- Proposes adjustments of the Bank's procurement supervision plan to reflect improvements or deterioration in Borrower's performance**

Transparency in Government Procurement

Principles

Transparency : Key Principles

- **Effective Advertisement (broad + sufficient time)**
- **Public Bid Opening (immediate opening of all financial bids)**
- **Well-formulated Bidding Documents**
 - **Bid Evaluation Criteria (non-discriminatory, disclosed, in monetary terms**)
 - **Qualification of bidder reviewed separately**
 - **Contract Award to the lowest evaluated bidder --without negotiations**

Procedures should exclude:

- **Use of two-envelope system**
- **Use of merit-point system to evaluate bids (for civil works + goods)**
- **Combine bid evaluation with qualification**
- **Use of non quantified bid evaluation criteria**
- **Restricting access to bidding process**

Modern Procurement Regulations

- **Provide to losing bidders an effective way to submit protests**
 - **Protests submitted to an independent entity**
 - **Protests before contract award may lead to re-visit the contract award**
 - **Protests after contract award may lead to compensatory damages**
- **Institutional Mechanisms**
 - **Entities conducting bid evaluations should be distinct from those having a regulatory/control functions**
 - **Registration of qualified bidder is an heavy procedure which require frequent updating**

- Panamá - CA 2002

Acuerdos Subregionales

- NAFTA 1994
- México - Colombia - Venezuela (G3) 1995
- CAN (servicios) 2002

Alcance y cobertura

- En general, incluyen todas las modalidades de compra, salvo las concesiones
- En general, se excluyen las compras indirectas, realizadas por otros entes con fondos estatales (donaciones préstamos, subvenciones, etc.) y con fondos de organismos internacionales
- Algunos excluyen servicios brindados en ejercicio de funciones gubernamentales, tales como seguridad social, pensión, educación , salud
- Algunos excluyen los servicios financieros transfronterizos

Niveles de Gobierno

- Entidades de Gobierno Central se incluyen en todos los acuerdos
- Entidades independientes, proveedoras de servicios públicos y empresas del Estado:
 - » Excluidas en Chile -CA
 - » Costa Rica, Bolivia y Nicaragua las incluyen, aunque México no
 - » EEUU y México las incluyen pero no para Canadá
 - » Panamá excluye compras de las Autoridades del Canal

Niveles de Gobierno

- Entidades de Gobiernos Estatales, Departamentales, Municipalidades y otras formas de gobierno local:
 - » Excluidas en Chile-CA
 - » Costa Rica, Bolivia y Nicaragua las incluyen, aunque México no
 - » Excluidas en G-3
 - » En NAFTA se deja a negociación futura

WTO Symposium on Transparency in Government Procurement
Quantifying the Size of Government Procurement
Geneva, 9-10 October 2002
By Denis AUDET, OECD Trade Directorate

Introduction

Governments are significant purchasers of goods and services and these markets represent huge opportunities for international trade. Informed knowledge about the size of these markets and in particular their internationally contestable shares is relevant for the business community, governments and trade negotiators. This presentation will begin with a comparative review of studies on the quantification of government procurement markets. The pros and cons of various methodological approaches will be outlined. Concrete examples of the size of government procurement markets will be given, including measurements of government procurement detailed by consumption and investment expenditure, by administrative levels, and the shares of government procurement that are potentially opened up to international trade.

Quantifying the size of government procurement markets

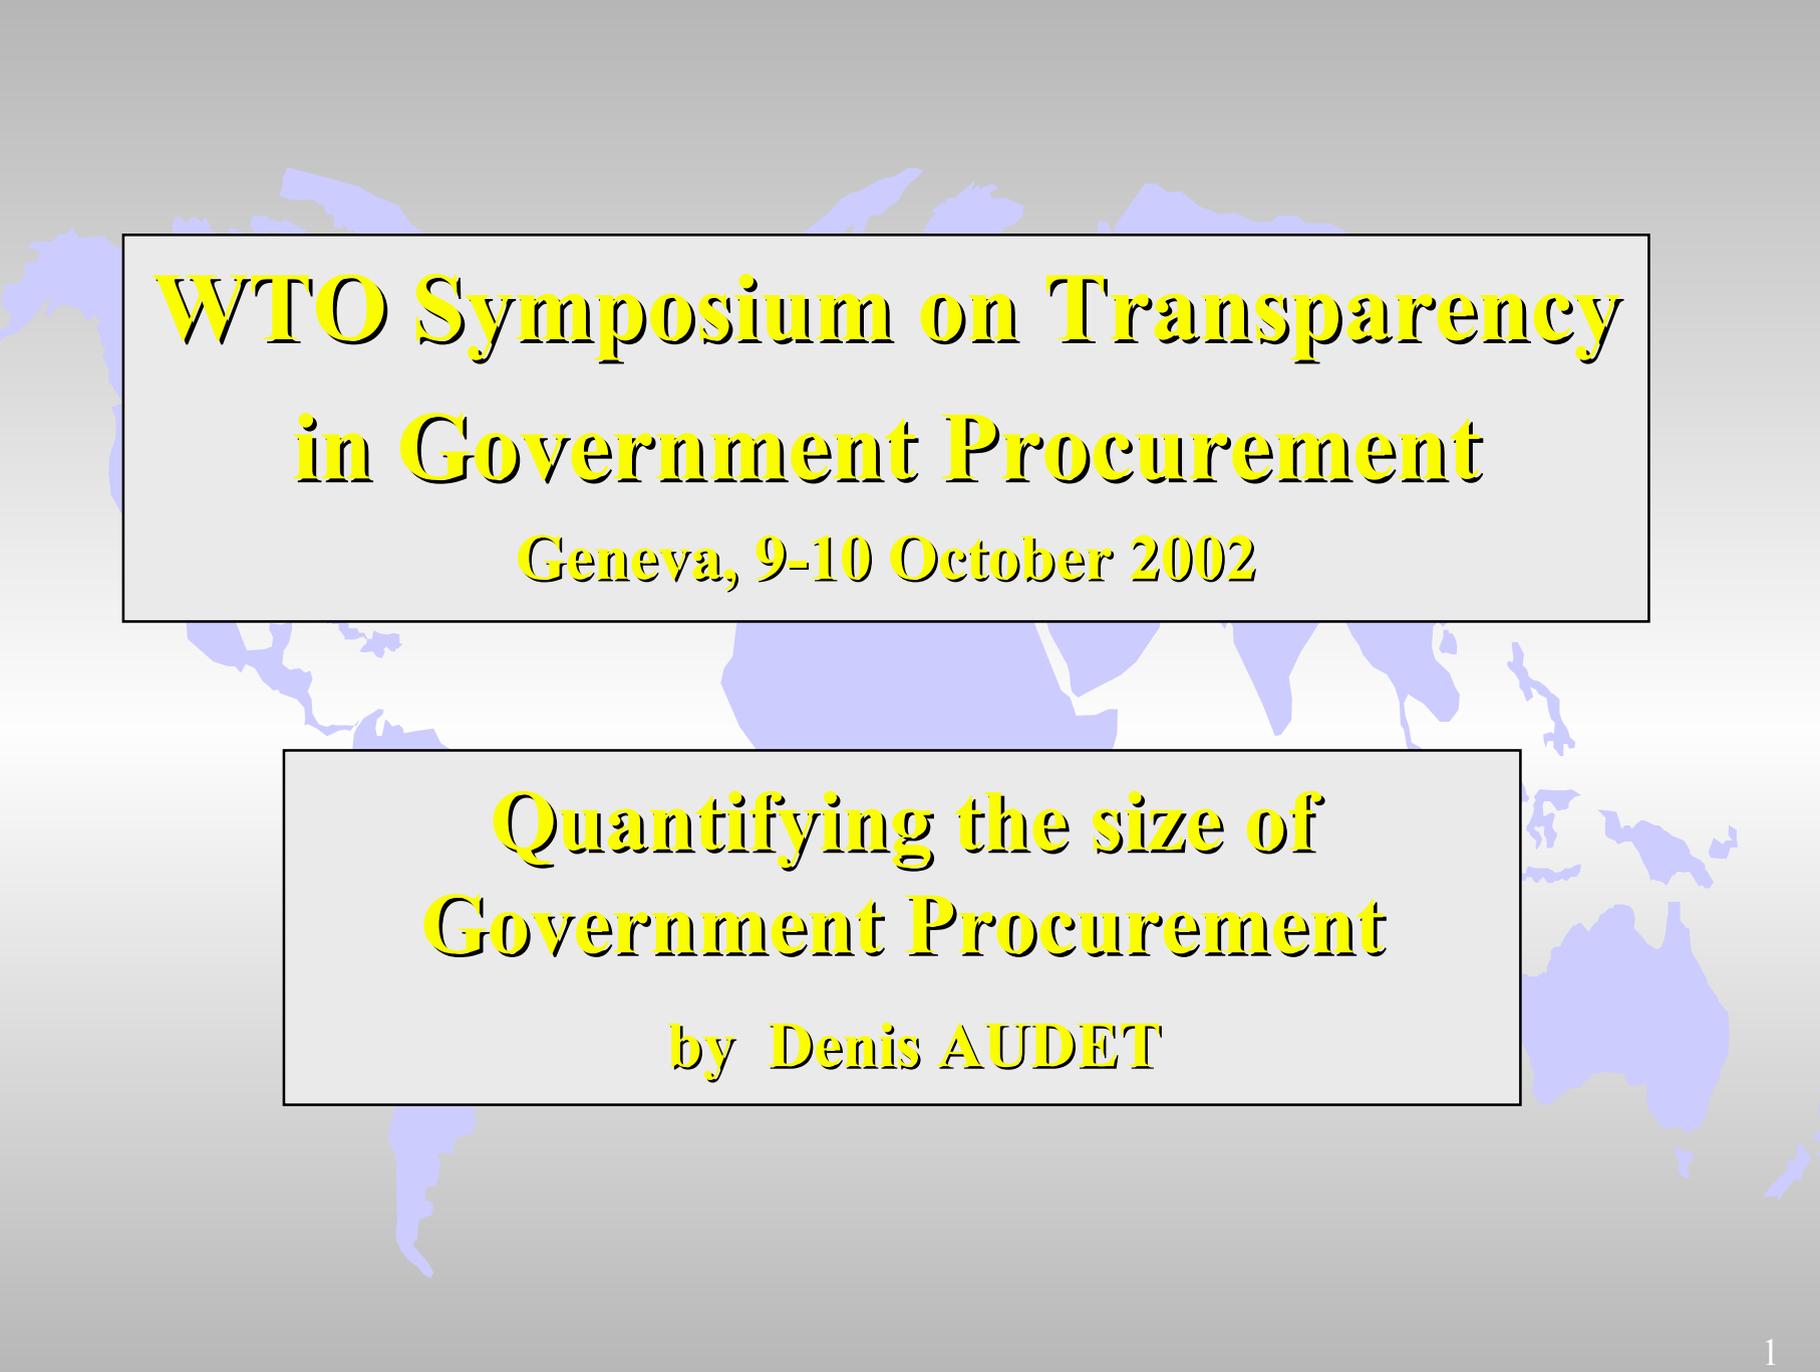

There are few studies on the quantification of the size of government procurement markets, their results are not necessarily comparable as different definitions of procurement are used, and the number of countries covered is usually small. Methodological approaches based on national data drawn from the System of National Accounts (SNA) provide a more reliable basis for estimating the size of government procurement markets in a consistent manner for a large number of countries. Depending on the availability of detailed data, SNA-based data also enables to distinguish consumption and investment expenditure, to measure procurement by administrative levels, and to estimate the shares of government procurement that are potentially opened up to international trade.

The so-called “bottom-up” approach to quantify government procurement refers to the process of gathering national data on procurement expenditure directly from national entities responsible for procurement decisions. Results are often uneven and the reliability of results stems, to a large extent, from the homogeneity and consistency of the compilation and reporting processes. Establishing such processes requires legally binding notification requirements on all concerned procurement entities.

The main estimates of the size of government procurement markets obtained from the recent OECD study, entitled “*The Size of Government Procurement Markets*”¹, will be presented. This study uses SNA-based data and offers various ratios of government procurement markets for over 130 countries. Some of these estimates are:

- The estimate for the world’s total government procurement market is US\$5,550 billion, which is roughly equivalent to 82.3% of the world merchandise and commercial services exports in 1998.
- The world value of the contestable government procurement market is estimated at \$2,083 billion in 1998, which is equivalent to 7.1% of the world GDP or 30.9% of the world merchandise and commercial services exports in 1998.

¹ The PDF file of this OECD publication is available for free on the OECD Online Bookshop which is accessible from the OECD Web site (www.oecd.org), also available in French “*La taille des marchés publics*”.

GOVERNMENT PROCUREMENT, TRADE AND DEVELOPMENT

Bernard Hoekman

Development Research Group

World Bank

Policy Objectives

- Minimize procurement costs (efficiency)
- Industrial development (infant industry)
- Technology transfer
- Offset market failures (SMEs)
- “Noneconomic” objectives (e.g., affirmative action)
- Discipline state owned enterprises
- National security

Instruments

- To Attain Value for Money: Competition
 - Mimic the market—bidding rules
 - Transparency mechanisms
 - Accountability—audits, etc.
- To Attain Other Objectives: Limit Competition
 - Import bans
 - Price preferences
 - Local content
 - Restrictions on entry (bidding)

Tradeoffs and Questions

- Pursuit of some objectives can conflict with cost minimization
- Is procurement policy the most efficient instrument to attain other objectives?
 - If not, what constrains use of superior policies?
- Competition requires complementary policies
 - Investment/entry policies—often a local presence is a precondition for contestability of the markets
 - Other policies (trade, etc.) interact with procurement

Rules of Thumb: Competition

- Policies that limit bidding are costly
- Entry matters--even under perfect competition
- FDI is important, especially for services
- Competition policy and challenge mechanisms to discipline collusion (bid rigging)
- Sequencing: Other policies vs. procurement

Transparency

- Strong link to competition/value for money goal
- Market access and anti-corruption dimensions
 - Will transparency increase access?
 - Does it matter?
- Compliance and enforcement
 - Domestic action needed—a broader agenda
- Implementation
 - Sequencing issues again
 - The TRTA agenda

Government Procurement: Market Access, Transparency, and Multilateral Trade Rules*

Revised
October 2002

Abstract: The effects on national welfare and market access of two important public procurement practices (discrimination and non-transparency) are analyzed with an eye to the ongoing international discussions on procurement reform in the Doha Round as well as regional integration agreements. The analysis suggests that the welfare payoffs of adopting mechanisms that foster domestic competition and transparency are likely to be greater than the return to efforts to ban international discrimination. However, improved transparency is unlikely to result in significant enhancements in market access, which in turn raises questions about the likely enforceability of a WTO transparency agreement.

Keywords: Government procurement, public purchasing, WTO, transparency, corruption, Doha Round

JEL classification: F13, H57

Government Procurement: Market Access, Transparency, and Multilateral Trade Rules

Simon J. Evenett and Bernard M. Hoekman

Introduction

With the conclusion of the Uruguay Round and the creation of the World Trade Organization (WTO), multilateral disciplines applying to all WTO members were established in many areas. One substantial exception is in government procurement, where the principles of non-discrimination have only been accepted on a plurilateral basis. The absence of general trade policy disciplines on public purchasing practices is therefore a major “hole” in the WTO edifice. Developing countries have been subject to substantial pressure to agree to multilateral disciplines limiting their ability to discriminate in favor of domestic firms when allocating contracts. Their vigorous resistance to such pressure led a number of WTO members in the late 1990s to propose that multilateral efforts be confined to attaining agreement on improving transparency in this area.¹ At the December 1996 WTO Ministerial meeting in Singapore it was agreed to establish a Working Group with the mandate to study on transparency in government procurement practices and develop “elements for inclusion in an appropriate agreement” (WTO, 1996, p. 6).² At the 2001 WTO Ministerial Conference in Doha, Qatar, agreement was reached to launch negotiations on transparency in government procurement in 2003, on the basis of modalities that must be agreed by explicit consensus.

Given that the WTO is a forum to negotiate and enforce market access opening commitments, not surprisingly a major motivation of pursuing transparency is to improve the ability of foreign suppliers to contest procurement markets. Thus, an important question is what effect transparency will have on market access. This paper examines both this question as well as

¹ The United States is playing a lead role in this connection. US legislation requires the United States Trade Representative (USTR) to monitor foreign procurement policies that deny access to markets for American goods and services, and procurement policies figure prominently in USTR’s annual *Foreign Trade Barriers Report*. The Clinton Administration made public procurement a priority trade policy issue, linking this to the broader issue of corruption. “This Administration is determined to ... push initiatives to clean up government procurement practices around the world” (*Financial Times*, May 1, 1995, p. 5). In April 1996, largely at the insistence of the US, OECD members agreed not to allow firms to write off bribes against tax obligations (*Oxford Analytica*, April 18, 1996).

the likely impact on national welfare of alternative multilateral disciplines on government procurement policies so as to permit an assessment of whether reforms that enhance welfare also enhance market access, and visa versa. Traditionally, the formula for successful trade reform under the WTO umbrella has typically involved those initiatives that enhance national welfare through improving market access.³ A major question is whether any proposed set of multilateral procurement disciplines does so. Although the analysis is largely motivated by WTO discussions, it applies also to regional efforts to agree on common rules on procurement. Procurement disciplines are, for example, on the agenda of the Free Trade Area of the Americas (FTAA) initiative, and also will figure in future efforts to expand the coverage of Euro-Mediterranean Partnership Agreements.

We argue that, in many circumstances, explicitly discriminatory and non-transparent procurement policies have little effect on market access, although they can have detrimental effects on national welfare. What matters more for efficient procurement outcomes is the degree of competition in national markets; and so ancillary policies—especially competition policies and the restrictiveness of foreign direct investment (FDI) regimes—are a major determinant of the effects of procurement favoritism.⁴ Insofar as procurement policies create excess profits in an industry, these will be eliminated over time through entry. Indeed, an implication of this analysis is that removal of procurement preference policies need not result in greater sourcing from foreign firms. In such circumstances, liberalization cannot reverse the detrimental effect on imports of prior procurement discrimination.

The market access implications of non-transparency center on the argument that absence of information on procurement opportunities and lack of ‘due process’ may impede the ability of foreign firms to bid for contracts. A lack of transparency may also generate opportunities for corruption. Even though improving transparency is typically beneficial from a national welfare perspective, we show that reforms to this end need not enhance market access; and the latter may detract from the attractiveness of a WTO agreement on transparency in procurement. This

² For an analysis of the origins of this Working Group, and its relationship to the Uruguay Round GPA, and the likely consequences of strengthening transparency provisions in the GPA, see Arrowsmith (1997).

³ As is the case in the small open economy that lowers its tariffs as part of a multilateral trade agreement.

⁴ Foreign direct investment is critical because many of the products purchased by government entities are effectively non-tradable, including many services. In such cases, procurement preferences will only be binding if foreign firms can contest the market through FDI and government entities differentiate across firms on the basis of their “nationality”.

finding also implies that such an agreement may be subject to only weak enforcement as foreign nations will not have strong incentives to bring cases on behalf of their frustrated exporters.

The paper is organized as follows. After a brief discussion on the possible rationales for discrimination (Section 1), we analyze the impact of the most egregious form of discrimination—a ban on government purchases from foreign suppliers (Section 2). Then, we analyze the impact of a less extreme form of discrimination, that of so-called price preference policies (Section 3). These analyses use a straightforward partial equilibrium framework, which we extend in Section 4 to include different configurations for firms' costs. In Section 5 we analyze instances where purchasers either have a strong (rational) preference for being in close geographic proximity to suppliers, or markets where products are non-tradable (such as services). The effect on national welfare and market access of non-transparent procurement regimes is examined in Section 6, with implications for the discussions on procurement reform at the WTO outlined in Section 7. Conclusions are offered in Section 8.

1. Existing analyses of the motives for and effects of discrimination in procurement.

The rationales for discrimination in procurement vary, but in most instances revolve around industrial objectives, national security considerations, or other non-economic objectives. The latter include policies that reserve certain types (or a certain share) of contracts for businesses owned by minorities, for firms located in certain geographic regions, or for small and medium-sized firms. From a normative perspective, of course, a key question is whether discrimination in procurement is an efficient way of attaining the underlying objective. Efficiency is particularly important in this policy area where it is often claimed that an overarching goal of procurement disciplines is 'value for money.'⁵

In the last 25 years a small literature has developed focusing on the effects of international discrimination in procurement. Much of this literature considers procurement discrimination in perfectly competitive markets and, in partial equilibrium settings, typically finds no efficiency rationale for discrimination.⁶ In such settings, observed procurement

⁵ Having said that, it is not difficult to conceive of models where a government buyer with market power could purchase goods at prices below those in a perfectly competitive market and distort the allocation of resources.

⁶ In addition to the seminal analyses of Baldwin (1970) and Baldwin and Richardson (1972), relevant contributions assuming competitive markets include Lowinger (1976), Herander and Schwartz (1982), Joson (1985), and Kim (1994). Miyagiwa (1991), Branco (1994, 1999), Laffont and Tirole (1993), and Trionfetti (2000) extend the analysis to consider imperfect competition.

discrimination is likely to be driven by industrial policy or other non-economic objectives. In contrast, in markets characterized by imperfect competition and a small number of firms, discriminating against foreign bidders may have an efficiency rationale. McAfee and McMillan (1989) show that discrimination may increase national welfare *if* domestic firms have a cost disadvantage in producing the products to be procured *and* only a limited number of firms (foreign and domestic) bid for the contract. An explanation for this finding is as follows: a policy that gives preferences to domestic firms reduces the effective competition they face from foreign firms and so induces domestic firms to raise their bids. However, foreign firms respond by lowering their (pre-preference inflated) bids. If the probability of a low cost foreign firm winning the contract is large enough, this can result in a reduction in the government's expected procurement costs. Here, price preferences effectively shift profits towards domestic firms while potentially reducing government outlays. Even if the cost structure of domestic and foreign firms are identical and account is taken of the social cost of distortionary taxation, discrimination may be optimal simply because foreign profits do not enter into domestic welfare (Branco, 1994; Vagstad, 1995). In the small numbers context assumed by these models, prices will exceed marginal costs, so that shifting demand to domestic firms may also reduce price-cost margins as domestic output expands (Chen, 1995).

Rationales for preferences hold in other settings too. Even if there are many potential suppliers, discrimination may be beneficial to the procuring entity if the products are intangible or if monitoring contractors and enforcing compliance is costly. In such situations by paying quasi-rents to contractors procuring bodies can use the threat of losing repeat business to increase the likelihood of better performance (Laffont and Tirole, 1991; Rotemberg, 1993).⁷ Moreover, geographic proximity may be a precondition for effectively contesting procurement markets—making some products, in particular services⁸, in essence non-tradable. Problems of asymmetric information and contract compliance may imply that entities can economize on monitoring costs by choosing suppliers that are located within their jurisdictions (Breton and Salmon, 1995). In turn this will make it more difficult for foreign firms to successfully bid for contracts, even if the

⁷ Of course, this is not necessarily the optimal instrument. Naegelen and Mougeot (1998) show that alternative instruments, such as cost targets, can be more efficient. Governments may also want to consider dual sourcing in this situation, see for example McGuire and Riordan (1995).

⁸ Given that services are often the largest category of purchases by governments (Francois, Nelson and Palmetier, 1997)—and increasingly so in countries that have been pursuing outsourcing and contracting policies—this has

goods or services involved are tradable. If cross-border trade is frustrated, then attention turns to whether there are barriers to entry through establishment (FDI) and to how procuring entities decide whether suppliers are local “enough”—i.e., effectively raising the issue of which “rules of origin” are applied to foreign subsidiaries in the procurement context. An important question, then, is the extent to which the impact of procurement policy depends on the government's stance towards the degree of domestic and foreign competition, a point developed further below.

Even though there are a variety of situations under which discriminatory procurement can, in theory, enhance national welfare by lowering procurement costs, little is known about whether existing procurement discrimination has this effect. Even in the case where there are significant differences in production costs between domestic and foreign firms and only a small number of potential suppliers, simulation studies suggest that welfare gains are likely to be modest at best. Greater profits of domestic firms will tend to be offset by increased average prices paid by public entities, resulting in at most small welfare gains (Deltas and Evenett, 1997). Worse still, small deviations from the optimal policy eliminate those gains. And given that the optimal policy in each situation will depend on parameters that are unlikely to be observed by policymakers (such as the distribution of the bidders' costs and the expectations that each bidder has about each other bidder's actions), these findings suggest that in practice procurement favoritism is likely to be more costly than a policy of non-discrimination.⁹

In considering the implications for the multilateral trading system, there is interest in the effect of procurement policies on market access as well as national welfare. Given the long history of bargaining over market access in the multilateral trading system, our analysis will consider the effects of discrimination against foreign firms by state buyers on market access, as proxied by the level of imports. If these effects are small, then a nation's exporters are likely to perceive few benefits from negotiating a multilateral agreement on procurement. Consequently, such an agreement will do little to mobilize domestic support for a package of multilateral trade reforms, providing little counterbalance to the opponents of reform. Thus, even though market access is a different concept than national welfare, the extent of domestic political support for a

potentially far-reaching implications for the assessment and design of multilateral disciplines for procurement practices.

⁹ Most of the literature analyzing discrimination is static with technologies and market structures taken as given. To the best of our knowledge dynamics have only recently been investigated in Branco (1999), who shows that discrimination in favor of higher cost domestic firms can enhance their incentives to become more efficient,

welfare-improving trade agreement will depend in large part on its perceived impact on overseas market access.

2. The effect of a ban on government purchases from foreign suppliers

In an influential paper Baldwin and Richardson (1972) analyze the impact on imports, prices, and national welfare of a ban on government purchases of foreign suppliers in a partial equilibrium perfectly competitive framework.¹⁰ They conclude that *in the short run* a procurement ban only has an effect on domestic prices, net imports, and national welfare when government demand for the product is greater than domestic supply (at free trade prices). We show below that, in the case of a small open economy, once allowance is made for entry by new firms, a procurement ban may not have any *long run* effects either.

Our focus on partial equilibrium models can be justified on the grounds that, once one moves beyond the stylized two good model to a world of many goods, changes in government sourcing patterns across foreign and domestic suppliers need not affect national factor prices.¹¹ The focus on perfectly competitive markets is justified in part by empirical studies that suggest that price-cost markups tend to fall rapidly towards competitive levels once the number of firms in an industry reaches as few as five (Bresnahan and Reiss, 1991). Thus, in many situations procuring entities will be able to source from a large number of firms with little market power.

We use a standard supply and demand framework, where P_W is the world price of the good; P_C is the unit price paid by the domestic consumer; P_G is the unit price paid by the domestic government; $D_G(p)$ is the demand schedule of the domestic government; $D_T(p)$ is total domestic demand schedule; $S_H(p)$ is the short run supply schedule of the domestic industry; $LS_H(p)$ denotes is the long run domestic supply curve; ATC and MC are the average total and marginal cost schedules of the representative firm in the domestic industry, respectively; and π is the short run profit of the representative domestic firm. We also assume that the country is small (a price taker on world markets) so that a reduction in imports does not affect the terms of trade.

providing a firmer foundation for interventionist policy in contexts characterized by asymmetric information and imperfect competition. Further work is required in order to explore the robustness of these findings.

¹⁰ See also Herander and Schwartz (1982) and Deardorff and Stern (1998).

¹¹ In a two-good two-country model it is straightforward to show that shifts in government demand for a good towards domestic firms can generate general equilibrium effects. Indeed, in cases when government demand for tradables is large in the appropriate sense, such two-by-two models may well provide the basis for useful policy implications. However, in contexts where government demand for individual goods is not large, a partial equilibrium approach is probably more appropriate.

To establish a point of departure assume that there is free trade. That is, there are no tariffs or other impediments to trade. Each domestic firm has a U shaped average cost curve that reaches a minimum at level C^* . The market is perfectly competitive, with domestic and foreign firms producing perfect substitutes. There is free entry and exit in the long run. In the short run the number of firms in the domestic industry is fixed. In the absence of a ban on government procurement from foreign firms, the long run equilibrium is portrayed in Figure 1. Free entry ensures that profits are zero in the long run, and that $P_W = C^*$. Free trade ensures that domestic consumers and the domestic governments pay the world price, $P_W = P_C = P_G$. Note that in this figure at the initial equilibrium price P_W , domestic industry output is greater than the government's purchases but is less than total domestic demand. In this case, the subsequent imposition of a ban on procurement from foreign suppliers has no effect on equilibrium prices, imports, and quantity traded. All foreign producers that previously supplied the government can find a domestic consumer to supply at world prices; domestic consumers that are abandoned by domestic firms who now supply the government can source foreign suppliers. Each domestic supplier is unable to raise the price charged the government, as other domestic suppliers are willing to step in at the existing world price.

Figure 2 portrays the case when government demand exceeds domestic supply at free trade prices. A procurement ban now implies that the supply decisions of the domestic industry can only be reconciled with the government demand schedule at a higher price, P_G . Since $P_G > P_W$, overall government purchases fall, domestic output rises, and the representative domestic firm makes positive profits. Domestic private sector consumers can still source from abroad, and do so, as foreign suppliers are willing to sell the good at a lower price than domestic suppliers. Overall imports fall from AC to BC. The procurement ban has an adverse effect on national welfare, creating consumption and production distortions equal to a deadweight loss of area ADB. Finally, domestic private sector consumer choices are unaffected by the procurement ban, and thus their welfare does not change. Thus, our framework replicates the principal findings of Baldwin and Richardson (1972).

Consider now the effects of allowing free entry of firms. This does not alter the analysis in Figure 1, as the imposition of a procurement ban does not alter the profitability of domestic firms. In contrast, in the case portrayed in Figure 2, a procurement ban raises the profits of domestic firms in the short run. This will induce other domestic firms to enter, expanding the

total industry supply, and forcing prices down until profits are eliminated at $P_G = P_W$. This result obtains in part because of the assumptions that foreign and domestic firms have identical minimum long run average total costs¹², there are no other trade restrictions, and firm costs do not increase as the industry expands. The latter implies that the long run domestic industry supply curve $LS_H(p)$ is horizontal which, along with the government's demand schedule $D_G(p)$, implies that domestic sales to the government are given by the quantity at point B in the long run equilibrium. Under free entry, therefore, a procurement ban is only distortionary in the short run. (At point B, since $P_G = P_W$, there is no consumption distortion and, as production takes place at the lowest possible production cost in the long run, there is no resource allocation distortion either.)

In sum, the welfare consequences of a procurement ban depend not only on the relative size of government demand and domestic industry output at the free trade prices, but also on the strength of a nation's competition policy as reflected in the ease of entry and exit. The effects of imposing a procurement ban are summarized in Table 1.¹³

Table 1: Long run equilibrium impact of a procurement ban

Variable:	At initial free trade prices, P_w		
	$D_G(p_w) < S_H(p_w)$	$D_G(p_w) > S_H(p_w)$	
		No free entry	Free entry
Price	0	+	0
Domestic industry output	0	+	+
Quantity of imports	0	-	-
Domestic welfare	0	-	0

Key: 0: no impact; — : Decline; + : Increase.

¹² While one might object to this assumption, several observations are in order. First, the assumption that both domestic and foreign firms share the same minimum level of long run average costs does not imply that they have the same cost functions or indeed access to the same technology. Second, if domestic and foreign firms do not have the same minimum level of long run average total costs then, in the absence of any trade barriers, it would have been impossible for both types of firms to potentially supply the domestic government in the initial long run equilibrium. Third, if in the initial long run equilibrium the foreign firms had lower costs than domestic firms, then domestic firms would not be supplying the domestic consumers either—and so would have had no sales. (That is, there would have been no domestic industry to shift government contracts towards!) Fourth, one can relax the assumption of identical minimum average total costs to allow for a foreign cost advantage so long as there is some international friction (such as international transportation costs) that exactly closes the gap between the minimum long run average costs of the foreign and domestic firms. Obviously, the latter argument has a “knife edge” property to it.

¹³ One can question the assumption of constant industry costs that underpins the horizontal industry supply curve. Although in our view in many cases this will be appropriate in practice, we discuss the increasing industry cost case (upward sloping long run supply schedule) in Section 4.

