africa.

Institution building

10. Supporting the establishment or reinforcement of public procurement offices and agencies plays an important role in technical cooperation provided by some IGOs. This form of assistance involves advice and assistance on the establishment or strengthening of public procurement offices and procurement policy implementation units in individual government departments as well as of procurement complaint and arbitration mechanisms. The OECD/SIGMA programme's work in Lithuania, Romania and the three Baltic countries, the ITC's work in Albania and Slovenia and the Asian Development Bank's work in Mongolia and Laos are examples.

Application of Information Technology

11. Application of information technology to government procurement is part of the work of the APEC/GPEG, the Working Group on Transparency in Government Procurement and the Committee on Government Procurement. Information on Members' national systems was made available in a demonstration session and a seminar on efficiency and transparency in public procurement, organized respectively by the WTO and the Inter-American Development Bank in 1998.

Human resource development

12. Assistance in the development of human resources to build up and to sustain the capacity for good management of public procurement is provided in various forms, such as training and organization of seminars, symposia and workshops.

Training

13. Training activities include the training of procurement officials, the development of local training strategies and the training of trainers. Procurement training is regularly provided by the World Bank and the regional development banks to the procurement staff who are directly involved in the projects financed by the banks and to the staff of the line ministries concerned as part of the implementation process for every new project and of the monitoring and supervision process for such procurement activities. The courses for training of trainers in the field of public procurement organized jointly by the OECD/SIGMA programme and the ILO Training Centre are another example of training activities. Moreover, training materials, in the form of manuals and handbooks, have been prepared, for instance "Public Procurement: A Manual for Central and Eastern Europe" jointly by the OECD/SIGMA programme and the International Training Centre of the ILO in Turin.

Workshops, seminars and conferences

14. Another form of technical assistance has been the organization of workshops, seminars and conferences. Some of the topics that have been treated by these activities in the past include: procurement principles by APEC/GPEG; application of information technology to government procurement by the WTO; bid challenge mechanisms and remedies by APEC/GPEG; efficiency and transparency in public sector procurement by the Inter-American Development Bank; and the WTO Agreement on Government Procurement by the FTAA Working Group on Government Procurement and APEC/GPEG, respectively. The African Development Bank, ITC, the World Bank and UNDP have jointly organized the African Public Procurement Reform Conference. The WTO Secretariat has provided speakers to a number of these regional or national seminars on government procurement. Also the seminars and workshops aimed at providing an overall appreciation of the WTO provisions and mechanisms generally include a presentation on the work on government procurement in the Working Group on Transparency in Government Procurement.

**TECHNICAL COOPERATION ACTIVITIES: INFORMATION FROM
OTHER INTERGOVERNMENTAL ORGANIZATIONS**

APEC GOVERNMENT PROCUREMENT EXPERTS GROUP (APEC/GPEG)

Revision

At its meeting of 22 June 1998, the Working Group agreed to request the Secretariat to provide information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.

In consequence, the Secretariat wrote to relevant international and regional intergovernmental organizations requesting them to provide such information. The information which has been received in response from the Chair of the APEC Government Procurement Experts Group was circulated in document WT/WGTGP/W/20/Add.4. The current document reproduces the updated information which has been received from the APEC Secretariat by a communication, dated 18 August 2000.

The APEC Government Procurement Experts Group (GPEG) was established in 1995 to consider ways to increase the transparency of, and liberalize, government procurement markets in accordance with the Osaka Action Agenda adopted by APEC Economic Leaders in 1995.

The GPEG finished its full set of government procurement non-binding principles in 1999. These principles are in the areas of transparency, value for money, open and effective competition, fair dealing, non-discrimination, accountability, and due process. The GPEG has encouraged APEC members to review in their individual action plans the consistency of their government procurement systems with the non-binding principles and how best to implement them and voluntarily bring their systems into conformity with the principles, with progress reported to the GPEG. Three APEC member economies are currently undertaking such reviews. (Note: These individual action plans chart each APEC member's progress toward the Bogor goals of trade liberalization by 2010 for developed economies and 2020 for developing economies in the APEC region.)

In the area of technical cooperation, the work of the GPEG has so far focused on two areas: information exchange and educational events.

On information exchange, the GPEG surveyed member economies' existing government procurement systems and publication arrangements for government procurement information. Members' returns to these surveys are posted on the APEC Government Procurement Homepage (website: <http://www.apecsec.org.sg/gphome.html>) for free and easy access by interested parties.

Members update these returns annually. In addition, contact points were established to facilitate the ongoing exchange of information.

On educational events, the GPEG is committed to holding workshops, seminars and training courses to enhance members' understanding of government procurement systems and international agreements. The aim of these activities is to provide a foundation for future work, with a view to achieving the long-term goal of liberalization of government procurement markets throughout the Asia-Pacific region in accordance with the principles and objectives of the Bogor Declaration by APEC Economic Leaders in 1994.

Finally, the GPEG has been discussing the development of electronic commerce and its application to procurement. Work is moving ahead in this area with a particular focus on how the work being done on electronic commerce in APEC links with the GPEG's work on the non-binding principles, including transparency. This is also a part of APEC's developing interest in moving government "on-line," not only in the area of government procurement but in many other areas as well.

**Working Group on Transparency
in Government Procurement**

TECHNICAL COOPERATION ACTIVITIES: INFORMATION FROM OTHER INTERGOVERNMENTAL ORGANIZATIONS

UNCTAD/WTO INTERNATIONAL TRADE CENTRE

Revision

At its meeting of 22 June 1998, the Working Group agreed to request the Secretariat to provide information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.

The information which has been received from UNCTAD/WTO International Trade Centre was circulated in document WT/WGTGP/W/20/Add.6. The present document reproduces the updated information which has been received from the UNCTAD/WTO International Trade Centre by means of a communication, dated 22 August 2000.

Mission and background

ITC is the focal point institution in the UN system for providing technical cooperation in export promotion and trade development to developing countries and economies in transition. ITC's programme of assistance in international purchasing and supply management (earlier named import operations and techniques) is focused on making systems for the purchase of goods and services to meet the needs of a country more cost-effective. One of the major areas of work of this programme is public procurement.

ITC's efforts in public procurement contribute to its mainstream work in export development and directly affect the quality of governance in a country. ITC responds to countries' requests for assistance in public procurement reform by:

- (1) Undertaking reviews of the present procurement systems to identify needed adjustments in the relevant legal, organizational and operational areas.
- (2) Providing advice, training and other assistance in designing and implementing effective public procurement systems to meet the identified needs.

Work is conducted in cooperation with the World Bank and other partner institutions and uses local staff and local consultancy expertise. Capacity building is a principal objective of ITC's technical cooperation efforts in this area.

While ITC will consider requests for assistance in public procurement activities from any developing or transition country, ITC actively seeks programme opportunities, especially in the priority area of assistance to least developed countries.

Since 1979, ITC assistance projects covering public procurement have emphasized approaches that countries could use to reduce their import expenditures to achieve more positive international trade balances. ITC expertise has been instrumental in designing and implementing projects funded by major multilateral and bilateral donors such as UNDP, the Swedish International Development Agency, the Government of Switzerland and others. Some of the countries benefiting from this early approach to improve import operations were Angola, Burundi, Djibouti, Egypt, Ethiopia, Ghana, Haiti, Mozambique, Niger, Rwanda, countries in the South Pacific, Sudan, Tanzania and Tunisia.

To support these projects - and also to extend technical cooperation where such projects did not exist - ITC has developed a series of technical and training materials addressing various aspects of procurement and materials management. These are available mostly free of charge to developing countries and economies in transition. The materials developed to date include 24 practical guides, 19 case studies and exercises, 12 manuals and directories, a complete three-level commercial English course for importers, eight import management video packs and two computer-based import simulation exercises. ITC also collaborated with the World Bank and the International Labor Organization in the preparation of an early guide to International Procurement and a recent series of handbooks for public procurement training.

ITC is committed to providing advice and assistance to countries seeking to improve their public procurement systems. However, the traditional "case by case" method of providing procurement advice through tailored assistance missions and projects has had a relatively high cost due to the independent analyses needed for each new project. To try to meet the challenge of delivering high quality procurement assistance in a targeted and sustainable manner, ITC is changing its past practice. Recent efforts of ITC have incorporated new strategic priorities and approaches for cooperation with partner countries. The new approach involves developing a set of universal tools and related services to build and operate national capacities for providing procurement training, consultancy and information support to purchasing organizations. This more integrated approach will significantly enhance the response time and cost-effectiveness of ITC's assistance in procurement and supply management operations. It will be centred around materials currently being developed by ITC. Some of these have been jointly developed with the United Kingdom's Chartered Institute of Purchasing and Supply. These include:

- *The Diagnostic Tools* will be used in assessing capacities and diagnosing problems in the procurement process at individual organisations. Separate versions of the diagnostic tools will focus on the needs of small and medium enterprises and of public sector procurement agencies. Collective requirements diagnosed in this manner will enable ITC and local organizations to design highly specific technical assistance programmes to meet identified needs through training, consultancy and information support. It will also be possible to later measure the effectiveness of these programmes.
- *The Modular Learning System* is being developed as the foundation of all future ITC efforts to build up training capacities in its partner countries covering all stages of the purchasing and supply process. Separate versions will exist for use by SMEs and public sector procurement agencies. It will be used for implementing either group-based training or individual open learning, and will include optional information technology support. The modular learning system will eventually integrate the full range of ITC's numerous technical materials and training aids relating to procurement. These will be made available through regular ITC dissemination channels, including through the Internet. Generic basic, intermediate and advanced training courses, to be tailored to specific

country needs, are being developed and piloted to build up the required knowledge and skills of purchasing managers and staff.

- The *Compendium Of Public Procurement Systems* will use existing data to provide a comparative reference on the scope of the public procurement system in a country. The information will be arranged by phase of the procurement process, as defined in the diagnostics and learning tools, for analysis and training purposes. The information in the compendium will provide a benchmark against which a country will be able to compare its procedures to those of other countries (e.g., solicitation methods or contract management approaches). This interactive database enables a country to compare its procurement system to those of other countries and with generally accepted models. The compendium is available for viewing on the ITC website www.intracen.org (InfoBase's).
- *Special materials for Purchasing and Supply Management Associations (PSMAs)*. The PSMAs play a key role in efforts at the national level to upgrade the competencies, recognition and effectiveness of professionals responsible for managing purchasing and supply operations. During 1996, ITC produced a handbook for the establishment and operation of PSMAs. In collaboration with the International Federation of Purchasing and Materials Management (IFPMM), ITC is developing a worldwide PSMAs directory to facilitate the growth of PSMAs. Direct assistance has been provided to PSMAs in Hungary, Poland, Romania, Tanzania, Tunisia and Uganda, mainly through national and regional projects.
- *Public Procurement and SMEs*. Most public procurement systems address in one way or another the issue of how to provide support for the domestic supplier base. Improved techniques for buying goods and services using modern quality standards and business practices can help improve the efficiency of local suppliers as they compete for government contracts. Such improvements in efficiency can enhance trade prospects by making these suppliers more acceptable vendors to global business partners. Inefficient government suppliers provide poor value to their national government, and will be unlikely to engage in any meaningful private sector trading partnerships in the era of global competition. For governments, such efficiencies can directly translate into the acquisition of additional goods and services to meet national needs, funding of higher priority programmes, or even reduced taxes on the public, which aid development. *The ITC Guide on Improving Access of Small and Medium Enterprises to Public Procurement* provides the experience of several countries (India, South Africa, the United States and Hungary) in using targeted and untargeted assistance to help develop local industry. Such assistance includes mentoring programmes, subcontracting opportunities, the payment of price preferences and premiums, and set-asides for small businesses.
- *Electronic Commerce*. An active electronic commerce programme in public procurement can help develop suppliers into global competitors. By introducing new technology solutions in the government-to-business market-place, the government acts as an "incubator" to help build demand for "state-of-the-art" technology. The state of the art is relative to that applied locally in the business sector. Thus, in one country the use of email could be state of the art while in another it is making binding contracts over the Internet. However, government intervention through procurement policies must be balanced by the capacity of domestic sellers to make the required changes and remain to compete in the national public procurement market. Failure to do this will restrict public procurement opportunities to relatively few firms. Such limited competition normally leads to increase prices to the government (absent increased competition from abroad) while it reduces the number of domestic suppliers participating in the business of government. ITC is developing a Model Website for use by developing and transition

countries to start connecting to the World Wide Web. It will be complete with databases and document preparation and bid evaluation application programmes.

Specific projects undertaken

ITC has substantially increased its assistance efforts aimed at reforming public procurement systems and supporting national public procurement policy-making institutions. This assistance is being provided through various projects - and usually involves the development of national procurement guidelines, standard procurement documents and other procurement system elements, aimed at enhancing the implementation of new national procurement legislation. Training of public procurement staff in the application of these guidelines and documents is often a key component of these projects, financed in various cases through World Bank grants to the countries concerned (e.g., Albania, Kyrgyz Republic and Slovak Republic). Assistance in public procurement reform and/or capacity development has also been provided to Belarus, Brazil, Guinea-Bissau, Namibia, Uganda, Ukraine, Viet Nam, Zambia and several Maghreb countries.

The theme of greater harmonization of public procurement systems within regional trading associations is being promoted in several partner initiatives. For example, the Commission for the Union Economique et Monetaire Ouest Africaine (UEMOA), as an outgrowth of the Abidjan Conference, is working with the World Bank and African Development Bank to promote greater integration of public procurement activities among the member states. These member states are Benin, Burkina Faso, Côte d'Ivoire, Mali, Niger, Senegal, Togo and Guinea-Bissau. Some proposed measures of progress being considered include a decrease in the number of direct contracts, the use of systematic external audits, and the number of people trained in modern procurement techniques. ITC is discussing with COMESA ways to help this regional trade association build the necessary capacity to begin to harmonize public procurement as a further example of this issue.

UNITED NATIONS OFFICE FOR PROJECT SERVICES (UNOPS)

Addendum

At its meeting of 22 June 1998, the Working Group agreed to request the Secretariat to provide information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.

The present document reproduces the information which has been received from the UN Office for Project Services (UNOPS) by means of a communication dated 31 July 2000.

The United Nations Office for Project Services (UNOPS) was established as a separate, identifiable entity within the United Nations system in order to provide high-quality, timely and cost-effective development services for the successful implementation of projects. These services include, *inter alia*, comprehensive project management and implementation of project components.

In order to meet these obligations, UNOPS has developed a responsive procurement regime consistent with internationally accepted norms for public procurement and subject to continuous review and improvement through internal and external oversight, monitoring by UNOPS' corporate governance mechanisms and policy formulation that takes into account new and emerging tools, trends and resources in public procurement.

Because UNOPS is part of the United Nations, the expertise necessary to maintain its cutting edge procurement regime also is made available to developing countries as capacity-building through UNOPS execution, as well as direct technical assistance. This input recognizes the importance of public procurement as part of any strategy for sustainable development and poverty alleviation and empowers recipient countries with sufficient capacity to satisfy donor requirements for use of funds provided for this purpose.

Capacity-building through execution

Development activities/projects funded by bilateral donors and international financing institutions often are implemented directly by the respective donors. Such a practice may be an expedient way to keep a specific project moving, but it does not promote capacity-building within the recipient's system. While this responsibility is best given to the recipient government, it has been

./.

UNOPS' experience that a transitional approach to national execution may be appropriate, both for purposes of build capacity and to assure donors that funds will be used according to necessary standards of accountability.

UNOPS facilitates this transition by providing implementation assistance for development programmes with capacity-building by design. Where UNOPS services are requested through a Management Service Agreement (MSA), between a funding source, like any financial institution, and a recipient government, UNOPS often creates a Project Implementation Unit hosted by the beneficiary ministry. The Unit undertakes project implementation activities, including procurement and contracting, within the framework of the recipient government but under the stewardship of an international organization set up for that purpose. Local staff under UNOPS supervision then gain valuable experience through project implementation, which covers not only best practices for public procurement but also contract management and compliance with donor requirements.

The experience gained through this type of transitional approach to project implementation ensures that the government has the capacity to maximize economy and efficiency in procurement, while maintaining the expected standards of transparency, fairness and accountability. This approach also may include specific technical assistance inputs as indicated below.

Technical assistance

UNOPS has internal experts in public procurement norms, laws and practices. The Legal & Procurement Support Division uses expertise acquired through management of UNOPS' procurement regime and offers that knowledge, together with specialized experience in legal aspects of procurement, through technical assistance inputs to development projects. Technical assistance offered by UNOPS in the area of public procurement reform includes the following activities:

Assessment. Review of an existing national procurement regime against international standards; identifying strengths, weakness, opportunities and threats.

Advice: Specific recommendations for and/or assistance with developing a procurement regime consistent with internationally accepted norms and the countries' development priorities; including legal, technical and administrative input.

Training. Instruction on best practices, procurement laws and procedures, international standards, etc.

Technical assistance provided by UNOPS experts often is part of capacity-building through execution. Therefore, it is a cost-effective way to create a national public procurement regime consistent with international norms, while ensuring sustainable development through national capacity.

A recent example of technical assistance is aimed at governance for sustainable human development in the Pacific Islands. The objective of this UNDP project was promotion of sustainable development through strengthening good governance and, thereby, facilitating job creation and sustainable livelihoods. Transparency and accountability in public procurement was considered an essential feature. UNOPS technical experts were requested to review existing procurement activities in several island nations and make recommendations for improvements to their legislation, regulations, procedures and practices, as well as prepare draft national procurement codes.

**PROPOSAL FOR A WORK PROGRAMME FOR COORDINATING INTERNATIONAL
TECHNICAL ASSISTANCE WITH IMPLEMENTATION OF A POTENTIAL
AGREEMENT ON TRANSPARENCY IN GOVERNMENT PROCUREMENT**

Communication from the United States

The following communication has been received from the Permanent Mission of the United States with the request that it be circulated to the Working Group on Transparency in Government Procurement.

I. INTRODUCTION

Discussions in the Working Group to date reflect the broadly shared view that all Members and their citizens benefit from concrete steps to ensure transparency in government procurement practices. Many individual Members have focused on transparency measures as a key element of their overall domestic efforts to build confidence in the management of government affairs, establish a stable and predictable commercial environment, and provide a solid foundation for future growth and development.

While it appears that all Members are committed to the principles of transparency in government procurement, some delegations have expressed concerns about proposals to develop WTO rules in this area. They note that some Members may face particular administrative or technical challenges in applying those principles to their individual circumstances.

The United States believes that the Working Group should develop concrete and pragmatic means of addressing these issues. Accordingly, we propose that the Working Group, concurrently with the ongoing work on its existing mandate, develop a focused work programme to assess the potential challenges that some Members may face in this area and the availability of international technical assistance to address such challenges (see below). We believe that this approach must be considered in close connection with the emerging substantive results of the Working Group's work on the elements of an appropriate agreement, and in the light of Members' overall interests and objectives in the rules-based international trading system.

II. CONTEXT OF THE PROPOSAL

Flexible Application of Transparency Rules: There is broad agreement in the Working Group that a potential agreement must be flexible enough to be fully and effectively applied in each Member's individual circumstances. The United States believes that effective transparency can be achieved in a wide variety of ways, as appropriate to those circumstances. For example, while there are clear advantages to publishing relevant information on the Internet, an appropriate agreement should provide the flexibility to use other appropriate media, such as official gazettes or newspapers.

In our view, this flexibility in the application of potential WTO rules in this area is relevant to concerns about the administrative and technical challenges that some Members may face in this area. While we agree that steps must be taken to address those challenges, we believe at the same time that appropriate flexibility in the substantive elements emerging from the Working Group can help to ensure that all Members will be in a position to effectively apply the elements of a potential agreement.

Appropriate Transparency Rules Contribute to all Members' Full Integration Into the International Trading System: We believe these issues also should be considered in light of the benefits to all Members of extending and strengthening the WTO system. The predictability and certainty provided by a rules-based transparency regime promotes economic stability and commercial confidence, and can complement other efforts to ensure the full integration of all Member economies into the global trading system. In this sense, the United States believes that all Members have a shared interest in accelerating, rather than delaying, progress toward such an environment. Improved coordination between the development of appropriate rules and the efficient use of international technical assistance, where appropriate, can help to achieve this objective.

III. A METHOD FOR PROCEEDING

The United States proposes that:

- Concurrently with, and drawing on the Working Group's ongoing work on the elements of an appropriate agreement, the Working Group should establish an operational work programme designed to assess relevant administrative and technical assistance needs, identify potential resources for addressing those needs, and facilitate efforts to effectively address challenges that individual Members may face in relation to the elements under discussion.
 - Such a work programme could proceed in two phases. In the first phase, the Working Group could collect and analyse information on potential capacity-building needs in relation to the elements of transparency under discussion and, at the same time, collect information on potential sources of technical assistance relating to those needs.
 - Both these types of information might be organized in appropriate categories, such as issues relating to the development of legal and administrative procedures, training and other human resources issues, and physical infrastructure or other technical needs.
 - In the second phase of the work programme, the Working Group could explore how to use this information efficiently to produce operational results.
 - Prior to the Working Group's next meeting, the Chairman should conduct informal consultations with a broad range of interested delegations with a view to outlining the most efficient way to proceed in developing such a work programme.
 - Based on the numerous submissions that other relevant international organizations have previously made to the Working Group, the Chairman should be authorized to consult with those organizations with a view to drawing on their expertise in this area.
-

PREPARATIONS FOR THE 1999 MINISTERIAL CONFERENCE

The WTO's Contribution to Transparency in Government Procurement

Communication from Hungary, Korea, Singapore and the United States

The following communication has been received from the Permanent Mission of the United States with the request that it be circulated to the General Council and the Working Group on Transparency in Government Procurement.

Attached¹ please find a submission made by the United States on behalf of the delegations of Hungary, Korea and Singapore of a draft consolidated text for an agreement on transparency in government procurement. This text is the result of ongoing informal consultations with a number of delegations, drawing upon the four draft texts that have been submitted to the Working Group on Transparency in Government Procurement and the discussions that have occurred in the Working Group to date. It is submitted by the delegations of Hungary, Korea, Singapore and the United States with a view to early conclusion of a WTO agreement on transparency in government procurement and in light of paragraph 76 of the revised draft of the Ministerial Declaration and with the hope that it may provide a useful basis for further Working Group discussions.

Proposal

That Members use the attached¹ text as the basis for continued efforts to conclude an agreement on transparency in government procurement at the Third Ministerial Conference. In the view of the Members making this submission, this draft text reflects the tremendous progress that Members have already made in this area, building on the comprehensive study and consultations in the Working Group on Transparency in Government Procurement, and provides a strong basis for advancing these efforts. This submission is without prejudice to individual Members' views on the specific elements of the attached text.

Rationale

Recent instability in global financial markets has underscored the importance of capacity building in the public sector and, in particular, of continuing to improve economic management. Members recognize that transparent and predictable procurement procedures are a critical element of

¹ Reproduced in the Annex.

good economic governance, and help to build public confidence, encourage long-term business commitments, and provide a solid foundation for sustained economic growth and development.

Transparency in procurement also helps to ensure that governments obtain the best value for the money they spend, freeing up resources to address pressing economic and social needs. For example, the Ministry of Health of one Member recently reported that it was able to reduce by 20 per cent the price of medicines supplied to patients as a result of the introduction of transparent procurement procedures. All Members can clearly benefit, often on an even greater scale, from the consistent use of such procedures.

Achieving concrete results in this area at the Third Ministerial Conference provides an important opportunity for the WTO to demonstrate that it can respond promptly and flexibly to the needs and interests of all Members. In the view of the delegations making this submission, the achievement of concrete results in this area at the Ministerial Conference can make an important contribution to Members' efforts to strengthen the rules-based international trading system.

ANNEX

DRAFT TEXT FOR AN AGREEMENT ON TRANSPARENCY IN GOVERNMENT PROCUREMENT

Members,

Recognizing that government procurement may provide a means of achieving or supporting Governments' social, environmental and economic objectives for the betterment of their communities,

Recognizing that efficient, effective and appropriate government procurement enhances the management of government resources, the quality of governance and the economic performance of the community as a whole,

Recognizing that transparency, integrity and predictability are integral to efficient and effective government procurement and to the functioning of the multilateral trading system, and

Desiring to establish a multilateral framework of transparency obligations to assure all parties that government procurement shall be conducted fairly, ethically and predictably,

Hereby *agree* as follows:

I. GENERAL OBJECTIVE

This Agreement aims at ensuring transparency [, integrity and predictability] in government procurement. Each Member shall adopt and apply its procurement laws, regulations and requirements in good faith and in a manner that does not undermine the aims of this Agreement.

II. NON-DISCRIMINATION IN TRANSPARENCY

In carrying out its obligations under this Agreement, each Member shall accord to suppliers from any other Member treatment no less favorable than that which it accords to its own suppliers or to suppliers from any other country.

III. SCOPE AND APPLICATION

1. This Agreement shall apply to any law, regulation or requirement governing the procurement by governmental agencies of goods and services purchased for governmental purposes and not with a view to commercial resale nor to use in the production of goods or services for commercial sale.

[2. This Agreement

Option 1: [applies to all procurement [within the jurisdiction] of a Member]

Option 2: [does not apply to procurement by government agencies other than those of a Member's central or Federal government and the highest level of sub-central government]

Option 3: [applies to all procurement of a Member's central or Federal government [including departments that perform administrative, research, supervisory, advisory or regulatory functions of a governmental nature]].¹]

3. This Agreement shall not apply to a procurement contract with a value of less than [the *de minimus* threshold specified in domestic procurement rules, which shall in no case be greater than]

Option 1: [... SDRs]

Option 2: [... SDRs for goods and services and ... SDRs for construction services].

3.1 Each Member shall ensure that its procuring entities do not divide intended procurements for the purposes of avoiding application of this Agreement.

IV. EXCEPTIONS

Nothing in this Agreement shall prevent any Member and its procuring entities from taking any action which that Member considers necessary for the protection of its essential security interests or any action which is necessary under GATT Article XX or GATS Article XIV. Any Member and its procuring entities may refrain from disclosing confidential business information or information that would impede law enforcement.

V. TRANSPARENCY OF PROCUREMENT RULES

1. Without prejudice to the obligations of Article X:1 of GATT and Article III:1 and 2 of GATS, each Member shall publish in a timely manner all laws, regulations, and requirements that specifically relate to government procurement and are of general application (hereinafter collectively referred to as "procurement rules") in officially designated media which are readily accessible to the public. Each Member shall publish in the same media and in a timely manner all additions and changes to its procurement rules.

[1.1 Members' procuring entities shall not be required to publish materials which could be prejudicial to the objective and non-discriminatory evaluation of bids or applications for qualification.]

2. *Option 1:* [Such procurement rules shall describe the conditions under which it is appropriate to use different procurement methods. A procuring entity's choice of procurement method shall be in accordance with those conditions.]

2.1 When a procuring entity uses a procurement method in which information on the procurement is provided only to one supplier or to a limited number of suppliers who are selected in advance by the procuring entity through a selection process other than a qualification process, it may depart from the provisions of Articles VI and VII [and VIII] of this Agreement.]

Option 2: [In selecting a procurement method, which may include open, sole source, pre-qualification arrangements, short-listing, staged procurement and other methods of procurement, entities may select the most efficient and effective method to achieve their procurement objective, taking into account market circumstances and the costs and benefits of each procurement method.]

¹ [This Agreement shall not apply to the granting of exclusive rights by a Member.]

3. Each Member shall, upon request by another Member, provide in a timely manner, information and explanations of their procurement rules, procedures, practices and policies, affecting the implementation and operation of this Agreement.

[4. Within one year from the date on which this Agreement takes effect, each Member shall notify to the WTO Committee on Transparency in Government Procurement a list of the titles of its laws, regulations and administrative rulings of general application specifically relating to government procurement [and its officially designated media for publishing information]. Such notifications shall be made in an official WTO language.]

[5. Each Member shall establish an enquiry point which shall disseminate information and provide answers to all reasonable questions from other Members and interested parties in other Members' countries or territories relating to government procurement policies and procedures. Each Member shall notify to the Committee on Transparency in Government Procurement, established in accordance with Article XI of this Agreement, the name, address and other appropriate contact information for this enquiry point.]

VI. TRANSPARENCY OF INFORMATION ON PROCUREMENT OPPORTUNITIES

Invitations to participate in the procurement process

1. Whenever a procuring entity issues an open invitation for bids, or, where appropriate, an invitation to participate in a qualification process, it shall publish the invitation in a medium of general distribution which is readily accessible to the public.

1.1 Where an invitation for bids is extended only to suppliers that the entity has pre-qualified or selected in advance, it shall ensure that the invitation is provided to all such suppliers.

2. The invitations shall include sufficient information to allow suppliers to assess their potential interest in a particular procurement process and to submit responsive bids, and shall include at least the following:

2.1 a description of the proposed procurement, including the nature of the goods and services to be procured and all relevant time-periods;

2.2 the procurement method to be used and information on any applicable preferences or other conditions for participation [, or an explicit reference to procurement rules setting out applicable preferences or other conditions for participation]; and

2.3 information on how to contact the procuring entity to obtain relevant information on the bidding or qualification process and requirements.

Time-periods

3. Procuring entities shall disseminate such invitations in sufficient time to enable interested suppliers to obtain qualification documentation, where appropriate, and tender documentation, and to prepare and transmit responsive submissions.

3.1 Procuring entities shall ensure that such time-periods are the same for all suppliers.

- 3.2 Entities shall ensure that time-periods for the receipt of bids are determined with due consideration of the particular circumstances of the procurement, including the conditions and the complexity of the procurement.

Invitations relating to closed lists of qualified suppliers

4. Whenever a qualification process covers multiple procurements over a period of time and is not open at all times to applications from interested suppliers:

- [4.1 an invitation to apply for qualification shall be published [at least once a year] [regularly]];
- 4.2 current lists of qualified suppliers shall, on request, be made available in a timely manner; and
- 4.3 each invitation to apply for qualification shall include the date and time for receipt of applications for qualification.

Changes to information provided

5. Procuring entities shall disseminate any changes to information provided in an invitation for bids or an invitation to participate in a qualification process in the same medium in which the invitation was provided.

VII. TRANSPARENCY IN QUALIFICATION AND BID DOCUMENTATION

1. With regard to qualification and bid documentation, procuring entities shall provide complete documentation in a timely manner to any interested supplier, upon request, and inform participating suppliers in a timely manner of any changes to the documentation.

2. Where a procuring entity uses a qualification process, qualification documentation shall clearly set out all the criteria that the entity will use to evaluate a supplier's qualifications to participate in the procurement process.

3. Bid documentation shall specify all the information necessary for an interested supplier to prepare and submit responsive bids. Such information, if not already provided in a prior invitation to participate, shall include:

- 3.1 all specifications and criteria the entity will use to evaluate the offered goods or services; and
- 3.2 the date and time for the receipt of tenders and, where appropriate, the date and time for the opening of tenders.

4. Procuring entities shall specify explicit and objective requirements that are, to the greatest extent possible, defined in terms of required functional performance.

5. *Option 1:* [Whenever a procuring entity obtains advice or assistance in the preparation or development of specifications from a supplier [that has a potential interest in the relevant procurement, the entity shall inform suppliers participating in the procurement of such advice or assistance and] [, such supplier shall not be eligible to participate in the relevant procurement].]

Option 2: [When an entity obtains advice or assistance on the development of specifications from a potential supplier, the entity shall apply that advice in a non-discriminatory manner.]

VIII. TRANSPARENCY OF DECISIONS ON QUALIFICATION AND CONTRACT AWARDS

1. Procuring entities shall base contract award decisions and qualification decisions solely on the criteria and other requirements that have been specified in the bid or qualification documentation or other information that has been provided to all participating suppliers.
2. Having awarded a contract, entities shall:
 - 2.1 inform suppliers that have submitted bids of the contract award decision;
 - 2.2 provide suppliers, upon request, with information as to why their bid was rejected or, where applicable, the reasons for the denial of their request to become a qualified supplier; and
 - 2.3 ensure that any debriefing provided by the entity is available to all participating suppliers.

Other post-award information

3. Each entity shall make information on contract awards [publicly available] [available to participating suppliers] for a reasonable period of time. Such information shall include the name of the procuring entity, a description of the goods and services procured, [and] the name of the winning supplier [, and the value of the contract award].
 - [3.1 In cases where procurements are conducted under conditions set forth in Article V:2.1, the entity shall cite in such information the condition in its procurement rules allowing the use of that procurement method.]

IX. OTHER PROVISIONS ON INFORMATION RELATING TO PROCUREMENTS

1. Procuring entities shall maintain [, and make available upon request by another Member,] records of tendering procedures relating to procurements subject to this Agreement. Such records shall be maintained for a period of at least three years.
 - [1.1 In cases where procurements are conducted under conditions set forth in Article V:2.1, the entity shall include in the records the condition in its procurement rules allowing the use of that procurement method.]
2. Members and procuring entities may utilise electronic or paper-based communication methods in all stages of the procurement process, provided that whatever media is chosen complies with the requirements of this Agreement. Members and procuring entities are encouraged to use, to the extent possible, electronic communications at all stages of the procurement process, provided that it complies with the requirements of this Agreement.
3. Except as provided for in Article V.4 of this Agreement, information required under this Agreement shall be provided either in an official national language or in an official WTO language.

X. DOMESTIC REVIEW PROCEDURES

1. Members shall encourage the resolution of procurement disputes relating to the implementation of this Agreement, in the first instance, through consultations between the procuring entity and suppliers.
2. Each Member shall maintain fair and transparent judicial, arbitral or administrative bodies or procedures for the purpose of the prompt review of procurement practices or actions that may be inconsistent with the requirements of this Agreement, as implemented by the Member.
3. Such bodies or procedures shall be operated independently of the procuring entities and shall provide all interested parties who participated in the procurement process and are affected by the practice or action with access to review and timely decisions [that, as appropriate, can address any inconsistent practice or action].
4. Each Member shall ensure that information about domestic review bodies, procedures and decisions is publicly available. Each Member shall maintain an administrative record of the review proceeding for a three-year period.

XI. REVIEW AND INSTITUTIONAL PROVISIONS

1. A Committee on Transparency in Government Procurement (hereinafter referred to as "the Committee") shall oversee the functioning of this Agreement and perform such additional functions related to government procurement as assigned by the General Council.
2. The Committee shall review the implementation of this Agreement [two] years from the date on which it enters into force.

XII. DISPUTE SETTLEMENT

1. Consultations and the settlement of disputes among Members regarding the implementation [in domestic procurement rules] of this Agreement shall be in accordance with Articles XXII and XXIII of GATT 1994 [and Articles XXII and XXIII of GATS], as elaborated and applied by the Understanding on Rules and Procedures Governing the Settlement of Disputes under the WTO Agreement [, except as otherwise specifically provided below].
2. Panels established by the Dispute Settlement Body to examine disputes under this Agreement shall include persons qualified in the area of government procurement.
3. [With regard to any dispute relating to the implementation of this Agreement, each Member should, as appropriate, encourage its interested parties to use the domestic review procedures provided for in Article IX of this Agreement before the Member invokes the provisions of Article XII:1.] [Members recognize that there must be no further judicial remedies available under domestic law against the inconsistent measure before the provision of Article XII:1 is invoked.]
4. [If a panel or the Appellate Body concludes that a measure is inconsistent with this Agreement, it shall only make recommendations that do not affect prior contract awards.]

XIII. TECHNICAL COOPERATION

1. In order to facilitate the implementation of this Agreement, Members shall provide, on request and on mutually agreed terms and conditions, technical cooperation in favour of developing and least developed country Members.

2. In order to ensure the greatest possible efficiency of such technical cooperation, the Committee on Transparency in Government Procurement shall identify specific priorities for individual Members, including with respect to the following areas:

- 2.1 development of national legislation and procedures;
- 2.2 training;
- 2.3 institution building;
- 2.4 access to information by suppliers [, including establishment of enquiry points]; and
- 2.5 the use of information technology.

3. The Committee on Transparency in Government Procurement shall develop a plan to assess and monitor assistance on an ongoing basis, and to coordinate such efforts with other relevant organizations.

XIV. FINAL PROVISIONS

Acceptance and entry into force

[1. Subject to Article X of the Marrakesh Agreement Establishing the World Trade Organization, this Agreement shall enter into force on 1 January 2001 for those Members which have ratified the Agreement by that date.]

Reservations

2. Reservations may not be entered in respect of any of the provisions of this Agreement.

[Transitional provisions]

Operation of other agreements

[3. Members' implementation of the provisions of this Agreement shall not affect their rights and obligations under the WTO Agreement on Government Procurement or any other international agreement covering government procurement.] [The rights and obligations of a Member under the WTO Agreement on Government Procurement or any other international agreement relating to government procurement to which a Member is a party shall prevail to the extent of any inconsistency between the rights and obligations of a Member under this Agreement and the rights and obligations of a Member under the WTO Agreement on Government Procurement or those other international agreements.]

**Working Group on Transparency
in Government Procurement**

Original: English

ELEMENTS FOR AN AGREEMENT ON TRANSPARENCY IN GOVERNMENT PROCUREMENT

Communication from the European Communities

The following communication, dated 4 November 1999, has been received from the Permanent Delegation of the European Commission with the request that it be circulated to Members.

The European Communities submitted a non-paper for an agreement on transparency in government procurement to the Working Group on Transparency in Government Procurement on 28 July 1999 (Job No. 4519). During the last few weeks, intensive discussions have taken place inside and outside the Working Group to arrive at more consolidated text elements.

The European Communities would like to emphasize their full commitment to reach a multilateral agreement on transparency in government procurement. In order to further the current process aiming at elaborating elements for such an agreement, the European Communities' draft of 28 July 1999 has been considerably revised, taking into account observations made by other delegations. The European Communities are pleased to share the results of this work with the Members of the Working Group. The proposed text favours a "principles-oriented approach" to transparency in government procurement. In the European Communities' view, it is not necessary in this context to impose one single set of rules onto Members that have widely diverging systems and, in some cases, limited resources.

The European Communities have understood from many delegations that the attached draft has, on most points, struck a fair balance between the different views. It is, however, clear that on some issues of importance, the European Communities' position is either misunderstood or not (yet) shared by certain other Members. The European Communities appreciate that the mandate of the Working Group is limited to elements on transparency in government procurement. Nevertheless, during this exercise it became clear that introducing multilateral rules on transparency in procurement will not be sufficient to resolve possible distortions in procurement practices. Therefore, further work on additional multilateral rules on government procurement is necessary. Obviously, commencing any such negotiations does not imply an automatic opening of procurement markets, but it will create a rules-based environment.

ATTACHMENT
ELEMENTS FOR AN AGREEMENT ON TRANSPARENCY IN
GOVERNMENT PROCUREMENT

Members,

Recognizing the need to further the objectives of the GATT 1994 and of the General Agreement on Trade in Services,

Desiring to render more transparent the legislation and administrative procedures applied in government procurement,

Taking into account the needs of developing country Members in particular with respect to trade and administration,

Realizing that further negotiations are necessary to ensure that governments obtain the best value for money in their procurement practices,

Desiring to provide for a consultative mechanism and the effective and equitable resolution of disputes arising under this Agreement, taking account of the peculiarities of government procurement,

Hereby *agree* as follows:

Article 1

General Objective

1. This Agreement aims at ensuring transparency throughout government procurement covered by GATT 1994 and GATS.
2. The requirements under this Agreement shall be met on a non-discriminatory basis.
3. Members shall adopt and apply their legislation in good faith so as not to undermine the aims of this Agreement.

PART I: DEFINITIONS AND SCOPE

Article 2

Scope

1. This Agreement applies to procurement by governmental agencies of products¹ and services purchased for governmental purposes and not with a view to commercial resale or with a view to use in the production of goods for commercial sale, without prejudice to Articles XX and XXI of GATT 1994 and Articles XIV and XIV*bis* of GATS, as appropriate.

¹ "Products" in the context of this Agreement include products for immediate or ultimate consumption in governmental use and not otherwise for resale or use in the production of goods for sale.

2. Notwithstanding the obligation for any procurement to be transparent, any Member may limit the application of Articles 5.1, 5.2, 5.3, 6, 7, 8.3, 9.2 and 14.1 of this Agreement to procurement above the following amounts:

<i>Maximum threshold</i>	<i>Applicable for:</i>
130,000 SDRs	central government contracts for supply of products and services,
200,000 SDRs	sub-central government contracts for supply of products and services,
400,000 SDRs	public enterprise contracts for supply of products and services,
5,000,000 SDRs	all contracts for public works,

provided Member's legislation contains clear and unambiguous provisions on contract valuation.

3. Members shall ensure that procuring entities do not divide intended procurements for the purposes of avoiding application of this Agreement.

PART II: PRINCIPLES OF TRANSPARENCY

Article 3

Public Accessibility of Domestic Legislation

1. Without prejudice to the obligations in Article X:1 of GATT and Article III:1 and 2 of GATS, each Member shall ensure that through a public medium its laws implementing this Agreement, procurement regulations and all administrative rulings of general application in connection with procurement, and all amendments thereof (hereafter: "laws and regulations"), are readily and easily accessible.

2. Members shall notify the WTO Secretariat of the (electronic) medium used. Information shall be provided at no more than the cost of copying and despatch.

Article 4

Methods of Procurement

1. Irrespective of the methods of government procurement used, they shall be specified in advance and applied in accordance with the laws and regulations. The procurement method chosen shall be transparent in accordance with the requirements of this Agreement.

2. Each procuring entity shall ensure that technical specifications are not prepared, adapted or applied in a manner that constitutes a disguised means of achieving objectives which are unrelated to that entity's procurement functions.

Article 5

Tendering Procedures

1. Wherever Members resort to government procurement through open tendering procedures, they shall publicise all necessary information and amendments thereof through an accessible source within sufficient time for potentially interested suppliers to respond in a meaningful manner.²

² This paragraph also covers pre-qualification procedures, wherever applicable.

2. The information referred to in paragraph 1 shall be adequate to allow suppliers to assess their potential interest in a particular procurement and, should they wish to participate in the procurement process, to submit responsive bids. Such information shall at least include:

- (a) name of the procuring entity;
- (b) the goods or services to be procured, and their specifications;
- (c) the procurement procedure used;
- (d) any (pre-)qualification requirements;
- (e) any restrictions on market access and/or domestic preferences granted;
- (f) the contact details for obtaining tender documentation and additional information;
- (g) the award criteria;
- (h) the deadlines for the submission of tenders; and
- (i) the date and time for the opening of tenders.

3. Members shall ensure that the information referred to in paragraph 2 is made available through the use of tender notices, tender documentation, or by other means, provided they allow for broad and easy access to potentially interested suppliers or service providers.

4. Members shall ensure that their laws and regulations clearly prescribe the conditions and, if applicable, thresholds under which procuring entities may choose to utilise procurement methods in which information on the procurement opportunity is provided only to one supplier or to a limited number of suppliers selected in advance by the procuring entity. Members shall ensure that procuring entities do not utilise such methods for the purposes of restricting participation in the procurement process in a non-transparent manner.

Article 6

Bid Periods

1. Sufficient time should be allowed for the preparation, submission and receipt of responsive bids. Time-limits set should not undermine the principles and objectives of this Agreement. They should take account of the particular circumstances as well as the complexity of the envisaged procurement.

2. Members shall clearly define in advance their policy on whether and in what circumstances late tenders may be accepted.

Article 7

Decisions on (Pre-)qualification and Contract Awards

1. Decisions on (pre-)qualification and contract awards shall be taken on the basis of the conditions and criteria (including technical specifications) which have been made known in advance, e.g. through a tender notice or tender documentation. Notwithstanding Article 6.2, only bids of

suppliers whose tenders have been received before the previously published final date for submission of tenders may be considered.

2. Once the contract is awarded, the participating suppliers shall be informed of the rejection of their bid. Unsuccessful bidders can, on request, obtain more detailed information as to why their bid was rejected and/or the winning bid was chosen.

Article 8

Domestic Review

1. Each Member shall maintain fair and transparent judicial, arbitral or administrative review bodies or procedures for the purpose, *inter alia*, of the prompt review of decisions of procuring entities creating legal effects.

2. Such bodies and procedures shall operate independently of the procuring entities and shall provide all interested parties that are directly and individually affected by a decision as mentioned in paragraph 1 with access to review.

3. Members shall ensure that each procuring entity is able to respond to requests for information on the way the procurement was carried out by maintaining a comprehensive administrative record of the procurement proceeding.

Article 9

Confidentiality

1. Any information which is by nature confidential shall be treated as such by the procuring entities. Such confidential information shall not be disclosed without specific permission of the party submitting it.

2. In case information is treated confidentially, where appropriate the procuring entities will furnish a meaningful non-confidential summary thereof.

Article 10

Language

Except if otherwise laid down in this Agreement, Members are encouraged to ensure that all information referred to in this Agreement is provided in a WTO language.

PART III: GENERAL PROVISIONS

Article 11

Notification Requirements

Laws and regulations shall be promptly notified to the WTO Secretariat. Members shall further provide a list in one of the WTO languages of the relevant generally applicable instruments. The WTO Secretariat shall endeavour to make such lists available to the general public through an electronic medium.

Article 12

Requests for Information

On request by another Member, Members shall provide information and explanations on their laws and regulations, procedures and practices affecting the implementation and operation of this Agreement.

Article 13

Dispute Settlement

1. The provisions of Articles XXII and XXIII of GATT 1994 or Articles XXII and XXIII of GATS respectively, as elaborated and applied by the Understanding on Rules and Procedures Governing the Settlement of Disputes under the WTO Agreement (hereinafter referred to as the "Dispute Settlement Understanding") shall be applicable within the limitations specified below.

2. The scope of paragraph 1 is limited to disputes among Members regarding the implementation of this Agreement and to decisions of the bodies mentioned in Article 8.1 for as far as such decisions concern procurements exceeding the maximum thresholds listed in Article 2.2.

3. In the case of a dispute in which provisions both of this Agreement and of one or more other Agreements listed in Appendix 1 of the Dispute Settlement Understanding are invoked by one of the parties to the dispute, paragraphs 1 and 2 shall apply only to issues of interpretation and application relating to this Agreement.

4. Panels established to examine disputes under this Agreement shall include at least one person qualified in the area of government procurement.

Article 14

Committee on Transparency in Government Procurement

1. The Committee on Transparency in Government Procurement ("the Committee") shall review promptly any particular matter which a Member considers to be detrimental to its interests under this Agreement and where consultations between it and the Member(s) concerned have failed to produce a mutually satisfactory solution. On such matters, the Committee may make such observations as it deems appropriate.

2. The Committee shall review the implementation and provisions of this Agreement, including the thresholds mentioned in Article 2.2, two years after its entry into force and periodically thereafter.

3. After the entry into force of this Agreement, the Committee shall initiate a study how to achieve "best value for money" in government procurement and develop elements for further multilateral rules for adoption in due course.

Article 15

Use of Information Technology

Members are encouraged to make use to the largest extent possible of tools of information technology to disseminate information, in particular for the dissemination of information about procurement opportunities and contract awards.³

Article 16

Technical Assistance

In order to facilitate the implementation of this Agreement, Members shall provide, on request and on mutually agreed terms and conditions, technical cooperation to developing and least developed country Members. Parties recognize in particular the need for developing countries to receive technical assistance to enable them to set up and operate electronic systems for ensuring transparency of procurements.

PART IV: FINAL PROVISIONS

Article 17

Final Provisions

1. Members' implementation of the provisions of this Agreement shall not affect their rights and obligations, if any, under the WTO Agreement on Government Procurement.
2. This Agreement is without prejudice to Members' rights and obligations under GATT 1994 and GATS.

Article 18

Entry into Force

This Agreement shall be open for acceptance, by signature or otherwise, by all WTO Members. It shall enter into force on the date determined by Ministers at [...] and shall remain open for acceptance for a period of two years following that date. An acceptance following the entry into force of this Agreement shall enter into force on the thirtieth day following the date of such acceptance.

³ Members recognize the difficulties which developing countries may have in applying tools of information technology.

Working Group on Transparency in Government Procurement

DOCUMENTS OF THE WORKING PARTY ON GATS RULES RELATING TO CONCESSIONS

Note by the Secretariat

At its meeting of 28 June 1999, the Working Group on Transparency in Government Procurement addressed the subject of concessions under the item on "definition and scope of government procurement". In the context of that discussion, it was agreed that the Secretariat would make available to the Working Group the documentation of the Working Party on GATS Rules relating to the subject of concessions (WT/WGTGP/M/8, paragraph 5). The present note has been prepared in response to this request.

The attachments to the note contain a compilation of the documents or sections of the documents of the Working Party on GATS Rules which contain references to "concessions". For the purpose of reflecting in a comprehensive manner the context in which the discussion on concessions took place, references in the Working Party's documents relating to the broader issue of a definition of government procurement in services have also been indicated. The relevant documents are organized under the following attachments:

Attachment 1

Submissions by delegations:

- Communication from Japan – Informal Comments on Concessions, dated 18 May 1999;
- Non-paper from the European Communities – Government Procurement of Services, dated 13 February 1999.

Attachment 2

Sections of the reports of the meetings of the Working Party on GATS Rules (S/WPGR/M/14-24), circulated between November 1997 and September 1999.

Attachment 3

Sections of the replies to the questionnaire on government procurement of services (S/WPGR/W/11 and addenda), circulated between 1996 and 1998.

ATTACHMENT 1

Job No. 2867

Working Party on GATS Rules

18 May 1999

COMMUNICATION FROM JAPAN INFORMAL COMMENTS ON CONCESSION

Several different understandings of the term "concession" have been raised in the Working Party; thus, in order to make progress on the issue, it is essential to streamline the definition. Based on the discussions so far, it had seemed possible to include mention of the following points:

1. contracts made between a government and a (foreign) private company for the purpose of developing the natural resources in the territory of the nation;
2. contracts made between a government and a (foreign) private company for the purpose of constructing and managing industrial sites, railways, public water supply systems and others;
3. government purchase of services including:
 - a) consumption by the government, e.g. cleaning of a government building;
 - b) consumption by the public, e.g. garbage collection.

[Comments after reflection]

- In point one, companies will pay some amount to the government to buy a right for natural resources development.
- In point two, consumers are supposed to pay the companies and governments will give a license to those companies.
- In point three, the government shall pay the companies, thus providing a typical case of government procurement. However, we doubt whether these activities can be called "concessions".

NON-PAPER

FROM THE EUROPEAN COMMUNITIES AND THEIR MEMBER STATES

GOVERNMENT PROCUREMENT OF SERVICES

1. INTRODUCTION

The purpose of this note is to contribute to the discussion in the Working Party on Rules on government procurement of services. It is to be understood that discussions in this Group are without prejudice to the discussions going on among the Members of the Government Procurement Agreement (GPA) in the Committee on Government Procurement or in the Transparency Group. To the contrary, it is hoped that discussions under the GATS' mandate will bring experts on government procurement together in a co-ordinated way. As was identified by this Group at the informal consultations, to the extent that Members share the desire to reach greater liberalisation on trade in services, and multilateral disciplines on procurement is seen as means to achieve that overall objective, discussions can and should take place in this Group. In addition, work in this Group has already served as a substantial contribution in the Transparency Group, for example.

Much of what is contained in this non-paper is based on the answers to the questionnaire and the synthesis document prepared by the WTO Secretariat (doc. S/WPGR/W/20). It is to be understood, however, that the starting point for our discussions is Article XIII of the GATS.

Finally, it should be noted that while this paper is aimed at progressing discussions, it is without prejudice to the final position of the EC as to which rules might be necessary and how they should apply to procurement of services.

2. OBJECTIVE

The aim of this paper is not to come up with clear or specific rules on procurement but rather to launch a discussion so that we can identify where services-specific elements in any procurement rules would add value to the existing disciplines under the relevant WTO Agreements.

From the outset it is fully recognised that the key principles to achieve liberalisation are transparency and non-discrimination. But we need also to reflect on the different elements of what constitutes government procurement on services. It is therefore suggested to engage the discussion on a possible working definition. This could allow the Group to reach a basis on which to negotiate further disciplines to achieve its objectives.

3. DEFINITION OF PROCUREMENT OF SERVICES

Any definition should be simple and avoiding using qualifications which could narrow the scope of application.

In defining what constitutes a government procurement of services, the language of Article XIII of the GATS offers three elements:

- when is there procurement: i.e. what transactions are covered?
- who is the procuring entity?
- what is being procured?

3.1. What transactions constitute procurement

Pursuant to Article XIII paragraph I of the GATS, the transactions which should be covered are those governed by "laws, regulations or requirements" and which are "purchased for governmental purposes and not with a view to commercial resale or with a view to use in the supply of services for commercial sale."

Accordingly, a general definition of government procurement should in the first place aim at covering those transactions that are currently being exempted from the GATS' scope by virtue of article XIII para 1. Yet, the above criteria have not been included in the definition of the GPA. In addition, from the preliminary discussion, it appears that other type of services transactions are also being procured. There is thus a need to gather further information on the type of services transactions that are being procured before we can decide which criteria to retain.

In the EC, and as a matter of fact under the GPA, the procurement rules apply to procurement by any contractual means, including through such methods as purchase or as lease, rental or hire purchase, with or without an option to buy, including any combination of services, Is this definition broad enough/covering all possible transaction under which a service is being procured?

A service can be purchased on a one-off basis or hired (consultancy) or provided through concessions when the purpose is that the service is being supplied on a permanent or regular basis (examples: cleaning of public roads, or waste collection etc.) or for the execution of works (construction; maintenance contracts/cleaning of buildings, offices etc.). From the preliminary discussions in this Group, it appears that much procurement takes place for execution of services/works, however this is being transacted. Besides buying a service or hiring a service, there is also the transaction for the supply of a service itself. it is the latter type of transaction which seems not to be covered by the present GPA definition.

There is thus a need to explore further how the supply of a service or execution of a work is being transacted. Often, for example, a public authority transfers the execution of a (public) service lying within its responsibility to an undertaking of its choice, and the latter agrees to execute the activity in return for the right to exploit the service, or this right together with payment. Such type of transactions are not to the direct use or benefit of the government and therefore would not, under the present GATS' Article XIII definition, be covered by the procurement rules when such type of contracts are being procured.

We see therefore a need to revisit the conceptual framework described in Article XIII para 1. The definition of "purchase for governmental purposes and not with a view to commercial resale or with a view to use in the supply of services for commercial sale" may not cover all procurement situations for services. In the answers to the questionnaire, the term "concessions" appears several times. It is thus necessary to clarify what is to be understood under this notion by the different WTO Members. The question that arises therefore is

whether the services procurement which goes beyond Article XIII para 1, constitutes a critical mass of economic activity requiring further analysis.

From the above follows, that further discussion is necessary on whether the definition should apply to all stages of the procurement; be limited or not to procurement which is to direct benefit and use of government or goes further so as to include all government purposes or whether some specific transactions or types of supply should be excluded.

Finally, in the EC, contracts are necessarily in written form, and are entered into for pecuniary interest. Only if there is any possible ambiguity on these 2 criteria would they need further specification in the WTO rules.

3.2. Who is the procuring entity?

This is probably the most important element of the definition.

Taking the GATS as the starting point, Article I.3 of the GATS stipulates that the Agreement applies to measures taken by "central, regional or local governments and authorities" and "non-governmental bodies in the exercise of powers delegated by central, regional or local governments and authorities". Following this definition, it would mean that procurement rules should apply to procurement done at ALL levels of government, including by entities upon which the government exerts an influence.

It is realised that specifying to which procurement entities the rules should apply, for the purpose of definition, may be different than on which entities these rules will effectively apply. From the answers to the questionnaire, the definition of procurement relates often to central level only. It is important that this distinction is being made between on the one hand defining the procuring entity for the sake of a definition as opposed to taking up rights and obligations. The latter is probably dependent on the mechanism that will be applied for liberalisation commitments.

Procurement done by entities either governed by public law or under the influence of government, should also be covered. This is for services a very important category in particular in a stage of deregulation and privatisation.

The question will be how to define these entities. Should criteria to determine influence/control of the government be set, such as: financed, in part, for the most part, by the state, regional or local authorities; subject to management supervision by State authorities; having administrative, managerial or supervisory board, more than half of the members being appointed by the State?

In this Group discussion should focus on possible elements/criteria which should lead to a clear understanding on which entities might be covered by the definition. It is recognised, however, that even if criteria existed, every case will have to be examined on its own merits and that the ultimate test should be whether the entity is subject to competition i.e. is the entity offering services in open markets? If that is the case, it cannot be asked to comply with rules which do not apply to its competitors.

3.3. What is being procured?

An answer to the question of what is being procured in the context of the GATS mandate should be straightforward: a service. And to answer what a service is reference should be made to the GATS. For the EC it is important that, from the outset, there is agreement that

the scope of the rules on procurement of services are the same as those for the supply of a service.

The GATS applies to all service activities except those explicitly excluded. An illustrative list of services sectors has been established listing II categories of services sectors. Services in the exercise of governmental authority, for example, are excluded (such as activities conducted by a central bank or monetary authority or any other public entity in pursuit of monetary or exchange rate policies; activities forming part of statutory social security schemes or activities conducted for the account of the financial resources of the Government - see para 1 of Annex on Financial Services).

The approach that the coverage for procurement rules should be the same as for liberalisation of services, would save the time and energy required to come up with another definition of what is a service. The generic word "services" could be used and it would then have to be explained that this covers all services sectors and activities covered by the GATS. This approach creates also the necessary legal certainty that commitments on market access for the supply of a service correspond to those used to determine the applicability of the procurement rules.

It should be noted, that the definition of "services" to determine the scope of application of the procurement rules, is a different exercise from determining which substantive rule (i.e. MFN/National treatment) will effectively apply. This is a question of negotiations so as to secure a mutual balance of benefits.

Besides the above elements, it will be important to consider whether there should be a threshold value below which the procurement rules will not apply.

4. CONCLUSION

As mentioned above, the aim of this exercise is to reach agreement on the broadest definition possible so as to cover the largest range of transactions. To reach such an understanding, elements of a working definition are being suggested.

As far as the definition used in the GATS or in the GPA is concerned, it seems not to address all the elements specific to the procurement of a service which is in most instance not purchased with the purpose to acquire something but rather to obtain a right to consume, exercise, supply or grant a service.

ATTACHMENT 2

References to Concessions in the Reports of the Meetings of the Working Party on GATS Rules

Meeting of 26 November 1997 (S/WPGR/M/14)

5. The Chairperson informed delegations that at an informal meeting on procurement held on 6 November 1997, two sorts of issues had been raised. On substance, a few delegations had suggested that work should focus initially on the **definition** of government procurement and the principle of non-discrimination. On procedure, several delegations had emphasized the need to address the problem of duplication of work between different fora dealing with government procurement in the WTO. One delegation said that there was clearly need for discussion in the Working Party on the elements of government procurement specifically related to trade in services, such as the role of **concessions** on public utilities. It intended to make a written submission dealing with **definitional** issues and illustrating the particularities of services procurement, in order to demonstrate the need to make progress in this area within the Working Party. Another delegation said that even though previously it had been less than enthusiastic about the prospect of such work, it now fully supported the idea. It had come to the view that there was need for work to improve the understanding of what disciplines could apply to services procurement and that the goal should be to develop such disciplines. A third delegation also expressed an interest in pursuing such work within the Working Party and welcomed the positive indications of interest from other delegations.

Meeting of 27 February 1998 (S/WPGR/M/15)

10. The European Communities made a written contribution dealing with **definitional** issues relevant to services procurement. In introducing the submission, the representative of the European Communities indicated that the purpose was to assist the discussion on a working **definition** of government procurement by addressing three questions: what transactions constitute procurement, who is the procuring entity, and what is being procured? Delegations welcomed the submission. Several reiterated the need for a working **definition** in view of the multiplicity of **definitions** of government procurement that had been identified in the replies to the questionnaire.

Meeting of 27 April 1998 (S/WPGR/M/16)

13. The paper submitted by the European Communities at the previous meeting identified three relevant questions: what transactions constitute procurement, who is the procuring entity, and what is being procured? As to the first question, some delegations favoured an approach consistent with that in the Agreement on Government Procurement. Others felt that transactions excluded from the relevant **definitions** in Article I of the GATS provided a clue as to what transactions constituted procurement. One delegation stressed the difficulties faced in her country in defining procurement and, particularly, whether **concessions** should be included. Other delegations echoed the reservations and indicated that more discussion on the matter was necessary. Regarding the second question, i.e. who is the procuring entity, some stated that the level of public control should be the main consideration and that all levels of government should be included. However, others felt that in the case of enterprises owned by the government, the decisive factor should be whether the entity operated like a private enterprise in a competitive context.

14. The Chairman drew delegations' attention to the fact that the Working Group on Transparency in Government Procurement was also discussing questions of **definition** and scope of procurement. One delegation emphasized that the Working Party should aim to provide an input to the Working Group on Transparency and suggested that discussions focus on the specificities of government

procurement of services. The Chairman indicated that he would continue consultations on how best to coordinate work with other fora dealing with government procurement.

Meeting of 23 June 1998 (S/WPGR/M/17)

5. Concerning the **definition** of government procurement, it had been suggested that the Transparency Working Group should employ a sufficiently broad approach to accommodate differing meanings given to the term "government procurement" in national legislations. The Group had also identified a range of issues that would need to be taken into account. In this context, a distinction had been made between the following questions: (i) who was doing the procuring? (ii) what was being procured? and (iii) what types of transactions were covered?

6. In regard to the first question, it had been suggested that entities at all levels of government, as well as enterprises owned or influenced by the government, be covered by a transparency agreement. Another suggestion was initially to apply the relevant rules only to entities at the central or federal government level and to condition the coverage of state enterprises on how they operated.

7. Regarding the second question (what was being procured?), it had been suggested that the scope of a transparency agreement be extended to all goods and services, and any combination of goods and services.

8. In relation to the third question (what types of transactions would be covered?), it had been suggested that acquisition by any contractual means, including through lease or rental, be covered. Questions had been raised as to whether **concessions** and build-operate-transfer (BOT) contracts should be covered as well. In connection with that issue, the delegation of Venezuela had presented a submission concerning the particular characteristics of government procurement, privatization and **concessions**-granting systems (circulated as job no. 3295). With respect to the use of threshold values in determining the coverage of a transparency agreement, the view had been expressed that in principle all contracts should be covered, but that certain provisions might be more flexibly applied to smaller contracts. Other delegations had felt that transparency obligations should only apply above certain threshold levels in order to avoid information costs and that the Group should take into account the relevant national practices.

9. In introducing the discussion, the Chairman recalled that the Working Party on GATS Rules had initially based its deliberations on scope and coverage on a submission from the European Communities. He proposed continuing that discussion with a view to identifying issues for further consideration. Most delegations that spoke indicated an interest in developing a working **definition** of government procurement based on the questions in the EC submission. The need was expressed for an examination of the issue of **concessions**. One delegation noted that some discussion on **concessions** had taken place at the previous meeting and that a similar discussion was being conducted in the Working Group on Transparency in Government Procurement; it was thus important to avoid duplication and to coordinate work. In certain delegations' view, the **definition** of government procurement in GATS appeared to exclude **concessions** where services were not purchased for governmental purposes. Accordingly, those transactions would be subject to the disciplines of Articles II, XVI and XVII of the GATS. However, some delegations expressed reservations about this interpretation. They felt it was necessary first to **define concessions** and then to discuss the relevance of GATS disciplines. In this context, it was proposed that delegations provide information on national regimes relating to **concessions**. One delegation recalled that some information on this subject already existed in the responses to the questionnaire.

10. The Chairman recalled that the Working Party had agreed to address the basic principle of non-discrimination as a second step in the work programme. He reminded delegations of a non-paper submitted by New Zealand (dated 30 September 1997) which examined some issues, including

definition and the principles of MFN and national treatment. While one delegation felt that for practical reasons it would be appropriate to discuss MFN-related issues first, others were of the opinion that the two principles should be dealt with in parallel since they were closely intertwined.

11. The Chairman concluded that there was a need to continue the discussion regarding and **definition** of procurement and, in particular, the treatment of **concessions**. More information on how **concessions** were **defined** and treated within national legislations was necessary; Members agreed to provide this information by the next meeting. Regarding the principle of non-discrimination, he noted that more input from delegations was needed on how to deal with this issue and encouraged Members to submit contributions by the following meeting. He would continue to coordinate work with the different fora dealing with government procurement.

Meeting of 6 October 1998 (S/WPGR/M/18)

16. The Chairman recalled that previous discussions had been focused on the scope and coverage of government procurement of services. He suggested three issues for consideration, based on the questions posed in the Non-paper by the European Communities, dated 13 February 1998. Regarding the first question concerning the transactions that constituted procurement, it had been recognized that more information was needed on how **concessions** were **defined** and treated in national legislations. Although Members had agreed to provide such information, nothing had been received so far. In replying to the questionnaire, detailed information had been provided only by Argentina and Costa Rica, while some reference to **concessions** was also contained in the responses of Colombia, Poland and Hong Kong, China. Regarding the second question (who is the procuring entity?), the EC paper presented two possibilities. One approach would cover procurement at all levels of government, including entities governed by public law and under the influence of government, while the second approach was based on market structure rather than on public ownership or influence per se - every case would be examined on its own merits, the ultimate criterion being whether the entity was subject to competition. Regarding the third question (what is being procured?), the EC paper suggested that all services falling within the scope of GATS should be covered. In this connection, the exclusion from the GATS of "services supplied in the exercise of governmental authority", raised the question of whether the GATS **definition** of such services was sufficiently clear. This was also related to the treatment of **concessions**, as some **concessions** might concern services provided in the exercise of governmental authority.

17. In relation to what transactions constitute procurement, the representative of Venezuela indicated, in a preliminary manner, that in his country **concessions** were governed by public/administrative law rather than private/civil law. That implied an exclusive competence of the State. For instance, petroleum and minerals were regarded as State-owned resources and their exploitation was reserved for the State. When the government gave **concessions**, it granted a right to operate the mines to a private sector entity through a contract, which in some cases involved a royalty while in others no payment to the State was required, except for taxes on revenues. Thus, **concessions** did not constitute a purchase by the government since they involved no acquisition of goods or services and, therefore, they did not constitute government procurement. Additionally, given that they were an exclusive competence of the State and that their commercial and competitive nature was questionable, the granting of **concessions**, and the activities involved, were excluded from the coverage of GATS.

18. The representative of Argentina recalled his doubts about the interpretation of some delegations of what activities might fall under Article XIII of the GATS and the possibility that **concessions** would be covered under the Agreement. For instance, the case of a **concession** granted for operating a motorway, where the government was not buying something for itself, but rather granting the right to operate a public service to a private operator, was a clear case of a service provided in the exercise of governmental authority. It was necessary to continue studying how

concessions would be considered within the GATS framework. The United States suggested that in addressing the issue in future submissions, the **definition** of **concessions** be related to the language of Article XIII, which specifically **defined** procurement in terms of a purchase.

19. The representative of Canada elaborated on the question of what transactions constituted procurement. The EC paper suggested that the transaction for the service itself was distinguished from the buying or hiring of the service. She asked whether the case of a contract providing a license to a private sector contractor to distribute government procurement data on an electronic tendering service, generating revenues from the purchaser of the data, would be considered to be a transaction for the service itself. If so, would it fall within the **definition** of procurement in GATS Article XIII?

20. In summing up, the Chairman observed that there was a need to continue the discussion on the scope and coverage of government procurement of services, and in particular on the issue of **concessions**, and urged Members to contribute their views in writing. He indicated that at the following meeting, the Working Party would revert to the question of how to proceed with the second step in the work programme, which concerned the application of the basic discipline of non-discrimination.

Meeting of 1 December 1998 (S/WPGR/M/19)

24. The Chairman recalled that the previous meeting had been devoted to discussing the scope and coverage of government procurement of services. He felt that the time had come to aim at reaching conclusions and, where necessary, identifying key issues for further consideration. The discussion could then move on to the second item in the work programme, i.e. the application of the basic discipline of non-discrimination to services procurement. The discussion could be divided into three parts, based on the three questions raised in the Non-Paper from the European Communities and their Member States (dated 13 February 1998). In the context of the first question regarding what transactions constitute procurement, delegations had recognized that more information was needed on how **concessions** were **defined** and treated within national legislations. In response to the Questionnaire on Government Procurement of Services detailed information on **concessions** has been provided only by Argentina and Costa Rica. **Concessions** had also been mentioned in the responses of Colombia; Hong Kong, China; and Poland.

25. The representative of Argentina stressed that more information was necessary to understand what was meant by **concessions**. It was important in this context not to focus on **definitions** of transactions between the State and private suppliers since these could vary among legislations. Focus should rather be on the economic nature of the transactions. Procurement contracts had to do with public entities and covered what could be called public services. While the State was responsible for their provision, different procedures existed: the State could use its own resources and personnel or contract a third party to carry out the work. In the latter case, the contractual relationship could be of limited duration and involves only the State and an enterprise which carried out the work and was paid by the State. The other option consisted of a continuous contractual relationship with the supplier which also involved the user of service, who in a way contributed to the payment. This option had to do with public works and public service **concessions**, where the state allowed a private party to supply a service to the public without ceding its competence, and where the supplier normally received a payment from the individual user. The relevant price might be determined and/or subsidized by the State. Such transactions would not include **concessions** related to the exploitation of natural deposit, e.g. mines, which would not be covered by the GATS.

26. The representative of Canada said that the EU paper suggested that the transaction for the service itself (as distinguished from the buying or hiring of the service) did not appear to be covered by the Agreement on Government Procurement. The paper suggested that such transactions were not to the benefit or use of the government and thus would also not be covered by the current GATS

Article XIII **definition** of services. The actual meaning of the critical phrase in the EU paper: the transaction for the service itself is not clear. An elaboration of some examples may be useful. Would for example a contract providing a license to a private sector contractor to distribute government procurement data on an electronic tendering service and generate revenue from purchasers of the data, be considered to fit within the transaction for the service itself and, if so, on what basis would it not meet the **definitions** of a procurement in the AGP and GATS Article XIII? On how to proceed with the work, he suggested requesting the Secretariat to prepare a note listing the types of policies that are applied to government procurement and may not be consistent with non-discrimination, both MFN and national treatment, with a brief explanation of each.

27. The Chairman noted that **definitions** of **concessions** varied and that it would be helpful to have brief descriptions of how **concessions** were treated in domestic legislation provided by Members. On the Canadian proposal, he recalled that various documents had such information, namely S/WPGR/W/3, section 9 of the document S/WPGR/W/20 and the submission from New Zealand (Job. 5446 dated 30 September 1997). He also recalled the other two questions posed in the European Communities submission, i.e. who was the procuring entity and what was being procured had still to be discussed. He suggested continuing discussion in the following meeting on scope and **definition**, and addressing the two remaining questions in this context.

Meeting of 19 February 1999 (S/WPGR/M/20)

27. The Chairman recalled previous discussions of scope and coverage of government procurement of services. At this meeting, he would like to invite further comments to reach preliminary conclusions, not necessarily agreed, and identifying key issues for further consideration. He reminded delegations of the three questions raised in the European Communities' informal paper of February 1998: (a) What transactions constitute procurement?; (b) who is the procuring entity?; and (c) what is being procured?

28. As to the first question, the Chairman noted that an important issue was the **definition** and treatment of **concessions**. The representative of Canada reminded the Working Party of his delegation's request for clarification from the European Communities, and indicated that the issue would be pursued bilaterally. The representative of the European Communities added that the issue raised related to the interpretation of the Government Procurement Agreement. In relation to **concessions**, she added that the relevant **definition** seemed to differ between national legislations; the EC was preparing a submission on this subject and looked forward to contributions from other delegations as well.