The impact of removing a procurement ban is, therefore, also sensitive to entry. Suppose the market is in long run equilibrium and the ban is eliminated. In the case of Figure 1 nothing changes: the government need no longer buy from domestic firms, but has no incentive to switch to foreign firms as $P_G = P_W$. In the case of Figure 2 with no entry, the pre-liberalization long run equilibrium is point D, where $P_G > P_W$. Removing the procurement ban would shift the equilibrium back to point A, reducing the domestic industry's output, eliminating the rents and the consumption distortion and increasing imports from BC to AC. Procurement liberalization would increase imports, eliminate the distortions created by the ban, and so improve national welfare. This conclusion does not carry over to the free entry case. If point B represents the level of domestic firm's sales to the government in the long run equilibrium before liberalization, removal of the ban does not alter the long run equilibrium price as every domestic supplier can find a buyer at this price, and every domestic buyer can find a domestic or foreign supplier. No one has an incentive to alter their plans, and removal of the procurement ban will not change the level of imports or the output of the domestic industry. Put another way, the damage has already been done: removing a procurement ban need not restore the pre-ban market outcomes.

3. The effects of price preference policies

In practice, rather than ban all purchases from foreign firms outright, governments often employ price preferences to discriminate against foreign suppliers.¹⁴ That is, the government inflates the actual supply price by $\rho\%$ (where $\rho > 0$ is the margin of preference). If the foreign firm's 'preference inflated' price is below that bid by domestic firms, the government purchases from the foreign seller at its actual (not its preference inflated) price. Otherwise, it buys from the lowest price domestic supplier.

The analogue to Figure 1 is represented in Figure 3: at free trade prices the quantity demanded by the government is less than or equal to the quantity supplied by the domestic industry. Irrespective of the size of the parameter ρ , the price preference policy results in the same reallocation of sales between firms observed under a procurement ban. Government purchasers evaluate the supply price of foreign suppliers as $(1+\rho) P_W$, and domestic suppliers as

¹⁴ In the absence of a formal procurement ban against foreign suppliers, the best justification for assuming that a government procurer does not source from abroad is that this is the combined effect of all of its discriminatory procurement policies.

P_W . Switching their purchases to domestic suppliers has no effect on prices, imports, domestic output, and national welfare. Similarly, removal of the preference policy has no effect.

When government demand exceeds domestic supply at free trade prices, two cases must be distinguished. The first is where the percentage difference in prices between P_W and P_G is less than the price preference (Figure 4). Starting from the original long run equilibrium at point A, the preference policy effectively “prices” the foreign supplier out of the market since their supply price to the government rises to $P_W(1+\rho)$. Here, government demand can only be met by domestic suppliers at a higher price P_G . In the absence of entry, point D is both the short and long run equilibrium, and similar to a procurement ban, the price preference policy creates both a long run consumption and resource allocation distortion. Here, removal of the price preference policy would shift the equilibrium back to A, eliminating both distortions and restoring the “lost” market access. However, if we allow for entry, the rents created by the preference policy in the short run attract firms into the industry. Analogous to Figure 2, with the long run supply curve LS_H a long-run equilibrium with domestic firms supplying the government the quantity of goods associated with point B does not distort create long run resource misallocations. Moreover, elimination of the preference policy has no impact on prices, domestic output, net imports, and welfare. With free entry, the reduction in imports caused by imposing a price preference policy cannot be reversed by its removal.

The second case is portrayed in Figure 5: here the price preference parameter, ρ (expressed as a percentage) is less than the percentage increase in price that would result if only domestic suppliers were allowed to sell to the domestic government. Thus, ρ is low enough so as not to “price” foreign suppliers entirely out of the market. Any domestic firm that attempts to price above $P_W(1+\rho)$ will find itself with no customers. Consequently, in the short run prices paid by the state rise to $P_W(1+\rho)$, and the government still imports some foreign goods (equal to amount DE). The price preference creates rents for incumbent domestic firms, as well as consumption and resource allocation distortions. Without entry, the long run equilibrium remains at point D. Elimination of the preference policy would in this case shift the long run equilibrium from point D to A, increasing national welfare and imports.

Allowing for entry in Figure 5 has some new implications. Domestic firms enter until prices fall to P_W and sales to the government reach the quantity associated with point B on the long run supply curve LS_H . However, the additional domestic output reduces long run

equilibrium imports to zero. Thus, price preference policies need not eliminate imports in the short run (as a procurement ban would), but with free entry will eliminate imports in the long run. This implies that even a small price preference can create a large long run increase in industry output and corresponding reduction in imports. When the new long run equilibrium has been established after the introduction of a price preference policy, removal of that policy will have no effect on prices paid by the state. Once again, after the price preference has been imposed free entry ensures that the long run effects of preferences cannot be reversed by their removal.

The impact of a price preference policy is summarized in Table 2. In the case where government demand exceeds domestic industry supply at free trade prices, one cannot observe whether the price preference parameter is such that Figure 4 or Figure 5 characterizes the short run and long run equilibria. Consequently, in this case, we cannot predict whether or not imports will collapse to zero in the short run.

Table 2: Impact of price preferences

Variable:	At Initial Free Trade Prices			
	$D_G < S_H$ Short & Long Run Impact	$D_G > S_H$		
		Short Run Impact	Long Run Impact	
		No entry	Free Entry	
Price	0	+	+	0
Domestic industry output	0	+	+	+
Quantity imported	0	-	-	-
Domestic welfare	0	-	-	0

Key: 0: no impact; — : Decline; + : Increase.

4. Increasing long run industry costs

The results obtained in sections 2 and 3 are sensitive to assumption that the long run supply curve is horizontal.¹⁵ The consequences of relaxing this assumption are straightforward: entry will still occur after a procurement ban is imposed, but this will not drive prices for the government back down to P_W . In the case of figure 2, for example, the long run equilibrium price paid by the government will be found at the point on the line segment DB where this segment

¹⁵ One reason that this assumption may not hold is if factor prices increase as industry output expands because factors are specific. More generally, it is an empirical matter whether an industry has an increasing long run supply curve or a horizontal supply curve.

intersects with the (upward sloping) long run industry supply curve. The implication is that in the long run the domestic market for the product concerned becomes segmented and even though domestic private consumers remain unaffected, there is a resource allocation distortion. Furthermore, the size of this distortion is smaller when entry is possible compared to the no entry case; again demonstrating the importance of entry barriers in determining the magnitude of any resource misallocation created by procurement discrimination. In terms of market access, if the long run industry supply curve is upward sloping, then removing a binding procurement ban or price preference will result in some domestic firms exiting the industry and imports increasing.

Another interesting point emerges when the long run industry supply curve is upward sloping: the market segmentation that results from procurement discrimination also creates an incentive for arbitrage. Given that $P_G > P_W$ in cases where $D_G > S_H$, traders will find it profitable to try to import goods and resell these to the procuring entities. If procurement officials are subject to hard budget constraints and have incentives to minimize costs they may be inclined to circumvent the ban. The same is true if officials are not interested in obtaining value for money—if there is corruption, officials may seek to procure foreign goods at (probably just above) world prices in return for kickbacks from the suppliers. This suggests another channel by which discrimination in procurement can generate incentives for corruption. Moreover, in this case, the incentive to engage in corrupt practices created by procurement discrimination may well mitigate any market access reductions suffered by foreign firms!

5. Procurement of non-tradables, services, and ‘proximity’ goods

Much of what is procured by governments is not tradable—including many services. Francois, Nelson, and Palmetter (1997) note that in 1993 purchases by federal, state, and local authorities in the United States exceeded US\$ 1.4 trillion, equivalent to some 20 percent of GDP. Out of this, federal procurement totaled \$445 billion, of which 68 percent was spent on defense (goods, services, and employee compensation). Of the remaining \$141 billion, employee compensation comprised 48 percent, leaving \$73 billion. Most of this (\$59 billion) was used to procure services. After wages, at the state and local level, the largest category of expenditure is construction. Therefore, to a large extent, services are where the action is in procurement markets.

A difficulty that arises in evaluating discriminatory policies towards the procurement of nontradables is that there will be no world price to pin down the analysis. Independent of the potential effects of discriminatory procurement regimes, national markets will be segmented and prices will depend to a large extent on local factor costs and technologies. However in the long run, free entry ensures that firms earn zero profits, and that prices are set at minimum average total costs. In this case an assumption of U-shaped cost curves conveniently pins down long run prices.

While there are many forms of services procurement discrimination possible, for simplicity we consider the impact of a ban on government purchases from subsidiaries of foreign firms that have already established a local presence.¹⁶ Assume that both domestically-owned (or “home”) and foreign-owned firms have access to the same technology and confront the same factor prices. Figure 6 portrays the long run equilibrium in the absence of the procurement ban: in this case the prevailing price C^* is such that government demand is less than home firms supply, i.e., $S_H(C^*) > D_G(C^*)$. The imposition of a ban has no effect—it merely reallocates customers to foreign affiliates.¹⁷

If at the initial long run equilibrium price C^* (the minimum cost of production), government demand exceeds home supply, so that some foreign affiliates supply the government, a procurement ban acts to segment the market (Figure 7). Home firms supply the government at price P^I , which is higher than C^* , and foreign subsidiaries are left supplying only the private sector at a lower price P^{II} (as home private consumers are unwilling to buy all of the output of these subsidiaries at the initial price C^*). The short-run impact of imposing a procurement ban is therefore to introduce two consumption and two production distortions. Unlike the tradable goods case, in the short run the procurement ban actually raises home consumers’ welfare!

This short run equilibrium will not persist as foreign-owned firms are making losses, and some will exit until the price paid by home consumers rises to C^* , where foreign subsidiaries break even. In Figure 7 this implies that the home consumers’ demand returns to point D from point B. Home firms are making positive profits at the short run equilibrium price P^I . If entry is

¹⁶ Evenett and Hoekman (2000) discuss services procurement issues, including the treatment of services in the WTO Agreement on Government Procurement in greater depth.

¹⁷ In nontradable services markets the appropriate comparison is between government purchases and home firms supply at free trade prices, not between government purchases and total supply.

permitted, this will force down the price paid by the government until firms make zero profits (at price C^* and government demand at point C). Thus the long run effect of the ban is to increase the number of domestic-owned firms and to reduce the number of foreign-owned firms. In contrast to the case of non-tradable goods and services, both free entry *and* exit are needed to eliminate the consumption and resource allocation distortion in the long run. Furthermore, elimination of the ban has no effect on the equilibrium price and so cannot return the market to the pre-discrimination outcome. Table 3 summarizes our results, which reinforce the central role policies towards competition play in determining the long run impact of discriminatory procurement policies.¹⁸

Table 3: Impact of a ban on purchases from foreign-owned firms

Variable:	At Initial Free Trade Prices, C^*			
	$D_G(C^*) < S_H(C^*)$	$D_G(C^*) > S_H(C^*)$		
		Short Run and Long Run without entry or exit	Long Run with exit only	Long Run with entry and exit
Price paid by home consumer	0	-	0	0
Price paid by government	0	+	+	0
Home Firm's output	0	+	+	+
Foreign Subsidiaries' output	0	-	-	-
Domestic Welfare	0	-	-	0

Key: 0: no impact; — : Decline; + : Increase.

6. Transparency

The foregoing has focused almost exclusively on international discrimination, as this is the traditional focus of the WTO negotiators and trade policymakers. In the Doha round, however, considerable emphasis has been put on improving transparency in public procurement. A lack of transparency can impede the ability of foreign firms to bid for contracts even if there is no discrimination. Opaque procurement practices may result from either administrative inefficiencies, the absence of hard budget constraints or oversight by the Ministry of Finance; or rent seeking and corruption. The result can be a major source of loss for the government budget (as contracts will not go to the most efficient supplier). Case studies suggest excess costs per

¹⁸ Note that this analysis can be applied to policies that discriminate across different types of domestic firms, e.g.,

project can be in the 25-50 percent range (Rose-Ackerman, 1995a, b; Ades and Di Tella 1997, Bardhan, 1997).

Analyzing the effects of opaque procurement regimes requires specifying the motives for non-transparency, the impacts (if any) on firms' costs and on the composition of government expenditure. Several cases can be distinguished, the first two of which are straightforward applications of the framework developed in previous sections. The first case considered here refers to a situation where a government has not made the investments necessary to run a transparent procurement regime. For example, the government may be unwilling or unable to spend resources on public announcements of intended future purchases. Potential suppliers—both domestic and foreign—may therefore be uncertain of the demand curve facing them and so be reluctant to enter the market. To the extent that acquiring information about demand levels in potential markets requires incurring fixed costs (additional costs per unit supplied) then one would expect long run (short run) market outcomes to be affected. For example, if informational costs raise the marginal costs of firms (irrespective of location) then this will (i) shift upward the short run supply schedules of domestic firms and (ii) the price at which foreign firms effectively compete will rise above the world price. In this case, improving transparency will help reduce costs, which in turn will lower prices and enhance national welfare.

The second case does not require any administrative inefficiency or lack of administrative capacity. Here, non-transparency is motivated by a desire on the part of a government (or specific entities) to circumvent a non-discrimination rule.¹⁹ If so, implementing a transparent procurement regime (perhaps in response to a WTO agreement on procurement) will have the same effects on market access and national welfare as reducing discrimination; in which case one can refer directly to the results discussed earlier.

These two cases are to be differentiated from a third case where the lack of transparency is the result of the self-interest of government officials—specifically, they attach a positive weight to income from bribes as well as from obtaining value for money for their government agency's purchases. There is a growing body of evidence that corrupt officials deliberately expand expenditures on goods and projects—such as aircraft and construction—which are highly differentiated and for which there are few, if any, comparable reference prices in world markets

legislation that grants preferences to small and medium sized or minority-owned businesses.

(Hines, 1997). Put simply, officials with an interest in rent collection are likely to employ non-transparent procurement regimes to expand government spending on those items where the opportunities for self-enrichment are greatest.²⁰ A consequence of having to pay bribes to bid for government contracts is to reduce number of domestic bidders.²¹ That is, the result can be thought of as shifting outward the government demand curve for products where there are opportunities for corruption, and at the same time shifting in the supply curve of firms.

To see what is the maximum possible effect on market access of imposing transparency in such a context on the procurement regime, assume that until now no foreign firm supplied the domestic government.²² Furthermore, suppose that following a multilateral agreement a transparent procurement regime is imposed and corruption ceases. The first effect is to reallocate government spending away from goods that were more prone to bribery. Figure 8 represents diagrammatically the consequences of this reform. With the opaque procurement system, foreigners would not sell anything to the government and the domestic firms' sold output Q_2 at price P_2 to the state.²³ Imposing transparency allows foreigners to sell the government, and shifts the demand curve from D_g to D_{g1} . The government takes advantage of access to world prices and buys quantity Q_3 , which is less than if the demand curve had remained at D_g . This implies that the quantity imported rises by (Q_3-Q_1) , with increase in market access worth $P_w(Q_3-Q_1)$. Thus, if corruption is the motivation for non-transparency *and* the latter resulted in effectively excluding foreign firms from selling to the government, then imposing a transparent procurement regime will improve market access less than the removal of a procurement ban that was not motivated by malfeasance by officials. Furthermore, if the fall in government demand is large enough so that domestic firms can now (at world prices) entirely supply the government's needs, then market access need not improve at all.²⁴

¹⁹ Of course, this will only be relevant for countries that are subject to such a rule, i.e., current signatories of the plurilateral WTO agreement on government procurement.

²⁰ Further evidence for this argument can be found in Mauro (1998), who finds that spending on education suffers in more corrupt economies and conjectures that the purchase of standard items such as textbooks and the hiring of teachers offer fewer opportunities for corruption than other government projects.

²¹ This is especially likely to drive out small and medium sized enterprises (SMEs). Unlike larger firms, SMEs do not have as many resources to devote to dealing with officials and paying bribes. See Tanzi and Davoodi (2000).

²² Of course, this need not be the case as an opaque procurement regime may be deliberately designed so as to extract bribes from foreign firms. However, this is illegal under US law for US-based firms, while recent initiatives in the OECD context have made it more difficult for other OECD-based firms to engage in bribery.

²³ No doubt some of the premium over the world price (P_1-P_w) is paid in bribes to corrupt officials.

²⁴ The lower impact on market access of transparency reform may be offset by greater imports of those goods that the government now increases expenditure on. In principle, this latter effect may ensure that transparency reform

Elimination of a non-transparent procurement regime will have a second effect, namely expanding the number of domestic firms who are willing to sell to the government. This case is analyzed in Figure 9. The starting point is the same as in Figure 8: in the presence of a non-transparent procurement regime motivated by corruption the equilibrium price P_1 prevails and domestic firms supply quantity Q_1 . Ignoring the effect of transparency reform on the government demand curve, such reform results in more firms entering the market (now that they do not have to spend time and money on officials), and this shifts the supply curve out to S_1 . With the government keen to buy at world price P_W , domestic firms now supply Q_4 and imports expand but only to $(Q_F - Q_4)$, not $(Q_F - Q_1)$ as happened when the procurement ban alone was eliminated. Market access only rises, as a result of transparency reform, by $P_W(Q_F - Q_4)$. Arguably, these new firms could have been attracted from other markets, and imports to those latter markets may well increase—providing additional benefits to foreign firms. (Such an effect will depend on the availability of unemployed resources, which can enter a new market without reducing supplies to other markets, and upon the relative profitability of supplying different markets.) Again, the theoretical case is ambiguous, and it is entirely plausible that transparency reform creates less market access benefits than eliminating discrimination. In this third case, therefore, although there is little debate about the benefits of reducing corruption and the importance from a welfare point of view of transparency in procurement, the market access gains may be limited. If non-transparency in procurement is motivated by the self-enrichment of officials, the market access effects of fully implementing a transparent procurement regime are likely to be less than if protectionist impulses motivated non-transparency.

7. Transparency and trade agreements

The absence of a significant market access benefit to the transparency reform has implications for efforts to include transparency in trade agreements. If the major source of gain from transparency is lower cost procurement, then why is a reform that can be implemented unilaterally an issue for multilateral (or regional) negotiation? A number of arguments are

creates more market access than eliminating a straightforward procurement ban, but the circumstances under which this is likely to occur are restrictive. This is due to the requirement that government demand must end up exceeding domestic firms' supply for imports to increase after the reallocation of government spending towards goods which offered (in the past) fewer opportunities for corruption. This requirement may not be satisfied for all the goods whose government demand expands under a transparent procurement regime.

possible. What follows focuses on the WTO, but the arguments apply also to regional trade agreements.

First, it might be argued that starting with transparency is justified as being a precondition for non-discrimination to be enforceable, that is, as the first step towards market access disciplines (as non-transparency can help entities avoid non-discrimination). This is a rather weak argument for a contemporary initiative on transparency at the WTO given the opposition on the part of many countries to accept a binding non-discrimination rule. A second possible argument is that all WTO rules need not have a market access dimension. If there are gains from transparency, that should be sufficient rationale for agreeing to put such disciplines into the WTO. The critical question here is whether transparency can be better addressed in other fora and organizations such as the UN, development banks or regional organizations. In practice entities such as the UN and the World Bank are actively engaged in assisting governments to improve procurement regimes.

A third argument is that a WTO agreement on transparency might help those governments that still have problems unilaterally implementing procurement reform even after any assistance received from multilateral and bilateral development agencies. Presumably, as is true for other subjects, an attraction of the WTO is that cross-issue linkage can help governments mobilize support for reforms that will be opposed by powerful vested interests. A fourth—closely related—attraction of using the WTO as a focal point for procurement reform is that there is binding dispute settlement mechanism. An open question in this regard is whether exporters will have strong incentives to encourage their governments to bring cases. This depends in part on the net payoff that can be expected from dispute settlement. In practice, the length of time before a case is adjudicated at the WTO plus the absence (at present) of any compensation for forgone profits of “wronged” firms, call into question the usefulness of multilateral dispute settlement procedures when it comes to procurement contracts (Hoekman and Kostecki, 2001).²⁵ Therefore, WTO dispute settlement does not provide strong incentives to

²⁵ This is to say nothing regarding a foreign firm’s fear that a government will retaliate against it in future procurement decisions should the former complain.

WTO members not to erode what little market access benefits accrue from any improvements in transparency.²⁶

One question that will need to be answered during the course of any negotiations on transparency in the WTO concerns what will need to be done at the national (and sub-national) level to implement transparency provisions. Effective deterrents against nontransparency and corruption will be required—such as credible threats of *ex post* punishments that exceed the gains realized by officials and firms (e.g., by firing officials and fining and banning firms caught in attempts to engage in bribery from bidding for contracts for a number of years); the creation of external monitoring devices and institutions (including encouragement and protection of "whistle blowers"); audits by independent entities (that are publicly available and published); and the creation of mechanisms and incentives for losers of corruption to bring cases forward.

Last, but not least, transparency is not costless—indeed, the procedures, training and domestic enforcement institutions that are required to make transparency a reality are complex and extend far beyond the narrow confines of procurement. Insofar as the issue largely revolves around disciplining the scope for corruption, the focus must extend beyond procurement. It must encompass not only the civil service generally, but also institutions such as the police, the judiciary, etc. This suggests that at the very least implementation of WTO rules on transparency on procurement—if they are negotiated—should be linked to (and sequenced with) broader reform efforts by governments to improve governance, and complemented by active support by the development community.

8. Concluding remarks

From the perspective of improving the allocation of economic resources—which in poor countries should be a key objective of development policy—the most successful multilateral trade initiatives have involved policy instruments where reforms improved market access. In doing this, waste and resource misallocation are also reduced. Reductions in tariff rates, by and large, result in *both* improved market access and higher national welfare. While much has been accomplished in reducing these barriers over successive trade rounds, much less has been

²⁶ A challenge or bid-protest mechanism that can be invoked by participants in a procurement process to contest instances where transparency rules appear to be violated may be more effective. At the WTO level, such a mechanism could involve multilateral surveillance (Hoekman and Mavroidis, 2000).

achieved in trade negotiations on public procurement. Our analysis provides one explanation why: potential international disciplines on procurement reforms are unlikely to translate into simultaneous improvements in market access and national welfare. Only under special—that is, not very general—circumstances is the economic case for reforms likely to be strong when the political economy to support such reform is favorable. This calls into question what can be realistically expected, or indeed what should be advocated, in international negotiations on procurement policies.

In many circumstances the impact of discriminatory procurement regimes on national welfare is likely to be limited in magnitude and duration. Often government demand will be too small to affect market outcomes. If the demand of government entities is initially larger than domestic supply—a situation that may be relatively more common in developing countries—discrimination can reduce imports and lower welfare. However, in the long run the distortions created by a discriminatory procurement policy will be smaller in economies with lower barriers to entry. While there may often be detrimental effects of such discrimination on market access—perhaps accounting for the concerted effort over many years in the WTO and OECD to discipline the scope for discrimination in procurement—a key finding of our analysis is that much of the adverse impact on market access may well not be reversed upon liberalization. The damage to market access will already have been done.

The focus of WTO members in the Doha round of negotiations is on transparency in government procurement, not on non-discrimination. We have argued that there is an ambiguous link between transparency and market access, raising doubts regarding the effectiveness of the WTO as an instrument to improve transparency of procurement practices. WTO negotiations may be an effective means for governments to pursue improved procurement procedures and outcomes by helping them to overcome political economy constraints that impede the adoption of better policies. However, although the *quid pro quo* in terms of better access to export markets or improved WTO rules in other areas may allow a transparency agreement to be pushed through at the domestic level, a major question is how such rules will be enforced. The lack of a compelling market access dimension to a potential multilateral agreement on transparency greatly reduces the incentives for firms to lobby their governments to bring cases to the WTO. All of these considerations cast doubt on the magnitude of the potential benefits of embedding

rules on transparency in government procurement in trade agreements—whether multilateral or regional.

A more effective method of encouraging the adoption of efficient procurement practices may well revolve around voluntary mechanisms such as development assistance, policy dialogue, and advocacy. There is a very large overlap between the procurement domain and the issue of public sector governance and improving the investment climate and business environment. It is important that assistance aimed at improving procurement practices be integrated into this broader agenda.

Finally, it can be noted that the argument that has been made here regarding the implications for the WTO of the limited market access dimensions of procurement policies may well apply more generally. There are other subjects that have been proposed for inclusion in the WTO (as well as regional trade agreements)—such as trade facilitation and competition law. Here also the market access link is arguably weak—these are primarily policies that have implications for national welfare and that require national action; indeed, often the issue of discrimination does not even arise.