29. The representative of the United States recommended to use as a starting-point the **definition** contained in Article XIII of the GATS, which referred to procurement in terms of services purchased "for governmental purposes and not with a view to commercial resale or with a view to use in the supply of services for commercial sale". This mirrored the language contained in Article III:8 of GATT 1994. Given the degree of ambiguity involved, he felt it would be useful if the Secretariat provided background information on the interpretation developed in the goods context. He also noted that the wording in Article XIII did not apparently capture the procurement of services with a view to their use in the supply of goods for commercial sale. The Working Party might want to address the **definitional** and legal implications of this omission. As to **concessions**, he noted that some delegations considered that these were outside the scope of government procurement, and some potentially strong arguments might be made. It would be very useful if further information could be provided on the relevant domestic regimes and any **definitional** distinctions from government procurement.

30. The representative of Australia reiterated the **definitional** difficulties involved and concurred that the starting-point for future work should be Article XIII of the GATS. A BOT contract might be an example of a **concession**; contrasting with the government's purchase of a service the costs involved were born entirely by consumers over a certain period of time. Accordingly, the relevant transactions were subject to general GATS disciplines. By contrast, services like garbage collection, which were totally or partially paid for by the government, might be considered procurement. In trying to develop general criteria, it would be useful to further discuss whether the allocation of costs were a determining factor. Another important issue was the **definition** of "governmental purposes" and, in this context, whether the focus should be on the government's use of a service – as in the case of maintenance and cleaning services – or its role in, and responsibility for, the provision of a service – as in the case of garbage collection. However, the role of governments differed from country to country. The relationship between the government and the private sector was also changing, as more and more companies were delivering services traditionally provided by governments.

31. The representative of Thailand agreed that it would be useful to discuss the interpretation given to the relevant GATT provisions. In Thailand, **concessional** regimes were provided for in many different pieces of legislation; however, they were always **defined** as services supplied in the exercise of governmental authority.

32. The representative of Mexico indicated variations in national legislation with regard to **concessions** and government procurement, for reference purposes. In her country, **concessions** were not assimilated with government procurement since they did not involve direct acquisition of goods or services, nor any expense, by the government. To avoid confusion, Mexico maintained different sets of legislation for, on the one hand, public works, which fell under government procurement, and **concessions** for the provision of public services which had their own rules. In the latter context, the State authorized one or more private companies to offer a public service and also determined the tariffs to be charged. By contrast, public works contracts did not involve the granting of any authorization to private parties to operate a public service. Another difference was that a **concessions** could be transferred to other parties, while the responsibility for the execution of public works remained with the main contractor, notwithstanding the degree of subcontracting involved. While a concessionaire had to provide the economic resources for the execution of the works and the exploitation of the service, in the procurement of public works the costs were covered by the State. In the case of **concessions**, legal relationship involved not only the government and the concessionaire, but the user of the service as well; legal obligations in the sphere of public works were limited to the contractor and the procuring authority.

33. In concluding the discussion on this issue, the Chairman encouraged delegations to submit information on their national regimes, preferably in writing. In turn, the Secretariat would provide a background note on how language similar to that contained in Article XIII:1 of the GATS had been interpreted in the GATT context. He wondered whether the Working Party would find it useful if the Secretariat also prepared a note on possible forms of **concessions** and potentially relevant GATS provisions. The Secretariat indicated that any such note would essentially distinguish between three categories of services: those supplied in the exercise of governmental authority, which were outside the scope of the GATS; services procured by governments which fell under Article XIII; and all other services. If **concessions** were neither services provided in the exercise of governmental authority nor constituted government procurement, then the general MFN obligation and, where relevant, specific commitments applied to them. From a legal perspective, any Secretariat note would not be able to go significantly beyond these principle issues.

34. Several delegations, including Argentina, Venezuela and Malaysia, felt it would be useful to further discuss these issues in the Working Party, based on information provided by Members before the Secretariat was asked to prepare a background note.

Meeting of 16 April 1999 (S/WPGR/M/21)

31. The Chairman recalled that discussions at previous meetings revolved around the scope and coverage of government procurement of services. The starting point was three questions raised in an informal submission by the European Communities: (a) What transactions constitute procurement?; (b) who is the procuring entity?; and (c) what is being procured? It had been agreed to continue this discussion at today's meeting, focusing in particular on the first question and, in this context, the treatment of **concessions**.

32. The representative of Japan stated that **concessions** did not exist in his country. Without prejudging Japan's position, he noted the different forms that they might take: (a) a contract between a government agency and a private company for the purpose of developing natural resources; (b) a government contract with a private company for the purpose of constructing and managing industrial sites, railways, public water supply systems, and others; and (c) government purchases of services which may be consumed by the government, e.g. cleaning of government buildings, or by the public in general, e.g. garbage collection. In cases (a), where a company paid for the right to exploit the natural resources, and (b), where consumers paid the company, it was not evident that the relevant transactions constituted government procurement. The third case, however, where the government paid companies, seemed more typical of government procurement. The financial responsibility for a transaction might be useful in distinguishing government procurement from **concessions**.

33. The representative of Korea said that in his country licenses, authorizations, and approvals related to **concessions** were regulated by the competent ministries. For example, the Ministry of Industrial Resources was responsible for approving mining rights. Since the **definition** of **concessions** and their role in services was unclear, it might be problematic to include them in the Working Party's discussion at this stage.

34. The representative of Australia felt that the discussion of **concessions** showed some links to the recent Secretariat paper (S/WPGR/W/29), which she found useful. The Paper noted that the relevant GATT Articles dealing with government procurement used different wording, i.e. "governmental purpose" in Art. III and "government use" in Art. XVII. Apparently, this had not been intended to imply different meaning, suggesting a relatively narrow interpretation of "governmental purposes". She recommended that Members consider whether "government purposes" in Article XIII of the GATS should be interpreted to mean "government use" in a narrow sense, i.e. that the government "consumes" the service, or to include cases where the government was not the actual consumer. It could be argued that certain services were purchased for government purpose, but not for government use. For example, when a government contracted out training services destined for the private sector, these would be fulfilling a purpose of, but not be used by, the government. Examining the question of what constituted "governmental purposes" would help to clarify which **concessions** could be considered government procurement and which would be subject to normal GATS disciplines. In Australia, procurement of services was not **defined** in law. However, at the federal level, entities were obliged to have regard to the Commonwealth Procurement Guidelines in all procurement cases. A footnote to the Guidelines stated that the terms property and services covered all goods and services, including: consultancies and professional services of all types; real property activities; construction and related services; financial and operating leases for equipment and real property; individual and collective training and educational programmes; services obtained from public utility suppliers; and outsourcing or contracting, including programme delivery and programme support. The inclusion of the latter activities indicated a very broad interpretation of government procurement.

35. The representative of Hong Kong, China, pointed out that the draft Multilateral Agreement on Investment discussed in the OECD contained a **definition** of **concessions**, which included the delegation of activities normally carried out by a government authority to a distinct and independent

legal entity. The representative of the European Communities mentioned a recent draft document on the treatment of **concessions** under Community law which could be of interest to other delegations (Draft Interpretative Document on Treatment of **Concessions** under Community Law; Official Journal of the EC, C94, 7 April 1999). The representative of Venezuela noted a fundamental characteristic of **concessions** which needed to be analysed and borne in mind, i.e. exclusive competence of the State. Other arrangements to be discussed were Built, Operate and Transfer contracts, and contracts pertaining to the management of public utilities. The representative of Argentina noted that not much information was available on **concessions**; he stressed the need for factual material describing how Members **defined concessions**.

36. The representative of Mexico recalled that contracts of the third type described by the Japanese delegation, involving disbursement of funds by the government, had been an element that Mexico had used to identify government procurement. In addition, the Secretariat Note (S/WPGR/W/29) recounted that a panel had used payment by the government as one factor to identify government procurement. More information on Members' **definition of concessions** was necessary before any further analysis could be requested from the Secretariat. The representatives of Malaysia, the United States, and Uruguay concurred.

37. The representative of the United States said that it was apparent from the Secretariat's Note that the existing precedents (negotiating history or dispute panels) did not provide sufficient guidance for the interpretation of the relevant terms in GATS. The Working Party might have to develop its own working **definition**. The representative of Poland also called for such a **definition**; the responses to the procurement questionnaire might contain useful elements. In Poland, government procurement included construction procurement, the delivery of goods, and the provision of services financed fully or partially with public funds. The concept of **concessions** was not used in public procurement.

38. The representative of Thailand, on behalf of ASEAN, felt that the Working Party needed to fully understand the meaning of government procurement. He observed that there was no authoritative WTO interpretation of the term; the existing interpretations by various GATT/WTO bodies of Articles III:8 and XVII:2 of GATT were, however, useful. A key element to be retained was the understanding that "government purpose" and "government use" both meant government consumption. In that context, it was difficult to include the notion of **concessions** if it meant the supply of services in the exercise of governmental authority. According to the rules of international law interpretation, drafting history was only a supplementary means of interpretation to be used on an exceptional basis. As a rule, one had to take into account the ordinary meaning of "government procurement" in its proper context and in the light of relevant GATS provisions.

39. A representative of the Secretariat pointed out that document W/29 made reference to a 1992 panel report (GPR.DS1/R, 23 April 1992) which might be interesting for the Working Party's purposes. However, the report had never been adopted and therefore was not legally relevant. The representative of the United States emphasised that, although the panel arrived at a questionable conclusion, its report illustrated some of the difficulties implied in defining government procurement of services, as in many cases government contracts combine the supply of goods and services.

40. The Chairman encouraged the delegation of Japan to submit its contribution in writing. He suggested continuing the discussion of S/WPGR/W/29 at the next meeting, taking into account considerations contained in the 1992 panel report. To clarify the concept of **concessions**, it would be very useful for delegations to submit written contributions.

Meeting of 19 May 1999 (S/WPGR/M/22 and Corr.1)

25. The Chairman observed that at the previous meeting, the Working Party had its first discussion of issues raised in the Secretariat Note S/WPGR/W/29. Some delegations expressed the need to develop a working **definition** of government procurement. In that context, Australia had recommended to consider whether the term "government purposes" in Article XIII of the GATS should be interpreted to mean "government use" in a narrow sense (i.e. the government "consumes" the service) or also include cases where the government was not the actual consumer. He proposed to discuss both W/29 and these contributions in greater depth. The three questions contained in the European Communities' informal paper were closely related to these **definitional** issues. Additionally, Japan had introduced a typology of **concessions** which distinguished between three types of transactions.

26. The representative of Brazil provided a brief overview of his country's legislation which distinguished between **concessions** and government procurement. In Brazil, the concept of **concessions** was not covered by the legislation that applied to government procurement (Law 8666 of June 1993), but had their own legal framework (Law 8987 of February 1995). Both legislations were applicable to federal, state and municipal governments, as well as to public enterprises, foundations and any form of institution with some level of control, directly or indirectly, by the government. While government procurement was **defined** to consist of acquisition of goods and services by purchase, **concessions** implied the delegation to a private entity of the right to supply a services. The representative of Venezuela added that the situation in his country was similar. **Concessions** and government procurement were different concepts regulated by separate legislations; the discussion of **concessions** might be of didactic value, but could not be part of negotiations on government procurement. In relation to the typology proposed by the delegation of Japan, he said that transactions pertaining to the exploitation of natural resources related to goods and not services. In Venezuela, such transactions did not involve any payment by the government; however, the government was entitled to collect taxes and royalties. In the absence of government procurement, there was no basis to apply GATS disciplines. Referring to contracts for constructing and managing industrial sites or public facilities, he noted that the financial responsibility laid with the users of the service and not the government. The third type of transaction, involving government purchase of services, could be considered government procurement rather than a **concessions**. **Concessions** involved transactions in which an exclusive competence of the government was delegated to a private entity, but the rights or resources involved continued to belong to the government. He reiterated previous requests for more information on Build, Operate and Transfer contracts.

27. The representative of Hong Kong, China, would prefer a working **definition** of government procurement which would minimize the exclusion of transactions from GATS disciplines; however, his delegation's interpretation of the term government procurement, as used in Article XIII:1, covered purchases for government use as well as cases where the government procured, but did not consume the relevant goods and services itself. Street cleaning and garbage collection for the public were cases in point. Regarding the distinction between **concessions** and government procurement, he felt that the criterion of financial responsibility was appropriate; if the government did not pay, a transaction could not be considered government procurement per se. Thus, **concessions** in the form of licenses and franchises would not fall under any government procurement rules. According to the representative of Thailand, the discussion should focus on defining government procurement as referred to in Article XIII. In Thailand the legal situation was clear. Relevant laws distinguished between **concessions** and government procurement; **concessions** were services supplied in the exercise of governmental authority. Contracts concerning the exploitation of natural resources were investment-related, and not particularly relevant for a discussion under Article XIII.

28. The representative of Mexico felt that the analysis of S/WPGR/W/29 should be continued. The Working Party had not considered all relevant **definitional** issues at that stage, and no authoritative interpretation of the term existed. Although her delegation was still considering the issues involved, she observed that one of the fundamental characteristics of government procurement was the financial responsibility by the government. **Concessions** involved the granting to the concessionaire of a right to exploit resources or exercise other prerogatives of the government. Any purchases by the concessionaire would constitute private acquisitions, which could not be covered by government procurement disciplines. She also echoed the request for information on Build, Operate and Transfer contracts.

29. The representative of the United States felt that the typology proposed by the delegation of Japan constituted a good starting-point for developing a working **definition**. The representative of Japan noted that the purpose of current discussions was to **define** government procurement, not **concessions**. His delegation considered the criterion of financial responsibility as relevant. Regarding contracts for exploitation of natural resources, he considered that the resources themselves were goods, but the exploitation activity was a service; for instance, energy services were included in the Services Sectoral Classification List (MTN.GNS/W/120).

30. The representative of Canada concurred that the discussion should focus on determining what was included in the concept of government procurement; **concessions** were a secondary issue. In defining government procurement, a wider range of factors needed to be considered. These included ownership, government control and the relevance of existing disciplines under the TRIMs. The representative of the European Communities referred to a Draft Interpretative Document on treatment of **concessions** under Community Law (O.J. C94 of 7.4.99). It included **definitional** elements which might be useful for the work of the Working Party such as level of exploitation, ownership, financial responsibility, etc. She felt it might be necessary to use a case-by-case approach in the determination of government procurement. The paper on **concessions** mentioned at the previous meeting had some factors that could be used in the work on **definition**, for example, level of exploitation, ownership, financial responsibility, etc. Regarding **concessions**, it was clear from the discussion that not all countries used such a concept.

31. In summing up, the Chairman observed that delegations felt the need to intensify work on a **definition** of government procurement; for that purpose, various routes were being contemplated. The criterion of financial responsibility was generally found relevant. The issues raised by the delegation of Australia were considered useful as well; in general, the concept of government use was perceived to be narrower than that of government purpose. He stressed the importance of submitting contributions in writing as a basis for further discussion.

Meeting of 21 June 1999 (S/WPGR/M/23)

33. The Chairman recalled that several delegations had suggested **definitions** – or elements of a **definition** – of government procurement of services. The notion of financial responsibility seemed to be widely considered one suitable criterion. He invited delegations to introduce additional elements.

34. The representative of Thailand, speaking on behalf of ASEAN, stressed the need for continued efforts to **define** government procurement under Article XIII. While the concept of financial responsibility was relevant, it was not sufficient in itself. "Government purpose" was another key term. However, more work was needed to arrive at a satisfactory **definition**.

35. The representative of Australia suggested developing a hierarchy of procurement activities, reflecting the level of government involvement. Japan's informal paper on **concessions** could be a starting-point. For instance, activities could be ranked as follows: government purchases for consumption by the government; government purchases for consumption by the public; contracts

with private companies for the purpose of constructing and managing industrial sites, railways, etc.; and contracts with private companies for the purpose of developing natural resources. The latter example was not to be considered government procurement.

36. The representative of New Zealand recommended that the Working Party focus on the **definition** of government procurement, rather than on surrounding concepts such as **concessions**. The criterion of financial responsibility was very useful; it implied the assumption of the financial risks and benefits of providing a service on a commercial basis. At the request of another Member, he explained that, in his delegation's view, the concept of **concessions** implied that a private party carried the risk of operating a service and was entitled to charge a fee in return. Thus, the private operator was financially responsible.

37. The Chairman concluded by drawing attention to three questions contained in a European Communities' informal paper of February 1998: what transactions constitute procurement?; who is the procuring entity?; and what is being procured? He felt it might be useful to further examine the range of entities which might be considered to conduct procurement activities. Some Members had expressed the view that, in principle, entities at all Government levels should be covered and that government ownership and control were important criteria. It had also been noted that the focus should be on entities enjoying some degree of exclusivity, i.e. entities not fully subject to market disciplines. He suggested that, at the next meeting, the Working Party tried to further clarify this question, in addition to advancing the discussion on **definitional** issues. The Working Party agreed.

Meeting of 8 September 1999 (S/WPGR/M/24)

40. The Chairman recalled that, during the past two meetings, several delegations had suggested **definitions**, or elements of a **definition**, of what could be considered government procurement of services. The notion of financial responsibility, i.e. the assumption of the financial risks and benefits associated with the purchase of services, seemed to be widely considered one suitable criterion to distinguish procurement from other forms of government involvement. He invited delegations to introduce any additional criteria and comments into the discussion.

41. The representative of Australia said that, following domestic consultations on how to **define** government procurement, her delegation now supported a broad **definition**. This was a pragmatic move since the processes of choosing contracts, as well as the relationship between companies and government, were generally identical and not influenced by notions of financial responsibility. Government procurement was thus considered to include all three categories in the hierarchy Australia had originally suggested: first, government purchases of services for consumption by the government; second, government purchases of services for consumption by the public; and, third, contracts between the government and private companies for the commercial provision of services to the public or to industry. The latter category was covered by the **definition** of GATS Article XIII because it was the government that initiated and organized the supply of the service and, thus, enabled the public to consume it.

42. The representative of Canada felt that the term "hierarchy" was not appropriate as it implied the setting of priorities; she proposed using a more neutral term such as "listing". The representative of the European Communities said that the **definition** offered by Australia was broad and wondered how it squared with relevant GATS provisions, given that the Working Party was mandated to deal with transactions not currently covered by the GATS.

43. The representatives of Venezuela, Brazil and Mexico noted that in their national legislations, **concessions** did not fall, and could not be categorized, under government procurement. The representative of Mexico suggested that examples be given under each category proposed by Australia. She wondered how this categories related to the concept of financial responsibility, which

many delegations considered relevant. In response to several requests, the representative of Australia undertook to submit her contribution in writing.

44. The representative of Hong Kong, China said that considerations related to the structure of the relevant market were important in determining what fell under government procurement. The representative of the United States suggested that the Working Party set aside its discussion on **concessions** for the time being and rather develop a genuine **definition** of government procurement. By default, it would also inform the **definition** of **concessions**.

45. As mentioned in his preparatory Note, the Chairman suggested further examining the range of entities considered to conduct government procurement. At previous meetings, it had been said that, in principle, entities at all government level should be covered, and that government ownership and control were important criteria. The legal form of operation or incorporation had not been mentioned as relevant. Some delegations had noted, however, that attention should be given primarily to entities enjoying some degree of exclusivity, i.e. to entities not fully subject to market disciplines. He invited delegations to further elaborate on these issues.

46. The representative of Canada said that government ownership and control were critical factors in defining government procurement. The representative of Hong Kong, China favoured in principle the inclusion of entities at all levels of government, but was not sure whether the legal form of operation or incorporation should be a determining factor. Criteria related to the form and structure of the markets concerned needed to be considered as well.

47. Notwithstanding the importance attached to **definitional** issues, the Chairman remarked that the negotiations under this item might benefit from Members giving thought to their ultimate purpose. This included in particular the question what common disciplines, if any, might be agreed upon at the end of the process. A prominent candidate would be the concept of non-discrimination. The Working Party endorsed his proposal of raising pertinent questions in the preparatory Note for the next meeting.

ATTACHMENT 3

References to Concessions in the Replies to the Questionnaire on Government Procurement of Services

Communication from Colombia (S/WPGR/W/11/Add.8, dated 4 October 1996)

1. *What is the definition of government procurement employed in completing this questionnaire?*

There is no explicit **definition** of government procurement. However, government procurement should be understood to mean the rules and procedures governing the purchase of goods and services, procurement of works and **concession** of activities of different kinds by public entities among themselves or with private individuals, in order to carry out and implement their objectives.

3.(a) *Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.*

Law 80 of 1993 was issued on the basis of the final indent of Article 150 of the Political Constitution, which empowers Congress to enact the general statute of government procurement and in particular procurement by the National Administration. Regulations under this Law have been enacted in various instruments, including the following: ...

- Decree 1448 of 1995 governing the grant of **concessions** for some telecommunication services; ...

Communication from Hong Kong, China (S/WPGR/W/11/Add.9, dated 7 October 1996)

3.(a) *Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.*

The Stores Regulations, supplemented by Financial Circulars issued by the Secretary for the Treasury, govern the government procurement process. Stores regulations are administrative measures made under the Public Finance Ordinance and are not statutory. The procedures laid down in these regulations and circulars are consistent with the provisions set out in the Tokyo Round of Agreement on Government Procurement.

The tender procedures set out in the Stores Regulations are required to be followed by all government departments for the procurement of stores, services as well as civil and engineering works, with the exception of the following for which separate procedures shall apply -

- (i) Franchises, **concessions**, leases, licences, tenancies and other items procured by public auction or method laid down by statute and government regulations.
- (ii) Private treaty grants of land, land exchanges, extensions and short-term tenancies of land.
- (iii) Consultancy service agreements approved by consultant selection boards appointed by the Secretary for the Treasury.

Communication from the European Communities and their member States (S/WPGR/W/11/Add.10, dated 2 December 1996)

5(a) *How are intended procurement publicised? Are invitations to tender published? If so, where, and in what languages?*

The Directives foresee common advertising rules for the tender procedures.

(i) Traditional sectors

Contracting authorities shall make known, by means of a notice, their intention to award a contract, a work **concession** or a design contest. This notice shall be sent to the Office for Official Publications of the European Communities, which shall publish it not later than 12 days after its dispatch (5 days in accelerated procedures)...

Communication from the Republic of Poland (S/WPGR/W/11/Add.12, dated 10 December 1996)

1. *What is the definition of government procurement employed in completing this questionnaire?*

... The **definition** of "public procurement" encompasses only purchasing activities. It does not include selling government-owned property or granting **concessions** or licenses unless, within the scope of these activities, the government is actually purchasing goods, services or construction.

Communication from Argentina (S/WPGR/W/11/Add.19, dated 2 May 1997)

2. *How are government procurement activities administered? Do what extent are procurement activities centralized? Please specify the identity of any central procurement agencies and their respective responsibilities.*

... Consequently, the procurement regime is subject to a single set of rules (see below, Laws and Regulations in force), with a distinction between goods and services on the one hand and public works on the other. As mentioned, there are also special procedures for public works **concessions**, which may include additional specifications depending on each particular case.

3(a) *Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.*

... The **regime for public works concessions** is contained in Law No. 17.520, as amended by Law No. 21.691, Law No. 23.696 and its Regulatory Decree 1.105/89.

In the case of public works and **concessions** the procedures are primarily contained in specific legislation, while the provisions of the Law on Accounting (Articles 3 and 61, paragraph 147, of Decree 5.720/72) apply on a supplementary basis.

4(a) *What procedures are followed in the procurement process? and*

4(b) *Under what circumstances are different procedures used? For instance, if the method used depends on the value of the procurement, the thresholds should be given.*

The Law on Public Works Concessions (Law 17.520) also recognizes three alternative methods: public tendering, direct contracting with public entities or government-owned companies, and contracting with mixed-capital or private-sector companies. In the latter case, when dealing with works of public interest, the choice is between public tendering or competitions for complete projects. In the latter case, invitations are issued for the presentation of projects with a view to the submission of proposals (Law 23.696, Article 58 and Decree 1.105/89). If a more desirable bid than that of the person presenting the proposal is made, both may improve their respective proposals within a period not exceeding half of the original presentation period. The opening of the bids, and the continuation of the procedure, the award and subsequent continuation of the contract are governed by the principles laid down in the Public Works Regime (Law 13.064).

5.(a) *How are intended procurements publicized? Are invitations to tender published? If so, where, and in what languages? and*

5(b) *Do the extent and form of publicity differ according to tendering procedures applied and/or the value of procurement?*

... Public Works Concessions: There are no specific provisions in Law No. 17.520, apart from the reference to the amendment of Article 4 contained in Law 23.696, which establishes the provisions for competitions for complete projects. In this case the invitation to present projects is made through notices in the Official Bulletin and in two national mass circulation newspapers for five days. These notices must give a summary of the initiative, set the date, hour and place for the submission of bids and the date, hour and place of opening. The time-period between the final publication of notices and the date of submission of bids must be at least 30 days and at most 90 days, except in carefully **defined** exceptional cases where the maximum time-period may be extended.

5(c) *What details of the intended procurement are normally published? Is there a minimum set of information that is required to be published? If so, please specify.*

... The Law on Public Works Concessions does not contain any provisions in this respect. Consequently, the provisions of the Law on Accounting apply, except as provided for in Law 23.696 on competitions for complete projects.

6(b) *What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of the intended procurement?*

... With regard to the tender process itself, in the case of procurement of goods and services, bidders must lodge a bid performance guarantee equivalent to 5 per cent of the total value of the bid or 10 per cent of that value in the case of licences or concessions (Article 61, paragraph 33, of Decree 5.720/72). Bidders do not have to lodge this guarantee at the time of submitting a bid, but must do so at the simple request of the procuring entity (Article 61, paragraph 37).

... With regard to the regime for concessions, any proposal submitted by private individuals for a complete project competition must be accompanied by a maintenance guarantee which may not be less than 2 per cent of the amount of the work. This guarantee is executable in the event of non-submission of the bid, but may be converted into the bid guarantee in the event of an invitation to

tender or competition. Nevertheless, if the bid is made subsequently, and the guarantee proves to be less than 2 per cent - with a 30 per cent margin - the bidder will not be considered to be the author of the proposal.

7.(a) *What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?*

... Law 23.696 and Decree No. 1.105/89 establishing its regulations amended the Law on Public Works **Concessions**, by stipulating as award criteria the economic/financial equation and the scope of the prior investments to be made in each case in order to obtain a real reduction in the tariff or charge to be paid by users.

10. *What, if any, are the procedures available for parties, domestic and foreign, to lodge complaints against the award of a contract? Please provide details.*

... With respect to public works and public works **concessions**, the provisions of the regulations on State contracts apply.

Communication from Costa Rica (S/WPGR/W/11/Add.22, dated 3 April 1998)

1. *What is the definition of government procurement employed in completing this questionnaire?*

In Costa Rica, government procurement covers all contracting activities conducted by public entities. This includes not only procurement of all types of goods and services, but also the construction of public works, **concessions** for government facilities, public services management **concessions**, public works **concessions** (governed by a special law) and the sale and leasing of government property.

3.(a) *Please specify the laws, regulations, rules, guidelines, decrees, decisions and other measures governing government procurement. What is the scope of their application? In particular, please describe any exemptions that exist. Please provide a brief summary of the content of each of these measures.*

With respect to government procurement, Article 182 of the Constitution stipulates that:

"Public works contracts concluded by the State, the municipalities and the autonomous institutions, procurement using funds from such entities, and the sale or lease of goods belonging to them shall be put out to tender, in accordance with the law as to the amount concerned."

The laws enacted in the light of the above constitutional provision are: the Law on Government Procurement (Law No. 7494 of 2 May 1995) which came into force on 1 May 1996, and the Regulation to the Law on Government Procurement (Executive Decree No. 25038-H), published in the Official Journal of 28 March 1996.

This Law on Government Procurement governs the procurement activities of:

- Executive organs;
- the Judiciary;
- the Legislature;
- the Supreme Court of Elections;
- the Office of the Comptroller-General of the Republic;

- the Office of the Ombudsman;
- the decentralized territorial and institutional sector;
- public enterprises (the majority of whose share capital is not in private hands);
- non-State public entities with more than 50 per cent public financing.

Other laws relating to procurement by public entities are:

- Organic Law of the Central Bank of Costa Rica, Article 171 of which regulates the procurement activities of State commercial banks and the Central Bank itself. According to this Article, each bank must issue its own procurement regulations, which must be approved by the governing board and by the Office of the Supervisor of Financial Entities;
- Municipal Code as regards certain regulations, in particular those concerning the sale and donation of municipal property;
- General Law on Public Works **Concessions** and the Regulations thereto, which regulate public works procurement;
- National Emergency Law, which regulates the action to be taken when a national state of emergency is declared;
- Law on Labour Corporations and Regulations thereto, developed to facilitate the shifting of personnel from the public sector to the private sector for the performance of auxiliary services;
- Law on Hydrocarbons and Regulations thereto, which regulate the procedures for granting **concessions** for mining and extraction of hydrocarbons;
- Law on Passenger Transport against Payment, which establishes the procedures for granting **concessions** in that sector and in the taxi transport sector;
- Precedents established by the Office of the Comptroller-General of the Republic, which is the administrative entity responsible for issuing guidelines for the interpretation of regulations in that area.

4.(c) *What are the time-limits for the submission of bids?*

... In the case of open tenders for public works **concessions**, the time-limit is 60 calendar days.

6.(a) *Are there registration, residence or other requirements for potential suppliers?*

For certain types of procedures (tendering by registration, selective tendering and single tendering) potential bidders must enter their names in a register in order to submit a tender. However, registration may take place once the proceedings are already underway. As regards residence, there are no requirements except in the case of public works **concessions**. In Costa Rica, any foreign company may conduct business provided it does so in conformity with the laws in force.

... For public works **concessions**, there are specifications for foreign participating countries, which are required, before signing a contract, to submit a declaration sworn before a notary in which they irrevocably undertake to comply with the requirements of Article 8, paragraph 4 of Law No. 7404 which stipulates that: "If the contract is awarded to a foreign legal person, that person must

transfer its head office to Costa Rica before signing the contract. If such legal person should decide not to transfer its head office, it must set up a domestic joint stock company in which it has full ownership, to act as a concessionaire. The shares of the concessionaire must be registered."

... The purposes of the company, whether Costa Rican or foreign, must expressly include the performance of public works **concessions**. The company is asked to ensure that the social pact **defines** the social conditions and grants the necessary authority to conclude, perform and comply with the contract in all its details, and assume the legal and economic responsibilities attached thereto *vis-à-vis* the government and *vis-à-vis* third parties. This social pact must extend at least ten years beyond the **concession**.

6.(b) What is the nature of any conditions for participation required from suppliers - such as financial guarantees, commercial standing and technical qualifications? Do the conditions of participation vary according to the nature of the tender process and/or the value of intended procurement?

... Three types of guarantee are required for public works **concessions**: a guarantee of participation in the open tendering procedure, a performance guarantee for the construction of the works, and a performance guarantee for the operation of the works.

7.(a) What criteria are taken into account in the award of tenders? Are criteria for award of contracts made available in advance to potential suppliers?

... In the case of public works **concessions**, the government must appoint an Assessment Commission for each procedure. This Commission is responsible for analysing and evaluating the bids. This involves carefully checking the bids against the conditions and specifications contained in the tender documents and comparing in accordance with the methodology **defined** therein. The rejection of bids on the grounds that they are not in line with the estimates reached by the government in previous studies is prohibited.

The analysis should make it possible to establish which bid or bids are most conducive to the general interest bearing in mind the nature of **concessions** and the particular characteristics of the works or services concerned.

APEC NON-BINDING PRINCIPLES ON GOVERNMENT PROCUREMENT

Communication from Hong Kong, China

The following communication, dated 20 September 1999, has been received from Miss Adeline Wong of Hong Kong, China, in her capacity as Chair of the APEC Government Procurement Experts Group.

I am writing in connection with the APEC Government Procurement Experts Group (GPEG), which was established in 1995 to consider ways to increase transparency of, and liberalize, government procurement markets in accordance with the Osaka Action Agenda adopted by APEC Economic Leaders in 1995.

In accordance with its action plan, the GPEG started the development of a set of non-binding principles on government procurement in 1997. On behalf of the GPEG, I forwarded the elements of and illustrative practices on the principles of transparency as well as accountability and due process to the WTO Working Group on Transparency in Government Procurement on 6 December 1997 and 29 March 1999 respectively for reference at the study phase (documents WT/WGTGP/W/11 and 22).

Since then, the GPEG has continued its work on developing the set of non-binding principles on government procurement. At its last meeting on 8 August 1999, the GPEG completed the development of the whole set of non-binding principles, and agreed to forward them to the Working Group on Transparency in Government Procurement for reference. A copy of the elements of and illustrative practices on the six non-binding principles is reproduced below.

I would like to stress that these elements and illustrative practices are non-binding, and shall not prejudice the position of individual APEC member economies in the discussion on transparency in government procurement in the WTO.

APEC GOVERNMENT PROCUREMENT EXPERTS GROUP

NON-BINDING PRINCIPLES ON GOVERNMENT PROCUREMENT (FINAL)

Introduction

1. One of the agreed APEC collective actions on government procurement (GP) was to develop by 1999 a set of non-binding principles on GP for adoption by members on a voluntary basis. The Government Procurement Experts Group (GPEG) completed the development of the non-binding principles in August 1999 and has identified the elements of and illustrative practices on the principles of transparency, value for money, open and effective competition, fair dealing, accountability and due process, and non-discrimination, as set out in this paper.

2. The principles developed by the GPEG are non-binding. Individual member economies are in the best position to decide on the applicability of individual elements to them, taking into account the specific characteristics of their economy and the costs and benefits of adopting specific measures. Considering the different levels of economic development among APEC economies and the diverse circumstances in each economy, flexibility will be available in the application of these principles in the course of achieving liberalization of government procurement markets in accordance with the principles, objectives and time-frames in the Bogor Declaration. The examples on practices included in this paper represent some of the possible ways to give effect to the elements of the principles developed by the GPEG, and are not intended to be prescriptive or exhaustive. Also, the elements and illustrative practices developed by the GPEG should not and will not prejudice the World Trade Organization (WTO) discussions on GP nor the positions taken by member economies in the WTO.

Elements of Transparency

3. *The general principle is that sufficient and relevant information should be made available to all interested parties consistently and in a timely manner through a readily accessible, widely available medium at no or reasonable cost. This general principle is applicable to all aspects of GP, including the general operational environment, procurement opportunities, purchase requirements, bid evaluation criteria and award of contracts, as further elaborated in paragraphs 5 to 14.*

- *Sufficiency and relevance of information:* to enable potential suppliers to make informed decisions. For example, potential suppliers must have access to information on the conditions for participation and the requirements of the intended procurement in order to decide whether to participate and to prepare a responsive offer.
- *Timeliness:* to ensure that the information is valid and useful when available to the receiver.
- *Availability to all interested parties:* to ensure that the procurement process is fair to all participants and seen to be fair.
- *Through a readily accessible medium at no or reasonable cost:* to ensure that information is accessible in practice.

- *Consistency*: the objectives of maintaining a transparent procurement system can only be achieved if the system remains consistently transparent. This also includes making information up to date and informing relevant parties of changes and additional information promptly.

4. Notwithstanding the above, the following information may be withheld: commercially sensitive information, and information the release of which would prejudice fair competition among suppliers, impede law enforcement, be contrary to public interest or compromise security of the economy concerned. Where such information is withheld, the reason should be given on request.

The general operational environment

5. *The laws, regulations, judicial decisions, administrative rulings, policies (including any discriminatory or preferential treatment such as prohibitions against or set aside for certain categories of suppliers), procedures and practices (including the choice of procurement method) related to GP should be transparent.*

6. This is to let suppliers know the rules of the game so that they can decide whether to participate. In practice, this can include:

- publishing these "rules" in a medium which is readily accessible to all;
- publishing either a positive or negative list of the entities subject to these "rules";
- publishing any changes immediately;
- establishing contact points for enquiries;
- wherever possible, providing a description of the above information on the APEC GP Home Page and linking APEC members' individual GP Home Pages, where available, with the APEC GP Home Page.

Procurement opportunities

7. *Procurement opportunities should be transparent.*

8. This would encourage wider participation leading to increased choices for the buyer and enhanced competition, contributing to achieving better value for money in procurement activities. In practice, this can include:

- making open and competitive tendering the generally preferred method of tendering. Where other procurement methods are to be used, any procurement invitations issued should indicate the intended method;
- where open tendering is adopted, publishing procurement opportunities in a medium readily accessible to suppliers (e.g. official journals/gazettes, newspapers, specialized trade journals, Internet, and through embassies and consulates);
- allowing adequate and reasonable time for interested suppliers to prepare and submit responsive bids;

- publishing contact details of purchasers, and their product/service purchase interests, for suppliers wishing to register their interest in being notified of bidding opportunities which may not be publicly advertised;
- making early advice of complex high-value procurement needs available to interested suppliers through staged procedures such as public requests for information, requests for proposals and invitations for pre-qualification, and allowing adequate time for interested suppliers to prepare and submit a response;
- making available requirements and procedures for pre-qualification of suppliers.

Purchase requirements

9. *All the information required for suppliers to prepare a responsive offer should be made available.*

10. This is to facilitate effective and efficient participation by potential suppliers in the procurement exercise. Also, because potential suppliers know the specific requirements, the non-responsive offers that the buyer may have to process can be minimized, increasing the operational efficiency of the buyer. In practice, this can include:

- including in procurement notices the following information: the nature of the product or service to be procured, specifications, quantity, time-frame for delivery, closing times and dates, where to obtain tender documentation, where to submit bids, and contact details from which further information can be obtained;
- publishing any changes to the above information immediately;
- providing tender documentation and other information to suppliers promptly on request;
- wherever possible, drawing up specifications in terms of performance/functional/operational requirements using international or other relevant standards.

Bid evaluation criteria

11. *All criteria for evaluating bids should be transparent and bids should be evaluated and contracts awarded strictly according to these criteria.*

12. This is to ensure fairness and integrity. In practice, this can include:

- setting out in procurement notices and/or tender documentation all evaluation criteria, including any preferential arrangements;
- maintaining proper record of decisions.

Award of contracts

13. *The award of contracts should be transparent.*

14. This would demonstrate government accountability to suppliers and the public. In practice, this can include:

- publishing the outcome of the tender including the name of the successful supplier and the value of the bid;
- as a minimum, promptly notifying unsuccessful suppliers of the outcome of their bids and where and when contract award information is published, and debriefing unsuccessful suppliers on request.

Due process

15. Due process and public accountability are essential elements of fair, open and impartial procurement procedures, and the availability of an avenue/channel for review of complaints is an element of transparency.

Elements of Value for Money

16. The general principle is that GP practices and procedures should be directed to achieving the best available value for money in the acquisition of goods and services to deliver, or support delivery of, government programmes.

17. The test of the best available value for money is a comparison of relevant benefits and costs on a whole of life basis. Purchase price alone is not an adequate indicator of total relevant costs. The lowest-priced compliant offer does not necessarily represent best value for money. Benefits in terms of savings to taxpayers and suppliers may also be obtained through improvement in the procurement processes and management.

Assessment of need

18. The desired outcomes of a procurement activity should be accurately identified.

19. This assists buyers in identifying those factors that will contribute to the value of the procurement's outcome. Buyers should not over-specify or under-specify the attributes and performance required to accomplish their objectives as these actions may affect the quality of value for money achieved.

20. In practice, in identifying the desired outcomes of a procurement activity, buyers may consider:

- where, why and when the need arises and for how long and for which unit or location;
- the programme objectives and functional requirements, with a focus on what is to be achieved rather than how it is to be done, to encourage innovative solutions that may improve the value for money outcome;
- whether the need is for the replacement or enhancement of existing resources, or to meet an entirely new requirement; and
- any alternatives, including the use of in-house resources.

21. Buyers may also develop a business case, including:

- consideration of funds availability;

- analysing and refining the initial statement of need;
- taking specialized advice from technical and procurement experts and on product availability, industry capability and potential risks or constraints;
- identification and treatment of any risks related to the procurement;
- setting out anticipated costs and benefits on a whole of life basis and, where appropriate, financial and sensitivity analysis which might include calculations of discounted cash flows; and
- identifying the costs of project management, including support requirements for technical and commercial expertise at the project approval stage, when these resources will need to be identified and the project team appointed.

Selection of appropriate procurement method

22. Buyers should, according to the needs of each procurement situation, choose the method that is likely to achieve the best value for money outcome. This includes encouraging levels of competition among suppliers commensurate with the anticipated value for money benefits from that competition.

23. No single type of procurement fulfils all requirements. Buyers should choose the method for each procurement that will best enable them to achieve value for money outcomes from a range of procurement methods according to the circumstances of each purchase. Procurement processes should be designed to facilitate appropriate levels of competition.

24. In practice, while open and competitive tendering should generally be the preferred method of tendering, in selecting the appropriate procurement method, buyers may take into account:

- the strategic importance of the procurement;
- the complexity and/or cost of the procurement;
- the complexity of the market-place and environment in which that procurement shall be undertaken; and
- constraints such as urgency, compatibility with existing goods and services, or existence of a sole source of supply.

Evaluation of suppliers and their offers

25. Buyers should evaluate suppliers and their offers to identify the bid offering the best value for money.

26. Buyers should:

- evaluate offers in a comprehensive and fully professional manner by taking account of the benefits and costs involved on a whole of life basis;
- establish or verify the competence, viability and capability of prospective suppliers;

- confirm that products offered comply with requirements including fitness for purpose and time-frames and reflect an understanding of the needs of the end-user;
- assess and allow for relevant risks;
- ensure that unnecessary costs are avoided and other costs are reduced wherever possible, for example, through clarification; and
- ensure that the contractual agreements entered into are a comprehensive and accurate reflection of the terms, conditions and obligations agreed between the suppliers and buyers.

27. In practice, supplier evaluation may be done through a pre-qualification process and/or be part of the evaluation of bids. When evaluating suppliers, buyers may consider their management competence, financial status, technical competence and other matters such as their legal identity, previous contract performance and similar information that will provide an indication of the suppliers capability to meet the procurement requirements. Where supplier evaluation is part of a pre-qualification process resulting in a register of suitable suppliers, buyers should regularly re-evaluate suppliers to confirm their continued ability to deliver value for money outcomes.

28. Evaluation of offers should be done in a whole-of-life context, so as to ensure that the best value is obtained for the procurement. Besides price and fitness for purpose, other factors that may be taken into account include performance, quality, reliability, delivery, inventory costs, running costs, warranties and after-sale support, and disposal.

29. In addition, negotiation, if not prohibited, may be considered to improve the value of a procurement outcome under certain circumstances, for example, when:

- it appears from evaluation that no one tender is obviously the most advantageous in terms of the specific evaluation criteria set forth in the tender notices or documentation;
- only one tender is received;
- potential suppliers raise reasonable objections or propose alternatives to the prescribed terms and conditions;
- offer prices are unfair and unreasonable in the circumstances; or
- there are substantial risks for either party warranting negotiation.

30. As a good policy, and to provide the buyers with the legitimacy for conducting negotiations, it is advisable to state in the tender notices and/or tender documentation that the buyers reserve the right to negotiate for the best offer and, if the submission of alternative proposals is allowed, that alternative proposals that improve the value of the offer may be submitted. The buyers should conduct the negotiations in a structured and ethical manner and should not in the course of negotiations discriminate between different suppliers. Properly drafted tender documentation, including draft contract terms and conditions, should ensure that negotiation with bidders commences from a well-defined base. Proper record of the negotiation should be kept.

The procurement function itself providing value for money

31. *Procurement systems should themselves represent value for money.*

32. Buyers should regularly monitor and evaluate their procurement systems to ensure that they are efficient, effective, appropriate and continue to represent value for money. Costs to buyers and suppliers of procurement activities should be minimised as far as possible.

33. This may be achieved by the following practices:

- procurements are effectively planned and approved prior to commencement;
- specifications are not unnecessarily complex or onerous;
- procurement activity is not unnecessarily complex, costly or time-consuming, but is still designed to adequately deliver value for money outcomes;
- pre-qualification, shortlisting and staged-procurement are undertaken where appropriate;
- regulation and red-tape is not unduly complex or costly for buyers and suppliers to address;
- contracts resulting from procurement activities should be managed so as to produce the best available value outcomes; and
- procurement officials should be trained and competent.

Elements of Open and Effective Competition

34. *The general principles are that the GP regime should be open and procurement methods should suit market circumstances and facilitate levels of competition commensurate with the benefits received.*

Open government procurement regime

35. *The GP regime should be transparent and GP readily accessible to the public and in particular to all potential suppliers. In addition, there should be a predictable bidding environment in which suppliers can readily evaluate their competitiveness and their chances of winning contracts.*

36. These can be achieved by acting consistently with the transparency principles and practices set out in paragraphs 3 to 15 above.

Encouraging competition in an open GP environment

37. *Procurement processes should be designed to encourage levels of competition among suppliers, commensurate with the anticipated value for money benefits from that competition.*

38. Considerations include:

- ensuring that the maximum number of potential suppliers are able to compete, including ensuring access for potential new suppliers to opportunities, consistent with value for money principles and with the efficient operation of the procurement system;
- ensuring that procurement procedures are flexible enough to accommodate market conditions; and
- avoiding unnecessary costs for buyers and suppliers.

39. In practice, buyers may choose from open, limited or restricted procurement processes depending on the circumstances of each procurement. The considerations are set out in paragraphs 22 to 24 above.

40. The following may be necessary to ensure that a procurement action facilitates effective competition:

- specifications are adequate and drawn up, where possible, in terms of performance/functional/operational requirements using international or other relevant standards;
- "or equivalent" should be added to a particular trademark, patent, design or type, specific source of origin, producer or supplier prescribed in tender documentation;
- sufficient time for tendering is allowed to enable interested suppliers to prepare tenders;
- where practicable, sufficient time is allowed to enable interested suppliers to initiate and complete any necessary qualification procedures;
- requests for offers are made in good time, effectively promoted in the market and are clear, succinct and informative;
- bids are evaluated expeditiously on a whole-of-life basis against notified criteria, giving all bidders full opportunity to demonstrate the benefits they can provide; and
- any negotiation undertaken with suppliers is conducted in a structured and ethical manner by trained and experienced negotiators.

41. Also, good market knowledge can help buyers to design and plan the procurement process, to identify possible new sources of supply as well as to conduct the procurement in the most effective manner. Buyers may use methods such as Invitation to Register Interest or Request for Proposals to identify the market and available or possible products or services, or to encourage suppliers to propose solutions where the fundamental nature of a solution to a requirement is not clear.

Responding to conditions that limit competition

42. *Buyers should ensure that limitations to competition are effectively addressed to ensure value for money outcomes.*

43. Competition may be limited by factors such as existence of monopolies or cartels, limited number of qualified suppliers, urgency of requirements, need for compatibility with existing products

and difficulty in persuading suppliers to bid. Buyers should adjust their procurement method to achieve the best value for money in such limited competition situations.

Elements of Fair Dealing

44. *The general principle is that the procurement system should be designed and buyers should conduct themselves in ways such that procurement activities are conducted in a fair, reasonable and equitable manner and with integrity.*

45. Fair dealing is especially important in GP because the expenditure of public funds is involved and procurement activities are thus subject to public scrutiny. Fair dealing promotes public confidence in the procurement process and mutual trust and respect between the buyers and suppliers which includes a clear understanding by all parties to a proposed transaction in regard to their obligations and expectations. This will in turn encourage participation and contribute to achieving the best value for money in the acquisition of goods and services. Unethical behaviour, on the contrary, will add costs to and/or reduce the quality of the goods and services procured and damage the image of the procuring entity.

Procurement process

46. *The procurement process should be fair and seen to be fair, and should treat all parties even-handedly.*

47. This may be achieved by the following practices:

- contact between all procurement and evaluation personnel and tenderers and prospective tenderers should be on a formal basis once the formal procurement process starts;
- all suppliers should be accorded fair and equitable opportunity and treatment at all stages of procurement from access to pre-tender information to debriefing and consideration of complaints (without prejudice to tenders in future);
- qualifications of suppliers and technical specifications should not be prepared, adopted or applied with a view to, or with the effect of, creating unfair advantages to some suppliers;
- tenders should be kept sealed until they are opened and there should be clear policy or regulations setting out the circumstances under which they would be invalidated;
- tenders should be opened by a designated tender opening team, which should authenticate the tenders and keep a duplicate copy of the tenders before passing them to the officers responsible for the evaluation of tenders. The names of the tenderers and tender prices should also be properly recorded by the tender opening team;
- clear and reasonable time-limits should be set for various stages of the procurement process and should be followed strictly by all parties. In particular, there should be a clearly defined policy on whether and in what circumstances late tenders may be accepted;
- technical specifications and evaluations should be undertaken by more than one evaluating staff member or a committee to confirm their freedom from bias, and to verify that the offers contain all the elements necessary to enable them to be compared on a common basis;

- any shortlisting process for negotiations should be conducted in a fair and equitable manner and any negotiations should be conducted in a structured and ethical manner; and
- bids should be evaluated and contracts awarded strictly according to the published criteria. Any action that the buyer is entitled to take, such as negotiations or cancellation of tenders, should be included in the published criteria.

48. *The GP regime should be transparent. This helps to avoid problems such as fraud and corruption.*

49. In practice, this can be achieved by acting consistently with the transparency principles and practices set out in paragraphs 3 to 15 above.

Procurement personnel

50. *Procurement personnel should at all times treat suppliers fairly and even-handedly and with integrity. Officials involved in procurement should have access to, inter alia:*

- advice about legal and legislative obligations and requirements;
- whole-of-Government advice such as Codes of Conduct; and
- agency-specific or work area instructions or directions, including procedures to address instances of conflict of interest.

Disclosure of interests

51. *Procurement personnel should not allow the pursuit of private interests to interfere with the proper discharge of their official duties. Also, they should not allow their conduct to warrant any suspicion of conflict between their official duties and their private interests. Early and open disclosure of personal interests will allow management to prevent a conflict of interest from arising.*

52. In practice:

- procurement personnel should disclose any interest, directly or indirectly possessed, which conflicts or might reasonably be thought to conflict with their public duties, or improperly influence their conduct in the discharge of their public duties; and
- procuring agencies should have a systematic way to address conflict of interests, e.g. where a procurement officer possesses an interest which conflicts with his public duties, the basis of that interest should be discontinued, or the person should cease the duties involved or obtain management permission to continue.

Gifts, benefits and hospitality

53. *Procurement personnel should not solicit or accept gifts, benefits or hospitality which might influence or be perceived to influence the conduct of their duties. Potential suppliers should not seek to influence procurement personnel in their duties by gifts, benefits or hospitality.*

54. In practice:

- procurement personnel should not solicit or accept benefits or advantages whether for themselves, their immediate family or business concern or trust with which they are associated from persons who have or seek to have supplies contracts with their agencies;
- procurement personnel should not accept any gift or hospitality from suppliers except as may be permitted under the rules of their agencies;
- when it is difficult to decide whether an offer of gift or hospitality is acceptable or not, procurement personnel should decline the offer or seek the advice of a superior;
- procurement personnel should report to management immediately any attempts by suppliers to undermine impartiality and independence of action by the offer of benefits or other form of inducement;
- procurement personnel should avoid occasions where their presence may appear to imply a close relationship with the suppliers or lead to perception of a conflict of interest;
- procuring agencies should have a clear policy on whether their procurement personnel may accept any purchasing privileges offered to them by suppliers. If such privileges are allowed, value and quantity limits should be set. It is vital that the requirement for fairness and equity is not compromised by this practice, which can place procurement personnel under pressure to regard certain suppliers favourably.

Confidentiality and accuracy of information

55. *Commercially sensitive information should be kept secure and should not be used for personal gain or to prejudice fair, open and effective competition. Information given by procurement personnel in the course of their work must be accurate, impartial and not designed to mislead.*

56. In practice, procurement personnel should:

- not give one supplier's or tenderer's prices to another to meet or beat;
- not reveal details of commercial arrangements, including the details of contract pricing, in a way that compromises the commercial interests of the supplier or contractor concerned;
- safeguard commercially sensitive information physically so that other parties do not release it deliberately or inadvertently; and
- not use information obtained in the course of official duties to gain directly or indirectly a pecuniary advantage for themselves or for any other person.

57. If a procuring agency engages consultants to assist in the tender evaluation process, they should also be subject to the principles in paragraphs 51 and 53 above. The contractual agreements with such consultants should contain a statement to this effect. The contractual agreements with such consultants should also stipulate that information gained during the tender evaluation may not be disclosed for a specified period after the evaluation.

Separation of responsibilities and authorization power

58. *To minimize the risk of unethical behaviour including fraud and corruption, a procuring agency should separate where practicable the various responsibilities and authorisations in procurement.* One method could be to rotate duties so that key decision areas are not continuously in the control of one individual. Rotation can reduce the risk of relationships that are "too cosy" developing between a particular staff member and a supplier, or the appearance of this.

Procurement records

59. *A record should be kept in relation to every contract awarded. The information recorded should be sufficient to justify decisions taken in the procurement process.*

Elements of Accountability and Due Process

60. *The general principle is that government procuring agencies and individual procuring personnel should be, and are seen to be, accountable to their governments, the end users, the public and suppliers for the efficient, cost-effective and fair conduct of their procurement; and that mechanisms for scrutiny of the procurement process and avenues/channels for review of complaints should be available.*

Procurement process

61. *Governments and individual agencies should establish and make known clear procurement laws/regulations/policies, practices and procedures; and procuring agencies and personnel should follow them without intentional or negligent infraction throughout the entire procurement process.*

Record keeping

62. *Proper record should be kept of the entire procurement process, including decisions and actions taken during the procurement process and the reasons for taking them, to the extent that is sufficient to justify the decisions and actions taken. These records should be retained for a predetermined period.*

63. In practice, matters that should be documented include:

- specifications of the items/services to be procured;
- approval to spend public moneys;
- selection of procurement methods;
- criteria for evaluating and selecting tenders;
- discussions with potential tenderers before tenders close;
- opening and authentication of the tenders received;
- names of the tenderers who have participated in tendering;
- contents of invalid tenders and reasons;

- clarification of tenders or other discussions with tenderers during tender evaluation;
- decisions on selection of tenders;
- authorization and signing of contracts; and
- reasons for varying a contract.

Independent scrutiny

64. *Scrutiny mechanisms should be put in place to support and ensure accountability and due process. Such mechanisms:*

- *should operate in ways that are independent, according to their circumstances, scope, and objectives, and are not subject to the authority, control or influence of scrutinized entities; and*
- *should treat, and be seen to treat, all parties even-handedly and fairly.*

65. In practice, such mechanisms may include:

- management controls and internal audit procedures designed to ensure efficiency, economy and probity in the agency's use of public resources;
- internal scrutiny of actions or decisions of a procurement official or section within an agency by another official or section of that agency; and
- scrutiny by another government agency, which may or may not be independent of government influence, such as an Ombudsman and government audit organization.

Review mechanism

66. *Mechanisms should be put in place for handling complaints about procurement processes or alleged breaches of procurement laws/regulations/policies/procedures which cannot be resolved through direct consultation with the procuring agency in the first instance. Such mechanisms should provide independent, impartial, transparent, timely and effective procedures for the review of such complaints or alleged breaches by suppliers who have, or have had, an interest in the procurement concerned.*

67. In practice, this can include:

- designating a review body/person for the purpose of an objective and impartial review of the complaints/alleged breaches. The review body may take the form of a court, an independent review body, a government agency not directly involved in the procurement, or a reputable private sector arbitration/mediation service. The review body should have no interest in the outcome of the procurement and its members should be secure from external influence during the review;
- providing for correction of the breaches or compensation for the loss or damages caused, which may be limited to the costs of tender preparation or protest;

- making information on the review mechanism including its scope, objectives and operations, and the rights and obligations of all parties involved, readily available and accessible to suppliers; and
- making the review mechanism available equally to domestic and foreign suppliers.

Openness and transparency

68. *The procurement process should be open and transparent.*

69. Openness and transparency support and help ensure accountability and due process. In practice, this can be achieved by acting consistently with the transparency principles and practices, including those in the area of award of contracts, set out in paragraphs 3 to 15 above.

Elements of Non-discrimination

70. *The general principle is that procurement laws, regulations, policies, administrative guidelines, procedures and practices should not be prepared, adopted or applied so as to afford protection/favour/ preference to, or discrimination/bias against, the goods, services or suppliers of any particular economy/economies.* The use of discriminatory practices in government procurement undermines the competitive process and thus the ability of member governments to achieve the best possible value for money outcomes.

71. *This principle should apply at all stages of procurement.*

72. In practice, this can be achieved through the following:

- the same information on procurement opportunities should be available in a timely manner to all potential suppliers. For example, publishing tender information through the Internet allows it to be available instantaneously to all interested suppliers wherever they are;
- criteria for qualification of suppliers, evaluation of bids, and award of contracts should be based solely on the ability to meet the procurement requirements such as technical competence, and value for money considerations in terms of relevant benefits and costs on a whole-of-life basis;
- where open call for tender is not practical, selective invitation to tender should be based on non-discriminatory and objective criteria of ability to meet the procurement requirements, consistent with the open and effective competition principles and practices identified by the GPEG earlier;
- tender specifications should not be prepared, adopted or applied with a view to, or with the effect of, creating bias for or against the goods, services or suppliers of any particular economy/economies; or unnecessary obstacles to trade. Where possible, tender specifications should be drawn up in terms of performance/functional/operational requirements using international or other relevant standards;
- bids should be evaluated and contracts awarded strictly according to the published criteria;

- post-tender negotiations, if allowed, should be notified in the tender notice and/or tender documentation. The buyer should conduct the negotiations in a structured and ethical manner and should not in the course of negotiations discriminate between goods, services or suppliers of different economies. Also, any opportunity to submit revised bids should be provided on a non-discriminatory basis;
- any debriefing should be available to all participating suppliers, and review procedures to all participating suppliers and suppliers having an interest in the procurement concerned, on a non-discriminatory basis; and
- suppliers should not be unjustifiably excluded from the procurement process.

73. Notwithstanding the above, the principle of non-discrimination should not prevent member economies from taking actions that are necessary for the protection of their essential security interests relating to the procurement of arms, ammunition or war materials; or to procurement indispensable for security or defence purposes. This exception should have limited application; it should not be used in an arbitrary or unjustifiable manner with the intention or effect of unnecessarily undermining the non-discrimination principle or restricting international trade.

TECHNICAL COOPERATION ACTIVITIES: INFORMATION FROM OTHER INTERGOVERNMENTAL ORGANIZATIONS

WORLD BANK

Addendum

At its meeting of 22 June 1998, the Working Group agreed to request the Secretariat to provide information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.

In consequence, the Secretariat wrote to relevant international and regional intergovernmental organizations requesting them to provide such information. The present document reproduces the information which has been received in response from the World Bank by means of a communication, dated 8 June 1999.

General

The World Bank policy unit, OCSPR, issued a new procurement directive in June 1998 revising the Country Procurement Assessment Review (CPAR). In FY99, approximately 20 CPARs were initiated in the six regions of the Bank (see the attached list of countries). Each review includes the joint Bank/government development of an action plan to improve the public procurement system in the country under review. The World Bank anticipates major growth in the area of support for procurement reform activities as the Bank continues to conduct CPARs and finance implementation of activities in the action plans.

To date, the Bank has neither tracked nor maintained data on the implementation of procurement technical assistance activities. Most of the financing is provided under financial management or public sector development projects that are designed and managed outside the procurement family.

Bank procurement staff are actively involved in providing procurement training, advice and assistance in the Bank's client countries. Procurement training is provided as part of the implementation process for every new project. In addition, the Bank works closely with the ILO International Training Center in Turin, Italy and several institutions in Africa to provide procurement training for staff from our client countries. Most of this training is Bank-specific intended to ensure proper implementation of the Bank's procurement guidelines. However, as the guidelines are based on international practices, they have been a source of development of procurement skills and knowledge. In addition, the standard bidding documents prepared for use on Bank-financed projects have been adapted by many countries for use in their public procurement system.

Specific Information by Regions

Latin America/Caribbean Region

1. Procurement Components in Bank-financed Projects

The LCR regional portfolio includes projects for public sector modernization and for financial and fiscal management in several countries (Honduras, Guatemala, El Salvador, Argentina, Colombia, Bolivia, etc.). Many of these include technical assistance, either directly or indirectly, to national procurement authorities as part of a broader programme of public sector reform. One concrete example of this type of work is in Jamaica.

Jamaica: Public Sector Modernization Project: This Bank-financed project, currently under implementation, includes a US\$2 million component to address Government Procurement, Contracting, Internal Control and Auditing. Among other activities, the component is financing the establishment of a **Procurement Policy Implementation Unit** in the Inspectorate Division of the Ministry of Finance; and institutional strengthening of the office of the **Contractor General** and of **Procurement/Contracting Units** and **Procurement Committees** in several Ministries.

New Projects under Preparation: As you know, we intend to include similar procurement components in new projects, as opportunities are identified through our work on CPARs (see below), Country Assistance Strategies (CASs), and other ongoing dialogues with our borrowers. In particular, we expect to include investments in capacity-building in Public Sector Modernization projects in **Trinidad and Tobago** (e.g. through assistance to Central Tenders Board, strengthening of procurement research and supervision capacity, and establishing a training centre) and in Guyana.

2. Country Procurement Assessment Reports (CPARs)

New format CPARs are planned for Guyana, Trinidad and Tobago, the Dominican Republic, Haiti and Uruguay in FY99. A possible CPAR is also under discussion for Paraguay. As you know, one of the key purposes of the new CPAR format is to help governments to increase their capacity to manage and monitor the procurement process. The design of detailed action plans for institutional improvements as part of these CPARs will constitute the delivery of technical assistance in this area. Financing for the CPARs will be provided by the Bank's own administrative budget, supplemented by Strategic Compact funding. Work is already under way on the **Guyana** CPAR and a plan of action to improve procurement processes in the country will be agreed upon with the Guyanese Government by the end of September.

3. Procurement Training delivered by Bank Staff and Consultants

LCR regional procurement staff and consultants regularly deliver about ten "Country" Procurement Seminars per year to government officials of the agencies implementing Bank-financed projects. While these seminars focus primarily on the application of the Bank's own Guidelines for Procurement and for Consultants Selection in Bank-funded projects, the fact that the Bank's guidelines are based in widely accepted international business practices makes the seminars a sort of introduction to international procurement procedures for government agencies.

In addition, through a new training initiative in Peru, Bank staff will provide technical assistance by leading a series of seminars as part of the Peruvian Government's efforts to establish a national programme for procurement training of government officials (a sort of "procurement college"). Topics covered by the seminars will include anti-corruption measures, procurement and privatization, international trade, legal and regulatory frameworks, etc.

Funding for such procurement training usually comes from the Bank's own administrative budget, although Institutional Development Fund (IDF) grants have also been used to launch training-of-trainers programme in Brazil, and the new initiative in Peru is expected to be funded entirely by the Government.

East Asia/Pacific Region

Technical Assistance Projects in the Philippines and China to establish ongoing procurement training facilities through local training institutions to provide training related to implementation of Bank-financed projects as well as improve public sector procurement.

DOMESTIC REVIEW MECHANISMS

Submission by the United States

The following communication, dated 23 June 1999, has been received from the Permanent Mission of the United States with the request that it be circulated to Members.

Issue: The Chairman's Checklist paper refers in element VIII to domestic review procedures. At the meeting of the Working Group on Transparency in Government Procurement on 25 February 1999 several Members continued to express concern about including a provision on domestic review mechanisms in a transparency agreement. However, the discussion at that meeting suggested a high degree of commonality in views on the issue. In particular, many of those Members expressing hesitancy appeared to confirm that they in fact already maintain either administrative or judicial mechanisms for hearing complaints regarding violations of domestic law on government procurement.

In order to clarify the issue of domestic review mechanisms and find common ground for addressing it in a transparency agreement, the United States offers the following comments and suggestions.

Background: Very early in the life of the Working Group, participants sought to distinguish domestic review procedures from WTO dispute settlement procedures by requesting the Chairman to address them in two separate sections of his Checklist paper (agreed at the Working Group meeting on 19-20 February 1998). The discussion that prompted the Working Group to separate the two issues highlighted that domestic review mechanisms are provided to resolve supplier complaints at a national level under the sovereign jurisdiction of a particular country, while WTO dispute settlement is available to resolve differences between WTO Members relating to the implementation of WTO obligations. In this discussion and others that followed in the Working Group, many participants noted that they already maintain domestic review mechanisms to resolve suppliers' complaints – some have administrative mechanisms, some judicial, while others have both.

Many WTO agreements provide for domestic review mechanisms to ensure that complaints or appeals can be raised and resolved under the jurisdiction of an individual WTO Member pursuant to national or local laws. The following are examples:

- GATT Article X:3(b) provides for "judicial, arbitral or administrative tribunals or procedures for the purpose, *inter alia*, of the prompt review and correction of administrative action relating to customs matters".

- Article 2(j) and Article 3(h) of the Rules of Origin Agreement provide that administrative actions related to determinations of origin shall be "reviewable promptly by judicial, arbitral or administrative tribunals or procedures, independent of the authority issuing the determination, which can effect the modification or reversal of the determination".
- Article 3(e) of the Import Licensing Agreement requires that applicants for licenses "shall have the right of appeal or review in accordance with the domestic legislation or procedures of the importing Member".
- Article 11 of the Customs Valuation Agreement (Agreement on Implementation of Article VII of the GATT 1994) provides the right of appeal for valuation determinations. An "initial right of appeal" may be to the customs administration or an independent body, but legislation must also provide "for the right of appeal without penalty to a judicial authority".

Similarly, the Agreement on Technical Barriers to Trade and the Agreements on Subsidies and Countervailing Measures and Anti-Dumping Practices contain domestic review provisions. The TRIPS Agreement contains very elaborate provisions for domestic review and enforcement.

Suggested Approach: We believe a transparency agreement should include a simple and flexible provision on domestic review mechanisms – one that can accommodate different Members' existing independent administrative or judicial tribunals and review procedures. Such a provision should ensure that there are transparent, timely and independent decisions on complaints or appeals relating to the transparency of procuring entities' actions and procedures. The scope of review of this provision under WTO procedures should be limited to actions relating to the implementation, through domestic laws and procedures, of the requirements of this Agreement.

Without prejudice to United States views in future discussions on the content of a domestic review provision in a transparency agreement, the following text could be an appropriate starting point for discussion, as it is modelled after existing provisions in other WTO agreements:

"Members shall maintain judicial, arbitral or administrative tribunals or procedures for the purpose of the prompt review and correction of procurement actions that may be inconsistent with the requirements of this Agreement, as implemented in Members' laws. Such tribunals or procedures shall be independent of the agencies responsible for procurements covered under this Agreement and shall provide for rapid decisions that, as appropriate, can effect the modification or reversal of any inconsistent actions."

APEC NON-BINDING PRINCIPLES ON GOVERNMENT PROCUREMENT: ACCOUNTABILITY AND DUE PROCESS

Communication from Hong Kong, China

The following communication, dated 29 March 1999, has been received from Miss Adeline Wong of Hong Kong, China, in her capacity as Chair of the APEC Government Procurement Experts Group.

I am writing in connection with the APEC Government Procurement Experts Group (GPEG), which was established in 1995 to consider ways to increase transparency of, and liberalize, government procurement markets in accordance with the Osaka Action Agenda adopted by APEC Economic Leaders in 1995.

In accordance with its action plan, the GPEG started the development of a set of non-binding principles on government procurement in 1997. The GPEG developed in 1997 a set of elements pertaining to the principle of transparency in government procurement and a list of practices illustrating how they could be implemented. On behalf of the GPEG, I forwarded on 6 December 1997 these elements and illustrative practices to the WTO Working Group on Transparency in Government Procurement for reference at the study phase (document WT/WGTGP/W/11).

Since then, the GPEG has continued its work on developing the set of non-binding principles on government procurement. At its recent meeting on 4 February 1999, the GPEG developed the elements of the principle of accountability and due process and a list of illustrative practices, and agreed to forward them to the Working Group on Transparency in Government Procurement for reference. A copy of these elements and illustrative practices is reproduced below.

I would like to stress that these elements of accountability and due process and illustrative practices are non-binding, and shall not prejudice the position of individual APEC member economies in the discussion on transparency in government procurement in the WTO.

APEC GOVERNMENT PROCUREMENT EXPERTS GROUP

NON-BINDING PRINCIPLES ON GOVERNMENT PROCUREMENT: ACCOUNTABILITY AND DUE PROCESS

Introduction

1. Under the APEC collective action plan on government procurement (GP), a set of non-binding principles on GP will be developed for adoption by members on a voluntary basis. The Government Procurement Experts Group (GPEG) has agreed to aim to complete the development of the non-binding principles by 1999. So far, the GPEG has identified the elements of and illustrative practices on the principles of transparency, value for money, open and effective competition and fair dealing.

2. At its ninth meeting on 4 February 1999, the GPEG further identified the elements pertaining to the principle of accountability and due process, and examples illustrating how these elements could be put into practice.

3. As with the principles previously discussed and agreed by the GPEG, the principle of accountability and due process to be developed by the GPEG is non-binding. Individual member economies are in the best position to decide on the applicability of individual elements to them, taking into account the specific characteristics of their economy and the costs and benefits of adopting specific measures. The examples on practices included in this paper represent some of the possible ways to give effect to the elements of accountability and due process identified in this paper, and are not intended to be prescriptive or exhaustive. Also, the elements and illustrative practices to be developed by the GPEG should not and will not prejudice the WTO discussions on GP nor the positions taken by member economies in the WTO.

Elements of accountability and due process

4. *The general principle is that government procuring agencies and individual procuring personnel should be, and are seen to be, accountable to their governments, the end users, the public and suppliers for the efficient, cost-effective and fair conduct of their procurement; and that mechanisms for scrutiny of the procurement process and avenues/channels for review of complaints should be available.*

Procurement process

5. *Governments and individual agencies should establish and make known clear procurement laws/regulations/policies, practices and procedures; and procuring agencies and personnel should follow them without intentional or negligent infraction throughout the entire procurement process.*

Record keeping

6. *Proper record should be kept of the entire procurement process, including decisions and actions taken during the procurement process and the reasons for taking them, to the extent that is sufficient to justify the decisions and actions taken. These records should be retained for a predetermined period.*

7. In practice, matters that should be documented include:
- specifications of the items/services to be procured;
 - approval to spend public moneys;
 - selection of procurement methods;
 - criteria for evaluating and selecting tenders;
 - discussions with potential tenderers before tenders close;
 - opening and authentication of the tenders received;
 - names of the tenderers who have participated in tendering;
 - contents of invalid tenders and reasons;
 - clarification of tenders or other discussions with tenderers during tender evaluation;
 - decisions on selections of tenders;
 - authorization and signing of contracts; and
 - reasons for varying a contract.

Independent scrutiny

8. *Scrutiny mechanisms should be put in place to support and ensure accountability and due process. Such mechanisms:*

- *should operate in ways that are independent, according to their circumstances, scope and objectives, and are not subject to the authority, control or influence of scrutinized entities; and*
- *should treat, and are seen to treat, all parties even-handedly and fairly.*

9. In practice, such mechanisms may include:

- management controls and internal audit procedures designed to ensure efficiency, economy and probity in the agency's use of public resources;
- internal scrutiny of actions or decisions of a procurement official or section within an agency by another official or section of that agency; and
- scrutiny by another government agency, which may or may not be independent of government influence, such as an Ombudsman and government audit organization.

Review mechanism

10. *Mechanisms should be put in place for handling complaints about procurement processes or alleged breaches of procurement laws/regulations/policies/procedures which cannot be resolved*

through direct consultation with the procuring agency in the first instance. Such mechanisms should provide independent, impartial, transparent, timely and effective procedures for the review of such complaints or alleged breaches by suppliers who have, or have had, an interest in the procurement concerned.

11. In practice, this can include:

- designating a review body/person for the purpose of an objective and impartial review of the complaints/alleged breaches. The review body may take the form of a court, an independent review body, a government agency not directly involved in the procurement, or a reputable private sector arbitration/mediation service. The review body should have no interest in the outcome of the procurement and its members should be secure from external influence during the review;
- providing for correction of the breaches or compensation for the loss or damages caused, which may be limited to the costs of tender preparation or protest;
- making information on the review mechanism including its scope, objectives and operations; and the rights and obligations of all parties involved readily available and accessible to suppliers; and
- making the review mechanism available equally to domestic and foreign suppliers.

Openness and transparency

12. *The procurement process should be open and transparent.*

13. Openness and transparency support and help ensure accountability and due process. In practice, this can be achieved by acting consistently with the transparency principles and practices, including those in the area of award of contracts, identified by the GPEG earlier.

**Working Group on Transparency
in Government Procurement**

Original: English

**TECHNICAL COOPERATION ACTIVITIES: INFORMATION FROM
OTHER INTERGOVERNMENTAL ORGANIZATIONS**

UNITED NATIONS DEVELOPMENT PROGRAMME (UNDP)

Addendum

At its meeting of 22 June 1998, the Working Group agreed to request the Secretariat to provide information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.

In consequence, the Secretariat wrote to relevant international and regional intergovernmental organizations requesting them to provide such information. The present document reproduces the information which has been received in response from the United Nations Development Programme (UNDP) by means of a communication, dated 28 September 1998.

Since the early 1990s, but increasingly over the past two to three years, UNDP has been changing its execution modality for technical cooperation projects from execution/implementation with the assistance of specialized UN agencies to a new concept of national execution through and by recipient governments. Accordingly, the responsibility for project procurement is being shifted towards the governments, which become fully responsible for managing all project inputs while still remaining accountable to the Administrator of UNDP for matching project objectives. In light of this development, UNDP recognizes that its overall responsibility for the most efficient and transparent use of its funds goes much beyond its fiduciary obligations and must increasingly focus on the development function of procurement and on enhancing government accountability.

In this context, UNDP has joined the ongoing efforts by the International Financing Institutions towards the same objectives, and has become an active member of their Working Group on Harmonization of Policies and Procurement Documentation. Within UNDP, major projects under this agenda will be the development of comprehensive guidelines that will govern all procurement funded by UNDP, with special emphasis on transparency and accountability issues, as well as the development and maintenance of standard documentation for solicitation, evaluation and contracting. UNDP's Programme for Accountability and Transparency is presently supporting work on: (1) the development of CONTACT guidelines (Country Assessments in Accountability and Transparency) as a tool for reviewing and analysing financial management and accountability systems in the public sector. The guidelines will include a specific component on procurement systems, as CONTACT is expanded to other areas of political and administrative accountability and transparency; and (2) the joint UNDP/OECD Comparative Case Study on Anti-corruption Reform (covering six countries) which aims to document, assess and synthesize best practices in anti-corruption. The current guidelines for research include specific components on procurement systems, as one of the areas vulnerable to corruption.

Country Offices of UNDP render assistance to the governments, on a transitional basis, to build up the necessary local capacities at government ministry level to sustain good management of public procurement. The above-mentioned efforts are supported and accompanied by a programme of training courses on transparent public procurement organized by IAPSO, for procurement personnel at UNDP country offices and their government counterparts, both on the national and regional level.

UNDP will also assume a visible role in the forthcoming "African Public Procurement Reform Conference" scheduled 30 November to 4 December 1998 in Abidjan, Ivory Coast. The International Trade Centre, African Development Bank, World Bank and UNDP are jointly holding the Conference to build awareness of the strategic value of public procurement, develop reform plans, and provide means for its sustainability and support.

COMMUNICATION FROM TURKEY

The following communication, dated 28 September 1998, has been received from the Permanent Mission of Turkey with the request that it be circulated to Members.

**GOVERNMENT PROCUREMENT IN TURKEY AND NATIONAL PROCEDURES
AND PRACTICES ON TRANSPARENCY IN GOVERNMENT PROCUREMENT**

I. INFORMATION ON LEGISLATION AND PROCEDURES

The primary legislation on public procurement in Turkey is the "Government Procurement Law" (GPL), Law No. 2886, which entered into force in 1984, altering the old one which had been in effect since 1934.

The Law applies to all types of procurement activities (supply, work and service contracts) of the administrations of general budget, annexed budget, city and town municipalities and other local administrations. Procurement contracts between a supplier/contractor and a contracting authority are executed according to the provisions of this Law.

Utilities which are carried out by either state economic enterprises or some other autonomous administrations are not subject to the provisions of this Law, since these administrations have their own regulations which are not very different from the GPL in many respects.

The GPL not only lays down rules on the selection of contractors and the award of contracts setting out the general principles of good business practice, but also states the conditions of conducting procurement activities, showing the process to be followed, in detail.

The main objectives of the GPL are value for money, efficiency, transparency and non-discrimination. Public procurements are open to all foreign suppliers and there is no restriction on the supplier's nationality or the place of origin. Foreign suppliers have full and non-discriminatory access to procurement information at all stages of the procurement process.

Technical specifications are prepared with the details needed to define the performance criteria rather than design or descriptive characteristics without any reference to a particular trademark or patent, specific origin, producer or supplier.

Contracting entities do not have the discretion of giving preference to domestic suppliers. The GPL permits only the Council of Ministers to do so. According to the Law, if a domestic

preference has to be given, the contracting entity has to obtain permission from the Council of Ministers. The preference margin has to be specified in the bidding documents.

At present, there is no decree in effect giving preference margin to domestic suppliers adopted by the Council of Ministers.

As a general rule, contracting entities have to follow closed and sealed envelope procedures (open tendering) with a prior call for competition. By way of exception, in certain cases specified in the GPL, either restricted or negotiated procedures can be followed.

For each procurement, a contract notice is published with relevant information about the subject-matter of the procurement and bidding procedure.

II. SCOPE OF GOVERNMENT PROCUREMENT

A. PROCURING ENTITIES

Departments of general budget, administrations of annexed budget, local administrations and city and town municipalities are covered by the GPL.

Public entities which are under the coverage of the GPL are shown below.

1. General Budget (including their regional and local sub-divisions)

National Assembly
Presidency of The Republic
Court of Accounts
Constitutional Court
Prime Ministry
State Planning Organization
Undersecretariat of Treasury
Undersecretariat of Foreign Trade
Council of State
Court of Cassation
State Institute of Statistics
Presidency of Religious Affairs
General Directorate of Title Deeds and Cadas
General Directorate of Meteorology
Ministry of Justice
Ministry of Defence
Ministry of Interior
General Directorate of Security
General Command of Gendarmery
Coast Guard Forces
Ministry of Foreign Affairs
Ministry of Finance
Ministry of National Education
Ministry of Public Works and Settlement
Ministry of Health
Ministry of Transportation
Ministry of Agriculture and Rural Affairs
Ministry of Forestry

Ministry of Labor and Social Security
Ministry of Industry and Commerce
Ministry of Energy and Natural Resources
Ministry of Culture
Ministry of Tourism
Ministry of Environment
Undersecretariat of Customs
Undersecretariat of Marine

2. Annexed Budget (Including their Regional and Local Sub-Divisions)

General Directorate of Agriculture Reform
General Directorate of Foundations
General Directorate of Physical Education
General Directorate of Highways
General Directorate of State Hydraulic Works
General Directorate of Coast and Frontier Guard
General Directorate of Forestry
General Directorate of Village Service
General Directorate of Petroleum Affairs
General Directorate of Social Service and Child Protection
General Directorate of Wireless Media
Higher Education Council
State Universities

3. City and Town Municipalities

4. Local Administrations

B. TRANSACTIONS

The scope of the GPL extends to all purchases, sales, services, construction, leasing, exchange, establishment of incorporeal right on property and transportation.

C. ENTITIES WHICH ARE NOT IN THE COVERAGE OF GPL HAVING THEIR OWN REGULATIONS

1. Entities which provide:

- Production, transport and distribution services of electricity.
- Transport by train.
- Services of airports or other terminal facilities by air.
- Telecommunication services.

2. State Economic Enterprise (SEEs)

III. TRANSPARENCY

A. NOTICE OF INVITATION TO TENDER

Regardless of the estimated value of the intended procurement, the procurement must be advertised twice in a daily newspaper in the town or city where bidding is to be held [Article 17(1), Law No. 2886].

The time interval between the first advertisement in the paper and the date of bidding can not be less than ten days and the time interval between the last advertisement and the bidding day can not be less than five days.

On the other hand, for works whose estimated value exceeds the amount to be determined every year by the budget law, in addition to the advertisements in the Article 17(1), the procurement must be advertised in a daily newspaper of major cities at least ten days prior to the date of bidding.

Works whose estimated value exceeds three times the amount of above paragraph will be advertised in the Official Journal at least ten days prior to the date of bidding.

Administrations may advertise these notices also in other papers published domestically or abroad and through other means of publication according to the importance and nature of the work.

In the bidding to be held by way of negotiated procedures the administrations are free to advertise or not to advertise.

Advertisements can be made in foreign countries to ensure sufficient competition for the biddings in which participation of foreign bidders is deemed advantageous by the administrations concerned. Such advertisement is made at least 45 days before the date of the bidding.

B. THE DETAILS THAT MUST BE CONTAINED IN ADVERTISEMENTS

Indicating the following points in advertisements is obligatory:

- (a) Nature, place and amount of the subject-matter of the bidding.
- (b) Where and under what conditions the specification and its enclosures can be obtained.
- (c) The place, date, time and method of procurement.
- (d) Estimated value, if any, and the amount of bid-security.
- (e) The documents that the bidders are required to present.
- (f) In the biddings to be held by submitting bids in sealed and closed envelopes, the deadline and time for submitting the bids.

C. SPECIFICATIONS (TOR)

The specifications and enclosures of any documents, describing all type of specifications of the subject-matter of the bidding, are prepared by the administrations.

In these specifications, in addition to the special and technical conditions to be imposed according to the nature of the procurement, generally the following matters are obligatory to be included:

- (a) The nature, type and quantity of the work.
- (b) The location, boundary, size, section, plot and block number and situation if available. And conditions according to the land registration in selling, leasing, exchanging and creating incorporeal rights on immovables.
- (c) Estimated value, amount and conditions of bid-security and performance security.

- (d) The place of execution of the work, mode and conditions of delivery and receiving of the work.
- (e) The date of commencement and termination of the work, penal interest to be collected in case of delay.
- (f) Qualifications and documents required from the bidders.
- (g) The conditions that the contracting authority shall be free, to award and decide against awarding contract and in determining the suitable price.
- (h) The conditions that the decision of award shall be approved or may be cancelled at the latest within 15 working days from the date of award by the superior authorized to issue payment order.
- (i) The party to pay taxes, duties, charges, and contracting expenses.
- (j) Place and terms of payment and whether an advance payment shall be made; if so conditions and amount thereof.
- (k) Price adjustment clauses in case the variations in the material or unit prices of the works are to be paid.
- (l) The cases and conditions under which extensions may be granted.
- (m) If a premium is to be paid in case of completing the work before its duration, where it is deemed to be advantageous, its conditions and term of payment.
- (n) Mode of settlement of disputes.

IV. REVIEW

Although, there is no independent and specialized Review Body in the GPL, a review procedure is available to all bidders. Bidders may lodge complaints against the application of the procurement procedures and the award of a contract with the procuring entity. If the procuring entity does not accept the complaints, any time, the bidders may lodge appeals according to the general rules.

On the other hand, prior to signing the contract any bidder, company or person who believes that a procurement has been carried out in a manner inconsistent with any provisions of regulations, may file complaint in writing with the Ministry of Finance (that exercises control over the contracting entities' contracting procedures and gives visa to procuring entities to sign contract) or the Court of Account. If the Ministry of Finance or the Court of Account finds any misuse of rules or contracting procedures, etc. during the preparation, execution and conclusion phases of procurement, they may suspend the award of contract.

It is clear that, after the signing the contract, the winner may lodge complaints against the application of the contract with the contracting entity. If the contracting entity does not accept the complaints, the winner may lodge appeals. Also, the procuring entity has a right to go to the court about the application of the contract.

V. METHODS OF PROCUREMENT

Five procurement procedures are applied in Turkey:

1. Closed and Sealed Envelopes Procedure

This procedure is an open tendering method. In this procedure, proposals have to be written and submitted in a closed and sealed envelope.

2. Selective Limited Tendering Procedure

Contracts should be awarded with competition. As it is explained in Article 44 of Law No. 2886, those works such as procurement of aircrafts, warships, war ammunition, military installation and supplies, dams, power stations, harbours, docks, railways, highways, bridges may be procured by employing the method of selective limited tendering procedure. But, in this procedure, at least three bidders must be invited. Also, Article 44 states that, if it is necessary to invite less than three candidates to submit a bid, it is essential to obtain a special permission from the Council of Ministers for this purpose based on the opinion of the Ministry of Finance.

But, in practice, the invitation is not extended to fewer than three bidders.

Under this procedure, proposals have to be written and submitted in a closed and sealed envelope.

Article 2 of Law No. 2886 states that competition is an essential principle. Competition is also an essential principle for the selective limited tendering procedure.

3. Public Tendering Procedure

Those works of which the estimated value does exceed the amount (US\$177,800, February 1998) to be established each year by the budget law, may be procured by employing the method of public tendering. Under this tendering procedure, offers are made verbally by the bidders to the bidding commissions. However, bidders may also submit their offers in writing.

This procedure is a form of open tendering. It is open to all suppliers. The differences between the closed and sealed envelope procedure and public tendering are the amount of works and the type of submission of proposals.

4. Negotiated Procedure

Those works of which the estimated value does not exceed the amount to be established each year by the budget law and also those works explained in Article 51 of GLP may be procured by employing the method of negotiated procedure.

The mode of receiving offers is not limited with a given form in the negotiated procedure. Biddings are concluded by receiving oral or written offers from one or several candidates according to the nature and requirements of the procurement and by reaching an agreement on the price.

The mode of negotiation, what kind of offers have been received and the reasons why the bidder who was awarded the bid has been preferred and explained in the commission's decision.

5. Direct Competition Procedure

Administrations may require all their study, planning and project works and the works related to fine arts to be accomplished by employing competition procedure. A contract may be awarded to the competitor whose project is to be applied through negotiation for the professional supervision related to such works.

In the GPL, also there are some specific procurement modes that are explained below:

1. Procuring entities falling within the scope of the GPL may procure any goods and services from each other by appraising the value after the favourable opinion of the Ministry of Finance.

In this case, production and execution of the goods and services being the subject-matter of the contracts have to be done by the mentioned public entities (in suppliers position), themselves.

2. As is described in Article 81(a) of the GPL, certain construction works up to TL 16 billion (US\$53,731, February 1998) (this value is changed each year by the budget law) and those works explained in Article 81 of the GPL may be procured by the concerned administration and carried out through force account commissions to be composed of the officials of the administration. In this case, the closed and sealed envelope (open tendering) procedure is used.

3. Article 89 of the GPL states that:

- In the cases when it is not possible to enforce the provisions of this Law
- Procurements for the reorganization of the Turkish Armed Forces and Security Department, modernization of their weapons, vehicles and equipment according to the modern technical developments
- For the procurement of the goods and services required to achieve the strategic objectives of the Turkish Armed Forces

the provisions of this Law may be disregarded by the Council of Ministers upon the proposal of the Ministry concerned. The procedures and rules to be employed in such biddings are determined by the concerned administrations and become final after the approval of the Minister concerned.

VI. A SUMMARY OF OBJECTIVES OF GPL, BIDDING DOCUMENTS AND QUALIFYING CONDITIONS

A. OBJECTIVES OF GPL

1. Economy

- Use of Competition
- Most Advantageous Offer
- Procurement Under Most Suitable Conditions and During the Season

2. Efficiency

- Decentralization
- Procurement Process

3. Non-Discrimination

- Open Tender Preferred
- Neutral Objective Specifications
- Rational and Non-discriminatory Qualifications
- Open to Foreign Bidders

4. Transparency

- Clear Rules
- Criteria Stated in Bid Documents
- Advertising

5. Accountability

- Responsible Decision-Makers
- Anti-Corruption Measures
- Control of Major Procurements
- General Guidance to Contracting Agencies

B. STANDARD BIDDING DOCUMENTS CONTAIN PROVISIONS RELATED TO:

- The Scope Of Work To Be Performed Or The Goods To Be Supplied
- Place, Date And Hour Of The Bidding
- Eligibility To Bid
- Method Of Bidding
- Preparation Of Bids
- Deadline For Bid Submission
- Procedure For Bid Opening
- Preparation Of Joint Venture Declaration
- Criteria For Bid Evaluation
- Definition Of Employer/Contractor And Rights And Obligations Of Both Parties
- Procedure For Bid Security And Performance Security
- Procedure For Payment Of The Taxes, Duties, Charges And Expenses
- Starting And Completion Date Of The Work
- Procedure For Measurement, Inspection And Acceptance Of The Work Performed
- Terms Of Payment And Advance Payment

- Price Adjustment Procedure
- Procedure For Variations Of The Work
- Procedure For Damages, Penalties And Delay
- Procedure For Termination Of Contract
- Force Majeure
- Settlement Of Disputes
- Applicable Law

C. MINIMUM QUALIFYING CONDITIONS REGARDING THE CAPABILITY AND CAPACITY OF BIDDERS TO UNDERTAKE THE WORK

- Legal Domicile (Not Necessarily In Turkey)
- Address For Notification (In Turkey)
- Document From Chamber Of Commerce/Industry
 - * Enrolled To The Chamber Of Commerce/Industry, or
 - * Foreign Legal Person Not Having A Branch In Turkey Must Have Documents Approved By The Turkish Consulate In Relevant Country Or By The Turkish Ministry Of Foreign Affairs.
- Signature Circular
- Bid Security (If Required)
- The Bid
- Other Documents
 - * Proof Of The Bidders Financial And Economic Standing
 - * Proof Of The Bidders Technical Knowledge (Tools, Plant, Equipment Etc.)
 - * Tax Payment Certificate
 - * Proof Of The Bidders Past Performance
- In Case Of Joint Venture Associated Undertaking Declaration Signed By The Partners

TECHNICAL COOPERATION ACTIVITIES: INFORMATION FROM OTHER INTERGOVERNMENTAL ORGANIZATIONS

UNITED NATIONS COMMISSION ON INTERNATIONAL TRADE LAW (UNCITRAL)

At its meeting of 22 June 1998, the Working Group agreed to request the Secretariat to provide information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.

In consequence, the Secretariat wrote to relevant international and regional intergovernmental organizations requesting them to provide such information. The present document reproduces the information which has been received in response from the United Nations Commission on International Trade Law (UNCITRAL) by means of a communication, dated 16 July 1998.

Communications from other intergovernmental organizations will be circulated as addenda to this document.

The UNCITRAL secretariat provides technical assistance to States preparing legislation based on UNCITRAL legal texts. Such assistance may be provided in various forms, including review of preparatory drafts of legislation from the viewpoint of UNCITRAL legal texts, technical consultancy services and assistance in the preparation of legislation based on UNCITRAL legal texts, preparation of regulations implementing such legislation, comments on reports of law reform commissions as well as briefings for legislators, judges, arbitrators, procurement officials and other users of UNCITRAL legal texts embodied in national legislation. In addition to technical assistance provided directly to the recipient country, the UNCITRAL secretariat may also advise other international organizations that provide law reform assistance in areas related to UNCITRAL work.

The UNCITRAL secretariat has, in one or the other fashion, provided technical assistance to all countries that have enacted legislation based on the UNCITRAL Model Law on Procurement of Goods, Construction and Services, since its adoption in 1994. The countries that to our knowledge have enacted the Model Law are indicated in the latest report of the Secretary-General on the status of UNCITRAL conventions and model laws circulated in document A/CN.9/449.

Under the training and technical assistance programme carried out by the UNCITRAL secretariat, the UNCITRAL secretariat regularly holds seminars and briefing missions primarily in developing countries. The standard programme of UNCITRAL seminars and briefing missions typically envisages some time for discussion of public procurement issues, including the UNCITRAL Model Law on Procurement of Goods, Construction and Services. The latest report of the Secretary-General on the training and technical assistance activities of the UNCITRAL secretariat has been circulated in document A/CN.9/448.

**TECHNICAL COOPERATION ACTIVITIES: INFORMATION FROM
OTHER INTERGOVERNMENTAL ORGANIZATIONS**

ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT (OECD)

Addendum

At its meeting of 22 June 1998, the Working Group agreed to request the Secretariat to provide information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.

In consequence, the Secretariat wrote to relevant international and regional intergovernmental organizations requesting them to provide such information. The present document reproduces the information which has been received in response from the Organisation for Economic Co-operation and Development (OECD) by means of a communication, dated 11 August 1998.

The main source of such assistance within the OECD is **SIGMA** (Support for Improvement in Governance and Management in Central and Eastern European Countries). Most of **SIGMA**'s funding comes from the European Commission's Phare programme, and a substantial proportion of its work is oriented towards the needs of countries in central and eastern Europe, as they make the transition to membership of the European Union. In the procurement field, this includes matching the standards of procurement legislation and administrative procedures achieved by EU members, as well as complying with wider international standards and requirements (such as those of the WTO and the World Bank) relating to government procurement.

Technical assistance projects in the procurement field in which **SIGMA** is currently engaged, or projects that are planned, include the following:

- (a) preparation of new public procurement laws in Bulgaria, Slovenia, Slovakia, Romania and the Former Yugoslav Republic of Macedonia;
- (b) setting up public procurement offices in Lithuania and Romania;
- (c) participation in the work of a procurement advisory committee established by the Government of Latvia;
- (d) developing a training strategy for procurement officials in Hungary;
- (e) advising the Baltic States on how to strengthen their procurement complaints and arbitration procedures;

- (f) providing comparative information on anti-corruption procedures in the procurement area;
- (g) publication of "Public Procurement: A Manual for Central and Eastern Europe" in December 1998;
- (h) a joint project with the International Training Centre of the ILO to prepare a "training of trainers" course in public procurement, based on the EC directives (for completion in December 1998).

Demand from the countries in the region for **SIGMA** assistance in the procurement field is growing as the process of European accession gathers pace.

It may be of interest to note other work that the OECD is conducting on government procurement, even though it does not fall into the category of technical assistance in implementing rules and procedures. The **Development Assistance Committee** (DAC) is reviewing government procurement practices in the context of efforts to untie Official Development Assistance (ODA) to least developed countries. The DAC is looking at the regimes governing bilateral aid procurement, with a particular focus on regimes for tied and untied aid. In addition to general information on the types of aid covered by tied and untied regimes and the locus of procurement responsibility (donor/recipient), the profiles set out information and procedures concerning eligibility, procurement regimes (e.g. international competitive bidding, international shopping, national competitive bidding, direct negotiation), advertising, bidding, evaluation and award, controls and accountability. This work will be completed in the first half of 1999.

Part of this work concerns "helping develop the capacities of the private sector and procurement systems in partner countries". A longer-term objective within this initiative is to identify partner country needs and the donor assistance required to move the responsibility for procurement into the hands of partner countries. This work will investigate the needs and requirements of both donors and recipients related to the further transfer of procurement responsibility to partner countries, including not only capacities to conduct procurement efficiently and effectively, but also in respect of standards for transparency, probity and accountability. The next stage of the discussion of these issues will be held at the meeting of the DAC's Working Party on Financial Aspects on 28-29 October 1998.

The **Trade Directorate** is carrying out research that aims at helping governments have a clearer idea of the size of government markets in OECD economies as well as non-OECD countries and addressing problems of data collection in this area.

The activity has two main objectives:

- (a) Better data on market size will allow countries to assess the potential economic gains deriving from liberal procurement policies. A clearer appreciation of the business opportunities generated by the public sector – at home and in foreign economies – may furthermore help attract broader participation in rule-making at the international level.
 - (b) Moreover, the identification of methodological weaknesses in the context of this research and further work underpinning the development of more rigorous and uniform methods for collecting data on government procurement – which raise complicated and technical issues – can contribute to the more efficient implementation of procurement systems at the national level and to international commitments in this area.

TECHNICAL COOPERATION ACTIVITIES: INFORMATION FROM OTHER INTERGOVERNMENTAL ORGANIZATIONS

ASIAN DEVELOPMENT BANK

Addendum

At its meeting of 22 June 1998, the Working Group agreed to request the Secretariat to provide information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.

In consequence, the Secretariat wrote to relevant international and regional intergovernmental organizations requesting them to provide such information. The present document reproduces the information which has been received in response from the Asian Development Bank by means of a communication, dated 20 August 1998.

Please be advised that the following procurement-related Technical Assistance (T.A.) was being implemented or planned for 1998:

- T.A. No. 2802-BHU (Bhutan): Improvement of Regulatory Framework for Procurement and Contracting;
- T.A. No. 2845-PRC (People's Republic of China): Establishment of National Procurement Regulations for the Public Sector;
- T.A. No. 2857-LAO (Laos): Institutional Strengthening of the Procurement Monitoring Office; and
- T.A. No. 3031-MON (Mongolia): Development of Procurement Legislation and Guidelines.

The brief description of the above T.A. can be accessed through the Internet <http://www.asiandevbank.org/law/menlaw.html>, section "Law and Development Bulletin", subsection "Projects by Country" or "Projects by Subject".

In addition, the following Bank activities are relevant to procurement:

- updating of the Bank's Guidelines for Procurement, expected to be approved within this year; and
- the Bank's Anticorruption Policy, approved in July 1998.

TECHNICAL COOPERATION ACTIVITIES: INFORMATION FROM OTHER INTERGOVERNMENTAL ORGANIZATIONS

AFRICAN DEVELOPMENT BANK AND INTERNATIONAL MONETARY FUND

Addendum

At its meeting of 22 June 1998, the Working Group agreed to request the Secretariat to provide information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.

In consequence, the Secretariat wrote to relevant international and regional intergovernmental organizations requesting them to provide such information. The present document reproduces the information which has been received in response from the African Development Bank by means of a communication, dated 21 August 1998.

The Secretariat has been informed by the International Monetary Fund (IMF) by means of a communication, dated 27 August 1998, that the IMF is working on fiscal transparency and is advocating transparency in government procurement. However, the IMF does not have any work programme directly related to government procurement.

The African Development Bank intervenes in its regional member countries through providing loans and grants primarily in the public sector. The Bank in its activities applies its rules of procurement, which are devised to guarantee equity and transparency of the procurement activities. Transparency is an important principle in the Bank's procurement rules.

By its mandate, the Bank must monitor and supervise all procurement activities under its financing. The monitoring process is carried out through the following activities:

- (a) Procurement and Disbursement Workshop for the staff of the government who are directly involved in project implementation such as project implementation units and to the staff of the supervising line ministries. These workshops are conducted at least once every two years in the Bank's borrowing countries.
- (b) Launching missions for the start-up of projects are designed to train project implementation units on the processing of procurement activities.

./.

- (c) Internally in the Bank, there is a Procurement Review Committee, which is an independent body entrusted with handling complaints and issues of unfairness. This Committee provides a forum to the bidders to address their grievances in an independent and transparent manner.
 - (d) The ADB Procurement Rules contain clauses which deal with the issues of transparency and corruption during the procurement process as well as how bidders can file their grievances against unfairness. Bidders are free to send copies of their communications on issues and questions with the Borrower to the Bank or to write to the Bank directly, when Borrowers do not respond promptly, or the communication is a complaint against the Borrower.
 - (e) Finally, the Bank will organize, in Abidjan, during the period 30 November - 4 December 1998, a continent-wide conference on public procurement. Most of the 53 regional (African) member countries will be represented in the conference at the policy and the operational levels. The International Trade Center, the World Bank, UNDP and the African Development Bank sponsor the conference.

TECHNICAL COOPERATION ACTIVITIES: INFORMATION FROM OTHER INTERGOVERNMENTAL ORGANIZATIONS

APEC GOVERNMENT PROCUREMENT EXPERTS GROUP (APEC/GPEG)

Addendum

At its meeting of 22 June 1998, the Working Group agreed to request the Secretariat to provide information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.

In consequence, the Secretariat wrote to relevant international and regional intergovernmental organizations requesting them to provide such information. The present document reproduces the information which has been received in response from the chair of the APEC Government Procurement Experts Group by means of a communication, dated 31 August 1998.

The APEC Government Procurement Experts Group (GPEG) was established in 1995 to consider ways to increase transparency of, and liberalize, government procurement markets in accordance with the Osaka Action Agenda adopted by APEC Economic Leaders in 1995.

In respect of technical cooperation, the work of the GPEG has so far focused on two aspects: information exchange and educational events.

On information exchange, the GPEG has completed questionnaire surveys on member economies' existing government procurement systems and publication arrangements for government procurement information. Members' returns to these surveys have been put on the APEC GP Homepage (website: <http://www.apecsec.org.sg/gphome.html>) for free and easy access by interested parties. These returns will be updated by Members annually. Moreover, contact points have been established to facilitate ongoing exchange of information.

On educational events, the GPEG is committed to hold workshops, seminars and training courses to enhance members' understanding of government procurement systems and international agreements and to provide a foundation for future work, with a view to achieving the long-term goal of liberalization of government procurement markets throughout the Asia-Pacific region in accordance with the principles and objectives of the Bogor Declaration by APEC Economic Leaders in 1994.

TECHNICAL COOPERATION ACTIVITIES: INFORMATION FROM OTHER INTERGOVERNMENTAL ORGANIZATIONS

EUROPEAN BANK FOR RECONSTRUCTION AND DEVELOPMENT (EBRD)

Addendum

At its meeting of 22 June 1998, the Working Group agreed to request the Secretariat to provide information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.

In consequence, the Secretariat wrote to relevant international and regional intergovernmental organizations requesting them to provide such information. The present document reproduces the information which has been received in response from the European Bank for Reconstruction and Development (EBRD) by means of a communication, dated 2 September 1998.

The EBRD takes a strong interest in the development of national public procurement legislation and the related institution-building activities in its countries of operations based on the public sector procurement models of WTO/GPA and the European Directives. The standard of a country's national public procurement legislation may under certain circumstances become an essential factor in determining the basis of its clients to undertake procurement under Bank-financed operations by applying national procurement procedures instead of the Bank's procurement rules and procedures. The Bank reviews regularly with its clients their laws, regulations and procedures in order to determine their consistency with the principles of the GPA and general acceptability to the Bank.

However, the Bank has not funded any technical cooperation grant-funded projects whose purpose has been solely to assist the governments of our countries of operations to develop and implement modern public procurement legislation, institutions and systems. Whilst it strongly advocates including a transfer of know-how component in the consultants' Terms of Reference wherever appropriate, the Bank's efforts focus primarily on the quality of procurement under the specific projects it finances as opposed to its significance from a general institutional perspective. The Bank's assistance to its clients in public sector procurement under its projects includes training of staff responsible for project implementation.

TECHNICAL COOPERATION ACTIVITIES: INFORMATION FROM OTHER INTERGOVERNMENTAL ORGANIZATIONS

UNCTAD/WTO INTERNATIONAL TRADE CENTRE

Addendum

At its meeting of 22 June 1998, the Working Group agreed to request the Secretariat to provide information on the technical cooperation programmes of international and regional intergovernmental organizations in the area of government procurement, so as to enable the Group to have as complete a picture as possible of the availability of technical assistance in this field.

The present document reproduces the information which has been received from the UNCTAD/WTO International Trade Centre and circulated in Job No. 667 on 5 February 1998.

Mission and background

ITC is the focal point institution in the UN system for providing technical cooperation in export promotion and trade development to developing countries and economies in transition. ITC's programme of assistance in international purchasing and supply management (earlier named import operations and techniques) is focused on making systems for the purchase of goods and services to meet the needs of a country more cost-effective. One of the major areas of work of this programme is public procurement.

Since 1979, ITC assistance projects covering public procurement have emphasized approaches that countries could use to reduce their import expenditures to achieve more positive international trade balances. ITC expertise has been instrumental in designing and implementing projects funded by major multilateral and bilateral donors such as UNDP, the Swedish International Development Agency, the Government of Switzerland and others. Some of the countries benefiting from this early approach to improve import operations were Angola, Burundi, Djibouti, Egypt, Ethiopia, Ghana, Haiti, Mozambique, Niger, Rwanda, countries in the South Pacific, Sudan, Tanzania and Tunisia.

To support these projects - and also to extend technical cooperation where such projects did not exist - ITC has developed a series of technical and training materials addressing various aspects of procurement and materials management. These are available mostly free of charge to developing countries and economies in transition. The materials developed to date include 24 practical guides, 19 case studies and exercises, 12 manuals and directories, a complete three-level commercial English course for importers, eight import management video packs and two computer-based import simulation exercises. ITC also collaborated with the World Bank and the International Labor

Organization in the preparation of an early guide to International Procurement and a recent series of handbooks for public procurement training.

ITC is committed to providing advice and assistance to countries seeking to improve their public procurement systems. However, the traditional "case by case" method of providing procurement advice through tailored assistance missions and projects has had a relatively high cost due to the independent analyses needed for each new project. To try to meet the challenge of delivering high quality procurement assistance in a targeted and sustainable manner, ITC is changing its past practice. Recent efforts of ITC have incorporated new strategic priorities and approaches for cooperation with partner countries. The new approach involves developing a set of universal tools and related services to build and operate national capacities for providing procurement training, consultancy and information support to purchasing organizations. This more integrated approach will significantly enhance the response time and cost-effectiveness of ITC's assistance in procurement and supply management operations. It will be centred around materials currently being developed by ITC. Some of these have been jointly developed with the United Kingdom's Chartered Institute of Purchasing and Supply. These include:

- *The Diagnostic Tools* will be used in assessing capacities and diagnosing problems in the procurement process at individual organisations. Separate versions of the diagnostic tools will focus on the needs of small and medium enterprises and of public sector procurement agencies. Collective requirements diagnosed in this manner will enable ITC and local organizations to design highly specific technical assistance programmes to meet identified needs through training, consultancy and information support. It will also be possible to later measure the effectiveness of these programmes.
- *The Modular Learning System* is being developed as the foundation of all future ITC efforts to build up training capacities in its partner countries covering all stages of the purchasing and supply process. Separate versions will exist for use by SMEs and public sector procurement agencies. It will be used for implementing either group-based training or individual open learning, and will include optional information technology support. The modular learning system will eventually integrate the full range of ITC's numerous technical materials and training aids relating to procurement. These will be made available through regular ITC dissemination channels, including through the Internet.
- *The Compendium Of Public Procurement Systems* will use existing data to provide a comparative reference on the scope of the public procurement system in a country. The information will be arranged by phase of the procurement process, as defined in the diagnostics and learning tools, for analysis and training purposes. The information in the compendium will provide a benchmark against which a country will be able to compare its procedures to those of other countries (e.g., solicitation methods or contract management approaches). The information will be submitted for review to the concerned countries in the first quarter of 1998. The survey should be completed in the third quarter of 1998. The compendium will be updated as necessary by individual countries but ITC will resurvey periodically to keep the information current.
- *Special materials for Purchasing and Supply Management Associations (PSMAs)*. The PSMAs play a key role in efforts at the national level to upgrade the competencies, recognition and effectiveness of professionals responsible for managing purchasing and supply operations. During 1996, ITC produced a handbook for the establishment and operation of PSMAs. In collaboration with the International Federation of Purchasing and Materials Management (IFPMM), ITC is developing a worldwide PSMAs directory to facilitate the growth of PSMAs. Direct assistance has been provided to PSMAs in

Hungary, Poland, Romania, Tanzania, Tunisia and Uganda, mainly through national and regional projects.

Specific projects undertaken

ITC has substantially increased its assistance efforts aimed at reforming public procurement systems and supporting national public procurement policy-making institutions. This assistance is being provided through various projects - and usually involves the development of national procurement guidelines, standard procurement documents and other procurement system elements, aimed at enhancing the implementation of new national procurement legislation. Training of public procurement staff in the application of these guidelines and documents is often a key component of these projects, financed in various cases through World Bank grants to the countries concerned (e.g., Albania, Kyrgyz Republic and Slovak Republic). Assistance in public procurement reform and/or capacity development has also been provided to Belarus, Brazil, Namibia, Uganda, Ukraine, Viet Nam and Zambia.

COMMUNICATION FROM MOROCCO

The following communication, dated 5 June 1998, has been received from the Permanent Mission of the Kingdom of Morocco with the request that it be circulated to Members.

Transparency in Government Procurement in Morocco

Introduction

The Kingdom of Morocco's government procurement regulations have been regularly adapted to reflect the numerous changes which have taken place in this field.

These various reforms have all had the same purpose, namely to enable the Government to control public expenditure by strengthening its management capabilities, giving the managers a greater sense of responsibility and clarifying relations with the business community.

At present, government procurement is regulated by Decree No. 2-79-439 of 14 October 1976¹ on construction, supply and services contracts awarded by the State, as well as by other laws and regulations.

These instruments make it possible to guarantee transparency in the preparation and award of public contracts through a range of measures such as the definition of requirements, publicization in the press, the submission of sealed bids, the opening of bids in public or private, according to the circumstances, and the evaluation of the bids by interdepartmental commissions.

I. TRANSPARENCY AND THE PREPARATION AND AWARD OF PUBLIC CONTRACTS

The public contract preparation and award phase is the key to the entire procurement procedure. In fact, at this level, the transparency and simplicity of the procedures are such as to ensure that the needs of the procuring entity are met, that potential bidders are well informed and, finally, that all things considered the best possible bid is chosen.

1. The definition of requirements and the transparency of the procurement process

The Decree of 14 October 1976 encourages managers accurately to define their requirements, in terms of quality and quantity, before soliciting bids. For the legislator, it is a question of ensuring

¹Official Journal No. 3339 of 27 October 1976, p. 1140.

that, on the one hand, the managers are in control of the procurement process and, on the other, that the contract is based on clear proposals and well-defined needs. This concern for transparency is illustrated by Article 2.1 of the above-mentioned decree which states that "services which form the subject of contracts must correspond, exclusively, to the nature and extent of the requirements to be met. The department concerned must determine, as precisely as possible, the specifications and the content of these services before any soliciting of bids or negotiation".

2. Transparency of the bid solicitation procedures

Where the award of public contracts is concerned, competition means ensuring that all the bidders are treated fairly.

Moreover, the free play of competition makes possible a better allocation of public resources and a good quality/price ratio.

The bid solicitation procedures adopted in the Decree of 14 October 1976 are of several kinds, depending on the nature of the goods or services and the circumstances in which they are provided. In this connection, a distinction is made between open and restricted procedures.

The open procedures (open adjudication, open tender and open competition) allow anyone to participate and bid.

Under the restricted procedures (restricted adjudication, restricted tender and restricted competition), only those whom the administration decides to consult, and whom it considers to be alone capable of meeting its needs because of the technicality or complexity of the specifications, receive circular letters inviting them to bid. However, these restricted procedures are exceptional and limited by the Decree of 14 October 1976 to specific cases and ceilings which may not be exceeded.

In addition to these procedures, public contracts may be awarded by direct negotiation. This allows the administration, in specified cases, freely to choose the supplier with whom it intends to negotiate the allocation of a contract. Direct negotiation may be used, *inter alia*, to contract for services declared to be secret or matters of public security, for objects which may be manufactured only by patent holders, and in cases of extreme urgency justified by unforeseen circumstances. It should be noted that even in the case of direct negotiation the administration is invited to encourage competition, to the extent possible and by all appropriate means, among the qualified candidates.

3. Publication of tender notices

Genuine competition in government procurement inevitably involves publicization. Thus, to ensure that the invitation to tender is widely circulated and the candidates are well informed, the Decree of 14 October 1976 establishes time-limits and procedures for publicizing the tender notice.

As far as the media used for publicization purposes are concerned, the Decree requires the procuring entity to publish the tender in two newspapers. In the case of restricted bidding, the procuring entity must notify by circular letter the bidders it decides to consult on the basis of their financial standing, human resources and technical competence.

Moreover, whether the bidding is open or restricted, the contents of the notice should be such as to ensure that the bidders are well informed. Thus, the notice should indicate the precise subject of the contract, the administrative and technical documents to be produced by participating bidders, the deadline for the receipt of proposals, and the date for bid opening and evaluation. Time-limits are also imposed on the procuring entity as regards the insertion of the solicitation notice (at least 15 days before the deadline for the receipt of proposals).

4. Bid acceptance and evaluation

The regulations take into account the principle of transparency with respect to the receipt and evaluation of bids through the guarantees they offer the participating bidders.

Thus, the bid or proposal of each bidder must be enclosed in a sealed envelope bearing the name of the bidder and the contract and, where appropriate, that of the lot concerned.

This envelope is accompanied by a second envelope, also sealed, containing the documents required and indicating the date of the tender, the subject of the contract and, in particular, a warning that the envelope should only be opened by the chairman of the commission at bid opening.

The envelopes are either sent through the post or delivered, with acknowledgement of receipt, to the offices of the procuring entity. The envelopes must remain sealed up to the date and hour fixed for bid opening and evaluation and any bid reaching the procuring entity after the expiration of these time-limits will not be accepted.

Whichever method is employed (adjudication, tender or competition), the bids are generally evaluated in public by an interdepartmental commission under conditions which guarantee transparency for the bidders.

It is important to begin by noting the representative membership of this commission which is chaired by the procuring entity. The other members consist of two representatives of the procuring entity's services, a representative of the Ministry of Finance and representatives, as appropriate, of the Ministry of Trade for supply contracts and the Ministry of Public Works for construction contracts. The chairman may employ experts or specialists to advise the commission on the evaluation of the bids.

With respect to the examination and evaluation of the bids, to achieve greater transparency the Decree of 14 October 1976 on government procurement requires the commission to combine several evaluation criteria. Thus, except in the case of adjudication, which is no longer much used and where the only criterion is the lowest bid, in selecting the bid most advantageous for the procuring entity the commission must take into account the evaluation criteria in the solicitation documents, such as the price of the goods, the cost of using them, their technical merit, the professional and financial guarantees offered by each of the bidders and, where appropriate, the proposed completion date and other considerations for which the specific articles and conditions may provide.

In addition, for clarification purposes and to achieve greater transparency, the commission may hear the bidders in order to obtain any necessary explanations concerning their proposals. In the event of several bids being considered generally equivalent, the commission is also empowered to propose that the procuring entity call for new bids.

Finally, as soon as it has made its choice, the commission must inform the other bidders of the rejection of their bids and return the accompanying documents, though not the bids themselves.

At the end of the proceeding, the commission must draw up a report which includes, where appropriate, the comments or objections of the bidders and indicates the reasons for eliminating those who were unsuccessful.

The observance of this set of rules designed to ensure transparency in the awarding of public contracts is the responsibility of the supervisory bodies which intervene either before or after the order forming the subject of the public contract has been filled.

II. SUPERVISION OF GOVERNMENT PROCUREMENT: GUARANTOR OF TRANSPARENCY

The supervision of public expenditure, particularly procurement, is the responsibility of bodies which mainly ensure that public contracts are properly awarded and executed, without neglecting to oversee the management of the public services as a whole.

Thus, the preliminary checks made by Control of Obligations² (CED) ensure that public contracts are properly awarded, and in particular that the procuring entity respects the rules of government procurement and that the expenditure is properly budgeted.

In this respect, Article 11 of the Decree of 30 December 1975 on the CED requires supervisors to check that obligations are covered by an available credit, are consistent with the budget line against which they are to be charged, have been properly evaluated and comply with the laws and regulations.

Thus, the principal purpose of these preliminary controls is preventive, namely to protect the interests of government contractors who are assured that the credits available are sufficient for the State to honour its obligations. A further aim of these controls is to ensure that the contract is balanced and consistent with the texts governing the execution of public contracts.

The preliminary controls are linked with another body of regulations governing the execution of public contracts. *Post facto* controls are applied by the Court of Auditors which has legal powers to oversee the management of the public purse.

There are two aspects to these controls: control of budgetary discipline, which involves verifying the regularity of the financial management of civil servants and officials, and management supervision, which involves assessing the performance of the government services, particularly those responsible for administering government procurement.

III. DISPUTE SETTLEMENT AND REVIEW PROCEDURES

In order to ensure transparency in the relations between the enterprise and the procuring entity with respect to contract performance, the general administrative conditions clearly establish the rights and obligations of each of the parties.

Thus, these regulations specify the relations that must be established at the time of execution of the contract between the procuring entity and the other contracting party, in connection with the monitoring of the works, supplies or services, the administrative orders to be notified to the enterprise, the procedures for granting advances and paying expenses, possible variations, provisional and final acceptance of the works, etc.

Thus, the general administrative conditions define the sanctions to be taken against the supplier in the event of default or non-performance, without neglecting the right of review offered to the latter. In the event of a difference between the procuring entity and the contractor, there is a possibility of hierarchical appeal to the Minister concerned or of administrative appeal. Finally, if the dispute cannot be settled, the parties may have recourse to the administrative courts.

In this way, the Kingdom of Morocco accords great importance to the clarification of public contract awards and implementation procedures. However, the regulations have a number of defects.

²Decree No. 2-75-839 of 30 December 1975 on the Control of State Obligations.

To remedy these, in the last few years, a reform of the government procurement code has been undertaken and a draft decree is in the course of being promulgated.

IV. REFORM OF THE GOVERNMENT PROCUREMENT CODE

The draft Decree on government procurement in the course of being promulgated constitutes a considerable advance towards greater transparency and sounder management of government procurement.

The objectives of the reforms are as follows:

- To improve the rules of free competition and to extend their scope;
 - to introduce mechanisms that guarantee transparency in the preparation, award and performance of public contracts and the simplification of procedures;
 - to strengthen the rules of administrative ethics and to clean up procurement at both government and enterprise levels;
 - to create favourable conditions for the fulfilment of the international commitments undertaken by Morocco.

in Government Procurement**

Original: English

COMMUNICATION FROM THE EUROPEAN COMMUNITIES

The following communication, dated 18 May 1998, has been received from the Permanent Delegation of the European Commission with the request that it be circulated to Members.

ENSURING THAT TRANSPARENCY IN PROCUREMENT POLICIES AND PRACTICES IS ACHIEVED

This contribution considers only what elements are required to ensure that transparency in procurement policies and practices is achieved. As such it does not consider more horizontal issues which would need to be addressed in developing a WTO transparency agreement, such as definition and scope, exchange of information between governments or technical assistance.

Transparency means ensuring that information on procurement rules, practices and opportunities are made widely available in an easily usable form to all interested parties (and particularly potential suppliers), as well as ensuring the right of access to that information. Furthermore, procurement policies and practices should be seen to be transparent and information provided should be respected. In addition, transparency can be a useful tool to encourage open and competitive procurement regimes, thereby helping both purchasers and suppliers to achieve economic benefits.

The following points have been raised to date as requiring consideration in relation to this:

1. Choice of procurement method

The method of procurement used should not undermine the principles and objectives of a transparency agreement to encourage open and competitive regimes. Any provision relating to procurement methods should be sufficiently flexible to accommodate the diversity of different procurement methods used, and should allow for the possibility of using methods which are not based on tendering.¹

¹ Whilst the methods used by WTO Members - at least for larger value contracts - mostly seem to be based on the principle of tendering (open, selective, limited), they are not necessarily limited to this (e.g. purchase cards, electronic catalogues).

The use of methods which, from the outset, severely restrict competition (e.g. single-source procurement) should only be used in justified and exceptional cases. An illustrative list of such exceptional cases should be developed. This should be based on existing widely-found practices including, but not necessarily limited to, the following:

- reasons of extreme urgency brought about by circumstances unforeseeable by the procuring entity;
- national security reasons;
- in procurements involving the protection of patents, copyrights or other exclusive rights; or
- in the absence of responsive bids under methods which do not severely restrict competition.

2. Providing information on national legislation and procedures

It is essential that all interested parties know in advance what the domestic procurement rules are, what procurement opportunities they can expect to be open to them and the general environment in which they are expected to operate. Therefore, laws, regulations, policy guidance and administrative procedures should be readily and easily accessible in a usable form to all interested parties, including potential foreign suppliers. This information should be provided at no more than cost. The medium through which this information is provided (e.g. publication in a Gazette, or in electronic format) should be left to the discretion of Members.

It would be desirable if interested parties were to know either where to go to locate this information, or who to ask. A requirement to notify either the source of this information and/or to establish and notify an enquiry point (which could take the form of an Internet Website) should be considered.

3. Publication of procurement opportunities and procedural requirements

Procurement opportunities and procedural requirements relating to those opportunities should be made known and be generally available through an accessible source.

The source used should be left to the discretion of WTO Members, but its level of availability should be proportionate to the likely level of interest in the procurement. In other words, where a procurement opportunity is likely to attract international interest, procurement opportunities should be published through a source which potential foreign suppliers and service providers have access to, as opposed, for example, to posting a notice in a town hall.

Interested parties should know what the source is and have access to it.

Electronic publication should be used where feasible and taking into account the level of development of individual WTO Members. Electronic publication offers significant benefits in terms of both time and cost, and (based on current trends) will be used increasingly in the coming years. However, at the present time, not all WTO Members have the capability to make use of electronic means of procurement, neither do all suppliers. Some flexibility will therefore be needed. Nevertheless, it seems safe to assume that potential suppliers to those Members who use electronic publication are likely to have access to the Internet. To enable WTO Members to meet such a requirement, suitable technical assistance should be provided.

Exceptions to the obligation to publish procurement opportunities (e.g. to take account of limited tendering in the case of the EC) should only be permitted in exceptional and justified cases. These circumstances should be the same as those set out for the use of procurement methods which severely restrict competition.

3.1 What information should be provided?

All information required for potential suppliers to assess their interest in a procurement opportunity or a registration/qualification system, and to prepare a responsive offer should be made available. This includes both information pertaining to the supplier and information pertaining to the goods/services to be procured. Members should be able to decide whether this is done just through the use of tender notices, or whether the bulk of information is contained in the tender documentation or by other means.

Where procurement takes place by means of tendering, this general principle could usefully be further elaborated through the development of an illustrative list of the sort of information which must be provided including, but not necessarily limited to the following:

- full contact details of the procuring entity, as well as coordinates of a contact point from which additional information may be requested, the final date for making such requests and, if applicable, the cost of such information;
- an identifiable description of the goods and/or services to be provided, together with their quantity or an indication of their extent;
- the place of delivery, site or place of performance of the service and, if applicable, the time-limit for delivery, completion or duration of the contract;
- any requirements relating to the supplier or service provider, for example economic or qualification requirements;
- any technical requirements;
- the criteria for the award of the contract; and
- the final date for the receipt of bids or requests to participate, the address to which this must be sent and details of any language requirements in this respect.

3.2 Time-limits

Sufficient time should be allowed for the preparation, submission and receipt of responsive bids to individual procurement opportunities. Any time-limits which are set should not undermine the principles and objectives of a transparency agreement. They should be determined with due consideration to the particular circumstances of the procurement (including the likely level of interest) as well as the complexity of the procurement.

4. Transparency of decision-making

Decisions on supplier qualification and contract award should be taken only on the basis of criteria (including in relation to technical specifications) which have been made known in advance. Where procurement is carried by means of tendering, this information should be made known through either the tender notice or the tender documentation. A transparency agreement would not, as a general rule, set out what those criteria should be. Nevertheless, as far as technical specifications are

concerned, transparency is increased if these are defined in accordance with international standards where these exist.

In addition, a public announcement about the contract awarded is essential to provide bidders with the opportunity to assess whether the procurement rules and practices have indeed been followed. It is also of interest to industry generally (as potential future bidders) and to governments which will want to see the transparency agreement working in practice. The means by which this is done should be a matter of choice for individual WTO Members, but it should be known to interested parties.

It would also be desirable if unsuccessful bidders were provided with information, when they themselves request it, as to why their bid was rejected and/or the winning bid was chosen. This is an important guarantee of transparency, particularly in circumstances where limited information on the contract awarded is provided.

It is, however, important that the issue of safeguarding confidential information is taken into account. Procuring entities should not be obliged to provide confidential information which would prejudice the legitimate commercial interests of particular enterprises (whether public or private).

5. Domestic review

It is not sufficient that rules are introduced to ensure transparency in government procurement practices. There must also be a domestic mechanism to introduce accountability into the process and to ensure that the rules are respected by everyone involved in the process. This mechanism should itself be transparent and provide a guarantee of independence.

This can be achieved through the combination of a variety of means:

- procuring entities should be required to maintain a proper record of proceedings;
- at their request, unsuccessful suppliers should be informed of the outcome of their bids and debriefed. Individual WTO Members should be able to choose how to do this, but interested parties should know what the method is;
- WTO Members should be required to provide a transparent, fair and independent procedure for the review of complaints which should be available to all potential suppliers, including foreign suppliers. The choice of procedure should be left to individual WTO Members. It should result in a published and reasoned conclusion.

6. Language

WT/WGTGP/W/6 shows that documents and other information relating to tendering proceedings are generally provided in the official language(s) of the country of the procuring entity. As a rule, documents and other information relating to procurement procedures and individual procurements should be allowed to be provided to potential suppliers and service providers in an official language of the country of the procuring entity. In general, potential suppliers wishing to do business in another country will have the necessary language facilities available. There should not be a specific requirement to provide such information in a WTO language. Nevertheless, procuring entities could be encouraged to provide information in a WTO language where a particular procurement opportunity is likely to attract international interest.

The issue of notification requirements to other governments and the WTO should be considered separately.

7. Use of information technology

A transparency agreement should provide for the possibility of using IT tools to disseminate information as an alternative to more traditional methods of communication. It is particularly useful for the dissemination of information about procurement opportunities and contracts awarded. Indeed, as mentioned in section 4 above, electronic means of disseminating information about procurement opportunities should be used wherever this is feasible. However, where they are used, IT tools should not undermine the basic principle of guaranteeing access to information.

COMMUNICATION FROM THE EUROPEAN COMMUNITIES

The following communication, dated 18 May 1998, has been received from the Permanent Delegation of the European Commission with the request that it be circulated to Members.

TECHNICAL ASSISTANCE

Technical assistance is an important element to ensuring the success of a future transparency agreement. It can and should play a role in helping WTO Members (present and future) to implement the agreement, in developing domestic regimes and in taking further practical steps to enhance transparency of procurement policies and practices.

The European Community has an extensive range of technical assistance and cooperation programmes with third countries which have been developed together with the beneficiary countries to meet their individual needs and priorities. The EC wishes to contribute to the debate within the Working Group on Transparency in Government Procurement by drawing on its own experience of technical assistance programmes to provide a brief overview of why, and in what forms the EC provides, or could foresee, technical assistance in areas which might be of interest to the Working Group.

The reasons the EC provides technical assistance in areas related to government procurement include, but are not limited to:

- the creation of modern and effective public administrations;
- the promotion of good governance and the rule of law;
- helping to achieve best value for money in government purchasing and use of taxpayers' money in this regard;
- assisting in the fight against corruption;
- enabling benefits to be gained from technological advances, particularly in the field of information and communication technology; and
- to facilitate the implementation of agreements and cooperation programmes to which the EC is a Party.

./.

What forms could technical assistance take?

- economic and policy option analysis, legal advice and assistance in drafting laws, administrative and/or policy guidance;
- training, such as practical training for those who have to implement, use or enforce new legislation, procedures and/or practices, training the judiciary, and training local trainers who will continue training programmes in, for example, business schools or colleges of public administration in the beneficiary country;
- administrative cooperation to enhance institution building and the exchange of information. For example, the EC has a programme providing for the exchange of officials between the EC and the beneficiary country for short periods of up to six months;
- workshops, seminars and the production of user guides, including the development of Internet Websites, search engines and databases, to help provide information about opportunities to do business with governments at home and abroad, and to facilitate access to that information. Such assistance can be of particular benefit to small- and medium-sized enterprises, increasing their confidence and effectiveness in successfully entering procurement markets at home and abroad;
- taking practical steps to make procurement more user-friendly by developing standard forms for tender notices and fill-in-the-blank bid forms, as well as developing a common procurement vocabulary;
- the development of IT tools which can be used to disseminate information about procurement opportunities and practices, and/or to establish full electronic tendering, as well as to facilitate the collection of relevant economic data and statistics;
- the provision of office, IT and/or other equipment necessary for the implementation and enforcement of legislation, procedures and/or practices.

Concluding remarks

The EC fully supports the inclusion of a provision on technical assistance in any future transparency agreement and would advocate the use of language which mirrors that of Article 67 of the TRIPS Agreement. The EC is prepared to consider positively any additional suggestions which might be made in this field.

INFORMATION ON PROCEDURES AND PRACTICES ON TRANSPARENCY IN GOVERNMENT PROCUREMENT

Communication from Australia

The following communication, dated 17 February 1998, was received from the Permanent Mission of Australia with the request that it be circulated to Members.

Introduction

1. This note is intended as a contribution to the study phase of the Working Group on Transparency in Government Procurement of the World Trade Organization (WTO). It outlines the procedures and practices of the Australian Commonwealth Government relating to transparency in government procurement, incorporating new simplified purchasing arrangements announced by the Australian Government on 11 December 1997.

2. Australia is a federation. In addition to the National or Commonwealth Government, there are six State Governments and two Commonwealth Territory Governments. Each of these has its own procurement legislation, policies and procedures. The third tier of government is local government.

3. There is no national regulation of procurement by subnational governments and their agencies. However, the Commonwealth, State and Territory Governments and the New Zealand Government are parties to a Government Procurement Agreement (GPA) which commits them to:

- remove discrimination among themselves in government procurement; and
- work in a coordinated way to improve procurement practices and procedures and to introduce greater uniformity across jurisdictions.

Basic principles

4. The Government reaffirmed in December 1997 that value for money, open and effective competition and ethics and fair dealing will remain the guiding and fundamental principles for government buyers.

- Value for money. Commonwealth procurement practices and procedures are directed towards achieving the best available value for money in the acquisition of goods and services for government programmes. The test for the best available value for money is a comparative evaluation of all relevant costs and benefits over the whole life of the goods or service being considered. Buyers will not necessarily obtain the best value of money by accepting the lowest priced offer that meets all mandatory criteria.

- Open and effective competition. This is a central operating principle of Commonwealth procurement, permitting a range of procurement methods. It demands transparency in the procurement process and ease of entry for new and small suppliers.
- Ethics and fair dealing. The Government requires that agencies and individuals conduct activities in a fair and reasonable manner and with integrity.

5. The Commonwealth Government expects its agencies to reflect its wider policies in the way they do business. For example, when acquiring office accommodation and fitting it out with furniture and equipment, agencies need to ensure that they observe government policy and best practice on occupational health and safety. Policies to be supported through government procurement include environmental policy, heritage policy, creation of opportunities for Aboriginal and Torres Strait Islander people, elimination of discrimination against women in private sector employment, and foreign policy (e.g. maintenance of any UN sanctions).

National legislation and procedures

6. Australia does not apply any preference margins, set-asides or offsets requirements with respect to Commonwealth Government procurement.

7. In the Commonwealth Government, the management of procurement is substantially decentralized with each agency being responsible for its own procurement within a centrally-prescribed framework of procurement policy and advisory guidance on best practices and techniques. The policy framework is set out in the *Commonwealth Procurement Guidelines*, which are issued by the Minister for Finance and Administration.

8. Commonwealth departments and agencies bound by the *Financial Management and Accountability Act 1997* and its Regulations are to operate in accordance with the policies and best practices as set out in the Guidelines. The Guidelines can be viewed and down-loaded free over the Internet at <http://www.pa.gov.au>.

Evaluation criteria

9. The Commonwealth Procurement Guidelines direct that the evaluation criteria for any particular procurement should clearly identify the relative importance of all relevant factors, and provide a sound basis for a procurement decision. Agencies should evaluate each offer applying only the evaluation criteria and methodology notified to bidders in the request for tender documentation.

Common use arrangements

10. Strategic Common Use Arrangements (CUAs) will be introduced for goods and services that are fundamental to Commonwealth operations and offer potential significant savings for the Government. The use of these arrangements will be mandated for the term of the arrangement, with the agreement of relevant portfolios, or where the Minister for Finance and Administration, following consultation, concludes that the interests of the Commonwealth are best served by such an arrangement.

11. In key industry segments that are not covered by strategic CUAs, but in which the Government is a major purchaser, or there is a risk of market failure, a pre-qualification scheme for suppliers is being developed by the Department of Finance and Administration. These schemes will help agencies manage risk in their procurement activities and give greater confidence in selecting suppliers that conform to minimum quality, service delivery and performance standards.

12. Although participation in the scheme will not guarantee business for suppliers, it should reduce red tape and the costs of tendering for business by eliminating the need for suppliers to respond to requests from agencies for basic information on each occasion that they tender. This pre-qualification scheme is open to foreign suppliers.

Public announcement of procurement opportunities

13. There is no financial threshold for advertisement of procurement opportunities. As conditions vary, the agency responsible must consider each case on its merits.

14. All Commonwealth agencies must use the *Purchasing and Disposals Gazette* to advertise all publicly available opportunities to do business with the Government, including, but not limited to, invitations to bid, express interest, qualify as approved suppliers, offer proposals or the like. The *Purchasing and Disposals Gazette* is published weekly on *Telstra Transigo* (<http://www.transigs.net.au>). Hard copies can be obtained by telephoning the Transigo Customer Assistance Centre on +61 6250 1355.

15. Agencies may also advertise opportunities in other media.

16. Publicly available procurement opportunities must be notified consistently in ways that provide bidders with reasonable opportunity to meet any pre-qualification requirements for participation in government business, and to bid against particular requirements.

17. Gazettal of opportunities is not required wherever the decision is to confine an approach, for example, a sole source, a limited field of suppliers or to a list of suppliers established following a publicly notified selection process.

18. Commonwealth agencies must publicly notify in the *Purchasing and Disposals Gazette* details of any contract arranged for supplies to be processed or used in Australia where the total estimated liability is \$A 2,000 or more. Agency Heads may decide to exempt notification under the Freedom of Information Act (1982).

Complaint/appeal procedures

19. As a first step, suppliers that complain about procurement processes or decisions are entitled to receive a fair hearing from the agency involved. It is Commonwealth Government policy that agencies offer all unsuccessful bidders a written or oral debriefing. When receiving complaints about procurement processes agencies should act in accordance with the procedures they have in place for handling complaints in general. Often buyers and suppliers can resolve complaints satisfactorily at the agency level.

20. If a supplier or potential supplier is not satisfied with the handling of its complaint by the individual agency concerned, there are other avenues of complaint available.

21. First, any supplier may complain to the Commonwealth Ombudsman concerning the actions or decisions of a buying agency which that supplier considers to be wrong, unjust, unlawful, discriminatory or unfair. If the Ombudsman finds a complaint to be justified, he/she may recommend a remedy, such as:

- an apology;
- a reconsideration of or changes to the decision;
- changes to agency rules or procedures;
- compensation for losses or damages caused by the agency's decision or action; or
- changes to the law that caused the problem.

Recommendations by the Ombudsman are not automatically binding on an agency but, if it fails to act upon the recommendations adequately, the Ombudsman may report to the Prime Minister and then to Parliament.

22. Suppliers may approach the *Purchasing Advisory and Complaints Service* within the Commonwealth Department of Finance and Administration. This service does not replace other avenues for complaint nor can it overturn purchasing decisions made by agencies. It is established to provide an informal advisory mechanism to help suppliers resolve complaints with Commonwealth agencies about purchasing processes, facilitating discussion between the parties involved. Although open to all suppliers, it is expected that this service will be of most benefit to small companies with limited knowledge, experience and resources to pursue complaints directly with agencies. The service should also be of significant assistance to any foreign suppliers which wish to make complaints.

REVIEW MECHANISMS

Communication from the United States

Introduction

As suggested by the Chairman's informal note, the case for including provisions in a WTO transparency agreement requiring national review mechanisms is a strong one. Review mechanisms can ensure due process and public accountability in the procurement process. In fact, the opportunity to seek review should be seen as a cornerstone of transparency. Public procurement authorities are much more apt to vigorously and conscientiously implement transparency provisions if their failure to do so may be challenged before an impartial body. Moreover, there is already ample precedent in WTO agreements for review or appeal mechanisms. Agreements as diverse as the Customs Valuation Agreement, the Anti-Dumping Agreement and the Preshipment Inspection Agreement include provisions on review procedures. Provision for review mechanisms does not have to require one model for every country or an elaborate set of obligations on the particular characteristics of national systems. As long as interested suppliers have access to an impartial body to hear their challenges and the opportunity to obtain decisions and remedies regarding these challenges, a transparency agreement need not dictate the particular kind of system that a WTO Member would choose to employ. The Secretariat's synthesis paper confirms that most national regimes already have review or appeal mechanisms in place. Obviously the scope of a review provision should be limited to the specific transparency obligations in a WTO agreement.

Key features of a review provision in a WTO transparency agreement

Impartiality: A review provision should permit flexibility as to whether a country chooses to provide opportunities to seek review through judicial or administrative bodies or both. Nevertheless, it should clearly require that such bodies be impartial and independent of the procurement process itself. Article X:2(b) of the GATT 1994 provides some guidance in this regard. This does not preclude, however, that suppliers may be encouraged to seek first to resolve issues directly with the relevant procurement entities.

Rapid decisions or possibility to suspend the procurement process: A review provision should ensure that claims from interested suppliers can be heard and decided upon in a manner that does not prejudice their interests in the procurements in question. Such guarantees can be available either through rapid decisions on challenges or through suspension of the procurement process while claims are pending. In cases in which the procurement process may be suspended, there could be provision for continuing with the award of procurements in the public interest.

Remedies: A review provision should provide for adequate remedies to protect the interests of suppliers and to deter procurement entities from engaging in future actions that would be inconsistent with WTO transparency provisions. Remedies should include the possibility of retendering procurements or damages to cover legitimate claims.

Related obligations

To ensure that there is an adequate factual basis for review bodies to reach decisions and provide remedies, a transparency agreement should require procurement entities to maintain written records of the procurement process.

TRANSPARENCY IN PROCUREMENT METHODS

Communication from the United States

Introduction

The Secretariat's synthesis paper and the Chairman's Checklist paper describe what are generally considered the three main categories of procurement methods: (1) open tendering; (2) selective tendering; and (3) single tendering (also known as limited or sole-source tendering). While specific circumstances governing a particular procurement often dictate the need for a particular method, open tendering is generally viewed as the most transparent procedure and single tendering as the least transparent. For this reason, the United States believes that a WTO transparency agreement could set forth specific conditions on the circumstances in which single tendering is justified, thereby ensuring that a substantial loophole to the agreement's obligations is not created, while at the same time allowing members to flexibly choose among alternative procurement methods to best address their procurement needs.

How single or limited tendering can undermine transparency

In many government procurement systems, including that of the United States, statutes and regulations may permit single tendering to be conducted without many of the normal procedural guarantees on transparency. The plurilateral WTO Government Procurement Agreement (GPA) itself provides in Article XV that the Agreement's general transparency provisions need not apply in cases of limited tendering.

If a government has unfettered discretion to utilize single tendering for any or all procurements, it could effectively escape the obligations of a WTO transparency agreement. To avoid such a potential loophole and ensure a common level of mutually agreed balance in obligations, WTO Members may want to consider specifying the general circumstances under which single tendering is justified. Additionally, a transparency agreement could provide that single tendering be conducted with a minimum level of transparency. At the same time, a transparency agreement should not impinge on a country's legitimate use of single tendering when circumstances warrant.

Commonly accepted circumstances justifying single tendering

According to the Secretariat's synthesis paper, the three international instruments (GPA, UNCITRAL Model Law, and World Bank Guidelines) and many countries' national legislation and regulations specify circumstances in which single tendering is justified. A few of these are described below.

Extreme urgency: When events unforeseeable by the procurement authority require urgent procurement of goods and services, many countries permit exceptions to generally applicable transparency requirements. Natural disasters are an obvious example.

Absence of tenders or collusion in tenders: If, as the result of an open tendering procedure, no responsive tenders are received or tenders appear to be collusive, procurement authorities may contact individual suppliers with no requirement that they readvertise.

Proprietary procurements: It may be clear at the outset of a procurement that only one supplier or a limited group of suppliers have the proprietary rights to goods or services being procured.

Commodity markets and fire sales: In commodity markets, there may be no individual suppliers since the market is the supplier. In so-called "fire sales", there may be circumstances in which the procurement authority can realize exceptional savings at a one-time event (e.g. liquidation sales).

National security: Many countries permit waiver of general transparency requirements when a national defence agency undertakes procurement of sensitive goods or services.

The examples identified above are not intended to be exhaustive, nor must a listing in a transparency agreement be exhaustive as well. To the extent, however, that a provision in a transparency agreement may be open-ended, it could still provide general criteria for circumstances that are not included in a non-exhaustive list (e.g. must be published in law or regulation).

Working Party on Transparency

in Government Procurement

NATIONAL PROCEDURES AND PRACTICES ON TRANSPARENCY
IN GOVERNMENT PROCUREMENT

Communication from Uruguay

I. INTRODUCTION

In the Singapore Ministerial Declaration (paragraph 21), the Ministers of Trade agreed to •establish a working group to conduct a study of transparency in government procurement practices, taking into account national policy, and, based on this study to develop elements for inclusion in an appropriate agreement•.

The Singapore mandate is clear in stating that this working group must take account, in conducting its study on transparency in government procurement practices, of national policies in that area.

It is in this context that Uruguay is presenting the Working Group with a description of its national procedures and practices with respect to transparency in government procurement, consisting essentially of an outline of the most important aspects of its Harmonized Text on Accounting and Financial Administration with Relevant and Supplementary Provisions (Texto Ordenado de Contabilidad y Administración Financiera y Normas Concordantes y Complementarias), hereinafter referred to as the TOCAF.

This harmonized text includes: provisions regulating State financial and economic administration; the organization of accounting and revenue services; control requirements for purchase and disposal of property and for procurement affecting government finances in order to ensure the efficiency of preventive measures with respect to revenue, expenditure and payments; and the responsibilities and guarantees governing the activities of officials involved in the management of State property.

II. HARMONIZED TEXT ON ACCOUNTING AND FINANCIAL
ADMINISTRATION WITH RELEVANT AND SUPPLEMENTARY
PROVISIONS (TOCAF)

Under the Uruguayan legal system, government procurement is defined as procurement in which one of the parties is the government, i.e. a State body with administrative functions.

In Uruguay, the provisions regulating government procurement are for the most part contained in the TOCAF.

The TOCAF is a body of laws adopted by Executive Decree and containing legal provisions which drew their inspiration chiefly from Budget Law No. 11,925 of 27 March 1953. Harmonization by the Executive of the relevant provisions has not affected their legal hierarchy. The Decree simply harmonizes and updates the rules of accounting and financial administration for the State as a whole and for the central administration in particular.