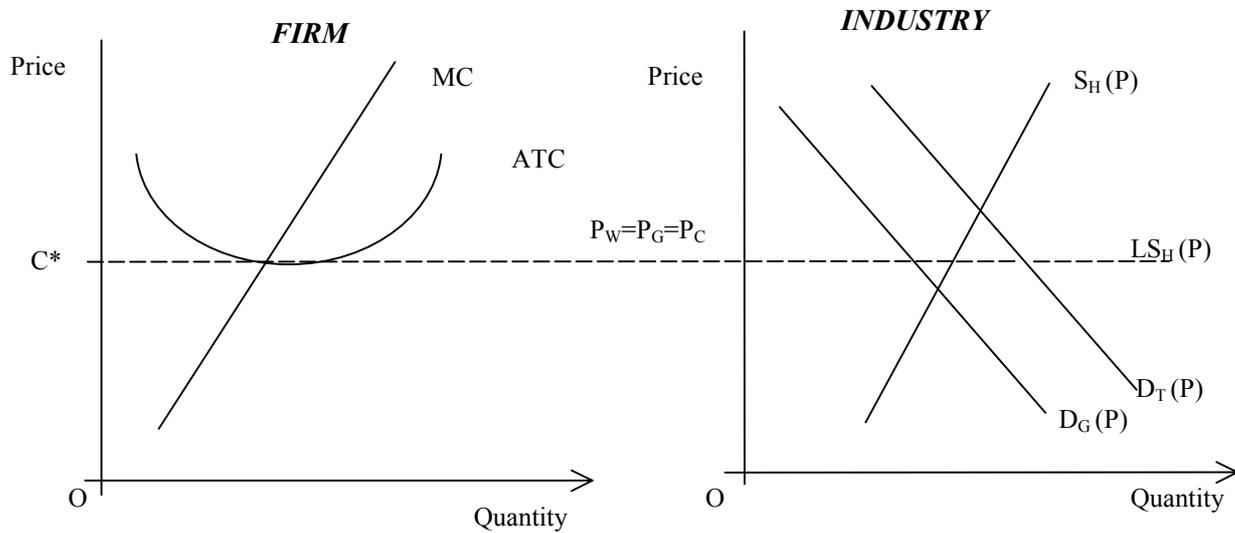

Figure 1

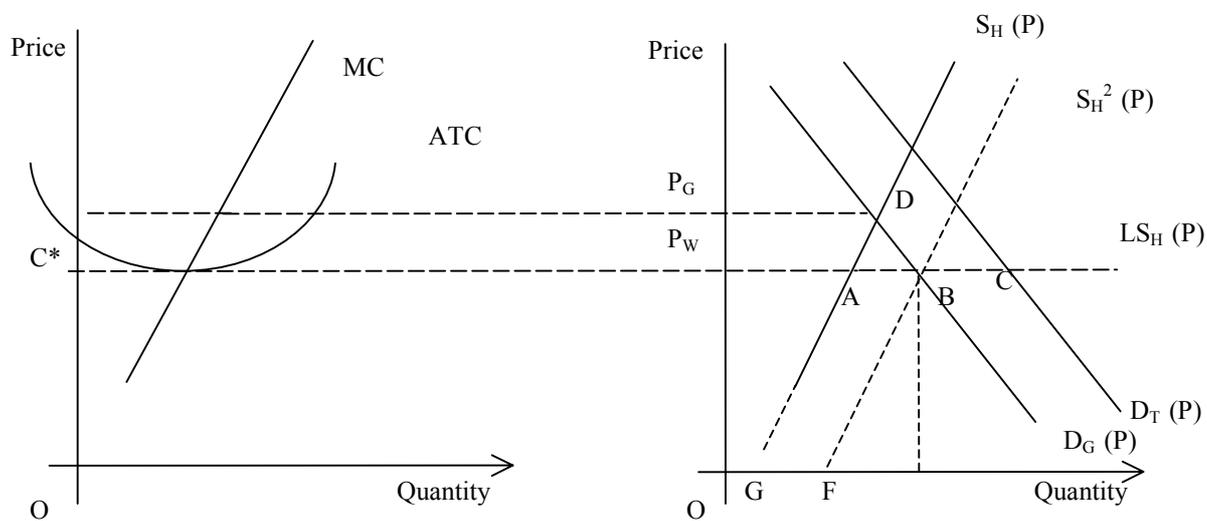

Figure 2

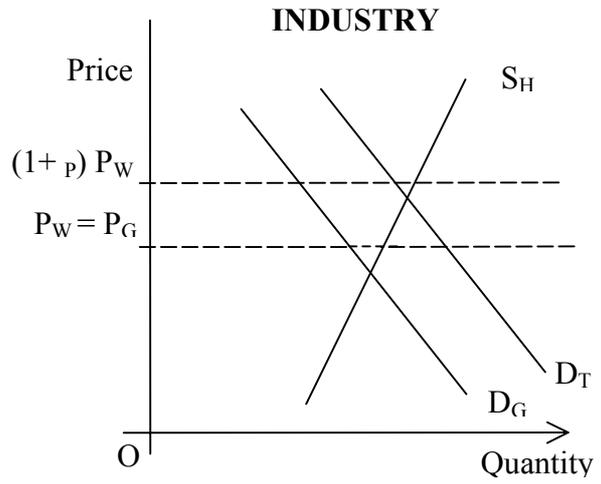

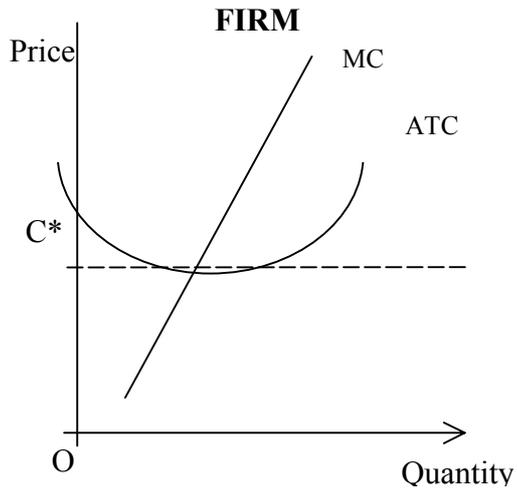

Figure 3

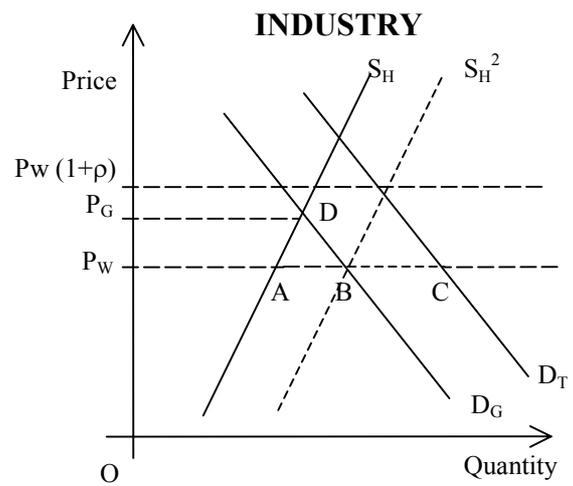

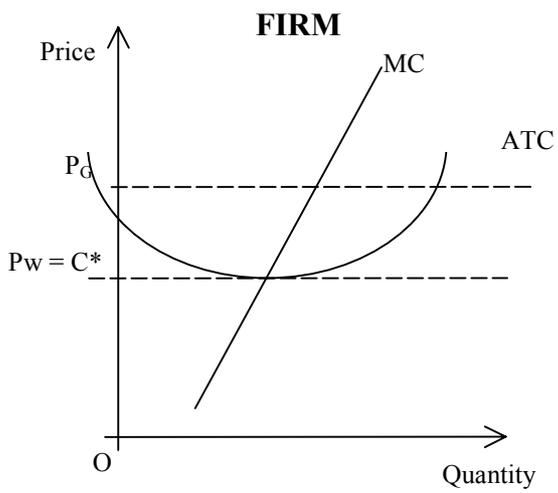

Figure 4

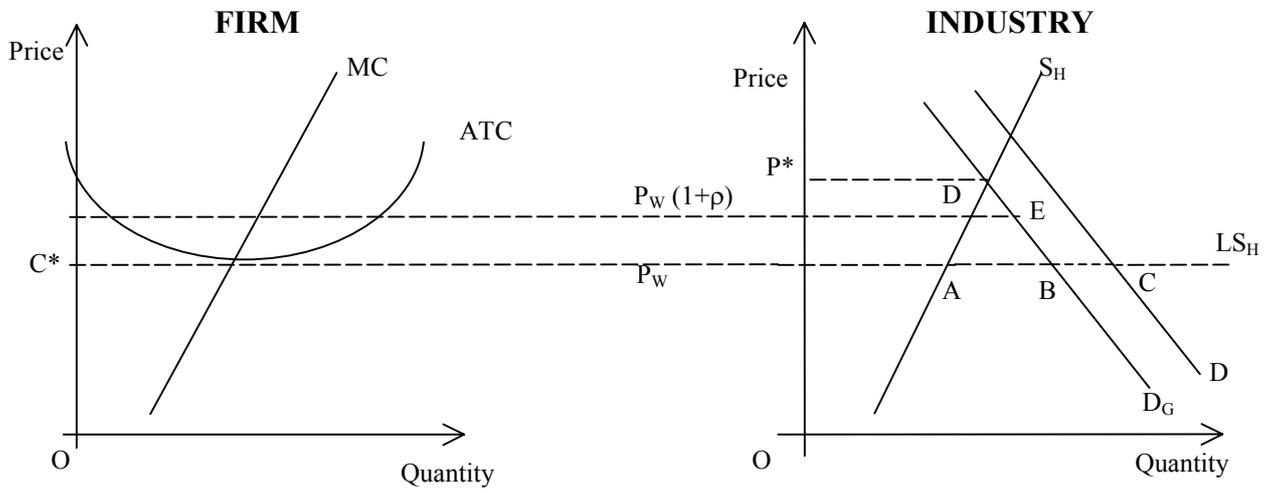

Figure 5

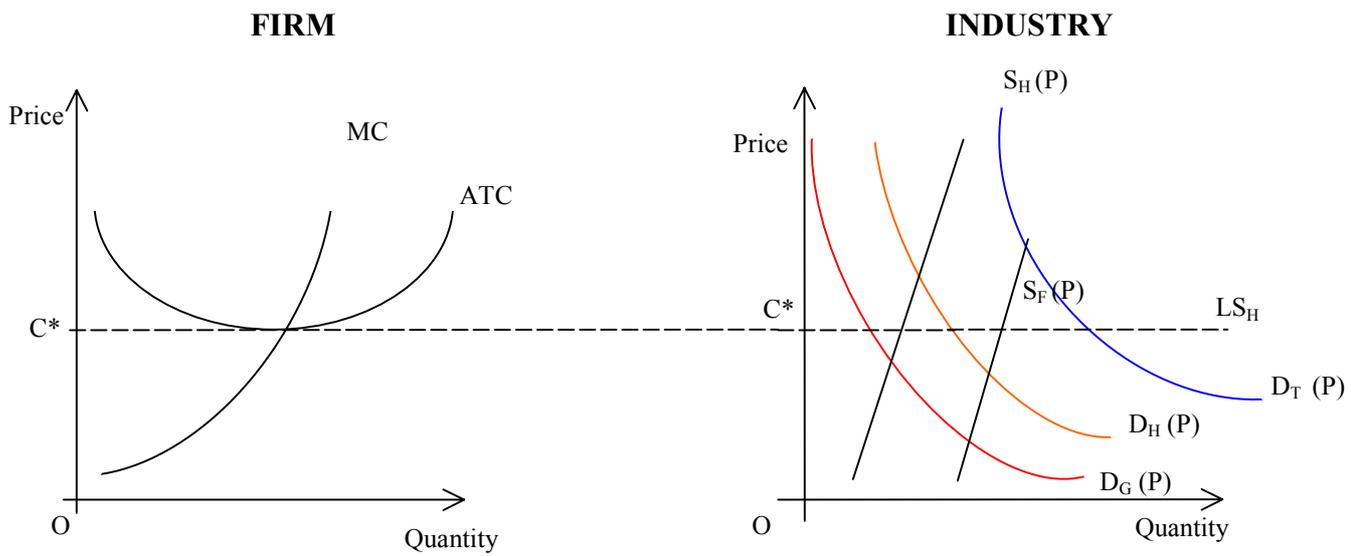

Figure 6

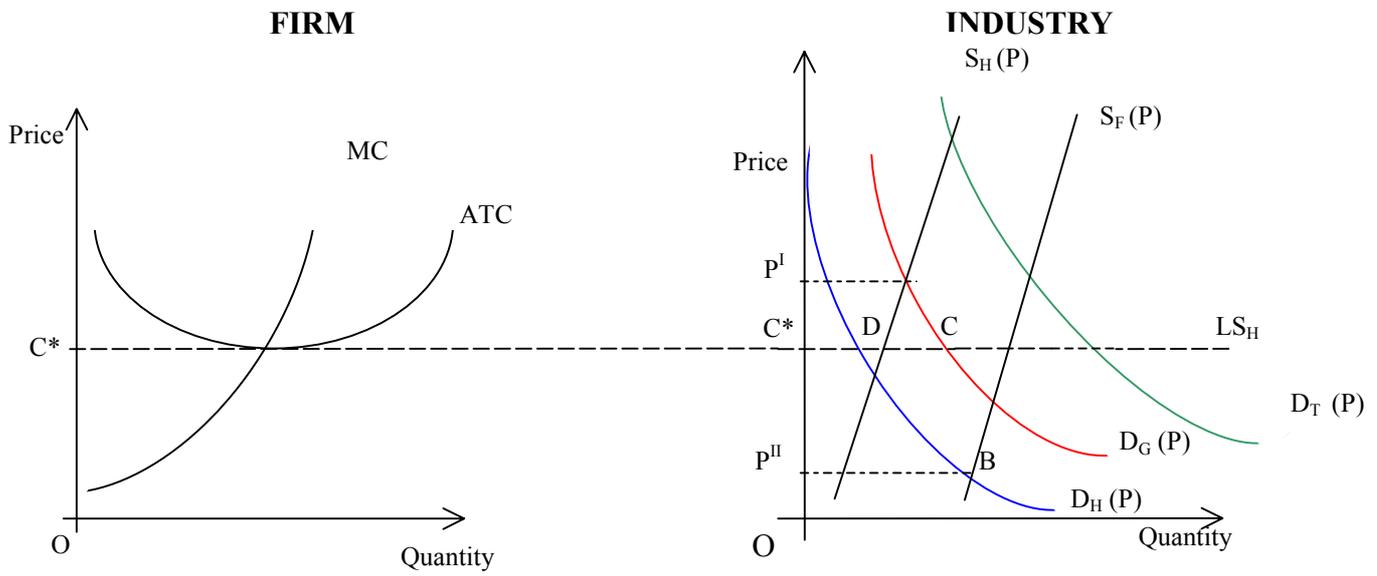

Figure 7

Figure 8:

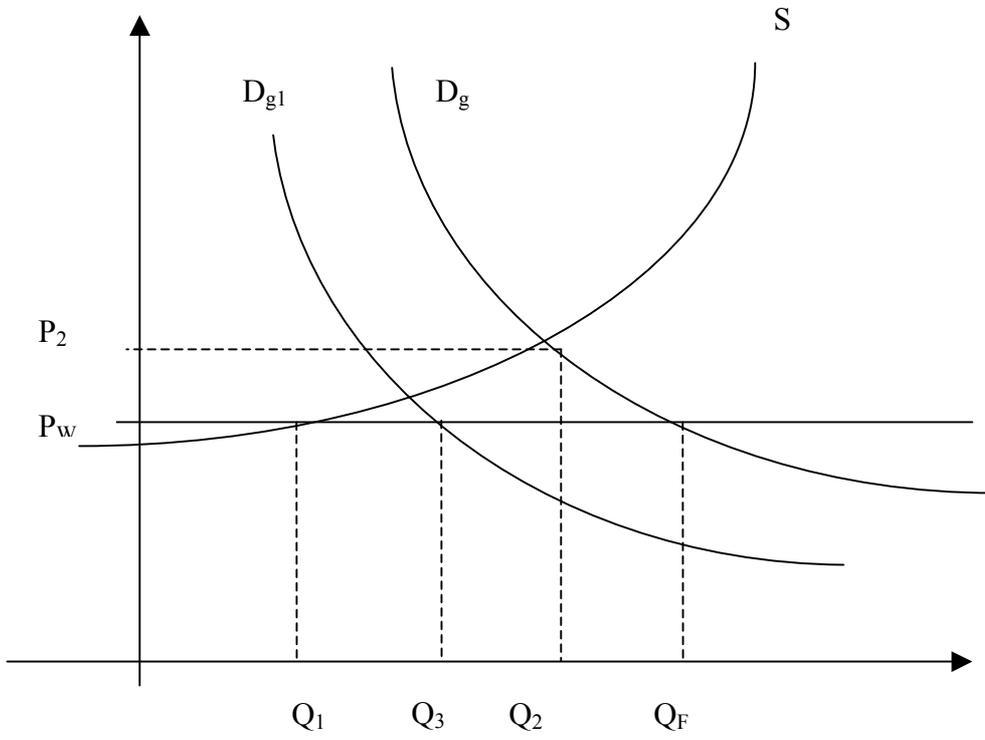

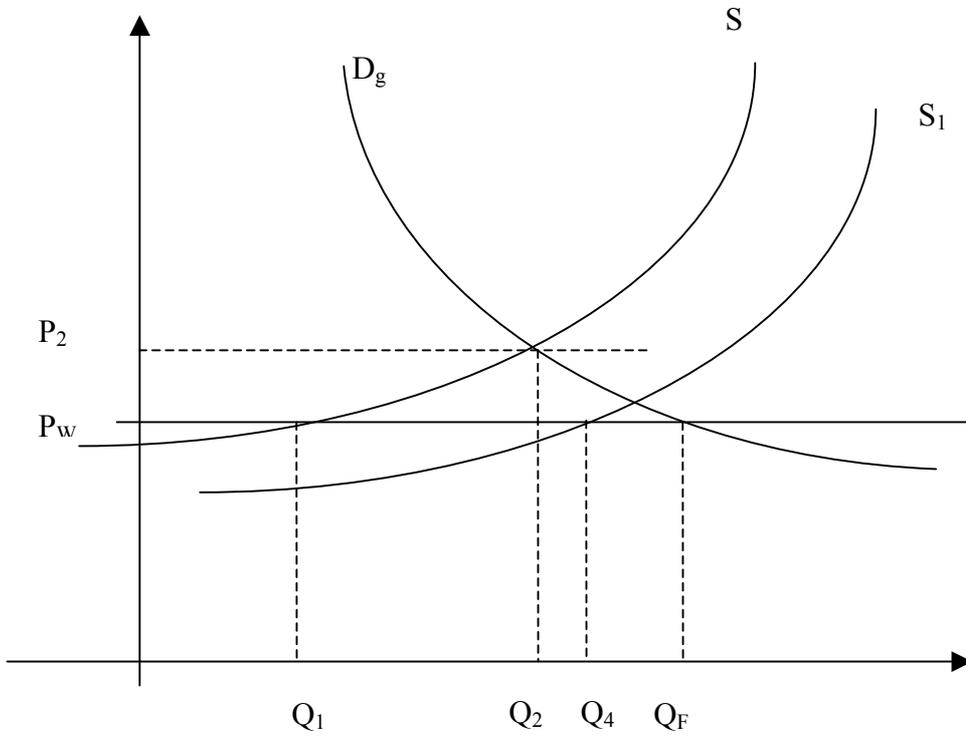

Figure 9:

n general:

Responsibility for government procurement in Switzerland is at three levels:

- federal
- cantonal
- local

National experience with the coverage of the GPA

What did the GPA change?

First international agreement on government procurement also for subfederal level

but:

Implementation remains at the federal, cantonal and local level

National experience with the coverage of the GPA

Before 1996:

- only guidelines
- no challenge procedure

Since 1996:

- federal and cantonal laws
- challenge procedures at the federal and cantonal level

National experience with the coverage of the GPA

Monitoring by a Commission of the confederation and the cantons which can also

- Mediate in specific cases
- Make proposals concerning on-going negotiations in international fora
- Give recommendations on the application of government procurement rules

What has the experience been at these levels?

In general:

Procurement procedure is now transparent, non-discriminatory and foreseeable

→ more participation on a national and international level

Enhanced market access

→ make sure that this is also the case in GPA partners

Challenge procedure is possible

→ as a means of last resort

What has the experience been at these levels?

Procuring entity must better prepare what actually wants to procure

→ makes procurement process more efficient

Reduction of costs for procuring entity

→ more competition in bid procedure

Lessons learnt

- Government procurement cannot solve all problems (reduce unemployment, regional preferences)
- Better market access means better information on procurement opportunities, especially for SME's (tailor-made list of projects)

Lessons learnt

- New developments require adjustment of the rules (e.g. E-procurement)
- Harmonisation of federal, cantonal and local rules is an important objective (even though not required by the GPA)

Experience with Issues Relating to Scope and Coverage of Government Procurement

Coverage in the WB Guidelines and the UNCITRAL Model Law

Jean-Jacques Raoul

World Bank

October 9, 2002

Purpose

- ◆ Briefly explain the coverage of the guidelines of Multilateral Development Institutions and UNCITRAL Model Law in respect to Government Procurement

Guidelines of MDBs

- ◆ Coverage: Most public sector activities (except defense) to the extent that they are funded by the MDB concerned
- ◆ All goods, works, equipment, and services, including consulting services, and BOT/concessions
- ◆ Obligations of the Borrower derive from a Loan Agreement (LA), which
 - covers procurement under the Project
 - refers to the MDB Procurement rules
 - defines procurement methods for Borrower's use
 - supercedes provisions in the national law if inconsistent with LA

General Considerations of MDB Guidelines

- ◆ Need for economy and efficiency
- ◆ Need for high-quality services (Consultants)
- ◆ Equal Opportunity to compete
- ◆ Encourage the development of national industry
- ◆ Importance of transparency in the process

Procurement Methods (Goods, Works and Related Services)

- ◆ Open competitive bidding must generally be used, with or without pre-qualification:
 - International Competitive Bidding is preferred (allows for margin of domestic preference)
 - National Competitive Bidding used for smaller contracts, unlikely interest of international bidders
 - basically similar Principles between ICB and NCB, exceptions: language, advertisement media, bidding time, bid/contract currency, and terms of contract

Procurement Methods - 2

- ◆ Other methods of procurement are allowed, as exceptions (Limited International Bidding, Shopping, Direct contracting)
- ◆ Reserved procurement, Misprocurement

Selection Methods (Consulting Services)

- ◆ Advertisement for expressions of interest, short list of qualified candidates, request for proposals, evaluation of technical and financial proposals
- ◆ Quality and Cost Based Selection is the preferred method – Quality: 80-90% weight, Cost: 20-10% weight.
- ◆ Other selection methods allowed if specified: Quality Based Selection, Selection under a fixed budget, least cost selection, selection based on qualification and single source selection

Procurement of BOT/Concessions

- ◆ Issue is specifically addressed in MDB Guidelines
- ◆ WB Guidelines provide for competitive bidding (Open or Limited) with PQ and/or one or two-stage bidding process
- ◆ If competitive bidding has not been used for selection of concessionaire, then it must be used for procurement of goods and services financed by the WB

UNCITRAL Model Law

- ◆ Scope of application is as specified in the law (art 1)
- ◆ Usually national defense and national security may be excluded (but not necessarily)
- ◆ Exclusions from coverage are to be specified in the law
- ◆ BOT/Concession in principle not excluded. Subsequently, a Legislative Guide on Privately Financed Infrastructure Projects was adopted, complementing the Model Law

Transparency and Government Procurement Procedures

Provisions in the WB Guidelines and
the UNCITRAL Model Law

Mr. Jean-Jacques Raoul

World Bank

October 9, 2002

Purpose

- ◆ Briefly show commonalities related to transparency issues in international instruments and national legislation regarding core principles of procurement, using the World Bank Guidelines, and the UNCITRAL Model Law.

Transparency in WB Guidelines

- ◆ Transparency is needed to foster competition
- ◆ Competition is seen as the best way to get value for money
- ◆ Transparency fosters the confidence of the taxpayer in the public procurement institutions
- ◆ Most powerful way to fight corruption (thrives in the dark)

Transparency in WB Guidelines (2)

- 👉 Critical elements of transparency:
 - ◆ Notification and advertising (allowing sufficient time for participation)
 - ◆ Predisclosure of relevant information (including bid evaluation method)
 - ◆ Public bid opening (and opening immediately following the deadline for bid submission)
 - ◆ Accessibility of applicable laws and regulations
 - ◆ Use of standard bidding and contract documents
 - ◆ Appeal mechanisms
 - ◆ Debriefing
 - ◆ Publication of awards

WB GLs vs UNCITRAL Model Law

They are generally consistent, except that:

- ◆ WB GL do not allow for:
 - selection procedure for services with simultaneous negotiations (Art 43), and
 - procurement of goods or works: request for proposals (Art 48) or competitive negotiations (Art 49)

WB GLs vs UNCITRAL Model Law (2)

- ◆ In WB GL, Consultant services are governed by specific procedures relying on a qualitative and financial assessment of competing proposals.
- ◆ In respect to GPA, WB GL do not allow:
 - Selective tendering (Art X)
 - Opening of tenders where tenderers are not allowed to attend (Art XIII-3)
 - Negotiated tendering (Art XIV); instead, WB provides for two-stage bidding process

El Principio de Transparencia en los Acuerdos de Compras Gubernamentales del Hemisferio Occidental

Fernando Ocampo

Octubre, 2002

Indice

- ☛ El principio de transparencia en los acuerdos comerciales del hemisferio occidental
- ☛ El principio de transparencia en el ALCA: trabajo del GNCSP

El principio de transparencia
en los acuerdos comerciales
del Hemisferio Occidental

Acuerdos sobre contratación pública en las Américas

☛ Acuerdos Bilaterales

- Canadá - Estados Unidos (1993)
- México - Bolivia (1995)
- México - Costa Rica (1995)
- México - Nicaragua (2001)
- Chile - Centroamérica (2002)
- Panamá - Centroamérica (2002)
- República Dominicana - Centroamérica (2002)

Acuerdos sobre contratacion

pública en las Américas (cont.)

☛ Acuerdos Regionales

- México - Estados Unidos - Canadá (NAFTA), 1994
- México - Colombia - Venezuela (G-3), 1995
- Comunidad Andina (servicios), 2002

☛ Negociaciones

- Chile - Estados Unidos
- Centroamérica
- ALCA

Transparencia

☛ Disposiciones existentes en los distintos acuerdos del hemisferio

- Publicación de leyes y reglamentos
- Publicidad de la invitación a participar
- Requerimientos/Especificaciones para proveedores y para el proceso
- Criterios de Evaluación y de otorgamiento de contratos
- Mecanismos de Revisión y de impugnación

Transparencia (cont.)

☛ Obligaciones para las entidades: modelo NAFTA vs. modelo Centroamérica

- Procedimientos detallados para cada una de las etapas del proceso de compra ó aplicación de Leyes Nacionales para las modalidades de contratación que se contemplen a nivel nacional
- G-3 y algunos bilaterales con México: flexibilidad
- Venezuela y Colombia aplican legislación nacional procedimientos
- Costa Rica aplicará licitación selectiva una vez apruebe su reglamento

Transparencia (cont.)

☛ Obligaciones para las Partes

- Publicación de leyes y reglamentos
- Supervisión de las entidades en la aplicación de los principios
- Requerimientos de información sobre los procesos específicos a solicitud (NAFTA, G-3 y bilaterales con México)
- Mantenimiento de documentación por un período de tiempo (NAFTA, G-3 y bilaterales con México)
- Requerimientos de información estadística (NAFTA, G-3 y bilaterales con México)
- Establecer mecanismos de revisión por una autoridad independiente (NAFTA, G-3 y bilaterales con México)

El principio de transparencia
en en el trabajo del
Grupo de Negociación sobre
Compras del Sector Público
del ALCA

Declaración de San José

Objetivos específicos del GNCSP:

- » Lograr un marco normativo que asegure la apertura y la transparencia en los procedimientos de las compras del sector público, sin que implique necesariamente el establecimiento de sistemas idénticos de compras del sector público en todos los países
- » Asegurar la no-discriminación en las compras del sector público dentro del ámbito a negociarse
- » Asegurar un examen imparcial y justo para la resolución de los reclamos y apelaciones relativos a las compras del sector público

Declaración de San José

Objetivos específicos del GNCSP:

- » Lograr un marco normativo que asegure la apertura y la transparencia en los procedimientos de las compras del sector público, sin que implique necesariamente el establecimiento de sistemas idénticos de compras del sector público en todos los países
- » Asegurar la no-discriminación en las compras del sector público dentro del ámbito a negociarse
- » Asegurar un examen imparcial y justo para la resolución de los reclamos y apelaciones relativos a las compras del sector público

El Principio de Transparencia en el GNCSP

- ☛ Difusión de leyes y reglamentos
- ☛ Publicación de la invitación a participar
- ☛ Aplicación de especificaciones técnicas
- ☛ Evaluación de las ofertas
- ☛ Divulgación y publicación de la adjudicación
- ☛ Mecanismos de revisión e impugnación

Propuestas en el Bando de Capítulo

- ☛ Principio general (consenso)
- ☛ Evaluación de ofertas y adjudicación de contratos
 - proveer información a los oferentes para la preparación de ofertas ajustadas a los requerimientos exigidos
 - emplear criterios transparentes y objetivos -de previo conocidos por los interesados- en la evaluación de las ofertas y posterior adjudicación

publicación de la adjudicación de un contrato

- ☛ Difusión de los resultados
- ☛ Notificación a todos los participantes
- ☛ Resoluciones motivadas
- ☛ Publicación de la adjudicación
- ☛ Expedientes completos sobre los procedimientos de contratación pública

Procedimientos de impugnación

- Accesibles a toda persona interesada
- Obligación de todas las entidades de adoptar o mantener las medidas establecidas en las legislaciones
- Deber de emplear procesos oportunos, transparentes e imparciales

Requisitos de impugnación

☛ Resoluciones fundamentadas:

- deben emitirse por escrito y ser notificadas a todos los participantes
- actuaciones deben ser públicas, salvo disposición legal en contrario
- autoridad resolutoria debe ser imparcial e independiente

☛ Existencia de mecanismos de impugnación accesibles para todo interesado

Medidas especiales para economías pequeñas

- ☛ Deber de emplear cualquier método en el tanto sea transparente

**Ministério do Planejamento, Orçamento e Gestão
Secretaria de Logística e Tecnologia da Informação**

The Brazilian Federal Government Procurement Process

Main topics for the October 9th. 2002 OMC/Geneva presentation.

1. General Explanation on the General Services System – SISG and the SIASG IT support system
 - 1.1 Modules*
 - 1.2 Characteristics*
 - 1.3 ITC & interactivity incorporation on the Internet*
 - 1.4 Managerial tools facilities*
 - 1.5 Transparency, accountability and social control characteristics*

In this part of the presentation the Speaker of the Brazilian Delegation will detail the main characteristics of the Federal Government structured system and the philosophy behind the centralized application that enables decentralized purchasing with a mix of real time control and ex-post centralized auditing. This part of the presentation explores the conceptual benefits to both sides in the tendering process.

2. SIASG/COMPRASNET environment
 - 2.1 Some statistics on procurement of goods and services*
 - 2.2 Facilities offered*

A brief explanation on the interfacing of the structured system with the web enabled information and transactional application that permits suppliers and procuring officers to base the whole process on the paperless concept we be made in this part of the presentation.

3. Reverse Auction
 - 3.1 Background information on the adoption of the new mode of procurement*
 - 3.2 Operational procedures*
 - 3.3 Impacts of the use of the reverse auction*

This part of the presentation deals with the fundamentals of the adoption of a new mode of procurement, as well as, the main changes related to traditional practices of public procurement of goods and services in Brazil. Considerations on the quantitative and qualitative impacts generated will also be explained.

4. Virtual Reverse Auction

4.1 Characteristics of the system

4.2 Characteristics of private public partnership

4.3 Operational demonstration

An in depth exploration of the procedures and phases of the electronic inverse auction process will be demonstrated and simulated to demonstrate the flexibility of the system and the in-built controls offered, as well as, the inducement to sound practices, competition and transparency.

5. Brazilian cooperation initiatives on government procurement

5.1 Multilateral initiatives

5.2 Bilateral initiatives

5.3 National & international recognition

The Brazilian Government has been improving its procurement procedures and systems. The objective of the development of the Program to Reduce the Cost of Contracting Goods, Civil Works and Services, which is part of the multiannual budget for the period 2000/2004, is to increase efficiency in the process, reduce its costs, increase competition, enable transparency and foster social control. Due to this the procurement policy of the Federal Government has caught the attention of multilateral organizations, such as the World Bank, IADB, the UN System and the European Union, and some countries, with proposal for technical cooperation in this field. The presenter will explain some of the initiatives underway and the possibilities that might be explored in the future.

Brasília, DF 06/09/2002

Federal Government Guidelines

- Less red tape
- Efficient processes
- Standard procedures
- Support information tools for the public manager
- Managerial controls on expenditures
- Increased Competition on tenders
- Cost Reduction
- **Transparency**

Topics Presentation

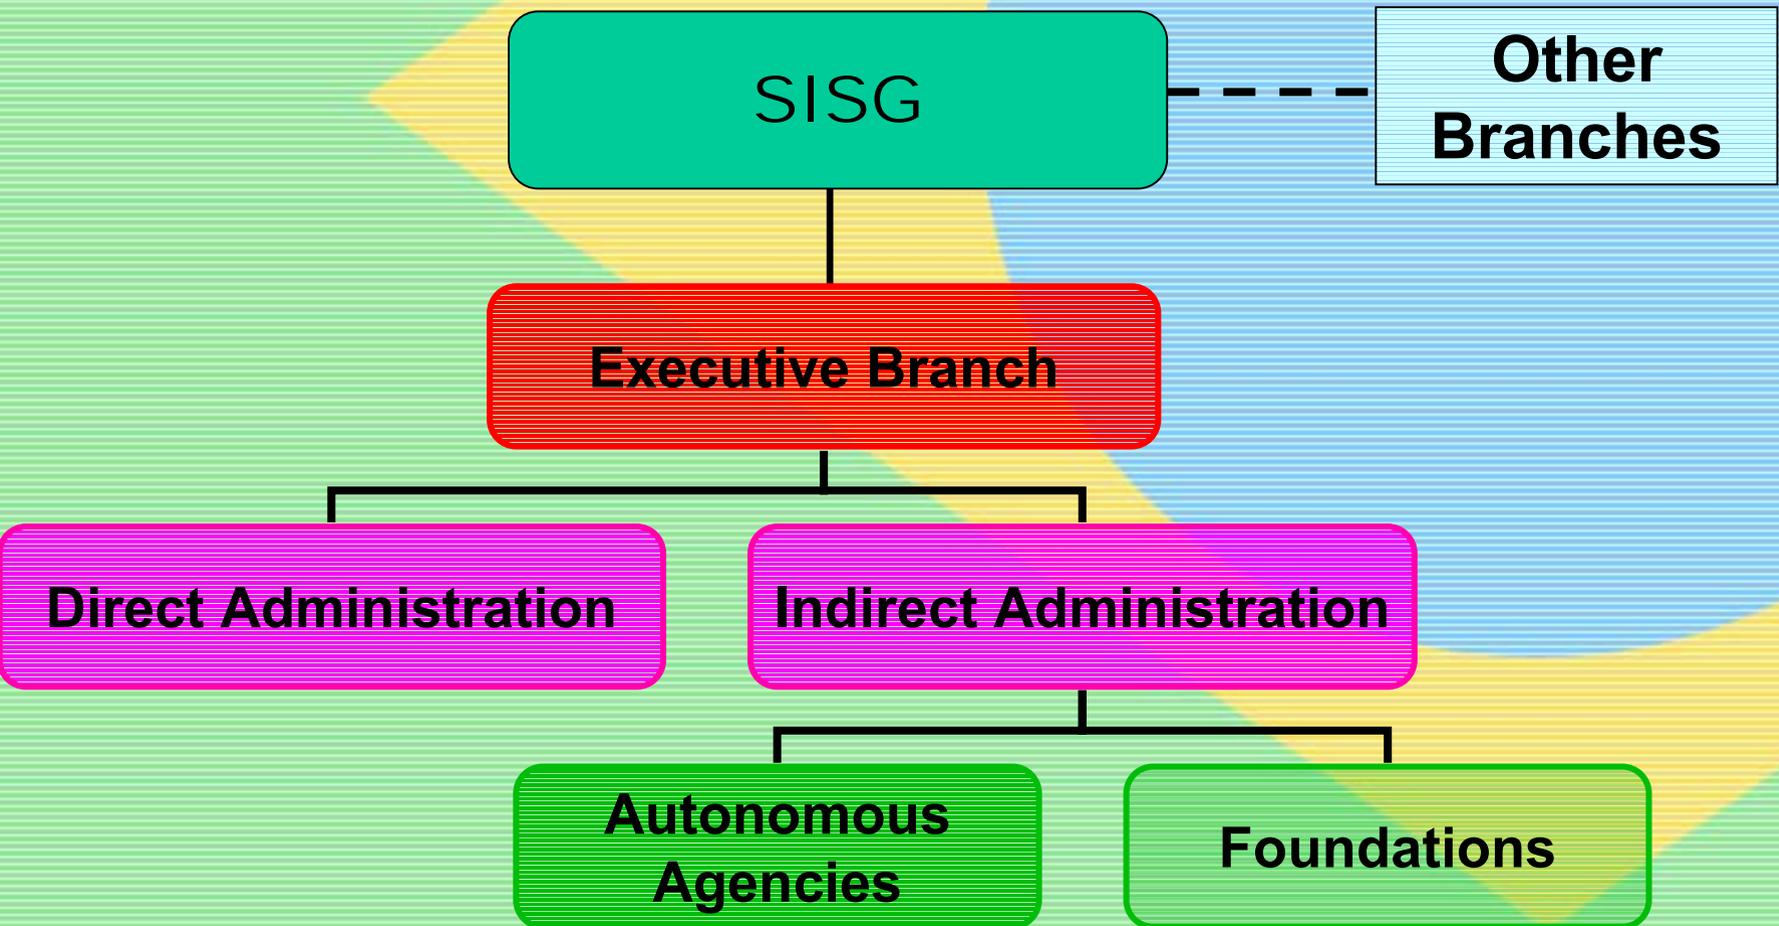

- **General Explanation on the General Services System – SISG, the SIASG IT support system and SIASG/COMPRASNET environment**
- **Inverse Auction and Virtual Inverse Auction**
- **Brazilian cooperation initiatives on government procurement**