The TOCAF was first adopted by Executive Decree 95|91 and amended by subsequent provisions. It was adopted in its current form by Executive Decree 194|97 of 10 June 1997, published in the Official Journal of 20 June 1997.

Article 2 of the TOCAF defines its scope of application as extending to deeds, acts and operations leading to transformations or alterations in public finances and carried out by the Executive, the Legislative or the Judiciary, the Court of Audit, the Electoral Court, the Administrative Court, the Departmental Governments, the autonomous entities and decentralized services, public education institutions and, in general, any State organs, services or entities.

The administrative acts that are subject to the rules of accounting and financial administration include procurement. In this respect, the TOCAF lays down the use of public tendering procedures as a general principle of procurement involving operating costs or investment or expenditure by the State, and auctioning or public tendering for cases which generate income or revenue.

Without prejudice to the application of this general principle, other government procurement procedures are also permitted.

When the amount of the transaction does not exceed a certain value, the law provides for an accelerated tendering procedure and single tendering. Cases in which the State may use both forms of procurement are expressly mentioned in Article 33 of the TOCAF, which also provides for selection by the regulating authority on grounds of proper administration.

The Executive, subject to a favourable ruling by the Court of Audit, may authorize special procurement systems and procedures based on the principles of publicity and equality of bidders when the nature of the market or of the goods or services in question so warrant. Such authorizations must be transmitted to the General Assembly and published in two nationwide newspapers.

III. CONCEPT AND PRINCIPLES OF PUBLIC TENDERING

Uruguayan law defines public tendering as a procedure for the conclusion of certain contracts, whose purpose is to determine the person offering the Government the most advantageous conditions. It consists of an invitation to interested parties to submit

bids on the basis of certain conditions contained in the so-called tender documentation, from which the administration selects the most advantageous bid.

In order to achieve the desired result, the entire procedure was built on the general principles governing the operational and control activities of State bodies in the field of procurement (as expressly set forth in Article 134 of the TOCAF), i.e. flexibility, delegation of authority, avoiding excessive formality and ensuring authenticity, presumption of truth until proof to the contrary, publicity, equality among bidders and competition in competitive tendering and selection procedures.

It should also be recalled that Article 2 of Decree 500|91, regulating administrative procedure in Uruguay in general, stipulates that the public administration must serve the public interest in an objective manner and in full compliance with the law, and that it must act in accordance with the general principles (also applicable to government procurement).

Before proceeding to their examination, it is important to point out that under Uruguayan positive law, these basic principles of administrative procedure (and government procurement) form the foundation on which the administrative procedure model was built, and also serve as a basis for interpretation and incorporation where there is no regulation explicitly covering a given point or area.

The basic principles are:

- (a) Impartiality: in order to guarantee the impartiality of administrative procedures, the officials involved may withdraw or be challenged when there is evidence that their impartiality could in any way be affected either by an interest in the procedure in which they are involved or a relationship of affection or enmity with the parties, or by their having specifically expressed an opinion on the matter at issue (prejudgment).*
- (b) Objective legality: the administrative procedure seeks not only to provide protection, but also to defend the objective rule of law with a view to maintaining legality and justice in the administrative system. This means not only strict compliance with the law, but also ensuring that administrative activity is in keeping with the principle of proper administration.*
- (c) Ex officio instigation: an administrative procedure may be initiated at the request of an interested person or ex officio. If it is initiated ex officio, the competent authority may act on instruction from a higher body, on its own initiative, on substantiated request by the officials concerned or on complaint.*

This principle also ensures that the action cannot lapse or be discontinued for lack of action on the part of the administration; indeed, Decree 500|91 stipulates that the expiry of the time-limits laid down in that respect shall in no case free the competent authority from its obligation to issue a decision, to give an express opinion on the substance of the matter and to issue a resolution on the action.

- (d) Material truth: the administration must act in accordance with the material truth of the facts without being bound by such agreements as may be*

reached between the interested parties in respect of those facts, nor exempted from investigating, hearing and acting in accordance with them by the fact of their not having been invoked or proved by the parties.

(e) Economy, speed and efficiency: the proceedings must be conducted with speed, simplicity and economy, avoiding any procedures or requirements involving unnecessary or arbitrary formalities or precautions that would simply serve to complicate or hinder them.

(f) Avoiding excessive formality: Uruguayan administrative procedure is governed by the principle of avoiding excessive formality in dealing with non-compliance with unessential formal requirements that can be met subsequently.

In no way must this principle provide a pretext for uncertainty, insecurity or lack of legal protection, or provide the administration with absolute freedom to act at its own discretion without observing established forms.

(g) Flexibility, authenticity and concentration on substance: the concept of flexibility stresses the instrumental nature of the proceedings, rejecting excessive rigidity and uniformity.

The concept of authenticity places the emphasis on what is truly important, which also implies that forms must be in keeping with the aims pursued; in other words, if a rule is violated, the measure is sustained as long as the aim is accomplished without detriment to the rights and guarantees of the party concerned.

Concentration on substance implies that the form is a means and not an end in itself, and that administrative acts should be judged on the basis of substance and not form, etc.

(h) Delegation of authority: decentralization in its various forms (allocation of functions, delegation of authority, dispersion) seeks to overcome the usual bureaucratic centralization in which the solution to the most routine administrative problems depends on a formal decision from higher authorities.

(i) Due process: under the Constitution, domestic legislation and the provisions of international law approved by Uruguay, the parties in an administrative procedure enjoy all of the rights and guarantees inherent in due process.

This principle embodies the right to be heard, publicity of proceedings with respect to the parties concerned, the right of a party to state its defence before the ruling is issued, the right to due consideration and appreciation of the arguments submitted and the evidence provided, the right to be defended by a lawyer, the right to submit and produce evidence, the right a substantiated decision, etc.

(j) Adversary proceedings: this principle applies to cases in which the conflict is not simply between an individual and the administration, but also involves

another individual that is in dispute with the first individual, which is the case for challenges against tender awards.

Tender proceedings involve conflicting interests between individuals in which the administration must ensure that both parties are treated in an equal fashion, failing which the impartiality by which the administrative body is bound would be undermined.

(k) Good faith, fairness and presumption of truth until proof to the contrary: the parties, their representatives and lawyers, public officials, and in general all participants in the proceedings must act in accordance with the principles of mutual respect, fairness and good faith.

(l) Substantiation of the decision: this principle follows logically from the preceding principle. Any administrative act (in this case the award or decision not to award a contract in connection with public tender proceedings, an accelerated procedure, etc.) must be accompanied by a clear statement of the reasons or grounds on which it is based and an explanation of the scope of its operative provisions, its aims, and the conditions governing its validity.

Thus, the articles governing tender proceedings and the principles on which they are based clearly provide the contracting parties with maximum guarantees, which are supplemented by those deriving from the challenge mechanisms provided for in Uruguayan positive law with respect to administrative acts associated with the said proceedings.

IV. CRITERIA FOR THE SELECTION OF BIDS

Under Uruguayan legislation, the criteria for the selection of bids are divided into quantitative criteria (measurable parameters) and qualitative criteria (subjective considerations).

Without prejudice to the above, Uruguayan positive law provides for a series of preferences in the consideration of bids, among which the preference relating to domestic production deserves special mention (Articles 42 and 52 of the TOCAF).

Article 52 of the TOCAF stipulates that in all public entity procurement proceedings preference shall be given to domestic products that are equal in quality and potential to foreign products, and that such preferences in respect of domestic production shall be governed by existing or future promotional laws, and their limits and nature shall be stated in the general terms and conditions.

Uruguayan law defines promotional laws as those enacted with a view to stimulating certain activities by placing them in a more favourable situation than would have been the case in the free course of economic relations.

These laws include Article 654 of Law No. 16,170 of 28 December 1990 which stipulates that the margin of 40 per cent established by Law No.13,032 of 7 December 1961 would be reduced to 25 per cent as from the first day of the month following the publication of the Law, to 15 per cent as from 1 July 1991 and to 10 per cent as from 1 January 1992.

Thus, preference to domestic production remains at a permanent 10 per cent.

Article 52 of the TOCAF also stipulates that •In awarding public works contracts, where there is a likeness in the different elements of the bids, preference shall be granted to those which involve greater utilization of domestic labour and raw materials. •

Finally, Article 52 of the TOCAF establishes that •If the procurement takes place abroad, the agreements with the countries members of the trade bodies, communities or customs, integration and production agreements to which Uruguay belongs, in particular the Latin American Integration Association, shall be respected. •

V. ADMINISTRATIVE REVIEW OR JUDICIAL REVIEW BY THE ADMINISTRATIVE COURT OF DECISIONS CONCERNING AWARD PROCEEDINGS

The Uruguayan legal system guarantees both administrative review and judicial review before the Administrative Court of administrative decisions to award or not to award contracts in connection with procurement and public tender proceedings.

The regime derives directly from the Constitution, Articles 317 and 319 of which provide for remedies against administrative acts, and Articles 307 and 313 regulate the competence of the Administrative Court as well as the judicial remedies against administrative acts.

Article 317 of the Constitution stipulates that during the administrative phase, implicit or tacit acts (in this case the administrative decision to award or not to award a contract in public tender proceedings) may be challenged through remedy of reconsideration (before the body responsible for the act), hierarchial remedy (when the body responsible for the administrative act forms part of a hierarchy), and appeal for annulment, which is lodged together with the appeal for reversal as an accessory action. The appeal for annulment must be based on the nullity provisions set forth in Article 309 of the Constitution, i.e. it must concern administrative decisions that are contrary to a rule or right or represent an abuse of power. The specific procedures and time-limits are regulated by Decree 500|91.

If the administrative decision was made by a departmental government, it must be challenged through an appeal for reversal before that body.

Once the available administrative remedies have been exhausted, the Uruguayan Constitution provides for judicial review (Articles 309 to 313) through an action for annulment.

Actions for annulment are brought before the Administrative Court, which is an independent judicial body created by the Constitution.

The Administrative Court has the power to confirm or annul the challenged administrative act and may also determine whether there are grounds for the party whose rights have been violated to bring an action for pecuniary damages.

As mentioned above, Uruguayan positive law provides the contracting parties with maximum guarantees, both during the administrative phase and during the subsequent

judicial phase, by providing the possibility of action for annulment of the administrative act before the Administrative Court and action for pecuniary damages.

VI. SUBREGIONAL CONTEXT

At the MERCOSUR level, the Common Market Group adopted Resolution 79/97 of 13 December 1997 creating an ad hoc group on government procurement with the task of developing a common system for government procurement of goods and services in the member countries.

Working Group on Transparency in

Government Procurement

NATIONAL PROCEDURES AND PRACTICES ON TRANSPARENCY IN
GOVERNMENT PROCUREMENT

Communication from the Czech Republic

Introduction

With reference to the agreement reached at the last meeting of the Working Group on the proposal from the Chair that delegations would provide information on their national practices relating to the transparency in government procurement the Czech Republic intends to contribute to the study phase of the Working Group.

Information on national legislation and procedures

Public procurement in the Czech Republic is governed by Act No. 199|1994 Coll. on Public Procurement, in the wording of Act No. 148|1996. When drafting the Act, it was drawn both on domestic sources (i.e. Building Procurement Code of 1991) and foreign legal regulations, particularly the •Model Law of Procurement•, designed by the Commission for International Law (UNCITRAL), and EC Directives on Public Procurement from 1993 (Nos. 93|36, 93|37 and 93|38).

According to the Act, the regular manner of public procurement is that the contract is awarded on the basis of a public tender in which an unlimited number of interested parties can participate, provided they meet the terms stipulated by the Act and the tender. Where such method is used, the contracting authority concludes a contract with the participant whose bid was selected as the most suitable.

The Act also provides for •other methods of public procurement•, such as procurement on the basis of invitations issued to several parties, simplified procurement, procurement in cases of small-scale contracts and procurement on the basis of an invitation issued to a single party. The above-mentioned methods may be used only in cases specifically listed by the Act.

General rules on how public notice is given

A public tender, the terms thereof, changes thereto or cancellation thereof shall be announced by the contracting authority in the Commercial Bulletin (•Obchodní věstník•).

The notice of the public tender must not be published in any other way prior to their publication in the Commercial Bulletin, and the content thereof must not be disclosed to any person.

Prequalification

The contracting authority may stipulate in its announcement of a public tender that it shall require proof of applicants' qualifications, to be established by means of prequalification proceedings. In the prequalification proceedings, the contracting authority shall select applicants who by satisfying qualification requirements prove their capability to execute the public procurement.

The contracting authority must request in the qualification documentation particularly the relevant licences and specify the manner in which further prerequisites (e.g. technical and material base necessary for execution of the public procurement, the number of staff of relevant specialised professions decisive for execution of the public procurement) are to be documented. Moreover, the contracting authority must state the time-limit for and place of presentation of the qualification documentation, as well as the time-limit for notification of the results of evaluation.

The time-limit for notification of the results of the prequalification proceedings must end 25 days prior to the expiry of the time-limit for receipt of bids at the latest.

Based on the outcome of the prequalifications proceedings, the contracting authority shall exclude applicants who fail to satisfy the qualification requirements. Only those applicants who have met the qualification requirements may submit bids.

Tender procedures and documents

- Public tender (open procedure)

The notice of the public tender must be published in the Commercial Bulletin. Contracting authorities are obliged to publish the tender notice if the amount the future monetary liability arising from a contract relating to real estate, with the exception of lease, or a set of machinery and equipment forming a separate functional unit, is in excess K_ 20,000,000, or in excess of K_ 5,000,000 in other cases. Tender notices must contain the following elements:

- Definition of the scope of execution of the public procurement;*
- the time and place of execution of the public procurement;*
- qualification requirements for proof of suitability of applicants;*
- the method of bid evaluation;*
- standard requirements for determination of the bid price, including the terms of payment;*

- the time-limit for the receipt of bids and the place where envelopes containing bids shall be opened;
- the time-limit of effectiveness of the bids;
- the place to which the bids are to be delivered and the time when they can be submitted in person;
- the name, registered office, telephone number, telex or facsimile numbers of the contracting authority;
- a notice stating the time of viewing of the place of execution of the public procurement or the time when documentation can be viewed, if any such viewing is envisaged, and provided such documentation is not included in the documentation accompanying the invitation to tender;
- requirement of any security required and specification of the amount thereof.

- Invitation to several parties

The contracting authority may conclude a contract on the basis of a written invitation made to no less than five interested parties in the case of public procurements where the pecuniary value of the contract is in excess of K_ 2,500,000, excluding VAT, for real estate with the exception of a lease, or a set of machinery or equipment constituting a separate functional unit, or in excess of K_ 500,000 in other cases.

Conclusion of a contract on the basis of a written invitation sent by the contracting authority to parties interested in the public procurement whose pecuniary value is in excess of the amount mentioned above, shall also be permissible in the event:

- Of an urgent need, as decided by the Government of the Czech Republic;
- of a specialized public procurement;
- that a public tender was previously organized and cancelled;
- that a publication of the terms of the tender could jeopardise a state secret, defence and security of the state or the property of the contracting authority.

The contracting authority shall send an invitation for submission of bids under (a), (c) and (d) to a minimum of three parties interested in the public procurement and under (b), to all interested parties who execute such specialized public procurement in the Czech Republic.

In the event of invitation to several parties, the contracting authority shall set identical requirements for all parties interested in the public procurement, and state the criteria for evaluation of their bids, i.e. the consideration of the lowest amount, or the most suitable bid on the whole. The contracting authority shall notify all applicants of the selection of the most suitable bid.

The time-limit for submission of bids shall not be shorter than 14 days. If the public procurement is awarded in the event of the urgent need, the Government may resolve to apply a reduced time-limit.

- *Simplified award of contract*

The contracting authority is obliged to request bids from a minimum of three interested parties in the case of public procurement where the pecuniary value of the contract is in excess of K_100,000, excluding VAT, but does not exceed the limits set out for the invitation to several parties.

The contracting authority must specify the requirement of:

-Determination of the bid price depending on the place of execution of the public procurement;

-time-limit for execution and other terms relating to the public procurement.

The contracting authority shall evidence any invitation made by a written record.

- Small-scale public procurement

In the case of public procurement whose future pecuniary value does not exceed K_ 100,000, excluding VAT, the contracting authority may decide to award the public procurement directly a price customarily charged in the place of execution. If the contracting authority decides to award the contract in this manner, it shall draw on market information and on its experience.

- Invitation to a single candidate

Conclusion of a contract on the basis of a written invitation for submission of a bid, sent by the contracting authority to a single candidate interested in the public procurement, shall be permissible only in the case of:

- An urgent need, where human lives or health are threatened, when there is a disaster, natural catastrophe or an imminent threat of extensive damage;*
- a specialized public procurement in cases where only one party interested in the public procurement can execute it;*
- a supplementary or repeated public procurement provided it does not exceed 50 per cent of the price of the original procurement and provided the invitation by the contracting authority is effected within 12 months of the execution of the public procurement;*
- a partial renovation of the object of the original public procurement, if a change of applicant would result in the contracting of authority having to procure execution of a public procurement of different technical parameters, which execution would lead to technical incompatibility or difficulties in operation and maintenance;*
- where publication of the terms of the tender could jeopardise a state secret, defence and security of the state;*
- where a winner of an architectural competition pertaining to the object of execution of the public procurement reaches an agreement with the contracting authority that shall draft the project documentation;*
- execution for the State Material Reserves.*

The applicant must present his business licence prior to conclusion of the contract.

Qualification of applicants and clarification

Applicants must demonstrate in their bids that they are qualified to execute the relevant public procurement. The contracting authority may require in its invitation to tender that other prerequisites for execution of the relevant public procurement be met.

The qualification requirements for execution a public procurement are met by the applicant:

- Who has the relevant licence to engage in business, provided such licence is required under special legal regulations;*
- against whose property no bankruptcy procurement has been issued;*
- who owes no tax according to the records kept by authorities;*
- who has not been duly sentenced for a criminal act related to his object of business, or for economic crime or crime against property;*
- against whom no disciplinary measures have been taken under special legal regulations governing the performance of the relevant specialized activity.*

The applicant shall prove that he satisfies the qualification requirements by submitting his licence to engage in business and an affidavit. The applicant with whom a contract is to be concluded shall prove his qualification by an extract from the Commercial Register (not older than 90 days) and by an extract from the Criminal Register (not older than six months).

Further prerequisites for execution of a public procurement include, but are not limited to:

- A technical and material base necessary for execution of the public procurement;*
- the number of staff of relevant specialized professions decisive for execution of the public procurement;*
- a list of significant procurements delivered by the applicant in recent years.*

Further prerequisites for execution of a public procurement shall be outlined by the contracting party in the invitation to tender or qualification documentation. Applicants may request additional information from the contracting authority as to how they should prove the attainment of further prerequisites up to seven days prior to the expiry of the time-limit set for bidding; such information must be provided to all applicants.

Any applicant is obliged to notify the contracting authority of any changes which occur after the submission of his bid and which concern the data required by the contracting authority as proof of his qualifications.

If an applicant fails to prove his attainment of any one of the qualification requirements or fails to notify any changes in qualifications, the contracting authority shall exclude such applicant from any further participation in subsequent proceedings concerning the public procurement. The decision to exclude an applicant shall be communicated thereto without delay.

Time-limits

Time-limit for the receipt of bids means the period within which bids may be submitted. The time-limit for the receipt of bids shall not be shorter than 36 calendar days. This time-limit shall start running on the day of publication of the public tender in the Commercial Bulletin and shall end on the day and the hour when the envelopes

containing bids are opened. The terms of the public tender shall stipulate the date and hour of the opening of the envelopes containing the bids.

Time-limit of effectiveness of bids means the period of time for which the applicants are bound by their respective bids. The contracting authority shall stipulate this period of time in calendar years in the notice of the public tender. The time-limit of effectiveness of the bids as set forth in the terms of the public tender shall be the same for all applicants, and it shall be extended with respect to the applicants ranking first, second and third in the evaluation up till the conclusion of the contract. The term of effectiveness of the bids without extension shall not exceed 90 calendar years; it shall start running on the day of opening of the envelopes containing the bids and end on the day of dispatch of notices regarding the selection of the most suitable bids.

Transparency of decisions on contract awards

- Method of bid evaluation

Bids shall be evaluated by means of a single criterion or several criteria, and it shall be stated what method shall be used to arrive at the order of bids.

In the event of the evaluation of bids by means of:

-A single criterion, the bids shall be evaluated according to the bid price;

-several criteria, the contracting authority shall apply, in addition to the bid price, some of the following criteria depending on the nature of public procurement: requirements of quality, terms of delivery, qualifications of applicants, quality guarantees, operation and maintenance requirements.

If the contracting authority opts for evaluation by means of several criteria, it shall list these individual criteria in the terms of the tender according to priority attached to them.

- Manner of submission of bids

Bids shall be submitted in person or by registered mail, in writing, in sealed envelopes marked •tender•, with the edges of the flaps stamped by the applicants• seals.

The bids must be delivered to the contracting authority before the end of the time-limit for receipt of bids. Each interested party may submit only one bid; should a breach of these duties occur, the contracting authority shall be obliged to exclude such applicant from the tender.

- Receipt of bids and opening of envelopes containing bids

The contracting authority is obliged to make sure that the envelopes containing the delivered bids are marked with a serial number, date and hour of delivery, and that the bids are entered, together with the above data, in the list of bids. If a bid is delivered in person, the contracting authority shall issue to the person in question a receipt of delivery bearing the data listed in the first sentence herein.

In addition to the contracting authority, the following parties are entitled to participation at the opening of the envelopes containing bids:

- Applicants whose bids have been delivered to the contracting authority within the time-limit for receipt of bids;*
- representatives of the authority in charge of surveillance;*
- representatives of the Ministry of Finance;*
- representatives of the authority from whose budget the public procurement is financed in full or in part, if such authority is not identical with the contracting authority.*

The contracting authority shall appoint a commission comprising at least three members to open the envelopes containing bids. The commission shall open the bids one by one according to their serial numbers and check the completeness of each bid with a view to the requirements prescribed by the contracting authority in the terms of the tender. If the commission discovers after opening the envelope that the bid is not complete with a view to the notice of the tender, the bid is excluded from further assessment and evaluation; such exclusion of any bid is announced to the attendees. The contracting authority shall exclude the respective applicant from further participation in the public tender without delay.

The commission shall draw up a record on the opening of envelopes containing bids. This record shall be signed by the member of the commission. The record shall not be made public but applicants shall be entitled to view the record. A copy of the record shall be provided to any authority whose representatives are entitled to attend the opening of envelopes.

- Evaluation of bids

The contracting authority shall establish a commission composed particularly of persons with education and experience relevant to the nature of public procurement in question. The commission shall have a minimum of five members. There shall always be a representative of the contracting authority on the commission.

The commission shall commence its activity by receiving from the contracting authority those bids which satisfies the terms of the tender with regard to completeness, checked upon the opening of the envelopes containing bids.

After the commission reviews the bids to establish whether their content is in accordance with terms of the tender and whether the applicant proceeded in compliance with principles of protection of economic competition, the commission shall propose to the contracting authority which bids failing to satisfy the above requirements be excluded from the tender.

An applicant excluded from the tender may request that the contracting party state the reason for his decision to exclude him. The contracting authority shall advise the relevant applicant of its decision without delay.

After assessing, and, as the case might be, excluding bids, the commission shall evaluate the remaining bids by the published method of evaluation. The commission shall set the order of individual bids depending on the results of its evaluation.

The commission shall draft a report on the assessment and evaluation of bids, which report shall contain:

- Data on the composition of the commission;*
- an overview of bids received by the commission from the contracting authority for assessment, which overview shall include the names of the respective applicants;*
- the result of the assessment of individual bids;*
- the conclusion from the assessment conducted by any experts invited;*
- a list of bids whose exclusion was proposed to the contracting authority after the commission conducted its assessment;*
- a list of bids evaluated by the commission;*
- a brief description of the method used to evaluate the bids;*
- the results of evaluation of individual bids;*
- the order of bids according to the results of evaluation.*

The report on the assessment and evaluation of bids shall be signed by all members of the commission and submitted to the contracting authority together with all the previous tender documentation. The contracting authority shall then make it possible for any applicants whose bid were assessed and evaluated to view the report at his request.

- Decision by the contracting authority on the most suitable bid*

The contracting authority is obliged to decide on the selection of the most suitable bid based on the assessment and evaluation of the bids by the commission. If the contracting authority's decision on the selection of the most suitable bid does not correspond to the order of bids as determined by the commission, the contracting authority is obliged to justify its decision in writing.

The contracting authority is obliged to notify all applicants, unless they have been excluded from the tender, of its decision on selection of the most suitable bid, including data on the applicant selected and the bid thereof.

The contracting authority shall state data on the applicant ranking second and third in its notification of selection of the bid (name of the applicants, their registered offices, if they are legal entities their domiciles and places of business, if they are physical entities). The notification of selection of the most suitable bid shall include information on the possibility to raise objections.

- Documentation of the public tender and publication of results of public tenders*

When holding a public tender, the contracting authority shall fill in •Public Tender Registration Sheet• and send it to the supervisory authority within 15 days of conclusions of contract. The Public Tender Registration Sheet contains the following information:

- Contracting authority (name, address);*
- manner of award of public procurement (public tender, invitation to several parties, invitation to a single candidate);*
- total number of bids received;*
- highest bid price;*
- lowest bid price;*
- selected applicant (name, address);*
- object of public procurement (unit, number of units);*
- place and district of execution (name, code);*
- price (K_);*
- date of execution of contract relating to the public procurement.*

The contracting authority is obliged to publish the name of the applicant with whom a contract was concluded and the bid price thereof, in the Commercial Bulletin within 30 days of conclusion of contract.

The contracting authority shall preserve the tender documentation, including all bids submitted by applicants for a period of five years.

System of remedies regarding public procurement

The Office for the Protection of Economic Competition performs surveillance over the compliance with the Act. This surveillance takes the form of review of applicants to the procedures employed by the contracting authority.

- Objections to the procedures employed by the contracting authority

Any participant, or, as the case might be, any participant in a prequalification procedure, may raise an objection to individual procedures employed by the contracting authority.

Objections are filed to the contracting authority in writing no later than seven days following the delivery of a notice of procedures employed by the contracting authority, or no later than seven days of delivery of a notice regarding the selection of the most suitable bid.

- Review of procedures employed by the contracting authority by the body of surveillance

The contracting authority's decision on objections may be reviewed by the body of surveillance i.e. by the Office for the Protection of Economic Competition. Proceedings before the body of surveillance are initiated upon delivery of a proposal for review of the contracting authority's decision on objections, unless the body of surveillance instigates proceedings on its own initiative.

The proposal is filed no later than seven days from the delivery of the contracting authority's decision.

If the proposal is filed within the prescribed time-limit, the time-limit for the receipt of bids ceases running from the date on which the proposal is lodged till the date when the decision on the proposal enters into force. The contracting authority must not complete its assessment and evaluation of bids, or conclude the contract. The contracting authority is obliged to advise other applicants of the fact.

Where a proposal for review of the contracting authority's decision regarding selection of the most suitable bid is filed, the body of surveillance examines the application and:

-Cancels the contracting authority's decision, if it finds the proposal well founded, and changes the contracting authority with making a new selection, or, where appropriate, with newly defining the public procurement in question;

-rejects the proposal and upholds the decision issued by the contracting authority, where no violation of the Act is established.

In other cases the Office shall examine the procedures employed by the contracting authority and decide that the said procedures:

-Constitute no violation of the Act, and reject the proposal; or

-constitute a violation of the Act, and charge the contracting authority with making changes, or, as the case might be cancel the tender.

The Office decides on two different levels. An appeal can be filed against the decision of the body of surveillance, the Chairman of the Office decides on such appeals.

- Decision on suits filed against decisions of the Office

The lawfulness of a decision of the Office may be examined by court. Such judicial review falls under the jurisdiction of the relevant High Courts.

Proceedings are instigated solely by virtue of a proposal, labelled in the civil judicial code as •suit•. A suit must be filed no later than two months after the delivery of the decision issued by the administrative body in the last instance.

The suit does not have a suspensive effect on the enforceability of the challenged decision. There is no other remedy available against the court ruling.

*APEC NON-BINDING PRINCIPLES ON
GOVERNMENT PROCUREMENT: TRANSPARENCY*

Communication from Hong Kong, China

The following communication, dated 6 December 1997, has been received from Miss Adeline Wong of Hong Kong, China, in her capacity as Chair of the APEC Government Procurement Experts Group.

I am writing in connection with the APEC Government Procurement Experts Group (GPEG), which was established in 1995 to consider ways to increase transparency of, and liberalize, government procurement markets in accordance with the Osaka Action Agenda adopted by APEC Economic Leaders in 1995.

Under the action plan of the GPEG, a set of non-binding principles on government procurement will be developed in 1997-2000. In undertaking this work, the GPEG has decided to start with the principle of transparency and subsequently agreed on a set of elements pertaining to the principle of transparency in government procurement and a list of practices illustrating how they could be implemented. The GPEG has also agreed to, as an APEC contribution to WTO's work on transparency in government procurement, forward these elements and illustrative practices to the WTO Working Group on Transparency in Government Procurement for reference at the study phase.

I am pleased to attach a copy of the elements of transparency and illustrative practices developed by the GPEG, which were endorsed by APEC Ministers at their meeting on 21-22 November in Vancouver, Canada.

I would like to stress that these elements of transparency and illustrative practices are non-binding, and shall not prejudice the position of individual APEC member economies in the discussion on transparency in government procurement in the WTO.

INTRODUCTION

1) Under APEC's collective action plan on government procurement (GP), a set of non-binding principles on GP will be developed in 1997-2000 for adoption by members on a voluntary basis. In pursuing this work, the Government Procurement Experts Group (GPEG) has decided to start with the principle of transparency.

2) The GPEG has identified a set of elements pertaining to the principle of transparency in GP, which are set out in the ensuing paragraphs. Examples on practices are also provided for the purpose of illustrating the possible ways to give effect to these elements, and are not intended as prescriptions of how these elements should be given effect in practice. It should also be noted that the elements of transparency in GP identified by the GPEG are non-binding and individual economies are in the best position to decide on the applicability of individual elements of transparency to them, and how best to translate these elements into practical measures, taking into account the specific characteristics of their economy and possibly the costs and benefits of adopting specific transparency measures.

ELEMENTS OF TRANSPARENCY

3) The general principle is that sufficient and relevant information should be made available to all interested parties consistently and in a timely manner through a readily accessible, widely available medium at no or reasonable cost. This general principle is applicable to all aspects of GP, including the general operational environment, procurement opportunities, purchase requirements, bid evaluation criteria and award of contracts, as further elaborated in paragraphs 5 to 14.

-Sufficiency and relevance of information: to enable potential suppliers to make informed decisions. For example, potential suppliers must have access to information on the conditions for participation and the requirements of the intended procurement in order to decide whether to participate and to prepare a responsive offer.

-Timeliness: to ensure that the information is valid and useful when available to the receiver.

-Availability to all interested parties: to ensure that the procurement process is fair to all participants and seen to be fair.

-Through a readily accessible medium at no or reasonable cost: to ensure that information is accessible in practice.

-Consistency: the objectives of maintaining a transparent procurement system can only be achieved if the system remains consistently transparent.

This also includes making information up to date and informing relevant parties of changes and additional information promptly.

4) *Notwithstanding the above, the following information may be withheld: commercially sensitive information, and information the release of which would prejudice fair competition among suppliers, impede law enforcement, contrary to public interest or compromise security of the economy concerned. Where such information is withheld, the reason should be given on request.*

The general operational environment

5) *The laws, regulations, judicial decisions, administrative rulings, policies (including any discriminatory or preferential treatment such as prohibitions against or set aside for certain categories of suppliers), procedures and practices (including the choice of procurement method) related to GP should be transparent.*

6) *This is to let suppliers know the rules of the game so that they can decide whether to participate. In practice, this can include:*

- publishing these •rules• in a medium which is readily accessible to all;*
- publishing either a positive or negative list of the entities subject to these •rules•;*
- publishing any changes immediately;*
- establishing contact points for enquiries;*
- wherever possible, providing a description of the above information on the APEC GP Home Page and linking APEC members• individual GP Home Pages, where available, with the APEC GP Home Page.*

Procurement opportunities

7) *Procurement opportunities should be transparent.*

8) *This would encourage wider participation leading to increased choices for the buyer and enhanced competition, contributing to achieving better value for money in procurement activities. In practice, this can include:*

- making open and competitive tendering the preferred method of tendering. Where other procurement methods are to be used, any procurement invitations issued should indicate the intended method;*
- where open tendering is adopted, publishing procurement opportunities in a medium readily accessible to suppliers (e.g. official journals/gazettes, newspapers, specialized trade journals, Internet, and through embassies and consulates);*

- allowing adequate and reasonable time for interested suppliers to prepare and submit responsive bids;
- publishing contact details of purchasers, and their product|service purchase interests, for suppliers wishing to register their interest in being notified of bidding opportunities which may not be publicly advertised;
- making early advise of complex high-value procurement needs available to interested suppliers through staged procedures such as public requests for information, requests for proposals and invitations for prequalification, and allowing adequate time for interested suppliers to prepare and submit a response;
- making available requirements and procedures for prequalification of suppliers.

Purchase requirements

9) All the information required for suppliers to prepare a responsive offer should be made available.

10) This is to facilitate effective and efficient participation by potential suppliers in the procurement exercise. Also, because potential suppliers know the specific requirements, the non-responsive offers that the buyer may have to process can be minimized, increasing the operational efficiency of the buyer. In practice, this can include:

- including in procurement notices the following information: the nature of the product or service to be procured, specifications, quantity, time-frame for delivery, closing times and dates, where to obtain tender documentation, where to submit bids, and contact details from which further information can be obtained;
- publishing any changes to the above information immediately;
- providing tender documentation and other information to suppliers promptly on request;
- wherever possible, drawing up specifications in terms of performance|functional|operational requirements using international or other relevant standards.

Bid evaluation criteria

11) All criteria for evaluating bids should be transparent and bids should be evaluated and contracts awarded strictly according to these criteria.

12) *This is to ensure fairness and integrity. In practice, this can include:*

-setting out in procurement notices and/or tender documentation all evaluation criteria, including any preferential arrangements;

-maintaining proper record of decisions.

Award of contracts

13) *The award of contracts should be transparent.*

14) *This would demonstrate government accountability to suppliers and the public. In practice, this can include:*

-publishing the outcome of the tender including the name of the successful supplier and the value of the bid;

-as a minimum, promptly notifying unsuccessful suppliers of the outcome of their bids and where and when contract award information is published, and debriefing unsuccessful suppliers on request.

Due process

15) *Due process and public accountability are essential elements of fair, open and impartial procurement procedures, and the availability of an avenue/channel for review of complaints is an element of transparency. In practice, this can include:*

-designating a body/person for the purpose of reviewing supplier complaints about procurement processes which are not able to be resolved through direct consultation with the procuring agency in the first instance. This may take the form of an independent authority;

-making information on review procedures readily available;

-making the review process available equally to domestic and foreign suppliers.

**Working Group on Transparency
in Government Procurement**

NATIONAL PROCEDURES AND PRACTICES ON TRANSPARENCY
IN GOVERNMENT PROCUREMENT

Communication from Hungary

1) Introduction

With reference to the agreement reached at the last meeting of the Working Group on the proposal from the Chair that delegations would provide information on their national procedures and practices relating to transparency in government procurement, Hungary intends to contribute to the study phase of the Working Group. The submission follows the structure of the Secretariat's synthesis as contained in document WT|WGTGP|W|6.

The Hungarian Law on Public Procurements is based on the relevant legislation of the European Union and its member States; however, the UNCITRAL Model Law as well as the WTO plurilateral Agreement on Government Procurement was also taken into consideration by the legislators. This paper focuses on the transparency provisions of the Law.

2) Information on national legislation and procedures

The major framework of the legislation on government procurement is a recent and modern Law (Law No. 90 of 1995 on Public Procurements) that is published in the Hungarian Official Gazette (Magyar Közlöny). An English translation of the Law is also publicly available. All the procedural decrees concerning specific aspects of the procedures are also published in the Official Gazette. All announcements concerning government procurement actions and tenders are published in the Public Procurement Bulletin (Közbeszerzési Értesítő), that is established exclusively for the purposes of public procurements.

3) Information on procurement opportunities, tendering and qualification

3.1 General rules on how public notice is given

All announcements shall be published in the Public Procurement Bulletin. An announcement may only be published in any other domestic newspaper following its publication in the Public Procurement Bulletin. If foreign-based bidders (bidders resident abroad) may take part in the procedure, the announcement may also be published in foreign newspapers. In this case, the announcement may not be published in the Public Procurement Bulletin prior to its dispatch abroad.

3.2 Notice of invitation to tender or prequalification

3.2.1 Preliminary information on procurement opportunities

Entities falling under the scope of the Law may, by 31 March each year, prepare preliminary summary information material about their public procurements planned for the year.

The preliminary summary information should contain the following information:

- name and address of the inviter (and the information provider, if different) including telephone, telex and telefax numbers;
- description of procurement, including quality and/or value (separately described procurement of goods, constructions and services);
- expected date of the initiation of tender procedures (if known);
- other relevant information;
- date of posting and receipt of the announcement.

3.2.2 Prequalification

(a) The public procurer may prequalify potential suppliers. The application for prequalification should precede the invitation for bidding by 25 days or more. In the course of the prequalification procedure, the procurer shall not request and the bidder shall not submit a bid.

(b) The invitation for prequalification should contain the following information:

- name, address, of the inviter of bids (including telegraphic, telephone, telex and telefax numbers);
- the procedure chosen (i.e., open tendering, selective tendering, or limited tendering/negotiations; accelerated selection) and reasons for selecting the procedure;
- definition of the contract, subject and quantity of the procurement, time and place of the performance, if submitting a bid for a part of the procurement is accepted;
- deadline for submitting the bids, address for submitting bids, language of submitting bids¹;
- requirement of establishing an economic association from the winning joint bidders¹;
- date and place of opening the bids;
- conditions of providing the collateral¹;
- data and facts requested for verifying the financial, economic and technical suitability of bidders;
- criteria for judging bids;

¹Optional items

- reference to the preliminary summary information¹;*
- dates of dispatch and receipt of the announcement.*

3.3 Tender documents

3.3.1 Open tendering

(a) General transparency rules

The inviter of bids shall describe the certification of the financial, economic and technical suitability of the bidder exclusively in a manner defined in the Act. The inviter of bids shall define the criterion for judgement chosen in the invitation for bidding, i.e. the consideration of the lowest amount, or the most favourable bid on the whole. In the latter case, the order of importance of the criteria as well as any other considerations shall also be defined.

(b) Information content of notices of invitation for open tendering

- name, address, of the inviter of bids (including telegraphic, telephone, telex and telefax numbers);*
- the procedure chosen (i.e., open tender, invitation tender, or limited tender|negotiations);*
- definition of the contract, subject and quantity of the procurement, time and place of the performance, if submitting a bid for a part of the procurement is accepted;*
- name and address of the organization providing the documentation, deadline of applying for the documentation, conditions of purchasing the documentation²;*
- deadline for submitting the bids, address for submitting bids, language of submitting bids¹;*
- definition of the parties to be invited by the inviter of bids for opening the bids;*
- date and place of opening the bids;*
- conditions of providing the collateral¹; conditions of financial consideration, and|or definition of the place where these can be found in detail;*
- requirement of establishing an economic association from the winning joint bidders¹;*
- data and facts requested for verifying the financial, economic and technical suitability of bidders;*
- period of binding by the bid;*
- criterion for judging bids (lowest price, or most favourable list considerations);*
- whether bids in several versions accepted?*
- reference to the availability of preliminary summary information¹;*
- dates of dispatch and receipt of the announcement.*

3.3.2 Selective tendering

(a) General transparency rules

²Optional items

The procedure by invitation can be applied, if only a limited number of bidders is suitable for fulfilling the contract due to the particular nature of the subject of public procurement, or with consideration to the subject of public procurement, and based on the list of qualified bidders, there are at least five qualified bidders suitable for submitting a bid. The procedure commences with an invitation to participation, which shall be published by the inviter of bids through an announcement. This announcement shall contain the following information:

- name, address, of the inviter of bids (including telegraphic, telephone, telex and telefax numbers);*
- the procedure chosen (i.e., open tender, invitation tender, or limited tender|negotiations accelerated procedure), and the reasons for selecting the procedure;*
- list of invited participants;*
- definition of the contract, subject and quantity of the procurement, time and place of the performance, if submitting a bid for a part of the procurement is accepted;*
- requirement of establishing an economic association from the winning joint bidders³;*
- deadline for submitting the bids, address for submitting bids, language of submitting bids¹;*
- conditions of providing the collateral¹;*
- data and facts requested for verifying the financial, economic and technical suitability of bidders;*
- criteria for judging bids;*
- intended number of invited parties¹;*
- reference to the preliminary summary information¹;*
- dates of dispatch and receipt of the announcement.*

Besides the invited ones, referring to the announcement, all parties suitable for fulfilling the contract may apply to participate in the procedure. The inviter of bids shall simultaneously and directly request in writing all applicants for participation, qualified as suitable to submit their bids.

The inviter of bids shall determine a limit figure for invited participants for the tender. This shall allow for at least five bidders.

The inviter of bids may not specify the deadline for participation as a period shorter than 25 days reckoned from publishing the announcement, and the deadline for submitting bids as a period shorter than 40 days reckoned from the dispatch of the invitation for bidding.

(b) Information content of notices of invitation for selective tendering

The tender documents shall contain the following data:

³Optional items

- *deadline for submitting the bids, the address to which bids shall be submitted;*
- *reference to the invitation to participation published;*
- if necessary the place where the documentation was obtained, the deadline and financial conditions for its request;*
- conditions of the financial consideration of the inviter of bids;*
- date and place of opening the bids, those invited to the opening of bids by the inviter of bids;*
- period of binding by the bid;*
- indication of the certificates to be attached;*
- detailed criteria for judging the contracts, if not included in the invitation to participation.*

3.3.3 Limited tendering (negotiations)

(a) General transparency rules

The procedure by negotiation can be applied only in exceptional circumstances defined by the Law.

The commencement of the procedure shall be published. The invitation shall contain the following information:

- name, address, of the inviter of bids (including telegraphic, telephone, telex and telefax numbers);*
- the procedure chosen (i.e., open tender, selective tendering, or limited tendering]negotiations accelerated procedure), and the reasons for selecting the procedure;*
- definition of the contract, subject and quantity of the procurement, time and place of the performance, if submitting a bid for a part of the procurement is accepted;*
- requirement of establishing an economic association from the winning joint bidders⁴;*
- deadline for submitting the bids, address for submitting bids, language of submitting bids¹;*
- conditions of providing the collateral;*
- data and facts requested for verifying the financial, economic and technical suitability of bidders;*
- intended number of invited parties¹;*
- name and address of the already selected applicants¹;*
- reference to the preliminary summary information¹;*
- dates of dispatch and receipt of the announcement.*

⁴Optional items

The parties intended to be invited may be indicated in the announcement; however, all parties - suitable for fulfilling the contract - may apply for participating in the procedure on the basis of the announcement. At least three applicants shall be invited to the negotiation (if there are three qualified ones).

In the course of a procedure by negotiation conducted without publishing an announcement, the inviter of bids shall directly invite the parties selected by him to the negotiation. The relevant provisions apply to publishing the result of the procedure by negotiation conducted without publishing the announcement.

3.4 Clarification

If the inviter of bids prepares the documentation required for submitting appropriate bids, the documentation shall contain the detailed contractual conditions. In the invitation for bidding, the manner and deadline of making the documentation available, the place of obtaining, as well as the financial conditions thereof shall be specified. The inviter of bids shall make the documentation available as of the date of publishing the invitation for bidding.

Furthermore, a bidder may request further information from the inviter of bids in writing not later than ten days prior to the deadline for submitting the bid. The content of the information shall be made available to the other bidders, as well. The inviter of bids shall provide the supplementary information related to the documentation not later than six days prior to the deadline for submitting the bids. The inviter of bids shall provide the information in a manner that does not favour certain bidders over others, and which does not violate equal chances. If the documentation is of a large volume, and/or if bids may only be submitted following the on-site checking of the documentation, or the inspection of the place of performance, the inviter of bids shall set or amend the deadline for submitting the bids with consideration. The inviter of bids may require the bidders in the documentation or in the invitation for bidding to define the part of the contract they intend to involve subcontractors.

3.5 Promptness and timeliness of prior information and timeliness

The inviter of bids may not set the deadline for submitting the bids (submission deadline) as a period shorter than forty days reckoned from publishing the invitation for bidding. In justified cases, the inviter of bids may extend the deadline for submitting the bids on one occasion. The inviter of bids shall publish the extension of the deadline in an announcement prior to the expiry of the original deadline, where the reason for extending the deadline shall also be indicated. The deadline for submitting the bids may not be shortened.

The inviter of bids may amend the conditions specified in the invitation for bidding, and/or the documentation prior to the expiry of the deadline for submitting the bids. A new announcement shall be published on the amended conditions, in which a new deadline for submitting the bids shall be established. The deadline may not be shorter than 40 days.

4) Transparency of decisions on qualifications

4.1 Prequalification

4.1.1 Transparency of criteria

The criteria for prequalification are contained in the invitation for prequalification (see 3.2.2(b)).

4.2 Notification and listing

Results of the prequalification should be published. The notice should contain the following information:

- name, address, of the inviter of bids (including telegraphic, telephone, telex and telefax numbers);*
- the procedure chosen;*
- date of selection;*
- number of applicants of the procedure;*
- names and addresses of the applicants selected and reasons for their qualification;*
- date of publishing the invitation to participation;*
- dates of dispatch and receipt of the announcement.*

5) Transparency of decisions on contract awards

5.1 Transparency of criteria

The general criteria applicable to evaluate the bids are set by the Law.

The inviter of bids shall define the criterion for judgement chosen in the invitation for bidding, i.e., the consideration of the lowest amount, or the most favourable bid on the whole. In the latter case, the order of importance of the criteria as well as any other considerations shall also be defined. For detailed requirements on the content of the invitation see 3.3.1(b).

5.2 Receipt and opening of tenders

The closed documents containing the bids shall be opened on the date of expiry of the deadline for submitting the bids. The inviter of bids, the bidders and the persons invited by them, the members of the Council, or persons appointed by them, furthermore, in the case of an inviter of bids who is granted central budgetary subsidy for public procurement, the organs and persons defined in a separate legal rule, may be present when bids are opened. The names and head offices (places of residence) of the bidders, the consideration requested by them and the deadline of performance undertaken by them shall be announced in the course of opening the bids.

The inviter of bids shall state on opening the bids, or following that, which bids are not valid.

Those who submitted invalid bids, and/or were excluded from the procedure may not take part in the further phase of the procedure.

The inviter of bids shall draw up minutes on the opening and the announcement of the bids, the invalid bids and the excluded bidders.

5.3 Ex post information on contract awards

The inviter of bids shall announce the decision on the judgement of the bids in public. Bidders not present at the announcement shall be immediately informed in writing about the decision. At the announcement of the decision and following that, the provisions on business secrets do not apply in respect of the fact, solution or data, which were taken into consideration by the inviter of bids in the course of judging the bid and in connection with making the decision.

If the inviter of bids accepts the bid of any of the bidders he shall announce the winner orally and in writing immediately.

The inviter of bids shall publish the information on the result of the procedure not later than within 15 days reckoned from its announcement.

The publication shall contain the following information:

- 1. name and address of the inviter of bids;*
- 2. (a) the procedure chosen*
- (b) reasons for applying the procedure in the case of a procedure by negotiation without publishing an announcement*
- 3. date of judgement;*
- 4. criterion for judgement;*
- 5. name and address of the winning bidder;*
- 6. name and address of the bidder submitting the most favourable bid after the winning bid⁵;*
- 7. number of bids received;*
- 8. name(s) and address(es) of bidder(s);*
- 9. subject and quantity of the procurement;*
- 10. amount of consideration;*
- 11. the part and value of the subject of the procurement in respect of which the bidder intends to conclude a contract with a third person¹;*
- 12. other information;*
- 13. date of publishing the invitation for bidding;*
- 14. reference to the preliminary summary information¹;*
- 15. dates of dispatch and receipt of the announcement.*

⁵Items to be filled in if the case exists

Bidders shall be informed, upon their request, within 15 days reckoned from the receipt of the request about the reasons for their exclusion, and/or the refusal of their bids, and/or the reasons for their qualification as unsuitable in the prequalification procedure, as well as about the person of the winning bidder. Upon the completion of the procedure, the inviter of bids shall prepare a written summary of the bids judged. The inviter of bids shall keep this summary for five years, and shall release it to the Council, upon request. The summary should contain the following information:

- 1.name and address of the inviter of bids, as well as subject and value of the procurement;*
- 2.names of bidders selected and reasons for their selection;*
- 3.names of bidders refused, and/or excluded, and the reasons for their refusal and exclusion;*
- 4.name of the winning bidder and the reasons for selecting his bid;*
- 5.the part of the procurement in respect of which the winning bidder may conclude a contract with third persons⁶;*
- 6.reasons for the condition of applying the procedure in the case of a procedure by negotiation;*
- 7.bid price of bidders;*
- 8.reference to the previous summary information¹;*
- 9.date of preparation of the information material.*

At the end of the budgetary year, the inviter of bids shall prepare an annual summary of annual public procurements, which shall be sent to the Council. The annual summary shall contain the following information:

- 1.number and value of the annual procurements of the inviter of bids in excess of the value limit;*
- 2.details of the annual procurements of the inviter of bids in excess of the value limit, as follows:*
 - (a) subjects of the procurement*
 - (b) types of the procedure*
- (c)number of domestic and foreign winning bidders;*
- 3.details of procedures by negotiation in accordance with the cases of their application, specifying the number and value of annual procurements;*
- 4.reference to the previous summary information.¹*

6) Review

⁶Items to be filled in if the case exists

The Law establishes the Public Procurement Council, reporting directly to the Parliament and the Public Procurement Arbitration Committee (hereinafter: Committee). Its responsibility is to act on legal remedy owing to issues of dispute, or matters related to violations of the law:

- (a)conducting a procedure instituted due to the unlawful bypassing of the public procurement procedure;*
- (b)conducting a procedure related to tenders divided into small sub-tenders in order to avoid the application of the Law, as well as in connection with the violation of the principles or rules of the public procurement procedure;*
- (c)judging an application submitted by any interested party against the decision of the inviter of bids.*

The judgement of other legal disputes related to public procurements, not mentioned above, shall come under the jurisdiction of the courts. Three public procurement commissioners shall proceed in the public procurement cases, appointed by the Chairman of the Committee.

- (1) A Public Procurement Arbitration Committee (hereinafter: Committee) acts within the Council; its responsibility is to act on legal remedy owing to issues of dispute, or matters related to violations of the law.*

The decision shall be delivered to the parties and other interested parties, and shall be published in the Public Procurement Bulletin.

Legal Consequences

In its decision, the Committee shall:

- (a)refuse unfounded applications;*
- (b)request the party causing the violation of law to proceed in accordance with the rules of this Act prior to the completion of the public procurement procedure, and/or may make the decision to be made by the inviter of bids subject to a condition;*
- (c)may declare null and void the decision of the inviter of bids made in the course of the public procurement procedure, or completing the public procurement procedure, except for the case if the contract has already been concluded on the basis of this decision;*
- (d)in addition to indicating the violated provision of this Act, it may establish the occurrence of the violation of law;*
- (e)may prohibit the bidder, for not more than five years, to take part in a public procurement procedure;*
- (f)may impose penalty on the organization violating the rules of this Act, or on the person responsible for the violation of law and maintaining legal relationship with the organization;*
- (g)oblige the party violating the law to bear the fee and costs of procedure.*

No appeal may be lodged against the decision of the Committee. The parties whose rights or lawful interests are violated by the decision of the Committee made with regard to the merits of the case may request the court to review the decision in the form of a statement of claim.

Working Group on Transparency

in Government Procurement

INFORMATION ON PROCEDURES AND PRACTICES ON
TRANSPARENCY IN

GOVERNMENT PROCUREMENT

Communication from Hong Kong, China

Introduction

1) *The Government of the Hong Kong Special Administrative Region (HKSAR) adopts an open, competitive and non-discriminatory tendering system in the procurement of goods and services. The objective is to ensure that tenderers are treated on an equal footing and that the Government gets the best value for money.*

2) *This note is intended as a contribution to the study phase of the Working Group on Transparency in Government Procurement of the World Trade Organization (WTO). It provides a brief description of the procedures and practices of the Government of the HKSAR, which relate to transparency in government procurement.*

Public announcement of procurement opportunities

3) *Tender notices for procurement of goods and services through open tendering or selective tendering from qualified contractors/suppliers by government departments are published both in English and Chinese in the Government of the HKSAR Gazette on Friday (except when Friday is a public holiday). Where necessary, tender notices may also be advertised in the local and/or international press. For procurements covered by the Agreement on Government Procurement of WTO (GPA), procuring departments will, if appropriate, also notify consulates and overseas trade commissioners of the tender invitations.*

4) To provide sufficient information about the intended procurement to enable contractors/suppliers/service providers to make an initial assessment of their potential interest in the contract and to request the tender documents for preparing their bids, information published in tender invitations covers the tender reference, the procuring department, a description on the nature and quantity of the goods or services required, the likely commencement and completion of the contract, the address, telephone number and faxline of the office from which forms of tender and further particulars may be obtained, the exact location of the tender box in which tenders are to be deposited, and the closing date and time for receipt of tenders. Reference will also be made if the intended procurement is covered by GPA.

5) Apart from publishing tender notices in the Government of the HKSAR Gazette, an outline of the tender information on government procurement of goods and services is also provided on the Finance Bureau Homepage on the Internet (Address: <http://www.info.gov.hk/fb/tender.htm>). Updating of the tender information on the Internet will be made every Friday. In addition, a forecast of invitations to tender for building and engineering works under the Works Digest issued on a quarterly basis, and tender information on tenders invited by the works departments are published on the Works Bureau Homepage on the Internet updated on a weekly basis (Address: <http://www.weplb.gov.hk/>). Furthermore, the Government Supplies Department and the Printing Department also publish information on tenders invited by them on their respective homepages on the Internet (Address: Government Supplies Department - <http://www.info.gov.hk/gsd/tender.htm>, Printing Department - <http://www.info.gov.hk/pd/>), and the tender information will also be updated every Friday.

Information on the criteria used for assessing bids and awarding contracts

6) Tenders are generally accepted on the basis of their compliance with the tender specifications and the tendered sum. In cases where predetermined assessment criteria approved by an appropriate tender board prior to the invitation of tender are used in the evaluation of tenders, procuring departments are required to specify in the tender document the use of a marking scheme in tender evaluation, including an outline of the assessment criteria. This is to ensure that tenderers are fully aware of the conditions relating to the assessment of tenders and to the award of contract.

Tenders received for works contracts

7) For works contracts, the number of tenders received and the range of tendered sums are published on the Finance Bureau Homepage on the Internet in the week after they are opened, together with a note to specify that the tenders have not been checked for conformity and that the tender sums have not been checked for accuracy.

Information on award of contracts

8) *Contracts awarded by the Government of the HKSAR are published for general information in the Government of the HKSAR Gazette before the end of the following month. The notice contains information on the procuring department, the type of tendering procedure adopted, the description of the contract awarded, name of the successful tenderer and the contract sum. Such information is also published on the Finance Bureau Homepage on the Internet. Furthermore, the procuring department is required to, in addition to notifying the successful tenderer of accepting his tender, inform all unsuccessful tenderers of the result of the tender exercise and the reasons why their bids have not been accepted.*

List of approved suppliers|contractors

9) *Where there is frequent need to invite tenders for services or goods but where not all suppliers|contractors in the market are capable of delivering, government departments may establish lists of qualified suppliers|contractors for the purpose of selective tendering, subject to the approval of the Secretary for the Treasury. At present, the Works Bureau maintains permanent approved lists of approved contractors for works categories and suppliers of materials and special contractors for public works. The Government Supplies Department and the Government Property Agency also maintain prequalified list of suppliers|contractors, which are valid for a specified period, for the purpose of selective tendering. Departments maintaining these lists of qualified suppliers|contractors are required to publish the up-to-date lists, the period of validity of the lists, the method of application and assessment and the method of renewal, where applicable, in the Government of the HKSAR Gazette annually. The notice should also specify that any interested firms may submit applications for inclusion any time to the government bureaux|departments concerned direct.*

Channel for complaint|appeal

10) *Suppliers|contractors may lodge complaints about the process or result of a tender exercise to the procuring department direct or to the relevant tender board, Independent Commission Against Corruption, or the Office of the Ombudsman. Under the Ombudsman Ordinance (Cap. 397 of the Laws of the HKSAR), the Ombudsman is empowered to investigate a complaint concerning the procedures adopted in inviting tenders, determining the qualification of persons to tender and the selection of the successful tenderer.*

11) *In connection with the accession to GPA, Hong Kong, China is required to set up a bid challenge system comprising an independent review body to enable suppliers|contractors to challenge alleged breaches of the Agreement arising in the context of procurements in which they have, or have had an interest. Detailed procedures of the system are being worked out by a task force set up by the Government of the HKSAR.*

Release of tender information to members of the public

12) Upon request from members of the public, the procuring departments may provide the following information:

- (a) tender documents upon the payment of a fee where appropriate;
- (b) particulars of a contract, the category of tenderers invited to tender for the contract, and the closing date for receipt of tenders; and
- (c) the number of tenders received for a particular contract, the name of the successful tenderer, the accepted tender sum and the date of the award of the contract. Information on the winning tender should only be provided after the contract has been executed with the successful tenderer.

Guide to Government Procurement

13) The Government of the HKSAR is preparing a Guide to Government Procurement to provide a ready single reference for all those who may be interested in the tendering system and procedures of the Government. In the Guide, we would highlight the principles underlying government procurement practices in Hong Kong, summarize the government procurement process and the Government bodies involved in procurement, and include useful contacts for those who wish to obtain more information about any particular area of government procurement. The Guide, which is expected to be available in December 1997, will be posted on the Finance Bureau Homepage on the Internet.

Working Group on Transparency in Government Procurement

NATIONAL PROCEDURES AND PRACTICES RELATING TO TRANSPARENCY IN PUBLIC PROCUREMENT

Communication from Tunisia

1. Presentation of the system

In Tunisia, government procurement is the most appropriate legal instrument for carrying out public sector projects and satisfying a great variety of community needs in respect of works, supply of goods and services or studies. As the amounts involved each year are considerable, it is important to ensure optimum allocation of these resources through better buying, i.e. by concluding the best possible contracts.

During the 1980s, there was a decline in the intensity of competition. Calls for tenders brought in only one or two bids, and sometimes none at all. The source of the problem lay in the fact that needs were sometimes poorly expressed and technical specifications were sometimes too scanty or too rigid, with the result that suppliers could neither comply with the specifications for fear of submitting a bid that was incomplete and unreliable, nor stray from the specifications for fear of having their bid rejected.

The problem also stemmed from the fact that not enough was done to ensure that public tenders were widely publicized. For example, there was sometimes a tendency to invoke urgency as a justification for issuing calls for tenders with very short deadlines. While it is true that urgency is a fact of life, it is occasionally deliberately confused with haste to protect public tenders from free competition.

Thus, it had become essential to introduce a new legal framework defining the rules and procedures pertaining to government procurement.

Government procurement is currently regulated by a set of legislative and regulatory texts. These regulations, which were heavily revised in 1989, lay down three basic principles: free competition, transparency in the awarding of contracts and preservation of the principles of sound management.

It is true that this mechanism involves a number of procedures - advertising in the newspapers, submission of tenders in sealed envelopes, opening of the envelopes,

examination of the tenders, control by special commissions, etc. But however numerous they may be, these procedures are not very complex, and in fact amount to ways of ensuring that the three above-mentioned principles are upheld and that public funds are properly managed.

2. Free competition and transparency

The regulations cover every aspect of these principles. They ensure that government procurement is exposed to the broadest possible competition with a view to obtaining the best possible quality and prices. They have made transparency a fundamental principle, closely linked to free competition as a means of ensuring synergy. This applies to the different phases of government procurement.

As regards the tender documents, the technical specifications must define the scope of the procurement and the conditions under which it is to take place. They must also lay down the conditions for participation, the selection criteria and their relative weight, and the rights and obligations of the parties concerned.

The regulations also stipulate that tender documents must be clear as to what is required: characteristics and content must be indicated precisely. They must be defined with reference to previously established technical specifications, and possibly to specifically identified national or international standards. Any indication of a brand name or any other element that could direct the purchase towards a given product is prohibited.

With respect to types of procurement, in order to ensure maximum competition and transparency the regulations favour tendering (appel d'offres) as the normal legal procedure, while maintaining the possibility of awarding contracts (adjudication) on the basis of a single criterion, namely price. Although certain provisions allow for single tendering, this remains an exceptional procedure to be applied only in certain specific cases laid down in the regulation, such as extreme urgency owing to unforeseen circumstances, cases involving national security or the higher interests of the State, or procurement related to research, testing, experimentation, etc.

Still in connection with free competition and transparency, the regulations stipulate that calls for tenders must be advertised as broadly as possible to ensure that all potential bidders are informed.

The Tunisian regulations governing the sending, receipt and opening of tenders include a great number of precautions to ensure that the various operations involved are carried out with complete transparency. Thus, all bids must be sent by registered mail within a period of time specified in the tender documents, which cannot be less than 20 days. Any bids which do not comply with these formal conditions or which are received beyond the deadline are automatically rejected.

The opening of the envelopes, in the case of both auctioning and tendering and even in the case of consultation, is carried out collectively by a commission, in the presence of an operational auditor, and generally in the presence of the participants. In exceptional cases where the opening of the tenders is not public, for example for reasons of urgency, the administrator is required to post the results of the opening immediately following the meeting of the commission.

The regulations stipulate that, for reasons of transparency, the examination of the bids and the choice of supplier must be carried out by a commission, which proceeds by considering the bids and eliminating those which do not meet the established conditions, classifies the remaining offers exclusively and strictly on the basis of the criteria and weighting set forth in the tender documents. These documents must be transmitted, against receipt, to all candidates, who may in no circumstances modify their bids retroactively.

The commission then draws up a detailed report describing all of these operations and singling out, on the basis of this classification, the bid that it considers the most suitable.

It should be stressed that the regulations do not confine themselves to establishing general principles such as transparency and to organizing the procedures required to put them into practice. They also seek to ensure that those principles are properly applied by providing for mandatory control, inter alia of compliance with the regulations.

3. The system of control

Government procurement involves the use of government funds, whose management must be accounted for at different stages. In addition to a concomitant control by means of on-the-spot inspections and a post check by the Court of Auditors, the regulations have provided for a prior control mechanism in which the procurement commissions play the key part. The purpose of this control is to ensure that procurement is carried out in a proper and regular manner by bringing to light possible irregularities or shortcomings before they occur, as well as examining disputes between the parties concerned.

These commissions are made up of representatives of the different Ministries (Trade, Industry, Finances, Equipment and Housing, and Economic Development, the Central Bank etc.).

This preventive control mechanism can come into play in any of the successive stages of the government procurement procedure, from the drawing up of technical specifications to the awarding of the contract.

However, the choice of the stage or stages at which the commission actually intervenes has to take two essential factors into account: firstly, the need for maximum efficiency, and secondly, the need to act promptly. The first of these considerations argues for a more thorough control, while the second argues for as rapid a control as possible.

In view of these considerations, the reform of 1989 opted for the middle-of-the-road solution of controlling the report of the examination of the tenders, a check which is essentially consultative, since it takes the form of reasoned opinions notified to the administrative head or managing director of the State enterprise concerned.

4. Challenges and dispute settlement

According to the regulations, any problem, challenge or dispute must be brought before the competent procurement committee, which examines the claims and grounds of each of the parties in the light of the regulations, and gives a reasoned opinion.

If the dispute continues, it can be settled amicably in an ad hoc committee chaired by a member of the administrative court and including, among its members, a representative of the profession and a representative of the Higher Procurement Commission. This commission endeavours to find common ground between the two parties and proposes what it considers to be the fairest solution.

If the parties have not accepted the committee's amicable solution, they may each request arbitration or bring the case before the Tunisian courts.

5. *Preference for domestic products*

Owing to the diversity of the sectors involved, the amount of public expenditure and its impact on domestic industry, government procurement also constitutes a tool of State intervention in the economy.

Consequently, following the example of other countries, the regulations concerning government procurement include measures for the protection of local industry by establishing the obligation for foreign suppliers, in cases of international calls for tender, to form a joint venture with Tunisian enterprises or to subcontract as much as possible of the project to local firms by granting a 20 per cent preference for products of Tunisian origin. It goes without saying that recourse to international calls for tender is possible whenever the project to be carried out calls for a skill that local enterprises do not possess or a product that is not manufactured locally, or if the project is co-financed by a foreign entity whose regulations require international competition.

It should be noted in this connection that international donor organizations such as the World Bank accept joint ventures and subcontracting, and grant local products a 15 per cent preference.

V. TRANSPARENCY OF DECISIONS ON QUALIFICATIONS.....	4
VI. TRANSPARENCY OF DECISIONS ON CONTRACT AWARDS	4
VII. REVIEW	5
VIII. OTHER MATTERS RELATED TO TRANSPARENCY	6
IX. INFORMATION TO BE PROVIDED TO OTHER GOVERNMENTS	7

I. INTRODUCTION

1. In 1995, Korea enacted the Act Relating to Contracts to which the State is a Party (ARCSP), in line with the GPA, as the basic regulation for government procurement. Unless otherwise provided for in other laws, government procurement is conducted under this Act.

2. In addition to the ARCSP, the Enforcement Decree of the Act Relating to Contracts to which the State is a Party (EDARCSP) was enacted to address matters related to enforcing the ARCSP. The ARCSP prescribes that government procurement exceeding threshold values provided for in the GPA should be proceeded by international tendering. Pursuant to the ARCSP, Korea enacted the Special Regulations of the Enforcement Decree of the ARCSP for a Specific Government Procurement (hereafter the Special Enforcement Decree) and the Special Enforcement Regulations for the ARCSP for Specific Procurement (hereafter the Special Enforcement Regulation) in order to regulate the procedures and criteria for international tendering in detail.

3. Contracts shall be concluded through the agreement of contracting parties on equal standing and shall be implemented on a bona fide basis. All international tendering shall be conducted under the principles of reciprocity. The contract officials shall not impose any special terms or conditions upon the citizens of a member country of the Government Procurement Agreement or upon the products or services produced from those countries.

II. PROCUREMENT METHOD

4. The procurement method in Korea can be classified as follows based on the way each contract is concluded:

(a) Open tendering

5. This is the typical tendering system in which suppliers holding the minimum capability to undertake the contract, such as a licence, facilities, etc. can participate in the tender concerned and compete with each other.

6. The ARCSP prescribes that the contract official shall conduct a public procurement according to the competition principle. However, if necessary, taking into consideration the purpose, nature, scale, etc. of the contract, he may nominate participants or restrict the qualification of the participants.

(b) Selective tendering

7. In cases where the goal of the contract is difficult to achieve unless the supplier has special facilities, technology, and materials, the procuring entity can nominate participants for tendering and determine the winning supplier.

(c) Single tendering

8. Following are the cases in which a single tendering can be applied:

- in the case of a situation where an Act of God or national security is concerned;
- in the case of goods that are set aside for small business;
- in the case of goods that are related to provisions of the Social Welfare Business Act;
- in the case of no bidder, even after a tendering renotification, etc.

III. INFORMATION ON NATIONAL LEGISLATION AND PROCEDURES

9. Korea submitted to the WTO information on national implementing legislation, which was circulated to the Parties to the GPA on 11 February 1997 (GPA/12).

10. As described in the Introduction, the main characteristic of the GP system in Korea is to enact the ARCSP, as the fundamental law which lays out the principles and procedures of government procurement. ARCSP is in line with the WTO/GPA and was promulgated on 5 January 1995.

11. Based on the ARCSP, the main regulations prescribing the procedures and criteria related to GP are as follows:

- Enforcement Decree of the ARCSP (EDARCSP)
- Special Regulation of the Enforcement Decree of the ARCSP for Specific Procurement (Special Enforcement Decree)
- Special Enforcement Regulations for the ARCSP for Specific Procurement (Special Enforcement Regulation)
- Local Financing Act
- Government-Invested Enterprise Management Law (GIEML)
- Act on Government Procurement Business (AGPB)

12. All of these laws and regulations, being related to government procurement are published in the official gazette before they enter into force. Korea is establishing an Internet Home Page to introduce its GP system and regulations in English.

13. In particular, information on the government procurement by SAROK (Supply Administration, Republic of Korea), the central procuring entity, and major government agencies are available from the GINS (Goldstar Information Network Services).

IV. INFORMATION ON PROCUREMENT OPPORTUNITIES, TENDERING AND QUALIFICATIONS

(a) Public notice

14. The Special Enforcement Decree prescribes that the notice of international tendering should be published in the official gazette, the Kwanbo. The procuring entity may make use of a computer network for the notice along with the official gazette.

15. Details of the public notice:

- matters assigned for the tendering;
- place, date and time for the tendering and its opening
- qualification of a bidder;
- decision method for the successful tenderer, etc.

(b) Tender documents

16. Tender documents are the following documents, which the procuring entity prepares and maintains for the tender participants to review, if necessary, from the date of the public notice of the tender to the deadline for submitting the tender:

- public notice of tender or notification of participating in tender;
- documents of notes for tender (describing matters to be kept in mind by participants);
- application form to tender, forms of tenders and contract;
- general and specific conditions of the contract;
- on construction work,
 - design documents (drawings, specification and construction site explanation)
 - a statement of quantity and a detailed explanation of the calculation of the unit price for the quantity
 - the guidance of tender.

(c) Clarification

17. Entities are required to provide tender documentation and to reply promptly to any request from suppliers for explanations relating to tender documentation.

V. TRANSPARENCY OF DECISIONS ON QUALIFICATIONS

(a) Transparency of criteria

18. Qualifications for a bidder, such as contract performance record, technical performance ability, financial capability, etc., can be provided to confirm a supplier's ability to fulfil a contract.

19. To simplify the qualification procedures, entities can avail themselves of a permanent supplier's list.

(b) Notification and listing

20. The procuring entity shall notify each supplier submitting an application to prequalify of whether or not it has been included on the list of qualified suppliers. The procuring entity shall notify each supplier included on the list of the termination of the list or any supplier's removal from the list.

VI. TRANSPARENCY OF DECISIONS ON CONTRACT AWARDS

(a) Transparency of criteria

21. In principle, the decision to award a contract in international tender is based on both the tender price and capability of conducting the contract concerned.

22. In a competitive tendering, the successful tenderer shall be:

- a person who is deemed fully capable of fulfilling the terms of the contract and offers the lowest bids;
- a person who offers the most favourable bid for the state in conformity with the evaluation criteria specified in the public notice or the tender documentation;

- a person whose bid conforms closest to the criteria if the evaluation criteria are determined by the Presidential Decree considering the nature and scale of contracts.

(b) Receipt and opening of tenders

23. Qualified suppliers may submit sealed tenders in person or by mail until the closing time of submission at the place which was specified in the tender notice. The tenders shall remain sealed and shall be deposited until they are opened publicly.

24. The place and time of opening tenders shall be specified in the tender notice. The procuring entity shall open tenders in the presence of the tenderers.