SISG and SIASG IT system and COMPRASNET

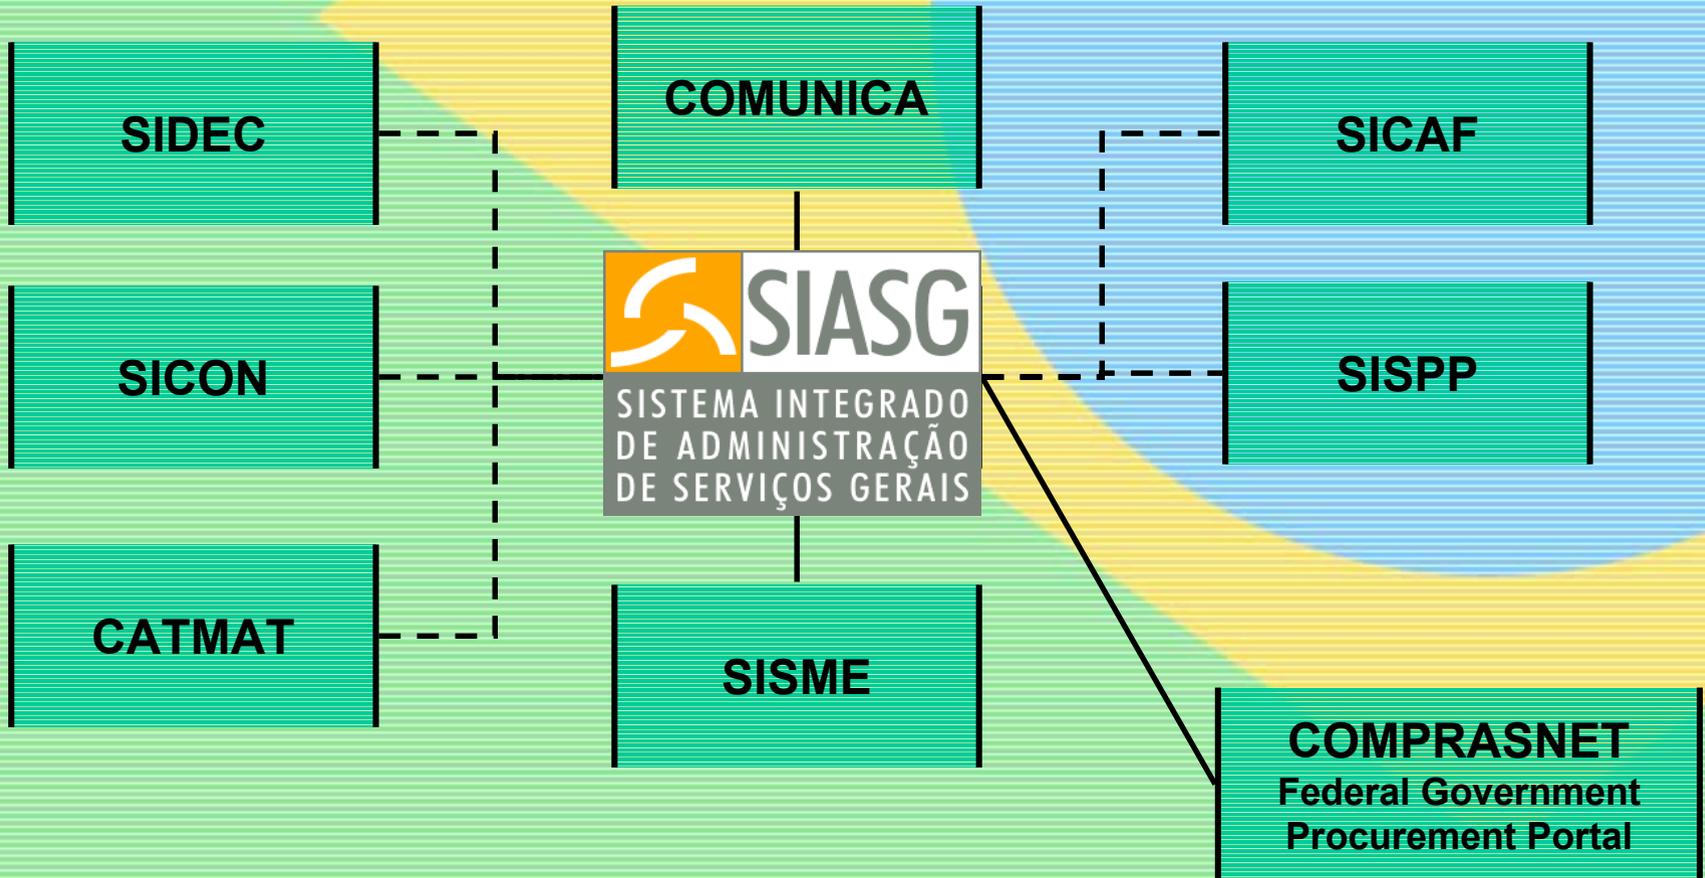

- *Modules*
- *Characteristics*
- *ITC & interactivity incorporation on the Internet*
- *Managerial tools facilities*
- *Transparency, accountability and social control characteristics*
- *Some statistics on procurement of goods and services*
- *Facilities offered*

General Services System - SISG

Information System

Unified System for Pre-registration of Suppliers - SICAF

- Certifies fiscal compliance through on-line consultation (on-line checking of
 - 163 thousand registered suppliers
 - 2,000 new registrations a monthregistration of Federal Government suppliers
- Allows pre-registration through internet “SICAFWeb”

Electronic Posting of Purchases and Contracts - SIDEC

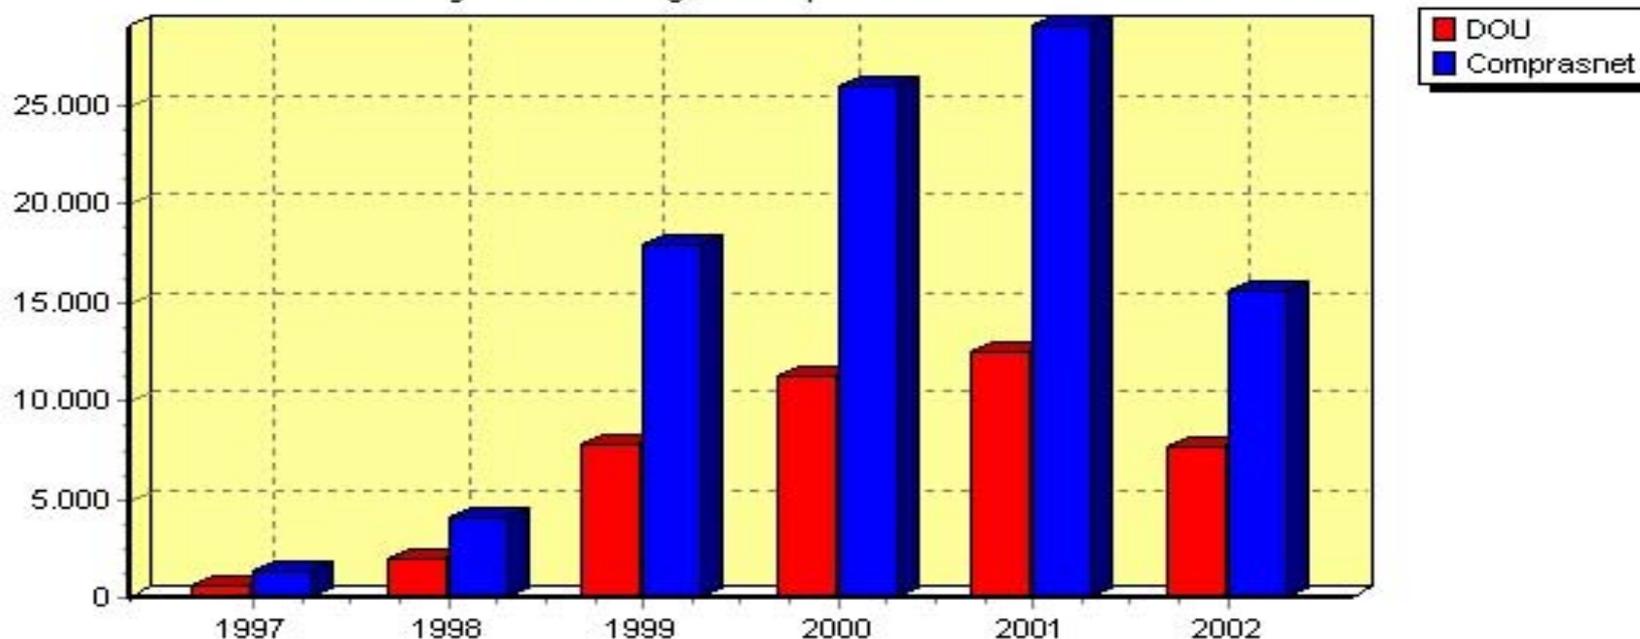

- **Electronic forwarding of documents for publication in the Union's Official Journal**
- **Automatic posting of invitations to bid and tender results on the Internet**
- **Allows searching and download of invitations to bid**

Tenders Announced by SIDEC

Licitações Divulgadas pelo SIDEC

Year	1997	1998	1999	2000	2001	2002

Inverse Auction Agenda

Legal Framework

- Law n° 8.666, 1993
- Provisional Measure n.º 2.026, de 4/5/2000
- Decree n° 3.555, de 8 of August of 2000
- Decree n° 3.693, de 2 of December of 2000
- Decree n° 3.697, de 21 of December of 2000
- Decree n° 3.784, de 6 of April of 2001
- Law n° 10.520, de 17 of July of 2002

Inverse Auction and Virtual Inverse Auction

- *Background information on the adoption of the new mode of procurement*
- *Operational procedures*
- *Impacts of the use of the reverse auction*

Advantages of the Inverse Auction

- **Increased competition**
- **Ease of use**
- **Transparency and Social Control Guaranteed**
- **Increased participation opportunities**
- **Use of new technologies**

Inverse Auction

- **New tendering modality, introduced in August 2000**
- **Allows direct confrontation between suppliers**
- **Successive bids are made until a winner is announced**
- **There are two forms:**
 - **Live inverse bidding**
 - **Electronic inverse bidding**

Inverse Auction Use

- Procurement of “common goods and services”
- Performance and quality standards objectively defined in invitation for bid

EXAMPLES

COMMON GOODS

- Office supplies
- Furniture
- General appliances
- Equipment
- Fuels and lubricants
- Microcomputers

COMMON SERVICES

- Cleaning, security and maintenance
- Renting and maintenance of equipment
- Meal voucher
- Telephony
- Transport
- Health insurance

Electronic Inverse Auction

STAGES

- I - Announcement
- II - Qualification
- III - Registration of proposals
- IV - Presentation of bids
- V - Award

II - QUALIFICATION

- **Interested suppliers are previously qualified by the administrator of the electronic inverse auction system**
- **They receive access codes that allow participation in any reverse auction**

CADASTRO

Esta assinatura terá **VALIDADE** por **06 (seis) meses**, podendo ser renovada ao final deste prazo.

Descrição: A conduta do Sr. Pregoeiro é contrária ao MANUAL DO PREGOEIRO, extraído da própria página do COMPRASNET, in verbis: c) Encerrando um item - é uma decisão do pregoeiro que deve ser comunicada pelo Chat aos participantes do certame e ser tomada no momento em que não houver mais competição ou novos lances. Após o encerramento, ... É certo que o Sr. Pregoeiro deveria decidir por sua suspensão e não pelo encerramento, como foi feito.

Descrição: Fundamento para interposição de recurso. Sr. Pregoeiro, conforme solicitado através de questionamento registrado em tela, estavam incluindo um novo lance, e o mesmo não foi registrado, e foi declarado encerrado o pregão, qual a posição em relação ao fato? Sendo certo que tal procedimento não se coaduna com o subitem 6.7 do Edital. O que feriu o princípio da economicidade.

Pregoeiro	19/02/2002 10:59:05	Menor preço cotado - R\$ 20.350,00 apresentado pela empresa SECAL SERVIÇOS DE ENGENHARIA CONSERVAÇÃO E ASSEIO LTDA.
Pregoeiro	19/02/2002 11:33:35	Dentro de trinta minutos encerraremos o prazo para manifestação da intenção de interposição de recurso.
178727/0001-89	19/02/2002 11:55:29	Conforme exarado pelo Sr. Pregoeiro às 10:05:38, deveria estar participando da etapa de lances, três empresa, conforme relação de proposta, e não seis, como o que ocorreu.
Pregoeiro	19/02/2002 12:09:02	Encerrado o prazo para manifestação de interposição de recursos.
178727/0001-89	19/02/2002 12:21:54	Sr. Pregoeiro, obrigado pela atenção dispensada.

Com o encerramento da fase de lances, os licitantes melhor classificados foram declarados vencedores dos respectivos itens, foi divulgado o resultado da licitação conforme indicado no quadro Resultado da Sessão Pública e foi concedido o prazo recursal conforme preconiza o inciso XVII, do artigo 11, do Decreto 3555/2000. Nada mais havendo a declarar, foi encerrada a sessão cuja ata foi lavrada e assinada pelo Pregoeiro e equipe de apoio.

Impacts of the Inverse Auction

- **Total expenditure on procurement of goods and services: R\$ 14.2 (US\$ 5.7) billion/year (2001 – US\$ 1.00 x R\$ 2.50)**
- **Out of this total, 20% has been procured by means of inverse auctions - amounting to R\$ 2.8 (US\$ 1.1) billion/year**
- **Estimated direct economy in 20 % of the expenditures, i.e. R\$ 560 (US\$ 224) million/year**

Impacts of the Inverse Auction

- **Number of Inverse Auctions:**
until 23 of September of 2002
- **6.350 Inverse Auctions**
- **Value of goods and services
acquired: R\$ 1,685 billion (US\$
674 million)**

Inverse Auctions Awarded: until August of 2002*

Year	Type of Auction	Number of Auctions	Value in R\$
2000	Live	81	29.140.348,09
	Electronic	1	67.120,00
2001	Live	2236	786.556.105,00
	Electronic	63	8.687.286,96
2002	Live	2094	746.714.610,00
	Electronic	181	17.864.469,61
Total		4656	1.589.029.939,66

COMPUTERS	10.742.474,75

Impacts of the Inverse Auction

- The purchases by means of the reverse auction may reach 40 % of the total contracts undertaken by means of competitive bidding (around R\$ 5.7/ US\$ 2.3 billion a year)

Impacts of the Inverse Auction

- Increased amount of purchases made under competitive modalities
- More transparency and opportunities to participate
- More agile and non bureaucratic procedures
- Suppliers pre-register only once
- Reduction in the time required for Qualification of suppliers
- Less time required for tendering
- Electronic posting of tender with ample access by the interested parties
- Staff freed for more complex activities

Inverse Auction in the States

- Law 10.520/2002 has extended use of the inverse auction by states and municipalities
- Several States (São Paulo, Bahia, Pernambuco, Mato Grosso etc.) developed, bought or entered into partnerships of their own inverse auction systems

Brazilian cooperation initiatives on government procurement

Cooperation initiatives Underway

- *Multilateral initiatives* (World Bank, IADB, OAS)
- *Bilateral initiatives* (Governments of Bolivia, Peru, Colombia, Nicaragua, India etc.)
- *States and municipalities*
- *National & international recognition* (COMDEX, CONIP, Hélio Beltrão Prize European Union e-gov Best Practice, UN-UNOPS Fair of July 2001)

Possible Cooperation initiatives

- **Planning**
- **Legislation**
- **Human Resources Training**
- **IT Information systems modelling**
- **Experience interchange**
- **Standards for procurement procedures and bidding documents and regulations**

**WORLD BANK
AFRICA REGION
ROLE AND RESPONSIBILITIES
IN IMPROVING GOVERNMENT PROCUREMENT**

Bernard Abeillé
October 10, 2002

Role & Responsibilities

Ensuring Economy, Efficiency and Transparency of Public Resources through:

- **Assessment of national systems**
- **Developing national capacities**
- **Fiduciary Compliance (Prior/Post Reviews + Audits)**

Main Focus

- **Building Capacity at the country level**
 - Country Procurement Assessment Reviews (CPARs)
 - Procurement Reforms
 - Country Specific Procurement Seminars
- **Enhanced Decentralization of Staff**
- **Enhance Fiduciary Compliance**
 - Accelerate Prior Reviews + more systematic post reviews
- **Modernize Monitoring/Communication Tools**
 - Procurement Reforms Observatory
 - Access to Africa Proc.WEBSITE

Services Rendered by Africa Procurement

Project Preparation

- Conduct Capacity Assessments
- Procurement Arrangements

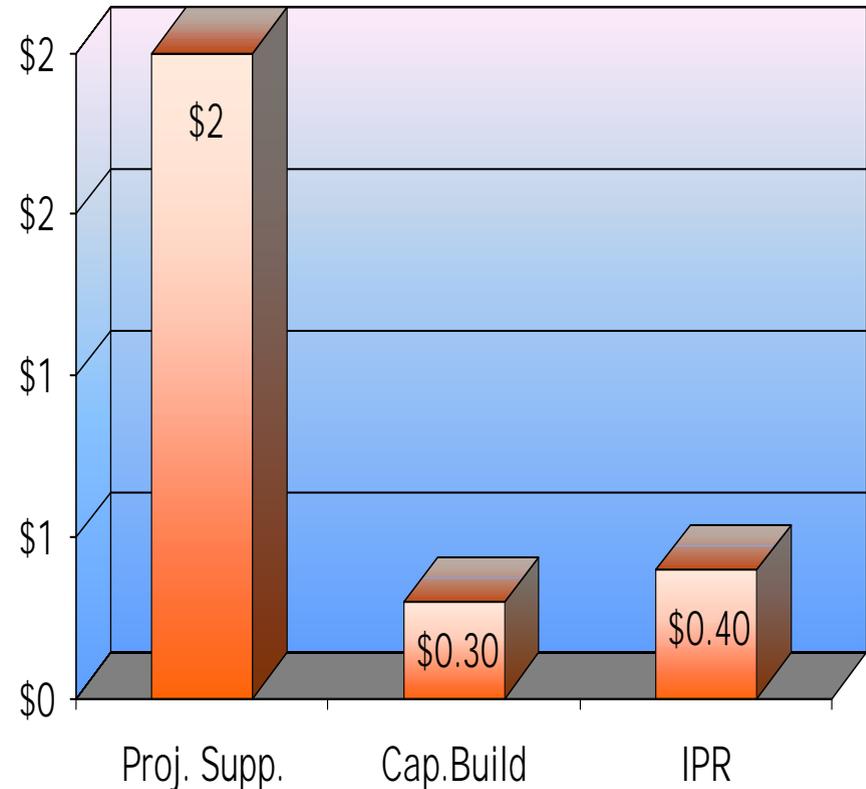

Supervision of Procurement Activities

- Prior Reviews above thresholds
- Post Proc. Reviews

Organize Independent Procurement Reviews

Deliver Country Specific Procurement Seminars

Conduct Country Procurement Assessment Reports (CPARs)

Country Procurement Assessment Reviews (CPARs)

■ **Country Procurement Assessment Review**

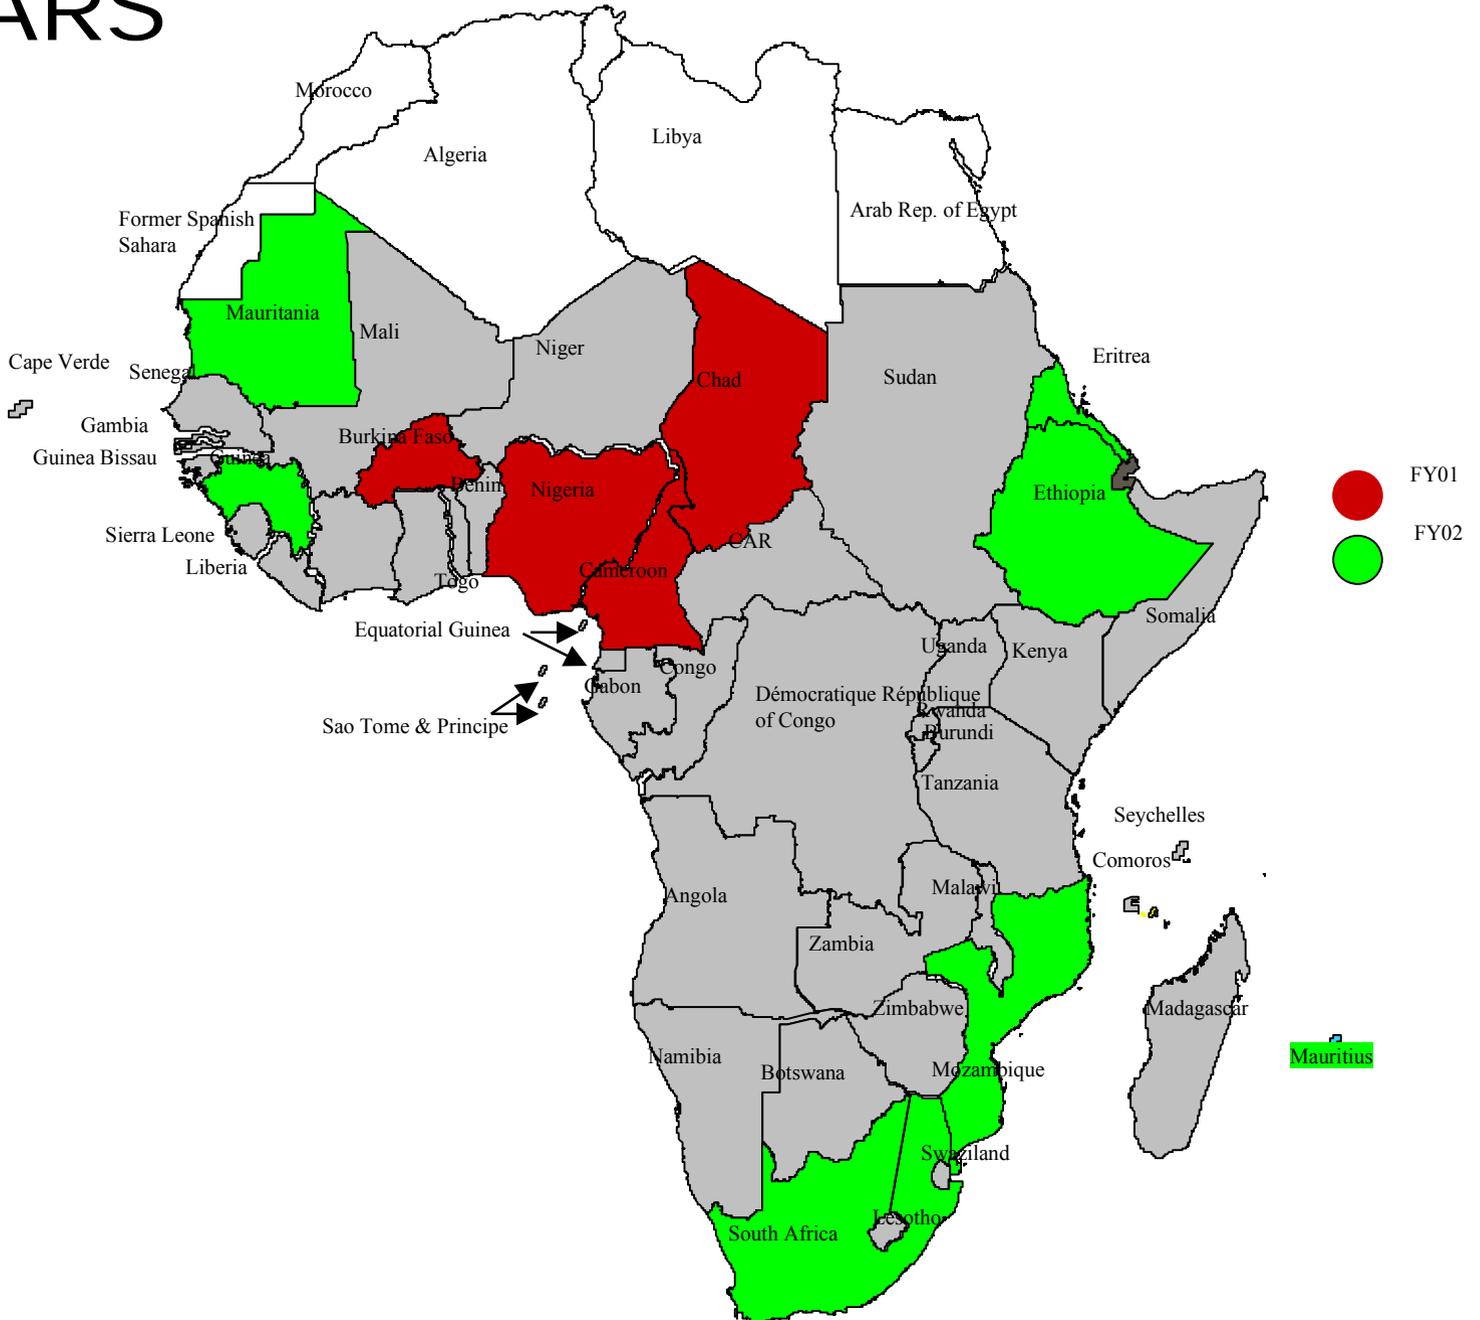

[Sound public procurement policies and practices are among the essential elements of good governance]

- **Jointly by the Bank and the Borrower**
- **In Partnership with other Donors (AfDB, EU,)**
- **Country Directors responsibility**
- **Report: Findings, Recommendations/Action Plans**
- **Action Plan → Procurement Reforms**