(c) Ex-post information on contract awards

25. When the procuring entity awards the contract, it is required to publish a notice of contract award in the official gazette within 72 days from the date of the decision. Such a notice must contain the following information:

- the scope, quantity and value of the procurement;
- the name and address of the winning tenderer;
- the address of the entity awarding the contract;
- the procedures used in the decision of the contract award;
- the procedure of public notice for open tender;
- the reasons why a limited tender was executed, if applicable;
- other matters concerning the decision on the contract award.

26. The procuring entity is also required to provide an unsuccessful tenderer with information on the reasons why its tender was not selected, characteristics and advantages of the tender selected, and the name of the winning tenderer, if requested.

VII. REVIEW

27. Those who claim to have been disadvantaged in the implementation of the provisions on the scope of the government procurement contract, eligibility for participation, public notice or the decision on the successful tenderer may make an objection to the central agency concerned.

28. Anyone dissatisfied with the ensuing measures by the agency may request a review from the International Contract Dispute Mediation Committee established in the Ministry of Finance and Economy.

29. The Committee shall undertake an investigation and provide mediation. If no objection is raised within 15 days regarding the result of the mediation, it shall have the same effect as a judicial conciliation.

VIII. OTHER MATTERS RELATED TO TRANSPARENCY

(a) Maintenance of record of proceedings

30. When the procuring entity decides on a contract award by the open tender, it shall maintain documentation regarding the following items for five years as well as all documentation related to the tender and contract:

- the names of participants in the tender and the opening of the tender;
- the name of the winning tenderer, the value of the winning award, and the reasons for the decision on the contract award;
- in the event of invalidity of tender, details of the tender and the reason for the invalidity;
- country of origin of goods.

31. When the contract is awarded by a single tendering, the procuring entity shall maintain, for five years, documents recording the following items:

- the purpose of the contract;
- the name of the item to be procured, specifications, quantity, unit price and value;
- specific provisions of laws and regulations applied and the reasons they were applied to the contract;
- the name and address of the other party to the contract;
- the value of the contract and the reasons for awarding the contract;
- country of origin of goods.

(b) Language and other matters

32. The procuring entity may make use of a computer network for the tender notice in addition to the official gazette (for international tendering, publishing the tender notice in the official gazette is required).

33. For the notice of international tendering, the procuring entity shall describe the following items in one of the official WTO languages (English, French or Spanish) at the tail end of the public notice:

- the subject-matter of the contract;
- the time-limits set for the submission of tenders or application to participate in the tender;
- the name and address of the procuring entity.

IX. INFORMATION TO BE PROVIDED TO OTHER GOVERNMENTS

34. Korea has already notified the WTO/Committee on Government Procurement of its national implementing legislation (GPA/12). In international tendering, the principle of non-discrimination in providing information related to government procurement is applied.

35. Member countries of the WTO/GPA are required to provide information on procurement and contract awards in response to a request by any other GPA Party. The Minister of Finance and Economy may request central government agencies to submit relevant materials accordingly.

I. At the second meeting of the Working Group on Transparency in Government Procurement held on 21 July 1997, the Secretariat was requested to complement the information in its note on the transparency-related provisions in existing international instruments (Part A of WT|WGTGP|W|3) with available information on national practices. This note attempts to respond to this request by providing a synthesis of the factual information on national procedures and practices relating to transparency available in the responses to the questionnaire on government procurement of services in the Working Party on GATS Rules (S|WPGR|W|11|Addenda 1-21), the surveys of national legislation of the APEC Government Procurement Experts Group, contributions submitted by delegations by 1 October 1997 (WT|WGTGP|W|5) and other information available in the WTO, e.g. the Trade Policy Review Reports and documents of the Committee on Government Procurement.

II. The contents of the note should not be taken to prejudice what is encompassed by the term 'transparency', which is a matter for the Working Group. Its purpose is to provide background information that may be useful to the Working Group in its study of transparency in government procurement practices.

III. Responses to the questionnaire on government procurement of services in the Working Party on GATS Rules have been received from 21 countries representing a wide geographical distribution of WTO Members. The surveys of

national legislation of APEC economies provide data on an additional four countries in East Asia. Given that the data sources used for this paper were initially designed for the purposes of discussion in other fora, the depth of information on the subject-matter of this note that is contained in individual responses and surveys varies. The present note synthesizes the information available and does not attempt to make a compilation of all national practices and procedures. In order to contribute to greater clarity, the footnotes provide some specific examples of an illustrative nature; they should not be taken to imply that the country or countries mentioned are the only ones using the practice or procedure in question. At the July meeting of the Working Group, some delegations said that the note could have been amplified on the provisions of the existing international instruments that give leeway to the adoption of policies aimed at achieving legitimate social and economic goals, for example offsets or other measures providing special treatment for developing countries. Accordingly, this note contains information on these aspects, in respect both of international instruments and of national practices (notably in Chapter VII, Section A on transparency of evaluation criteria).

I. INTERNATIONAL INSTRUMENTS ON PROCUREMENT

IV. Promoting transparency in procurement procedures is one of the explicit considerations that guide the requirements in the Model Law (Preamble, paragraph (f)), the GPA (Preamble, paragraph 3), the World Bank Guidelines for goods and works (paragraph 1.2(d)) and the World Bank Guidelines for consultants' services (paragraph 1.4(e)). Transparency can be viewed as a linchpin of the other common objectives of these instruments, which are, among others: maximizing economy and efficiency in procurement; fostering and encouraging participation in procurement proceedings by suppliers regardless of nationality and thereby promoting international trade; and promoting the integrity and fairness of and public confidence in the procurement process.

V. The transparency provisions of the three international instruments are aimed at three sets of interested parties:

- Suppliers. The fulfilment of the objectives of procurement regimes requires that potential suppliers should be able to readily obtain adequate information on procurement opportunities, on the conditions to be met to qualify for them and on all matters relevant to the preparation and submission of bids. Their participation will also be enhanced if procurement procedures are perceived by them as fair and equitable.*
- Legislatures and the general public. Transparency is a necessary condition for procurement regimes and decisions to be accountable, in particular in the use of public or, in the case of the World Bank, international funds. For this purpose decisions must not only be impartial, but also be seen to be impartial. This calls for objective criteria, made known in advance, for the taking of such decisions, for the receipt*

and opening of tenders under procedures guaranteeing the regularity of the tender openings and ex-post information on the contracts awarded as well as for review possibilities.

-Other governments. Under the WTO Agreement on Government Procurement, each Party accepts obligations vis-à-vis other Parties to the Agreement, not only to ensure that the suppliers of those Parties benefit from adequate information and transparent procedures, but also to provide information directly to other Parties on its procurement procedures and decisions taken under it.

Transparency may also be important to purchasers, for example because knowledge of prices paid elsewhere may facilitate their attempts to get best value for money.

VI. There exist at present three international instruments on the procedures and practices of governments in the area of procurement:

(i) The UNCITRAL Model Law on Procurement of Goods, Construction and Services was drawn up by the United Nations Commission on International Trade Law (the UNCITRAL)¹ to serve as a model for States for the evaluation and modernization of their procurement laws and practices and the establishment of procurement legislation where none presently exists. As a framework law, the Model Law is intended to provide all the essential principles and procedures for conducting procurement proceedings in the various types of circumstances likely to be encountered by procuring entities. In line with the mandate of UNCITRAL to promote international trade and the notion underlying the Model Law that the wider the degree of competition the better the value received for public expenditures, the Model Law as a general rule promotes non-discrimination. Under the Model Law, this is given effect by the procedures designed, for example, to ensure that non-national suppliers are given adequate transparency. At the same time, the Model Law recognizes that the enacting States may in some cases wish to restrict participation by foreign suppliers with a view to protecting certain domestic industries or for other legitimate reasons. However, with a view to promoting transparency, any such restrictions are subject to the requirement that the imposition of the restriction by the procuring entity should be based only on grounds specified in the procurement regulations or in other legislation.²

¹UNCITRAL is an organ of the United Nations General Assembly established to promote the harmonization and unification of international trade law, so as to remove unnecessary obstacles to international trade caused by inadequacies and divergences in the law affecting trade.

²UNCITRAL Model Law Guidelines page 58 and Model Law Article 8(1) and (2)

(ii) The Guidelines for Procurement under IBRD Loans and IDA Credits and the Guidelines for Selection and Employment of Consultants by the World Bank Borrowers have the purpose of informing those World Bank Borrower countries or their agencies (Borrowers) carrying out a project that is financed in whole or in part by a loan from the IBRD (the International Bank for Reconstruction and Development) or a credit from the IDA (the International Development Association) of the arrangements to be made for procuring goods and works and the procedures for selecting, contracting and monitoring consultants required for the project. In most cases the Bank requires its Borrowers to obtain goods and works through International Competitive Bidding (ICB) open to all eligible suppliers and contractors, with allowance for preferences for domestically manufactured goods and for domestic contractors for works under prescribed conditions.³ The World Bank Guidelines also allow for other methods to be used where ICB is clearly not the most economic and efficient method, for example for the procurement of goods or works which, by their nature or scope, are unlikely to attract foreign competition.⁴

(iii) The WTO Agreement on Government Procurement (1994) establishes an agreed framework of rights and obligations, among WTO Members Parties to the GPA, with respect to their national laws, regulations, procedures and practices in the area of government procurement with a view to achieving greater liberalization and expansion of trade and improving the international framework for the conduct of world trade. The cornerstone of the rules in the GPA is non-discrimination between the supplies and suppliers of WTO Members Parties to the GPA. The GPA applies to the procurement of goods and services, including construction services, above certain threshold values and defined by the schedules of each Party as contained in Appendix I to the GPA.⁵ Certain derogations or exceptions are specified in the schedules of individual Parties in Appendix I to the GPA. In order to ensure that the basic principle of non-discrimination is followed and that access to procurement is actually available to foreign products, services and suppliers, the GPA lays heavy emphasis on procedures for providing transparency of laws, regulations, procedures and practices regarding government procurement.

³World Bank Guidelines on goods and works, paragraph 1.3

⁴World Bank Guidelines on goods and works, paragraph 1.4

⁵GPA, Article III:2

II. DEFINITION AND SCOPE OF GOVERNMENT PROCUREMENT

International instruments

VII. *The three instruments vary as to their scope and coverage. Similarly there is no uniform definition of what is meant by government procurement.*

VIII. *The Model Law is designed to be applicable, in principle, to all types of procurement of goods, construction and services. At the same time, it recognizes that an enacting State may wish to exempt certain types of procurement from the coverage of its procurement legislation, for example defence- and security-related procurement; this may be specified in the procurement law or in the implementing regulations.⁶*

IX. *The Model Law defines •procurement• as the acquisition by any means of goods, construction and services.⁷ What is meant by •goods•⁸, •construction•⁹ and •services•^{10, 11} is listed in the Model Law. In order to take into account the existence of procurement legislation at different levels of government, the Model Law presents two options as to the levels of government to be covered. The first option brings within the scope of the Model Law all governmental departments, agencies, organs and other units within the enacting State pertaining to the central government as well as to provincial, local or other governmental subdivisions of the enacting State. This option may be adopted by non-federal States, and by federal States that may legislate for their subdivisions. A second option would be adopted by States that enact the Model Law only with respect to the organs of the national government.¹² The enacting State may extend application of the Model Law to certain entities or enterprises that are not considered part of the government, if it*

⁶Model Law Article 1(1)

⁷Model Law Article 2(a)-(c)

⁸•Goods• means objects of every kind and description including raw materials, products and equipment and objects in solid, liquid or gaseous form, and electricity, as well as services incidental to the supply of the goods if the value of those incidental services does not exceed that of the goods themselves.

⁹•Construction• means all work associated with the construction, reconstruction, demolition, repair or renovation of a building, structure or works, such as site preparation, excavation, erection, building, installation of equipment or materials, decoration and finishing, as well as services incidental to construction such as drilling, mapping, satellite photography, seismic investigations and similar services provided pursuant to the procurement contract, if the value of those services does not exceed that of the construction itself.

¹⁰•Services• means any object of procurement other than goods or construction.

¹¹Model Law Article 2(c)-(e). The enacting State may include additional categories of goods or specify certain objects of procurement which are to be treated as services.

¹²Model Law Article 2(b)(i)

has an interest in requiring those entities to conduct procurement in accordance with the Model Law.^{13, 14}

X. *The World Bank Guidelines are applicable to the procurement of goods, works and related services, and to consultants• services for a project that is financed in whole or in part by a loan from the IBRD (International Bank for Reconstruction and Development) or a credit from the IDA (International Development Association).*¹⁵ *The definitions of •goods•¹⁶ and •services related to goods•¹⁷ are set forth in the Guidelines on procurement. The latter also apply to services in which the physical aspect of the activity predominates and which are bid and contracted on the basis of performance of a measurable physical output, for example construction of works, manufacture of goods, operation and maintenance of facilities or plants, surveys, exploratory drilling, aerial photography, and satellite imagery.*¹⁸ *The Guidelines on the Selection and Employment of Consultants only apply to services of an intellectual and advisory nature and the term •consultants•¹⁹ is defined therein. The Bank Borrowers use consultants to help in a range of activities, such as policy advice, institutional reforms, management, engineering services, construction supervision, financial services, procurement services, social and environmental studies, and identification, preparation and implementation of projects to complement the Borrowers• capabilities in these areas.*²⁰

XI. *The GPA applies to procurement by any contractual means, including through such methods as purchase or lease, rental or hire purchase, with or without an option to buy, including any combination of products and services.*²¹

¹³Model Law Article 2(b)(ii), Guide to Enactment of UNCITRAL Model Law - pages 65 and 66 list the factors that the enacting State may consider in deciding which entities to cover.

¹⁹•Consultants• includes a variety of private and public entities, including consulting firms, engineering firms, construction managers, management firms, procurement agents, inspection agents, auditors, United Nations agencies and other multinational organizations, investment and merchant banks, universities, research institutions, government agencies, non-governmental organizations and individual consultants.

²⁰Guidelines on consultants• services, paragraph 1.3

²¹GPA, Article I:2

The obligations under the Agreement apply to procurement: by the procuring entities that each Party has listed in its schedule in Annexes 1 to 3 of Appendix I, relating respectively to central government entities, sub-central government entities and other entities such as utilities; of goods; and of all services and construction services that are specified in lists, found respectively in Annexes 4 and 5 of Appendix I. General Notes at the end of most Parties' schedules provide for a number of exceptions. The Agreement authorizes Parties to modify the mutually agreed coverage of Appendices I to IV under the procedures for rectification and modification specified in Article XXIV:6.²²

XII. The international instruments provide for the size of procurement contracts to be taken into account in determining the requirement to which they are subject. The provisions of the GPA apply to procurement in respect of procurement contracts above certain threshold values. Each Party indicates its thresholds applying to the procurement of goods and services under Annex 1, 2 and 3 entities.²³ The Model Law allows the procuring entity engaging in low-value procurement in which there is unlikely to be interest on the part of foreign suppliers to forgo certain procedural requirements relating to announcements at the international level.²⁴ Under the World Bank Guidelines, NCB procedures may be preferred to ICB procedures when contract values are small.²⁵

National practice

XIII. Several countries have stated that there is no legislative or regulatory definition of government procurement.²⁶ In most cases, government procurement is defined simply as the procurement of goods and services by central, provincial and local governments, as well as by other public entities, which in certain cases include utilities - e.g. suppliers of energy, water, transport and telecommunications services.^{27, 28} Some countries treat the use of public funds to

²²Since its signature in April 1994, the Agreement's scope has been expanded through the incorporation in it of the results of a series of bilateral agreements between individual Parties. A loose-leaf system for Appendices to the Agreement designed to reflect the up-to-date status of the Appendices as such changes occur is being prepared.

²³GPA, Article I:4; a table of thresholds of individual GPA Parties is available on <http://www.wto.org/wto/govt/thresh.htm>. The thresholds as expressed in national currencies of Parties to the Agreement for 1996/97 are available in documents GPA/W/12 and Addenda 1-7.

²⁷S/WPGR/W/11/Add.1, Add.2, Add.10, Add.14

²⁸Eg., within the Community, "government procurement" covers written contracts for pecuniary interest awarded by public authorities (including at a regional and local level), bodies governed by public law and certain utilities in respect of the supply of goods and the provision of services, including construction services. The entities covered are subject to a common EC-wide regime for

finance purchases either fully or partially as a defining criterion.²⁹ Some countries have stated that procurement by any contractual means is covered, including purchases, leasing, rental or hire purchase, with or without an option to buy.³⁰ In one instance, government procurement also includes the concession of activities of public entities among themselves or with private individuals.³¹ Other countries have stated that the term •procurement• includes all stages of the process by which government agencies acquire from external sources the goods and services they need to fulfil their mandates.³² Others have indicated, explicitly or implicitly, that procurement generally does not include non-contractual agreements³³ or any form of government assistance.³⁴

III. PROCUREMENT METHODS

International instruments

XIV. Various methods of procurement are used by government entities, according to circumstances. All three of the instruments covered by this note describe the specific procurement methods that may be used and define the parameters for their use. The instruments provide that more transparent methods of procurement are to be favoured where possible as being more likely to be effective in realizing the objectives of procurement systems, but these instruments allow less inherently transparent means when circumstances warrant it and, in some instances, subject to special conditions often related to ensuring adequate transparency.

XV. As the method of procurement in normal circumstances, the Model Law foresees the use of tendering for procurement of goods and construction services and, for other services, principal method for procurement of services, a method designed to give due weight in the evaluation process to the qualifications and

procurement contracts above certain threshold values. The rules concerning procurement operations under the threshold values are defined by national law, in accordance with the general principles of law laid down in the EC Treaties. The threshold values are set out in Community law. These thresholds are defined with a view to ensuring that competitive procurement rules apply to contracts likely to interest suppliers from other EU member States while allowing administrative and procedural costs on smaller contracts to be kept to a minimum. Contracting authorities are not permitted to split up a contract so as to reach a contract value below the threshold (WT/WGTGP/W/5).

³⁴S/WPGR/W/11/Add.6

expertise of the service suppliers. For the purposes of the GPA, open tendering procedures, where all suppliers may submit a tender, is a preferred method. The World Bank Guidelines prescribe the use of International Competitive Bidding in the procurement of goods and works and Quality- and Cost-Based Selection for the selection of consultants services as the main method.

XVI. For exceptional and well-defined circumstances, in which the above preferred methods are not considered by the procuring entity to be an appropriate or feasible method for procurement, the three instruments offer alternative methods of procurement which provide a lesser degree of competition among suppliers compared to the principal method. Therefore, conditions on the use of other methods have been included in all three instruments to avoid unjustified resort to these methods of procurement and to limit their use to exceptional cases, while safeguarding the objectives of non-discrimination among suppliers and transparency of the procurement process. The Model Law gives the options of two-stage tendering, requests for proposals and competitive negotiations where it is not feasible for the procuring entity to formulate specifications to the degree of detail required under the tendering method for goods, for example in the procurement of high technology goods or under the principal method of procurement for services. These methods give the procuring entity an opportunity to negotiate with suppliers with a view to settling upon technical specifications and contractual terms. With regard to the selection of suppliers, the Model Law offers a restricted tendering method which permits the procuring entity to solicit participation only from a limited number of suppliers for procurements of a technically complex or specialized nature; a request for quotations or shopping method with simplified and accelerated procedures under which the procuring entity is allowed to solicit quotations from a small number of suppliers for cases of low-value procurement of standardized goods or services; and single-source procurement for exceptional circumstances, such as serious economic urgency due to catastrophic events. With a view to providing transparency as regards decisions of procuring entities to use an exceptional method of procurement rather than the method that is normally required, the Model Law contains a requirement that any such decision should be supported in the record of procurement proceedings provided under Article 11 of the Model Law by a statement of the grounds and circumstances on which the entity has relied to justify the use of the method in question.³⁵

XVII. The GPA prescribes two methods of procurement other than open tendering procedures. Under selective tendering procedures, those suppliers invited to do so by the entity may submit a tender.³⁶ In order to ensure optimum effective international competition under this method, purchasing entities are required to invite tenders from the maximum number of domestic and foreign suppliers consistent with the effective operation of the procurement system. A number of

³⁵Model Law Article 18(4)

³⁶GPA, Articles VII:3(b) and X

safeguards to ensure non-discrimination in the procedures and conditions for qualification of suppliers are set out in Article VIII. Under limited tendering procedures, the entity contacts the potential suppliers individually.³⁷ Because of the inherently non-transparent nature of this method, the GPA closely circumscribes the situations in which it can be used; it is permitted, for example, in the absence of responsive tenders under open or selective procedures, when the product or service can be supplied only by a particular supplier, or for reasons of extreme urgency brought about by events unforeseeable to the entity.³⁸ The GPA subjects this method to special transparency conditions which require entities to prepare a report in writing on each contract awarded which should include, inter alia, a statement of the conditions referred to in Article XV that justified the limited tendering. Furthermore, entities may hold negotiations with suppliers making tenders, provided this is indicated in the initial tender notice or it appears from the tender evaluation that no one tender is the most advantageous, and subject to specified safeguards to ensure that such negotiations do not discriminate between suppliers.³⁹

XVIII. The World Bank Guidelines allow Modified International Competitive Bidding with simplified advertising and currency provisions to be used in the case of quick disbursement loans or in procurement of commodities. Other methods of procurement which are used in circumstances which necessitate departures from the International Competitive Bidding method procedures are: Limited International Bidding which is essentially International Competitive Bidding by direct invitation and without open advertisement and used where the contract values are small or where there is only a limited number of suppliers or other exceptional reasons⁴⁰; National Competitive Bidding, normally used for public procurement in the country of the Borrower, which is considered to be the most efficient and economical way of procuring goods or works which, by their nature or scope, are unlikely to attract foreign competition⁴¹; Shopping (international and national) which is based on comparing price quotations obtained from several suppliers to ensure competitive prices and is appropriate for procuring readily available off-the-shelf goods or standard specification commodities that are small in value⁴²; and Direct Contracting Without Competition (single-source)⁴³ used under conditions similar to those of single-source procurement under the Model Law or limited tendering under the GPA. As alternatives to the principal method

⁴⁰World Bank Guidelines on goods and works, paragraph 3.2

⁴¹World Bank Guidelines on goods and works, paragraph 3.3-3.4

⁴²World Bank Guidelines on goods and works, paragraph 3.5-3.6

⁴³World Bank Guidelines on goods and works, paragraph 3.7

of selection of consultants, Quality- and Cost-Based Selection, the World Bank Guidelines prescribe Quality-Based Selection for complex or highly specialized assignments or for those which invite innovations.⁴⁴ Other methods of selection of consultants under the World Bank Guidelines, with specified conditions for their use, include Selection under a Fixed Budget, Least-Cost Selection, Selection Based on Consultants' Qualifications and Single-Source Selection.⁴⁵

XIX. While many of the specific requirements relating to transparency referred to in the later sections of this note concern transparency under any of the allowable procurement methods, it should be noted that some of the specific requirements relate more directly to preferred methods of procurement.

National practices

XX. The basic range of permissible procurement procedures is the same in most countries, although there are some variations. Although the terminology employed may differ, three broad categories of procedures are commonly distinguished: public or open tendering procedures; selective or restricted tendering procedures; and limited tendering or direct contracting or single tendering procedures.

XXI. Even though the basic range of procurement methods is the same in most countries, there are significant differences in the conditions under which a purchasing agency can resort to different procedures. Some countries prescribe the procurement method to be used according to a scale of threshold values. In some other countries, the procuring agency has considerable discretion in choosing the appropriate procurement procedure within the parameters of the government's purchasing policy and guidelines⁴⁶ and according to the characteristics and circumstances of the procurement and the complexity of the procurement.⁴⁷ In most countries, open or selective tendering procedures appear to be the main procedures.

XXII. In the information available, typical features of national practices in regard to open tendering procedures are as follows:

-all interested suppliers may submit a tender. However, in some countries only qualified suppliers are invited to participate, at least for certain types of contracts⁴⁸;

⁴⁴World Bank Guidelines on selection of consultants, paragraph 3.2-3.4

⁴⁵World Bank Guidelines on selection of consultants, paragraph 3.5 to 3.11

⁴⁶S/WPGR/W/11/Add.4, Add.11

⁴⁷S/WPGR/W/11/Add.6

⁴⁸S/WPGR/W/11/Add.3, Add.5

- often used for procurement with high threshold values⁴⁹;
- longer time-limits for submitting tenders are provided compared to other methods of procurement⁵⁰;
- used for procurement of basic goods and services that are easy to compare and where contracts are awarded according to price only;
- prior notice of procurement opportunities is invariably given including publication of notices of invitation to tender.

XXIII. Selective tendering procedures are used in procurement under which, because of the nature or the purpose of the procurement, participation is limited to a certain number of selected suppliers.⁵¹ These procedures may have the following features:

- only those suppliers that have been invited to submit a tender by the contracting entity may do so;
- suppliers are selected from a list of qualified suppliers.⁵² In some cases, the minimum number of qualified suppliers that should be invited is specified in the procurement legislation;
- used to ensure that excessive time is not spent on evaluation when evaluation of the tenders is time-consuming⁵³;
- prior notice of procurement opportunities may be given, including publication of notices of invitation to tender.

XXIV. Under limited tendering procedures, the procurement entity contacts the suppliers (or sole supplier) individually. It is generally used as an exception and under conditions and circumstances which may include, depending on the country:

- where there are no satisfactory responsive bids under other methods⁵⁴;

⁴⁹Dominican Republic-TPR 1996, Czech Republic-TPR 1996, Costa Rica-TPR 1995, Venezuela-TPR 1996, Fiji-TPR 1997, Thailand-TPR 1991, Indonesia-TPR 1991, Uruguay-TPR 1992

⁶⁵S/WPGR/W/11/Add.13

-for procurement under tied loans⁶⁶;

-in some instances it has been stated that prior public notice of procurement opportunities is not a requirement under this method.⁶⁷

XXV. Some countries have specified that, in some exceptional cases, procuring entities may conduct negotiations with one or more suppliers to determine the terms of the procurement contract in the context of limited tendering procedures.⁶⁸ Others seem to allow the possibility of negotiations also in other cases, for example in negotiating contract terms with service providers.⁶⁹ The conditions for resort to negotiations vary between countries. In some countries, these conditions are similar to those under which limited tendering is permitted.⁷⁰ In one country, negotiated procedures are sometimes used in the utilities sector after the publication of calls for competition.⁷¹ In another country, negotiations are undertaken in cases of extreme urgency to meet the demand within a given time-frame where sources of supplies are known.⁷²

XXVI. Moreover, some countries conduct a two-stage procedure in the event of a complicated procurement requiring clarification of technical aspects.⁷³ Several countries sometimes employ design or other contests.⁷⁴ Under this procedure, the contracting authority may acquire a plan or design selected by a jury after having been put into competition with or without the award of prizes. Design contests can be organized as a part of another procedure leading to the award of a contract, or can constitute an independent procedure on their own.^{75, 76}

IV. INFORMATION ON NATIONAL LEGISLATION AND PROCEDURES

International instruments

XXVII. *Government procurement activities are generally regulated through laws at the central or sub-central levels of government supplemented by administrative rulings and directives of general application. The Model Law and the GPA require the public accessibility of the relevant texts.⁷⁷ The GPA explicitly requires the GPA Parties to publish any law, regulation, judicial decision, administrative rulings of general application and any procedure regarding government procurement (including standard contract clauses) in such a manner as to enable other GPA Parties and suppliers to become acquainted with them. The publications in which individual GPA Parties publish their respective national legislation have to be identified in Appendix IV to the GPA.⁷⁸ The World Bank Guidelines are published by the World Bank and made available to Borrowers.⁷⁹*

XXVIII. *The GPA also provides for other means by which suppliers and/or other governments can obtain information on national procurement procedures. Under the GPA, each entity shall, on request from a supplier of a GPA Party, promptly provide an explanation of its procurement practices and procedures.⁸⁰ The GPA Parties are also required to provide the challenge procedures under Article XX in writing and make them generally available.⁸¹*

National practices

XXIX. *National rules differ in depth, in certain cases specifying relatively detailed procedural obligations, while in other cases containing only general guidelines. In a few instances, there are no laws or regulations relating specifically to procurement and each entity is free to determine its own procurement procedures within the general parameters set by the government purchasing policy.⁸²*

XXX. *The national regulatory frameworks for government procurement procedures include one or more of the following:*

⁷⁷Model Law Article 5; GPA, Article XIX:1

⁷⁸GPA, Article XIX:1

⁷⁹World Bank Guidelines on goods and works, paragraph 1.1; World Bank Guidelines on consultants• services, paragraph 1.1

⁸⁰GPA, Article XVIII:2(a)

⁸¹GPA, Article XX:3

⁸²S/WPGR/W/11/Add.4

- national constitutions⁸³;
- procurement laws⁸⁴;
- regulations, including in the form of legislative decrees, cabinet orders, ministerial ordinances implementing various aspects of the basic procurement law⁸⁵, for example on procedures for registration and qualification of suppliers, on tender evaluation processes or on public entities and enterprises providing network services⁸⁶;
- horizontal guidelines on government procurement policies in decentralized procurement regimes⁸⁷;
- horizontal laws on national budgets or the public sector budget⁸⁸;
- horizontal laws on financial or budgetary management⁸⁹, public sector control or audit⁹⁰;
- agency-specific purchasing regulations and guidelines that implement national policies and procedures on procurement⁹¹;
- specific laws at the sub-central levels of government⁹²;
- the provisions of regional or other international agreements;
- separate regulations on procurement of specific goods and services categories and construction works.⁹³

⁸³S/WPGR/W/11/Add.3, Add.8; Mexico-TPR 1997

⁸⁴S/WPGR/W/11/Add.12, Add.17; Slovak Republic-TPR 1995, Czech Republic-TPR 1996, Venezuela-TPR 1996, Mexico-TPR 1997

⁹²S/WPGR/W/11/Add.2, Add.5, Add.6, Add.7; Costa Rica-TPR 1995

XXXI. In most countries, such laws, regulations, administrative guidelines, etc. are published in the official journals.⁹⁴ The information available does not specify how they are otherwise made publicly available.

*V. INFORMATION ON PROCUREMENT OPPORTUNITIES,
TENDERING AND QUALIFICATION*

XXXII. The three international instruments recognize that timely, sufficiently detailed and readily available information on opportunities to bid for specific contracts is essential for guaranteeing effective competition. They lay down detailed provisions on the advance information that entities must provide on their intended procurements. Where prequalification is a necessary condition for tendering, information must be provided on the procedures and criteria that have to be fulfilled in order for an interested potential supplier to qualify.⁹⁵

⁹³S/WPGR/W/11/Add.1, Add.9, Add.10, Add.16, Add.17; Costa Rica-TPR 1995, Brazil-TPR 1996

⁹⁴Eg., in the EC the relevant legislation (the Directives) has been published in the Official Journal of the European Communities: the Directives are available to suppliers from the Office for Official Publications of the European Communities in Luxembourg or through designated sales offices. The Directives are also available on the Internet through the SIMAP home page at <http://simap.eu.int>. In addition, a database of all contracting entities covered by the Community Directives is being developed.

⁹⁵Model Law Article 7(3)(a)

A. Notice of Invitation to Tender or to Prequalify

(i) *How public notice should be given*

International instruments

XXXIII. *The relevant provisions in the three instruments set forth a set of minimum procedures for giving public notice of tendering opportunities that the procuring entity should follow in order to obtain expressions of interest in a specific procurement from potential suppliers. Under the Model Law and the GPA, the information on an intended procurement must be advertised primarily through a notice of invitation to participate in the intended procurement.⁹⁶ The publications in which individual GPA Parties publish their notices of invitations to tender have to be identified in Appendix II to the GPA.⁹⁷ The World Bank Guidelines require the Borrower country to notify the projects which include procurement of goods and works on the basis of International Competitive Bidding or any expected consultancy assignments through a General Procurement Notice on the basis of a draft prepared and submitted to the Bank by the Borrower. The Borrower country must notify the international community in a timely manner of the opportunities to bid for specific procurement of goods and works through invitations to bid advertised in the form of Specific Procurement Notices.⁹⁸ For selection of consultants, the preparation of requests for proposals shall involve a Letter of Invitation which shall state the intention of the Borrower to enter into a contract for provision of consultancy services.⁹⁹ Publication of a General Procurement Notice is not required in the case of National Competitive Bidding (see Chapter VII, Section A) and advertising may be limited to the national press or official gazette. Bidding documents may be in the official language of the country, and local currency is generally used for the purposes of bidding and payment.¹⁰⁰*

XXXIV. *All three instruments foresee the publication of a notice of invitation to participate in an official gazette or other official journal.¹⁰¹ Moreover, to create awareness of the procurement opportunity in the international community, the Model Law and the World Bank Guidelines require the notice of invitation to tender also to be published in a newspaper or a relevant trade publication in a*

⁹⁶Model Law Articles 24(2), 37(2) and 48(2); GPA, Article IX:1

language customarily used in international trade, in a technical magazine or a professional journal of wide international circulation.¹⁰² Under the World Bank Guidelines, the invitations to bid for goods or works or lists of consultancy assignments which are advertised in the General Procurement Notice and the Specific Procurement Notices are published in *Development Business*.¹⁰³ World Bank Borrowers are also encouraged to transmit invitations to embassies and trade representatives of countries of likely suppliers and contractors.¹⁰⁴

XXXV. The GPA provides that entities at the sub-central level (Annex 2 entities) and public utilities (Annex 3 entities) may use a notice of planned procurement or a notice regarding a qualification system as an invitation to participate in a tender.¹⁰⁵

XXXVI. The GPA requires that any amendment or re-issue of a notice of invitation to tender, after publication of an invitation to participate in an intended procurement but before the time set for the opening or receipt of tenders, shall be given the same circulation as the original documents upon which the amendment is based.¹⁰⁶

National practices

XXXVII. The information available indicates that publication of invitations to tender is often mandatory.¹⁰⁷ The information provided on some countries describes the practice but without being explicit as to whether it is a requirement under the procurement legislation.¹⁰⁸ In one country there are no central laws, regulations or rules for the publication of notices.¹⁰⁹ The extent and form of publicity can differ according to the tendering procedures applied and/or the value of the procurement. With certain exceptions¹¹⁰, publication requirements are

¹⁰²Model Law Article 24(2); World Bank Guidelines for goods and works, paragraph 2.8 and on consultants• services, paragraph 2.5

¹⁰³*Development Business* (UNDB) is a publication of the United Nations Department of Public Information, UN Plaza, New York, New York 10017, USA. A *Development Business* office is maintained at the World Bank, 1818 H Street, N.W., Washington D.C. 20433, USA.

usually associated with open or selective procurement procedures.^{111, 112} Invitations to tender under certain selective tendering procedures may be sent directly to qualified suppliers.¹¹³

XXXVIII. In most instances, requirements for publication of invitations to tender, in particular advertising in the official gazette or in official procurement bulletins, only concern procurements above certain threshold values which may differ depending on the type of procurement¹¹⁴, or are less rigorous for procurements falling below a certain threshold value.¹¹⁵ For example, tender notices are set up in a visible place of the procuring entity for two consecutive days.¹¹⁶ Some Members have stated that the extent and form of publicity does not depend on tendering procedures¹¹⁷ or on the value of procurement.¹¹⁸

XXXIX. Procurement opportunities are advertised through publication of notices of invitation to tender in printed media which may include:

- government gazettes or official journals.¹¹⁹ In some countries gazetting is required for procurement above certain threshold values¹²⁰;
- special supplements to official journals¹²¹;

¹¹¹S/WPGR/W/11/Add.2, Add.16, Add.19; WT/WGTGP/W/5; APEC Survey - Brunei Darussalam; Zambia-TPR 1996

- local newspapers with wide national circulation.¹²² While gazetting is often stipulated by law, additional announcements in the local press may be at the discretion of the procuring entity¹²³;
- specialized daily or weekly publications¹²⁴;
- trade or financial journals and magazines¹²⁵ in order to disseminate information directly to interested suppliers. These may have standing-columns for advertising tenders¹²⁶;
- bulletins or other publications of national trade associations¹²⁷ or chambers of commerce, depending on the type of procurement and the procuring entity¹²⁸;
- specialized publications circulated in a number of countries belonging to the same region¹²⁹;
- foreign press of wide international circulation where an entity's procurement activities require international sourcing.¹³⁰ The national legislation of one country sets out detailed requirements for non-discrimination in the way tender notices are published domestically and internationally. For example, if the announcement of a specific procurement is to be published in a foreign newspaper, the announcement may not be published in the national publication prior to its publication abroad. The announcements published

¹³⁰S/WPGR/W/11/Add.19

*abroad and nationally must not contain conflicting or different details and facts*¹³¹;

*-sub-central publications equivalent to an official gazette*¹³² *or local language newspapers*¹³³ *may be used to publish invitations for procurements at sub-central levels of government, such as State governments or municipalities. Tender notices are usually given in the local media within the territorial jurisdiction of the entity in which the good is to be used, the service supplied and the work executed.*¹³⁴ *One country has indicated that, while it is compulsory in the case of federal entities, publication of tender notices of municipalities and countries in the official gazette is on a voluntary basis.*¹³⁵

*XL. Advertising of opportunities to tender through electronic media is described in Chapter IX, Section B of the present note. In addition to the printed and electronic media, the procuring entity may use additional forms of advertising, for example periodic handouts*¹³⁶ *or posting on the notice boards of the procuring entity.*¹³⁷ *Tender notices are sometimes published/notified through the country's embassies abroad and copies given to the local representatives of other countries.*¹³⁸

*XLI. In addition to setting out the general requirements on procedures for advertising, the procurement legislation may in some cases specify the minimum number of newspapers in which tender notices should be published and the number and the frequency of publication of the same tender notice.*¹³⁹ *In one case, procuring entities are required to use the services of a centralized advertising agent for publication.*¹⁴⁰

¹³⁹S/WPGR/W/11/Add.8, Add.10

¹⁴⁰S/WPGR/W/11/Add.11

*XLII. In some instances, in addition to invitation to tender notices, periodic pre-information notices announcing procurement plans are published, in particular in the works or utilities sectors such as water, energy, transport and telecommunications.*¹⁴¹

(ii) *Information content of notices of invitation to tender*

International instruments and national practices

*XLIII. All three international instruments require entities to include a minimum amount of information in their invitations to tender sufficient to enable prospective suppliers to assess their interest in the intended procurement, to make an informed decision as to whether a copy of the tender document should be requested from the procuring entity and to facilitate their participation in tendering procedures.*¹⁴² *The three instruments refer broadly to the same elements.*

*XLIV. Under the World Bank Guidelines on consultants' services, the document prepared for the assignment called the Terms of Reference shall define the objectives, goals and the scope of the assignment and provide background information to facilitate the consultants' preparation of their proposals. The Terms of Reference shall also list the services and surveys necessary to carry out the assignment and the expected results, for example reports, data, maps or surveys.*¹⁴³

*XLV. Under the GPA, invitations to tender shall contain certain other specific information, including information concerning the method of procurement applied (open, selective, negotiated procedures)¹⁴⁴ and on the mode of procurement (purchase, lease, rental or hire purchase).*¹⁴⁵

XLVI. Since the GPA obligations only apply to procurement by those entities explicitly covered in the schedules of individual GPA Parties in Appendix I to the GPA subject to exceptions contained therein and to goods and services above

¹⁴¹S/WPGR/W/11/Add.1, Add.6, Add.10; APEC Survey - Australia and Hong Kong, China; GPA/10. For example, for works contracts, contracting authorities in the European Community publish indicative notices containing the essential characteristics of the works contracts which they intend to award. For other services and supplies contracts above a certain threshold value, contracting authorities are required to make known, by means of an indicative notice to be published as soon as possible after the beginning of their budgetary year, the intended total procurement by product area or in each of the service contracts which they envisage awarding during the subsequent 12 months (WT/WGTGP/W/5).

¹⁴²Model Law 25(1); GPA, Article IX:6-8

¹⁴³World Bank Guidelines on consultants' services, paragraph 2.3

¹⁴⁴GPA, Article IX:6(b)

¹⁴⁵GPA, Article IX:6(h)

*specified threshold values, the notices of invitation to participate in intended procurements or the publication in which such notices appear should indicate whether the procurement for which tenders are sought is subject to the obligations of the Agreement.*¹⁴⁶

*XLVII. Finally, under the GPA, being an intergovernmental agreement subscribed to by Parties using different languages, entities must publish in an appropriate publication listed in Appendix II, for each case of intended procurement, a summary notice of the invitation to tender in one of the official languages of the WTO. The notice shall contain at least information regarding the subject-matter of the contract, the time-limits set for the submission of tenders or an application to be invited to tender, and the addresses from which documents relating to the contracts may be requested.*¹⁴⁷

XLVIII. The details of the information that must be made available in notices of invitation to tender are similar to the requirements in international instruments. The information on national practices as well as the specific elements identified in one or more of the international instruments, are listed below with the instrument that explicitly contains that element identified in the footnotes. There are differences among the countries on which information is available as to the level of detail required in tender notices.

XLIX. International instruments and most countries require tender notices to contain information regarding intended procurement:

- the title, the business name and the address (including address, telephone, telex and fax number) of the entity responsible for inviting tenders for procurement and/or awarding the contract or details of the client of consultancy services. The coordinates of a contact point responsible for providing any commercial or technical information*^{148, 149, 150};
- the scope of the procurement with details on the nature and the quantity of the goods and services to be procured or the construction to be effected*¹⁵¹

LI. The information content of tender notices issued by entities in countries which are parties to plurilateral or regional agreements (e.g. GPA and NAFTA) is subject to the relevant requirements set out in those agreements.¹⁸⁷ Tender notices indicate whether the procurement falls under any of those agreements or whether the bid is domestic or international.¹⁸⁸ For procurement by entities at the sub-central levels of government in a country, the minimum information to be provided is equivalent to the information required of entities at the central government level.¹⁸⁹

LII. In some Members, entities are required to draw up tender notices on the basis of model specimens or notices.¹⁹⁰

B. Tender Documents

International instruments

LIII. The information contained in tender documents describes the needs of the procuring entity and establishes a set of standards which enables the procuring entity to compare the tenders submitted in an objective and fair manner.¹⁹¹ Tender documents also set out the rules and procedures with which a prospective tenderer should comply in preparing and submitting a responsive tender. The level of detail and complexity of tender documents may vary with the size and nature of the intended procurement but they should include, at least, the information that is required to be published in the notice of intended procurement.¹⁹² The three instruments refer broadly to the same elements.¹⁹³ The specific elements identified in one or more of the three instruments are listed below, with the instrument that explicitly specifies those elements identified in the footnotes:

²²⁴Model Law Article 27(l) and (m)

-any commitments to be made by the supplier or contractor outside of the procurement contract, such as commitments relating to counter-trade or to the transfer of technology.²²⁵

LIV. Under the Model Law, at any time prior to the deadline for submission of tenders, the procuring entity may, for any reason, whether on its own initiative or as a result of a request for clarification by a supplier or contractor, modify the tender documents by issuing an addendum. The addendum shall be communicated promptly to all suppliers or contractors to which the procuring entity has provided the solicitation documents and shall be binding on those suppliers or contractors.²²⁶

National practices

LV. The data available do not contain details or examples of tender documents. Some countries have stated that tender documentation must contain all the relevant information to enable suppliers to prepare and submit responsive bids.²²⁷

C. Clarification

International instruments

LVI. Under the Model Law and the World Bank Guidelines, the procuring entity is required to respond to any request by a supplier for clarification of the tender documents or prequalification documents within a reasonable time prior to the deadline for the submission of tenders or application to prequalify so as to enable the supplier to make a timely submission of its tender or application to prequalify. The procuring entity is also required, without identifying the source of the request, to communicate the clarification, any additional information, correction of errors or any other modifications to all other suppliers to which the procuring entity has provided the tender documents. The record of any meeting with any suppliers shall also be communicated to other suppliers.²²⁸

LVII. Under the GPA, entities are required to reply promptly to any reasonable request from suppliers for explanations relating to tender documentation under open and selective procedures. Entities are also required to reply to any reasonable request for relevant information from a supplier participating in the tendering process on condition that such information does not give that supplier an advantage over its competitors in the procedure for the award of the contract.²²⁹

²²⁵Model Law Article 27(v)

²²⁶Model Law Article 28(2)

²²⁷WT/WGTGP/W/5; APEC Survey - Mexico

²²⁸Model Law Articles 28(1) and (3) and 7(4); World Bank Guidelines on goods and works, paragraph 2.18

²²⁹GPA, Article XII:3(a)-(c)

Also, any significant information given to one supplier regarding invitations to tender for a particular intended procurement shall be given simultaneously to all other suppliers concerned in adequate time to permit the suppliers to consider such information and to respond to it.²³⁰

LVIII. Under the World Bank Guidelines, all prospective bidders shall be provided the same information, and shall be assured of equal opportunities to obtain additional information on a timely basis.²³¹ Borrowers shall provide reasonable access to project sites for visits by prospective bidders. For works or complex supply contracts, particularly for those requiring refurbishing existing works or equipment, a pre-bid conference may be arranged whereby potential bidders may meet with the Borrower's representatives to seek clarifications. Minutes of the conference shall be provided to all prospective bidders with a copy to the Bank.²³²

National practices

LIX. No detailed information is available on national practices on clarification of tender documents and procedures. In one country, the procurement legislation provides the conditions under which tenderers may request and obtain further information from the procuring entity.²³³

D. Promptness and Timeliness of Prior Information and Deadlines

International instruments

LX. The Model Law and the GPA emphasize the importance of promptness in the access to national legislation and the publication of texts of relevant legislation.²³⁴ The World Bank Guidelines on goods and works emphasize that specific bidding opportunities should be advertised to all those interested in bidding and, in particular, to the international community in a timely manner to enable prospective bidders to obtain prequalification or bidding documents and prepare and submit their responses.²³⁵

²³⁰GPA, Article IX:10

²³¹World Bank Guidelines on good and works, paragraph 2.18

²³²World Bank Guidelines on goods and works, paragraph 2.18

²³³Tenderers may, for the purpose of drawing up their bids, request further information from the procuring entity in writing not later than ten days prior to the expiry of the deadline for submitting tenders. The content of the information shall be made available to other tenderers. The procuring entity is required to provide the supplementary information related to tender documents not later than six days prior to the expiry of the deadline for submitting the bid and in a manner that does not favour certain bidders over others (S/WPGR/W/11/Add.17).

²³⁴Model Law Article 5; GPA, Article XIX:1

²³⁵World Bank Guidelines on goods and works, paragraph 2.7 and 2.8

LXI. All three instruments provide that suppliers must be granted a sufficient period of time to prepare their tenders. The Model Law recognizes that the length of that period of time may vary from case to case depending on the circumstances of the given procurement and it is left to the procuring entity to fix the deadline by which tenders must be submitted.²³⁶

LXII. The GPA prescribes certain minimum deadlines that must be allowed for the preparation, submission and receipt of tenders to enable responsive tendering. The relevant provisions also contain general considerations that should govern when entities set time-limits for tendering and delivery. Any prescribed time-limit shall be adequate to allow suppliers of other Parties as well as domestic suppliers to prepare and submit tenders before the closing of the tendering procedures. In determining such a time-limit, entities shall, consistent with their own reasonable needs, take into account factors such as the complexity of the intended procurement, the extent of subcontracting anticipated and the normal time for transmitting tenders by mail from foreign as well as domestic points. Furthermore, each Party is required to ensure that its entities take due account of publication delays when setting the final date for receipt of tenders or of applications to be invited to tender.²³⁷

LXIII. Paragraphs 2 and 3 of Article XI of the GPA on deadlines specify the minimum periods that must be provided for the preparation and submission of tenders by suppliers after the issuance of notices of invitation to tender. The deadlines may be shortened under certain circumstances specified in that Article.

LXIV. The World Bank Guidelines also require that the time allowed for the preparation and submission of bids shall be determined with due consideration of the particular circumstances of the project and the magnitude and the complexity of the contract and, generally, no less than six weeks from the date of invitation to bid or the date of availability of bidding documents, whichever is later, shall be allowed for International Competitive Bidding.²³⁸ The relevant provisions require that sufficient time should be allowed to prospective bidders to prepare their bids after they have been notified of the procurement opportunity. A lead time of eight weeks is prescribed between the publication of a General Procurement Notice for procurement on the basis of International Competitive Bidding and the release of the bidding documents to the public. The notifications on opportunities to bid for specific contracts, or to prequalify, in the form of Specific Procurement Notices, shall be published in sufficient time to enable prospective bidders to obtain prequalification or bidding documents and prepare and submit their responses.²³⁹

²³⁶Model Law Article 30(1)

²³⁷GPA, Article XI:1

²³⁸World Bank Guidelines on goods and works, paragraph 2.43

²³⁹World Bank Guidelines on goods and services, paragraph 2.7 and 2.8

LXV. The GPA has detailed provisions aimed at allowing a sufficient period of time for potential suppliers to prequalify. To this end, the GPA provides that any conditions for participation in tendering procedures shall be published in adequate time to enable interested suppliers to initiate and complete the qualification procedures²⁴⁰; the time required for qualifying suppliers shall not be used in order to keep suppliers of other GPA Parties off a suppliers' list or from being considered for a particular intended procurement²⁴¹; entities maintaining permanent lists of qualified suppliers shall ensure that suppliers may apply for qualification at any time; and that all qualified suppliers so requesting are included in the lists within a reasonably short time; if, after publication of a tender notice, a supplier not yet qualified requests to participate, the entity shall promptly start procedures for qualification.²⁴²

National practices

LXVI. Most countries' procurement legislation establishes minimum time-limits, with which the purchasing entities must comply. In a couple of countries there are no mandatory requirements and individual government agencies have discretion in setting the minimum time-limits.²⁴³ Some GPA Parties have stated that their time-limits are in line with the relevant provisions of the GPA.²⁴⁴ The time-limits allowed between the publication of notices of invitation to tender and submission of tenders vary from five to 45 days depending on the procurement methods used, the complexity or size of the procurement and whether the tender is advertised locally or internationally.²⁴⁵ Under open and selective tendering procedures, a period of no less than 40 days between publication of notices of invitation to tender and submission of tenders is frequently allowed although some countries may extend this period up to three months.²⁴⁶

LXVII. The information available also indicates the following more specific practices in some countries:

²⁴⁰GPA, Article VIII(a)

²⁴¹GPA, Article VIII(c)

²⁴²GPA, Article VIII(e)

²⁴³S/WPGR/W/11/Add.4, Add.11

²⁴⁴S/WPGR/W/11/Add.1, Add.2

²⁴⁵S/WPGR/W/11/Add.3, Add.6, Add.8, Add.13, Add.15, Add.16, Add.21; APEC Survey - Malaysia and Mexico; South Africa-TPR 1993

²⁴⁶S/WPGR/W/11/Add.1, Add.2, Add.5, Add.6, Add.9, Add.12, Add.13, Add.14, Add.16, Add.17, Add.18; WT/WGTGP/W/5; Malaysia-TPR 1993

- under selective procurement procedures, where procurement procedures provide for the bid to be preceded by an application to participate in the tender, the time-limits between the publication of the invitation to participate in the tender and receipt of the application may be no less than 25 days²⁴⁷;
- time-limits may be reduced for commercial off-the-shelf procurement²⁴⁸ when the procuring entity has published a pre-information notice, for example in the case of works and services contracts²⁴⁹ and under accelerated procedures used in urgent circumstances²⁵⁰;
- in justified cases, the inviter of bids may extend the deadline for submitting bids, provided that the extension of the deadline is published in an announcement prior to the expiry of the original deadline, and the reason for extending the deadline is indicated.²⁵¹

VI. TRANSPARENCY OF DECISIONS ON QUALIFICATION

A. Transparency of Criteria

International instruments

LXVIII. All three instruments contain provisions aimed at ensuring that decisions on the qualification of suppliers are taken and seen to be taken on the basis of criteria that have been previously disclosed, are capable of objective application and linked to the abilities of interested suppliers to perform.²⁵²

LXIX. The Model Law sets forth the range of criteria that procuring entities may require the suppliers to meet in order to qualify for participation in procurement proceedings.²⁵³ The GPA requires that any conditions for participation in tendering procedures be limited to those which are essential to ensure the firm's capability to fulfil the contract in question. Entities shall recognize as qualified suppliers such domestic and foreign suppliers that meet the conditions for

²⁴⁷S/WPGR/W/11/Add.2, Add.6, Add.17; WT/WGTGP/W/5

²⁴⁸S/WPGR/W/11/Add.6, Add.10

²⁴⁹S/WPGR/W/11/Add.10

²⁵⁰S/WPGR/W/11/Add.17, Add.18; WT/WGTGP/W/5

²⁵¹S/WPGR/W/11/Add.1, Add.10, Add.17

²⁵²Model Law Article 6; GPA, Article VIII and World Bank Guidelines on goods and works, paragraph 2.9 and 2.10

²⁵³Model Law Article 6(1)(b)

*participation in an intended procurement.*²⁵⁴ *The GPA also prescribes a number of procedures in Article VIII to ensure that the qualification process is fair and does not lead to discrimination among suppliers. The World Bank Guidelines emphasize that qualification of suppliers be based entirely on their capability and resources to perform the particular contract satisfactorily and lists the factors that should be taken into account.*²⁵⁵

*LXX. In order to guarantee fairness of and non-discrimination in the qualification process, the Model Law requires that the same criteria must be applied to all suppliers participating in the procurement proceedings; any qualification criteria shall be predisclosed in the prequalification documents or tender documents; the procuring entity shall evaluate the qualification of suppliers in accordance with the qualification criteria set forth in the prequalification or tender documents; and, in reaching a decision with respect to the qualification of each supplier, the procuring entity shall apply only the criteria and procedures set forth in such documents.*²⁵⁶ *The World Bank Guidelines require that the scope of the contract and a clear statement of the requirement for qualification be sent to those who have responded to the invitation to prequalify.*²⁵⁷

National practices

*LXXI. Registration and qualification systems serve to create a pool of readily available information on supplier firms which the procuring entities may use to request proposals for bids or to evaluate bids.*²⁵⁸

LXXII. So that procuring entities can satisfy themselves that the supplier selected will have the financial and technical capacity to perform the terms of the procurement contract, the following national practices on qualification criteria are employed in one or more of the countries on whom information is available:

-the financial capacity and stability of a supplier are determined by requiring detailed records of accounting operations and the proof that the supplier has fulfilled all his tax obligations²⁵⁹ or has a professional risk indemnity insurance²⁶⁰;

²⁵⁴GPA, Article VIII(b) and (c)

²⁵⁵World Bank Guidelines on goods and works, paragraph 2.9

²⁵⁶Model Law Article 6(3) and (4) and Article 7(5)

²⁵⁷World Bank Guidelines on goods and works, paragraph 2.10

²⁵⁸S/WPGR/W/11/Add.7, Add.16

²⁵⁹S/WPGR/W/11/Add.1, Add.3, Add.9, Add.17, Add.19

²⁶⁰S/WPGR/W/11/Add.10

- the assessment of professional capacity and technical suitability²⁶¹ based on information relating to: major accomplished projects; availability of equipment, plants, materials and key staff; managerial competence²⁶²; adequate production capacity and availability of the licence required to perform the contract; references or certificates issued by independent bodies attesting ability to supply the required goods and services in compliance with appropriate quality standards and quality assurance systems²⁶³;*
- the legal capacity to enter into procurement contracts may have to be substantiated, for example by producing extracts from penal records, etc.²⁶⁴ In some cases, if tenders are submitted by groups of suppliers, a specific legal form can be required once the contract has been awarded even though it may not be required in submitting the tender²⁶⁵;*
- additionally, entities may base their qualification requirements on some other considerations, for example protection of health and safety of workers²⁶⁶ and employment equity for men and women²⁶⁷;*
- in some cases, tenderers applying for qualification may be required to prove their enrolment in one of the professional or trade registers;*
- in certain cases, countries make the eligibility of suppliers of other countries to participate in a procurement depend on these countries providing reciprocal treatment to its suppliers.²⁶⁸*

The criteria for qualification may vary according to the procurement procedure used or the procuring entity, for example rules on qualification in the utilities sector may be less detailed.²⁶⁹

²⁶¹S/WPGR/W/11/Add.3, Add.9, Add.12, Add.17

²⁶²S/WPGR/W/11/Add.6, Add.9, Add.11, Add.12, Add.13, Add.16; GPA/12/Rev.1

²⁶³S/WPGR/W/11/Add.4, Add.11, Add.13

²⁶⁴S/WPGR/W/11/Add.2; Brazil-TPR 1996

²⁶⁵S/WPGR/W/11/Add.10

²⁶⁶S/WPGR/W/11/Add.2

²⁶⁷E.g., Affirmative Action (Equal Employment Opportunity for Women) Act in Australia

²⁶⁸S/WPGR/W/11/Add.2

²⁶⁹S/WPGR/W/11/Add.10

LXXIII. Entities may sometimes use negative criteria for disqualifying suppliers, for example for reasons of bankruptcy, criminal conviction, grave professional misconduct²⁷⁰, failure to respect social security or tax obligations, misrepresentation or failing to supply information that may be required, and inadequate past performance or violation of contractual obligations in a previous public procurement.²⁷¹ Persons who are themselves public employees or who have family or business ties with the officials involved in the specific procuring process or who have acted as experts in settlement of a related procurement dispute may also be excluded from participating in tenders.

LXXIV. Any particular requirements and conditions regarding qualification procedures are normally set forth in invitations to tender and tender documents, thereby ensuring that all suppliers are informed sufficiently in advance of the relevant requirements.²⁷²

LXXV. In addition to being used to ensure the capacity of tenderers to perform, qualification and also registration systems may be used to build up an approved suppliers network and for consolidating relationships with reliable suppliers. The guidelines for procurement in one country advise organizations which purchase items specifically designed and manufactured to meet their requirements to consider developing a list of approved suppliers.²⁷³ One country allows lists of approved suppliers to be used only in exceptional cases, and then the recourse to lists must be justified and approved.²⁷⁴

LXXVI. Registration requirements are compulsory in certain countries and do not exist in others. Their relation to qualification requirements is not always clear. In some cases, they seem to be additional. In certain countries, all potential suppliers, both local and foreign, are required to be enrolled in a centralized registration system as a prerequisite for participation in government procurement contracts in certain categories of tenders.²⁷⁵ Registration systems may include the following features, depending on the country:

²⁷⁰S/WPGR/W/11/Add.10

²⁷¹S/WPGR/W/11/Add.13, Add.17, Add.18

²⁷²S/WPGR/W/11/Add.6, Add.15, Add.17, Add.18

²⁷³S/WPGR/W/11/Add.4

²⁷⁴S/WPGR/W/11/Add.6

²⁷⁵S/WPGR/W/11/Add.1, Add.5, Add.6, Add.8, Add.9, Add.11, Add.12, Add.13, Add.14, Add.15, Add.16, Add.20; Pakistan-TPR 1995, Egypt-TPR 1991, Uruguay-TPR 1992; APEC Survey - Malaysia and Indonesia (e.g. the Authorized Registers of Qualified Bidders in New Zealand, the Unified Registry of Suppliers (•SICAF•) in Brazil, the General Contractors Registry in Chile, the National Registry of Contractors in Venezuela)

- designated authorities handle registration systems and classify suppliers according to their contracting capacity.²⁷⁶ One country has indicated that, while there is no compulsory registration requirement, procuring entities may request that a firm register in the roster of suppliers be kept by the National General Accounting Office which will include all enterprises that bid or contract with the State within five days following the opening of bids.²⁷⁷ In some cases, tenderers are required to enrol in a professional or trade register²⁷⁸;
- in some countries, the registration requirement may be limited to public works²⁷⁹ or to specific sectors²⁸⁰;
- in another instance, non-registered firms are allowed to participate in tenders for non-recurring goods, services or works where the local contractors are unable to meet the required standards in the execution of contracts²⁸¹;
- companies or firms seeking registration are usually required to make a declaration and/or have their background, finances and ability to provide a satisfactory service checked by the registration authorities.²⁸²

LXXVII. Some countries have provided reasons for the operation of registration systems. Creating a readily available pool of information on bona fide firms reduces the time needed to examine qualifications during the tender evaluation and thus facilitates the qualification process. Another country has stated that the registration system helps to reduce the risk that the designated supplier will not be able to implement the contract properly. It has been stated by one country that the registered suppliers also benefit because they are not burdened

²⁷⁶E.g., the Unified Register of Suppliers maintained by the chambers of commerce in Colombia, the Directorate General of Supplies and Disposals and the National Small Industries Corporation in India, the Expenditure and Procurement Policies Unit, Pharmaceutical Department or Construction Industry Development Board in Singapore, the Higher Council of Public Works (CONSULCOP) in Peru, the Government Procurement Division of the Ministry of Finance of Malaysia

²⁷⁷S/WPGR/W/11/Add.19

²⁷⁸S/WPGR/W/11/Add.10

²⁷⁹E.g., the National Register of Public Works Building Contractors in Argentina, the Register of Construction Contractors in Chile and the National Register of Public Works in Peru

²⁸⁰The Unified Suppliers Registry and the Unified Contractors Registry maintained by the PDVSA (the national oil company of Venezuela)

²⁸¹S/WPGR/W/11/Add.14, Add.16

²⁸²S/WPGR/W/11/Add.5, Add.12

by the need to provide the same information each time they participate in a public tender.²⁸³

LXXVIII. *Residence requirements seem to be relatively rare as a condition to participate in tenders. In some countries, it is required that foreign natural persons without domicile in the country or foreign legal persons without a branch in the country must accredit an agent domiciled in the country who is duly empowered to submit tenders and sign contracts and also to represent them legally and in non-legal matters.²⁸⁴ In a country, in order to conclude a contract with the State, a firm must normally be established in the country, but foreign firms are exempted from this requirement in the case of international tenders.²⁸⁵ In some instances, the procuring authority might require the contractor to be within a certain distance of the site of contract performance where there is a legitimate need for the contracting entity to have the contractor in close proximity.²⁸⁶*

LXXIX. *One country maintains •common use arrangements• which are standing offers with companies to supply goods and services based on pre-negotiated terms and conditions and at agreed prices. Issues such as trade terms, delivery arrangements, discount schedules and all other contract details are agreed prior to suppliers being added to the lists. Common use arrangements cover most requirements for recurring needs across departments and are continually monitored to ensure that suppliers meet the required standards. The same country has put in place an •endorsed supplier arrangement•, under which suppliers of information technology and major office machine products under common use arrangements have to demonstrate a commitment to world best practice in terms of quality standards and service, and long-term value-adding activities.²⁸⁷*

B. Notification and Listing

International instruments

LXXX. *The three instruments have specific requirements on the provision of information on decisions to qualify to the suppliers concerned and to the general public. Under the Model Law, the procuring entity shall make available to any member of the general public, upon request, the names of all suppliers or contractors that have been prequalified.²⁸⁸ Each supplier submitting an*

²⁸⁶S/WPGR/W/11/Add.6

²⁸⁷S/WPGR/W/11/Add.11

²⁸⁸Model Law Article 7(6)

*application to prequalify shall be notified whether or not it has been prequalified.*²⁸⁹ *Under the Model Law and the GPA, the procuring entity shall, upon request, communicate to suppliers whose application to qualify was rejected or whose qualification has been brought to an end the grounds therefor.*²⁹⁰ *The GPA requires the entity concerned to advise any supplier having requested to become a qualified supplier of its decision in this regard.*²⁹¹ *The World Bank Guidelines require Borrowers to inform all applicants of the results of the prequalification.*²⁹² *Entities maintaining lists of qualified suppliers are required to publish the qualification criteria, the methods of application and assessment up-to-date lists.*²⁹³

*LXXXI. Under the procedures of Article X of the GPA on selective tendering, entities maintaining permanent lists of qualified suppliers are required to publish annually in one of the publications listed in Appendix III a notice containing the following*²⁹⁴:

-the enumeration of the lists maintained, including their headings, in relation to the products or services or categories of products or services to be procured through the lists;

-the period of validity of the lists, and the formalities for their renewal.

*Entities are required to notify the qualified suppliers included on permanent lists of the termination of any such lists or of their removal from them.*²⁹⁵

²⁹³S/WPGR/W/11/Add.2, Add.9

²⁹⁴GPA, Article IX:9(a)-(c)

²⁹⁵GPA, Article VIII(f)

National practices

LXXXII. Many procuring entities maintain either permanent or occasional lists of qualified suppliers²⁹⁶ for procurement in specific categories of products, services and public works, in particular in the case of complex projects.²⁹⁷ In preparing and maintaining lists of qualified suppliers, entities generally observe the following procedures:

- in order to avoid exclusivity in the procurement process, ensuring that new suppliers are provided with an opportunity to be admitted to the lists of qualified suppliers at any time or at regular intervals²⁹⁸ and that qualification lists are regularly updated by procuring entities²⁹⁹ by evaluating and approving potential suppliers³⁰⁰;*
- the regular publication of up-to-date approved lists of qualified suppliers, the period of validity of the lists, the qualification criteria, and methods of application.³⁰¹*

²⁹⁶S/WPGR/W/11/Add.2, Add.4, Add.5, Add.13, Add.14; APEC Survey - Thailand; GPA/12/Rev.1

³⁰¹S/WPGR/W/11/Add.9, Add.21

VII. TRANSPARENCY OF DECISIONS ON CONTRACT AWARDS

A. Transparency of Criteria

International instruments

LXXXIII. *Government procurement regimes and each of the three instruments referred to in this note put great emphasis on decisions on the award of the contracts not only being objective but also being seen to be objective. This concern lies at the heart of the nexus linking transparency and accountability. Being seen to be objective in decision-making requires, first, that the evaluation criteria, including technical specifications, be objective in nature and publicly announced in advance and, second, that arrangements for the receipt and opening of tenders are such as to ensure their regularity. Transparency in decision-making further entails the availability ex post of information on the decisions taken.*

LXXXIV. *As stated above under the Section on tender documents, all three instruments provide that tender documents should contain the criteria, including any factor other than price, to be considered by the procuring entity in determining the successful tender and for awarding the contract. All three instruments also emphasize that entities should evaluate tenders only on the basis of the criteria that have been previously published.*

LXXXV. *The provisions of the Model Law on examination, evaluation and comparison of tenders require the procuring entity to evaluate and compare the tenders in order to ascertain the successful tender in accordance with the procedures and criteria set forth in the tender documents and prohibit the use of any criterion that has not been set forth in the tender solicitation documents.³⁰² The procuring entity is to apply the same criteria to all tenders in a given procurement proceeding.*

LXXXVI. *The GPA also explicitly provides that awards should be made in accordance with the criteria and essential requirements specified in the tender documentation.³⁰³ Unless in the public interest an entity decides not to issue the contract, the entity shall make the award to the tenderer who has been determined to be fully capable of undertaking the contract and whose tender, whether for domestic products or services, or products or services of other Parties, is either the lowest tender or the tender which in terms of the specific evaluation criteria set forth in the notices or tender documentation is determined to be the most advantageous.³⁰⁴*

³⁰²Model Law Article 34(4)(a), Article 39(1) and Article 48(3)

³⁰³GPA, Article XIII:4(c)

³⁰⁴GPA, Article XIII:4(b)

LXXXVII. The World Bank Guidelines require that bidding documents shall specify the relevant factors, in addition to price, to be considered in bid evaluation and the manner in which they will be applied for the purpose of determining the lowest evaluated bid.³⁰⁵ The Borrower is required to prepare a detailed report on the evaluation and comparison of bids setting forth the specific reasons on which the recommendation for the award of the contract is based.³⁰⁶

LXXXVIII. Particular attention is given in the three instruments to ensuring the transparency and objectivity of technical specifications criteria and their evaluation. The GPA and the Model Law stipulate that technical specifications³⁰⁷ prescribed by procuring entities shall not be prepared, adopted or applied with a view to, or with the effect of, creating unnecessary obstacles to international trade.³⁰⁸ The GPA and the World Bank Guidelines require that technical specifications prescribed by procuring entities shall be based on international standards, where such exist, otherwise, on national technical regulations, recognized national standards or other equivalent standards, or building codes.³⁰⁹ The GPA has an explicit preference for the use of specifications based on performance rather than design or descriptive characteristics. The Model Law requires that any specifications, plans, drawings, designs and requirements or descriptions be based on the relevant objective technical and quality characteristics of the goods.³¹⁰ All three instruments proscribe the use of brand names and other references pointing to, for example, a patent, specific origin, producer or supplier.³¹¹ Moreover, the GPA requires entities not to seek or accept, in a manner which would have the effect of precluding competition, advice which may be used in the preparation of specifications for a specific procurement from a firm that may have a commercial interest in the procurement.³¹²

LXXXIX. The Model Law provides that, as a general rule, suppliers and contractors are to be permitted to participate in procurement proceedings without regard to nationality and that foreign suppliers and contractors should not

³⁰⁵World Bank Guidelines on goods and works, paragraph 2.51

³⁰⁶World Bank Guidelines on goods and works, paragraph 2.53

³⁰⁷Such as quality, performance, safety and dimensions, symbols, terminology, packaging, marking and labelling, or the procedures and methods for their production and requirements relating to conformity assessment procedures prescribed by procuring entities

³⁰⁸GPA, Article VI:1; Model Law Article 16(1)

³⁰⁹World Bank Guidelines on goods and works, paragraph 2.19 and 2.20

³¹⁰Model Law Article 16(2)

³¹¹GPA, Article VI:2-3; Model Law Article 16(2); World Bank Guidelines on goods and works, paragraph 2.19 and 2.20

³¹²GPA, Article VI:4

otherwise be subject to discrimination. At the same time, the Model Law recognizes that governments may wish in some cases to restrict procurement from foreign sources with the purpose of protecting certain economic sectors or on account of certain legal obligations. Such restrictions should only be on grounds specified in the procurement regulations or should be pursuant to other provisions of law.³¹³ The objective of transparency is promoted by requiring a procuring entity to declare any limitations on participation on the basis of nationality in the invitations to tender and to include in the record of the procurement proceedings a statement of the grounds and circumstances on which a procurement entity has relied for limitation of participation on the basis of nationality. In these cases, the procuring entity is exempted from the obligation to give wide international circulation to the invitation to tender or invitation to prequalify and the invitation notices do not need to contain certain details, for example on the languages in which they are available, which are necessary only for documents of international circulation.³¹⁴

XC. The Model Law also provides that in evaluating and comparing tenders, a procuring entity may grant a margin of preference in favour of local goods, services and suppliers which permits the procuring entity to select the overall lowest-priced tender of a local supplier when the difference in price between that tender and the lowest-priced tender falls within the range of margin of preference.³¹⁵ The rules for calculation of such preference margins should be set forth in the procurement regulations. Moreover, the use of a margin of preference is to be predisclosed in the tender documents and reflected in the record of the procurement proceedings.³¹⁶

XCI. Under the (ICB) International Competitive Bidding procedures, the World Bank Guidelines provide that a margin of preference may be granted to domestic goods and construction firms in the evaluation of bids at the request of the Borrower and under conditions to be agreed under the Loan Agreement.³¹⁷ The margin of preference for goods manufactured in the country of the Borrower is equivalent to the amount of duties and other related import charges or 15% of the bid price of foreign goods if the said duties and charges exceed 15% of the bid price. To be eligible for a margin of preference, goods must have a domestic content of at least 30%. Borrowers may also grant a margin of preference of 7.5% to bids for works from eligible domestic contractors in World Bank

³¹³Guide to Enactment of UNCITRAL Model Law, page 58 and Model Law Article 8(1)

³¹⁴Model Law Article 23

³¹⁵Guide to Enactment of UNCITRAL Model Law, page 58; Model Law Article 34(4)(d) and 39(2)

³¹⁶Model Law Articles 27(e), 34(4)(d) and 39(2)

³¹⁷World Bank Guidelines on procurement of goods and construction services, paragraph 2.54 and 2.55

*Borrower countries below a specified threshold of GNP per capita when comparing with bids from foreign countries. The bidding documents shall clearly indicate any preferences to be granted, the information required to establish the eligibility of a bid for such preference, and the method that will be followed in the evaluation and comparison of bids.*³¹⁸

*XCII. Moreover, for procurement of goods and works, which by its nature or scope is not expected to be of interest to foreign bidders, the competitive bidding procedure normally used for public procurement in the country of Borrower, the NCB, may be preferred to the ICB procedures as the most economic and efficient method of procurement. The NCB procedure is used where the contract values are small; works are scattered geographically or spread over time; works are labour intensive; or the goods or works are available locally at prices below the international market. It may also be used when the advantages of ICB are clearly outweighed by the administrative or financial burden involved. Under the NCB, the criteria used in the evaluation of bids and the award of the contracts shall be made known to all bidders and not be applied arbitrarily. Adequate response time for preparation and submission of bids shall be provided. To be acceptable for use in World Bank-financed procurement, the Borrower country's procurement procedures shall be reviewed and modified as necessary, to ensure economy, efficiency and transparency and broad consistency with the principles of the World Bank Guidelines.*³¹⁹

XCIII. Under the GPA and in respect of procurement covered by the Agreement, governments Parties to the Agreement are required to give the products, services and suppliers of any other Party to the Agreement treatment no less favourable than that they give to their domestic products, services and suppliers and not to discriminate among the goods, services and suppliers of other Parties (Article III:1). Furthermore, each Party is required to ensure that its entities do not treat a locally established supplier less favourably than another locally established supplier on the basis of the degree of foreign affiliation or ownership and do not discriminate against a locally established supplier on the basis of the country of production of the good or service being supplied (Article III:2). Certain derogations from the fundamental principles of the Agreement are provided for in national schedules appended to the Agreement. For instance, for sectors in Annex 3 and for procurement by Annex 1-3 entities of services listed in Annexes 4 and 5, the Appendices of certain GPA Parties enable them to make non-discriminatory treatment of other GPA Parties dependent on material reciprocity.

XCIV. In addition, special and differential treatment for developing countries under Article V of the GPA allows for agreed exclusions from the requirement of national treatment under the GPA. The GPA recognizes the need of developing

³¹⁸World Bank Guidelines on goods and works, paragraph 2.54 and Appendix 2, paragraphs 2-5

³¹⁹World Bank Guidelines for procurement of goods and works, paragraph 3.3 and 3.4

countries to: safeguard their balance-of-payments position and ensure a level of reserves adequate for the implementation of programmes of economic development; promote the establishment or development of domestic industries including the development of small-scale and cottage industries in rural and backward areas and economic development of other sectors of the economy; and support industrial units so long as they are wholly or substantially dependent on government procurement. Accordingly, a developing country acceding to the Agreement may negotiate with other Parties mutually acceptable exclusions from the rules on national treatment with respect to certain entities, products or services that are included in its coverage lists. After its accession to the Agreement, a developing country Party may modify its coverage list under the normal procedures of the Agreement or request the Committee to grant exclusions from the rules on national treatment for certain entities, products or services that are included in its coverage lists.³²⁰

XCV. The GPA prohibits, in the qualification and selection of suppliers, products or services, or in the evaluation of tenders and award of contracts, Parties from imposing, seeking or considering offsets. These are defined as measures used to encourage local development or improve the balance-of-payments accounts by means of domestic content, licensing of technology, investment requirements, counter-trade or similar requirements.³²¹ However, a developing country may at the time of its accession negotiate conditions for the use of offset requirements, to be used only for qualification of suppliers and not as criteria for awarding contracts. These offsets shall be set forth in the country's schedule to the Agreement. The existence of such conditions shall be included in the notice of intended procurement and other documentation relating to tendering procedures.³²² One GPA Party's Appendix I to the GPA contains a note on the use of offset requirements.³²³

National practices

XCVI. In some countries, the basic principles and criteria for selecting tenders are established in the procurement legislation³²⁴; in others, there are no centrally prescribed contract award criteria and agencies determine the criteria that are appropriate in the context of individual procurements.³²⁵ The following criteria and procedures are common to the process of evaluation of tenders:

³²⁰GPA, Article V:2, 4 and 5

³²¹GPA, Article XVI:1

³²²GPA, Article XVI:2; Note to GPA Appendix I of Israel

³²³Note to Israel's Appendix I to the GPA

³²⁴S/WPGR/W/11/Add.3, Add.8, Add.12, Add.17, Add.19

³²⁵S/WPGR/W/11/Add.4, Add.11

- it is invariably required that all evaluation criteria be made available in advance to suppliers in the tender notice or in the tender documents³²⁶; that only those criteria previously announced be taken into account in the evaluation of bids³²⁷; and that selection of the winning tender be made in accordance with the evaluation criteria previously announced and relative importance of each criterion;*
- it may be required that the criteria that are communicated to the potential suppliers in the invitation to tender and tender documents cannot be modified without notifying all of the potential bidders through the same channels used to transmit the invitations and the tender documents³²⁸;*
- contracts are awarded, in general, to the tenders which have the lowest price or to the tenders determined to be economically the most advantageous in terms of the specific evaluation criteria. The latter may involve such elements as price, through-life costs such as installation, maintenance and other overhead costs, quality, aesthetic and functional aspects, technical specifications, fitness for purpose, technical merit, performance of the goods and services to be supplied, competence, viability, solvency, scope of prior investment and experience of prospective suppliers, and other considerations such as after-sale service, guarantees, and technical assistance to clients, environmental impact, associated risks, date of delivery, et cetera;*
- in some cases procuring entities are required to state clearly in the tender documents the ranking of the award criteria that they intend to apply by order of importance.³²⁹ However, the information available does not specify how the criteria are weighted in the overall evaluation.*

XCVII. The procurement practices of a number of countries provide for award criteria to take into account considerations such as the promotion of domestic supplies and/or suppliers. To this end, the criteria may include factors such as price preference margins, offset requirements, set-asides for small and medium-sized enterprises or for minority business. Some countries have stated that the procuring entity must give suppliers prior information at the invitation to

³²⁶E.g., in section •m• of tender documents published in the Commerce Bulletin Daily of the United States

³²⁸S/WPGR/W/11/Add.18

³²⁹S/WPGR/W/11/Add.10, Add.12, Add.17; APEC Survey - Thailand and Malaysia

*tender stage of the procedures if domestic preferences or any other conditions in a procurement proceeding are applied.*³³⁰

XCVIII. With respect to the treatment of domestic supplies and/or suppliers, the following practices have been indicated:

- some countries have stated that they have no laws, regulations, procedures or practices that accord domestic goods, services and public works and/or suppliers treatment more favourable than that accorded to foreign goods, services and public works and/or suppliers or that discriminate on the basis of nationality of supplier or origin of goods or services.³³¹ In some, the non-discrimination principle is prescribed in the procurement legislation or government purchasing guidelines³³²;*
- the procurement legislation in another country prohibits procurement subject to an international agreement from suppliers originating in countries not parties to that agreement³³³;*
- in some countries, procurement below certain thresholds may be limited to domestic suppliers³³⁴;*
- preferences to bids from domestic supplies/suppliers, which may take the following forms:*
- preference margins, which may vary according to the category of procurement (usually between 3% and 20%)^{335, 336};*

³³⁰S/WPGR/W/11/Add.12, Add.17

³³¹S/WPGR/W/11/Add.5, Add.9, Add.12, Add.14, Add.15; Dominican Republic-TPR 1996, Mauritius-TPR 1995

³³²S/WPGR/W/11/Add.4, Add.13, Add.15

³³³The Trade Agreement Act (TAA) in the United States requires that procurement of products from countries that the President has not exempted from application of the Buy American Act be prohibited for Federal goods contracts that are covered by the GPA. Amendments to the TAA contained in the Uruguay Round Agreements Act 1994 permit the President to waive the purchasing prohibition and apply Buy American preferences in its place for countries that are not signatories to the GPA but agree to apply equivalent competitive procurement procedures and effective anti-corruption measures. The purchasing prohibition does not apply to services that are covered under the GPA.

³³⁴S/WPGR/W/11/Add.12

³³⁵For example, the Buy American Act of 1933 requires that domestic end-products be acquired for public use. The Executive Order implementing the United States Buy American Act of 1933 states that United States Federal agencies, other than the Department of Defense, may determine that an award can be made for a foreign product if an offered price of a domestic product is

-preference may be given to suppliers of goods and services of domestic origin in choosing between otherwise equal bids, in some cases as a tie-breaker.³³⁷

-no general preferences but specific preferences apply to purchases by certain categories of entities or procurement categories.³³⁸

XCIX. Some procurement legislation requires procuring entities to take into account in the award of contracts the ability of tenderers to meet certain offset requirements. In these cases, the inviter of bids is to define such conditions in the invitations to bid and in tender documents. Some countries have indicated that they do not employ such policies.³³⁹ Where countries do, offset requirements may have the following features:

-local content requirements expressed in terms of a percentage of human resources and other inputs, technology transfer, counter-trade, R&D, export, training, national sub-contracting, strategic investment and venture capital investment requirements. Local content requirements may be expressed in terms of percentage of the value of domestic raw materials and products used in the performance of a procurement.³⁴⁰ In some instances, local content requirements are limited to specific sectors.³⁴¹

determined to be unreasonable, i.e. if the domestic price exceeds the price of a foreign product by 6%, or 12% for small businesses. The Department of Defense uses a 50% factor.

³³⁶S/WPGR/W/11/Add.12, Add.17; APEC Surveys - Malaysia and Thailand; Czech Republic-TPR 1996, Sri Lanka-TPR 1995

³³⁷S/WPGR/W/11/Add.3, Add.8, Add.19, Zambia-TPR 1996

³³⁸For example, Article 36 of the EC Utilities Directive requires as a general rule that, where two or more tenders are equivalent in the light of the award criteria (they are equivalent if the price difference does not exceed 3%), preference shall be given to the tenders where the proportion of the products originating in third countries does not exceed 50% of the total value of the products constituting the tender. Another case is the Preferential Margin Scheme for Construction Quality maintained by Singapore for local contractors with consistent good performance. Under the scheme, a local contractor who has been assessed to be eligible on the basis of performance in the recent past is given a preference point in the computation of prices. The contractor is awarded the contract if his tender price does not exceed the lowest tender by the computed preferential margin. In procurement by PETROBRAS (national oil company of Brazil) and in public works contracts in Costa Rica, a margin of preference is given to local suppliers.

³³⁹S/WPGR/W/11/Add.1, Add.2, Add.3, Add.4, Add.5, Add.6, Add.9, Add.13, Add.14, Add.15, Add.16, Add.18, Add.19, Add.21

³⁴⁰S/WPGR/W/11/Add.8, Add.12, Add.17; Venezuela-TPR 1996, Uruguay-TPR 1992, Tunisia-TPR 1994, Indonesia-TPR 1991, South Africa-TPR 1993; Note to Israel's Appendix I to the GPA

³⁴¹E.g., procurement under the United States Cargo Preference Act and the Fly American Act or defence procurement may involve local content requirements. In Australia the Partnerships for

C. *Some procurement regimes provide for other criteria which discriminate on grounds unrelated to the quality of the tender. Such grounds include:*

- the application of domestic sourcing requirements for inputs into the exploration and exploitation of natural resources;*
- the limitation of the participation in tendering for small-size contracts in the service and construction service sectors on the basis of the location of the supplier's principal office³⁴²;*
- criteria favouring a region of the economy in a general framework of regional development for procurement not covered by international agreements and above a certain threshold value³⁴³;*
- set-aside policies encouraging procurement in labour surplus areas³⁴⁴;*
- preference in selection of tenders to small and medium-sized enterprises. Such enterprises may include local cooperatives, micro-enterprises, foundations, communal action associations and in general similar entities of the place where the contract is to be implemented.^{345, 346} In one instance, small-scale sectors may be granted a price preference up to 15% over the large-scale sector, subject to the merits of each case³⁴⁷;*
- set-aside programmes for creating opportunities for training and employment for businesses run by minority groups through government contracts³⁴⁸;*

Development Programme (PfD) under the umbrella of the Civil Offsets Agreement and the Fixed Term Arrangements (FTA) encourages international information technology and telecommunications companies operating in Australia to make use of domestic products, services and skills. Procurement by PETROBRAS (the national oil company of Brazil) and public work contracts in Uruguay may be subject to local content requirements.

³⁴²S/WPGR/W/11/Add.13

³⁴⁵S/WPGR/W/11/Add.5, Add.6, Add.7, Add.8, Add.13, Add.17; Cameroon-TPR 1995

³⁴⁶For example, the Small Business Act in the United States requires that awards of any size shall be set aside for small business participation when there is a reasonable expectation that offers will be obtained from at least two small businesses and awards will be made at fair market prices (so-called •Rule of Two•).

³⁴⁷S/WPGR/W/11/Add.14

³⁴⁸S/WPGR/W/11/Add.6, Add.7; APEC Survey - Malaysia

- the granting of national treatment to foreign suppliers on the basis of reciprocity³⁴⁹, in particular, in the services sector^{350, 351};*
- a large number of regional arrangements contain provisions on government procurement.³⁵² The Secretariat has not made a systematic study of this matter to determine to what extent they provide national treatment or preferences to supplies and suppliers of other countries in the region. However, the information available indicates the following preferences in two such arrangements. The ASEAN PTA (the Association of South East Asian Nations Preferential Trading Arrangement) requires member countries to accord each other a preferential margin of 2.5%.³⁵³ Under the Government Procurement Agreement between Australia and New Zealand, six States or Commonwealth Territories in Australia apply preference margins of 10% or 20% to procurement of goods and related services of Australian-New Zealand content.³⁵⁴*

B. Receipt and Opening of Tenders

³⁴⁹S/WPGR/W/11/Add.2, Add.8, Add.18; Indonesia-TPR 1991

³⁵⁰Covered services in Appendix I of certain GPA Parties

³⁵¹E.g., Article 36 of the EC Utilities Directive applies to tenders comprising products originating in third countries with which the Community has not concluded, multilaterally or bilaterally, an agreement ensuring comparable and effective access for Community undertakings to the markets of those third countries.

³⁵²Apart from the European Community Directives, of the regional arrangements on which information has been supplied in the responses to the questionnaire on government procurement services, only NAFTA has detailed provisions on tendering procedures including transparency provisions. Other regional agreements which contain provisions on government procurement with varying degrees of detail include the Australian-New Zealand Government Procurement Agreement, the European Economic Area Agreement (laying down specific provisions and arrangements concerning the application of certain EC Directives relating to procurement), the Europe Agreements between the European Union and Poland, Hungary, Romania, Bulgaria, the Czech Republic, the Slovak Republic, Estonia, Latvia, Lithuania and Slovenia, the Central European Free Trade Agreement between Hungary, Poland, the Czech Republic and the Slovak Republic, the Customs Union Agreement between the Czech Republic and the Slovak Republic, the US-Israel Free Trade Agreement, the ACP-EC Convention of Lomé, the Euro-Mediterranean Agreements between the EU and Tunisia and between the EU and Israel, Partnership and Cooperation Agreements between the EU and Russia and Ukraine, the Cooperation Agreement between the EU and Chile, the Free Trade Agreement between Colombia, Mexico and Venezuela (Group of 3 Accord), the Free Trade Agreements between Mexico and Costa Rica and Mexico and Bolivia, the Free Trade Agreements between the EFTA countries and Poland, Hungary and Turkey and the three Baltic countries.

³⁵⁴S/WPGR/W/11/Add.11

International instruments

CI. *The GPA provisions require that procedures and conditions for the receipt and opening of tenders guarantee the regularity of the openings and be consistent with the national treatment and non-discrimination provisions of the GPA.*³⁵⁵

CII. *The Model Law and the World Bank Guidelines set forth detailed conditions which are aimed at preventing any non-transparent action or decision by the procuring entity in the process of the opening of tenders and at enabling suppliers to observe that the entity complies with the procurement criteria and procedures. To this end, these two instruments provide, inter alia, that:*

- bids shall be opened at the time and place stipulated in the notice of invitation to tender or in the tender notice*³⁵⁶;
- all suppliers that have submitted tenders or their representatives shall be permitted by the procuring entity to be present at the opening of tenders*³⁵⁷;
- the technical proposals, submitted separately from financial proposals, shall be opened immediately by a committee of officials drawn from the relevant departments (technical, finance, legal, as appropriate) after the closing time for the submission of proposals*³⁵⁸; *the financial proposals shall remain sealed and shall be deposited with a reputable public auditor or independent authority until they are opened publicly*³⁵⁹;
- the name and address of each supplier whose tender is opened and the tender price or the total amount of each bid shall be read aloud to those persons present at the opening of tenders, and communicated on request to suppliers that have submitted tenders but that are not present or represented at the opening of tenders*³⁶⁰;

³⁵⁵GPA, Article XIII:3

³⁵⁶Model Law Article 33(1); World Bank Guidelines on goods and works, paragraph 2.44

³⁵⁷Model Law 33(2); World Bank Guidelines on goods and works, paragraph 2.44

³⁵⁸World Bank Guidelines on consultants' services, paragraph 2.12

³⁵⁹World Bank Guidelines on consultants' services, paragraph 2.12

³⁶⁰Model Law Article 33(3); World Bank Guidelines on goods and works, paragraph 2.44

-the name and address of each supplier whose tender is opened and the tender price or the total amount of each bid shall be recorded immediately in the record of the tendering proceedings.³⁶¹

CIII. The three instruments set forth a number of other provisions that safeguard transparency at the bid evaluation stage. The procuring entity may ask bidders for clarifications of their tenders that are needed to evaluate them, but no changes are to be asked or permitted with a view to making unresponsive bids responsive except for the correction of arithmetical errors appearing on tender.³⁶² The GPA requires that any opportunity that may be given to tenderers to correct unintentional errors of form between the opening of tenders and the awarding of the contract shall not be permitted to give rise to any discriminatory practice.³⁶³ The World Bank Guidelines preclude the alteration of bids after the deadline for receipt of bids.³⁶⁴

CIV. Under the GPA, negotiations with entities may only take place where prior notice has been given or where no one tender is obviously the most advantageous in terms of the specific evaluation criteria set forth earlier in the notices or tender documentation.³⁶⁵ To safeguard transparency in the course of negotiations, entities shall ensure that any elimination of participants is carried out in accordance with the criteria set forth in the notices and tender documentation; all modifications to the criteria and to the technical requirements are transmitted in writing to all remaining participants in the negotiations; all remaining participants are afforded an opportunity to submit new or amended submissions on the basis of the revised requirements; and when negotiations are concluded, all participants remaining in the negotiations shall be permitted to submit final tenders in accordance with a common deadline.³⁶⁶ The Model Law prohibits negotiations between the procuring entity and a supplier with respect to a tender submitted by the supplier.³⁶⁷

CV. The World Bank Guidelines require that information relating to the examination, clarification, and evaluation of bids and recommendations concerning awards shall not be disclosed to bidders or other persons not officially

³⁶¹Model Law Article 33(2); World Bank Guidelines on goods and works, paragraph 2.44

³⁶⁷Model Law Article 35

concerned with the bidding process until the successful bidder is notified of the award.³⁶⁸

CVI. Under the procedures on negotiations in the Model Law and in the GPA, entities are required to treat information in tenders, in particular any technical, price or other market information, confidentially and not to provide information intended to assist particular participants to bring their tenders up to the level of other participants.³⁶⁹

CVII. Under the World Bank Guidelines on consultants' services, information relating to the evaluation of proposals and recommendations concerning awards shall not be disclosed to the other consultants that have submitted the proposals or to other persons until the award of the contract is notified to the successful firm.³⁷⁰

National practices

CVIII. The countries on which information is available follow procedures that are set forth in the generally applicable procurement laws³⁷¹ or established by individual procuring agencies for their own use.³⁷²

CIX. Most countries require that tenders be received and opened at the date, time and place that were previously announced and specified and published in the invitation to tender or tender documents.³⁷³

CX. Practices regarding procedures for submission and receipt of tenders include the following, depending on the country:

-tenders must be submitted in sealed envelopes³⁷⁴ with an identification of the tender and the opening date. Submitted tenders are to be registered with the date of arrival and persons delivering tenders provided with receipts³⁷⁵;

³⁶⁸World Bank Guidelines on goods and services, paragraph 2.46

³⁷³S/WPGR/W/11/Add.5, Add.10, Add.12, Add.16, Add.19

³⁷⁴S/WPGR/W/11/Add.1, Add.5, Add.10, Add.11, Add.14, Add.19, Add.20

³⁷⁵S/WPGR/W/11/Add.8, Add.10

-tenders may also be deposited in a tender box or an urn that is to be situated in the place specified in the tender documents.³⁷⁶ Tenders sent by registered mail³⁷⁷ are to be deposited promptly by the procuring entity into the correct tender box³⁷⁸;

-tenders must be kept stored securely by the responsible department or the procuring entity until the designated bid opening time is reached.³⁷⁹ Purchasing entities are not permitted to canvass offers after the closing date from suppliers who have not submitted bids.³⁸⁰

CXI. In regard to procedures for the opening of tenders, practices include, depending on the country:

-all tenders are to be opened on the due date, preferably immediately after the stipulated closing date for submission of tenders, in the specified place and simultaneously.³⁸¹ Tenders submitted later than the stipulated date are not to be considered³⁸² and are to be returned to the tenderer³⁸³;

-tenders are to be opened by a tender opening committee to be designated by the tender body, formally composed of at least two representatives of the procuring entity³⁸⁴, for example an officer serving in a purchasing unit or an independent member from a non-purchasing branch.³⁸⁵ Some countries procedures require that tender notices should specify the persons who are to be present at the tender opening³⁸⁶;

³⁸⁵S/WPGR/W/11/Add.10

³⁸⁶S/WPGR/W/11/Add.1, Add.10

-in most countries bidders or their proxies are entitled to be present at bid openings³⁸⁷ and in some others the award is announced in a public meeting and any person wishing to attend may be present at the opening of tenders.³⁸⁸ In some countries, if bidders are not allowed to be present, the opening has to be witnessed by at least three members of the staff of the procuring entity³⁸⁹ who are not involved in the tendering procedure.³⁹⁰ One country has indicated that the procuring entities may decide not to have a public opening but to communicate the award to each of the bidders³⁹¹;

-tender opening procedures may vary according to the category of procurement and the procurement method chosen.³⁹² For example, only tenders under open procedures³⁹³ or tenders above a certain threshold value may be publicly opened, or bidders may be allowed to be present at the opening of tenders only in the area of public works.³⁹⁴

CXII. Practices applied at the opening of tenders include, depending on the country:

-a tender protocol is to be set up at the opening³⁹⁵;

-the name of the bidder, the price, when the lowest price is the award criterion, and other conditions met by the bidder are announced immediately.³⁹⁶ One country has indicated that disqualified bids are returned to the interested parties in closed envelopes³⁹⁷;

³⁹⁷S/WPGR/W/11/Add.3

- opened tenders must be registered so that an additional tender cannot be added subsequently without explanation.³⁹⁸ Tenders should be stamped with the date and the time of opening and the stamp must be initialled by the persons responsible for opening tenders³⁹⁹ or by official witnesses⁴⁰⁰;
- announced awards are to be recorded immediately in the official record of the tendering proceedings⁴⁰¹;
- in some cases, minutes of the official record of the opening proceedings are prepared and signed by the members of the commission and by tenderers who are present.⁴⁰² One country has indicated that the opening procedure has to be recorded only in the case of procurement of construction services.⁴⁰³ The record may include the names of the persons that have attended the opening process, names of tenderers, dates of submission of offers, process offered, variety of offers. One country has indicated that the minimum information content of the minutes is specified in its procurement legislation.⁴⁰⁴ Some countries have stated that all tenderers who have participated in the tender have the right to examine the records.⁴⁰⁵

CXIII. Moreover, in some countries, where a stratified tendering procedure is employed, tenders are received in two sealed envelopes.⁴⁰⁶ The first envelope contains the documentation by which it is possible to identify and confirm the existence and participation of the bidder and a description of the required technical specifications of the product or service in question. The second envelope contains the financial bid for the product or service together with the bid security document. During the first phase, known as the •technical phase•, all of the bids are opened in the presence of the participants, and their contents verified. Only the aspects of bids pertaining to the required technical specifications of the product or service in question are examined and only those which meet the technical

requirements set forth in the bidding conditions are qualified for their second or financial phase, where the final decision is made.⁴⁰⁷ Another country has elaborated that, in negotiated procurements, prices are kept confidential until an award is made. The reason for doing so relates to the proprietary nature of the pricing information. An additional concern is that the knowledge of prices could lead to a situation in which the incumbent contractor has an unfair advantage over its competitors which could affect the integrity of the procurement system.⁴⁰⁸

C. Ex Post Information on Contract Awards

International instruments

CXIV. The three instruments lay down provisions requiring procuring entities to inform the public and, in particular, the suppliers that have participated in the procurement process of their award decisions. The Model Law and the GPA require entities to publish a notice award after the award of each contract.⁴⁰⁹ The publications in which individual GPA Parties publish such notices are identified in Appendix II to the GPA. The GPA sets forth in detail the type of information that such notices, to be published within a specified time-limit after the award of each contract, must contain. Such information shall relate to⁴¹⁰:

- the nature and quantity of products or services in the contract award;
- the name and address of the entity awarding the contract;
- the date of award of the contract;
- the name and address of the winning tenderer;
- the value of the winning award or the highest and lowest offer taken into account in the award of the contract;
- where appropriate, the means of identifying the notice of invitation to tender or justification for the use of a limited tendering procedure; and
- the type of procedure (open, selective or limited) used.

CXV. In addition to the publication of a notice of contract award, the GPA goes on to require entities to promptly inform directly those suppliers that have participated in a tender of the decision on the contract award, in writing if

⁴⁰⁷Czech Republic-TPR 1996, Brazil-TPR 1996

⁴⁰⁸S/WPGR/W/11/Add.6

⁴⁰⁹Model Law Article 14(1) and (2); GPA, Article XVIII:1

⁴¹⁰GPA, Article XVIII:1(a)-(g)

requested.⁴¹¹ Under the Model Law, the procuring entity is required to give a notice to other suppliers after it has entered into a contract with a supplier, specifying the name and address of the supplier and the contract price.⁴¹²

CXVI. The GPA confers on unsuccessful tenderers the right to obtain the necessary information on the contract award. Accordingly, each entity must respond promptly to requests for further information from a supplier of a GPA Party regarding its procurement practices and procedures. In order to foster transparency and accountability of the decisions of the procuring entity, the Model Law and the GPA allow an unsuccessful tenderer to seek and obtain pertinent information concerning the reasons why its tender was not selected. The GPA also requires the provision of information on the characteristics and relative advantages of the tender selected as well as the name of the winning tenderer. Under the Model Law, however, the procuring entity is not required to justify the grounds for its rejection of tenders.⁴¹³

CXVII. As regards the treatment of confidential information on contract awards, the GPA foresees that entities may decide to withhold certain information on contract awards where release of such information may impede law enforcement or otherwise be contrary to public interest or would prejudice the legitimate commercial interests of particular enterprises or might prejudice fair competition between suppliers.⁴¹⁴

CXVIII. The provisions of the Model Law bar the procuring entity from disclosing certain information, including that relating to the examination, evaluation and comparison of tenders so as to safeguard the public interest or the commercial interest of parties involved in the proceedings.⁴¹⁵

National practices

CXIX. In most countries for which information is available, entities are required to announce publicly the results of the contract award monthly or within a time-period which varies from three days to three months.⁴¹⁶

CXX. National practices regarding public notice of contract awards include, depending on the country:

⁴¹¹GPA, Article XVIII:3

⁴¹²Model Law Article 36(6)

⁴¹³Model Law Article 12(1) and GPA, Article XVIII:2

⁴¹⁴GPA, Article XVIII:4

⁴¹⁵Model Law Article 45 and Article 34(8)

⁴¹⁶S/WPGR/W/11/Add.1, Add.2, Add.3, Add.6, Add.8, Add.9, Add.10, Add.17, Add.18

- frequently, contract award notices are published in the same media as those in which invitations to tender had been published⁴¹⁷;
- national procurement legislation sometimes provides that, in addition to publication of the contract award notice in the official journal, for the purposes of social control and public participation, entities have to publicize, in simple layman's terms, all relevant information relating to contract awards once a month in a visible and publicly accessible place within the premises of the entity concerned.⁴¹⁸ In one case, in the area of public works contracts, information on contract awards may also be available from the contact points of procurement agencies⁴¹⁹;
- in some countries, there are no central requirements to publish the details of the contracts awarded⁴²⁰ or contract awards are published on a voluntary basis by the procuring entities⁴²¹;
- in some countries, only awards of contracts above a certain threshold value are published.⁴²²

CXXI. The types of information that are included in the public notices of contract awards include:

- the details of the awarding authority;
- the identity and details of the enterprise or natural person to whom the contract was awarded;
- the procurement procedure used;

⁴¹⁷E.g., Contract Award Notice (CAN) in the Official Journal of the European Communities and in the TED database; the Commerce Business Daily in the United States; the Kanp_ or its equivalents at the local level in Japan; the Hong Kong, China Government Gazette; the Unified Journal of Government Procurement which is an Appendix to the Official Journal in Colombia; the Official Journal of the Federation in Mexico; the Purchasing and Disposals Gazette in Australia; the Bulletin of Public Procurement in Poland; the Swiss Official Gazette; the Official Journal in Peru

⁴²¹APEC Survey - Thailand

⁴²²S/WPGR/W/11/Add.11

- the amount, the characteristics and classification of the product or service to be procured;
- the number of tenders received and the form of the award procedure chosen;
- the price or the range of prices to be paid or the highest or lowest offer taken into account;
- the criteria applied;
- references to the related tender notice.⁴²³

One country has indicated that its procurement law provides a specimen for publication of awards of contracts.⁴²⁴

CXXII. In addition to notifying the successful tenderer, the procuring entity may be required to inform all unsuccessful tenderers of the result of the contract award.⁴²⁵ In regard to information made available to unsuccessful tenderers, the country information available indicates the following national practices, depending on the country:

- procuring entities notify such tenderers of their contract award decisions in writing⁴²⁶, with an explanation of the reasons why their bids were not selected and identifying the characteristics and relative advantages of the tender selected⁴²⁷;
- unsuccessful tenderers are notified through a standard regret card⁴²⁸;
- in some countries with deregulated procurement regimes, communication to unsuccessful tenderers of the reasons for not being selected at the request of the tenderer is encouraged under the government's purchasing guidelines⁴²⁹;
- one country has indicated that, while there are no legal obligations, tenderers may obtain information on the successful tender through laws on the

⁴²⁹SJ/WPGR/W/11/Add.4, Add.15

freedom of access to information or through recourse to the right of petition⁴³⁰; another country has indicated that, while there is no legal requirement, in practice it is customary to provide the reasons for rejecting bids⁴³¹;

-in some countries, entities are not required to provide each tenderer individually with the pertinent reasons for rejection of its bid⁴³²;

-in some other countries, the reasons for the rejection of the bid are provided in response to a written request by an unsuccessful supplier⁴³³;

-in some countries, all suppliers who have made a bid are entitled to a debriefing so as to give the unsuccessful tenderers the opportunity to discover what they were doing wrong and to assist them to enhance their performance in future bids.⁴³⁴ Typically the debriefing covers an explanation of how suppliers performed against the evaluation criteria⁴³⁵, the significant weaknesses or deficiencies in the tenders; the overall evaluated cost or price and technical rating of the successful tender and the debriefed tender; a summary of the rationale for award; and whether tender selection procedures contained in the tender documents, applicable regulations, and other applicable authorities were followed⁴³⁶;

-tenderers are advised on the relative strengths and weaknesses of their own proposals without a point-by-point comparison of the debriefed suppliers' tenders with those of other suppliers' tenders.⁴³⁷

CXXIII. As regards confidentiality of information on the contract awarded, some countries have stated that a procuring entity may decide that certain information on the contract award be withheld where divulgence of such information would prejudice the legitimate commercial interests of the winning firm or would be contrary to the public interest.⁴³⁸

VIII. REVIEW

International instruments

CXXIV. *Review procedures are often considered a key component of transparency and accountability of government procurement practices. The rules set out in the Model Law and the GPA establish the basic features that national review mechanisms must have without going into great detail. The purpose of these provisions is to give suppliers believing that an entity has breached national law or, in the case of the GPA, the rules of the GPA itself, a right of review.*⁴³⁹

CXXV. *Under the Model Law and the GPA, as an initial step, complainants are encouraged to seek resolution of their complaints through consultations with the procuring entity itself prior to recourse to an administrative review body.*⁴⁴⁰ *Under the Model Law, unless the complaint is resolved by mutual agreement, the procuring entity shall, within prescribed time-limits, issue a written decision including a statement on the reasons for the decision and indicating any corrective measures that are to be taken.*⁴⁴¹

CXXVI. *If the matter is not settled at this stage, the complainant is entitled, under the Model Law, to seek an administrative review.*⁴⁴² *The functions of an administrative review may be vested in an existing appropriate administrative body or a body whose competence is exclusively to resolve disputes in procurement matters and which is independent of the procuring entity. The decisions of the review bodies or failure to make a decision within prescribed time-limits shall be subject to judicial review.*⁴⁴³ *The Model Law also lays down certain procedures to ensure the openness and fairness of review procedures.*⁴⁴⁴

CXXVII. *Under the GPA, Parties may confer the authority to hear challenges by suppliers on national courts or on an impartial and independent review body of an administrative nature. In the event that a bid challenge is heard by a review body which does not have the status of a court of law, either its decisions must be subject to judicial review or it must follow the criteria laid down in detail in Article XX:6(a)-(g). These minimum standards are mainly designed to ensure the openness, fairness and equity of the proceedings.*⁴⁴⁵

⁴³⁹Model Law Article 52; GPA, Article XX:1

⁴⁴⁰GPA, Article XX:1

⁴⁴¹Model Law Article 53

⁴⁴²Model Law Articles 54 and 55

⁴⁴³Model Law Article 57

⁴⁴⁴Model Law Article 55

⁴⁴⁵GPA, Article XX:6(a)-(g)

CXXVIII. The World Bank Guidelines allow a bidder or a consultant who wishes to ascertain the grounds on which its bid or proposal was not selected, after notification of award, to address a request for explanation to the Borrower country or agency. If the bidder or consultant is not satisfied with the explanation given, it may seek debriefing with the World Bank.⁴⁴⁶

CXXIX. Under the GPA, a review body must have the authority to order the correction of a breach of the Agreement or compensation for the loss or damages suffered by a supplier, but this may be limited to costs for tender preparation or protest. Pending the outcome of the challenge, the review body must be able to order rapid interim measures, including the suspension of the procurement process, to correct breaches of the GPA and to preserve commercial opportunities.⁴⁴⁷ However, procedures may provide that overriding adverse consequences for the interests concerned, including the public interest, may be taken into account in deciding whether such measures should be applied. The provisions of the Model Law also provide for the suspension of procurement proceedings which takes account of the need of the procuring entity to conclude a contract in an economic and efficient way without undue disruption and delay in the procurement process.⁴⁴⁸

National practices

CXXX. Many countries have procedures which allow aggrieved suppliers to lodge complaints against any alleged breaches of the applicable rules and to seek review of the procurement proceedings of an entity, including award decisions. The procedures for review of complaints and remedies available to successful complainants are sometimes provided explicitly in procurement legislation⁴⁴⁹ and, in other cases, may result from more general possibilities to appeal administrative decisions.

CXXXI. The conditions of recourse to review may comprise the following:

-complaints may be raised on the grounds that the applicable procurement laws and regulations have been violated.⁴⁵⁰ In some cases, where a country is a party to an international agreement, an alleged breach

⁴⁴⁶World Bank Guidelines on goods and works, Appendix 4, paragraph 15 and on consultants• services, Appendix 4, paragraph 15

⁴⁴⁷GPA, Article XX:7(a)-(c)

⁴⁴⁸Model Law Article 56

⁴⁴⁹S/WPGR/W/11/Add.1, Add.3, Add.19

⁴⁵⁰S/WPGR/W/11/Add.3, Add.17, Add.20

of the rules of the agreement itself may constitute grounds for recourse to a review⁴⁵¹;

-in most cases, procedures are available to any person who has or has had an interest in obtaining a particular contract or who has been or risks being harmed by an alleged infringement.

CXXXII. Principal features of complaint-based procedures generally comprise the following:

-provisions encouraging suppliers, in the first instance, to take up the matter directly with the procuring entity for an early resolution.⁴⁵² For this purpose, agencies may have procedures in place for handling complaints directly;

-in some cases, provisions enabling suppliers to seek the mediation or good offices of an independent authority;

-provisions enabling suppliers to bring an action against the procuring entity before an independent body or a court.

CXXXIII. Most countries have designated administrative or judicial authorities to handle procurement-related challenges. The nature of the review authorities varies and, when review bodies are not judicial in character, their decisions are often subject to judicial review.⁴⁵³ The review may be handled by the following types of bodies:

-a specialized body established to review challenges in the area of government procurement⁴⁵⁴;

-an administrative authority with a broader mandate⁴⁵⁵;

⁴⁵¹E.g., GPA, NAFTA and the Government Procurement Agreement between Australia and New Zealand

⁴⁵²S/WPGR/W/11/Add.3, Add.4, Add.6, Add.9, Add.11, Add.12, Add.20, Add.21; WT/WGTGP/W/5; APEC Survey - Philippines

⁴⁵³S/WPGR/W/11/Add.10, Add.12, Add.13, Add.15, Add.17, Add.18, Add.20

⁴⁵⁴OGPR (the Office of Government Procurement Review) and the Government Procurement Review Board under the OGPR in Japan, a panel of arbiters selected by the Office of Public Procurement in Poland, an independent committee of public procurement commissioners under the Public Procurement Council in Hungary, the Higher Tribunal of Public Works Tenders and Contracts (CONSULCOP) in Peru, the International Trade Tribunal in Canada, the International Contract Dispute Mediation Committee in the Ministry of Finance and Economy in Korea and the General Accounting Office (GAO), the Agency Board of Contract Appeals and the Federal Court of Claims in the United States

*-courts of law.*⁴⁵⁶

CXXXIV. Apart from complaint-based procedures, the following mechanisms are used in some instances for monitoring the procurement process:

*-the internal audits of procuring authorities.*⁴⁵⁷ *In those countries where procurement procedures are decentralized, each entity has its own procedures which may vary from one entity to another*⁴⁵⁸;

*-external control or audits by an administrative body in charge of overseeing the proper conduct of procurement proceedings*⁴⁵⁹;

*-in one group of countries in the utilities sector, contract award procedures and practices are periodically examined by independent bodies for the purpose of attesting to their compliance with applicable rules*⁴⁶⁰;

*-oversight by the legislative authorities in some countries.*⁴⁶¹

CXXXV. The remedies available to successful complainants differ from country to country and may include the following:

*-interim measures, including the suspension of the procurement procedures and of the implementation of any decision of the procuring authority taken unlawfully in order to preserve the rights of suppliers.*⁴⁶² *In some*

⁴⁵⁵The Ministry of Commerce in New Zealand, the Ministry of Finance in Singapore and the EC Commission, the Commonwealth Ombudsman or State/Territory Ombudsman in Australia, the Ombudsman and the Controller and Auditor General in New Zealand, the Office of the Comptroller General in Chile, and the Accounts Tribunal or Organs of the System of Internal Control in Brazil, the Ministry of Comptroller and Administrative Development (SEDOCAM) in Mexico, Independent Commissioner Against Corruption in Hong Kong, China, the Federal Commission for Appeal in Switzerland, the General Directorate for Complaints in Mexico, the Ombudsman under the Office of the Commissioner for Administrative Complaints (COMAC), the Comptroller General's Office in Costa Rica

⁴⁵⁶S/WPGR/W/11/Add.1, Add.2, Add.8, Add.10, Add.14, Add.15

⁴⁵⁷S/WPGR/W/11/Add.4, Add.15, Add.18, Add.19

⁴⁵⁸S/WPGR/W/11/Add.15

⁴⁵⁹E.g., the Ministry of Commerce, Audit Office and Serious Fraud Office in New Zealand, the Ministry of Construction and Public Works in the Slovak Republic

⁴⁶⁰S/WPGR/W/11/Add.10

⁴⁶¹New Zealand Parliament's Select Committee public hearing, the Chamber of Deputies in Chile

⁴⁶²S/WPGR/W/11/Add.1, Add.2, Add.3, Add.6, Add.13, Add.17

cases, the review authority is empowered to suspend a procurement before a contract is awarded but not to revoke a contract award.⁴⁶³ In some cases, for instance in the utilities sector, procurement procedures cannot be stopped⁴⁶⁴ although the entity infringing the rules may be asked to pay damages to the supplier wronged unlawfully.⁴⁶⁵ National laws sometimes provide for the public interest to be taken into account in deciding whether to suspend or cancel a procurement decision;

-cancelling of procurement procedures or setting-aside decisions and awards⁴⁶⁶;

-recommendations to entities to bring their procurement proceedings and decisions in line with the rules in force⁴⁶⁷;

-the aggrieved supplier may be awarded damages.⁴⁶⁸ Sometimes these are limited to the financial costs of tendering.⁴⁶⁹

IX. OTHER MATTERS RELATED TO TRANSPARENCY

A. Maintenance of Record of Proceedings

International instruments

CXXXVI. The Model Law establishes an explicit requirement for the maintenance of a record of the key decisions and actions taken by the procuring entity during the course of the procurement proceedings. As is explained in the Guide to the Enactment of the Model Law, the maintenance of a record is one of the principal mechanisms for ensuring adherence to the rules and also facilitates the exercise of the right of aggrieved suppliers to seek review.⁴⁷⁰

⁴⁶³S/WPGR/W/11/Add.2, Add.8, Add.19

⁴⁶⁴S/WPGR/W/11/Add.1, Add.20

⁴⁶⁵S/WPGR/W/11/Add.1

⁴⁶⁶S/WPGR/W/11/Add.1, Add.3, Add.10, Add.12, Add.18

⁴⁶⁷In Australia, while compliance by an entity with a recommendation of the review authority for a remedy is not mandatory, the review authority may report to the Prime Minister and then to the Parliament if the entity does not act upon a recommendation adequately.

⁴⁶⁸S/WPGR/W/11/Add.1, Add.11

⁴⁶⁹S/WPGR/W/11/Add.2

⁴⁷⁰UNCITRAL Model Law on Procurement of Goods, Construction and Services with Guide to Enactment, pages 61 and 71

CXXXVII. Under the Model Law, the record of proceedings should contain, at a minimum, the following key information regarding the procurement, the procuring entity and suppliers and evaluation of tenders⁴⁷¹:

- a brief description of the goods, construction or services to be procured, or of the procurement need for which the procuring entity requested proposals or offers;*
- the names and addresses of suppliers that submitted tenders, proposals, offers or quotations, and the name and address of the supplier or contractor with whom the procurement contract is entered into and the contract price;*
- information relative to the qualifications, or lack thereof, of suppliers that submitted tenders, proposals, offers or quotations;*
- the price, or the basis for determining the price, and a summary of the other principal terms and conditions of each tender, proposal, offer or quotation and of the procurement contract, where these are known to the procuring entity;*
- a summary of the evaluation and comparison of tenders, proposals, offers or quotations, including the application of any margin of preference;*
- any information on rejection of tenders, proposals, offers or quotations under the relevant provisions of the Model Law including a statement to that effect and the grounds therefor;*
- a statement of the grounds and circumstances on which the procuring entity relied to justify the selection of the method of procurement used;*
- in procurement proceedings in which the procuring entity limits participation on the basis of nationality, a statement of the grounds and circumstances relied upon by the procuring entity for imposing the limitation;*
- a summary of any requests for clarification of the prequalification or solicitation documents, the responses thereto, as well as a summary of any modification of those documents.*

CXXXVIII. The GPA stipulates that information on the opening of tenders shall remain with the entity concerned at the disposal of the government authorities responsible for the entity in order that it may be used if required under the procedures relating to the provision of information by entities (GPA, Article XVIII), between governments (GPA, Article XIX) and under the

⁴⁷¹Model Law Article 11(a)-(m)

*procedures for bid challenge (GPA, Article XX) and dispute settlement (GPA, Article XXII).*⁴⁷²

CXXXIX. Moreover, given the more restrictive nature of limited tendering procedures under the GPA, entities using this method in a given procurement are required to prepare a report in writing on each contract awarded using the limited tendering method, rather than open and selective tendering. Each report shall contain the name of the procuring entity, the value and kind of goods or services procured, country of origin, and a statement of the conditions for using limited tendering as stated in Article XV:1 which prevailed. This report shall remain with the entities concerned at the disposal of the government authorities responsible for the entity in order that it may be used if required under the procedures for information and review as regards the obligations of entities and Parties (GPA, Articles XVIII and XIX) and bid challenge and dispute settlement (GPA, Articles XX and XXII).

National practices

*CXL. The information available on national practices is limited. One country has stated that procuring entities are required to prepare and keep records of certain information related to each procurement.*⁴⁷³ *In another case, the contracting authorities are required to draw up a written report for each contract awarded, which is used either for monitoring purposes or in the case of complaints by suppliers.*⁴⁷⁴

B. Information Technology

International instruments

CXLI. Information technology can play, and in some countries is already playing, a major role in enhancing transparency. With a view to ensuring that the provisions of the GPA do not constitute an unnecessary barrier to technical progress, Article XXIV:8 of the GPA foresees consultations and, if necessary, the negotiation of modifications to the Agreement in view of developments in the use of information technology in government procurement. The consultations in the Committee shall, in particular, aim to ensure that the use of information technology promotes the aims of open, non-discriminatory and efficient government procurement through transparent procedures, that contracts covered under the Agreement are clearly identified and that all available information relating to a particular contract can be identified. The relevant provision of the GPA further states that, when a Party intends to innovate, it shall endeavour to take into account the views expressed by other Parties regarding any potential

⁴⁷²GPA, Article XIII:3

⁴⁷³GPA/10

⁴⁷⁴WT/WGTGP/W/5

*problems. In the context of the three-year review of the Agreement under Article XXIV:7(b), the Committee on Government Procurement has initiated work on possible amendments to the relevant provisions of the GPA to reflect recent developments in information technology.*⁴⁷⁵

National practices

*CXLII. Countries' use of electronic means for publicizing procurement opportunities is not uniform. While some have made a substantial investment in the development of information technology systems, some others have only taken preliminary, experimental steps in this direction. Some countries have stated that their legislation does not explicitly provide for the use of electronic means to participate in tendering procedures.*⁴⁷⁶ *In some cases, electronic databases may be provided voluntarily by the purchasing agencies.*⁴⁷⁷ *Some countries have pilot projects for establishing electronic systems focusing both on the processing of tenders and on conducting actual procurements.*⁴⁷⁸

*CXLIII. Information available on the use of information technology in government procurement mainly concerns electronic databases*⁴⁷⁹ *which give information on tendering opportunities in the following way:*

*-tender notices are posted through on-line information and database retrieval services on the Internet.*⁴⁸⁰ *Some agencies have 'home pages' on the Internet for specified types of procurement contracts*⁴⁸¹;

⁴⁷⁵GPA/8

⁴⁷⁶S/WPGR/W/11/Add.18, Add.19

⁴⁷⁷S/WPGR/W/11/Add.4, Add.16, Add.19

⁴⁷⁸The United States Government is planning to develop a FACNET (Federal Acquisition Computer Network Architecture) that would be government-wide and would provide interoperability among users. FACNET would be introduced gradually, with the initial focus on purchases below certain thresholds. The system would allow the use of electronic means in the phases of the procurement process including: posting notices of contracting opportunities, sending tender documents and receiving offers; processing bids, awarding contracts, posting notices of contract award; updating inventories, and, where practical, invoicing customers and paying suppliers. The EDIRAM in Norway and Finland is a pilot project on electronic exchange of information between public purchasers and suppliers. The purchaser will be able to order goods by electronic mail, and the suppliers to return invoices as well as other relevant information in demand to the purchasers (GPA/IC/W/7/Add.6/Suppl.1).

⁴⁷⁹TED (Tenders Electronic Daily) in the EC, Norway and Switzerland under SIMAP (Système d'Information Marchés Publics) project. Canada has the Open Bidding System (OBS), an internationally accessible electronic database on government procurement which is managed by a private company. In the United States, Electronic Commerce Architecture provides for the VANs (value-added networks) to receive calls for tender as they are issued; commercial VANs are used as the interface to the suppliers. The Korean GINS (Goldstar Information Network Service) is operated by a private firm. The JETRO database in Japan; GEMS (Government Electronic Marketplace Service) in Australia and New Zealand.

- in some cases, only tenders above certain threshold values or an outline of the intended tender is so posted⁴⁸²;
- in some GPA Parties, tender notices are issued electronically on all procurement covered by the GPA.⁴⁸³ A code may be used to identify the procurements covered by the GPA and other international agreements⁴⁸⁴;
- some countries have electronic versions of their official gazettes where tender notices are published⁴⁸⁵;
- in some cases, on-line subscribers can order and obtain tender documents electronically.⁴⁸⁶

CXLIV. The databases may have the following features:

- the databases are generally accessible on-line worldwide through the Internet⁴⁸⁷;
- the databases of some countries⁴⁸⁸ extend to all levels of procurement whereas in others⁴⁸⁹ they only cover central government entities;
- some databases contain information on international procurement opportunities, information and advice on doing business with the government, on export possibilities and procurement guidelines at the national

⁴⁸⁰E.g., Tenders Electronic Daily (TED) in the EC, Switzerland and Norway which is the electronic version of the Supplement S to the Official Journal to the European Communities; New Zealand uses Australian Commonwealth's GEMS; the Canadian Open Bidding Service (OBS). S/WPGR/W/11/Add.4, Add.5, Add.6, Add.11, Add.15; WT/WGTGP/W/5; GPA/W/24/Add.1-4

⁴⁸¹E.g., the Works Branch in Hong Kong, China and NASA in the United States

⁴⁸²GPA/W/24/Add.1 and Add.2

⁴⁸³Available in Korea through GINS; in the EC, Norway and Switzerland through TED; in Canada through OBS and through the home page of the Hong Kong Housing Authority

⁴⁸⁴Each notice advertised in the Canadian OBS (Open Bidding Service) and GBO (Government Business Opportunities) contains a field for •Agreement Type• which identifies GPA- and NAFTA-covered procurements.

⁴⁸⁵S/WPGR/W/11/Add.1, Add.5

⁴⁸⁶S/WPGR/W/11/Add.6, Add.7, Add.13

⁴⁸⁷S/WPGR/W/11/Add.5; WT/WGTGP/W/5; GPA/W/24/Add.1-4

⁴⁸⁸S/WPGR/W/11/Add.10, Add.13

⁴⁸⁹S/WPGR/W/11/Add.5, Add.6

level.⁴⁹⁰ Suppliers can browse through the various listings in the database or do a quick search using key words to find opportunities that are of interest⁴⁹¹;

-one country's database contains information on registered suppliers and product lists⁴⁹²;

-some countries' databases provide information about government contracts awarded in the past to help suppliers with market research.⁴⁹³

CXLV. In some cases, tender documents are disseminated and tenders are submitted electronically.⁴⁹⁴ In some other cases, contract awards are also published electronically.⁴⁹⁵ One country has indicated that it provides information on contracts awarded through electronic means, but not on tendering opportunities.⁴⁹⁶ Moreover, some countries are working towards electronic commerce in the procurement proceedings as a whole, including all information exchange between suppliers and procuring entities and the actual ordering of goods and services and invoicing by electronic mail, and electronic payment for the procured goods and services.⁴⁹⁷

⁴⁹⁰GPA/W/24/Add.1-2. OBS in Canada also has a bid matching service which provides suppliers with a description of the goods and services they sell. Using this information, OBS scans its database and automatically faxes to subscribers those opportunities that match their profile. Suppliers can then order the bid documents from the Bid Request Line.

⁴⁹¹OBS in Canada

⁴⁹²Costa Rica-TPR 1995

⁴⁹³E.g., information on the dates for government auctions of surplus goods, a range of material about Australian Government purchasing policies and special purchasing opportunities are advertised in the Australian GEM. In Korea, GINS (Goldstar Information Network Services) covers information on the procurement of about 350 procuring entities including Korea Telecommunications, Korea Electric Power Organizations; database of the National Supply Agency in Costa Rica.

⁴⁹⁴GPA/W/24/Add.2

⁴⁹⁵GPA/W/24/Add.1; e.g. CANs (Contract Award Notices) in the European Community; GINS in Korea; home pages of individual agencies in Hong Kong, China

⁴⁹⁶S/WPGR/W/11/Add.8

⁴⁹⁷S/WPGR/W/11/Add.6; GPA/W/24/Add.1 and Add.4

C. Language

International instruments

CXLVI. Under the Model Law, there is a general requirement that documents relating to tendering proceedings shall be formulated in the official language or languages of the enacting State and, except in certain specified cases, in a language customarily used in international trade. An additional rule in the Model Law allows the formulation and submission of tenders in any language in which the tender documents have been issued or in any other language that the procuring entity specifies in the tender documents.⁴⁹⁸ The GPA requires the submission of a summary of the invitation to tender in one of the WTO official languages.⁴⁹⁹ The World Bank Guidelines require that the qualification documents be prepared in either English, French or Spanish but allow entering into contracts with local bidders in the national language of the Borrower.⁵⁰⁰

CXLVII. Under the GPA, if an entity allows tenders to be submitted in several languages, one of those languages must be one of the WTO official languages.⁵⁰¹

National practice

CXLVIII. Generally, tender notices are published in the official language(s) of the country of the procuring entity.⁵⁰² In some instances, summaries are provided in languages traditionally used in international trade.⁵⁰³ Countries with several official languages publish in all official languages⁵⁰⁴ or give a summary in other official language(s), the original text alone being authentic.⁵⁰⁵ It is stated, in one case, that the public notice may be in English when the payment for procurement

⁴⁹⁸Model Law Articles 17 and 29

⁵⁰³S/WPGR/W/11/Add.2

⁵⁰⁴E.g., Malay and English in Brunei Darussalam and Chinese and English in Hong Kong, China

⁵⁰⁵S/WPGR/W/11/Add.2, Add.10

is to be in a foreign currency⁵⁰⁶ and tender announcements may be made in a language used in international trade in justified circumstances.⁵⁰⁷

X. INFORMATION TO BE PROVIDED TO OTHER GOVERNMENTS

CXLIX. The GPA is the only international instrument on government procurement that confers on governments that are Parties to it contractual rights and obligations. Therefore, the procedures described in this Chapter concern the exchange of information between governments Parties to the GPA as required under the relevant provisions of the GPA.

A. Information on National Legislation

International instruments

CL. The GPA Parties are required to be prepared to explain their government procurement procedures in response to a request by any other GPA Party.⁵⁰⁸ More particularly, the provisions on special treatment for developing countries require developed country Parties to establish, individually or jointly, information centres to respond to reasonable requests from developing country Parties for information relating to, among others, laws, regulations, procedures and practices regarding government procurement, notices about intended procurement which have been published, addresses of the entities covered by the Agreement, and the nature and volume of products or services procured or to be procured, including available information about future tenders. The Committee on Government Procurement established under the Agreement may also set up an information centre to respond to enquiries by developing countries.⁵⁰⁹ The coordinates of the contact points of GPA Parties are included in the relevant documents of the Committee on Government Procurement (Korea - GPA|12|Rev.1, page 10, Norway - GPA|10, page 7, Switzerland - GPA|15, page 7). Moreover, individual APEC member countries have designated contact points in the context of the work of the Group of Experts on Government Procurement. These are included in the APEC Surveys and can be accessed through the APEC Home Page on Government Procurement at the Internet (<http://www.apecsec.org.sg/gphome.html>).

CLI. The GPA has a general provision in Article XIX:4, requiring that confidential information provided to any government Party to the GPA shall not be revealed without formal authorization from the Party providing the information. The definition of confidential information is identical to that in

⁵⁰⁶S/WPGR/W/11/Add.13

⁵⁰⁷S/WPGR/W/11/Add.12

⁵⁰⁸GPA, Article XIX:1

⁵⁰⁹GPA, Article V:11

*Article X of GATT 1994 with the addition of a reference to information which would prejudice fair competition between suppliers.*⁵¹⁰

*CLII. The Committee has adopted a Decision on procedures for the notification of national implementing legislation by the GPA Parties, including responses to a checklist of issues.*⁵¹¹ *The Decision requires GPA Parties, inter alia, to supply, in response to a request from another Party, a copy of any law, regulation, final judicial decision, administrative ruling or other measure relevant to the Agreement. Each Party shall notify the Committee of the coordinates of a contact point established for that purpose. Through its contact point, a Party from which a text has been requested shall use its best endeavours to assist the requesting Party with any translation into a WTO language.*

B. Notification of National Legislation

International instruments

*CLIII. Under the GPA, each Party has an obligation to inform the Committee on Government Procurement of any changes in its national legislation and its administration.*⁵¹² *The Decision requires GPA Parties, inter alia, to submit the complete texts of their basic legislation (laws and regulations) on government procurement in the original language to the Secretariat where these texts will be open for inspection by Parties. These would include the basic legal instruments pursuant to which effect is given to the provisions of the Agreement. Each Party shall provide a summary of that legislation in a WTO language. GPA Parties are also required to describe in a WTO language what other legislation giving effect to the Agreement on Government Procurement exists. This need not take the form of a listing of individual texts but should include sufficient information on the nature of legislation relevant to each category of entities to facilitate another Party requesting a text of interest to it.*

CLIV. In accordance with the Decision of the Committee on Government Procurement (GPA|1|Add.1), the following four GPA Parties have submitted data on their legislation as of October 1997: Canada (GPA|10), Korea (GPA|12|Rev.1), Norway (GPA|13) and Switzerland (GPA|15).

C. Information on Contract Awards

CLV. Further to the obligations of entities under Article XVIII:2(c) of the GPA relating to the provision of information to an unsuccessful tenderer, the GPA allows the government of an unsuccessful tenderer which is a Party to the GPA to

⁵¹⁰GPA, Article XIX:4

⁵¹¹GPA|1|Add.1

⁵¹²GPA, Article XXIV:5(a) and (b)

seek such additional information on the contract award as may be necessary to ensure that the procurement was made fairly and impartially. To this end, the procuring government is required to provide information on both the characteristics and relative advantages of the winning tender and the contract price. The government may disclose the information thus obtained provided it exercises this right with discretion. In cases where the release of such information would prejudice competition in future tenders, this information shall not be disclosed except after consultation with and agreement of the Party which gave the information to the government of the unsuccessful tenderer.⁵¹³ The GPA also imposes a general requirement on Parties to provide, upon request, to any other Party, information concerning procurement by covered entities and their individual contract awards.⁵¹⁴

D. Statistical Information

International instruments

CLVI. As a means of monitoring procurement covered by the GPA, Article XIX:5 of the GPA requires each Party to collect and provide to the Committee on an annual basis statistics on its procurements covered by the GPA. The type of information that such reports shall contain is stipulated in detail in Article XIX:5, paragraphs (a) to (d).

CLVII. The most recent statistical data submitted by Parties to the Tokyo Round Agreement on Government Procurement are contained in the following set of documents: the European Community (GPR|72|Add.3|Rev.1) and Israel (GPR|72|Add.9) for 1992; Japan (GPR|75|Add.9), the United States (GPR|75|Add.6), Austria (GPR|75|Add.5) and Canada (GPR|75|Add.4) for 1993; Singapore (GPR|78) and Finland (GPR|78|Add.3) for 1994; Switzerland (GPR|80|Add.1) and Norway (GPR|80|Add.2) for 1995; and Hong Kong (GPR|81) for 1996. No statistical data have been submitted by GPA Parties since the entry into force of the Agreement in 1996.

***Working Group on Transparency
in Government Procurement***

TRANSPARENCY IN PUBLIC PROCUREMENT

Factual Contribution from the European Communities

A. Introduction

This note is intended as a contribution to the study phase of the Working Group on Transparency in Government Procurement. It seeks to provide an explanation of Community rules and practices as they relate to transparency in government procurement.¹

Within the Community, there are a number of basic principles affecting government procurement which are enshrined in the EC Treaties, including that of transparency. These principles are implemented at Community level through the six public procurement Directives² (so-called secondary legislation). The purpose of the Directives is not to harmonize all national rules on government procurement. Rather they align the procedures to be followed whenever a contract is to be awarded whose value exceeds a certain threshold, by laying down rules generally regarded as being based on common sense.³

A number of these rules relate to the need to ensure transparency in government procurement practices because it is recognized that this is an essential element in the process of an open and competitive procurement regime which safeguards the best interests of the procuring entity, as well as of suppliers, is to be

¹It should not be taken as a legal interpretation of Community legislation in this area. For more details, Members are referred to the relevant Community legislation, which is readily available - see section B.1 of this note.

²See Annex for a list of these Directives.

³For contracts which fall below the threshold levels, the means of ensuring transparency is left to the Member States.

achieved. These rules and practices relating to them are set out in the later parts of this paper.

A.1 Definition of government procurement

Within the Community, “Government Procurement” covers written contracts for pecuniary interest awarded by public authorities (including at a regional and local level), bodies governed by public law and certain utilities⁴ in respect of the supply of goods and the provision of services, including construction services. Procurement by any contractual means is covered, including purchases, leasing, rental or hire-purchase, with or without an option to buy. The entities covered are subject to a common EC-wide regime for procurement above certain threshold values. The rules concerning procurement under the threshold values are defined by national law, in accordance with the general principles of law laid down in the EC Treaties.

The threshold values are set out in Community law.⁵ These thresholds are defined with a view to ensuring that competitive procurement rules apply to contracts likely to interest suppliers from other EU Member States while allowing administrative and procedural costs on smaller contracts to be kept to a minimum. Contracting authorities are not permitted to split up a contract so as to reach a contract value below the threshold.

The present note deals primarily with requirements for procurement contracts which are above the threshold values.

-The thresholds defining which contracts fall under Community law are set at ECU 200,000 for supplies and service contracts (ECU 400,000 for contracts awarded in the utilities sectors and approximately ECU 130,000 for some contracts falling within the scope of the application of the WTO Government Procurement Agreement) and ECU 5,000,000 for works contracts.

A.2 Methods of procurement

Community rules provide for three methods of procurement: (a) the open procedure, whereby any firm is eligible to tender for the contract; (b) a restricted procedure, in which only firms that have been invited to tender by the contracting authority may do so; and (c) a negotiated procedure, in which the contracting

⁴The “utilities” supply water, energy, transport and telecommunications services.

⁵The national currency equivalents of these thresholds are periodically reviewed (every two years as a rule). Any change to the threshold value is required to be published in the Official Journal of the European Communities. Changes to the threshold only take effect once they have been published.

authority consults selected firms and negotiates the contract terms with one or more of them (usually a minimum of three). The choice of procedure depends on the nature of the purchase. However, the use of the negotiated procedure is only permitted in the limited cases set out in the Directives. All three procedures guarantee transparency in the call for tenders and seek to achieve best value for money for individual procurements.

B. Elements of transparency

Transparency relates primarily to the obligation to provide information relating to procurement opportunities and practices and the right to have access to that information, so that potential suppliers and purchasing entities know in advance what their rights and obligations are. In the Community this is ensured through a number of different elements enumerated in the following sections. These elements are principally linked to the procurement process.

B.1 Availability of legislation to suppliers

Potential suppliers and procuring entities need to know what the rules are. In the Community, the relevant legislation (the Directives) has been published in the Official Journal of the European Communities (hereinafter referred to as the "OJ"). The Directives are readily available to suppliers from the Office for Official Publications of the European Communities in Luxembourg or through designated sales offices upon payment of the appropriate fee. The Directives are also available on the Internet through the SIMAP homepage at <http://simap.eu.int>. In due course, Member States' rules and regulations relating to procurement will also be made available at this Internet site.

Furthermore, a database of all the contracting entities covered by the Community Directives is being developed, containing information including addresses, telephone and fax numbers, and contact points. This database will shortly be made available on the Internet on a trial basis.

B.2 Public announcement of procurement opportunities and procedural requirements

Community law requires transparency of procurement opportunities and award procedures, so that all potential suppliers are able to find out about contracts which might interest them. This is secured by the requirement that contracting entities wishing to award a contract whose estimated value exceeds the relevant threshold must publish a tender notice in the Supplement to the OJ (S series) and in the TED data bank.⁶

⁶TED, or Tenders Electronic Daily, is the on-line version of the printed Supplement S to the Official Journal. It is updated five times a week, is hosted by the European Commission Host Organisation (ECHO) and is accessible in many countries via Official Gateways.

The notice is published in full in the original language, which is the only authentic one. However, a summary of the important elements of each notice is published in the other official languages of the Community. A contracting authority must be able to furnish proof of the date of dispatch to the OJ.

In addition to publication in the OJ, notices can be published in the official journals or in the press of the country of the contracting authority. However, where this happens, publication must not be made before the date of dispatch to the OJ, and these other notices must not contain information other than that published in the OJ.

Notices for procurements below the EC thresholds are not required to be published in the OJ - they are instead usually just published in the national official journals and/or in local, regional or national newspapers.

In addition to the invitation to tender notices, pre-information notices are published for planning purposes. For works contracts, contracting authorities publish indicative notices containing the essential characteristics of the works contract which they intend to award. This notice is published in full in all the official languages of the Community. For other services and supplies contracts, contracting authorities are required to make known, by means of an indicative notice to be published as soon as possible after the beginning of their budgetary year, the intended total procurement by product area or in each of the service contracts which they envisage awarding during the subsequent 12 months where the total estimated value is not less than ECU 750,000.

The extent and form of publicity can differ according to tendering procedures applied and/or the value of the procurement. There are no common advertising rules for contracts below the threshold values.

B.2.1 What information do the notices contain?

The tender notices provide information about the procurement, including an indication of which of the permissible award procedures has been chosen, the award criteria which will be used, deadlines and a contact point for obtaining further information. Their purpose is to provide sufficient information about the intended procurement to enable suppliers, or service providers to make an initial assessment of their potential interest in the contract, to decide whether to request the tender documents in order to prepare their bid and to provide certainty and transparency as to the individual procurement.

Standard forms exist for the use of contracting entities, but their use is not yet mandatory. Contracting entities are also encouraged to use the Common Procurement Vocabulary (CPV) to describe the object of the procurement: this facilitates identification by potential suppliers of suitable contracts.

Information required to be contained in a tender notice includes, but is not necessarily limited to:

Full contact details of the contracting authority

Type of award procedure chosen (open, restricted, negotiated)

Description of the goods or services to be provided, together with their quantity or indication of their extent

For services other than construction services: indication whether the execution of the service is reserved by law to a particular profession, with reference to the law and whether legal persons should indicate the names and professional qualification of the staff to be responsible for the execution of the services

Indication of whether the suppliers can tender for part of the contract only

Place of delivery, site or place of performance of service

Time-limit for delivery, completion or duration (if any)

Period during which the tenderer is bound to keep open the tender

Details of the service from which contract and additional documentation may be requested, final date for making such requests and - where applicable - cost of such documents

Final date for receipt of tenders or requests to participate, address to which they must be sent, language(s) in which they must be drawn up

Date, hour and place of tender opening. Where applicable, persons authorized to be present at the opening of tenders

Any deposits and/or guarantees required

Any economic or technical requirements

The criteria for the award of the contract. Criteria other than lowest price must be mentioned if they do not appear in the contract documents

The right of interested suppliers to be informed does not end with the publication of tender notices. If interested suppliers so request, contract and supporting documents, as well as any additional information relating to these documents, must be sent to them within six days of receipt of the application for this information (four days in case of urgency). Tender documentation must contain all the relevant information to enable suppliers to prepare their bids.

B.3 Access for bidders to information on the criteria used for assessing bids and awarding contracts

Community law provides for transparency of the procedures for selecting contractors and awarding contracts, through the use of objective criteria which must be known beforehand. This helps to prevent a contracting authority from selecting candidates and tenders on the basis of criteria different from those initially stated, and to ensure that potential suppliers are fully aware of the conditions relating to the award of the contract. In practice this is achieved by stating either in the tender notice or in the contract documentation all the criteria which are to be applied to the award, where possible in descending order of importance.

B.4 Receipt and management of bids received

Publication of the tender notice marks the point when the contract award procedure begins. Community law sets out minimum time-limits which must be provided for regarding submission of tenders or candidatures. The relevant provisions ensure that the time-limits set do not hamper competition or lead to de facto discrimination between suppliers, particularly against third country suppliers.

The minimum periods that purchasing entities must allow under the different types of procedure are set out schematically in the following table:

	Time-limit for receipt of request to participate*		Time-limit for receipt of tenders*	
	Normal	Urgent	Normal	Urgent
Open procedures			not less than 52 days ¹	
Restricted procedures	not less than 37 days	not less than 15 days	not less than 40 days ²	not less than 10 days
Negotiated procedures	not less than 37 days	not less than 15 days		

*Time-limits start from the day of dispatch of the notices to the Office for Official Publications of the European Communities. Notices must be published in the Official Journal within 12 days of receipt (five days if urgency).

¹Reduced to 36 days in case of work and service contracts where an indicative notice has been published.

²Reduced to 26 days in the case of works and services contracts where an indicative notice has been published.

Reception, registration and opening of bids are governed by national law. The Community only indicates that, in the case of open procedures, the date, time and place of the opening must be published in the tender notice, as well as the persons allowed to be present at the opening. In this way, suppliers have the opportunity to discover who has made bids.

Contacts between the bidders and the purchasing entities are not forbidden, but such contacts must be conducted in a transparent and non-discriminatory manner and should not be used in such a way as to preclude competition.

B.5 Information on awarded contracts

Contracting authorities or contracting entities who have awarded a contract are required to make the result known by means of a contract award notice (CAN). This has to be published in full in the OJ and in the TED data bank in all the official languages of the Communities. In the case of utilities,

publication is done only in the original language. The CAN must be forwarded for publication to the OJ within 48 days of the award of the contract.

The information to be published is not limited to the mention of the actual award of a contract, but must contain the conditions under which the contract has been awarded (i.e. the criteria applied and the price agreed). However, relevant information on the contract award may, under certain limited circumstances, be omitted - i.e. if publishing the information would have harmful effects on the winning firm or the public interest. These exceptions are, however, narrowly interpreted.

In addition, for each contract awarded, the contracting authorities are required to draw up a written report to be communicated to the Commission at its request. This is used either for monitoring purposes or in the case of a complaint to the Commission (see also section C).

Information which should be included in the contract award notice

Details of the awarding authority

Form of the award procedure chosen

Date of award of contract

Criteria for award of contract (optional for the utilities sectors)

Number of tenders received

Name(s) and address(es) of successful supplier(s), contractor(s) or service provider(s)

The nature and quantity of goods supplied, where applicable, by supplier or the nature and extent of services provided

Price or range of prices (minimum|maximum) paid

Where appropriate, indication of whether the contract has been, or may be sub-contracted to third parties

Date of publication of tender notice in the OJ

B.6 Informing unsuccessful bidders of the reasons why their bid was rejected

Contracting authorities must, within 15 days of the date on which the request is received, inform any eliminated candidate or tenderer who so requests in writing of the reasons for rejection of his application or tender, and in the case of a tender, the name of the successful tenderer. Unsuccessful tenderers may ask the contracting entity for additional information if they are not satisfied with the explanation. This provides unsuccessful candidates or tenderers with a means of assessing whether the procurement rules and practices have been followed. In addition, they can then use this information to (hopefully) good effect in future bids.