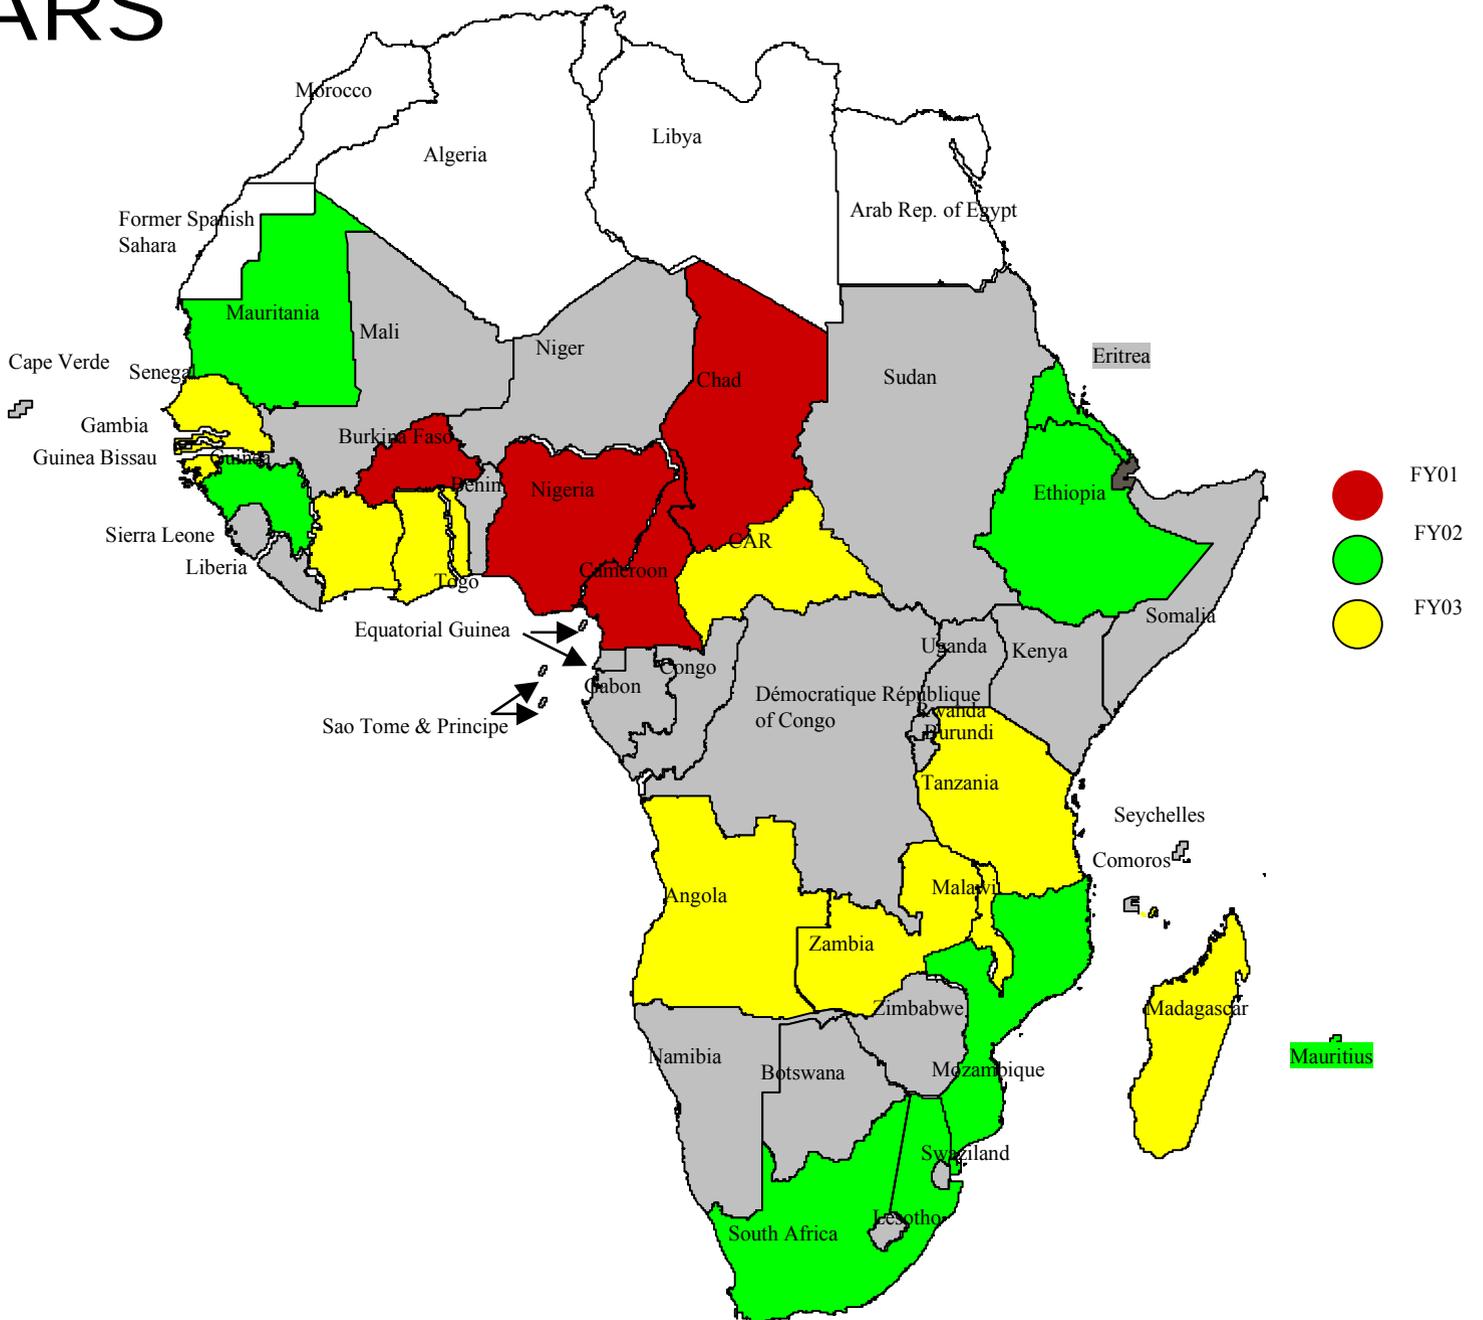

CPARS

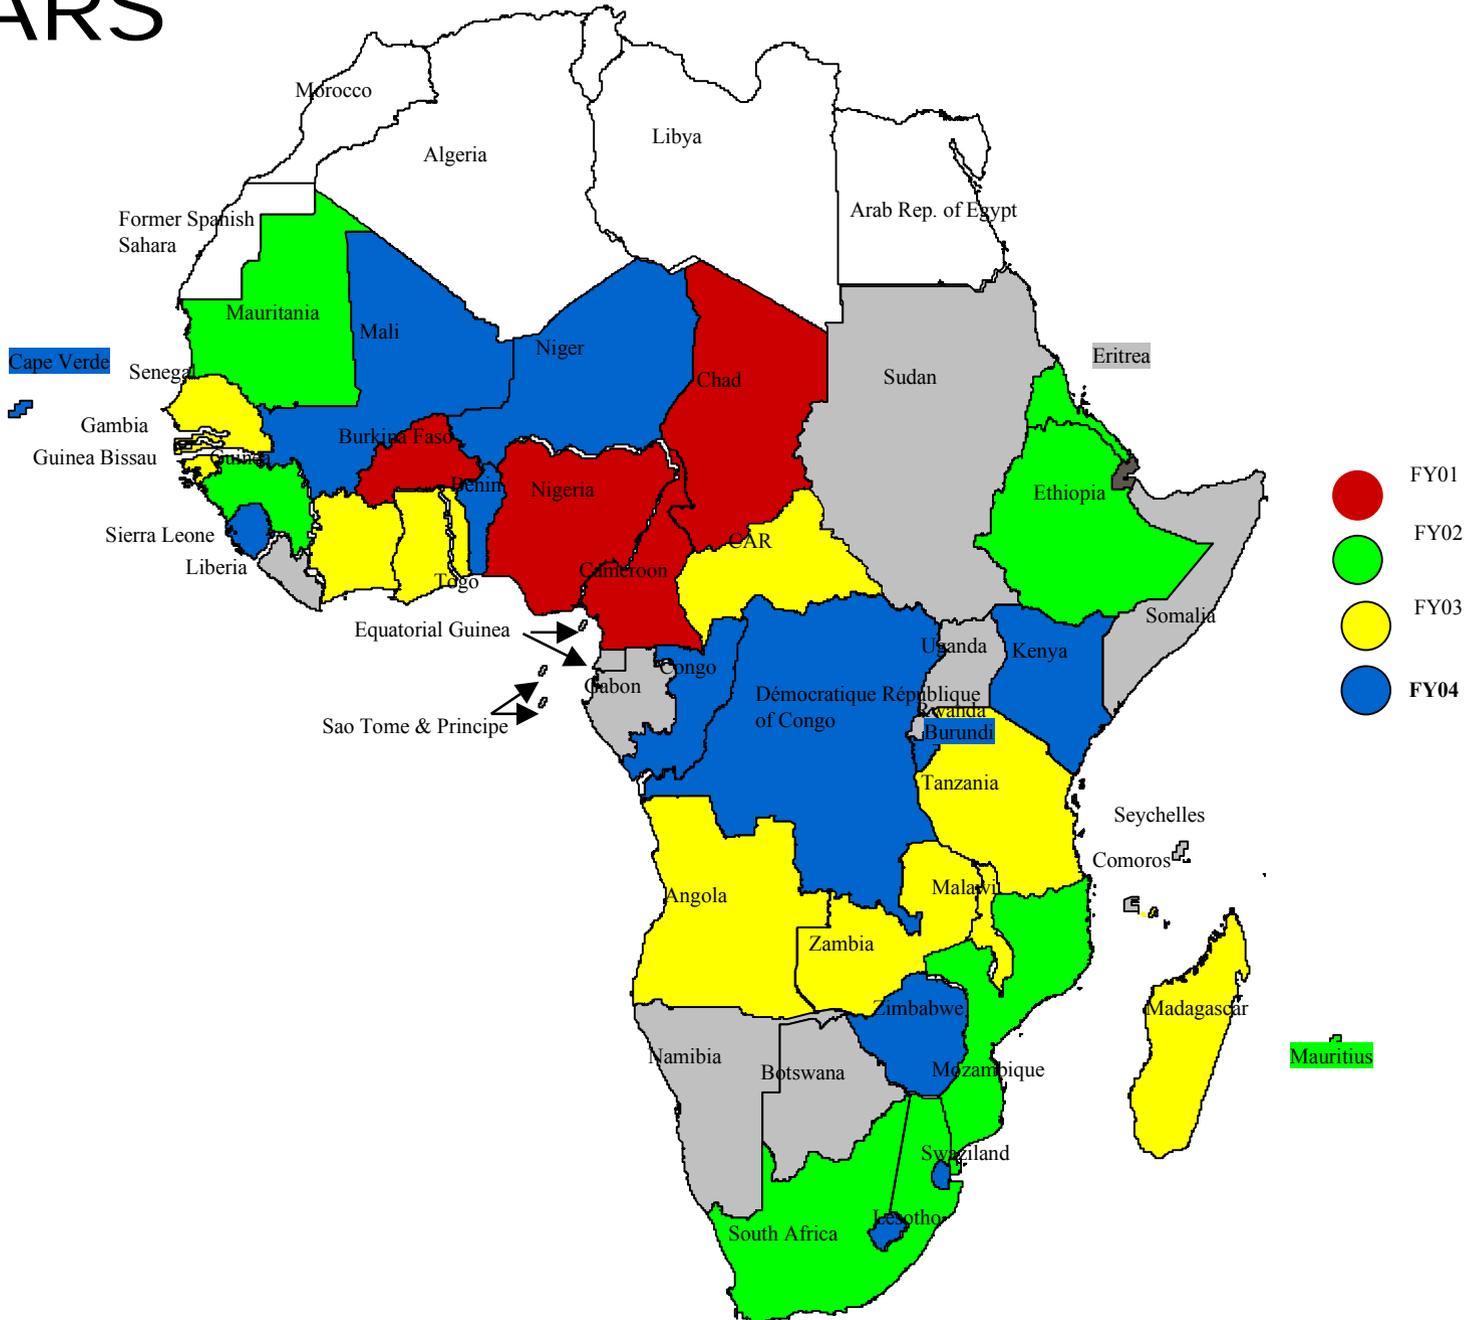

CPARS

CPARS

CPARS

CPAR Follow-up

- **Country Dialogue & Capacity Building:**
 - WB coordinates and monitors CPARs
 - WB supports & monitors Procurement Reform Programs
 - WB organizes sub-regional workshops on Procurement Reforms
- **Sub-Regional Organizations may play a major role (WAEMU, COMESA ...)**
- **Procurement Reforms are at the center of:**
 - WB Country Assistance Strategy (CAS)
 - PRSCs
- **Partnership with other donors is growing rapidly**

**WORLD BANK
AFRICA REGION
EXAMPLES OF WB CONTRIBUTION
IN IMPROVING GOVERNMENT PROCUREMENT**

Bernard Abeillé

October 9, 2002

World Bank Involvement in Procurement Reforms:

- **Procurement Reforms as a result of CPARs in:**
 - Angola, Benin, Burkina Faso Cameroon, Chad, Ethiopia, Eritrea, Ghana, Guinea, Kenya, Mauritania, Niger, Nigeria, Uganda, and South Africa

- **WB supports Procurement Reforms in Rwanda and Burundi, at the request of Governments**

- **WB supports WAEMU and COMESA sub-regional initiatives in partnership with AfDB**

Number of CPARs in FY03 and FY04

CPARs	FY02	FY03	FY04	FY05
Total # of Reports Of which:	8	9	16	4
Full CPARs	6	8	7	3
CPAR Updates	1		1	0
Issues Papers	1	1	8	1

Example of Angola

- Government had already launched a review of its procurement system
- Government sought WB assistance to carry out its review
- To avoid duplication of previous Government's efforts, the WB:
 - **Took stock of work already done**
 - **Carried out its own diagnostic with AfDB**
 - **Brought Bank experience in this area**
 - **Associated other donors**
 - **Shared its findings with the Government**

Concept Memorandum (CM)

- A **CM** was shared with the WB Country Team and AfDB
- **It identified:**
 - **Country specific Issues:**
 - Post-Conflict situation
 - Lack of sound procurement code
 - Lack of professional skills
- **It proposed:**
 - **A strategy based on a realistic time-table and indicators**
 - **Areas of focus including:**
 - Short-term action to get immediate impact
 - Long-term capacity building program

Bringing Bank's Experience

- **Ensuring Government Ownership**
- **Mobilizing resources**
 - **A National Task Force**
 - **Other donors**
 - **The private sector + Civil Society**
- **Recruiting a highly qualified national consultant**
- **Using international best practices as benchmark**

Comprehensive Analysis

- **Analyze of public procurement:**
 - ✓ Legal framework
 - ✓ Practices
 - ✓ Institutional capacities
 - ✓ Fairness and transparency
- **Analyze of private sector:**
 - ✓ Imports (Volume + Regulations + Practices)
 - ✓ Consulting services
 - ✓ Construction industry
 - ✓ Manufacturers & Suppliers
- **Evaluation of risks for Bank-financed projects**

Results as of to-day

- **Government of Angola has been briefed, using the CPAR Executive Summary;**
- **The Government is finalizing its action plan before the WB issues a final CPAR; and**
- **WB funds have been made available to support the first steps of the reform.**

END

Government procurement: services

This multilateral Working Party on GATS Rules (WPGR) was established by the Council for Trade in Services. Among its responsibilities are negotiations on government procurement of services, as required under Article XIII: 2 of the General Agreement on Trade in Services (GATS).

See also:

- > [Transparency in government procurement](#)
- > [Plurilateral Government Procurement Agreement](#)

> [The starting point: How government procurement is exempt from the usual rules](#)

The mandate

GATS Article XIII says:

Government Procurement

1. Articles II, XVI and XVII shall not apply to laws, regulations or requirements governing the procurement by governmental agencies of services purchased for governmental purposes and not a view to commercial resale or with a view to use in the supply of services for commercial sale.
2. There shall be multilateral negotiations on government procurement in services under this Agreement within two years from the date of entry into force of the WTO Agreement.

Working Party on GATS Rules

ACTIVITIES OF THE WORKING PARTY ON GATS RULES

Report to the Council for Trade in Services

In view of the fact that the Working Party has had no further opportunity to meet since its meeting of 8 and 14 October and in the light of subsequent consultations regarding the final paragraph, the attached Report of the Working Party to the Council for Trade in Services is submitted on the Chairman's responsibility.

Activities of the Working Party

1) The Working Party on GATS Rules was established in March 1995 by the Council on Trade in Services to carry out the negotiating mandates contained in the GATS on emergency safeguard measures, government procurement in services and subsidies. Article X requires that multilateral negotiations shall be held on the question of emergency safeguard measures, based on the principle of non-discrimination, the results of which are to enter into effect not later than 1 January 1998. Article XIII of GATS calls for multilateral negotiations on government procurement in services within two years from the date of entry into force of the WTO Agreement. Article XV of GATS stipulates that negotiations will be held with a view to developing the necessary disciplines to avoid the trade-distortive effects of subsidies that may arise in certain circumstances and to address the appropriateness of countervailing procedures. It also required Members to exchange information concerning all subsidies related to trade in services and to establish a future work programme to determine how, and in what time frame, negotiations on such multilateral disciplines will be conducted.

2) The Working Party has held eight meetings. The Working Party first took up the issue of emergency safeguard measures, followed at intervals of three months by government procurement in services and subsidies. Thus, since its fifth

meeting, the Working Party has considered all three negotiating mandates at every meeting. Differing views have been expressed by Members in regard to the desirability of developing an emergency safeguard mechanism under GATS and substantive discussions are continuing in regard to this question. Working papers on emergency safeguard measures were submitted to the Working Party by Australia (S/WPGR/W/5), Thailand (S/WPGR/W/6) and Switzerland (S/WPGR/W/14). The Working Party agreed that those Members wishing to do so would provide written contributions in relation to questions raised in document S/WPGR/W/15 on emergency safeguard measures.

3) The discussions in the Working Party on the subject of government procurement in services have addressed various aspects of possible disciplines, particularly in relation to transparency. In addition, Members have considered the implications of the existence of the Agreement on Government Procurement (GPA) for any disciplines that might be developed in GATS, as well as some of the reasons given by Members as to why they are not signatories of the GPA. Members are also engaged in an information-gathering exercise in relation to national procurement regimes with a view to preparing for negotiations on procurement in services.

4) The Working Party's deliberations on the subject of subsidies have so far been of a preliminary nature. Many delegations have noted the inherent complexity of the subsidy issue in services, urging a careful and systematic approach to the negotiating mandate. Some discussion has taken place on the question whether a distinction should be made between broad-based subsidies of general applicability and narrower, sector specific subsidies. The Working Party has begun to consider the modalities of the information exchange exercise called for in the negotiating mandate. A working paper on conceptual issues relating to subsidies was submitted to the Working Party by Chile (S/WPGR/W/10).

Future Work

5) The Working Party proposes that the Council for Trade in Services recommend that Ministers might adopt the following text:

•Ministers note that more analytical work will be required on emergency safeguard measures, government procurement in services, and subsidies. They agree that the Working Party on GATS Rules should aim, in accordance with the provisions of Article X, to complete negotiations on the question of emergency safeguard measures by 31 December 1997. If negotiations have not been concluded by that date, the Council for Trade in Services may extend the provisions of Article X of the GATS to an appropriate time. Ministers agree to review progress in the GATS Rules negotiations at their meeting in 1998, bearing in mind the need to carry forward the negotiations expeditiously. •

Working Party on GATS Rules

ACTIVITIES OF THE WORKING PARTY ON GATS RULES

Report to the Council for Trade in Services

The Working Party on GATS Rules held six formal meetings in 1997. In each meeting, the Working Party considered all three negotiating mandates: emergency safeguard measures under Article X, government procurement under Article XIII and subsidies under Article XV.

Negotiations on emergency safeguard measures under Article X of the GATS

Differing views have been expressed by Members with regard to the desirability of developing an emergency safeguard mechanism under the GATS. Substantive discussions are continuing on the subject without prejudging the position of any delegation in respect of the desirability, feasibility or form of any possible emergency safeguard mechanism. Several Members responded on a voluntary basis to a series of written questions on emergency safeguard measures (contained in S/WPGR/W/15). Other submissions on the subject of safeguards were also received from Members during 1997 (circulated as documents S/WPGR/W/17, 18, 19, 22 and 23).

In the last three meetings, the Working Party has focused on four key questions identified by the Chairperson in an informal note (dated 3 June 1997): (i) On whose behalf would emergency safeguard action be taken? (ii) In what circumstances would emergency safeguard action be taken and what would be the purpose of such action? (iii) What approach should be adopted in respect of injury/adverse effects, and the relevant causal link between injury/adverse effects and commitments under the GATS? (iv) What measures would be taken under the emergency safeguard mechanism? Are some measures deemed more suitable than others? At the request of Members, the Secretariat prepared a note which focused on the second question, containing hypothetical examples of situations in which emergency safeguard action may be taken (circulated as S/WPGR/W/24).

Since Members recognized that there still remained many points to be considered in order to conclude this negotiation, they decided to propose to the Council for Trade in Services to extend the application of the first sentence of paragraph 1 and paragraph 2 of Article X until the end of June 1999, notwithstanding the second sentence of paragraph 1 and paragraph 3 of Article X.

Negotiations on government procurement under Article XIII of GATS

Progress was made in the information gathering exercise on national procurement regimes. The twenty-one responses received so far to the questionnaire on national procurement regimes were circulated as addenda to document S/WPGR/W/11. The

Secretariat prepared a synthesis of the first nineteen responses to the questionnaire (issued as document S/WPGR/W/20). The information gathering exercise has provided a basis for negotiations on disciplines. An indicative tabulation relating questionnaire responses to possible elements of multilateral disciplines was presented in a Chair's note (dated 21 February 1997) and has formed the basis for the commencement of a structured consideration of these elements. The need to coordinate work with the Working Group on Transparency in Government Procurement was emphasized by several delegations.

Negotiations on subsidies under Article XV of GATS

At its meeting of 23 January 1997, the Working Party approved a questionnaire to facilitate the information exchange, mandated by Article XV, on subsidies related to trade in services. Two responses to the questionnaire have been received so far (circulated as documents S/WPGR/W/16/Add.1 and Add.2). Some delegations also expressed the need to continue the technical analysis of subsidies related to trade in services.

Working Party on GATS Rules

**REPORT OF THE WORKING PARTY ON GATS RULES
TO THE COUNCIL FOR TRADE IN SERVICES**

1. The Working Party on GATS Rules held five formal meetings in 1998. In each meeting, the Working Party considered all three negotiating mandates: emergency safeguard measures under Article X, government procurement under Article XIII and subsidies under Article XV.

Negotiations on emergency safeguard measures under Article X of the GATS

2. Differing views have been expressed by Members with regard to the desirability of developing an emergency safeguard mechanism under the GATS. Substantive discussions are continuing on the subject without prejudging the position of any delegation in respect of the desirability, feasibility or form of any possible emergency safeguard mechanism, with the objective of concluding negotiations by 30 June 1999.

3. In recent meetings, the Working Party has focused on four key questions identified by the Chairperson in an informal note (dated 3 June 1997): (i) On whose behalf would emergency safeguard action be taken? (ii) In what circumstances would emergency safeguard action be taken and what would be the purpose of such action? (iii) What approach should be adopted in respect of injury/adverse effects, and the relevant causal link between injury/adverse effects and commitments under the GATS? (iv) What measures would be taken under the emergency safeguard mechanism? Are some measures deemed more suitable than others?

4. The delegation of Hong Kong, China, made a submission suggesting some broad principles that might be included as part of any safeguard mechanism (circulated as S/WPGR/W/26). The Chairperson circulated an informal note (dated 16 September 1998) containing responses, not necessarily agreed, to the above four questions. The questions raised in this note were discussed during an informal brainstorming session on 1 October 1998 and in subsequent meetings. The delegation of Venezuela made an informal submission (dated 14 October 1998) listing issues for the organization of future discussions on emergency safeguards. The Secretariat prepared a paper (S/WPGR/W/27) describing, first, alternative forms that a safeguard mechanism under the GATS may take and then elaborating on the list of issues identified in the submission from Venezuela.

Negotiations on government procurement under Article XIII of GATS

5. Costa Rica submitted a response to the questionnaire on national procurement regimes (S/WPGR/W/11/Add.22), adding to the twenty-one responses received during 1997. An indicative tabulation relating questionnaire responses to possible elements of multilateral disciplines, presented in a note from the Chairperson (dated 21 February 1997), has formed the basis for a structured consideration of these elements. In recent meetings, discussion has focused on the scope and coverage of any disciplines on government procurement on the basis of a non-paper submitted by the European Communities and Their Member States (dated 13 February 1998). In this context, the issue of how concessions should be treated has received particular attention. Members have emphasized

the need for the Working Party to continue to coordinate work with the Working Group on Transparency in Government Procurement .

Negotiations on subsidies under Article XV of GATS

6. Delegations expressed the need to continue the technical analysis of subsidies related to trade in services. To this end the Secretariat prepared a note presenting information on the subject contained in WTO Trade Policy Reviews (circulated as S/WPGR/W/25). The Chairperson circulated an informal note (dated 3 April 1998) to facilitate identification of the circumstances in which subsidies may cause trade distortions. Discussion on the relevant conceptual and legal issues is continuing even as efforts are being made to advance the information exchange.

Working Party on GATS Rules

**REPORT OF THE WORKING PARTY ON GATS RULES
TO THE COUNCIL FOR TRADE IN SERVICES**

1. The Working Party on GATS Rules held six formal meetings in 1999 (S/WPGR/M/20-25). In each meeting, the Working Party considered all three negotiating mandates: emergency safeguard measures under Article X; government procurement under Article XIII; and subsidies under Article XV.

Negotiations on emergency safeguard measures under Article X of the GATS

2. Differing views continued to be expressed by Members on the desirability, feasibility and possible form of an emergency safeguard mechanism in services. The contributions made and the issues thought to require further consideration are recorded in document S/WPGR/W/27/Rev.2. In recent meetings, Members focused in particular on: (i) possible indicators to underpin trade-related injury concepts (an informal Secretariat paper, Job No. 5294 gives an overview of such indicators, drawing on a previous submission by Venezuela, Job No.2860); (ii) basic disciplines which would need to govern any future safeguard action, regardless of the mechanism which may finally be adopted (including MFN treatment, advance notice, temporary and degressive application, clear specification of the measures envisaged, protection of "acquired rights" of established suppliers); and (iii) the range of applicable measures and other relevant issues.

3. On recommendation by the Working Party, the Council for Trade in Services decided in June 1999 to extend the negotiations on the question of emergency safeguard measures until 15 December 2000; the results shall enter into effect on a date not later than the date of entry into force of the results of the next round of mandated services negotiations (S/L/73).

Negotiations on government procurement under Article XIII of GATS

4. Discussions focused on the range of activities and entities which may be covered by Article XIII of GATS. An informal paper by Japan contains a typology of such activities (Job No. 2867), and a Secretariat Note compiles background information on the interpretation of procurement-related provisions under GATT which might be relevant for the interpretation of similar GATS provisions (S/WPGR/W/29). Recently, Members started giving thought to the scope and depth of procurement disciplines, if any, which might be agreed upon at the end of the negotiating process.

Negotiations on subsidies under Article XV of GATS

5. Hong Kong, China made a submission under the information exchange programme mandated under Article XV (S/WPGR/W/16/Add.13), adding to two other submissions received in 1997. A proposal that Members provide information on subsidy-related access problems encountered in foreign markets is being considered by Members. Discussions have continued on the potential for subsidies, which are extended under one mode (e.g. investment aid under mode 3) to distort trade under other modes, and the effects on trade of export subsidies in services.

**REPORT OF THE WORKING PARTY ON GATS RULES
TO THE COUNCIL FOR TRADE IN SERVICES**

1. In 2000, the Working Party on GATS Rules has held four formal meetings to date. Minutes of the meetings are contained in documents (S/WPGR/M/26-29). A fifth meeting is scheduled on 30 November 2000. In each meeting, the Working Party considered all three negotiating mandates: emergency safeguard measures (Article X); government procurement (Article XIII); and subsidies (Article XV). Written contributions, both formal and informal, made by delegations have supported the debate under the three items.

**I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS
ARTICLE X**

2. Differing views continued to be expressed regarding the desirability of an emergency safeguard mechanism (ESM) in services, but Members agreed to leave this question aside for the time being and to concentrate on feasibility issues. In order to structure the debate, the Chairperson circulated an illustrative list of themes which could usefully be discussed, without prejudice to the final outcome of the negotiations (Job No. 1979/Rev.1). The list includes issues such as the definition of "domestic industry" and the issue of "acquired rights", the modal application of a safeguard mechanism, the concept of "like service", the identification of indicators and criteria for determining injury and causality, the possible forms of a safeguard measure, the questions of compensation and special and differential treatment, situations justifying safeguard action and relevant procedural matters. All issues were examined in both formal and informal meetings. The Working Party also examined a Concept Paper which was introduced in March by Thailand on behalf of the ASEAN Members (S/WPGR/W/30). The Paper contains elements of a possible emergency safeguard mechanism in services.

3. The Working Party is also considering the extension of the negotiating deadline for this subject-matter, which is currently set for 15 December 2000.

**II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS
ARTICLE XIII**

4. Discussions have continued on definitional issues as well as on possible multilateral disciplines in this area.

III. NEGOTIATIONS ON SUBSIDIES UNDER GATS ARTICLE XV

5. The Working Party has continued to consider the need for and possible scope of disciplines on subsidies which may have trade-distortive effects. In March, Argentina and Hong Kong, China presented a communication discussing relevant issues and identifying a number of topics for further work (S/WPGR/W/31). At the request of the Working Party, the Chairperson circulated a Checklist of issues, whose purpose is to help to address in a more systematic manner relevant questions under this agenda item (Job No. 4519/Rev.1). Members agreed to take up one item at each successive

meeting. The first item on the list ("Definition of a Subsidy in Services (including relevance of the definition in the Agreement on Subsidies and Countervailing Measures")) was discussed in September.

Working Party on GATS Rules

**REPORT OF THE WORKING PARTY ON GATS RULES
TO THE COUNCIL FOR TRADE IN SERVICES**

1. Since its last annual report¹, the Working Party on GATS Rules has held five formal meetings. Minutes of the meetings are contained in documents (S/WPGR/M/30-34). In each meeting, the Working Party considered the three negotiating mandates: emergency safeguard measures (Article X); government procurement (Article XIII); and subsidies (Article XV).

**I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS
ARTICLE X**

2. At its meeting on 20 November 2000, the Working Party agreed to extend the negotiating mandate under Article X until 15 March 2002 (doc. S/C/W/184). This proposal was adopted by the Council for Trade in Services at its meeting on 1 December 2000.

3. Differing views continued to be expressed regarding the desirability and feasibility of an emergency safeguard mechanism (ESM) in services. Most discussions were held on the basis of the illustrative list of themes circulated by the Chairperson (Job No. 1979/Rev.1). The list includes issues such as situations justifying safeguard action, the definition of "domestic industry" and the issue of "acquired rights", the modal application of a safeguard mechanism, the concept of "like service", the identification of indicators and criteria for determining injury and causality, the possible forms of a safeguard measure, the questions of compensation and special and differential treatment, and relevant procedural matters. A number of delegations presented informal written contributions on specific aspects of a possible ESM. Moreover, a group of delegations presented an informal *Draft agreement on emergency safeguard measures for trade in services*, on 31 October 2000. All issues were examined in both formal and informal meetings.

4. The Working Party also discussed the organization of future work, keeping in mind the negotiating deadline of 15 March 2002. In July 2001, the Working Party requested the Chairperson to prepare, under his responsibility, a synopsis which would outline the current state of the discussion under the ten items identified in the Chairperson's Note, Job No. 1979/Rev.1. The synopsis was circulated on 7 August (JOB(01)/122) and is without prejudice to the questions of desirability and feasibility, nor to the form that a possible ESM might take. It presents, in a synthetic way, the main options proposed until July 2001, and indicates comments made by Members.

**II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS
ARTICLE XIII**

5. Discussions have continued on definitional issues as well as on possible multilateral disciplines in this area.

¹ S/WPGR/W/35, 3 November 2000.

III. NEGOTIATIONS ON SUBSIDIES UNDER GATS ARTICLE XV

6. The Working Party has continued to consider the need for, and possible scope of, disciplines on subsidies which may have trade-distortive effects. Delegations proceeded on the basis of the Chairperson's Checklist (Job No. 4519/Rev.1), and took up one item at each successive meeting. The fifth and last item was addressed in July. At that meeting, it was decided that the Checklist would remain on the table for the time being and that the five topics it contains would remain open for discussion.

**REPORT OF THE WORKING PARTY ON GATS RULES
TO THE COUNCIL FOR TRADE IN SERVICES (2002)**

1. Since its last annual report¹, the Working Party on GATS Rules held five formal meetings.² In each meeting, the Working Party considered the three negotiating mandates it is entrusted with: emergency safeguard measures (Article X); government procurement (Article XIII); and subsidies (Article XV).

2. On 22 July 2002, the Working Party adopted work programmes on emergency safeguard measures, subsidies and government procurement respectively, recognizing, *inter alia*, that these did not prejudice in any way the outcome of the negotiations under the respective agenda items, and that the undertaking of individual items of work, including the questions of desirability and feasibility, should be without prejudice to each other under each subject of negotiations (S/WPGR/7).

**I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS
ARTICLE X**

3. At its meeting on 15 March 2002, the Working Party agreed to extend the negotiating mandate under Article X until 15 March 2004 (S/C/W/205/Rev.1). This proposal was adopted the same day by the Council for Trade in Services (S/L/102).

4. Moreover, on 22 July 2002, the Working Party adopted a work programme for organizing its work on emergency safeguard measures (S/WPGR/7). Main elements are, *inter alia*, to identify, elaborate and consolidate elements for an ESM, to address the questions of desirability and feasibility, to encourage Members to put forward submissions as early as possible before 31 December 2002, and to finalize the negotiations by 15 March 2004.

5. Various delegations presented formal and informal written contributions in relation to the mandate contained in Article X.³ During several formal and informal meetings, delegations continued their examination of issues related to a possible ESM, including the question of desirability and feasibility, the form of a possible ESM, the modal application of safeguard measures, the concept of special and differential treatment, and relevant procedural matters, such as notification, consultation and surveillance. Divergent views continued to be expressed on these issues.

¹ S/WPGR/6, 4 October 2001.

² Minutes of the meetings are contained in documents S/WPGR/M/35-39.

³ See *Desirability of a Safeguard Mechanism for Services: Promoting Liberalization of Trade in Services*, Communication from the United States (S/WPGR/W/37); *Modal Application of an Emergency Safeguard Measure*, Communication from the European Communities and Their Member States (S/WPGR/W/38); Contribution from Cuba, the Dominican Republic, Guatemala, Honduras and Nicaragua (JOB(01)/166); *Elements for a Possible "Core Mechanism" for Temporary Suspension or Modification of Commitments*, Communication from Australia (JOB(02)/8). See also JOB(02)/9 and JOB(02)/85.

II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS ARTICLE XIII

6. On 22 July 2002, the Working Party adopted a work programme on government procurement (S/WPGR/7). It provides, *inter alia*, for continued discussion on the basis of submissions from Members and materials available, and encourages Members to put forward submissions as early as possible before 31 March 2003.

7. In their discussions, Members examined a Communication from the European Communities and their Member States on government procurement of services (S/WPGR/W/39). The issue of the scope of the mandate contained in Article XIII was also raised.

III. NEGOTIATIONS ON SUBSIDIES UNDER GATS ARTICLE XV

8. On 22 July 2002, the Working Party adopted a work programme on subsidies (S/WPGR/7). It provides, *inter alia*, for continued discussion on subsidies on the basis of submissions from Members and materials available, and encourages Members to put forward submissions on subsidies as early as possible before 31 March 2003.

9. Discussions under this agenda item focused on the information exchange mandated in Article XV, and on the need for further information on services subsidies in general. Members gave consideration to a simplified questionnaire put forward by the delegations of Argentina, Chile and Hong Kong, China (JOB(02)/84). Moreover, the Secretariat circulated a further addendum to the overview of information on subsidies contained in Trade Policy Review reports (S/WPGR/W/25/Add.3).

Working Party on GATS Rules

**UPDATE TO THE ANNUAL REPORT OF 2002 OF THE WORKING PARTY
ON GATS RULES TO THE COUNCIL FOR TRADE IN SERVICES (2003)**

1. Since its last annual report¹, the Working Party on GATS Rules held 3 formal meetings.² In each meeting, the Working Party considered the three negotiating mandates it is entrusted with: emergency safeguard measures (Article X); government procurement (Article XIII); and subsidies (Article XV). It also held various informal meetings on the three items.

**I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS
ARTICLE X**

2. Members continued their examination of various themes as they had emerged from previous meetings and submissions. Issues under examination included desirability and feasibility of an emergency safeguard mechanism (ESM), the interpretation of the GATS Article X mandate, modal application, examples presented by Members of safeguard-type provisions contained in economic integration agreements, in Members' schedules and in WTO instruments, as well as S&D. There were diverging views as to whether some of the examples constituted safeguard-type provisions. Members also discussed possible common elements of various types of ESM, based on the Synopsis³ and on the Overview of the Synopsis,⁴ and process-related issues such as transparency, notification, consultation, surveillance provisions and expedited dispute settlement proceedings.

3. Many delegations called for the Working Party to discuss actual or hypothetical situations where a safeguard action might be needed, and which form action could take, as an important aspect for further progress in the negotiations. One example was presented at the February meeting by Thailand, on behalf of the ASEAN Members. The Working Party is still examining whether this example can be considered as a possible situation justifying an ESM. Other delegations suggested that discussion of existing safeguard-type provisions applying to services should continue.

4. As requested by Members the Secretariat prepared three background documents: (i) a *Compilation of References Made by Delegations to Safeguard-Type Provisions*⁵; (ii) a note on *Core Elements Contained in Members' Proposals – Overview of the Synopsis*⁶; and (iii) a note on *Safeguard-Type Provisions in Economic Integration Agreements*⁷.

5. On 14 March 2003, the former Chairperson of the Working Party, Mr. Thomas Chan, circulated under his responsibility a Report on Negotiations on Emergency Safeguard Measures⁸, as

¹ S/WPGR/8, 5 December 2002.

⁵ JOB(03)/20.

⁶ JOB(02)/200 and --/Rev.1.

⁷ S/WPGR/W/4/Add.1.

⁸ S/WPGR/9.

mandated in the work programme on ESM adopted on 22 July 2002.⁹ Delegations had a first exchange of views on this Report during an informal meeting held on 20 April. At the formal meeting of 13-14 May, the Working Party gave further consideration to the Report. Comments made by delegations are recorded in the minutes of this meeting.¹⁰ At the same meeting, the European Communities introduced a written contribution on *Scope for Emergency Safeguard Measures (ESM) in the GATS*.¹¹ A number of delegations welcomed this contribution. Other delegations expressed different views.

II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS ARTICLE XIII

6. Discussions continued on the Communication from the European Communities and their Member States on government procurement of services.¹² In May, the European Communities introduced a new contribution proposing a legal framework for government procurement in services.¹³ At the same time, several delegations maintained the view that Article XIII excluded from the negotiations the obligations of most-favoured-nation treatment, market access and national treatment, whilst others underlined that the mandate of Article XIII:2 included no such limitation.

7. Members noted the possibility of duplication between the WPGR and the Working Group on Transparency in Government Procurement (WGTGP). The WPGR should be aware of the relevant issues raised in the WGTGP.