Furthermore, the contracting authority is required to inform candidates or tenderers who make a request in writing of the grounds on which it decided not to award a contract in respect of which a prior call for competition was made, or to recommence the procedure. In these cases, the OJ must also be informed.

C. Right to review/redress

So far, the transparency rules have dealt with the process of procurement. The Community considers, however, that there is also a need to provide a mechanism to ensure that these rules are respected by contracting authorities, as a major guarantee of the transparency of the process.

For this reason, a mechanism has been established to allow any potential contractor who considers that he has been injured by an unlawful decision on the part of a contracting authority, for example because the correct procedures were not followed, to seek review. In the first instance, matters are taken up directly with the contracting authority. In addition, in each Member State there is a legally authorized body able to resolve conflicts in the field of public procurement.

These review procedures must also be transparent and provide a guarantee of independence. Furthermore, companies have the possibility of lodging complaints with the Commission.

D. Concluding remarks

The Community recognizes that ensuring transparency is an essential element in the procurement process if a regime which safeguards the best interests of the procuring entity, as well as of suppliers, is to be achieved. It helps in providing suppliers, including domestic suppliers, with increased opportunities; it contributes to the increased confidence of suppliers in the reliability of the administration as a business partner and it acts as a mechanism to minimize the misuse of public money and power either by purchasers or suppliers.

THE UNCITRAL MODEL LAW ON PROCUREMENT OF GOODS,
CONSTRUCTION AND SERVICES

Statement by the Representative of the UNCITRAL at
the Working Group's Meeting of 23 May 1997

Introduction

1. The UNCITRAL Model Law on Procurement of Goods, Construction and Services is currently being utilized by States on an increasingly wider scale. Among the various policy objectives of the Model Law is that of transparency in the public procurement process. After introducing the process of formulation of the Model Law, the present paper outlines the manner in which the Model Law promotes transparency. Because of the summary nature of the presentation, the paper does not attempt exhaustively to list and describe all of the provisions contained in the Model Law that facilitate greater transparency. It is intended rather to highlight the principal ways in which national legislation based on the Model Law would promote transparency in public procurement.

I. LEGISLATIVE NATURE AND HISTORY OF MODEL LAW

A. Purpose of Model Law

2. The United Nations Commission on International Trade Law (UNCITRAL) concluded the preparation of the UNCITRAL Model Law on Procurement of Goods, Construction and Services in 1994. The purpose of the Model Law is to provide a model for States modernizing their national procurement legislation or establishing such legislation for the first time. Its scope is limited to the procedures utilized in selecting suppliers and contractors with whom public purchasers conclude procurement contracts.

B. The UNCITRAL Process

3. *UNCITRAL is an intergovernmental technical organ of the United Nations General Assembly. Its primary function is to act as a sort of global •commercial law legislature• for international commerce. The international conventions or treaties, model laws and other legal instruments formulated by UNCITRAL assist States in modernizing the legal regime for international commerce. This enables commercial parties from different countries, regions, and legal and economic systems to successfully implement various types of commercial transactions and to overcome differences among legal systems that might otherwise hinder international commerce.*

4. *The UNCITRAL process takes place at the intergovernmental level. The rotating membership of UNCITRAL is made up of 36 States, elected by the General Assembly on the basis of a regional representation formula. In addition, all other States are invited to participate in the work of UNCITRAL as observers. Both member and non-member States thus participate actively in the development of legal instruments formulated by UNCITRAL. In addition to the input of the delegates, who represent their governments, the work of UNCITRAL benefits from the input of interested international organizations both of intergovernmental and non-governmental character (e.g., World Bank, International Chamber of Commerce, Asian-African Legal Consultative Committee, International Bar Association) as well as the input of experts. It may also be noted by way of introduction that UNCITRAL deals primarily with matters of contractual relations between trading parties, rather than focusing on intergovernmental trade regulation and tariff arrangements.*

5. *It is also noteworthy that the legal texts of UNCITRAL are developed on the basis of a consensus. This is a fitting approach in view of the objective of spanning various types of legal and economic systems, and meeting the needs of international commerce, which involves the interaction of parties from States at various levels of economic development. That approach has successfully led to formulation of instruments widely adopted by and utilized in States at all levels of economic development, such as the United Nations Convention on Contracts for the International Sale of Goods, the UNCITRAL Model Law on International Commercial Arbitration, and the UNCITRAL Arbitration Rules.*

C. Juridical Nature of an UNCITRAL Model Law

6. *The UNCITRAL Model Law on procurement is exactly what its title indicates - a model for emulation by national legislatures. It is not a treaty or convention like the WTO Agreement on Government Procurement although there is harmony in the substantive content of the two instruments. Adoption of legislation based on the Model Law does not depend on reciprocal action by any other State. Apart from that aspect, the Model Law may be viewed as the consensus statement of governments from around the world on the minimum elements of a sound national legislative framework for public procurement. As*

such it is intended to be used by States from all regions and at all levels of economic development.

D. Guide to Enactment

7. Together with the Model Law, UNCITRAL has issued a Guide to Enactment of the Model Law. The Guide is intended to assist legislatures and executive branches of government utilizing the Model Law to modernize or establish procurement legislation.

II. TRANSPARENCY: THE FOUNDATION OF THE UNCITRAL MODEL LAW

8. The preamble to the Model Law lists its main policy objectives. Those include the overarching objective of economy and efficiency in procurement, maximizing participation of bidders and competition among them, fairness in treatment of bidders, objectivity in decision-making, and transparency.

9. Those objectives are closely intertwined, in that it would hardly be possible to achieve economy and efficiency in procurement without maximizing participation and competition, objectives which depend in turn on objectivity and procedural fairness in the selection process. At the foundation of that pyramid of objectives is transparency, on the basis of which procedural fairness is achieved, and thus the confidence of the bidding community in the integrity of the procurement process.

10. Aside from promoting participation in procurement proceedings by assuring bidders of fair treatment, mechanisms that achieve transparency foster the accountability of procuring entities to governmental and legislative oversight bodies, and help to build the confidence of the public, at large in the management and expenditure of public funds.

11. The Model Law reflects the various aspects of transparency that a sound national legislative framework for procurement would establish. Firstly, there is the question of making readily available to as wide an audience as possible information about procurement opportunities. Secondly, there is the body of provisions in a procurement statute designed to ensure disclosure to bidders, and implementation, of the •rules of the game• of the selection of the successful bidder. Lastly, there is the desirability of having what one might term transparency as to the results of a procurement action.

A. Information about Procurement Opportunities

12. This aspect is implemented in the Model Law by procurement methods involving wide participation, and solicitation requirements designed to facilitate such participation. Thus, as the default rule for the procurement of goods or construction, the open tendering method is prescribed (Article 18). Similarly, for procurement of consultancy and other types of intellectual services, a principal

method is included. It may be implemented so as to strike an appropriate balance between publicizing services procurement opportunities and achieving economy and efficiency, from the standpoint both of procuring entities and bidders, in the preparation and consideration of proposals (Chapter IV). A related aspect is the limitation of the use of the less competitive methods of procurement (e.g., restricted tendering, request for quotations, and single-source procurement) to those tightly defined cases in which they are truly appropriate (Articles 19-22).

13. The solicitation requirements related to announcement of procurement opportunities in the Model Law may be supplemented by an enacting State by including in the legal regime requirements also of publication of indicative notices of procurement planned for a given year or other budgetary period.

B. Disclosure of Procedural Rules Governing Procurement

14. The next dimension of transparency has to do with disclosing to interested parties the procedural rules, or •rules of the game•, of the procurement process. This in turn has several aspects, including, as outlined below, accessibility of the relevant legislative and other normative instruments, clarity as to the scope of applicability of procurement rules, and predisclosure and transparency in the rules governing the selection of the successful bidder.

Accessibility of legal texts

15. While most States have among their basic constitutional and legislative principles the requirement that laws have to be published and otherwise made accessible to the general public, the accessibility of normative texts is closely linked to the achievement of the fundamental goals of procurement policy, in particular the objective of transparency. Thus, the Model Law includes an Article requiring accessibility to the general public of legal texts governing procurement (Article 5).

16. A way of facilitating accessibility of normative texts, and clarity in the understanding of applicable rules, is the consolidation to the extent feasible of legislative rules governing the selection procedure. To the extent that those rules may be scattered about the statutes of a given State, accessibility is made more complicated, and transparency may be diminished. Consolidation will assist not only bidders in understanding the procurement process, but also will have the benefit for procuring entities of defining more clearly their obligations.

Clarity in scope of application of procurement rules

17. Another fundamental way of injecting greater transparency into public procurement is to maximize clarity as to the scope of application of the legal regime governing such procurement. This translates into defining clearly: (a) the types of state agencies and other entities covered (Article 2(b)); (b) the types of procurement covered (Article 1); (c) defining any exceptions to the coverage in the procurement law or its implementing regulations and making any such exceptions as surgical and limited as possible (Article 1(2) and (3)).

18. *The recommendation embodied in the Model Law is to extend the coverage of the procurement law to as much as possible of public procurement. Thus, procurement of goods, construction and services is covered. While a slot is included in the Model Law for the enacting State to list the types of procurement that may be excluded from coverage, it is not intended to encourage or recommend extensive exclusions.*

19. *Procuring entities may be uncertain as to which rules to apply if a procurement action is subject to treaty obligations of the State in question. An example is procurement using funds disbursed under a loan agreement between the State and an international financial institution such as the World Bank or with funds provided under a bilateral aid agreement which is tied to the application of specific procurement rules. The Model Law relieves the procuring entity of that uncertainty by deferring to conflicting international treaty obligations of the enacting State (Article 3).*

20. *The extent of possible conflict between legislation based on the Model Law and the procurement rules of international financial institutions such as the World Bank is rather limited, since the Model Law is in basic harmony with the procedures and principles of such rules.*

III. TRANSPARENCY IN CONDUCT OF PROCUREMENT PROCEEDINGS

21. *The Model Law includes a comprehensive set of procedures designed to ensure that procurement proceedings - in the variety of circumstances encountered in everyday practice - are conducted in a transparent manner. Those provisions may be categorized in the manner set forth below.*

A. Use of Most Competitive and Transparent Procurement Method

22. *A basic way in which a procurement law can foster transparency is by guiding procuring entities to use the most competitive and open procurement methods feasible in any given case. This in turn helps to foster transparency, as it may generally be assumed that the more open and competitive the procurement proceedings are, the more transparency there is. As has already been noted, the Model Law follows such an approach, by requiring open tendering for the procurement of goods and construction, except when the circumstances fit the grounds specified for use of less open and competitive methods. A similar approach is followed with respect to the main method for the procurement of consultancy and other intellectual services.*

B. Adequate Range of Alternative Methods

23. *A shortcoming in some procurement laws is that they lack an adequate range of alternative procurement methods to deal with situations in which open tendering may not be the most appropriate method. Such laws may drop down*

from the most open and transparent method to a method that is essentially without competition, such as single-source procurement - or to a method with very limited transparency such as unstructured, simultaneous negotiations with several bidders.

24. *Legislation based on the Model Law may avoid such a pitfall. For example, an enacting State may elect to include in the range of procurement methods available to procuring entities methods such as two-stage tendering and request for quotations (•shopping•). From a transparency point of view, as well as from the standpoint of ease of application of the law by procuring entities, the law should be as clear as possible as to the circumstances in which the alternatives may be used. Additional transparency may be achieved by defining procedures for the alternative methods (Chapter V) and requiring entry into the record of the procurement proceedings - when an alternative method is used - of a statement of the grounds justifying the use of the alternative method (Article 11(1)(g)).*

C. *Negotiation in the Award Process*

25. *The degree to which a procurement law achieves transparency is related also to the manner in which negotiated procurement is handled. Among the methods offered by the Model Law for consideration by legislators, the two-stage tendering is a method that permits negotiations and technical discussions to be conducted with bidders when a procuring entity wishes to discuss with bidders various technical or contractual possibilities to solve its procurement need, while applying the transparent selection procedures of tendering in the second stage (Article 46).*

D. *Predisclosure of Information for Effective Participation in Procurement Proceedings*

26. *At the heart of the provisions of the Model Law aimed at achieving transparency, and its other objectives, are rules requiring predisclosure to participating bidders of various types of information essential for effective participation of bidders in procurement proceedings.*

27. *One essential type of information concerns the qualification criteria and procedures to be applied to bidders seeking to participate in the procurement proceedings. The Model Law identifies an exhaustive list of the general types of qualification criteria that may legitimately be applied (Article 6(1)(b)). Their legitimacy stems from the fact that they are objectively linked to the capacity of a bidder to perform the procurement contract.*

28. *The exhaustive listing of permissible qualification criteria is part of a package of qualification provisions in the Model Law crucial to transparency (Articles 6 and 7). Other provisions include, for example, the requirement that in prequalification proceedings an up or down decision be made on every application (Article 7(5)), that qualification assessments may be made only on the basis of predisclosed criteria (Article 6(3) and (4)), and that applicants for*

prequalification determined to be unqualified be informed of the grounds for their disqualification (Article 7(7)).

29. *The next aspect of essential predisclosure concerns the technical specifications for the procurement in question. The Model Law requires use of objective, functionally defined technical specifications, detailed to the fullest extent possible and referring to relevant national and international standards (Article 16). This contributes not only to transparency, but also to more effective competition and ultimately to better value for the public purchaser.*

30. *A concomitant, essential requirement, in particular in tendering proceedings, as well as in the principal method for procurement of services, is the predisclosure of the technical evaluation criteria by which bids are to be evaluated, and the relative weight of the criteria (Article 27(e); Article 38(m)). The cardinal rule here is that only those evaluation criteria that have been predisclosed may be used (Article 34(4)(a)).*

31. *Another area of importance from the standpoint of transparency and predisclosure to bidders has to do with the terms of the procurement contract and the manner in which they describe the rights and obligations of the parties. It may be noted in this connection that in tendering proceedings the Model Law requires the predisclosure to bidders of the terms of the eventual contract, as well as the manner of its entry into force (Article 27(f); Article 27(y); Article 13).*

32. *Another important way of injecting greater transparency into the legal rules applicable to contractual and other aspects of the procurement process is to utilize harmonized legal instruments. This is particularly relevant in international procurement. To this end a State may wish to consider becoming party to the United Nations Convention on Contracts for the International Sale of Goods, to ensure that internationally harmonized and widely understood and available rules may be readily applicable to the procurement contract.*

33. *Furthermore, use may be made of instruments such as the INCOTERMS of the International Chamber of Commerce (ICC) to define specific aspects of the delivery and insurance terms of the procurement contract, the ICC Uniform Customs and Practice for Documentary Credits (UCP) to define rights and obligations of the issuer and the beneficiary under letters of credit, and the ICC Uniform Rules for Demand Guarantees (URDG) and the ICC Uniform Rules on Contract Bonds (URCB) for defining rights and obligations with respect to bids and performance guarantees. Mention should also be made of the role of standard forms of contract and bidding documents in promoting transparency in the procurement process. For the purposes of dispute settlement under the procurement contract, the UNCITRAL Arbitration Rules and the UNCITRAL Conciliation Rules are widely known and acceptable both to public purchasers and suppliers and contractors.*

E. Clarity of Bid Solicitation Documents

34. *The discussion in the preceding paragraphs underscores the importance from the viewpoint of transparency of comprehensive and clearly drawn bid solicitation documents. For this reason, the Model Law presents detailed provisions, in this regard for tendering proceedings (Article 27), as well as for procurement of consultancy and other intellectual services (Article 38). Also indispensable is an effective mechanism for responding to requests for clarification of the solicitation documents (Article 28; Article 40). This involves responding to requests for clarification in time for the responses to be taken into account in timely bid preparation and submission, and circulation of the clarification to all participating bidders. Related mechanisms include meetings of bidders and site visits, after which the procuring entity prepares minutes that are then provided to the bidders.*

F. *Bid Submission and Opening*

35. *Several Model Law provisions promote transparency at this crucial stage of procurement proceedings when the method used is tendering. Noteworthy are the requirements that the tender validity period be deemed to be only as predisclosed in the solicitation documents (Article 31(1)), that bid opening should coincide with the deadline for submission of bids (Article 33(1)), and that bidders or their representatives should be allowed to attend bid opening (Article 33(2)), at which certain basic information about each bid is read out, including the bid price (Article 33(3)).*

G. *Bid Evaluation*

36. *The Model Law sets forth a number of procedures for tendering proceedings that guard transparency at the climactic bid evaluation stage. Those include, for example, the following: (a) only predisclosed technical and qualification criteria may be applied; (b) no changes are to be solicited or offered with a view to making unresponsive bids responsive (Article 34(1)(a)); (c) prohibition of negotiation (Article 35); (d) preservation of confidentiality as to the contents of bids (Article 34(8)); and (e) correction of arithmetical errors appearing on face of tender, with disclosure of the correction to the bidder (Article 34(1)(b)).*

IV. TRANSPARENCY IN RESULTS OF PROCUREMENT PROCEEDINGS

A. *Notifications to Bidders and General Public*

37. *Mechanisms for recording and disclosing the conduct of procurement proceedings, and the results of such proceedings, constitute another essential step towards transparency in public procurement. They include, in particular: (a) notification to bidders of the results of applications for prequalification, including disclosure of grounds for rejection; (b) notification to participating bidders of the winner of the selection of the successful bidder (Article 36(6)); (c) publication of notice of contract award competition (Article 14).*

B. Record of Procurement Proceedings

38. An important tool for establishing transparency in public procurement is the maintenance of a record of the procurement proceeding. In addition to laying down the requirement, the Model Law details the required contents of the record and the extent and recipients of disclosure of the record (Article 11). Adequate record procedures, in addition to safeguarding transparency, help to make a procurement law self-policing to the extent that interested parties and the general public can monitor the performance of procuring entities.

V. REVIEW PROCEDURES

39. Effective complaint and review procedures are essential for transparency in the public procurement process generally, and the accountability of procuring entities to bidders, oversight and supervisory bodies and the general tax-paying public. The Model Law sets a standard for such a mechanism that has the following key features: (a) affirmation of the right of aggrieved bidders to obtain review of alleged violations by procuring entities of required procedures (Article 52(1)); (b) exemption of certain discretionary matters not involving the rights of individual bidders from the review process so as to prevent excessive disruption of the procurement process (Article 52(2)); (c) several stages of review, commencing with initial petition to the procuring entity (if the procurement contract has not yet entered into force), followed by administrative review, and culminating with judicial review (Articles 53-55 and 57); (d) the possibility of a limited period of suspension of procurement proceedings, except in the presence of strong countervailing public interest (Article 56),

*VI. TECHNICAL ASSISTANCE FOR PREPARATION OF
PROCUREMENT LEGISLATION BASED ON MODEL LAW*

40. The text of the UNCITRAL Model Law and of the accompanying Guide to Enactment are available from the UNCITRAL secretariat (Vienna International Centre, A-1400 Vienna, Austria, P.O. Box 500, tel: 43 1 21345 4060, fax: 43 1 21345 5813). In addition, the UNCITRAL secretariat can assist States in obtaining legal technical consultancy services to assist in the preparation of legislation based on the Model Law.

Working Group on Transparency in Government Procurement

WORLD BANK GUIDELINES ON PROCUREMENT

Statement by the Representative of the World Bank at
the Working Group's Meeting of 23 May 1997

Introduction

The apparent purpose of the Working Group on Transparency in Government Procurement is very close to the World Bank's objectives in the area of procurement. The World Bank Guidelines prescribe rules for the application of open, transparent and economic procurement procedures to all procurement under the projects financed by the World Bank. The World Bank has closely cooperated with the UNCITRAL over the years in the development of the UNCITRAL Model Law on Procurement of Goods, Construction and Services and is also cooperating with the regional development banks, the OECD and with other international institutions that have an interest in open and transparent public procurement. The World Bank would be happy to support the work of the Working Group in its future activities.

The World Bank is the oldest and largest of the international development finance institutions. It was established in 1945 with the purpose of making loans to developing country members in order to improve their economic situation. Today, almost all countries of the world are members of the World Bank. The World Bank (officially the International Bank for Reconstruction and Development (IBRD)) and the International Development Association (IDA), together finance annually some 40,000 contracts under loans of some \$20 billion that are mostly allocated for specific development projects. Loan agreements of the IBRD and IDA with Borrower countries incorporate by reference the World Bank's Guidelines for Procurement of Goods and Works and the Guidelines for Selection and Employment of Consultants. The Guidelines are based on the principles of the Articles of Agreement establishing the World Bank signed in 1944, which provide that the World Bank must make its loans with due attention to economy and efficiency.

Transparency in public procurement

Transparency is not an end in itself. Its main purpose is to foster competition in procurement. In considering how the public sector should do purchasing, it becomes clear that competition is the best way to get value for money. For example, a public entity which wants to purchase 100 trucks can choose between one of the following two methods

of procurement, which are at the extreme end of the spectrum. On the one hand, it could choose to negotiate with one supplier concerning the price of the trucks. From the point of view of the supplier, it makes sense to ask 30 to 40% more than what he would have charged under conditions of competition and then reduce the price by some 10 or 20% in the negotiations in order to make the purchaser happy, thus obtaining a final price that is still much more than what he could obtain in a competitive situation. On the other hand, with the rules of competitive bidding, every supplier bidding for 100 trucks must submit his bid price by a certain deadline, and has only one chance of doing so (i.e., he is prohibited from subsequently reducing it). The fact that the supplier cannot change his price or conditions after bid opening is the most powerful incentive to each bidder to give his best price in order to stand a chance of getting the contract. By using the most transparent procurement method and open competition, the public sector, in its role as a consumer, will get the best possible price from the supplier.

Another purpose of transparency is to foster the confidence of the taxpayer in the decency and honesty of the public sector purchases. In that sense, it is the most powerful way to fight corruption, which is a serious problem confronting all countries universally. To the extent that corruption manifests itself in public procurement, transparency in procurement and competition in the procurement process contribute to fight it because corruption thrives in the dark. Some of the main elements of transparency are set forth below.

Notification and advertising

One important aspect of transparency in the UNCITRAL Model Law and the World Bank Guidelines is promoting wide participation in the procurement process through publicity and advertising. The World Bank Guidelines require that, when the loan agreement is signed, the Borrower must advertise a General Procurement Notice in the United Nations Development Business (UNDB). Thus interested bidders all over the world are notified in advance about the project that is going to be financed by the World Bank, the type of contracts that are expected to be available for bidding under the project, and where and when the bidding documents will be expected to be available.

A Specific Procurement Notice is published further in the project cycle by the Borrower agency for the particular procurement, either in the UNDB or in the official gazette or in other specialized newspapers in the Borrowing country. The World Bank also requires that all foreign embassies in the Borrowing country be notified of any bidding possibilities. The information is passed on by the embassies to the industries, suppliers, contractors in their countries. Notification is extremely important because if bidders do not know about the bidding possibility they cannot participate in the bidding process. As a result, the procurement process will not take place under the best competitive conditions and the Borrower agency will not get the best possible price. Irregularities in the procurement process could well occur even at this stage. There was recently a case where, in its recommendation for award to the World Bank, the Borrower agency stated that the particular contract was advertised and only one bidder had submitted a bid. Under the World Bank rules, the award is to be approved even if there is only one bidder. However, another supplier protested the approval of the award by the Bank since they had not been informed of the bidding opportunity. An investigation showed that the copy of the advertising in the official gazette produced by the Borrower agency was a falsification, as the advertising had never taken place. This was an attempt to fraudulently influence the award of the contract in favour of one preferred bidder, by suppressing the required notification.

Predisclosure of relevant information

It is important that the rules of the game are publicly announced so that all bidders get the same chance of knowing in advance when and where they have to submit their bids and, particularly, how the bids will be evaluated. It is not permissible to apply any bid evaluation criteria that have not been announced previously.

Public bid opening

Public bid opening is an important feature of transparency. A few years back this was not a generally accepted idea because some countries had the tradition of opening bids only in camera. In this area, like so often in life, perceptions are as important as what actually happens. A bidder who has lost the award which is opened and evaluated without the presence of the bidders may have the perception that the committee opening the bids may have allowed one of the bidders to change its bid price after the opening of the bids. It is for this reason that the World Bank's Guidelines, the UNCITRAL Model Law and most modern procurement laws of individual states emphasize that bids must be opened in the presence of all bidders that have submitted a bid; the bidders must submit their bids by a deadline; and the bids must be opened immediately thereafter in the presence of all bidders that wish to attend; the prices must be read out; and minutes must be established so that facts are clearly established and can no longer be changed.

Accessibility of applicable laws and regulations

It is very important that the bidders have access to the laws and regulations on procurement so that they are aware of the rules under which procurement processes will take place. The World Bank Guidelines are made available to everybody and distributed widely because it is important for bidders to know the rules. The Bank's Standard Bidding Documents set forth clearly the rules of the bidding process, for example instructions to bidders on how to submit their bids, technical specifications, evaluation criteria, conditions of the contract, etc. If the bidding documents are not clear, the bidder may perceive that the procurement official may have had a chance to interpret certain rules in order to give an undue advantage to another bidder. The World Bank has developed mandatory Standard Bidding Documents, e.g., for the purchase of equipment, works, consulting services, pharmaceuticals, textbooks and computers, etc. Since the use of Standard Bidding Documents by the Borrowers has become mandatory, protests and complaints by suppliers have substantially decreased.

Prior and post review

The UNCITRAL Model Law provides a mechanism by which aggrieved suppliers can seek a review of the decision of the bidding authority by the procuring entity itself, by an administrative body or a judicial review body. As regards the contracts under the World Bank funded projects, the World Bank supervises the implementation of the procurement process. Important contracts accounting for around one fourth of the total number of contracts are subject to prior review where the Bank reviews every step of the procurement process to ascertain the conformity of the procurement process with the agreed rules. For other contracts, the Bank uses a post review procedure to ensure that the Borrower has carried out the procurement process in accordance with the agreed rules. In the latter case, when the Borrower submits his application for the withdrawal of funds from the loan account, he has to give the Bank all the relevant information on how he carried out the procurement. Moreover, under the Guidelines, upon a complaint from a bidder, the World Bank checks the allegation to ascertain whether the procurement rules have been properly applied by the Borrower. The Bank does not enter into any

dialogue with the bidders until the award has been made. If, after the award, a bidder wishes to ascertain the grounds on which his bid was not selected, and he is not satisfied with the explanation given by the Borrower, he may seek a debriefing with the Bank, where the relevant staff will explain the process to the bidder.

Technical assistance

The World Bank considers the UNCITRAL Model Law as the best document available at present that could be used as model by governments that want to introduce transparent procurement codes. The World Bank has been providing funds to its borrowing countries under institutional development grants to finance the services of lawyers qualified in the area of procurement that can advise governments on the development of modern and transparent procurement laws, most often based on the UNCITRAL Model Law. The World Bank also gives assistance to governments for the preparation of Standard Bidding Documents. While it has been mostly countries of the former COMECON Agreement and of the former Soviet Union that have received assistance from the World Bank for developing new procurement laws, several African and Asian countries have also improved their procurement laws through technical assistance of the World Bank.

I. *As requested of the Secretariat at the first meeting of the Working Group on Transparency in Government Procurement held on 23 May 1997, this note provides factual information on the provisions related to transparency in international instruments on government procurement (Part A) and in the WTO Agreements (Part B). In compiling Part A, information on the following international instruments has been included:*

-UNCITRAL Model Law on Procurement of Goods, Construction and Services (1995) (Model Law)

- *Guidelines on Procurement under IBRD Loans and IDA Credits (1996) and Guidelines on Selection and Employment of Consultants by World Bank Borrowers (1997) (World Bank Guidelines, respectively for goods and works and for consultants• services)*
- *WTO Agreement on Government Procurement (1994) (GPA).*

II. *The contents of the note should not be taken to prejudice what is encompassed by the term •transparency•, which is a matter for the Working Group. Its purpose is to provide background information that may be useful to the Working Group in its study of transparency in government procurement practices.*

PART A

TRANSPARENCY-RELATED PROVISIONS IN INTERNATIONAL INSTRUMENTS ON GOVERNMENT PROCUREMENT

I. INTRODUCTION

III. *Promoting transparency in procurement procedures is one of the explicit considerations that guide the requirements in the Model Law (Preamble, paragraph (f)), the GPA (Preamble, paragraph 3), the World Bank Guidelines for goods and works (paragraph 1.2(d)) and the World Bank Guidelines for consultants• services (paragraph 1.4(e)). Transparency can be viewed as a linchpin of the other common objectives of these instruments, which are, among others: maximizing economy and efficiency in procurement; fostering and encouraging participation in procurement proceedings by suppliers; giving all suppliers equal opportunity to compete regardless of nationality and thereby promoting liberalization of international trade; and promoting the integrity and fairness of and public confidence in the procurement process.*

IV. *The transparency provisions of the three international instruments are aimed at three sets of interested parties:*

- *Suppliers. The fulfilment of the objectives of procurement regimes requires that potential suppliers should be able to obtain readily adequate information on procurement opportunities, on the conditions to be met to qualify for them and on all matters relevant to the preparation and submission of bids. Their participation will also be enhanced if procurement procedures are perceived by them as fair and equitable.*
- *Legislatures and the general public. Transparency is a necessary condition for procurement regimes and decisions to be accountable, in particular in the use of public or, in the case of the World Bank, international funds. For this purpose decisions must not only be impartial, but also seen to be impartial. This calls for objective*

criteria, made known in advance, for the taking of such decisions, the receipt and opening of tenders under procedures guaranteeing the regularity of the tender openings and ex-post information on the contracts awarded as well as review possibilities.

-Other governments. Under the WTO Agreement on Government Procurement, each Party accepts obligations vis-à-vis other Parties to the Agreement, not only to ensure that the suppliers of those Parties benefit from adequate information and transparent procedures, but also to provide information directly to other Parties on its procurement procedures and decisions taken under it.

V. Part A of this note starts by outlining the main characteristics of the three instruments (Section II). It then looks at the preferred and supplementary procurement methods provided for in them and the relation of these methods to transparency considerations (Section III). The remaining sections of Part A concern particular aspects of transparency: information on national legislation and procedures (Section IV); information on procurement opportunities, including tendering and qualification (Section V); transparency of decisions on qualification (Section VI); transparency of decisions on contract awards (Section VII); review (Section VIII); other matters related to transparency (Section IX); and information to be provided by governments (Section X).

II. INTERNATIONAL INSTRUMENTS ON PROCUREMENT

VI. *There exist at present three international instruments on the procedures and practices of governments in the area of procurement:*

- (i) *The UNCITRAL Model Law on Procurement of Goods, Construction and Services was drawn up by the United Nations Commission on International Trade Law (the UNCITRAL)¹ to serve as a model for States for the evaluation and modernization of their procurement laws and practices and the establishment of procurement legislation where none presently exists. As a framework law, the Model Law is intended to provide all the essential principles and procedures for conducting procurement proceedings in the various types of circumstances likely to be encountered by procuring entities. In line with the mandate of UNCITRAL to promote international trade and the notion underlying the Model Law that the wider the degree of competition the better the value received for public expenditures, the Model Law as a general rule promotes non-discrimination. Under the Model Law this is given effect by the procedures designed, for example, to ensure that non-national suppliers are given adequate transparency. At the same time the Model Law recognizes that the enacting States may in some cases wish to restrict participation by foreign suppliers with a view to protecting certain domestic industries or for other legitimate reasons. However, with a view to promoting transparency, any such restrictions are subject to the requirement that the imposition of the restriction by the procuring entity should be based only on grounds specified in the procurement regulations or in other legislation.²*
- (ii) *The Guidelines for Procurement under IBRD Loans and IDA Credits and the Guidelines for Selection and Employment of Consultants by the World Bank Borrowers have the purpose of informing those World Bank Borrower countries or their agencies (Borrowers) carrying out a project that is financed in whole or in part by a loan from the International Bank for Reconstruction and Development (IBRD) or a credit from the International Development Association (IDA) of the arrangements to be made for procuring the goods and works and the procedures for selecting, contracting and monitoring consultants³ required for the project. In most*

¹UNCITRAL is an organ of the United Nations General Assembly established to promote the harmonization and unification of international trade law, so as to remove unnecessary obstacles to international trade caused by inadequacies and divergences in the law affecting trade.

²UNCITRAL Model Law Guidelines p.58 and Model Law Article 8(1) and (2)

³For the purposes of the World Bank Guidelines, the term •consultants• includes a wide variety of private and public entities, including consulting firms, engineering firms, construction managers, management firms, procurement agents, inspection agents, auditors, UN agencies and other multilateral organizations, investment and merchant banks, universities, research institutions, government agencies, non-governmental organizations and individuals. Bank Borrowers use these

cases the Bank requires its Borrowers to obtain goods and works through International Competitive Bidding open to all eligible suppliers and contractors, with allowance for preferences for domestically manufactured goods and works under prescribed conditions.⁴ The World Bank Guidelines also allow for National Competitive Bidding for procurement of goods or works which, by their nature or scope, are unlikely to attract foreign competition.⁵

- (iii) *The WTO Agreement on Government Procurement of 1994 establishes an agreed framework of rights and obligations, among WTO Members Parties to the GPA, with respect to their national laws, regulations, procedures and practices in the area of government procurement with a view to achieving greater liberalization and expansion of trade and improving the international framework for the conduct of world trade. The cornerstone of the rules in the GPA is non-discrimination between the supplier and suppliers of WTO Members Parties to the GPA. The GPA applies to the procurement of goods and services, including construction services, above certain threshold values and defined by the schedules of each Party contained in Appendix I to the GPA.⁶ Certain derogations or exceptions are specified in the Schedules of individual Parties in Appendix I to the GPA. In order to ensure that the basic principle of non-discrimination is followed and that access to procurement is actually available to foreign products, services and suppliers, the GPA lays heavy emphasis on procedures for providing transparency of laws, regulations, procedures and practices regarding government procurement.*

III. PROCUREMENT METHODS

VII. Various methods of procurement are used by government entities, according to circumstances. All three of the instruments covered by this note describe the specific procurement methods that may be used and define the parameters for their use. The instruments provide that more transparent methods of procurement are to be favoured where possible as being more likely to be effective in realizing the objectives of procurement systems, but these instruments allow less inherently transparent means when circumstances warrant it and, in some instances, subject to special conditions often related to ensuring adequate transparency.

organizations as consultants to help in a wide range of activities - such as policy advice; institutional reforms; management; engineering services; construction supervision; financial services; procurement services; social and environmental studies; and identification, preparation, and implementation of projects - to complement Borrowers' capabilities in these areas.

⁴World Bank Guidelines on goods and works, paragraph 2.54 and Appendix 2

⁵World Bank Guidelines on goods and works, paragraph 3.3 and 3.4

⁶GPA Article III:2

VIII. *As the method of procurement in normal circumstances, the Model Law foresees the use of tendering for procurement of goods and construction services and, for other services, principal method for procurement of services, a method designed to give due weight in the evaluation process to the qualifications and expertise of the service suppliers. For the purposes of the GPA, the open tendering procedures where all suppliers may submit a tender is a preferred method. The World Bank Guidelines prescribe the use of International Competitive Bidding in the procurement of goods and works and Quality- and Cost-Based Selection for the selection of consultants• services as the main method.*

IX. *For exceptional and well-defined circumstances, in which the above preferred methods are not considered by the procuring entity to be an appropriate or feasible method for procurement, the three instruments offer alternative methods of procurement which provide a lesser degree of competition among suppliers compared to the principal method. Therefore, conditions on the use of other methods have been included in all three instruments to avoid unjustified resort to these methods of procurement and to limit their use to exceptional cases, while safeguarding the objectives of non-discrimination among suppliers and transparency of the procurement process. The Model Law gives the options of two-stage tendering, requests for proposals and competitive negotiations where it is not feasible for the procuring entity to formulate specifications to the degree of detail required under the tendering method for goods, for example in the procurement of high technology goods or under the principal method of procurement for services. These methods give the procuring entity an opportunity to negotiate with suppliers with a view to settling upon technical specifications and contractual terms. With regard to the selection of suppliers, the Model Law offers a restricted tendering method which permits the procuring entity to solicit participation only from a limited number of suppliers for procurements of a technically complex or specialized nature; a request for quotations or shopping method with simplified and accelerated procedures under which the procuring entity is allowed to solicit quotations from a small number of suppliers for cases of low-value procurement of standardized goods or services; and single source procurement for exceptional circumstances, such as serious economic urgency due to catastrophic events. With a view to providing transparency as regards decisions of procuring entities to use an exceptional method of procurement rather than the method that is normally required, the Model Law contains a requirement that any such decision should be supported in the record of procurement proceedings provided under Article 11 of the Model Law by a statement of the grounds and circumstances on which the entity has relied to justify the use of the method in question.⁷*

X. *The GPA prescribes two methods of procurement other than open tendering procedures. Under selective tendering procedures, those suppliers invited*

⁷Model Law Article 18(4)

to do so by the entity may submit a tender.⁸ In order to ensure optimum effective international competition under this method, purchasing entities are required to invite tenders from the maximum number of domestic and foreign suppliers consistent with the effective operation of the procurement system. A number of safeguards to ensure non-discrimination in the procedures and conditions for qualification of suppliers are set out in Article VIII. Under limited tendering procedures, the entity contacts the potential suppliers individually.⁹ Because of the inherently non-transparent nature of this method, the GPA closely circumscribes the situations in which it can be used; it is permitted, for example, in the absence of responsive tenders under open or selective procedures, when the product or service can be supplied only by a particular supplier, or for reasons of extreme urgency brought about by events unforeseeable to the entity.¹⁰ The GPA subjects this method to special transparency conditions which require entities to prepare a report in writing on each contract awarded which should include, inter alia, a statement of the conditions referred to in Article XV that justified the limited tendering. Furthermore, entities may hold negotiations with suppliers making tenders, provided this is indicated in the initial tender notice or it appears from the tender evaluation that no one tender is the most advantageous, and subject to specified safeguards to ensure that such negotiations do not discriminate between suppliers.¹¹

XI. The World Bank Guidelines allow Modified International Competitive Bidding with simplified advertising and currency provisions to be used in the case of quick disbursement loans or in procurement of commodities. Other methods of procurement which are used in circumstances which necessitate departures from the International Competitive Bidding method procedures are: Limited International Bidding which is essentially International Competitive Bidding by direct invitation and without open advertisement and used where the contract values are small or where there is only a limited number of suppliers or other exceptional reasons¹²; National Competitive Bidding, normally used for public procurement in the country of the Borrower, which is considered to be the most efficient and economical way of procuring goods or works which, by their nature or scope, are unlikely to attract foreign competition¹³; Shopping (international and national) which is based on comparing price quotations obtained from several suppliers to assure competitive prices and is appropriate for procuring readily available off-the-shelf goods or standard specification commodities that are small

⁸GPA Articles VII:3(b) and X

⁹GPA Article VII:3(c)

¹⁰GPA Article XV

¹¹GPA Article XIV

¹²World Bank Guidelines on goods and works; paragraph 3.2

¹³World Bank Guidelines on goods and works, paragraph 3.3-3.4

in value¹⁴; and Direct Contracting Without Competition (single source)¹⁵ used under conditions similar to those of single source procurement under the Model Law or limited tendering under the GPA. As alternatives to the principal method of selection of consultants, Quality- and Cost-Based Selection, the World Bank Guidelines prescribe Quality-Based Selection for complex or highly specialized assignments or for those which invite innovations.¹⁶ Other methods of selection of consultants under the World Bank Guidelines, with specified conditions for their use, include Selection under a Fixed Budget, Least-Cost Selection, Selection Based on Consultants• Qualifications and Single-Source Selection.¹⁷

XII. While many of the specific requirements relating to transparency referred to in the later sections of this note concern transparency under any of the allowable procurement methods, it should be noted that some of the specific requirements relate more directly to preferred methods of procurement.

IV. INFORMATION ON NATIONAL LEGISLATION AND PROCEDURES

XIII. Government procurement activities are generally regulated through laws at the central or sub-central levels of government supplemented by administrative rulings and directives of general application. The Model Law and the GPA require the public accessibility of the relevant texts.¹⁸ The GPA explicitly requires the GPA Parties to publish any law, regulation, judicial decision, administrative rulings of general application and any procedure regarding government procurement (including standard contract clauses) in such a manner as to enable other GPA Parties and suppliers to become acquainted with them. The publications in which individual GPA Parties publish their respective national legislations have to be identified in Appendix IV to the GPA.¹⁹ The World Bank Guidelines are published by the World Bank and made available to Borrowers.²⁰

XIV. The GPA also provide for other means by which suppliers and/or other governments can obtain information on national procurement procedures. Under the GPA each entity shall, on request from a supplier of a GPA Party, promptly

provide an explanation of its procurement practices and procedures.²¹ The GPA Parties are also required to provide the challenge procedures under Article XX in writing and make them generally available.²²

V. INFORMATION ON PROCUREMENT OPPORTUNITIES, TENDERING AND QUALIFICATION

XV. The three instruments recognize that timely, sufficiently detailed and readily available information on opportunities to bid for specific contracts is essential for guaranteeing effective competition. They lay down detailed provisions on the advance information that entities must provide on their intended procurements. Where prequalification is a necessary condition for tendering, information must be provided on the procedures and criteria that have to be fulfilled in order for an interested potential supplier to qualify.

(a) *Notice of invitation to tender or to prequalify*

(i) *How public notice should be given*

XVI. The relevant provisions in the three instruments set forth a set of minimum procedures for giving public notice of tendering opportunities that the procuring entity should follow in order to obtain expressions of interest in a specific procurement from potential suppliers. Under the Model Law and the GPA, the information on an intended procurement must be advertised primarily through a notice of invitation to participate in the intended procurement.²³ The publications in which individual GPA Parties publish their notices of invitations to tender have to be identified in Appendix II to the GPA.²⁴ The World Bank Guidelines require the Borrower country to notify the projects which include procurement of goods and works on the basis of International Competitive Bidding or any expected consultancy assignments through a General Procurement Notice on the basis of a draft prepared and submitted to the Bank by the Borrower. The Borrower country must notify the international community in a timely manner of the opportunities to bid for specific procurement of goods and works through invitations to bid advertised in the form of Specific Procurement Notices.²⁵ For selection of consultants, the preparation of requests for proposals shall involve a

²⁴ GPA Article IX:1

²⁵World Bank Guidelines on goods and works, paragraph 2.7, 2.8 and 2.10 and on consultants• services

*Letter of Invitation which shall state the intention of the Borrower to enter into a contract for provision of consultancy services.*²⁶

*XVII. All three instruments foresee the publication of a notice of invitation to participate in an official gazette or other official journal.²⁷ Moreover, to create awareness of the procurement opportunity in the international community, the Model Law and the World Bank Guidelines require the notice of invitation to tender also to be published in a newspaper or a relevant trade publication in a language customarily used in international trade, in a technical magazine or a professional journal of wide international circulation.²⁸ Under the World Bank Guidelines the invitations to bid for goods or works or lists of consultancy assignments which are advertised in the General Procurement Notice and the Specific Procurement Notices are published in *Development Business*.²⁹ World Bank Borrowers are also encouraged to transmit invitations to embassies and trade representatives of countries of likely suppliers and contractors.³⁰*

XVIII. The GPA requires that any amendment or re-issue of a notice of invitation to tender, after publication of an invitation to participate in an intended procurement but before the time set for opening or receipt of tenders, shall be given the same circulation as the original documents upon which the amendment is based.³¹

(ii) *Information content of notices of invitation*

XIX. All three instruments require entities to include a minimum amount of information in their invitations to tender sufficient to enable suppliers to assess their interest in the intended procurement and to facilitate their participation in tendering procedures.³² The three instruments refer broadly to the same elements. The specific elements identified in one or more of these instruments are listed below, with the instrument that explicitly contains that element identified in the footnotes:

²⁶World Bank Guidelines on consultants• services, paragraph 2.9

³¹GPA Article IX:10

³²Model Law 25(1); GPA Article IX:6-8

on the intended procurement:

- the name and address of the entity responsible for the procurement, awarding the contract and providing any information necessary for obtaining specifications and other documents³³ or details of the client of consultancy services³⁴;*
- the scope of the procurement with details on the nature and the quantity of the goods and services to be procured or the construction to be effected³⁵;*
 - any options for further procurement; the nature and quantity of any recurring contracts³⁶;*
 - the time-table for the supply of goods, the provision of services or for the completion of the construction.³⁷ If possible, an estimate of the timing when any option for further procurement may be exercised; in the case of recurring contracts an estimate of the timing of the subsequent tender notices³⁸;*
- the place of delivery of the goods to be supplied, the location where services are to be provided or where the construction is to be effected³⁹;*

regarding suppliers:

- any economic and technical requirements, financial guarantees and information required⁴⁰;*
- the criteria and procedures to be used for evaluating the qualifications of suppliers.⁴¹*

⁴⁰GPA Article IX:6(f)

⁴¹Model Law Article 25(1)(d)

To facilitate obtaining tender documents or prequalification documents by suppliers interested in bidding for the intended procurement, the procuring entity shall also provide information regarding :

- the means of obtaining the documents and the place from which they may be obtained⁴²;*
- the price charged⁴³ and the currency and means of payment for documents⁴⁴;*
- the scheduled date for the availability of the documents⁴⁵;*
- the language or languages in which the documents are available⁴⁶;*

and information regarding submission of applications to tender or to prequalify:

- the address for submitting an application to be invited to tender or for qualifying for the suppliers• lists as well as for submission or receiving tenders⁴⁷;*
- the deadline for the submission or receipt of tenders⁴⁸;*
- the language or languages in which application to be invited to tender or qualify for the suppliers• list must be submitted.⁴⁹*

XX. Under the World Bank Guidelines on consultants• services, the document prepared for the assignment called the Terms of Reference shall define the objectives, goals and the scope of the assignment and provide background information to facilitate the consultants• preparation of their proposals. Terms of

⁴⁹GPA Article IX:6(d)

*Reference shall also list the services and surveys necessary to carry out the assignment and the expected results, for example reports, data, maps or surveys.*⁵⁰

XXI. Under the GPA, invitations to tender shall contain certain other specific information, including information concerning the method of procurement applied (open, selective, negotiated procedures)⁵¹ and on the mode of procurement (purchase, lease, rental or hire purchase).⁵²

XXII. Since the GPA obligations only apply to procurement by those entities explicitly covered in the schedules of individual GPA Parties in Appendix I to the GPA subject to exceptions contained therein and to goods and services above specified threshold values, the notices of invitation to participate in intended procurements or the publication in which such notices appear should indicate whether the procurement for which tenders are sought is subject to the obligations of the Agreement.⁵³

XXIII. Finally, under the GPA, being an intergovernmental agreement subscribed to by Parties using different languages, entities must publish in an appropriate publication listed in Appendix II, for each case of intended procurement, a summary notice of the invitation to tender in one of the official languages of the WTO. The notice shall contain at least information regarding the subject matter of the contract, the time-limits set for the submission of tenders or an application to be invited to tender, and the addresses from which documents relating to the contracts may be requested.⁵⁴

(b) Tender documents

XXIV. The information contained in tender documents describes the needs of the procuring entity and establishes a set of standards which enables the procuring entity to compare the tenders submitted in an objective and fair manner.⁵⁵ Tender documents also set out the rules and procedures with which a prospective tenderer should comply in preparing and submitting a responsive tender. The level of detail and complexity of tender documents may vary with the size and nature of the intended procurement but they should include, at least, the information that is required to be published in the notice of intended procurement.⁵⁶ The three

instruments refer broadly to the same elements.⁵⁷ The specific elements identified in one or more of the three instruments are listed below, with the instrument that explicitly specifies those elements identified in the footnotes:

regarding the procuring entity:

- *the address of the entity to which tenders should be sent⁵⁸;*
- the address where requests for supplementary information or requests for clarification should be sent⁵⁹ and the name, functional title and address of one or more officers or employees of the procuring entity who are authorized to communicate with suppliers in connection with the procurement proceedings, without the intervention of an intermediary⁶⁰;*

regarding the intended procurement:

- a complete description of the products or services or construction to be procured⁶¹, a brief description of the consultancy assignment⁶²;*
- where the procurement is for goods, the quantity of or a list of the goods to be procured⁶³;*
- any requirements (including technical and quality specifications, standards, minimum performance requirements, conformity certification) to be fulfilled and the test methods that will be used to assess the conformity of the equipment or works with those specifications⁶⁴;*

⁵⁷The World Bank Borrowers use Standard Bidding Documents (SBDs) published by the Bank for various types of procurement (World Bank Guidelines on goods and works, paragraph 2.12). Where no SBDs have been issued, the Borrower uses other standard conditions of contract or contract forms acceptable to the Bank. For selection and employment of consultants the Borrower uses the standard Request for Proposals (RFPs) which includes a letter of Invitation, Information to Consultants (ITC), the Terms of Reference, and the proposed contract (World Bank Guidelines on consultants• services paragraph 2.8 and 2.10 and Appendix 2).

-any requirements of the procuring entity with respect to any tender security to be provided by suppliers including the issuer and the nature, form, amount and other principal terms and conditions⁸⁸;

-any commitments to be made by the supplier or contractor outside of the procurement contract, such as commitments relating to counter-trade or to the transfer of technology.⁸⁹

XXV. Under the Model Law, at any time prior to the deadline for submission of tenders, the procuring entity may, for any reason, whether on its own initiative or as a result of a request for clarification by a supplier or contractor, modify the tender documents by issuing an addendum. The addendum shall be communicated promptly to all suppliers or contractors to which the procuring entity has provided the solicitation documents and shall be binding on those suppliers or contractors.⁹⁰

(c) Clarification

XXVI. Under the Model Law and the World Bank Guidelines the procuring entity is required to respond to any request by a supplier for clarification of the tender documents or prequalification documents within a reasonable time prior to the deadline for the submission of tenders or application to prequalify so as to enable the supplier to make a timely submission of its tender or application to prequalify. The procuring entity is also required, without identifying the source of the request, to communicate the clarification, any additional information, correction of errors or any other modifications to all other suppliers to which the procuring entity has provided the tender documents. The record of any meeting with any suppliers shall also be communicated to other suppliers.⁹¹

XXVII. Under the GPA, entities are required to reply promptly to any reasonable request from suppliers for explanations relating to tender documentation under open and selective procedures. Entities are also required to reply to any reasonable request for relevant information from a supplier participating in the tendering process on condition that such information does not give that supplier an advantage over its competitors in the procedure for the award of the contract.⁹² Also, any significant information given to one supplier regarding invitations to tender for a particular intended procurement shall be given

*simultaneously to all other suppliers concerned in adequate time to permit the suppliers to consider such information and to respond to it.*⁹³

*XXVIII. Under the World Bank Guidelines, all prospective bidders shall be provided the same information, and shall be assured of equal opportunities to obtain additional information on a timely basis.*⁹⁴ *Borrowers shall provide reasonable access to project sites for visits by prospective bidders. For works or complex supply contracts, particularly for those requiring refurbishing existing works or equipment, a pre-bid conference may be arranged whereby potential bidders may meet with the Borrowers's representatives to seek clarifications. Minutes of the conference shall be provided to all prospective bidders with a copy to the Bank.*⁹⁵

(d) Promptness and timeliness of prior information and deadlines

*XXIX. The Model Law and the GPA emphasize the importance of promptness in the access to national legislation and the publication of texts of relevant legislation.*⁹⁶ *The World Bank Guidelines on goods and works emphasize that specific bidding opportunities should be advertised to all those interested in bidding and, in particular, to the international community in a timely manner to enable prospective bidders to obtain prequalification or bidding documents and prepare and submit their responses.*⁹⁷

*XXX. All three instruments provide that suppliers must be granted a sufficient period of time to prepare their tenders. The Model Law recognizes that the length of that period of time may vary from case to case depending on the circumstances of the given procurement and it is left to the procuring entity to fix the deadline by which tenders must be submitted.*⁹⁸

XXXI. The GPA prescribes certain minimum deadlines that must be allowed for the preparation, submission and receipt of tenders to enable responsive tendering. The relevant provisions also contain general considerations that should govern when entities set time-limits for tendering and delivery. Any prescribed time-limit shall be adequate to allow suppliers of other Parties as well as domestic suppliers to prepare and submit tenders before the closing of the tendering procedures. In determining such a time-limit, entities shall, consistent with their own reasonable

⁹³GPA Article IX:10

⁹⁴World Bank Guidelines on good and works, paragraph 2.18

⁹⁵World Bank Guidelines on goods and works, paragraph 2.18.

⁹⁶Model Law Article 5; GPA Article XIX:1

⁹⁷World Bank Guidelines on goods and works, paragraph 2.7 and 2.8

⁹⁸Model Law Article 30(1)

needs, take into account factors such as the complexity of the intended procurement, the extent of subcontracting anticipated and the normal time for transmitting tenders by mail from foreign as well as domestic points. Furthermore, each Party is required to ensure that its entities shall take due account of publication delays when setting the final date for receipt of tenders or of applications to be invited to tender.⁹⁹

XXXII. Paragraphs 2 and 3 of Article XI of the GPA on deadlines specify the minimum periods that must be provided for the preparation and submission of tenders by suppliers after the issuance of notices of invitation to tender. The deadlines may be shortened under certain circumstances specified in that Article.

XXXIII. The World Bank Guidelines also require that the time allowed for the preparation and submission of bids shall be determined with due consideration of the particular circumstances of the project and the magnitude and the complexity of the contract and, generally, no less than six weeks from the date of invitation to bid or the date of availability of bidding documents, whichever is later, shall be allowed for International Competitive Bidding.¹⁰⁰ The relevant provisions require that sufficient time should be allowed to prospective bidders to prepare their bids after they have been notified of the procurement opportunity. A lead time of eight weeks is prescribed between the publication of a General Procurement Notice for procurement on the basis of International Competitive Bidding and the release of the bidding documents to the public. The notifications on opportunities to bid for specific contracts, or to prequalify, in the form of Specific Procurement notices, shall be published in sufficient time to enable prospective bidders to obtain prequalification or bidding documents and prepare and submit their responses.¹⁰¹

XXXIV. The GPA has detailed provisions aimed at allowing a sufficient period of time for potential suppliers to prequalify. To this end, the GPA provides that any conditions for participation in tendering procedures shall be published in adequate time to enable interested suppliers to initiate and complete the qualification procedures¹⁰²; the time required for qualifying suppliers shall not be used in order to keep suppliers of other GPA Parties off a suppliers' list or from being considered for a particular intended procurement¹⁰³; entities maintaining permanent lists of qualified suppliers shall ensure that suppliers may apply for qualification at any time; and that all qualified suppliers so requesting are included in the lists within a reasonably short time; if, after publication of a tender

¹⁰³GPA Article VIII : (c)

notice, a supplier not yet qualified requests to participate, the entity shall promptly start procedures for qualification.¹⁰⁴

VI. TRANSPARENCY OF DECISIONS ON QUALIFICATION

(a) Transparency of criteria

XXXV. All three instruments contain provisions aimed at ensuring that decisions on the qualification of suppliers are taken and seen to be taken on the basis of criteria that have been previously disclosed, are capable of objective application and linked to the abilities of interested suppliers to perform.¹⁰⁵

XXXVI. The Model Law sets forth certain criteria that procuring entities may require the suppliers to meet in order to qualify for participation in procurement proceedings.¹⁰⁶ The GPA requires that any conditions for participation in tendering procedures be limited to those which are essential to ensure the firm's capability to fulfil the contract in question. Entities shall recognize as qualified suppliers such domestic and foreign suppliers that meet the conditions for participation in an intended procurement.¹⁰⁷ The GPA also prescribes a number of procedures in Article VIII to ensure that qualification process is fair and does not lead to discrimination among suppliers. The World Bank Guidelines emphasize that qualification of suppliers be based entirely on their capability and resources to perform the particular contract satisfactorily and lists the factors that should be taken into account.¹⁰⁸

XXXVII. In order to guarantee fairness of and non-discrimination in the qualification process, the Model Law requires that the same criteria must be applied to all suppliers participating in the procurement proceedings; the procuring entity shall evaluate the qualification of suppliers in accordance with the qualification criteria set forth in the prequalification or tender documents and; in reaching a decision with respect to the qualification of each supplier, the procuring entity shall apply only the criteria set forth in such documents.¹⁰⁹ The World Bank Guidelines require that the scope of the contract and a clear statement of the requirement for qualification be sent to those who have responded to invitation to prequalify.¹¹⁰

¹⁰⁷GPA Article VIII:(b) and (c)

¹⁰⁸World Bank Guidelines on goods and works, paragraph 2.9

¹⁰⁹Model Law Article 6(3)

¹¹⁰World Bank Guidelines on goods and works, paragraph 2.10

(b) Notification and listing

XXXVIII. The three instruments have specific requirements on the provision of information on decisions to qualify to the suppliers concerned and to the general public. Under the Model Law, the procuring entity shall make available to any member of the general public, upon request, the names of all suppliers or contractors that have been prequalified.¹¹¹ Each supplier submitting an application to prequalify shall be notified whether or not it has been prequalified.¹¹² Under the Model Law and the GPA, the procuring entity shall, upon request, communicate to suppliers whose application to qualify was rejected or whose qualification has been brought to an end the grounds therefor.¹¹³ The GPA requires the entity concerned to advise any supplier having requested to become a qualified supplier of its decision in this regard.¹¹⁴

XXXIX. Under the procedures of Article X of the GPA on selective tendering, entities maintaining permanent lists of qualified suppliers are required to publish annually in one of the publications listed in Appendix III a notice containing the following¹¹⁵:

- the enumeration of the lists maintained, including their headings, in relation to the products or services or categories of products or services to be procured through the lists;*
- the period of validity of the lists, and the formalities for their renewal.*

Entities are required to notify the qualified suppliers included on permanent lists of the termination of any such lists or of their removal from them.¹¹⁶

*VII. TRANSPARENCY OF DECISIONS ON CONTRACT AWARDS**(a) Transparency of criteria*

¹¹¹Model Law Article 7(6)

¹¹²Model Law Article 7(6)

¹¹³Model Law Article 7(7) and GPA Article XVIII:2(b)

¹¹⁴GPA Article VIII:1(f)

¹¹⁵GPA Article IX:9(a)-(c)

¹¹⁶GPA, Article VIII(f)

XL. Government procurement regimes and each of the three instruments referred to in this note put great emphasis on decisions on the award of the contracts not only being objective but also being seen to be objective. This concern lies at the heart of the nexus linking transparency and accountability. Being seen to be objective in decision-making requires, first, that the evaluation criteria, including technical specifications, be objective in nature and publicly announced in advance and, second, that arrangements for the receipt and opening of tenders are such as to ensure their regularity. Transparency in decision-making further entails the availability ex post of information on the decisions taken.

XLI. As stated above under the section on tender documents, all three instruments provide that tender documents should contain the criteria, including any factor other than the price, to be considered by the procuring entity in determining the successful tender and for awarding the contract. All three instruments also emphasize that entities should evaluate tenders only on the basis of the criteria that have been previously published.

XLII. The provisions of the Model Law on examination, evaluation and comparison of bids require the procuring entity to evaluate and compare the tenders in order to ascertain the successful tender in accordance with the procedures and criteria set forth in the tender documents and prohibit the use of any criterion that has not been set forth in the tender documents.¹¹⁷ In evaluating and comparing tenders, a procuring entity may grant a margin of preference in favour of a domestic supplier; but any rules for calculation of such preference margins should be set forth in the procurement regulations and should be calculated accordingly. Moreover, the use of a margin of preference is to be predisclosed in the tender documents and reflected in the record of the procurement proceeding.¹¹⁸

XLIII. The GPA also explicitly provides that awards should be made in accordance with the criteria and essential requirements specified in the tender documentation.¹¹⁹ Unless in the public interest an entity decides not to issue the contract, the entity shall make the award to the tenderer who has been determined to be fully capable of undertaking the contract and whose tender, whether for domestic products or services, or products or services of other Parties, is either the lowest tender or the tender which in terms of the specific evaluation criteria set forth in the notices or tender documentation is determined to be the most advantageous.¹²⁰

XLIV. The World Bank Guidelines require that bidding documents shall specify the relevant factors in addition to the price to be considered in bid evaluation and the manner in which they will be applied for the purpose of determining the lowest evaluated bid.¹²¹

¹¹⁷Model Law Article 34(4)(a)

¹¹⁸Model Law Articles 27(e), 34(4)(d) and 39(2)

¹¹⁹GPA Article XIII:4(c)

¹²⁰GPA Article XIII:4(b)

¹²¹World Bank Guidelines on goods and works, paragraph 2.51

The Borrower is required to prepare a detailed report on the evaluation and comparison of bids setting forth the specific reasons on which the recommendation for the award of the contract is based.¹²² Under the provisions on domestic preferences, the Borrower may grant a margin of preference in the evaluation of bids under International Competitive Bidding procedures; but in such cases, the bidding documents shall clearly indicate any preferences to be granted and the information required to establish the eligibility of a bid for such preference.¹²³

XLV. Particular attention is given in the three instruments to ensuring the transparency and objectivity of technical specifications criteria and their evaluation. The GPA and the Model Law stipulate that technical specifications¹²⁴ prescribed by procuring entities shall not be prepared, adopted or applied with a view to, or with the effect of, creating unnecessary obstacles to international trade.¹²⁵ The GPA and the World Bank Guidelines require that technical specifications prescribed by procuring entities shall be based on international standards, where such exist, otherwise, on national technical regulations, recognized national standards or other equivalent standards, or building codes.¹²⁶ The GPA has an explicit preference for the use of specifications based on performance rather than design or descriptive characteristics. The Model Law requires that any specifications, plans, drawings, designs and requirements or descriptions be based on the relevant objective technical and quality characteristics of the goods.¹²⁷ All three instruments proscribe the use of brand names and other references pointing to, for example, a patent, specific origin, producer or supplier.¹²⁸ Moreover, the GPA requires entities not to seek or accept, in a manner which would have the effect of precluding competition, advice which may be used in the preparation of specifications for a specific procurement from a firm that may have a commercial interest in the procurement.¹²⁹

(b) Receipt and opening of tenders

¹²²World Bank Guidelines on goods and works, paragraph 2.53

¹²³World Bank Guidelines on goods and works, paragraph 2.54 and Appendix 2

¹²⁴Such as quality, performance, safety and dimensions, symbols, terminology, packaging, marking and labelling, or the procedures and methods for their production and requirements relating to conformity assessment procedures prescribed by procuring entities

¹²⁸GPA Article VI:2-3; Model Law Article 16(2); World Bank Guidelines on goods and works, paragraph 2.19 and 2.20

¹²⁹GPA Article VI:4

XLVI. The GPA provisions require that procedures and conditions for receipt and opening of tenders guarantee the regularity of the openings and be consistent with the national treatment and non-discrimination provisions of the GPA.¹³⁰

XLVII. The Model Law and the World Bank Guidelines set forth detailed conditions which are aimed at preventing any non-transparent action or decision by the procuring entity in the process of opening of tenders and at enabling suppliers to observe that the entity complies with the procurement criteria and procedures. To this end, these two instruments provide, inter alia, that:

- bids shall be opened at the time and place stipulated in the notice of invitation to tender or in the tender notice¹³¹;*
- all suppliers that have submitted tenders or their representatives shall be permitted by the procuring entity to be present at the opening of tenders¹³²;*
- the technical proposals, submitted separately from financial proposals, shall be opened immediately by a committee of officials drawn from the relevant departments (technical, finance, legal, as appropriate) after the closing time for the submission of proposals¹³³; the financial proposals shall remain sealed and shall be deposited with a reputable public auditor or independent authority until they are opened publicly¹³⁴;*
- the name and address of each supplier whose tender is opened and the tender price or the total amount of each bid shall be read aloud to those persons present at the opening of tenders, and communicated on request to suppliers that have submitted tenders but that are not present or represented at the opening of tenders¹³⁵;*
- the name and address of each supplier whose tender is opened and the tender price or the total amount of each bid shall be recorded immediately in the record of the tendering proceedings.¹³⁶*

XLVIII. The three instruments set forth a number of other provisions that safeguard transparency at the bid evaluation stage. The procuring entity may ask bidders for

¹³³World Bank Guidelines on consultants• services, paragraph 2.12

¹³⁴World Bank Guidelines on consultants• services, paragraph 2.12

¹³⁵Model Law Article 33(3); World Bank Guidelines on goods and works, paragraph 2.44

¹³⁶Model Law Article 33(2); World Bank Guidelines on goods and works, paragraph 2.44

clarifications of their tenders that are needed to evaluate them, but no changes are to be asked or permitted with a view to making unresponsive bids responsive except for the correction of arithmetical errors appearing on tender.¹³⁷ The GPA requires that any opportunity that may be given to tenderers to correct unintentional errors of form between the opening of tenders and the awarding of the contract shall not be permitted to give rise to any discriminatory practice.¹³⁸ The World Bank Guidelines preclude the alteration of bids after the deadline for receipt of bids.¹³⁹

XLIX. Under the GPA, negotiations with entities may only take place where prior notice has been given or where no one tender is obviously the most advantageous in terms of the specific evaluation criteria set forth earlier in the notices or tender documentation.¹⁴⁰ To safeguard transparency in the course of negotiations, entities shall ensure that any elimination of participants is carried out in accordance with the criteria set forth in the notices and tender documentation; all modifications to the criteria and to the technical requirements are transmitted in writing to all remaining participants in the negotiations; all remaining participants are afforded an opportunity to submit new or amended submissions on the basis of the revised requirements; and when negotiations are concluded, all participants remaining in the negotiations shall be permitted to submit final tenders in accordance with a common deadline.¹⁴¹ The Model Law prohibits negotiations between the procuring entity and a supplier with respect to a tender submitted by the supplier.¹⁴²

L. The World Bank Guidelines require that information relating to the examination, clarification, and evaluation of bids and recommendations concerning awards shall not be disclosed to bidders or other persons not officially concerned with the bidding process until the successful bidder is notified of the award.¹⁴³

LI. Under the procedures on negotiations in the Model Law and in the GPA, entities are required to treat information in tenders, in particular any technical, price or other market information, confidentially and not to provide information intended to assist particular participants to bring their tenders up to the level of other participants.¹⁴⁴

¹³⁷Model Law Article 34(1)

¹³⁸GPA Article XIII:1(b)

¹³⁹World Bank Guidelines on goods and works, paragraph 2.45

¹⁴¹GPA Article XIV:4(a)-(d)

¹⁴²Model Law Article 35

¹⁴³World Bank Guidelines on goods and services, paragraph 2.46

¹⁴⁴Model Law Article 49.3 and GPA Article XIV:3

LII. Under the World Bank Guidelines on consultancy services, information relating to evaluation of proposals and recommendations concerning awards shall not be disclosed to the other consultants that have submitted the proposals or to other persons until the award of the contract is notified to the successful firm.¹⁴⁵

(c) Ex-post information on contract awards

LIII. The three instruments lay down provisions requiring procuring entities to inform the public and, in particular, the suppliers that have participated in the procurement process of their award decisions. The Model Law and the GPA require entities to publish a notice award after the award of each contract.¹⁴⁶ The publications in which individual GPA Parties publish such notices are identified in Appendix II to the GPA. The GPA sets forth in detail the type of information that such notices, to be published within a specified time-limit after the award of each contract, must contain. Such information shall relate to¹⁴⁷:

- the nature and quantity of products or services in the contract award;
- the name and address of the entity awarding the contract;
- the date of award of the contract;
- the name and address of winning tenderer;
- the value of the winning award or the highest and lowest offer taken into account in the award of the contract;
- where appropriate, means of identifying the notice of invitation to tender or justification for the use of limited tendering procedure; and
- the type of procedure (open, selective or limited) used.

LIV. In addition to publication of a notice of contract award, the GPA goes on to require entities to promptly inform directly those suppliers that have participated in a tender of the decision on the contract award, in writing if requested.¹⁴⁸ Under the Model Law, the procuring entity is required to give a notice to other suppliers after it has entered into a contract with a supplier, specifying the name and address of the supplier and the contract price.¹⁴⁹

¹⁴⁵World Bank Guidelines on consultants• services, paragraph 2.28

¹⁴⁶Model Law Article 14(1) and (2); GPA Article XVIII:1

¹⁴⁷GPA Article XVIII:1(a)-(g)

¹⁴⁸GPA Article XVIII:3

¹⁴⁹Model Law Article 36(6)

LV. The GPA confers on unsuccessful tenderers the right to obtain the necessary information on the contract award. Accordingly, each entity must respond promptly to requests for further information from a supplier of a GPA Party regarding its procurement practices and procedures. In order to foster transparency and accountability of the decisions of the procuring entity, the Model Law and the GPA allow an unsuccessful tenderer to seek and obtain pertinent information concerning the reasons why its tender was not selected. The GPA also requires the provision of information on the characteristics and relative advantages of the tender selected as well as the name of the winning tenderer. Under the Model Law, however, the procuring entity is not required to justify the grounds for its rejection of tenders.¹⁵⁰

LVI. As regards the treatment of confidential information on contract awards, the GPA foresees that entities may decide to withhold certain information on contract awards where release of such information may impede law enforcement or otherwise be contrary to the public interest or would prejudice the legitimate commercial interests of particular enterprises or might prejudice fair competition between suppliers.¹⁵¹

LVII. The provisions of the Model Law bar the procuring entity from disclosing certain information, including that relating to the examination, evaluation and comparison of tenders so as to safeguard the public interest or the commercial interest of parties involved in the proceedings.¹⁵²

VIII. REVIEW

LVIII. Review procedures are often considered a key component of transparency and accountability of government procurement practices. The rules set out in the Model Law and the GPA establish the basic features that national review mechanisms must have without going into great detail. The purpose of these provisions is to give suppliers believing that an entity has breached national law or, in the case of the GPA, the rules of the GPA itself, a right of review.¹⁵³

LIX. Under the Model Law and the GPA, as an initial step, complainants are encouraged to seek resolution of their complaints through consultations with the procuring entity itself prior to recourse to an administrative review body.¹⁵⁴ Under the Model Law, unless the complaint is resolved by mutual agreement, the procuring entity

¹⁵²Model Law Article 45 and Article 34(8)

¹⁵³Model Law Article 52; GPA Article XX:1

¹⁵⁴GPA Article XX:1

*shall, within prescribed time-limits issue a written decision including a statement on the reasons for the decision and indicating any corrective measures that are to be taken.*¹⁵⁵

*LX. If the matter is not settled at this stage, the complainant is entitled, under the Model Law, to seek an administrative review.*¹⁵⁶ *The functions of administrative review may be vested in an existing appropriate administrative body or a body whose competence is exclusively to resolve disputes in procurement matters and which is independent of the procuring entity. The decisions of the review bodies or failure to make a decision within prescribed time-limits shall be subject to judicial review.*¹⁵⁷ *The Model Law also lays down certain procedures to ensure the openness and fairness of review procedures.*¹⁵⁸

*LXI. Under the GPA, Parties may confer the authority to hear challenges by suppliers on national courts or on an impartial and independent review body of an administrative nature. In the event that a bid challenge is heard by a review body which does not have the status of a court of law, either its decisions must be subject to judicial review or it must follow the criteria laid down in detail in Article XX:6(a)-(g). These minimum standards are mainly designed to ensure the openness, fairness and equity of the proceedings.*¹⁵⁹

*LXII. The World Bank Guidelines allow a bidder or a consultant who wishes to ascertain the grounds on which its bid or proposal was not selected, after notification of award, to address a request for explanation to the Borrower country or agency. If the bidder or consultant is not satisfied with the explanation given, it may seek debriefing with the World Bank.*¹⁶⁰

*LXIII. Under the GPA, a review body must have the authority to order the correction of a breach of the Agreement or compensation for the loss or damages suffered by a supplier, but this may be limited to costs for tender preparation or protest. Pending the outcome of the challenge, the review body must be able to order rapid interim measures, including the suspension of the procurement process, to correct breaches of the GPA and to preserve commercial opportunities.*¹⁶¹ *However, procedures may provide that overriding adverse consequences for the interests concerned, including the public interest, may be taken into account in deciding whether such measures should be applied. The provisions of the Model Law also provide for suspension of procurement proceedings which take account of the need of the procuring entity to conclude a contract in an*

*economic and efficient way without undue disruption and delay in the procurement process.*¹⁶²

IX. OTHER MATTERS RELATED TO TRANSPARENCY

(a) Maintenance of record of proceedings

*LXIV. The Model Law establishes an explicit requirement for the maintenance of a record of the key decisions and actions taken by the procuring entity during the course of the procurement proceedings. As is explained in the Guide to the Enactment of the Model Law, maintenance of a record is one of the principal mechanisms for ensuring adherence to the rules and also facilitates the exercise of the right of aggrieved suppliers to seek review.*¹⁶³

*LXV. Under the Model Law, the record of proceedings should contain, at a minimum, the following key information regarding the procurement, the procuring entity and suppliers and evaluation of tenders*¹⁶⁴:

- a brief description of the goods, construction or services to be procured, or of the procurement need for which the procuring entity requested proposals or offers;*
- the names and addresses of suppliers that submitted tenders, proposals, offers or quotations, and the name and address of the supplier or contractor with whom the procurement contract is entered into and the contract price;*
- information relative to the qualifications, or lack thereof, of suppliers that submitted tenders, proposals, offers or quotations;*
- the price, or the basis for determining the price, and a summary of the other principal terms and conditions of each tender, proposal, offer or quotation and of the procurement contract, where these are known to the procuring entity;*
- a summary of the evaluation and comparison of tenders, proposals, offers or quotations, including the application of any margin of preference;*
- any information on rejection of tenders, proposals, offers or quotations under the relevant provisions of the Model Law including a statement to that effect and the grounds therefor;*

¹⁶²Model Law Article 56

¹⁶³UNCITRAL Model Law on Procurement of Goods, Construction and Services with Guide to Enactment, pages 61 and 71

¹⁶⁴Model Law Article 11(a)-(m)

- a statement of the grounds and circumstances on which the procuring entity relied to justify the selection of the method of procurement used;
- in procurement proceedings in which the procuring entity, limits participation on the basis of nationality, a statement of the grounds and circumstances relied upon by the procuring entity for imposing the limitation;
- a summary of any requests for clarification of the prequalification or solicitation documents, the responses thereto, as well as a summary of any modification of those documents.