8. At its meeting on 13-14 May 2003, the Working Party requested the Secretariat to prepare a note providing an *Overview of Government Procurement-Related Provisions in Economic Integration Agreements*. The note was issued on 24 June 2003.¹⁴

9. On 30 June 2003, Mr. Santiago Urbina, Chairperson of the Working Party, submitted a note under his responsibility to report on the progress of work, as mandated in the work programme on government procurement adopted on 22 July 2002.¹⁵

III. NEGOTIATIONS ON SUBSIDIES UNDER GATS ARTICLE XV

10. The delegation of Poland circulated an informal contribution containing thoughts on the definition of subsidies in services.¹⁶ Two main issues emerged from the discussion: (i) the scope of a generic definition of subsidies in the services context, including the relevance of the definition contained in the SCM Agreement; and (ii) the meaning of the concept of trade-distortive or "actionable" subsidies. Several delegations recalled the mandate in GATS Article XV to exchange information concerning all subsidies related to trade in services that they provide to their domestic service suppliers. The need for more information on services subsidies from Members as well as other sources such as other intergovernmental organizations was also stressed by several delegations.

11. On 17 March 2003, the Chairperson circulated a revised *Checklist on Subsidies*,¹⁷ as had been agreed at the February meeting.¹⁸ This new revision, prepared again under the responsibility of the

Chairperson, includes two changes. First, the question of categorization of subsidies has been explicitly spelled out under the first point, i.e. definition of a subsidy in trade in services. Second, a new issue has been added, relating to concepts relevant to what should be regarded as trade-distortive subsidies. The *Checklist* is without prejudice to the position of any Member.

12. On 30 June 2003, Mr. Santiago Urbina, Chairperson of the Working Party, submitted a note under his responsibility to report on the progress of work, as mandated in the work programme on subsidies adopted on 22 July 2002.¹⁹

¹⁹ S/WPGR/10.

Working Party on GATS Rules

**ANNUAL REPORT¹ OF THE WORKING PARTY ON GATS RULES
TO THE COUNCIL FOR TRADE IN SERVICES (2003)**

1. Since its last update to the annual report, the Working Party on GATS Rules held two formal meetings: on 2-3 July 2003 and 1 October 2003. Reports of these meetings are contained in documents S/WPGR/M/43 and S/WPGR/M/44. They should be read in conjunction with this update. The three negotiating mandates the Working Party is entrusted with were put on the agenda of the two meetings: emergency safeguard measures (Article X), government procurement (Article XIII) and subsidies (Article XV). At its meeting of 2 and 3 July, the Working Party also took stock of progress made in the negotiations, as reflected in the report of that meeting, and subsequently reported by the Chairman in his personal capacity to the Special Session of the Council for Trade in Services.²

**I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS
ARTICLE X**

2. At the meeting of July 2003, the question of emergency safeguard measures was not addressed. At the meeting of 1 October 2003, delegations continued their examination of issues related to the question of ESM, including desirability and feasibility. Also, a delegation drew attention to the usefulness of examining examples of safeguard-type provisions contained in economic integration agreements and in Members' schedules. As an answer to a Chairman's suggestion that Members should examine the hypothetical example presented by ASEAN Members under the different approaches considered by the Working Party, the Swiss delegation submitted a non-paper which goes through the example under approach (e) (i.e. no explicit ESM). Various points of views, as well as preliminary reactions were expressed. The delegation of Thailand, speaking for a number of other delegations, responded to questions previously asked regarding how an ESM model might apply to a hypothetical example it presented. These discussions are reflected in paragraphs 2-22 of S/WPGR/M/44.

**II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS
ARTICLE XIII**

3. The issue of government procurement was not addressed at the meeting of July 2003. At the meeting of 1 October 2003, the European Communities explained its proposal to negotiate an annex to the GATS that would lay down the conditions under which a number of GATS provisions would apply to government procurement.³ The EC argued that this proposal showed that an agreement was feasible and could easily be put in place, enabling negotiations of commitments for government procurement within the framework of the GATS. A number of delegations commented and asked questions, while others reserved their position for the time being. Some delegations recalled their

¹ This report, together with the update in document S/WPGR/12, complete the reporting requirement for 2003.

² TN/S/M/8.

³ S/WPGR/W/42.

views on the negotiating mandate under Article XIII, questioning the negotiations on market access issues, and pointed out the uncertainty arising from work undertaken in other fora. These discussions are reflected in paragraphs 23-38 of S/WPGR/M/44. Also, the Secretariat had prepared a note on government procurement disciplines in economic integration agreements.⁴

III. NEGOTIATIONS ON SUBSIDIES UNDER GATS ARTICLE XV

4. The issue of subsidies was discussed at both the meetings of July and October 2003. Discussions focused on the issue of definition and on ways to obtain more information on subsidies in services sectors. Regarding the latter point, a proposal by the delegation of Chile, supported by various other delegations, was put forward and several Members referred to UNCTAD's work on a study on subsidies in services sectors. In addition, Members mandated the Secretariat to update its previous Note on subsidy disciplines in economic integration agreements notified under Article V and to put together a list of studies pertaining to subsidies in services sectors that have been done by other international organizations. These discussions are reflected in paragraphs 44-69 of S/WPGR/M/43 and paragraphs 39-83 of S/WPGR/M/44.

⁴ S/WPGR/W/44.

Working Party on GATS Rules

**ANNUAL REPORT OF THE WORKING PARTY ON GATS RULES
TO THE COUNCIL FOR TRADE IN SERVICES (2004)**

1. Since its annual report for 2003, the Working Party on GATS Rules held five formal meetings: on 2 December 2003, on 10 and 15 March 2004, on 24 March 2004, on 23 June 2004, and on 20 September 2004.¹ While the meeting of 10 and 15 March was specifically devoted to the issue of the deadline for the negotiations under Article X, the three negotiating mandates the Working Party is entrusted with were put on the agenda of the other meetings: emergency safeguard measures (Article X), government procurement (Article XIII), and subsidies (Article XV). The Working Party also held a number of informal meetings.

**I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS
ARTICLE X**

2. At the meeting of December 2003, discussions focused on the hypothetical example of an emergency situation provided by a group of delegations from ASEAN², as well as on a non-paper earlier submitted by the delegation of Switzerland which analyzed avenues available under a "no ESM scenario". At the meeting of 10 and 15 March, the Working Party agreed on the content of a draft decision on the extension of the negotiations pursuant to the mandate under Article X³, which was later adopted by the Council for Trade in Services.⁴ In subsequent meetings, delegations discussed an informal communication from the group of ASEAN Members (JOB(04)/4), which provided further thoughts on an emergency safeguard mechanism. Members expressed divergent views on various aspects, including regarding desirability and feasibility. To facilitate discussions, the Chairperson compiled a list of main questions raised (JOB(04)/49). Focal issues of interest included situations justifying a safeguard, link to progressive liberalization, the concept of limited window, domestic industry and acquired rights, injury determination, applicable measures and modal issues, duration and compensation, surveillance, and special and differential treatment.⁵

**II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS
ARTICLE XIII**

3. At the meetings of December 2003 and March 2004, delegations continued their discussion of an earlier communication from the European Communities on a proposed framework for government procurement of services under the GATS (S/WPGR/W/42). They also considered an informal communication from Singapore (JOB(03)/216), which listed a number of issues and questions for further discussion in the light of the proposal by the European Communities. At the meetings of June

¹ Reports of these meetings are contained in documents S/WPGR/M/45, S/WPGR/M/46 (and corr.1), S/WPGR/M/47, S/WPGR/M/48 and S/WPGR/M/49. They should be read in conjunction with this report.

² Brunei Darussalam, Indonesia, Malaysia, Myanmar, the Philippines and Thailand.

³ As reflected in S/C/W/236.

⁴ As reflected in S/L/159.

⁵ Discussions on emergency safeguard measures are reflected in paragraphs 5-22 of S/WPGR/M/45, in S/WPGR/M/46 and S/WPGR/M/46/Corr.1, paragraphs 2-38 of S/WPGR/M/47, paragraphs 46-47 of S/WPGR/M/48, and paragraphs 39-58 of S/WPGR/M/49.

and September 2004, discussions focused on a new communication from the European Communities (S/WPGR/W/48), which provided examples of how commitments and MFN exemptions relating to government procurement could be incorporated in the GATS. The delegation of Hong Kong, China circulated an informal communication (JOB(04)/130), which listed questions relating to the proposal from the European Communities. Many questions and issues were raised, including the application of the MFN obligation, the relationship to the GPA, modal application, scheduling approaches, the possibility of distinguishing between goods and services, link to development, and procedural rules. As requested, the Secretariat prepared a Note on *Government Procurement-Related Provisions in Economic Integration Agreements* (S/WPGR/W/49).

4. A number of delegations continued to reiterate that, in their view, the negotiating mandate under Article XIII did not entail market access issues, while others thought that these were covered. Some delegations drew attention to the General Council's decision, in the July Package, that there be no negotiations on the Singapore issue of transparency in government procurement, while others pointed out that the July Package also called on Members to intensify efforts to conclude the rule-making negotiations, including those on Article XIII.⁶

III. NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

5. Delegations first focused on an informal communication from Chile (JOB(03)/218), which provided anonymous examples of subsidies that might distort trade in services. Delegations tended to concentrate on the first example, which raised issues relating to export subsidies. Members also discussed an informal communication from the delegation of Chinese Taipei on the definition of subsidies in services (JOB(04)/78). At the last meeting, discussions focused on an informal communication from the delegation of Hong Kong, China that put forward some thoughts on the possible way forward on aspects such as the information exchange, other sources of information about subsidies, the definition of subsidy, and trade distortion (JOB(04)/127). Noting the lack of progress in that area, some delegations called for a target date to be set for the exchange of information pursuant to Article XV, while others raised doubts about the precise meaning of Article XV in that regard. The importance of working on a definition of subsidy was stressed, as well as the need for discussing concrete negotiating proposals. It was also recommended to address different aspects of the negotiations in tandem. As requested, the Secretariat produced four Notes, which were subsequently discussed: *Overview of Subsidy Disciplines Relating to Trade in Services in Economic Integration Agreements* (S/WPGR/W/46), *List of Publications from International Organizations Relating to Subsidies in Services* (S/WPGR/W/47), *Subsidies for Services Sectors: Information Contained in WTO Trade Policy Reviews* (S/WPGR/W/25/Add.4), and *Limitations in Members' Schedules Relating to Subsidies* (S/WPGR/W/13/Add.2).⁷

⁶ The discussions on government procurement are reflected in paragraphs 23-33 of S/WPGR/M/45, paragraphs 39-53 of S/WPGR/M/47, paragraphs 26-45 of S/WPGR/M/48 and paragraphs 2-38 of S/WPGR/M/49.

⁷ The discussions on subsidies are reflected in paragraphs 34-52 of S/WPGR/M/45, paragraphs 54-80 of S/WPGR/M/47, paragraphs 5-25 of S/WPGR/M/48, and paragraphs 59-80 of S/WPGR/M/49.

**ANNUAL REPORT OF THE WORKING PARTY ON GATS RULES
TO THE COUNCIL FOR TRADE IN SERVICES (2005)**

1. Since its annual report for 2004, the Working Party on GATS Rules held three formal meetings: on 24 November 2004, on 7 February 2005, and on 20 June 2005.¹ The three negotiating mandates the Working Party is entrusted with were put on the agenda of each meeting: emergency safeguard measures (Article X), government procurement (Article XIII), and subsidies (Article XV). The Working Party also held one informal meeting.

2. In the three areas, discussions referred to the need to consider work priorities in the context of upcoming key timelines and the current state of discussions, including as mentioned by the Chairperson in the annotated agenda circulated as JOB(05)/115. Various delegations expressed concerns regarding the lack of progress across the three areas of negotiations as well as the information exchange foreseen in paragraph 1 of Article XV.

**I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER GATS
ARTICLE X**

3. At the meetings of November 2004 and February 2005, delegations continued their discussion on emergency safeguard measures on the basis of an informal communication from a group of ASEAN Members² (JOB(04)/175), which presented answers to questions raised with respect to their proposal. Issues touched upon in the discussion included: situations justifying the use of a safeguard measure; the definition of domestic industry; availability of appropriate statistics; the relationship between safeguard measures and obligations in bilateral investment treaties; link to progressive liberalization; and the use of safeguard-type entries in schedules.

4. At the meeting of June 2005, a representative from UNCTAD presented a paper on emergency safeguard measures that the organization had earlier circulated. The ensuing discussion touched upon a number of issues, such as the purpose and effects of a safeguard mechanism in services, relevant comparisons with rules in the area of goods, special and differential treatment, domestic industry, procedures and indicators, compensation, as well as possible approaches for a way forward.³ Divergent views were expressed on the various aspects raised in relation to emergency safeguard measures, including desirability and feasibility.

**II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER GATS
ARTICLE XIII.**

5. At the meetings of November 2004 and February 2005, delegations continued their discussion of an earlier proposal by the European Communities for a framework under GATS for government

¹ Reports of these meetings are contained in documents S/WPGR/M/50, S/WPGR/M/51, and S/WPGR/M/52. They should be read in conjunction with this report.

² Brunei Darussalam, Indonesia, Malaysia, Myanmar, the Philippines and Thailand.

³ Discussions on emergency safeguard measures are reflected in paragraphs 33-55 of S/WPGR/M/50, paragraphs 55-79 of S/WPGR/M/51, and paragraphs 4-37 of S/WPGR/M/52.

procurement in services (S/WPGR/W/48). At the meeting of June 2005, the European Communities presented a communication on the structure of an annex to the GATS on procedural rules for government procurement (S/WPGR/W/52). Issues raised in the discussion included the application of the MFN obligation, the relationship to the Government Procurement Agreement (GPA), modal application, the possibility of distinguishing between goods and services, scheduling approaches, comparisons with approaches taken in regional trade agreements, thresholds, and elements of procedural rules. As requested, the Secretariat prepared the following Note: *Main Approaches to the Undertaking of Commitments on Government Procurement in Economic Integration Agreements: Summary Observations* (S/WPGR/W/51).

6. A number of delegations continued to reiterate that, in their view, the negotiating mandate under Article XIII did not entail market access issues, while others thought that these were covered. Some delegations drew attention to the General Council's decision, in the July Package, that there be no negotiations on the Singapore issue of transparency in government procurement, while others pointed out that the July Package also called on Members to intensify efforts to conclude the rule-making negotiations, including those on Article XIII.⁴

III. NEGOTIATIONS ON SUBSIDIES UNDER GATS ARTICLE XV

7. At the meeting of November 2004, delegations pursued their discussion on issues relating to the information exchange, the definition of subsidy, and trade distortion, including in the light of a previous communication from the delegation of Hong Kong, China (JOB(04)/127). At the meeting of February 2005, delegations discussed an informal communication from the United States, which put forward some thoughts regarding the information exchange. The delegation of Singapore also presented an informal communication which enumerated a number of relevant issues for the negotiations, in particular with respect to definition (JOB(04)/180). At the meeting of June 2005, delegations discussed an informal communication from the delegations of Chile, Hong Kong, China, Mexico, Peru and Switzerland, which put forward suggestions regarding the development of a provisional definition of subsidy and suggested next steps for the information exchange, including timelines (JOB(05)/96).

8. During the three meetings, the issues raised, and on which various views were expressed, included the scope and depth of the information exchange provided for in Article XV:1, the selection of sectors and timelines for the provision of information, the relevance of the ASCM concepts for a provisional definition in services, the treatment of public services, and flexibility for developing countries pursuant to Article XV:1. As requested, the Secretariat prepared the following informal Note: *Synthesis of Views Expressed on the Definition of Subsidy* (JOB(05)/4).⁵

⁴ Discussions on government procurement are reflected in paragraphs 56-70 of S/WPGR/M/50, paragraphs 37-54 of S/WPGR/M/51, and paragraphs 38-58 of S/WPGR/M/52.

⁵ Discussions on subsidies are reflected in paragraphs 4-32 of S/WPGR/M/50, paragraphs 2-36 of S/WPGR/M/51, and paragraphs 59-81 of S/WPGR/M/52.

Working Party on GATS Rules

REPORT OF THE MEETING OF 21 SEPTEMBER 2005

Note by the Secretariat¹

1. Due to the absence of the Chairperson, the Working Party elected Ms. Clare Kelly, from New Zealand, to preside over this meeting. The agenda for the meeting, contained in WTO/AIR/2649, included the following items: adoption of the annual report to the Council for Trade in Services, emergency safeguard measures, subsidies, government procurement, date of the next meeting, and other business. To assist delegations in the preparation of the meeting, the Chairperson had prepared an annotated agenda, contained in JOB(05)/189. The agenda was adopted.

I. ANNUAL REPORT OF THE WORKING PARTY ON GATS RULES TO THE COUNCIL FOR TRADE IN SERVICES (2005)

2. The Chairperson invited the Working Party to adopt the draft annual report contained in document S/WPGR/W/53 and to transmit it to the Council for Trade in Services. It covered the meetings of the Working Party from November 2004 to June 2005.

3. Some delegations proposed changes to the draft report. The following delegations participated in the ensuing discussions: Hong Kong, China; United States; Chile; New Zealand; Switzerland; Thailand; Republic of Korea; Chinese Taipei; the Philippines; the European Communities; and Brazil. After some modifications had been made to the draft, the Working Party adopted the Annual Report, which was circulated as document S/WPGR/15.

II. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (ARTICLE X)

4. The Chairperson reminded delegations of the need to focus their attention on work priorities and ways to carry them through. The current state of the negotiations on the three topics was known to all and, in the context of the broader negotiating agenda and timelines, delegations needed to think pragmatically about what could realistically be achieved over the remaining period of time. This was relevant for the three negotiating issues under the responsibility of the Working Party. On emergency safeguard measures, the delegation of Australia had indicated that it wished to report on the workshop on ESM that it had organized last July, and which it had announced at the last meeting. In reacting, delegations should take the opportunity to express their views on work priorities. At the end of the discussion at the last meeting of the Working Party, as well as in the annotated agenda, the Chairperson had noted that core divergences remained, but that there seemed to be some openness to consider new or alternative ideas and approaches. Some delegations had made general suggestions in that regard at the last meeting. She sought guidance from delegations on any particular avenues of work that might be further explored.

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

5. The representative of Australia reported that the workshop, held in Bali, was conducted by Australian academics Malcolm Bosworth and Ray Trewin, as well as by Greg McGuire, currently an adviser to Indonesia's Ministry of Trade. Various ASEAN Members had sent capital-based officials to the workshop, which was designed to provide senior officials with an appreciation of the broad range of issues related to the application of an ESM in services. The workshop was divided in a number of thematic sessions, including the following: ESM within GATS and the Doha Development Agenda; key issues in the application of an ESM in services; the question whether an ESM for services could work and if so how; alternatives to an ESM and the role of domestic policy; regulatory regimes for telecommunications and ESMs; Australia's experience and lessons in liberalizing telecommunications; financial services under the GATS and the optimal level of financial regulation; Indonesia's experience and lessons in liberalizing financial services; practicalities of applying an ESM to services; and possible ways forward. As expected, no conclusions or recommendations emerged from the proceedings whose primary purpose was to provide an opportunity for capital-based officials to look at the specifics of an ESM. The issues relating to safeguards in services were very complex, and the workshop proved a useful forum to discuss the various proposals put forward to date, and the benefits and disadvantages of safeguards in services.

6. The representative of the Philippines thought that the workshop had contributed to a better understanding of the practicalities of an ESM. The main economic theme was the need to provide sufficient checks in any ESM model to ensure that the mechanism was not captured by domestic protectionist tendencies. One of the presenters had noted that most of the technical and feasibility concerns that had been raised in the Working Party could be addressed in one way or another. The insulation of an ESM from protectionist tendencies was a policy objective shared by the governments from the group of ASEAN delegations. This objective was pursued within a policy framework that was also informed by vital political economy considerations. ASEAN Members had demonstrated much flexibility in many of the issues involved, as reflected in their communication from November 2004 (JOB(04)/175), and willingness to consider the concerns of others. In the context of services, there inevitably was an array of potential safeguard situations. Safeguards in services were not as simple as imposing tariffs or quotas at the border. An ESM could therefore not be explained in a hypothetical scenario or addressed by a single rule of injury determination, or a single form of trade remedy. The author of the UNCTAD paper had argued that it was necessary to step back and look for simpler forms of resolving the most fundamental issues at hand. While some Members would view such complexity as detrimental to an ESM in services, he looked at it positively. The situation required more creativity and cooperation on the part of WTO Members as well as greater flexibility for regulators, while bearing in mind the need to preserve legal certainty of commitments.

7. His delegation continued to be interested in how the Members that maintained safeguard-type measures in their schedules dealt with feasibility issues. This could provide additional insights. The representative noted that there had been some informal discussion in the workshop on the possible link between the reduction or elimination of ENTs, particularly those that were not fully transparent, and the process of establishing an ESM in services. Some delegations had raised in the Working Party the possibility of a waiver mechanism as a potential interim or alternative solution, and this had also been discussed in the workshop. This discussion had highlighted some concerns about what form such a mechanism might take or the procedures it might embrace, as well as the possibility of experiencing similar feasibility issues in defining the parameters of 'exceptional circumstances' or whatever criteria chosen for a waiver. The workshop had also suggested the possibility of exploring non-horizontal options, such as allowing Members to inscribe an ESM in schedules on a sectoral basis along with a set of general disciplines, or developing a narrow safeguard-like instrument for sectors where liberalization concerns were greatest. However, these approaches were ex-ante disciplines that might not be adequate to deal with political economy interests. While his group of delegations remained open to exploring such interim or alternative solutions that might also be acceptable to Members, their authorities had fundamental concerns on how effective temporary solutions could be. He hoped to hear the views of other Members on these proposed solutions or approaches. The negotiations were now at a crossroad. While he recognized that there might be valid concerns that an

ESM be captured by protectionist interests or that it could potentially disrupt legal predictability, he believed that cooperation could solve technical issues. The capacities and experience of all Members could be harnessed towards solving many of the seemingly intractable technical, legal or policy issues raised in the last ten years. Members could see their concerns addressed through compromise and negotiations, and should thus not reject the idea of an ESM altogether. The question of feasibility and desirability could not be resolved by generating hypothetical scenarios, as some Members had long been suggesting. Aside from the likelihood that such scenarios would be rejected as inadequate to make the case for an ESM, the services sector was so complex that negotiations could not be reduced to one concrete scenario or the other.

8. While there might be valid technical issues to grapple with, he believed that Members had to take strategic political and economic decisions, if the deadlock in these negotiations was to be broken. His group of delegations had considered the possibility of updating JOB(04)/175 or of presenting another proposal in the Working Party. Some of the relevant authorities, however, had wondered whether this would only lead to never-ending debates, which would not be constructive. The authorities were presently studying this issue and revisiting fundamental interests. The alternative approaches or interim solutions alluded to by Members as well as at the Bali workshop were being considered in capitals; his group of delegations was presently exploring avenues of moving these negotiations forward, but other Members were expected to be constructive in discussions. Consideration of the way forward lied as much with the proponents as with other Members. In that context, he asked delegations if informal consultations would truly be useful; could they help to address the concerns of Members or were these too systemic and deep? Noting that some delegations had approached his group of delegations to work together on fundamental issues, he wondered whether bilateral meetings would be useful. While acknowledging that the proponents were supposed to drive the process, he asked whether the Working Party would be agreeable to the Chairperson using his good offices in terms of finding a feasible way forward. An ESM was of fundamental political and economic importance for his group of delegations. He was under no illusion that this issue, which had been discussed for the last 10 years, could be solved in the next three months before the Hong Kong Ministerial. However, delegations might be able to come to some common understandings and views, which could be built upon during the final stages of the Round.

9. The representative of Malaysia said that the workshop had been a meeting point where participants discussed and strived to understand each others' concerns on the issue of an ESM. She understood Australia's point of view in trying to impress upon participants the practicalities of an ESM. She supported the intervention from the delegation of the Philippines on the discussion derived from the workshop. Interim and non-horizontal approaches had been mentioned in both the workshop and the WPGR, but her delegation was not ready to explore alternative approaches in the absence of substantive progress, despite strenuous efforts from ASEAN Members to facilitate the process. She wished to thank the Chair of the Special Session of the Council for Trade in Services for organizing a brainstorming session on ESM before the summer break. Particularly notable was the information that a group of Members had entered into bilateral agreements on services with provisions on ESM. She thought that questions of feasibility and desirability would have been thoroughly considered at that stage. This would be relevant to the Working Party's discussion and could enable to make quick progress. Feedback from the workshop indicated concerns on the lack of checks and balances, and she proposed that such concerns, or any other concerns that Members might have, be discussed further in the WPGR in order to advance work on an ESM.

10. The representative of New Zealand said that his delegation had been able to attend the workshop as an observer and considered that the event had proved informative and constructive. It highlighted the usefulness of an informal small-group process for dealing with such complex technical issues. He thus supported the continuation of such discussions, including with the assistance of the Chairperson. The representative of Indonesia expressed appreciation for the assistance of Australia in organizing the workshop. He associated his delegation with the statements of the delegations of the Philippines and Malaysia.

11. The representative of Pakistan thought that such discussions in a workshop could yield positive results. Her delegation wished to see balanced progress on rules and market access. Members had to engage in this Working Party to ensure positive results on both ESM and subsidies. She supported the views expressed by the Philippines and hoped to see further exchanges involving all sides.

12. The representative of Hong Kong, China said that he would support exploring alternative ideas and approaches. He had an open mind in that regard, but it was important to make the necessary distinctions between, on the one hand, the question of the need for an ESM and, on the other hand, the question of how it could operate in practice. Informal exchanges should take place to explore any alternative ideas or approaches that delegations might come up with. Willingness and open-mindedness had to be shown by all sides. He would be prepared to contribute his thoughts to such informal exchange.

13. The representative of Chinese Taipei was encouraged to see that issues relating to an ESM could be discussed in the workshop. An ESM was of fundamental importance to certain countries pondering further liberalization. Therefore, she supported the suggestions by the delegation of the Philippines to have additional informal exchanges, with the assistance of the Chairperson. Some ideas touched upon in the seminar, such as non-horizontal approaches, could be explored further.

14. The representative of Thailand said that her authorities had found the workshop very useful. She associated her delegation with the statement made by the Philippines, including the suggestions on the way forward.

15. The representative of Cuba expressed support for the intervention by the delegation of the Philippines. She drew attention to the fact that, after so many years, the same difficulties persisted. While the proponents had show flexibility in trying to find a solution, there was a lack of political will from others. She underscored that this topic was her delegation's priority in the Working Party.

16. The representative of the European Communities considered that the suggestions of the delegation of the Philippines for the way forward, such as informal discussions and bilateral consultations, had already been pursued in the past. He supported the continuation of such efforts, but this should also be done in other rules areas such as government procurement. In response to comments on safeguard provisions in bilateral trade agreements on services, he said that this issue had already been discussed in past meetings. There were significant differences between such bilateral agreements and the GATS, especially regarding the levels of flexibility. No safeguard provisions in services existed in bilateral trade agreements that used a positive-list approach modelled on the GATS.

17. The representative of Brazil supported the suggestion that informal consultations be undertaken. The Chair of the Special Session had organized a brainstorming last June, and he might be asked, along with the Chair of the Working Party, to facilitate informal exchanges between delegations. In principle, his authorities had no problems with consultations on the other two areas within the remit of the Working Party.

18. The representative of Trinidad and Tobago said that the issue of ESM was important for countries such as hers, which were small and vulnerable. She was interested in any documents coming out of the workshop, which could be drawn upon in the WPGR. Many small economies were sometimes confronted with difficult situations. Efforts to advance market access thus needed to proceed in a complementary manner to efforts on rules so that sufficient fall-back positions could be ensured to face such difficult times. Cooperation in developing an ESM was key and her delegation was looking forward to participate in consultations.

19. The representative of India welcomed the suggestions made by the delegation of the Philippines relating to the organization of future work. His delegation was open to discussing various alternative approaches, which would help to take the negotiations forward.

20. The representative of the United States asked the delegation of the Philippines to clarify what it had in mind when referring to the good offices of the Chairperson. She agreed that some form of consultations should be contemplated, but this should be done under the auspices of this Working Party. The brainstorming undertaken by the Chair of the Special Session had been under his personal responsibility. Despite a productive exchange, a lot of questions remained unanswered and her delegation continued to question the need for and the feasibility of an ESM in services. The onus for developing a workable proposal clearly rested with the proponents. Her delegation was very sensitive to the political needs of some Members and was interested in consultations that would help to promote creative ideas.

21. The representative of the Philippines emphasized that all delegations needed to show the willingness and open-mindedness required to move forward on this issue. The Chairperson would eventually decide whether to offer his good offices in finding a way forward. He was hoping that the Chairperson could facilitate such informal exchanges, but was also envisaging that ASEAN Members might convene consultations among a small group. He invited delegations that had been less vocal in the Working Party to signal their interest in participating in such discussions. If some Members had no willingness to negotiate and had already taken the decision that there was no need for an ESM, these might not prove very helpful however. The Working Party would then be bound to repeat the discussions of the last 10 years.

22. The representative of Brazil said that he had learned much about the GATS by listening to the arguments of those in favour as well as those against an ESM. The Working Party had so far engaged in two types of approaches. One was to discuss fictitious examples. Another avenue, favoured by his delegation, was to look at some schedules to examine entries that had effects equivalent to that of safeguards so as to learn from experience. This could help to clarify feasibility issues raised in relation to an ESM. He had questions for some Members in relation to their scheduling entries, but understood that additional time might be needed since the questions had not been circulated in advance. They were addressed to Japan, the United States, the European Communities, and Canada. The revised Japanese offer (TN/S/O/JPN/Rev.1) contained an entry similar to a safeguard that allowed the introduction of future and temporary limitations. It was to be found in the commitment on freight transport by road (CPC 7123). In Japan's Uruguay Round schedule, the entry for that sector clearly referred to emergency safeguard measures, and the Japanese delegation had indicated in the past that this had been a mistake. In the revised offer, the entry had been replaced, in mode 3 under market access, by the following: "None except that on a temporary and non-discriminatory basis, limitations on the number of service suppliers and on the number of service operations or on the quantity of service output may be applied". The inscription suggested that in some situations the number of service suppliers, service operations or the quantity of service output might be limited. Since the measure affected mode 3, it might be used to limit 'expansionary activities' that could cause injury or threat thereof to the domestic industry and affect acquired rights. He asked for clarifications on the following aspects: What were the situations that justified the application of the measure? What type of information would be considered in making a determination of injury or threat thereof? What would be the statistical source that the proponents would use? Would these statistics need to be provided according to the mode of supply? What type of evidence would be sought in determining the potential injury? What parameters were considered in setting the quantitative limits? Would these be applied to the established local and foreign suppliers as well as on those wishing to establish? How would expansion of service supplies be defined (increases in turnover, profits, product range, regional representation, etc)?

23. The representative further said that the revised offer from the United States (TN/S/O/USA/Rev.1) contained an inscription similar to a safeguard. It allowed exemptions on rural local exchange carriers to ensure interconnection. The entry, which was found in a footnote to the Reference Paper on telecommunications, seemed to be discriminatory. It enabled a state regulatory authority to exempt rural local exchange carriers for a limited period of time from the obligations of section 2.2 of the Reference Paper with regard to interconnection with competing local exchange carriers. In relation to this inscription, he invited the United States to provide clarifications about the following aspects: In which situation was this exemption applied? What type of information would be considered in determining the exemption? To which modes of supply would this safeguard apply? What data would be used? Would statistics need to be provided according to the modes of supply? What was the type of surveillance applied and what were the elements considered in such a process? How was the limited period of application stipulated?

24. The representative said that the revised offer of Canada (TN/S/O/CAN/Rev.1) also contained an inscription similar to a safeguard measure. It required a public convenience and necessity test in relation to distribution services. The entry, which was found in the sub-sector 'Retail sales of motor fuel' (CPC 613) and applied to the province of Prince Edward Island under mode 3, read as follows: "Public convenience and necessity test. (criteria related to approval include: examination of the adequacy of current levels of service, market conditions establishing the requirement for expanded services, the effect of new entrants on public convenience, including the continuity and quality of service, and the fitness, willingness and ability of the applicant to provide proper service)". He thought that the concept of "effect on public convenience" might have a close relation to issues such as the consideration of consumers' views, as well as to the broader economic impact of the application of a safeguard measure. Therefore, he asked Canada to explain the concrete parameters for the application of this measure. Further, what type of information would be considered in determining the adequacy of current levels of service? What type of statistics would be used? Would they be disaggregated by sub-sector (e.g., three digit CPC, four digit CPC)? How would the requirement for expanded services be defined (increases in turnover, profits, product range, regional representation, etc)? Could the measure imply restrictions to the acquisition of new facilities, new hiring, increased marketing, expansion of consumer base, or new strategic alliances? Would any limitations to expansion be discriminatory, or would they also apply to domestic suppliers? Would the consideration of new entrants with regard to public convenience take into account domestic suppliers and, if so, what would be the criteria? Would discriminatory restrictions be consistent with bilateral investment treaties providing for national treatment to established foreign investors, including foreign service suppliers? Would the Parties to these agreements be exempted on the basis of acquired rights? How could it be determined whether public convenience was affected by scheduled liberalization, as opposed to other factors? What weight would be given to public convenience compared to economic factors?

25. The representative continued by referring to the revised offer from the European Communities (TN/S/O/EEC/Rev.1). It contained a safeguard-type entry that required an economic needs test based on, in his view, unclear criteria in relation to distribution services. The entry, which related to retailing services under mode 3 and was specific to Belgium, Cyprus, Denmark, France, Italy, Malta and Portugal read: "(e)conomic needs test applied on a national treatment basis. The economic needs test, when applied, sets a limit on the number of department stores (large department stores in France and larger than 2000 sq. m. in Portugal). Main criteria: The number of and impact on existing stores, population density, geographic spread, impact on traffic conditions and creation of new employment." He asked what type of information would be considered in determining the impact on existing stores, what type of statistics would be used, and whether these would be disaggregated by sub-sector (e.g., three digit CPC, four digit CPC)? Further, how could it be determined whether the existing stores were affected by liberalization undertaken in accordance with the schedule of commitments, as opposed to other factors? How would safeguard measures be different from the market access limitations listed, and would their use be less feasible than the use of such limitations? The representative encouraged the relevant Members to engage in this discussion, at least in

forthcoming meetings. There was no presumption that the entries he mentioned were safeguard measures. However, some entries contained elements that, if explained, could inform the debate on feasibility issues raised in relation to an ESM. He reiterated that his delegation stood ready to respond to questions as well.

26. The representative of Japan noted that similar questions on Japan's schedule of commitments had been raised in the past and said that he would communicate the details of Brazil's intervention to his authorities and come back to this at a later time.

27. The representative of the European Communities said that the questions raised by Brazil related to an economic needs test which was not applied on a discriminatory basis nor in response to emergency or injury situations. He did not think that such questions were relevant to the Working Party's discussions.

28. The representative of the United States said that the Working Party, in continuing discussions pursuant to Article X, had been looking at proposals on an emergency safeguard mechanism. The questions put forward by Brazil were outside of the mandate. Nevertheless, her delegation had responded during the bilateral request-offer process. She hoped to see the questions in writing and was open to again discuss these issues further with Brazil in the hope of addressing its concerns. The entry in the US schedule that was highlighted by Brazil was not an emergency safeguard mechanism nor was it intended to play such a role. A different standard was being applied for the Article X mandate.

29. The representative of Canada, in a preliminary manner, saw little parallels between ENTs and an ESM. ENTs in schedules had emerged from earlier negotiations and, to the extent they were impediments to trade, they would be discussed in the context of on-going and future market access negotiations. Article XVI specifically contemplated ENTs. Their existence did not militate in favour of equipping the GATS with an ESM, but highlighted the flexibility already imbedded within the GATS.

30. The representative of Hong Kong, China hoped that the delegation of Brazil could share its questions with the whole Membership. He asked the Secretariat to inform the Working Party of Notes prepared in the past on safeguard provisions in economic integration agreements. When discussing safeguard-type entries in schedules, it was important to look at measures that, even if not using the word 'safeguard' as such, had the effect of introducing uncertainty in specific commitments by providing an element of discretion in deciding the level of market opening granted in practice. Two types of measures were closely related to safeguards. The first were some entries referring to ENTs. ENTs were one way of specifying an Article XVI limitation; however, many such entries did not specify a criterion nor the type of limitation that could be imposed. One could presume that such entries had been included in schedules because the relevant Members had wanted to reserve a certain amount of discretion in terms of limiting market access. In that sense, there might be some resemblance between unspecified ENTs and safeguard-type provisions. Second, subsidies could also act as very effective safeguard measures for those Members that could afford it. Subsidies could tilt the level playing field in favour of the domestic suppliers in situations where injury was caused by supplies of foreign service suppliers. Various Members had included in their schedules horizontal carve-outs on subsidies. The representative was puzzled by previous interventions suggesting that Brazil's questions were of no relevance to this Working Party. Many resembled some of the issues raised in the Committee on Specific Commitments (CSC). He was looking for Members to respond to these questions, whether in this Working Party or in the CSC. Such questions would continue to be asked until they were addressed in a substantive manner. He was not intending to single out any particular Member, but rather aimed at addressing the more general problem of unclear entries that might have effects similar to safeguards or that, in their operation, would be posing the same type of feasibility questions. If some Members considered that such entries did not have similar effects to

safeguards nor posed similar feasibility questions, he was waiting for an explanation. A solution to this issue was to eliminate or reduce these types of entries through Members' offers.

31. The representative of the United States said that, while it might prove interesting to look at the entries in all Members' schedules, this might detract from discussions on the question of an ESM. She did not think that this was an appropriate way to respond to the proponents of an ESM, and she wondered whether the proponents thought that examining entries in every single Member's schedule would prove useful. Further, there was no definition of what might be safeguard-type provisions. She agreed with the delegation of Hong Kong, China that the occurrence of certain limitations and other trade obstacles should be reduced. This was a purpose of the negotiations. In the CSC, her delegation had supported informal discussions to address technical questions relating to schedules. One could continue to ask questions, but, given that some might feel that these did not fall under the mandate and that Members were not obligated to answer, she wondered whether this would be a prudent way to advance the Article X mandate. She had not agreed to launch such an exercise.

32. The representative of Chile noted that the approach, mentioned earlier, consisting of the provision of examples of situations requiring a safeguard was an important way to address this question. She did not see such examples as fictitious, but rather hoped that the proponents put forward concrete examples in order to see whether or not a safeguard-type mechanism was necessary and feasible. She thought that the questions put forward by Brazil were useful and did not mind whether they were discussed in the WPGR or the CSC.

33. Reacting to previous interventions, the representative of the European Communities did not consider that ENTs were similar to safeguards. Economic needs tests carried a certain level of discretion, but Members without commitments in certain sectors or with the inscription "unbound" had even more discretion. This should be kept in mind when attempting comparisons.

34. The representative of the Philippines thought that Brazil's intervention was a positive and constructive contribution to help solve some feasibility issues previously raised regarding safeguards. Delegations should not perceive this exercise as an attempt to target any particular delegation, but rather as a complement to on-going discussions about an ESM. Hopefully, reticent delegations would at least discuss such issues in the informal consultations that ASEAN would convene.

35. The representative of China believed that Brazil's intervention was relevant to the discussion on Article X. The examples mentioned were, in his view, equivalent to safeguards, and he was looking forward to answers from relevant Members. He agreed with the suggestions made by the Philippines on organization of work.

36. The representative of the United States did not endorse the course of action proposed by Brazil. The Chairperson might have to conduct consultations on how best to proceed on this point. Engaging in an informal discussion of Brazil's questions could mean that the Working Party would have to examine similar questions on every Member's schedule. Her authorities would further consider this issue, but the US delegation would certainly not participate unless assured that every Member would be subject to the same questions. In any event, she would not be interested in discussions in formal mode. The burden was on the proponents to demonstrate the need for an ESM; the burden was not on others to demonstrate why entries in their schedules were not safeguard-type provisions. Trying to shift the burden in such a way was not acceptable.

37. The representative of the Philippines did not see Brazil's intervention as an attempt to shift the burden, but as a constructive effort to further the negotiations on ESM.

38. The representative of Brazil was open to consultations by the Chairperson on this issue. He would circulate the questions and revert to them at the next meeting. He encouraged delegations to ask questions on his country's schedule, hoping that this could help to avoid scheduling inaccuracies.

He was not trying to shift the burden of proof, but rather attempted to ease the burden of rejoinder. Many questions had been put to the proponents in relation to feasibility. The four large economies at which the questions were directed could share their experience. They were in a good position to respond because they had sophisticated bureaucracies, but the intent was not to target any Member in particular.

39. The representative of Thailand was grateful for Brazil's intervention and looked forward to further discussions on this topic. The scheduling entries mentioned could lead to a form of suspension of specific commitments, which was why there was no impending need for an ESM. In some ENTs, the criteria could serve as a trigger point similar to what might be used for an emergency situation in safeguard provisions.

40. The representative of Hong Kong, China noted that the Secretariat Note S/CSS/W/118 contained a list of ENTs in Members' schedules. A similar list relating to subsidies could be found in the Secretariat Notes S/WPGR/W/13 and addenda. Like the delegation of Chile, he was interested in pursuing this discussion either in this Working Party or in the CSC.

41. In response to a previous question, the Chairperson said that the Notes prepared by the Secretariat on safeguard-type provisions in economic integration agreements had been circulated as S/WPGR/W/2, S/WPGR/W/4, and S/WPGR/4/Add.1 (incl. Corr.1). In summing up, she noted the appreciation of Members for the seminar held in Indonesia on ESM issues, as well as the strong interest of some delegations in advancing on this question. Proponents, as well as other delegations, had signalled their openness to considering possible alternatives and approaches on the way forward. Some delegations had stressed that the responsibility for advancing this negotiation lied with the proponents. It had been suggested that the Chairperson should undertake consultations and hold informal exchanges as appropriate, and ASEAN Members had said they might hold additional meetings. In addition, Brazil had made an intervention on what it considered as limitations in schedules resembling safeguards, and had invited comments from other delegations in reaction to its questions. Views differed to a significant degree on the utility of answering such questions in this Working Party, and it was noted that the Chairperson should include this point in his consultations. She invited the Working Party to take note of comments made.

III. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV)

42. The Chairperson suggested that delegations pursue their discussion of the communication from Chile; Hong Kong, China; Mexico; Peru; and Switzerland (JOB(05)/96) on a provisional definition of subsidy for the purpose of information exchange and of the suggestions contained therein. It would be of interest to know, from those that had not given a view to date, what steps were envisaged regarding the provision of information as per Article XV:1. While having all Members agree on a working definition and select sectors might prove useful, delegations should keep in mind that these were not pre-conditions for the provision of information.

43. The representative of Hong Kong, China wished to emphasize three general points in relation to JOB(05)/96. First, he was not looking for a perfect and agreed definition of subsidies for the purpose of developing disciplines, but rather for a working definition that individual Members could use as a basis for initiating the information exchange as mandated in Article XV:1. That mandate was clear and he did not see any reason for such an exercise to be confused with notifications. Both the 1997 Secretariat questionnaire and the 2002 simplified questionnaire by Hong Kong, China and others had suggested that delegations use either the definition of the Agreement on Subsidies and Countervailing Measures (ASCM) or their own definition. The proposal for a provisional definition was a response to the repeated complaints by some Members that the lack of a definition made it difficult to exchange information. Second, there was no need for a common definition before proceeding with the information exchange. That would be ideal, but the discussions would be shaped by the information coming forward. It was important for the information exchange to go ahead, rather

than to dwell on details. In any event, no definition used by individual Members for the purpose of the information exchange would prejudice any eventual definition or the scope of disciplines. Third, sponsors of the communication had suggested the possibility of self-selecting a certain number of sectors, along with a certain timeframe. Specific suggestions had been made in the communication, but he was open to other Members' views as to what would be realistically achievable. He recognized the capacity constraints that some developing Members might face and was open to ideas on how this might be addressed, e.g. by providing information on fewer sectors, by having a longer timeframe, or - as had been suggested by the EC - by setting a *de minimis* level.

44. Turning to specific issues raised at the last meeting, the representative noted that a comparison had been made between the US proposal and JOB(05)/96. While there might be some small differences, JOB(05)/96 built upon the US proposal in regard to both a provisional definition and the sector focus. A difference between the two proposals was that the sponsors of JOB(05)/96 did not believe that there was a need to narrow down the focus to one sector. Drawing information from only one or two sectors might introduce a bias in the analysis of subsidies and of their trade-distorting effects. Letting Members exchange information by starting from a few sectors of their choice would yield information of a sufficiently broad range to permit appropriate analysis. A question had also been raised about the terms "on terms more favourable than those available to the potential recipient or beneficiary in the market", used in the proposed working definition. He said that this wording had been drawn from jurisprudence on the notion of "conferring of a benefit", which figured in the ASCM definition. Regarding questions on the choice of sectors, for example whether they should be based on W/120, he did not think that this should be a hurdle given that it was left to individual Members. The concept of specificity had been retained in the provisional definition partly to address the concerns of some Members over the potentially wide scope of the definition. At the same time, he thought that the notion of specificity might not be readily transposable to the services context and might need modifications. Members that did not consider that this notion was relevant to the definition could decide not to use it for the purpose of the information exchange. The Members that used the concept could explain how they applied it in gathering information.

45. Regarding non-governmental bodies, he thought that every Member would have an idea of the meaning of these terms since they were found in Article I of the GATS. He recalled that the provisional definition was not intended to be perfect, but to help the information exchange. With respect to questions on general infrastructure and public services, he said that 'general infrastructure' was a notion used in the ASCM. The terms 'public services' were introduced to cover services provided by the government to the public in general. This also was an attempt to address concerns that the information exchange might be too broad and thus hurt some sensitivities. He was ready to consider suggestions on how to better define this concept. He stressed that the references in paragraph 3(d) of the annex in JOB(05)/96 did not prejudice the scope of Article I:3 of the GATS. Paragraph 2 of the annex specified that only subsidies within the scope of Article I:3 were covered. With regard to flexibility for developing countries, he was aware of the recognition in Article XV of the role of subsidies in relation to the development programmes of developing countries and the importance of taking into account the needs of Members, especially developing economies, for flexibility in this area. Such flexibility might be something to further consider during the negotiations of disciplines. Regarding comments that the provision of information was sensitive, he pointed out the high aspirations of some Members on transparency in other areas. In JOB(05)/96, the sponsors had made many suggestions, relating for example to the choice of sectors or public services, to address sensitivities and he was open to further ideas in that regard.

46. The representative of Turkey saw utility in the information exchange and believed it would be important to develop a provisional definition, which would not prejudice the positions of Members. The definition could be based upon existing WTO provisions and jurisprudence. A limited number of service sectors of interest to the entire Membership might be chosen, for example two sectors. There might be merit in selecting the same sectors for all Members. The Working Party might

initially focus on subsidies based on export performance. The concerns of Members, as expressed at the last meeting, needed to be addressed.

47. The representative of Guatemala reiterated her support for proceeding with the information exchange, subject to the development of a provisional definition of subsidy. It should only aim at facilitating the information exchange and not prejudge positions of Members in the development of disciplines. Any deadline should provide the necessary time for allowing government institutions to gather the information. Since a deadline before the Hong Kong Ministerial would be difficult to comply with, further discussion of this aspect was needed. The selection of sectors should be left for each Member to decide. Flexibility for developing countries should be provided in terms of the number of sectors chosen.

48. The representative of Pakistan encouraged Members to start the process of information exchange. The proposal by the United States (JOB(05)/5) had made some useful suggestions in that regard. The Working Party might consider asking UNCTAD or the OECD to make presentations if they were doing work in this area. On the definition, she agreed with the use of the ASCM definition as a provisional basis for facilitating the information exchange. Elements could be added to it. Subsidies could entail specific financial contributions or concessions made by a government at federal, state, provincial or lower levels to an entity providing services locally or exporting and competing with entities not enjoying these benefits. The definition would only target sectors where Members had already made commitments.

49. Regarding the timeframe proposed in JOB(05)/96, the representative of Switzerland said that she was open to other Members' views as to what would be realistically achievable. She understood that some Members would need more time and her delegation was ready to accommodate such needs. However, she thought that a strong positive signal would be given if Members could exchange information on the selected sectors by the Hong Kong Ministerial. It would be regrettable if the proposed timeframe was not further considered.

50. The representative of Thailand reiterated her support for developing a provisional definition for the purpose of facilitating the information exchange. Some elements contained in paragraph 8 of JOB(05)/96 could be used as a flexible basis for sharing information. Any future disciplines could be looked at in the light of Article IV, the purpose of which was to increase the participation of developing countries. Certain forms of government assistance could create an artificial and unfair competitive advantage for domestic suppliers.

51. The representative of the European Communities said that his delegation had provided information in all sectors. He recalled the communication from his delegation from 6 July 2000, as well as his intervention at the last meeting (paragraph 62 of S/WPGR/M/52), which mentioned the websites where relevant information on subsidies could be accessed.

52. The representative of Hong Kong, China thought that the steps taken by the EC might be a good example of how one could get started on the information exchange. He asked if the EC could provide insights on the definition used in gathering such information. The representative recalled that the US had suggested to focus on export subsidies, and he thought this was an interesting idea. He asked the delegation of the United States how they would define export subsidies for the purpose of sharing information. In view of the need for the Working Party to focus on what was realistically achievable, a reality check was needed regarding the information exchange. Since the first questionnaire, only four Members had provided written replies and one Member had provided information orally. Apart from a few Members that had reported difficulties in gathering and providing information for the information exchange, no Member had indicated any attempts or signalled any progress in responding to the questionnaire or otherwise gathering information. He had shown willingness and made suggestions to try to accommodate the concerns of those that had experienced difficulties. A problem mentioned was the absence of definition, which his group had

attempted to address in their proposal. Second, some delegations had pointed to the potentially broad scope of the information exchange and its resource implications, and he had consequently suggested to start with few sectors at a time. Third, some delegations had felt that the information exchange should focus only on areas where the subsidies were causing trade distortion. In that regard, he reiterated that the purpose of the information exchange was to provide an information base that could serve for analysing the problems and devising appropriate solutions as necessary. He strongly believed that the information exchange was required for enhancing discussions on trade distortion and possible disciplines. The exchange would also provide a better basis to decide on an appropriate definition. The mandate in Article XV:1 was clear and remained to be fulfilled.

53. The representative noted that many schedules contained carve-outs for subsidies. Like for safeguards, it might be that Members with such carve-outs were hesitant to engage in a substantive way in the negotiations on subsidies because they already had protected their position. Subsidies could be effective safeguard measures, so long as a Member could afford it. While the information exchange was not necessarily a pre-condition for moving forward, it was an important component of the negotiations. The fact that the mandate could not be fulfilled by Members over the last 8 years had been a matter of great concern and he wondered about Members' willingness. This situation contrasted with the emphasis put by some delegations on transparency in other areas. The representative therefore requested the Chairperson to reflect, in her report to the Special Session of the Council for Trade in Services, the fact that the mandate had remained unfulfilled until now. The Chairperson should also conduct informal consultations on ways to facilitate progress on the information exchange. The Chairperson's report to the Special Session should be made with a view to seeking guidance on this matter, keeping in mind that the subsidy negotiations were part of the overall services negotiations. Progress should be made in parallel in both the market access and the rules negotiations.

54. The representative of Chile agreed with the delegation of Hong Kong, China regarding the importance of the information exchange. Many Members had not fulfilled the mandate. While some had said that they had encountered difficulties, others clearly had the resources needed to provide the information and should therefore do so. She was open to discuss the difficulties faced by those delegations with more limited resources. It was important first to constitute an information base before moving on to other aspects of the negotiations. Hopefully, the information on subsidy programmes mentioned in Trade Policy Reviews and in other sources could be shared with the Working Party. Delegations could then analyse whether there was a problem to address. She thought that subsidies would, as pointed by the delegation of Thailand, lead to an uneven playing field. Regarding the way forward, she agreed with the suggestions made by the delegation of Hong Kong, China, in particular the undertaking of informal consultations.

55. The representative of the United States said that she needed to consult with her authorities before agreeing to any proposal to request the Chairperson to make certain statements or take actions in the Special Session of the Council for Trade in Services.

56. In summing up, the Chairperson noted that no more Members had provided information today pursuant to the exchange mentioned in Article XV:1. Different suggestions had been made to address the concerns that Members might have regarding the provision of information. Several delegations had expressed support for energizing the information exchange. The idea had been raised that, in the light of the lack of fulfilment of the mandate, some guidance should be sought from the Special Session, although opposing views had been expressed. It also had been suggested that the Chairperson undertake informal consultations on the way forward. She urged Members to make efforts to provide information as appropriate and hoped that the proponents could lead the way. Delegations should inform the Working Party of any problems that they were facing in gathering information, so that these could be addressed. She invited the Working Party to take note of comments made.

IV. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII)

57. The Chairperson invited delegations to continue their discussion on the basis of the latest communication from the European Communities (S/WPGR/W/52) and to focus on possible procedural rules. A key question was whether there were such rules around which there could be a greater degree of support for advancing discussions.

58. The representative of the European Communities recalled that his delegation's communication referred to procedural rules that could be developed for government procurement in services. He underscored that delegations should participate actively and in good faith in all three topics under the responsibility of the Working Party. Of course, delegations with particular interests in one of the topics could take the lead, as the EC was doing on procurement. However, other delegations needed to participate to ensure progress in the negotiations as a whole. All three areas had to advance at the same pace.

59. The representative of Hong Kong, China said that he conducted the negotiations in the three areas in good faith, but, in the light of the discussion on the information exchange mandate, he feared that not everybody shared this view. Concerning the EC proposal, he had not yet received a satisfactory answer to the question on how the proposed framework for government procurement would square with reciprocity provisions in the Government Procurement Agreement (GPA). The answers given so far had suggested that the EC was relying upon exemptions from the MFN obligation similar to existing exemptions pursuant to Article II of the GATS. He still was puzzled about how this approach would allow for a reconciliation of the reciprocity provisions in the GPA with the multilateral commitments that the proposed EC framework envisioned. He hoped to obtain clear answers in order to progress in the discussions.

60. The representative of Brazil reiterated that he disagreed with the delegation of the European Communities regarding the scope of the mandate in Article XIII. His delegation was therefore not prepared to engage in any discussion relating to market access or national treatment. He might be willing to address, however, other parts of the communication from the European Communities.

61. In response to the question from the delegation of Hong Kong, China, the representative of the European Communities said that under the EC proposal Members' commitments would apply multilaterally. If the GPA contained additional elements that applied only amongst GPA Members on the basis of reciprocity, these would be preserved by a specific provision to that effect. He did not see a major problem with the relationship between the framework and the GPA, but was open to suggestions. He took note of Brazil's views and welcomed the Brazilian delegation's readiness to engage on some parts of S/WPGR/W/52. Should the Chairperson undertake informal consultations on subsidies and ESM, he should also do so on government procurement.

62. The Chairperson invited the Working Party to take note of comments made.

V. DATE OF THE NEXT MEETING

63. The Chairperson suggested that the Working Party hold its next formal meeting during the next cluster of services meetings after the Hong Kong Ministerial. She noted the interest on the part of delegations for the Chair to undertake informal consultations and to take appropriate steps to facilitate informal exchanges.

VI. OTHER BUSINESS

64. No issue was raised under this agenda item.

Working Party on GATS Rules

REPORT OF THE MEETING OF 20 JUNE 2005

Note by the Secretariat¹

1. The meeting of the Working Party on GATS Rules was opened by Ms. Clare Kelly, from New Zealand. The agenda for the meeting, contained in WTO/AIR/2595, included the following items: election of the new chairperson, emergency safeguard measures, government procurement, subsidies, date of the next meeting, and other business. To assist delegations in the preparation of the meeting, the Chairperson had prepared an annotated agenda, contained in JOB(05)/115. The agenda was adopted.

2. The Chairperson recalled that at the last meeting she had asked delegations to reflect on what should be priorities for this year and how to implement them. In the annotated agenda circulated in preparation for the informal meeting of 13 June, she had shared her personal assessment of the situation in the light of consultations undertaken with the assistance of the incoming Chairperson. Discussions on subsidies were still at an early stage and discussions on ESM and government procurement were characterized by important divergences of views. Accordingly, no substantive progress had been made in moving closer to any consensus, and it seemed unlikely that much could be achieved if divergences in positions and levels of ambition were not addressed. A reality check was indeed important as delegations now needed to think in a pragmatic manner about what could be done over the remaining short period of time. In that context, she had made some suggestions regarding possible areas of focus for this year.

I. ELECTION OF THE NEW CHAIRPERSON

3. The Chairperson noted that it had not been possible to proceed with the hand-over of the chairmanship at the first meeting of the year. The consultations undertaken by the Chairperson of the Council for Trade in Services, last March, had suggested that Mr. Sumanta Chaudhuri, from India, seemed to enjoy the support of the whole membership. She proposed that the Working Party elect Mr. Sumanta Chaudhuri as Chairman of the Working Party on GATS Rules. Mr. Chaudhuri was elected by acclamation. The incoming Chairperson thanked delegations for their confidence and thanked the outgoing Chairperson for the work done under her tenure. Delegations expressed their appreciation for the outgoing Chairperson's efforts and dedication, and congratulated the new Chair on his election.

II. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (ARTICLE X)

4. The Chairperson recalled that at the last meeting UNCTAD had been invited to present to a study on emergency safeguard measures. Ms. Mina Mashayekhi, Head of the Trade Negotiations and Commercial Diplomacy Branch of UNCTAD, would introduce this paper, which had been presented last March at UNCTAD's Commission on Trade in Goods and Services and Commodities.

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

5. The representative of UNCTAD said that the study, entitled "Emergency Safeguard Measures in the GATS: Beyond Feasible and Desirable", had been authored by Mario Marconini, a consultant. The predisposition of the author was in favour of the inclusion of an emergency safeguard mechanism (ESM) in the GATS because it would improve the Agreement. With appropriate provisions for special and differential treatment, an ESM would encourage progressive liberalization with due respect for national policy objectives by helping Members to sell the logic of GATS liberalization at home. An ex-post instrument such as an ESM would help to convince reluctant sectors to bind liberalization through commitments. If the mechanism was adequate, it should make the GATS a more reliable and meaningful framework for liberalization. The debate on an ESM in services had placed the burden of proof on those in favour of an ESM, but if a similar burden of proof had been applied in relation to the Agreement on Safeguards and Article XIX of the GATT, there would be no safeguards in the area of goods. The Europe Agreements also contained safeguard provisions. Accordingly, once the desirability was established, an ESM would become feasible. The paper noted that while an ESM appeared to go against classical economic theory, the real world was different: governments needed to address adjustment costs, ensure orderly exit from a market and deal with impacts on employment. Those losing out from liberalization needed to be brought on board by addressing imperfections in factor mobility; there was a need for breathing space to build capacities. Developing countries frequently lacked the regulatory and institutional framework to address these issues in a GATS-consistent manner. The case for an ESM was stronger in services because liberalization was a novel phenomenon and involved complex regulatory issues, which made it difficult to foresee the economic, social and developmental impacts.

6. With respect to domestic industry, she noted that differences in legal systems made it difficult to agree on common definitions. Accordingly, the author had proposed that definitions of domestic industry, as well as the concept of like services, be left to individual Members to decide. This would be combined with stringent requirements, such as notification. National definitions would have to be notified at the beginning of the process and the reason for preferring one definition over another would have to be clearly specified. The definition of domestic industry also related to mode 3, particularly the distinction between pre- and post-establishment, which raised questions about acquired rights, possible grounds for discriminatory treatment, and expansion of established suppliers' operations. The paper argued that it was easier to apply an ESM at the pre-establishment phase because many countries would not want to force disinvestment. With respect to modal application, the author recommended that an ESM apply to all modes of supply so as to avoid imbalances. However, each mode faced specific problems. For example, under mode 1, issues of enforcement and circumvention arose. Regarding mode 4, some countries had concerns about the possibility of abuse. She noted that the author proposed, in relation to mode 4, the inclusion of provisions on special and differential treatment.

7. In relation to indicators and criteria to ensure a stringent application of ESM, the representative of UNCTAD said that the focus would be on a three-pronged investigation (import surge, injury or threat thereof, and causal link) based on the Agreement on Safeguards. The author also proposed to apply an economic interest test and a public interest test. Public notices and hearings as well as questionnaires to importers and other interested parties would guarantee a comprehensive analysis and thereby ensure that safeguards would not be used for protectionist purposes. In terms of applicable safeguard measures, she said that there was a convergence of views on: applying an ESM on an MFN basis; using the form of suspending specific commitments - possibly also in relation to Article XVIII; resorting to such measures as subsidies, quantitative restrictions, or taxes, which would be least trade restrictive; and safeguard measures being temporary and degressive. The paper noted that S&D treatment might, for example, provide for renewal in the application of safeguard measures, greater duration of application, non-application to mode 4, and a *de minimis* clause. The paper argued that compensation should be limited to unavoidable cases; it would be best not to have compensation requirements, at least not in the initial period of existence of an ESM. Developing countries might be allowed not to compensate as a form of S&D treatment.

8. The author had tried to address a number of arguments made in the course of negotiations. Regarding lack of data, he pointed out that the petitioning firm would usually be able to produce data to trigger the mechanism. On arguments that an ESM would entail costs for the invoking country by having negative economic impacts, the paper said that countries should be able to determine for themselves whether or not policies would be harmful. Regarding mode 4, the representative of UNCTAD said that commitments under this mode were weaker than those under mode 3 and already had built-in safeguards. An ESM might actually help to remove limitations on mode 4. The paper also referred to the existence of economic needs tests in schedules, which had equivalent effects to that of safeguards. Regarding arguments on the burden of proof, she noted the lack of experience with an ESM. A mechanism first had to be created, and it could then be tested and revised as greater experience was collected. In terms of the modalities for ESM application, the paper mentioned three different approaches: a horizontal approach, which most developing countries supported and which was more in line with the GATS framework; a reference document, which would be optional and attached to national schedules, but which raised issues of bargaining power; and a schedule-based ESM which might provide for the right to resort to safeguards, but this would vary sector-by-sector and Member-by-Member and thus raised concerns of fragmentation. In terms of way forward, the paper emphasized that, in addition to contributions from ASEAN Members, other contributions had been made and provided for simplified versions of an ESM, such as for example Australia's model II. Constructive solutions were needed because an ESM would improve the overall functioning of GATS, in particular given that the GATS lacked rules for antidumping and strong competition disciplines. The key question was not whether the system should have an ESM or not, but rather what type of ESM was feasible and desirable to fit the aims and objectives of the GATS.

9. The representative of Thailand, on behalf of Brunei Darussalam, Indonesia, Malaysia, Myanmar, and the Philippines said that they generally agreed with the assessment made in the annotated agenda with respect to the three items under the responsibility of the Working Party. Recent discussions had focused on the practicality of a possible mechanism. Doubts and concerns had been expressed over the availability of reliable statistical data at a sufficiently disaggregated level, the ways and means to keep track of cross-border transactions, the sort of measures applicable to mode 1, and determinants of 'like services'. She did not believe that these technical and conceptual obstacles were insuperable. Working with proxies would allow to come to terms with them. Procedures were equally important. Some Members had invited her group of delegations to come forward with a set of commitments that they might be willing to undertake if a safeguard mechanism existed. She did not think this would be the most appropriate way to approach the question of emergency safeguards because it was based on power relations and because Members had different political and economic constraints. Further, it was impossible to predict all possible eventualities. She preferred to approach the issue on the basis of key principles, such as the need for rules in a rules-based system, as well as the analogy between trade in goods and trade in services and the reasons why some suggested that the latter, which was more complex, should be deprived of a remedy that would make liberalization more manageable. The representative considered that the lack of a single authoritative statement on whom an ESM would protect reflected the multiple purposes of a possible mechanism. For example, it might aim to protect the domestic industry, diversify the economy, correct regulatory failures, and facilitate orderly exit. Purposes could be changing according to sector specificities, and might sometimes temporarily conflict with other policy goals. Therefore, consultations were a very important element of future procedures in order to build confidence by being transparent about what was going to be done or not.