LXVI. The GPA stipulates that information on the opening of tenders shall remain with the entity concerned at the disposal of the government authorities responsible for the entity in order that it may be used if required under the procedures relating to the provision of information by entities (GPA Article XVIII), between governments (GPA Article XIX) and under the procedures for bid challenge (GPA Article XX) and dispute settlement (GPA Article XXII).¹⁶⁵

LXVII. Moreover, given the more restrictive nature of limited tendering procedures under the GPA, entities using this method in a given procurement are required to prepare a report in writing on each contract awarded using the limited tendering method, rather than open and selective tendering. Each report shall contain the name of the procuring entity, value and kind of goods or services procured, country of origin, and a statement of the conditions for using limited tendering as stated in Article XV:1 which prevailed. This report shall remain with the entities concerned at the disposal of the government authorities responsible for the entity in order that it may be used if required under the procedures for information and review as regards obligation of entities and Parties (Articles XVIII and XIX) and on bid challenge and dispute settlement (Articles XX and XXII).

(b) Information technology

LXVIII. Information technology can play, and in some countries is already playing, a major role in enhancing transparency. With a view to ensuring that the provisions of the GPA do not constitute an unnecessary barrier to technical progress, Article XXIV:8 of the GPA foresees consultations, and if necessary, negotiations of modifications to the Agreement in view of developments in the use of information technology in government procurement. The consultations in the Committee shall, in particular, aim to ensure that the use of information technology promotes the aims of open, non-discriminatory and efficient government procurement through transparent procedures, that contracts covered under the Agreement are clearly identified and that all available information relating to a particular contract can be identified. The relevant provision of the GPA further states that when a Party intends to innovate, it shall endeavour to take into account the views expressed by other Parties regarding any potential problems. In the context of the three-year review of the Agreement under Article XXIV:7(b), the Committee on Government

¹⁶⁵GPA Article XIII:3

*Procurement has initiated work on possible amendments to the relevant provisions of the GPA to reflect the recent developments in information technology.*¹⁶⁶

(c) Language

*LXIX. Under the Model Law, there is a general requirement that documents relating to tendering proceedings shall be formulated in the official language or languages of the enacting state and, except in certain specified cases, in a language customarily used in international trade. An additional rule in the Model allows the formulation and submission of tenders in any language in which the tender documents have been issued or in any other language that the procuring entity specifies in the tender documents.*¹⁶⁷ *The GPA requires the submission of a summary of the invitation to tender in one of the WTO official languages.*¹⁶⁸ *The World Bank Guidelines require that the qualification documents be prepared in either English, French or Spanish but allow entering into contracts with local bidders in the national language of the Borrower.*¹⁶⁹

X. INFORMATION TO BE PROVIDED TO OTHER GOVERNMENTS

LXX. The GPA is the only international instrument on government procurement that confers on governments that are Parties to it contractual rights and obligations. Therefore, the procedures described in this section concern the exchange of information between governments Parties to the GPA as required under the relevant provisions of the GPA.

(a) Information on national legislation

*LXXI. The GPA Parties are required to be prepared to explain their government procurement procedures in response to a request by any other GPA Party.*¹⁷⁰ *More particularly, the provisions on special treatment for developing countries require developed country Parties to establish, individually or jointly, information centres to respond to reasonable requests from developing country Parties for information relating to, among others, laws, regulations, procedures and practices regarding government procurement, notices about intended procurement which have been published, addresses of the entities covered by the Agreement, and the nature and volume of products or services procured or to be procured, including available information about future tenders. The Committee on Government Procurement established under the Agreement may also set up an information centre to respond to enquiries by developing countries.*¹⁷¹

¹⁶⁶GPA/8

¹⁶⁷Model Law Articles 17 and 29

¹⁶⁸GPA Article IX:8

¹⁶⁹World Bank Guidelines on goods and works, paragraph 2.15 and on consultants• services, paragraph 1.21 and 1.22

¹⁷⁰GPA Article XIX:1

¹⁷¹GPA Article V:11

LXXII. *The GPA has a general provision in Article XIX:4, requiring that confidential information provided to any government Party to the GPA shall not be revealed without formal authorization from the Party providing the information. The definition of confidential information is identical to that in Article X of GATT 1994 with the addition of a reference to information which would prejudice fair competition between suppliers.*¹⁷²

(b) Notification of national legislation

LXXIII. *Under the GPA each Party has an obligation to inform the Committee on Government Procurement of any changes in the national legislation and its administration.*¹⁷³ *The Committee has adopted a Decision on procedures for the notification of national implementing legislation by the GPA Parties, including responses to a checklist of issues.*¹⁷⁴

(c) Information on contract awards

LXXIV. *Further to the obligations of entities under Article XVIII:2(c) of the GPA relating to the provision of information to an unsuccessful tenderer, the GPA allows the government of an unsuccessful tenderer which is a Party to the GPA to seek such additional information on the contract award as may be necessary to ensure that the procurement was made fairly and impartially. To this end, the procuring government is required to provide information on both the characteristics and relative advantages of the winning tender and the contract price. The government may disclose the information thus obtained provided it exercises this right with discretion. In cases where release of such information would prejudice competition in future tenders, this information shall not be disclosed except after consultation with and agreement of the Party which gave the information to the government of the unsuccessful tenderer.*¹⁷⁵ *The GPA also imposes a general requirement on Parties to provide, upon request, to any other Party, information concerning procurement by covered entities and their individual contract awards.*¹⁷⁶

(d) Statistical information

LXXV. *As a means of monitoring procurement covered by the GPA, Article XIX:5 of the GPA requires each Party to collect and provide to the Committee on an annual basis statistics on its procurements covered by the GPA. The type of information that such reports shall contain is stipulated in detail in Article XIX:5, paragraphs (a) to (d).*

PART B

TRANSPARENCY PROVISIONS IN WTO AGREEMENTS

I. INTRODUCTION

LXXVI. WTO Agreements contain extensive transparency provisions aimed at ensuring the adequate provision of information on national trade measures both to economic operators and to other WTO Members. These provisions would appear to be motivated by three main underlying concerns:

- first, that traders and other affected economic operators should, as a basic principle, only be subject to measures which have been previously published or, at least, made otherwise publicly available;*
- second, the need for adequate information on trading opportunities provided under the WTO to be available in order that economic operators can take advantage of them; and*
- third, the need for information on national measures to be available to WTO bodies and other Members as a basis for monitoring the operation of WTO Agreements and, in particular, compliance with them.*

LXXVII. This Part focuses on provisions in WTO agreements, in particular those in Annex I of the WTO, relating to the availability of information on national trade measures to traders and other economic operators. It thus deals with such matters as the publication or public availability of laws, regulations, judicial decisions and administrative rulings, advanced notice of proposed regulations, the provision of information in response to requests and the treatment of confidential information. Another important dimension of transparency is the notification of information by Member governments to other Members through the WTO. Rather than duplicating the considerable work that has been done on compiling information on these notification requirements, notably by the Working Group on Notification Obligations and Procedures, the attention of delegations is drawn to documents G|NOP|W|2|Rev.1 and G|L|112|Add.1 which list existing notification obligations under agreements in Annex 1A of the WTO Agreement.

II. PUBLICATION

(a) Publication

LXXVIII. Article X of GATT 1994 is at the origin of the provisions in other WTO Agreements which set forth specific obligations requiring Members to publish laws, regulations, judicial decisions and administrative rulings of general application effective in Members and which relate to the operation of the respective Agreements. Article X:1 of GATT 1994 reads:

•Article X

1. *Laws, regulations, judicial decisions and administrative rulings of general application, made effective by any contracting party pertaining to the classification or the valuation of products for customs purposes, or to rates of duty, taxes or other charges, or to requirements, restrictions or prohibitions on imports or exports or on the transfer of payments therefor, or affecting their sale, distribution, transportation, insurance, warehousing inspection, exhibition, processing, mixing or other use, shall be published promptly in such a manner as to enable governments and traders to become acquainted with them. Agreements affecting international trade policy which are in force between the government or a governmental agency of any contracting party and the government or governmental agency of any other contracting party shall also be published.*•

LXXIX. Transparency is part of the general obligations and disciplines in the General Agreement on Trade in Services. The requirement to publish, or make otherwise publicly available, is set out in the following terms:

•Article III

Transparency

1. *Each Member shall publish promptly and, except in emergency situations, at the latest by the time of their entry into force, all relevant measures of general application which pertain to or affect the operation of this Agreement. International agreements pertaining to or affecting trade in services to which a Member is a signatory shall also be published.*
2. *Where publication as referred to in paragraph 1 is not practicable, such information shall be made otherwise publicly available.*•

LXXX. The Agreement on Trade-Related Aspects of Intellectual Property Rights establishes the requirement to publish, or make publicly available, the relevant legislation as part of the procedures on dispute prevention or settlement.

•Article 63

Transparency

1. *Laws and regulations, and final judicial decisions and administrative rulings of general application, made effective by a Member pertaining to the subject matter of this Agreement (the availability, scope, acquisition, enforcement and prevention of the abuse of intellectual property rights) shall be published, or where such publication is not practicable made publicly available, in a national language, in such a manner as to enable governments and right holders to become acquainted with them.*

Agreements concerning the subject matter of this Agreement which are in force between the government or a governmental agency of a Member and the government or a governmental agency of another Member shall also be published.•

LXXXI. It may be noted that in the WTO Agreements cited above, the obligation to publish extends to international agreements in force between Members affecting the subject matter of the respective Agreements.

LXXXII. The Agreement on Implementation of Article VII of GATT 1994 stipulates publication of domestic legislation by reference to Article X:1 of GATT 1994. The relevant provision reads:

•Article 12

Laws, regulations, judicial decisions and administrative rulings of general application giving effect to this Agreement shall be published in conformity with Article X of GATT 1994 by the country of importation concerned.•

LXXXIII. The requirement on publication in the Agreement on Preshipment Inspection is set forth as part of the general transparency obligations imposed on user Members. These provisions read:

•Article 2

Obligations of User Members

Transparency

8. User Members shall publish promptly all applicable laws and regulations relating to preshipment inspection activities in such a manner as to enable other governments and traders to become acquainted with them.•

LXXXIV. The disciplines governing the application of rules of origin during the transition period under the Agreement on Rules of Origin require Members to comply with the requirements on publication set forth in Article X:1 of GATT 1994. The relevant provisions read:

•Article 2

Disciplines During the Transition Period

Until the work programme for the harmonization of rules of origin set out in Part IV is completed, Members shall ensure that:

(g)their laws, regulations, judicial decisions and administrative rulings of general application relating to rules of origin are published as if they were subject to, and in accordance

with, the provisions of paragraph 1 of Article X of GATT 1994.

LXXXV. Under the Agreement on Import Licensing Procedures the obligation imposed on Members to publish concerns, in particular, the specific procedures governing the application of licensing requirements and the lists of products subject to licensing requirement. The relevant provision reads:

•Article 1

General Provisions

- 4. (a) The rules and all information concerning procedures for the submission of applications, including the eligibility of persons, firms and institutions to make such applications, the administrative body(ies) to be approached, and the lists of products subject to the licensing requirement shall be published, in the sources notified to the Committee on Import Licensing provided for in Article 4 (referred to in this Agreement as •the Committee•), in such a manner as to enable governments and traders to become acquainted with them.*

LXXXVI. The relevant obligations of central government bodies in the Agreement on Technical Barriers to Trade with respect to publication or public availability of all regulations and procedures read:

•Article 2

Preparation, Adoption and Application of Technical Regulations by Central Government Bodies

- 2.11 Members shall ensure that all technical regulations which have been adopted are published promptly or otherwise made available in such a manner as to enable interested parties in other Members to become acquainted with them.*

•Article 5

Procedures for Assessment of Conformity by Central Government Bodies

- 5.8 Members shall ensure that all conformity assessment procedures which have been adopted are published promptly or otherwise made available in such a manner as to enable interested parties in other Members to become acquainted with them.*

Moreover, the Code of Good Practice for the Preparation, Adoption and Application of Standards under the Agreement on Technical Barriers to Trade contains the following provision requiring standardizing bodies to publish the standards adopted by them:

- O. *Once the standard has been adopted, it shall be promptly published.*•

LXXXVII. Annex B of the Agreement on the Application of Sanitary and Phytosanitary Measures stipulates the publication of regulations (sanitary and phytosanitary measures such as laws, decrees or ordinances which are applicable generally) in the following terms:

•Publication of regulations

1. *Members shall ensure that all sanitary and phytosanitary regulations which have been adopted are published promptly in such a manner as to enable interested Members to become acquainted with them.*•

LXXXVIII. The Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994 requires Members to give public notice of the initiation of an investigation, of any preliminary or final determination, of any decision to accept an undertaking pursuant to Article 8, of the termination of such an undertaking, and of the termination of a definitive anti-dumping duty. The details of information that such notices should contain, or otherwise make available through a separate report, are also set forth in the relevant provisions. The requirements on public notice also apply to the initiation and completion of reviews of anti-dumping duties and price undertakings and to decisions to apply duties retroactively.¹⁷⁷

LXXXIX. The Agreement on Subsidies and Countervailing Measures requires Members to give public notice of the initiation of an investigation of an alleged subsidy, of any preliminary or final determination, of any decision to accept an undertaking pursuant to Article 18, of the termination of such an undertaking, and of the termination of a definitive countervailing duty. The details of information that such notices should set forth, or otherwise make available through a separate report, are enumerated under the relevant provisions. The requirements on public notice also apply to the initiation and completion of reviews of countervailing duties and to decisions to apply countervailing duties retroactively.¹⁷⁸

(b) Timing of publication

XC. Article X:2 of GATT 1994 requires that national legislation shall be published promptly. The General Agreement on Trade in Services requires that measures be published promptly and, except in emergency situations, at the latest by the time of their entry into force.

XCI. The Agreement on Import Licensing sets forth an obligation to publish licensing requirements and any amendments in advance of their entry into force and sets out specific time-limits. The relevant provision reads:

¹⁷⁷Article 12

¹⁷⁸Article 22

•Article 4(a)

... Such publication shall take place, whenever practicable, 21 days prior to the effective date of the requirement but in all events not later than such effective date. Any exception, derogations or changes in or from the rules concerning licensing procedures or the list of products subject to import licensing shall also be published in the same manner and within the same time periods as specified above. •

XCII. The provisions on transparency in the Agreement on Preshipment Inspection also emphasize the importance of informing exporters of any additional procedural requirements or changes in existing procedures. They require that such modifications shall not be applied to a shipment unless the exporter is informed of these changes at the time the inspection date is arranged. An exception clause applies in emergency situations of the type addressed by Articles XX and XXI of GATT 1994 allowing the application of such additional requirements or changes to a shipment before the exporter has been informed.¹⁷⁹

XCIII. Under the Agreement on Technical Barriers to Trade¹⁸⁰ and the Agreement on the Application of Sanitary and Phytosanitary Measures¹⁸¹, Members are required to allow a reasonable time between the publication of a measure and its entry into force to allow for producers in exporting Members, and particularly in developing country Members, to adapt their products or methods of production to the requirements of the importing Member. However, exceptions are allowed for urgent circumstances referred to in the respective Agreements.

III. PUBLIC NOTICE OF PROPOSED REGULATIONS

XCIV. As an integral part of the procedures for the notification of proposed regulations and procedures, the Agreement on Technical Barriers to Trade¹⁸² and the Agreement on Sanitary and Phytosanitary Measures¹⁸³ require Members to give advance public notice of proposed regulations or procedures. Under these provisions, Members are required to publish a notice in a publication at an early appropriate stage in such a manner as to enable interested parties in other Members to become acquainted with the proposal to introduce a particular regulation. However, in case of urgent problems of safety, health, environmental protection or national security, Members are allowed to proceed with the adoption of regulations and procedures without giving advance public notice.

¹⁷⁹ Article 2:6

¹⁸⁰ Article 2.12 and Article 5.9

¹⁸¹ Annex B, paragraph 2

¹⁸² Articles 2.9.1 and 5.6.1

¹⁸³ Annex B, paragraph 5(a)

IV. PROVISION OF INFORMATION IN RESPONSE TO REQUESTS FROM OTHER MEMBERS

XCV. Certain WTO agreements contain obligations on Members to provide information bilaterally to another Member in response to a specific request.

XCVI. Under the General Agreement on Trade in Services, the relevant provision included in Article III on transparency reads:

- 4. Each Member shall respond promptly to all requests by any other Member for specific information on any of its measures of general application or international agreements within the meaning of paragraph 1.•*

XCVII. The obligation on the establishment of enquiry point(s) under the transparency provisions in Article III of the General Agreement on Trade in Services reads:

- 4. ... Each Member shall also establish one or more enquiry points to provide specific information to other Members, upon request, on all such matters as well as those subject to the notification requirement in paragraph 3. Such enquiry points shall be established within two years from the date of entry into force of the Agreement Establishing the WTO (referred to in this Agreement as the •WTO Agreement•). Appropriate flexibility with respect to the time-limit within which such enquiry points are to be established may be agreed upon for individual developing country Members. Enquiry points need not be depositories of laws and regulations.•*

XCVIII. Under the Agreement on Trade-Related Aspects of Intellectual Property Rights, Members shall respond to requests for information from another Member concerning domestic legislation as well as on any specific judicial decisions or administrative rulings or bilateral agreements in the area of intellectual property. The relevant provision under the Article on transparency reads:

•Article 63

Transparency

- 3. Each Member shall be prepared to supply, in response to a written request from another Member, information of the sort referred to in paragraph 1. A Member, having reason to believe that a specific judicial decision or administrative ruling or bilateral agreement in the area of intellectual property rights affects its rights under this Agreement, may also request in writing to be given access to or be informed in sufficient detail of such specific judicial decisions or administrative rulings or bilateral agreements.•*

XCIX. The obligation in the Agreement on Trade-Related Investment Measures to respond to requests for information is stated in the following terms:

•Article 6

Transparency

3. *Each Member shall accord sympathetic consideration to requests for information, and afford adequate opportunity for consultation, on any matter arising from this Agreement raised by another Member.*

C. *Under the Agreement on Technical Barriers to Trade, Members must set up a national enquiry point to provide information on any trade-related technical regulations, standards, conformity assessment procedures within the Member's territory whether proposed or adopted, as well as on the Member's participation in bilateral or plurilateral standards-related agreements, regional standardizing bodies and conformity assessment systems. The establishment of enquiry points to provide information on the standardization activities of non-governmental organizations is subject to a best-endeavours obligation.*^{184,185,186}

CI. *Annex B of the Agreement on the Application of Sanitary and Phytosanitary Measures setting forth transparency requirements gives details on the type of information which may be obtained by interested Members from enquiry points established under that Agreement.*^{187,188}

¹⁸⁴Article 10.1, 10.2 and 10.3

¹⁸⁵Document G/TBT/ENQ/-, which is regularly updated, contains the list of names and addresses of enquiry points and any additional information provided by Members concerning their operation.

¹⁸⁶Subsequent to the Decisions adopted by Ministers on 15 April 1994 relating to the Agreement on Technical Barriers to Trade, a WTO Standards Information Service operated by ISO was established to provide information on the activities of the standardizing bodies which have subscribed to the Code of Good Practice for the Preparation, Adoption and Application of Standards in Annex 3 to the Agreement (G/L/1).

¹⁸⁷Annex B, paragraph 3

¹⁸⁸Document G/SPS/ENQ/-, which is regularly updated, contains the list of names and addresses of enquiry points and any additional information provided by Members concerning their operation.

V. PROVISION OF INFORMATION IN RESPONSE TO REQUESTS FROM
ECONOMIC OPERATORS

CII. *The Agreement on the Implementation of Article VII of the GATT 1994 provides as follows:*

•Article 16

Upon written request, the importer shall have the right to an explanation in writing from the customs administration of the country of importation as to how the customs value of the importer's goods was determined.

CIII. *The Agreement on Preshipment Inspection includes specific provisions which require the entities in user Members to provide information in response to requests by exporters. In this respect the Agreement reads:*

•Article 2

Obligations of User Members

Transparency

6. *User Members shall ensure that, when initially contacted by exporters, preshipment inspection entities provide to the exporters a list of all the information which is necessary for the exporters to comply with inspection requirements. The preshipment inspection entities shall provide the actual information when so requested by exporters. This information shall include a reference to the laws and regulations of user Members relating to preshipment inspection activities, and shall also include the procedures and criteria used for inspection and for price and currency exchange-rate verification purposes, the exporters' rights vis-à-vis the inspection entities, and the appeals procedures set up under paragraph 21.*

CIV. The provisions on transparency to be provided by user Members in the Agreement on Preshipment Inspection requires the preshipment inspection offices maintained by preshipment inspection entities to serve as information points:

•Article 2

Obligations of User Members

Transparency

- 7. User Members shall ensure that the information referred to in paragraph 6 is made available to exporters in a convenient manner, and that the preshipment inspection offices maintained by preshipment inspection entities serve as information points where this information is available. •*

CV. Enquiry points established under Article 10 of the Agreement on Technical Barriers to Trade is to answer all reasonable enquiries not only from other Members but also interested parties in other Members.

CVI. The provisions on increasing participation of developing countries in Article IV of the General Agreement on Trade in Services also require developed country Members to establish contact points to facilitate the access of developing Members• service suppliers to information. The type of information that such contact points should provide is also set forth. The relevant provision reads:

•Article IV

- 2. Developed country Members, and to the extent possible other Members, shall establish contact points within two years from the date of entry into force of the WTO Agreement to facilitate the access of developing country Members• service suppliers to information, related to their respective markets, concerning:*

(a)commercial and technical aspects of the supply of services;

(b)registration, recognition and obtaining of professional qualifications; and

(c)the availability of services technology. •

VI. TREATMENT OF CONFIDENTIAL INFORMATION

CVII. It should be noted that many WTO Agreements contain provisions allowing confidential information to be withheld, notwithstanding the normal transparency obligation. Confidential information is generally defined as information which would impede law enforcement or otherwise be contrary to the public interest or would prejudice the legitimate commercial interests of particular enterprises, public or private. In this respect, Article X:1 of GATT 1994 reads:

•... *The provisions of this paragraph shall not require any contracting party to disclose confidential information which would impede law enforcement or otherwise be contrary to the public interest or would prejudice the legitimate commercial interests of particular enterprises, public or private.*•

CVIII. *Furthermore, the Article of GATT 1994 on security exceptions in Article XXI has provisions on the treatment of confidential information which read:*

•*Article XXI*

Security Exceptions

Nothing in this Agreement shall be construed

(a) to require any contracting party to furnish any information the disclosure of which it considers contrary to its essential security interests.•

CIX. *Article IIIbis of the General Agreement on Trade in Services reads:*

•*Article III bis*

Disclosure of Confidential Information

Nothing in this Agreement shall require any Member to provide confidential information, the disclosure of which would impede law enforcement, or otherwise be contrary to the public interest, or which would prejudice legitimate commercial interests of particular enterprises, public or private.•

CX. *The language in the Agreement on Trade-Related Intellectual Property Rights, paragraph 4 of Article 63, allowing confidential information to be withheld is similar to that in Article X:1 of GATT 1994.*

CXI. *Article 6 of the Agreement on Trade-Related Investment Measures on transparency also makes a direct reference to the relevant provision in Article X:1 of GATT 1994 and allows Members not to disclose confidential information.*

CXII. *The Agreement on Technical Barriers to Trade allows the withholding of information related to essential security interests. The relevant provision reads:*

•*10.8 Nothing in this Agreement shall be construed as requiring:*

10.8.3 Members to furnish any information, the disclosure of which they consider contrary to their essential security interests.•

CXIII. The provisions on the protection of confidential information are part of the General Reservations under the Agreement on the Application of Sanitary and Phytosanitary Measures. They read:

General Reservations

11. Nothing in this Agreement shall be construed as requiring:

(b) Members to disclose confidential information which would impede enforcement of sanitary or phytosanitary legislation or which would prejudice the legitimate commercial interests of particular enterprises.

CXIV. It might be noted that, while the above provisions of WTO Agreements allow Members to exempt confidential information from transparency obligations, certain other provisions of WTO Agreements mandate the protection of such information. These include Article 10 of the Agreement on Implementation of Article VII of the GATT 1994, Article 12 of the Agreement on Preshipment Inspection and Article 39 of the Agreement on Trade-Related Aspects of Intellectual Property Rights.

GOVERNMENT PROCUREMENT – TRANSPARENCY: SYMPOSIUM – GENEVA
9-10 OCTOBER 2002

Symposium on transparency in government procurement

The WTO symposium on transparency in government procurement was organized pursuant to the commitment in [paragraph 26 of the Doha Ministerial Declaration](#) to ensure adequate technical assistance and support for capacity building to developing countries.

Programme and background materials [back to top](#)

Day 1, Wednesday 9 October 2002, morning

9.30 a.m. **Opening remarks**

SESSION 1: Overview of international and regional activities regarding transparency in government procurement

9.45 - 10.00 **Guidelines and activities of the World Bank**

Bernard Abeillé (Africa Region, World Bank)
[Presentation](#) (14 pages; 211 KB)

10.00 - 10.45 **Regional activities and arrangements**

- **Latin America**
Fernando Ocampo (FTAA/NGGP Chairman)
[Presentation in Spanish](#) (22 pages; 152 KB)

- **Africa**
John Mensah-Quainoo (Head of Procurement, African Development Bank)

10.45 - 11.00 **General discussion**

SESSION 2: Economic and developmental implications of government procurement

11.00 - 11.20 **Quantifying the size of government procurement**

Denis Audet (Trade Directorate, OECD)
[Outline](#) (1 page; 91 KB)
[Presentation](#) (11 pages; 420 KB)

11.20 - 11.40 **Developmental significance of government procurement**

Bernard Hoekman (International Trade Division,

World Bank)

[Presentation](#) (6 pages; 60 KB)

[Paper](#) – Evenett and Hoekman (30 pages; 226 KB)

11.40 - 12.00 **General discussion**

SESSION 3: Experience with issues relating to scope and coverage of government procurement

12.00 - 12.20 **National experience with the coverage of the Agreement on Government Procurement**

Marie-Gabrielle Ineichen (WTO Office, SECOFI)

[Presentation](#) (8 pages; 60 KB)

12.20 - 12.40 **Coverage in the Guidelines of the World Bank and the UNCITRAL Model Law**

Jean-Jacques Raoul (Procurement Policy and Services Group, World Bank)

[Presentation](#) (9 pages; 50 KB)

12.40 - 13.00 **General discussion**

Day 1, Wednesday 9 October 2002, afternoon

SESSION 4: Transparency and government procurement procedures

15.00 - 15.30 **Provisions in the Agreement on Government Procurement**

Susan Sheehan (Department of Foreign Affairs and International Trade, Canada)

15.30 - 16.00 **Provisions in the UNCITRAL Model Law and the World Bank Guidelines**

Jean-Jacques Raoul (Procurement Policy and Services Group, World Bank)

[Presentation](#) (6 pages; 51 KB)

16.00 - 16.30 **Regional activities and arrangements in Latin America**

Fernando Ocampo (FTAA /NGGP Chairman)

[Presentation](#) in Spanish (17 pages; 122 KB)

16.30 - 17.00 **General discussion**

SESSION 5: Application of information technology

17.00 - 17.20 **The results of transparency and efficiency achieved with the modernization of federal procurement in Brazil**

Marcos Ozorio de Almeida (Secretariat of Logistics and Information Technology, Ministry of Planning, Brazil)

[Outline](#) (2 pages; 107 KB)

[Presentation](#) 85 pages; 3760 KB)

17.20 - 17.40 **Use of GeBIZ system in government procurement**

Chua Jek Heng (Government Chief Information Office, Infocomm Development Authority,

Singapore)

17.40 - 18.00 **General discussion**

Day 2, Thursday 10 October 2002, morning

SESSION 6: Domestic review procedures and dispute settlement in government procurement

10.00 - 10.20 **Transparency rules and WTO dispute settlement procedures**

Frieder Roessler (Advisory Centre on WTO Law)

10.20 - 10.40 **Experience with appeal and review procedures**

Marian Lemke (Poland)

10.40 - 11.10 **Domestic bid challenge mechanisms**

Steven Schooner (George Washington University)

11.10 - 11.30 **General discussion**

SESSION 7: Technical cooperation and capacity building

11.30 - 11.50 **Role of the World Bank and Regional Development Banks**

Bernard Abeillé (Africa Region, World Bank)
[Presentation](#) (19 pages; 556 KB)

John Mensah-Quainoo (Head of Procurement,
African Development Bank)

11.50 - 12.30 **Capacity building in procurement**

William Kovacic (U.S. Federal Trade Commission)

12.30 - 12.50 **General discussion**

12.50 p.m. **Closing remarks**

contact us : World Trade Organization, rue de Lausanne 154, CH-1211 Geneva 21, Switzerland

The Doha Declaration explained

The November 2001 declaration of the Fourth Ministerial Conference in Doha, Qatar, provides the mandate for negotiations on a range of subjects, and other work including issues concerning the implementation of the present agreements.

The negotiations take place in the [Trade Negotiations Committee and its subsidiaries](#). Other work under the work programme takes place in other WTO councils and committees.

This is an unofficial explanation of what the declaration mandates.

Issues

- > [implementation](#)
 - > [agriculture](#)
 - > [services](#)
- > [market access \(non-agriculture\)](#)
- > [intellectual property](#)
 - > [investment](#)
 - > [competition](#)
- > [transparency in government procurement](#)
 - > [trade facilitation](#)
 - > [anti-dumping](#)
 - > [subsidies](#)
- > [regional agreements](#)
 - > [dispute settlement](#)
 - > [environment](#)
 - > [e-commerce](#)
 - > [small economies](#)
- > [trade, debt and finance](#)
- > [trade and technology transfer](#)
 - > [technical cooperation](#)
- > [least-developed countries](#)
 - > [special and differential treatment](#)

The work programme

The 21 subjects listed in the Doha Declaration (and the paragraphs that refer to them). Most of these involve negotiations; other work includes actions under "implementation", analysis and monitoring:

Implementation-related issues and concerns

(par 12) > [back to top](#)

"Implementation" is short-hand for problems raised particularly by developing countries about the implementation of the current WTO Agreements, i.e. the agreements arising from the Uruguay Round negotiations.

In Doha this important question was handled in two ways. First, ministers agreed to adopt around 50 decisions clarifying the obligations of developing country member governments with respect to issues including agriculture, subsidies, textiles and clothing, technical barriers to trade, trade-related investment measures and rules of origin.

Agreement on these points required hard bargaining between negotiators over the course

THE DOHA TEXTS

- > [Implementation decision](#)

of nearly three years.

Many other implementation issues of concern to developing countries have not been settled, however. For these issues, Ministers agreed in Doha on a future work programme for addressing these matters.

In paragraph 12 of the Ministerial Declaration, ministers underscored that they had taken a decision on the 50 or so measures in a separate ministerial document ([the 14 November 2001 decision on "Implementation-Related Issues and Concerns"](#)) and pointed out that "negotiations on outstanding implementation issues shall be an integral part of the Work Programme" in the coming years.

The ministers established a two-track approach. Those issues for which there was an agreed negotiating mandate in the declaration would be dealt with under the terms of that mandate.

Those implementation issues where there is no mandate to negotiate, would be taken up as "a matter of priority" by relevant WTO councils and committees. These bodies are to report on their progress to the Trade Negotiations Committee by the end of 2002 for "appropriate action".

> [Implementation decision explained](#)

Agriculture

([par 13, 14](#)) > [back to top](#)

Negotiations on agriculture began in early 2000, under Article 20 of the WTO Agriculture Agreement. By November 2001 and the Doha Ministerial Conference, 121 governments had submitted a large number of negotiating proposals.

These negotiations will continue, but now with the mandate given by the Doha Declaration, which also includes a series of deadlines. The declaration builds on the work already undertaken, confirms and elaborates the objectives, and sets a timetable. Agriculture is now part of the single undertaking in which virtually all the linked negotiations are to end by 1 January 2005.

The declaration reconfirms the long-term objective already agreed in the present WTO Agreement: to establish a fair and market-oriented trading system through a programme of

Key dates: agriculture

Start: early 2000

"Framework" agreed: **1 August 2004**.

Formulas and other "modalities" for countries' commitments: originally 31 March 2003, now by **6th Ministerial Conference 2005** (in Hong Kong, China)

Countries' comprehensive draft commitments and stock taking originally by **5th Ministerial Conference, 2003** (in Mexico)

Deadline: originally by 1 January 2005, now unofficially by **end of 2006**, part of single undertaking

fundamental reform. The programme encompasses strengthened rules, and specific commitments on government support and protection for agriculture. The purpose is to correct and prevent restrictions and distortions in world agricultural markets.

Without prejudging the outcome, member governments commit themselves to comprehensive negotiations aimed at:

- market access: substantial reductions
- exports subsidies: reductions of, with a view to phasing out, all forms of these
- domestic support: substantial reductions for supports that distort trade

The declaration makes special and differential treatment for developing countries integral throughout the negotiations, both in countries' new commitments and in any relevant new or revised rules and disciplines. It says the outcome should be effective in practice and should enable developing countries meet their needs, in particular in food security and rural development.

The ministers also take note of the non-trade concerns (such as environmental protection, food security, rural development, etc) reflected in the negotiating proposals already submitted. They confirm that the negotiations will take these into account, as provided for in the Agriculture Agreement.

- > [current negotiations](#)
- > [more on agriculture](#)

Services

([par 15](#)) > [back to top](#)

Negotiations on services were already almost two years old when they were incorporated into the new Doha agenda.

The WTO General Agreement on Trade in Services (GATS) commits member governments to undertake negotiations on specific issues and to enter into successive rounds of negotiations to progressively liberalize trade in services. The first round had to start no later than five years from 1995.

Accordingly, the services negotiations started officially in early 2000 under the Council for Trade in Services. In March 2001, the Services Council fulfilled a key element in the negotiating

Key dates: services

Start: early 2000

Negotiating guidelines and procedures: March 2001

Initial requests for market access: by 30 June 2002

Initial offers of market access: by 31 March 2003

Stock taking: originally 5th Ministerial Conference, 2003 (in Mexico)

Revised market-access offers: by 31 May 2005

Deadline: originally by 1 January 2005

mandate by establishing the negotiating guidelines and procedures.

2005, now unofficially end of 2006, part of single undertaking

The Doha Declaration endorses the work already done, reaffirms the negotiating guidelines and procedures, and establishes some key elements of the timetable including, most importantly, the deadline for concluding the negotiations as part of a single undertaking.

The negotiations take place in “special sessions” of the Services Council and regular meetings of its relevant subsidiary committees or working parties.

- > [current negotiations](#)
- > [more on services](#)

Market access for non-agricultural products

([par 16](#)) > [back to top](#)

Key dates: market access

Start: January 2002

Stock taking: 5th Ministerial Conference, 2003 (in Mexico)

Deadline: originally by 1 January 2005, now unofficially by end 2006, part of single undertaking

The ministers agreed to launch tariff-cutting negotiations on all non-agricultural products. The aim is “to reduce, or as appropriate eliminate tariffs, including the reduction or elimination of tariff peaks, high tariffs, and tariff escalation, as well as non-tariff barriers, in particular on products of export interest to developing countries”. These negotiations shall take fully into account the special needs and interests of developing and least-developed countries, and recognize that these countries do not need to match or reciprocate in full tariff-reduction commitments by other participants.

At the start, participants have to reach agreement on how (“modalities”) to conduct the tariff-cutting exercise (in the Tokyo Round, the participants used an agreed mathematical formula to cut tariffs across the board; in the Uruguay Round, participants negotiated cuts product by product). The agreed procedures would include studies and capacity-building measures that would help least-developed countries participate effectively in the negotiations. Back in Geneva, negotiators decided that the “modalities” should be agreed by 31 May 2003. When that date was missed, members agreed on 1 August 2004 on a new target: the Hong Kong Ministerial Conference in December 2005.

While average customs duties are now at their lowest levels after eight GATT Rounds, certain tariffs continue to restrict trade, especially on exports of developing countries – for instance

“tariff peaks”, which are relatively high tariffs, usually on “sensitive” products, amidst generally low tariff levels. For industrialized countries, tariffs of 15% and above are generally recognized as “tariff peaks”.

Another example is “tariff escalation”, in which higher import duties are applied on semi-processed products than on raw materials, and higher still on finished products. This practice protects domestic processing industries and discourages the development of processing activity in the countries where raw materials originate.

The negotiations take place in a **Market Access Negotiating Group**.

- > [current negotiations](#)
- > [more on market access](#)
- > [GATT and the Goods Council](#)

Trade-related aspects of intellectual property rights (TRIPS)

([pars 17-19](#)) > [back to top](#)

TRIPS and public health. In the declaration, ministers stress that it is important to implement and interpret the TRIPS Agreement in a way that supports public health – by promoting both access to existing medicines and the creation of new medicines. They refer to their separate declaration on this subject.

This separate declaration on TRIPS and public health is designed to respond to concerns about the possible implications of the TRIPS Agreement for access to medicines.

It emphasizes that the TRIPS Agreement does not and should not prevent member governments from acting to protect public health. It affirms governments’ right to use the agreement’s flexibilities in order to avoid any reticence the governments may feel.

The separate declaration clarifies some of the forms of flexibility available, in particular compulsory licensing and parallel importing. (For an explanation of these issues, go to the main TRIPS pages on the WTO website)

For the Doha agenda, this separate declaration sets two specific task. The **TRIPS Council** has to find a solution to the problems countries may face in making use of compulsory licensing if they have too little or no pharmaceutical

Key dates: intellectual property

Report to the General Council - solution on compulsory licensin and lack of pharmaceutical production capacity: originally by end of 2002, decision agreed 30 April 2003.

Report to TNC – action on outstanding implementation issues under par 12: **by end of 2002** (missed)

Deadline – negotiations on geographical indications registration system (wines and spirits): **by 5th Ministerial Conference, 2003** (in Mexico) (missed)

Deadline – negotiations specifically mandated in Doha Declaration: originally by 1 January 2005, now unofficially **by end 2006**

Least-developed countries to apply pharmaceutical patent provisions: **2016**

manufacturing capacity, reporting to the General Council on this by the end of 2002. (this was achieved in August, 2003, see [intellectual property](#) section of the “Agreements” chapter.) The declaration also extends the deadline for least-developed countries to apply provisions on pharmaceutical patents until 1 January 2016.

Geographical indications – the registration system. Geographical indications are place names (in some countries also words associated with a place) used to identify products with particular characteristics because they come from specific places. The WTO TRIPS Council has already started work on a multilateral registration system for geographical indications for wines and spirits. The Doha Declaration sets a deadline for completing the negotiations: the Fifth Ministerial Conference in 2003.

These negotiations take place in “special sessions” of the TRIPS Council.

Geographical indications – extending the “higher level of protection” to other products. The TRIPS Agreement provides a higher level of protection to geographical indications for wines and spirits. This means they should be protected even if there is no risk of misleading consumers or unfair competition. A number of countries want to negotiate extending this higher level to other products. Others oppose the move, and the debate in the TRIPS Council has included the question of whether the relevant provisions of the TRIPS Agreement provide a mandate for extending coverage beyond wines and spirits.

The Doha Declaration notes that the TRIPS Council will handle this under the declaration’s paragraph 12 (which deals with implementation issues). Paragraph 12 offers two tracks: “(a) where we provide a specific negotiating mandate in this Declaration, the relevant implementation issues shall be addressed under that mandate; (b) the other outstanding implementation issues shall be addressed as a matter of priority by the relevant WTO bodies, which shall report to the Trade Negotiations Committee [TNC], established under paragraph 46 below, by the end of 2002 for appropriate action.”

In papers circulated at the Ministerial Conference, member governments expressed different interpretations of this mandate.

Argentina said it understands “there is no agreement to negotiate the ‘other outstanding implementation issues’ referred to under (b) and that, by the end of 2002, consensus will be required in order to launch any negotiations on

these issues”.

Bulgaria, the Czech Republic, EU, Hungary, India, Liechtenstein, Kenya, Mauritius, Nigeria, Pakistan, the Slovak Republic, Slovenia, Sri Lanka, Switzerland, Thailand and Turkey argued that there is a clear mandate to negotiate immediately.

Reviews of TRIPS provisions. Two reviews have been taking place in the TRIPS Council, as required by the TRIPS Agreement: a review of Article 27.3(b) which deals with patentability or non-patentability of plant and animal inventions, and the protection of plant varieties; and a review of the entire TRIPS Agreement (required by Article 71.1).

The Doha Declaration says that work in the **TRIPS Council** on these reviews or any other implementation issue should also look at: the relationship between the TRIPS Agreement and the UN Convention on Biodiversity; the protection of traditional knowledge and folklore; and other relevant new developments that member governments raise in the review of the TRIPS Agreement. It adds that the TRIPS Council’s work on these topics is to be guided by the TRIPS Agreement’s objectives (Article 7) and principles (Article 8), and must take development fully into account.

> [more on TRIPS](#)

Relationship between trade and investment

([pars 20-22](#)) > [back to top](#)

This is a “[Singapore issue](#)” i.e. a working group set up by the 1996 Singapore Ministerial Conference has been studying it.

In the period up to the 2003 Ministerial Conference, the declaration instructs the **working group** to focus on clarifying the scope and definition of the issues, transparency, non-discrimination, ways of preparing negotiated commitments, development provisions, exceptions and balance-of-payments safeguards, consultation and dispute settlement. The negotiated commitments would be modelled on those made in services, which specify where commitments are being made – “positive lists” – rather than making broad commitments and listing exceptions.

The declaration also spells out a number of

Key dates: trade and investment

Continuing work in working group with defined agenda: to **5th Ministerial Conference, 2003** (in Mexico)

Negotiations: after 5th Ministerial Conference, 2003 (in Mexico) subject to “explicit consensus” on modalities with deadline: by 1 January 2005, part of single undertaking. But no consensus; **dropped from Doha agenda in 1 August 2004 decision**

principles such as the need to balance the interests of countries where foreign investment originates and where it is invested, countries' right to regulate investment, development, public interest and individual countries' specific circumstances. It also emphasizes support and technical cooperation for developing and least-developed countries, and coordination with other international organizations such as the UN Conference on Trade and Development (UNCTAD).

Since the 1 August 2004 decision, this subject has been dropped from the Doha agenda.

- > statement: [chairman's understanding of the mandate ...](#)
- > [more on trade and investment](#)

Interaction between trade and competition policy

(pars 23-25) > [back to top](#)

This is another "Singapore issue", with a working group set up in 1996 to study the subject.

In the period up to the 2003 Ministerial Conference, the declaration instructs the **working group** to focus on clarifying:

- core principles including transparency, non-discrimination and procedural fairness, and provisions on "hardcore" cartels (i.e. cartels that are formally set up)
- ways of handling voluntary cooperation on competition policy among WTO member governments
- support for progressive reinforcement of competition institutions in developing countries through capacity building

The declaration says the work must take full account of developmental needs. It includes technical cooperation and capacity building, on such topics as policy analysis and development, so that developing countries are better placed to evaluate the implications of closer multilateral cooperation for various developmental objectives. Cooperation with other organizations such as the UN Conference on Trade and Development (UNCTAD) is also included.

Since the 1 August 2004 decision, this subject has been dropped from the Doha agenda.

- > statement: [chairman's understanding of the](#)

Key dates: trade and competition policy

Continuing work in working group with defined agenda: to **5th Ministerial Conference, 2003** (in Mexico)

Negotiations: after 5th Ministerial Conference, 2003 (in Mexico) subject to "explicit consensus" on modalities with deadline: by 1 January 2005, part of single undertaking. But no consensus; **dropped from Doha agenda in 1 August 2004 decision**

[mandate ...](#)
> [more on competition policy](#)

Transparency in government procurement

(par 26) > [back to top](#)

A third “Singapore issue” that was handled by a **working group** set up by the Singapore Ministerial Conference in 1996.

The Doha Declaration says that the “negotiations shall be limited to the transparency aspects and therefore will not restrict the scope for countries to give preferences to domestic supplies and suppliers” – it is separate from the plurilateral Government Procurement Agreement.

The declaration also stresses development concerns, technical assistance and capacity building.

Since the 1 August 2004 decision, this subject has been dropped from the Doha agenda.

> statement: [chairman's understanding of the mandate ...](#)
> [more on transparency in government procurement](#)

Key dates: government procurement (transparency)

Continuing work in working group with defined agenda: to 5th Ministerial Conference, 2003 (in Mexico)

Negotiations: after 5th Ministerial Conference, 2003 (in Mexico) subject to “explicit consensus” on modalities with deadline: by 1 January 2005, part of single undertaking. But no consensus; **dropped from Doha agenda in 1 August 2004 Decision.**

Trade facilitation

(par 27) > [back to top](#)

A fourth “Singapore issue” kicked off by the 1996 Ministerial Conference.

The declaration recognizes the case for “further expediting the movement, release and clearance of goods, including goods in transit, and the need for enhanced technical assistance and capacity building in this area”.

In the period until the Fifth Ministerial Conference in 2003, the **WTO Goods Council**, which had been working on this subject since 1997, “shall review and as appropriate, clarify and improve relevant aspects of Articles 5 (‘Freedom of Transit’), 8 (‘Fees and Formalities Connected with Importation and Exportation’) and 10 (‘Publication and Administration of Trade Regulations’) of the General Agreement on Tariffs and Trade (GATT 1994) and identify the trade facilitation needs and priorities of Members, in particular developing and least-developed countries”.

Key dates: trade facilitation

Continuing work in Goods Council with defined agenda: to 5th Ministerial Conference, 2003 (in Mexico)

Negotiations: **after 5th Ministerial Conference, 2003 (in Mexico)** subject to “explicit consensus” on modalities, agreed in 1 August 2004 Decision.

Deadline: originally by 1 January 2005, now **unofficially end of 2006**, part of single undertaking

Those issues were cited in the 1 August 2004 decision that broke the Cancún deadlock. Members agreed to start negotiations on trade facilitation, but not the three other Singapore issues.

> statement: [chairman's understanding of the mandate ...](#)

> [more on trade facilitation](#)

WTO rules: anti-dumping and subsidies (par 28) > [back to top](#)

The ministers agreed to negotiations on the Anti-Dumping (GATT Article 6) and Subsidies agreements. The aim is to clarify and improve disciplines while preserving the basic concepts, principles of these agreements, and taking into account the needs of developing and least-developed participants.

In overlapping negotiating phases, participants first indicated which provisions of these two agreements they think should be the subject of clarification and improvement in the next phase of negotiations. The ministers mention specifically fisheries subsidies as one sector important to developing countries and where participants should aim to clarify and improve WTO disciplines.

Negotiations take place in the Rules Negotiating Group.

> [current negotiations](#)
> [more on anti-dumping](#)
> [more on subsidies](#)

Key dates: anti-dumping subsidies

Start: January 2002

Stock taking: 5th Ministerial Conference, 2003 (in Mexico)

Deadline: originally by 1 January 2005, now unofficially end of 2006, part of single undertaking

WTO rules: regional trade agreements (par 29) > [back to top](#)

WTO rules say regional trade agreements have to meet certain conditions. But interpreting the wording of these rules has proved controversial, and has been a central element in the work of the Regional Trade Agreements Committee. As a result, since 1995 the committee has failed to complete its assessments of whether individual trade agreements conform with WTO provisions.

This is now an important challenge, particularly when nearly all member governments are parties to regional agreements, are negotiating them, or are considering negotiating them. In the Doha

Key dates: regional trade agreements

Start: January 2002

Stock taking: 5th Ministerial Conference, 2003 (in Mexico)

Deadline: originally by 1 January 2005, now unofficially end of 2006, part of single undertaking

Declaration, members agreed to negotiate a solution, giving due regard to the role that these agreements can play in fostering development.

The declaration mandates negotiations aimed at “clarifying and improving disciplines and procedures under the existing WTO provisions applying to regional trade agreements. The negotiations shall take into account the developmental aspects of regional trade agreements.”

These negotiations fell into the general timetable established for virtually all negotiations under the Doha Declaration. The original deadline of 1 January 2005 was missed and the current unofficial aim is to finish the talks by the end of 2006. The 2003 Fifth Ministerial Conference in Mexico was intended to take stock of progress, provide any necessary political guidance, and take decisions as necessary.

Negotiations take place in the **Rules Negotiating Group**.

> [current negotiations](#)
> [more on regional trade agreements](#)

Dispute Settlement Understanding (par 30) > [back to top](#)

The 1994 Marrakesh Ministerial Conference mandated WTO member governments to conduct a review of the Dispute Settlement Understanding (DSU, the WTO agreement on dispute settlement) within four years of the entry into force of the WTO Agreement (i.e. by 1 January 1999).

The Dispute Settlement Body (DSB) started the review in late 1997, and held a series of informal discussions on the basis of proposals and issues that members identified. Many, if not all, members clearly felt that improvements should be made to the understanding. However, the DSB could not reach a consensus on the results of the review.

The Doha Declaration mandates negotiations and states (in par 47) that these will not be part of the single undertaking – i.e. that they will not be tied to the overall success or failure of the other negotiations mandated by the declaration. Originally set to conclude by May 2003, the negotiations are continuing without a deadline.

> [more on Dispute Settlement Understanding](#)

Key dates: disputes understanding

Start: January 2002

Deadline: originally by May 2003, currently no deadline, separate from single undertaking

[negotiations](#)**Trade and environment**[\(pars 31-33\)](#) > [back to top](#)**New negotiations****Multilateral environmental agreements.**

Ministers agreed to launch negotiations on the relationship between existing WTO rules and specific trade obligations set out in multilateral environmental agreements. The negotiations will address how WTO rules are to apply to WTO members that are parties to environmental agreements, in particular to clarify the relationship between trade measures taken under the environmental agreements and WTO rules.

So far no measure affecting trade taken under an environmental agreement has been challenged in the GATT-WTO system.

Information exchange. Ministers agreed to negotiate procedures for regular information exchange between secretariats of multilateral environmental agreements and the WTO. Currently, the Trade and Environment Committee holds an information session with different secretariats of the multilateral environmental agreements once or twice a year to discuss the trade-related provisions in these environmental agreements and also their dispute settlement mechanisms. The new information exchange procedures may expand the scope of existing cooperation.

Observer status. Overall, the situation concerning the granting of observer status in the WTO to other international governmental organizations is currently blocked for political reasons. The negotiations aim to develop criteria for observership in WTO.

Trade barriers on environmental goods and services. Ministers also agreed to negotiations on the reduction or elimination of tariff and non-tariff barriers to environmental goods and services. Examples of environmental goods and services are catalytic converters, air filters or consultancy services on wastewater management.

Fisheries subsidies. Ministers agreed to clarify and improve WTO rules that apply to fisheries subsidies. The issue of fisheries subsidies has been studied in the Trade and Environment Committee for several years. Some studies

demonstrate these subsidies can be environmentally damaging if they lead to too many fishermen chasing too few fish.

Negotiations on these issues, including concepts of what are the relevant environmental goods and services, take place in “special sessions” of the **Trade and Environment Committee**.

Negotiations on market access for environmental goods and services take place in the **Market Access Negotiating Group and Services Council “special sessions”**.

Work in the committee [back to top](#)

Ministers instructed the **Trade and Environment Committee**, in pursuing work on all items on its agenda, to pay particular attention to the following areas:

- The effect of environmental measures on market access, especially for developing countries.
- “Win-win-win” situations: when eliminating or reducing trade restrictions and distortions would benefit trade, the environment and development.
- Intellectual property. Paragraph 19 of the Ministerial Declaration mandates the TRIPS Council to continue clarifying the relationship between the TRIPS Agreement and the Biological Diversity Convention. Ministers also ask the Trade and Environment Committee to continue to look at the relevant provisions of the TRIPS agreement.
- Environmental labelling requirements. The Trade and Environment Committee is to look at the impact of eco-labelling on trade and examine whether existing WTO rules stand in the way of eco-labelling policies. Parallel discussions are to take place in the Technical Barriers to Trade (TBT) Committee.
- For all these issues: when working on these (market access, “win-win-win” situations, intellectual property and environmental labelling), the Trade and Environment Committee should identify WTO rules that would need to be clarified.
- General: ministers recognize the importance of technical assistance and capacity building programmes for developing countries in the trade and environment area. They also encourage members to share expertise and experience on national environmental reviews.

Electronic commerce

(par 34) > [back to top](#)

The Doha Declaration endorses the work already done on electronic commerce and instructs the **General Council** to consider the most appropriate institutional arrangements for handling the work programme, and to report on further progress to the Fifth Ministerial Conference.

The declaration on electronic commerce from the Second Ministerial Conference in Geneva, 1998, said that WTO members will continue their practice of not imposing customs duties on electronic transmissions. The Doha Declaration states that members will continue this practice until the Fifth Ministerial Conference.

Report on further progress: **5th Ministerial Conference, 2003** (in Mexico)

Small economies

(par 35) > [back to top](#)

Small economies face specific challenges in their participation in world trade, for example lack of economy of scale or limited natural resources.

The Doha Declaration mandates the **General Council** to examine these problems and to make recommendations to the next Ministerial Conference as to what trade-related measures could improve the integration of small economies.

Key date: small economies

Recommendations: **5th and 6th Ministerial Conferences, 2003 and 2005** (in Mexico and Hong Kong, China)

Trade, debt and finance

(par 36) > [back to top](#)

Many developing countries face serious external debt problems and have been through financial crises. WTO ministers decided in Doha to establish a **Working Group on Trade, Debt and Finance** to look at how trade-related measures can contribute to find a durable solution to these problems. This working group will report to the General Council which will in turn report to the next Ministerial Conference.

> [more on Committee on Trade and Development](#)

Trade and technology transfer

(par 37) > [back to top](#)

A number of provisions in the WTO agreements mention the need for a transfer of technology to take place between developed and developing countries.

However, it is not clear how such a transfer takes place in practice and if specific measures might be taken within the WTO to encourage such flows of technology.

WTO ministers decided in Doha to establish a **working group** to examine the issue. The working group will report to the General Council which itself will report to the next Ministerial Conference.

Key date: technology transfer

General Council report: **5th and 6th Ministerial Conferences, 2003 and 2005** (in Mexico and Hong Kong, China)

Technical cooperation and capacity building

(pars 38-41) > [back to top](#)

Through various paragraphs of the Doha Declaration, WTO member governments have made new commitments on technical cooperation and capacity building.

For example, the section on the relationship between trade and investment includes a call (par 21) for enhanced support for technical assistance and capacity building in this area.

Within the specific heading "technical cooperation and capacity building", paragraph 41 lists all the references to commitments on technical cooperation within the Doha Declaration: paragraphs 16 (market access for non-agricultural products), 21 (trade and investment), 24 (trade and competition policy), 26 (transparency in government procurement), 27 (trade facilitation), 33 (environment), 38-40 (technical cooperation and capacity building), 42 and 43 (least-developed countries). (Paragraph 2 in the preamble is also cited.)

Under this heading (i.e. pars 38-41), WTO member governments reaffirm all technical cooperation and capacity building commitments made throughout the declaration and add general commitments:

Key dates: technical cooperation

Technical assistance funding raised 80%; Development Agency Global Trust Fund set up: **December 2001**

Director-General reports to General Council: **December 2002**

Director-General reports to ministers: **5th and 6th Ministerial Conferences, 2003 and 2005** (in Mexico and Hong Kong, China)

- The Secretariat, in coordination with other relevant agencies, is to encourage WTO developing-country members to consider trade as a main element for reducing poverty and to include trade measures in their development strategies.
- The agenda set out in the Doha Declaration gives priority to small, vulnerable, and transition economies, as well as to members and observers that do not have permanent delegations in Geneva.
- Technical assistance must be delivered by the WTO and other relevant international organizations within a coherent policy framework.

The Director-General reported to the General Council in December 2002 and to the Fifth Ministerial Conference on the implementation and adequacy of these new commitments.

Following the declaration's instructions to develop a plan ensuring long-term funding for WTO technical assistance, the General Council adopted on 20 December 2001 (one month after the Doha conference) a new budget that increased technical assistance funding by 80% and established a Doha Development Agenda Global Trust Fund. The fund now has an annual budget of 24 million Swiss francs.

> [more on WTO assistance for developing countries](#)

Least-developed countries ([pars 42, 43](#)) > [back to top](#)

Many developed countries have now significantly decreased or actually scrapped tariffs on imports from least-developed countries (LDCs).

In the Doha declaration, WTO member governments commit themselves to the objective of duty-free, quota-free market access for LDCs' products and to consider additional measures to improve market access for these exports.

Members also agree to try to ensure that least-developed countries can negotiate WTO membership faster and more easily.

Some technical assistance is targeted specifically for least-developed countries. The Doha Declaration urges WTO member donors to

Key date: least-developed countries

Reports to: General Council: July 2002, 5th and 6th Ministerial Conferences, 2003 and 2005 (in Mexico and Hong Kong, China)

significantly increase their contributions.

In addition, the **Sub-Committee for LDCs** (a subsidiary body of the WTO Committee on Trade and Development) designed a work programme in February 2002, as instructed by the Doha Declaration, taking into account the parts of the declaration related to trade that was issued at the UN LDC Conference.

- > [more on Sub-Committee on Least-Developed Countries](#)
- > [more on WTO assistance for developing countries](#)

Special and differential treatment (par 44) > [back to top](#)

Key date: special and differential treatment

The WTO agreements contain special provisions which give developing countries special rights. These special provisions include, for example, longer time periods for implementing agreements and commitments or measures to increase trading opportunities for developing countries.

Recommendations to General Council: **July 2002, July 2005**

In the Doha Declaration, member governments agree that all special and differential treatment provisions should be reviewed with a view to strengthening them and making them more precise.

More specifically, the declaration (together with the Decision on Implementation-Related Issues and Concerns) mandates the **Trade and Development Committee** to identify which of those special and differential treatment provisions are mandatory, and to consider the implications of making mandatory those which are currently non-binding.

The Decision on Implementation-Related Issues and Concerns instructed the committee to make its recommendations for the **General Council** before July 2002. But because members needed more time, this was postponed to the end of July 2005.

DOHA WTO MINISTERIAL 2001

A HISTORIC MOMENT:

'May I take it that this is agreeable?' Gavel, applause, congratulations ...

This is how conference chairman, Qatari Finance, Economy and Trade Minister Youssef Hussain Kamal introduced the ministerial declarations and decision in the closing plenary session of the Doha Ministerial Conference, 14 November 2001.

See also:

[> Doha Ministerial briefing notes](#)

Meeting summaries:

- > [14 November](#)
- > [13 November](#)
- > [12 November](#)
- > [11 November](#)
- > [10 November](#)

Other WTO Ministerials:

- > [Singapore](#) 9-13 Dec. 1996
- > [Geneva](#) 18 & 20 May 1998
- > [Seattle](#) 30 Nov-3 Dec. 1999

“ ... I now would like to submit to delegations for their consideration and adoption, three draft texts which have emerged from the process of intensive decisions and negotiations that we have had over the past few days. These texts are the following:

- the draft Ministerial Declaration in document WT/MIN(01)/DEC/W/1,
- two, the draft Declaration on the TRIPS Agreement and Public Health in document WT/MIN(01)/DEC/W/2, and
- the third, the draft Decision on Implementation-Related Issues and Concerns in document WT/MIN(01)/W/10

Before I propose action on these three texts, allow me to offer my sincere thanks to the Director-General and all of the ministers who have assisted me so ably as Friends of the Chair. I would also like to pay tribute to the hard work and dedication of the Chair of the General Council, the Deputy Directors-General and the Secretariat, and all the ministers and delegations representing their governments at this Ministerial Conference.

The past five days have seen a tremendous amount of committed work by all delegations. Throughout this process I have done my utmost to ensure full transparency and inclusiveness, and I am grateful for the spirit of cooperation and goodwill shown by all participants.

I would like to note that some delegations have requested clarification concerning paragraphs 20, 23, 26 and 27 of the draft declaration. Let me

.....
 [Doha Development Agenda](#)

> [The ministerial declarations and decisions](#)

> [Negotiations, implementation and development](#)

> [The Doha Declaration explained](#)

> [The Doha implementation decision explained](#)

> [How the negotiations are organized](#)

> [The Trade Negotiations Committee](#)

.....

say that with respect to the reference to an 'explicit consensus' being needed, in these paragraphs, for a decision to be taken at the Fifth Session of the Ministerial Conference, my understanding is that, at that session, a decision would indeed need to be taken by explicit consensus, before negotiations on trade and investment and trade and competition policy, transparency in government procurement, and trade facilitation could proceed.

In my view, this would also give each member the right to take a position on modalities that would prevent negotiations from proceeding after the Fifth Session of the Ministerial Conference until that member is prepared to join in an explicit consensus.

I would like to suggest that we take action on the three draft texts before I give the floor to delegations who wish to do so to make a statement for the record.

First I should like to propose that the Ministerial Conference adopt the draft Ministerial Declaration in document WT/MIN(01)/DEC/W/1. May I take it that this is agreeable to members?

It is so agreed. (Gavel, applause, congratulations.)

I should like to propose that the Ministerial Conference **adopt the draft Declaration on the TRIPS Agreement and Public Health** in document WT/MIN(01)/DEC/W/2. May I take it that this is agreeable?

(Gavel, applause.)

Finally I should like to propose that the Ministerial Conference **adopt the draft Decision on Implementation-Related Issues and Concerns** in document WT/MIN(01)/W/10

With regard to the outstanding implementation issues, I would like to recall the cover letter of 5 November 2001, sent to me by the Chairman of the General Council and the Director General, which accompanied the draft decision on implementation. It states that the draft decision proposes immediate action on a number of implementation issues, and provides that remaining issues, which include those referred to WTO bodies as well as those listed in their completion will be addressed in the course of the future work programme in accordance with paragraph 12 of the draft ministerial declaration.

May I take it that the draft **Decision on**

Implementation-Related Issues and Concerns in document WT/MIN(01)/W/10 is acceptable to delegations?

(Gavel, applause.)

May I now offer the floor to delegations wishing to make a statement for the record "

WTO Symposium on Transparency in Government

FIDUCIARY ASPECTS OF QUALITY AND TRANSPARENCY PROCUREMENT

Bernard Abeillé
October 9, 2002

FIDUCIARY ASPECTS OF QUALITY PROCUREMENT

■ OVERVIEW

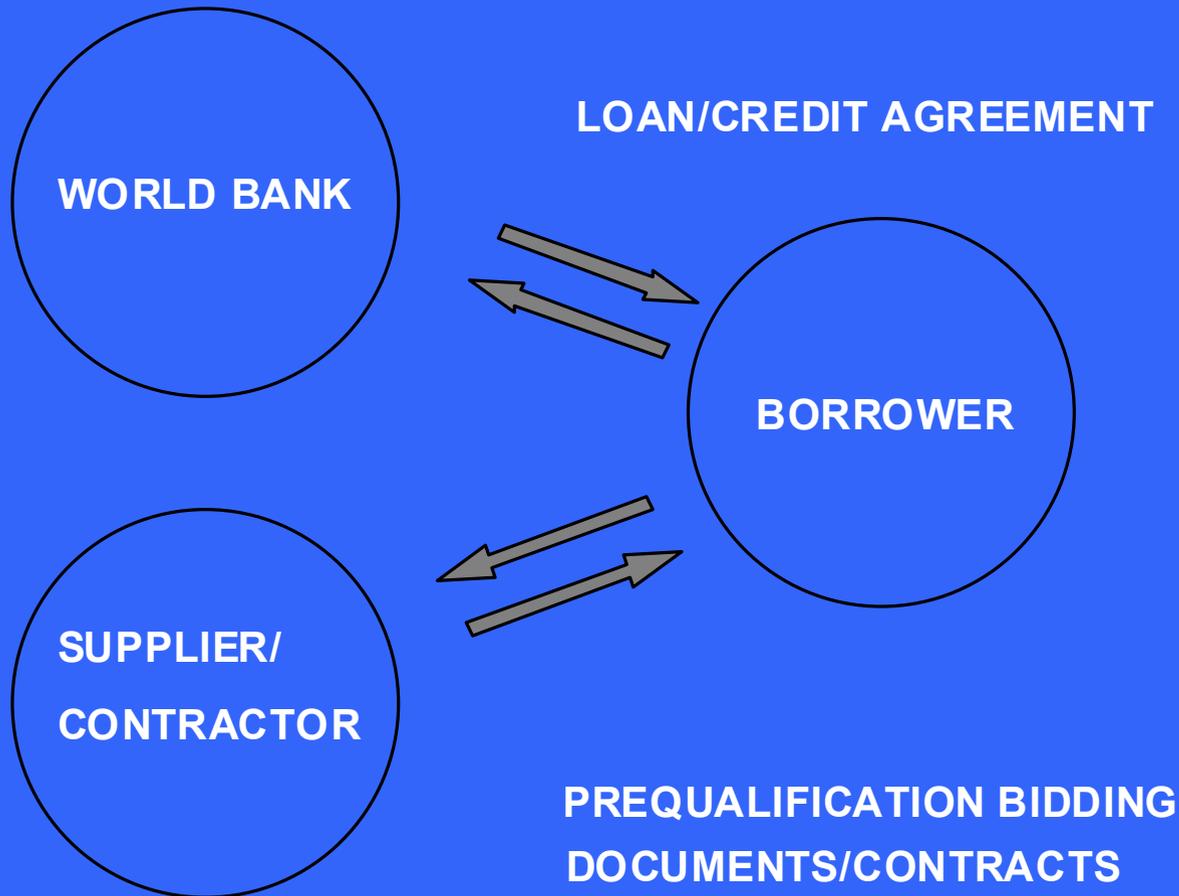

- Bank staff have a **fiduciary responsibility**, mandated by the Articles of Agreement of IBRD and IDA, to ensure that the proceeds of any loan/credit are used only for the purposes for which the loan was granted, with due attention to considerations of economy and efficiency and without regard to political or other non-economic influences or considerations.

FIDUCIARY ASPECTS OF QUALITY PROCUREMENT

- To fulfil this mandate, the Bank has established detailed **Guidelines** specifically for procurement of goods, works and consulting services
- Basic principles governing the Bank's Procurement Policies:
 - the need for **economy and efficiency**
 - to give all eligible bidders **equal opportunity to compete**
 - as a development institution, encourage the **development of domestic contracting** in the Borrowing country
 - the importance of **transparency** in the procurement process.

PROCUREMENT RELATIONSHIPS

FIDUCIARY ASPECTS OF QUALITY PROCUREMENT

- The **Loan/Credit Agreement** governs the legal relationships between the Borrower and the Bank, and **the Guidelines** are made applicable to procurement of goods and works, and to the selection and employment of consultants for the project as provided in the Agreement
- The rights and obligations of the Borrower and the providers of goods, works and consulting services are governed by the **bidding documents/RFP and by the contracts** signed by the Borrower.

■ ROLE OF BANK STAFF

- Maintains strict neutrality and impartiality throughout the process**

FIDUCIARY ASPECTS OF QUALITY PROCUREMENT

- Appendix 1 of the Guidelines describe the Bank's procedures for reviewing procurement decisions made by the borrower/client. The concurrence of the Bank is communicated to the client through letters conveying the Bank's "no objection" to the Borrower's decision (no-objection letters —NOLs). **The review of the decision and the issuance of the NOL described in Appendix 1 of the *Guidelines* constitute the core of the fiduciary function of procurement.**
- Task Team Leaders (TTLs) sign NOLs responding to Borrower's proposed actions, after a clearance by a Procurement Specialist (PS) or a Procurement Accredited Staff (PAS).

■ Ensuring that sound national fiduciary systems are in place

■ Country Procurement Assessment Reports (CPARs)

[Sound public procurement policies and practices are among the essential elements of good governance]

- **Jointly by the Bank and the Borrower**
- **Findings include Risks**
- **Recommendations/Action Plans → Procurement Reform**

■ **Capacity Analysis**

- **Assessment of management capacities**
- **Prior Review thresholds for contracts based on the risk analysis**

■ **Procurement Arrangements (provisions in Loan Agreements)**

- **Based on appraisal, capacity assessments etc.,**
- **Changes introduced after negotiations require WB approval and internal clearances**

■ During Implementation, WB:

- Monitors the quality of procurement by the Borrower through:**
 - **Prior Reviews**
 - **Post Reviews**
 - **Mandatory Reviews**
 - **Ex-Post Procurement Reviews**
 - **Ex-Post Procurement Audits**
- Reports major deficiencies and proposed remedies**