10. Regarding future work, the representative said that her group of delegations was open to new ideas. Certain issues had not been put into question so far, and these were key touchstones of a future safeguard mechanism: the first was that emergency safeguards should be applied on an MFN basis, consistently with the principle of non-discrimination in Article X; second, the measures should be time-bound; third, the show-just-cause obligation could in effect deter any potential abuse, as the burden of proof was upon invoking Members. Article X could not be looked at in isolation, but put

into the context of Article XXI procedures, as well as the negotiations under Article VI:4, on subsidies and on ENTs. The UNCTAD paper contained recommendations that could be further reflected upon. She agreed that political imperatives made a strong case for an ESM; this logic had never been called into question in the case of goods. She believed that safeguards could also be positive economically by facilitating the adjustment process. Therefore, the starting point should be what sort of ESM was practical and desirable in order to support the notion of progressive liberalization and make the GATS complete. She agreed that the impact of regulatory change induced by liberalization was very difficult to assess beforehand. By definition, unforeseen developments could not be predicted and trying to come up with hypothetical examples did not seem relevant. Members tended to forget that safeguards were a temporary recourse. What mattered most were ways to enhance the transparency and predictability aspects of the mechanism through consultation or surveillance provisions.

11. The representative of Malaysia thought that the UNCTAD paper was strongly supportive of the position that the group of ASEAN countries had put forward over the years. The fundamental principle was the need to provide symmetry for both goods and services. The Working Party should not deviate from what needed to be done, which was to address the goals and objectives behind an ESM. She agreed with the consultant that there was no political will to advance the negotiations. Arguments about the need for concrete examples were a departure from the precedent of GATT Article XIX, where questions had been raised after the mechanism had been fully integrated into the multilateral system, and not before. Currently, the GATS did not provide a sufficient safety net after commitments had been made. Article XXI permitted a permanent withdrawal of commitments, but an ESM aimed at providing a temporary suspension while adjustment was made to address market failures. Article XXI was the last option, not the first one, because it entailed a permanent modification of commitments, which would have negative impacts on further liberalization efforts. The author's arguments on domestic industry were similar to those of the group of ASEAN Members. The ideas in relation to S&D treatment were creative, in particular the *de minimis* clause, the non-application of ESM to LDCs, and the non-application of an ESM to mode 4 for developing countries.

12. The representative of Pakistan looked forward to further discussions on the various elements mentioned in the paper so as to be able to develop some type of mechanism in the future. She appreciated the points made regarding the Agreement on Safeguards; it was incumbent on all to work towards the development of rules. An ESM was to address situations where no unfair trade practices were involved and where some foreign enterprises had fairly been able to dominate the field. Delegations had to see if some kind of protection should be provided to domestic small and medium enterprises, which were particularly numerous in developing countries and LDCs. The study was very useful in pointing out that provisions on S&D treatment could be used to ensure that such a mechanism would not be abused in the future, especially against developing country Members. She hoped that UNCTAD could come up with more statistics on the extent to which the Agreement on Safeguards had been used; she suspected that safeguard measures in goods were not used as much as anti-dumping measures, which were designed to counter unfair trade practices. However, the GATS had no rules for unfair trade practices, neither for dumping nor for subsidies. An ESM would be very useful for Members contemplating to liberalize and for those who already had liberalized in many services sectors.

13. The representative of the United States thought that the UNCTAD paper was well written and quite interesting, but tended to oversimplify the issues involved. For example, while the GATT experience with safeguards was surely useful, there were fundamental differences between the GATT and the GATS. One such fundamental difference was that the GATT had one mode of supply only, while the GATS comprised four modes of supply. Another difficulty related to the intangibility of services. These were basic and critical differences. No safeguard mechanism had been included in the GATS because it was difficult to determine how it would work in the context of services. Article X had been developed so as to provide more time to analyse the issue. It referred to "the

question of emergency safeguard measures", which was for a reason. The only principle in Article X that guided the Working Party in this work was non-discrimination. There was no consensus on other principles. Most of the compromise options put forward in the paper were not consistent with the principle of non-discrimination, for example the proposals on domestic industry, on how to address modes 3 and 4, and on S&D treatment. Regarding differences between the GATT and the GATS, the former was intended to cover all manufactured goods from the start, while the GATS used a bottom-up approach and allowed for modification of commitments and for some regulatory freedoms. In her view, the examples seen so far did not deal with emergency situations. She was not convinced that Members would do away with non-transparent ENTs or labour market tests if a way was somehow found to apply an ESM to services. Therefore, such discussions only amounted to opening additional Pandora's boxes. She appreciated the argument presented by the author that the flexibility of the GATS, in the absence of a safeguard mechanism, might lead Members to be overly cautious about making commitments. However, she had not been persuaded that a case had been made for an ESM in view of what had been offered so far by way of new commitments. If the GATT approach were to be applied more faithfully, a pre-condition for a safeguard should be that substantially all services sectors be covered by commitments.

14. Wishing to focus on how a mechanism of this sort might actually work in practice, the representative noted that the paper seemed to consider the public interest provision as essentially equivalent to transparency provisions. There seemed to be a significant difference between what was described in the paper and the presentation by the UNCTAD representative in terms of the economic interest and the public interest tests. From the presentation, the examination of a causal link seemed to be precisely the same examination as contemplated by the economic interest test, i.e., to investigate whether injury was caused by a factor other than an increase in foreign supply. Moreover, to date, no safeguard measure under the GATT had ever been upheld under the WTO dispute settlement system, despite the relatively good state of data available for investigations of increased imports of goods. Yet every panel that had looked into such investigations had found data problems that prevented it from upholding the action taken. The paper seemed to gloss over this question by suggesting that data problems would not be serious, but they were a serious issue in the goods context despite better statistics. How much more severe would this problem be in the services context, given that the data was much less precise?

15. The representative noticed that the paper said on page 6 that there were additional reasons why safeguards might be more relevant for services than for goods, including the deregulation of important public services. The author later went on to argue that the GATT model could address relevant issues by finding an increase in supply, injury and a causal relationship, but in the case of unforeseen effects from deregulation, the kinds of problems encountered could include disruptions of supply, as opposed to an increase such as in the case of market failure. Similarly, market failure might not result in injury to suppliers, but could instead be beneficial to suppliers and harmful to consumers, for example, if poor market design enabled suppliers to capture excessive rents. This suggested to her delegation that the GATT model might not be very effective at addressing regulatory crises in the services context. Her delegation was also somewhat troubled by the way the paper failed to address how the causal link for each mode of supply could be established.

16. The paper seemed to assume that it would be to the benefit of developing countries to come up with a quick solution and dismiss a few other issues that needed to be ironed out, as opposed to taking time to negotiate and find out what was effective and what provided comfort to all Members. For example, the author seemed to say that since it was too difficult to develop a single definition of domestic industry, this should simply be left for each Member to decide. Her delegation failed to see how such discretion could satisfy anybody. Further, such an approach was inconsistent with the principle of non-discrimination. The question of an ESM had been discussed for 10 years now and what was needed were insights on how to tackle the issues and concerns raised, as opposed to looking for an easy way out and relying solely on political will. Her delegation could perhaps muster political

will to use an ESM in certain sectors, but one had to be accountable to oneself in these negotiations. On S&D treatment, the paper suggested on page 23 that an ESM should not apply to developing countries' mode 4 exports. She did not think that this proposal in anyway matched the concept of special and, in particular, differential treatment. It would not be acceptable to propose an ESM in an area where it was very difficult, even for the most developed countries, to produce data and to ensure enforcement, and where the procedures appeared to be more complex for developing countries. The paper said that some developing countries had difficulties in setting up regulatory procedures, but how would these countries then be able to set up the appropriate procedures to use an ESM? Further, the paper ignored the fact that even in the goods area Article 9 of the Safeguards Agreement did provide for S&D treatment, but with an implicit *de minimis* rule. No such rule was proposed here, which was strange given that the paper had made more general, albeit simplistic, comparisons to the goods area. She reiterated that S&D treatment might not be compelling for services because the very nature of the GATS inherently lent itself to such treatment. Regarding the points made by the outgoing Chairperson about the state of play and the need for a reality check, she wished to correct the assumption that the Working Party was now under time pressure; the negotiations on this issue did not have a deadline, as a distinct extension had been negotiated. If anything, proponents might make a case for the results to be captured in the current round. She hoped that delegations would not resort to simplistic approaches by declaring that this was a matter of political will. Valid issues had been raised and the answers provided by the proponents had been analysed very carefully. However, in responding, the proponents had sometimes shot away from the target. She feared that, on the basis of the proposals put forward, the only Members that would actually be able to use an ESM, should one be agreed upon, would be the more economically advanced countries.

17. The representative of China thought that the in-depth analysis provided by UNCTAD helped clarify various misunderstandings. The focus of current negotiations should not be on hypothetical cases, which would lead to endless technical discussions. As in the case of the Agreement on Safeguards, an ESM in services was a policy issue rather than an economic concern. The objective was to grant WTO Members sufficient confidence and useful leverage in further liberalizing their services sectors. Experience in drafting and implementing trade obligations in the goods area had demonstrated that it was much more important to grant Members recourse to ex-post instruments than ex-ante measures. Only in doing so could Members' doubts be dispelled and further liberalization commitments be taken. A proper and feasible ESM should provide sufficient flexibility while at the same time observe rigid disciplines and standards. It was necessary to respect Members' rights to take decisions according to their own national and sectoral situation, while establishing a code of acceptable standards and criteria at the multilateral level. The current negotiation should go beyond the debate about feasibility and desirability. A multilaterally-accepted ESM with rigid standards and criteria would be far more predictable and balanced than the prevailing quasi-safeguard measures such as ENTs which were favoured by so many WTO Members.

18. The representative of Australia noted that the rules negotiations were complex and difficult, with many divergences of views and different levels of ambition. His delegation was still examining the paper by UNCTAD, but agreed with the former chairperson's suggestion in paragraph 6 of JOB(05)/115, which suggested that it might be more constructive to discuss concrete examples of situations justifying the use of safeguards against the background of the commitments that a Member might contemplate taking in this round and of the existing instruments available under the GATS to address such situations. He announced that Australia was holding an ESM workshop for ASEAN Members, which was to take place in Bali from 13 to 15 July. He hoped that the workshop would address many of the issues involved in a possible ESM and that it would help equip participating officials with the skills and knowledge to consider all relevant questions.

19. The representative of Chinese Taipei, referring to the presentation by the representative from UNCTAD, noted with interest the comments suggesting that once the desirability of an ESM was established it would also become feasible. Regarding the definition of domestic industry, it seemed

difficult to come up with a single definition for all Members and modes of supply. Accordingly, the question of whom the safeguard measure would protect was particularly relevant. In the goods context, the definition of domestic industry was quite broad, encompassing the concept of like or directly competitive products. In services, it might be up to the Member applying the safeguard to define the scope of protection under each mode. Moreover, she noted that the paper by UNCTAD said on page 16 that an ESM in services should allow much room for the authorities to look into possible causes of injury other than increases in the supply of foreign services. The four modes of supply complicated the analysis. Investigating authorities should clarify the mode of supply under evaluation and the safeguard measure should be specific to that mode. While Members might have some discretion in applying a safeguard measure, in the event of a dispute the burden of proof would be on the Member that had imposed the safeguard. Further, she noted that the representative from UNCTAD had indicated that developing countries frequently lacked the regulatory or institutional frameworks, for example competition law, to address relevant issues in a GATS-consistent manner. While the UNCTAD representative had said that an ESM could address the GATS' lack of anti-dumping rules and of strong competition-related disciplines, these were different in nature from safeguards since they were not directed at unfair trade.

20. The representative of Brazil considered that the paper from UNCTAD helped overcome several prejudices against the feasibility and the necessity of safeguard measures. The paper was not simplistic, but clear and helpful in its suggestions. Safeguards already existed in Members' schedules of commitments, as well as in offers. A key issue was how to deal with such a situation and how to balance the multilateral safeguards to be developed with the individual quasi-safeguards. The lack of safeguard measures and, maybe, also of remedies against the unfair trade practices had clearly been a problem in the services negotiations. A solution would help contribute to achieving concrete results in these negotiations. Concerning the intangibility of services, he observed that in some cases services imports could have very tangible effects, for example in terms of affecting employment, developmental or technological policies. The intangibility of services should not serve as an excuse not to develop safeguards to address those very tangible problems. He noted that the quasi-safeguard measures included in schedules or offers were non-emergency safeguards; in many cases they appeared to be systematic safeguards, such as ENTs, that could be applied without any proof and in the absence of data. While it was difficult to achieve a multilateral definition of domestic industry, the authorities had a very clear picture of the domestic industry when concrete problems arose. This issue should therefore not serve as a deterrent to negotiations. His delegation intended to present shortly a paper on quasi-safeguard measures contained in schedules of specific commitments.

21. The representative of Japan thought that the presentation by the representative of UNCTAD helped to better understand the arguments of the proponents of an ESM. He wished to make a few points in reaction to previous interventions. First, some had wondered why the GATS should not have a safeguard mechanism since the GATT had one. He thought that the differences between goods and services were clear and significant. In the goods area, safeguard measures were applied at the border, but in services they would be applied inside the territory of a Member to companies which already had invested. Therefore, the fact that safeguard measures were available in the goods area did not substantiate the case for an ESM in services. Second, a statement was made that there should be rules on safeguards because the WTO was a rule-making organization. The key question, however, was whether the proposed rules were desirable or not; Members should make desirable and helpful rules. Third, it had been said that the GATS lacked devices to deal with unfair trade, but at issue in these negotiations were measures to deal with fair trade. Fourth, the point had been made that it was not fair to ask the proponents to present sectors where a commitment could not be made without an ESM because situations were unpredictable. He did not think that such a stance helped to advance the negotiations. If situations were truly unpredictable, it was impossible to know the appropriate rules or measures that might be devised to address them. Like Australia, he asked the proponents to present concrete situations where a safeguard measure was needed. Fifth, he was not comfortable with statements to the effect that this was a political issue and that safeguard measures would give

Members comfort. It was important to understand that safeguard measures in services would also give many Members and many service suppliers discomfort. While his delegation was ready to discuss issues in a substantive manner, general statements regarding the comfort level provided by safeguard, as well as exchanges of political messages, would not help to achieve progress.

22. The representative of Canada highlighted the differences with trade in goods as well as the experience regarding safeguards in the goods area. Aside from its modal structure, the inherent flexibility of the GATS could not be ignored as well as the challenges in determining injury or finding adequate data. While a premise of the paper seemed to be that an ESM would be helpful in overcoming political resistance to liberalization, all Members faced some political challenges when pondering liberalization, but an ESM was not the proper answer. Solutions might rather lie in public consultations, outreach, and information sharing. The author seemed to assume that an ESM was needed and that Members should not worry if it did not work, if the methodology was questionable or if the data was problematic. The assumption seemed to be that such problems would be resolved over time, after the creation of an ESM. This was a dangerous approach. An ESM risked rendering uncertain the commitments undertaken under existing rules. The representative felt that it might be useful to further consider the issue of the potential for circumvention by service providers if a safeguard was applied in one mode of supply. For example, a safeguard under mode 3 might lead to further service supplies through modes 1, 2 or 4. Coming back to challenges in using the goods model, he was not sure how border measures might be applicable in the area of services. Given technical complexities in the application of a safeguard, his delegation remained unconvinced of its desirability and feasibility in services. The representative informally circulated to delegations a chart on the application of safeguards in goods from 1995 to 2002, which showed that the number of investigations initiated went from 2 in 1995 to 152 in 2002. An investigation *per se* had a significant chilling effect. Regarding comments about caution in undertaking commitments, his personal view was that initial and revised offers already showed that Members were very cautious. Members needed to conduct the necessary consultations before they undertook commitments in any event. He wondered whether UNCTAD could organize a meeting with the author of the paper.

23. The representative of Hong Kong, China believed that many of the issues raised in the UNCTAD paper recalled very detailed and in-depth discussions that had taken place over many years in the WPGR. A key problem was that delegations did not have answers for many of the issues. In contrast, the paper appeared simplistic in assuming that there were very clear answers to all questions. The author presumed that there was a case for ESM and then focused on the various technical aspects and on how some sort of political compromise might be achieved. One argument made in the paper to substantiate the case for an ESM in services was that such an instrument already existed in goods. He echoed points made by other delegations on the deep differences between goods and services. One element in that regard was the number, extent and structure of commitments. On the goods side, only tariffs could be used as a means of protection and full national treatment was already provided for measures behind the border. These aspects could not simply be brushed aside as insignificant to the consideration of an ESM in services. The paper also argued that an ESM was needed for political reasons. However, political will was not one-sided, but had to come from all sides. Proponents needed to specify the political problems they were facing. The political will of other Members would then be needed to examine these problems and see how to address them. If this issue was a political problem, the appropriate way to proceed seemed to be along the lines of what the outgoing Chairperson had suggested in the annotated agenda. The Working Party should not confine itself to solely look at possible mechanisms within Article X, but rather examine the broader context and consider other alternatives that might help address the political issues that the proponents had raised. This might help to break the deadlock in the present negotiations.

24. The representative thought that the section of the UNCTAD paper entitled "true concerns" missed one of the most important concern, i.e., why there was a need for an ESM in the first place. This related to such basic questions as: for what purpose would an ESM be used, from what would it

protect, whom would it protect, and by what means should protection be provided. These fundamental questions needed to be addressed. The concern not to create a monster, as mentioned in the paper, did not arise solely because of the potential complexity of a mechanism, but also because of the lack of a clearly defined purpose to benchmark the use and impact of any potential mechanism. A monster was fearsome because nobody knew what it might do next. Similarly, his delegation had concerns about an ESM because it did not know what it might be used for. The experience in the area of goods clearly showed that it was extremely difficult to contain a monster once it had been let out of the box. Accordingly, he would be extremely cautious to create something and see later what might be done about it. The expression of political will should come through the presentation of real-world situations that might justify the use of an ESM. Turning to the paper's mention of some past proposals made in the Working Party, he recalled that the Australian proposal had two variants. One was the core mechanism and the other was an approach akin to a fast-track waiver-type mechanism. If delegations wished to look back at past contributions in order to search for alternatives, the latter option should not be overlooked. Regarding comments on quasi-safeguard type provisions in schedules and related concerns, he felt that the best way to proceed might be to ensure that such provisions became less of a concern.

25. The representative of the European Communities drew attention to the comment by the UNCTAD representative that an ESM might be needed because some countries did not have good competition regimes. He also noted the remarks by the delegation of Thailand on the importance of a rules-based system. The EC was attached to the development of necessary rules in the WTO, but such thinking was not shared by all Members and the rules agenda had diminished since the Seattle Ministerial. Members should not attach importance only to one aspect of the rules agenda, including within this Working Party's agenda. Delegations needed first to clarify the problem and see whether means were already available to address it. If not, one would then look at what might be put in place and how it should look like. Most likely, negotiators went through these steps when putting together rules on safeguards in the area of goods. He thought that the UNCTAD paper did not care whether a problem existed or not. There was a call for an ESM because one existed already for goods, without discussing the fact that the Working Party had been unable to identify situations justifying a safeguard. The paper further said that the lack of data was not an obstacle to the development of an ESM, but made it difficult to provide compensation. He thought this was a contradiction and should be further explored. Noting that the Europe Agreements had been mentioned in the discussion, he recalled that these were part of a system of pre-integration and did not allow for the kind of flexibility enjoyed in the GATS. The Agreements provided for full national treatment and full market access and included specific provisions to overcome the lack of flexibility during a limited window of 10 years. After such time, the provisions could not be invoked. He noted that the UNCTAD paper did not mention the concept of a limited window, which had been put forward by a group of ASEAN Members in 2004. Further, while the UNCTAD paper suggested that the concept of unforeseen developments did not need to be taken into account, it remained relevant in the goods area since GATT Article XIX still applied. The representative also asked, in reference to the approach taken in the Europe Agreements, whether a safeguard mechanism would be necessary when a Member had already used the flexibility of the GATS, for example by limiting the quantity of service suppliers. Alternatively, could safeguards only be applied in situations where a Member had undertaken either full commitments or very extensive commitments not subject to quantitative limitations? The paper also mentioned the financial crisis of the 1990s, and he wondered whether the author was aware of the Annex on Financial Services and the relevant policy carve-outs it contained.

26. Since the problem at issue had not been identified, it was difficult to know whether means were available to address it. The GATS already contained many safety valves, and caution should be exercised in considering additional ones. Concerning Article XXI, some delegations seemed to think that its use was limited to a definitive withdrawal or modification of commitments, but this was not clearly supported by the relevant provisions. It might be possible to modify commitments for a temporary basis; for example going from "none" to "unbound until 2011, none afterwards".

Moreover, the paper said that degressivity would be difficult to implement and he hoped the UNCTAD representative could explain why. With respect to S&D treatment, he failed to understand why there should be no compensation and why safeguards on mode 4 should not be applied against developing countries. Practically all mode 4 commitments were subject to quantitative limitations. Finally, the paper said that pre-approval was out of question and he wondered why this possibility should be excluded. Article XXI did not need pre-approval, but provided for compensation, while waivers did not provide for compensation, but required pre-approval.

27. The representative of Chile shared many of the concerns expressed by the delegations of Japan, Canada and Hong Kong, China. The UNCTAD paper was based on a number of debatable assumptions, for example that an ESM would improve the overall functioning of the GATS or that it would lead to more commitments. She was concerned about suggestions that Members should simply adopt a mechanism, see how it worked and then improve upon it. Experience with anti-dumping rules, for example, showed the difficulties and she did not want to go down the same path with an ESM in services. The main issue was that the problem had not been defined. Like others, she hoped that the proponents could come up with some concrete examples of situations justifying an ESM. It might be helpful to ask regulators for information in that regard. Most commitments in the GATS simply bound liberalization that had previously been undertaken. Such liberalization, before being bound in schedules, might have given rise to some situations justifying an ESM. Rather than discussing in abstract terms, delegations might ask their regulators how liberalization had proceeded and whether such situations had occurred, and then share such information with the Working Party.

28. The representative of New Zealand said that her preliminary views on the UNCTAD paper were similar to those heard earlier from the delegations of the United States, Hong Kong, China, Japan, and Canada, particularly regarding the need to develop good rules rather than to proceed quickly. She agreed with Canada's suggestion to have an informal meeting with the author of the paper. Regarding the suggestion in the Chairperson's annotated agenda, her delegation had views similar to those put forward earlier by the delegation of Hong Kong, China. If there was a political problem, the Working Party needed to look for practical political solutions. The proposal to examine concrete examples against existing instruments would be helpful in that regard. She had no problems with further discussions of technical issues of interest to proponents, but the burden for reinvigorating the discussion naturally lied with them.

29. The representative of the Republic of Korea thought that today's discussion highlighted that there was nothing new under the sun. The issue had been discussed for 10 years and it was important to have a reality check this year. Her delegation had concerns about applying an ESM to mode 3, if only because it would undermine investment. In the goods area, her country had applied safeguards, lost the ensuing dispute, and been subjected to retaliation. Her country also had successfully challenged other Members' safeguard measures in two years of dispute settlement procedures and it took another year for the measure to be lifted. Her delegation was thus still examining whether it was useful and appropriate to have safeguard measures in services, but wanted to provide constructive inputs to the discussion. Should an ESM be developed, some basic principles had to be followed: first, services should be liberalized as much as goods trade; second, a mechanism should have strict procedures; finally, safeguards would have to be applied in a non-discriminatory manner. On the link established in the UNCTAD paper between the need for an ESM and the lack of strong competition regimes, she thought that it was more important to solve the problem by improving competition regimes. She also wondered about the differences between ENTs and an ESM, and why an ESM would be more needed than ENTs.

30. The representative of the Philippines associated himself with the statement made by the delegation of Thailand, also on behalf of Brunei Darussalam, Indonesia, Malaysia and Myanmar. He was grateful for the paper by UNCTAD, which came at a critical juncture. His delegation was conscious of the political, technical and strategic concerns expressed in relation to an ESM, but upon

further reflection remained convinced that these negotiations were of fundamental importance. He hoped that the paper by UNCTAD could be a solid starting point for renewed discussions in the Working Party, in particular the proposal on definitions coupled with stringent information and notification requirements, as well as proposals on S&D treatment whereby developing countries, for example, would be exempt from mode 4 safeguards. The recommendations in the paper were well reflected and recognized the complexities and difficulties of services. He did not wish to characterize UNCTAD's comparison of the GATT and the GATS as simplistic. A more appropriate question might be whether the differences between goods and services were deep enough to support the argument that there should be no ESM. There were strong political economy considerations underlying the proposal for an ESM. Desirability and feasibility issues had been held against an ESM over the last 10 years, but they were not insurmountable. Desirability was a matter of both perception and choice. What was desirable to one Member might not be desirable to another. It seemed more important to give Members the choice of using safeguards or not. This was a political and economic choice of sovereign governments that should not be precluded through the non-inclusion of an ESM in the GATS. On the question of feasibility, there was enough information that could provide a basis for resolving some difficult aspects. His delegation hoped to table focused discussion papers on outstanding issues such as those identified by the outgoing Chairperson in her annotated agenda. He was ready to continue to explore the potential for an ESM with a view to making liberalization more manageable to developing countries. He took good note of Japan's urging to not confine discussions to political messages but to engage in substantive and productive technical discussions, as well as the concrete suggestions made by Chile and Hong Kong, China. He did not pretend to possess all answers, but many delegations had much greater capacities and technical experience in services which might be harnessed toward solving many previously raised technical, legal or policy issues.

31. The representative of Singapore noted that an overarching theme in the paper was the relationship between liberalization and the need for an ESM. However, he stressed the different structure of GATT and GATS, with the latter being more flexible. He wished to refer the Working Party to a paper that his delegation had tabled in 1997 (S/WPGR/W/19). Among other issues, it had highlighted that adequate mechanisms were already present in the GATS and the WTO Agreement to address possible safeguard situations, including the WTO waiver provisions. The delegation of Hong Kong, China had already alluded to a fast-track waiver mechanism. As mentioned by others, many technical issues had not been resolved yet, including the concepts of domestic industry and acquired rights. In approaching the ESM issue, his delegation was informed by two practical considerations. On the export side, domestic services suppliers, which were largely SMEs, needed a stable environment to operate in foreign markets. SMEs, unlike multinational enterprises, had less financial resources and know-how and often undertook significant risks in investing overseas. Safeguards that limited the expansion of operations might frustrate the business plans of these companies. While Members might face challenges in selling liberalization domestically, there was a parallel challenge to ensure certainty for one's own suppliers. A proper balance was needed. On the import side, it was important to keep in mind that foreign investors created employment. He drew attention to the section of his delegation's 1997 paper that discussed the impact of safeguards on economic welfare. Unlike the GATT, the use of ESMs in the GATS could reduce the overall domestic output and employment. While the output of national service suppliers would increase, the output of foreign service suppliers might decline due to new restrictions.

32. The representative of Switzerland recalled her country's long-standing position on the issue of an ESM. The UNCTAD paper claimed that an ESM was needed to sell the logic of liberalization at home. However, GATS commitments did not always coincide with the actual level of liberalization. The GATS enabled a Member to start by liberalizing a sector at the national level only and monitor the effects, and finally consolidate the liberalization under the GATS as and when appropriate. This was an important aspect that had to be taken into account. Further, like other delegations, she stressed the flexibility, including with respect to scheduling, provided by the GATS. She also disputed the

assumption that the establishment of an ESM would carry no costs, if only because an ESM would render the legal environment less certain.

33. The representative of Argentina thought that the UNCTAD paper would be helpful in advancing discussions in the Working Party. His delegation was generally in favour of a complete system of rules for trade in services. However, like others, he had doubts about the technical possibility of developing an ESM. Regarding comments by other delegations on the flexibility of the GATS, he suggested having a look at certain sectors to see whether an ESM might help in securing better commitments, for example in maritime transport and audiovisual services. Regarding the latter sector, if such work was not done in the WTO, it would end up being done in other agreements administered by other international organizations.

34. The representative of Turkey said that his delegation had not made up its mind on the issue of an ESM. Doubts persisted on whether an ESM was desirable and feasible. His authorities lacked appropriate statistics in services, which also had implications for the assessment of trade. His delegation was open to continued discussion of the issue and thought that the existing flexibility of the GATS could be sufficient to tackle relevant situations. The representative of Indonesia considered that the UNCTAD paper was a constructive contribution. He reiterated the importance attached to this issue, as earlier stated by the delegations of Thailand and the Philippines. An ESM provided a certain level of comfort to the domestic industry which was encouraged to take an active part in the liberalization process.

35. The representative of UNCTAD remarked that the paper mentioned not only the political need for an ESM, but also, on page 5, the adjustment costs flowing from liberalization. An ESM would deal with these temporary costs, for example negative impacts on employment. Regarding data problems, she thought that these permeated all areas of services negotiations. However, petitioning firms would be able to put forward data at the firm level, for example relating to the occurrence of losses, decline in profits or price reductions. The burden would be on petitioning firms. Regarding compensation, the paper said it would be difficult to quantify substantially equivalent levels of concessions. The ongoing Article XXI process would give some indication on how to do such calculations. The public interest and economic interest tests should be seen as complementary. The tests went beyond transparency because views expressed should be taken into account. On the definition of domestic industry, the approach taken in the paper was not simplistic; it just took into account the fact that different countries had different definitions. Constitutional requirements could not be ignored. Strict notification and transparency requirements regarding national definitions would prevent abuse and would not undermine the predictability of GATS commitments. With respect to S&D treatment, one suggestion in the paper was that consideration be given to non-application of an ESM to mode 4. Regarding ENTs, she observed that many had been scheduled without criteria and thus provided ample discretion, while an ESM would be based on strict indicators and criteria, and include a monitoring mechanism. An ESM would thus be preferable to ENTs. Concerning degressivity, the paper was in favour of this concept and, in this context, referred to varying levels of quantitative restrictions and subsidies. The representative concluded by indicating that she would convey questions and comments to the author of the paper, and that UNCTAD would try to provide an opportunity for interested delegations to meet with him.

36. The Chairperson hoped that delegations would be able to use the opportunity for an informal meeting with the author organized by UNCTAD. The representative of Japan asked for further elaboration from the UNCTAD representative on the differences between an ESM and ENTs. The representative of UNCTAD said that safeguards were supposed to deal with emergency situations that countries faced when opening up their market, while ENTs were ex-ante measures that acted as proxies for an ESM. Currently, most countries scheduled no criteria for their ENTs. They thus had provided full discretion to decide on establishment and expansion on a case-by-case basis. An ESM

would be less amenable to abuse since it would arguably be accompanied by strict notification requirements, review processes, indicators and criteria.

37. The Chairperson noted that the core divergences that had been mentioned in the annotated agenda had again surfaced in the discussion. At the same time, he discerned some openness from both sides in terms of looking at new ideas and alternative mechanisms. Some suggestions were made to consider earlier models presented in the Working Party and examine real world situations of liberalization and any ensuing problems. There was some support for the outgoing Chairperson's suggestion, in the annotated agenda, regarding the need for concrete examples of situations justifying the use of safeguards against the background of commitments that a Member might contemplate undertaking in this Round and of instruments potentially available under the GATS to address such situations. He invited the Working Party to take note of comments made.

III. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII)

38. The Chairperson remarked that the European Communities had recently circulated a communication, S/WPGR/W/52, on a proposal for an Annex to the GATS on government procurement in services. He invited delegations to focus their discussions on this contribution and also recalled the importance of a reality check in all three areas under the responsibility of the WPGR.

39. The representative of the European Communities said that the communication aimed at identifying the structure of a GATS Annex on procedural rules for government procurement. The annotated agenda of the Chairperson suggested that efforts on government procurement might this year focus on aspects other than market access. The latter topic had already been the subject of various contributions recently, but less time had been spent on procedural rules. During the last meetings, some delegations had called for deepening work on this aspect, including on the basis of the Secretariat Note on Government Procurement Provisions in Economic Integration Agreements (S/WPGR/W/49). The delegation of Singapore had also noted, last November, that most of the agreements reviewed by the Secretariat contained rules covering a number of recurring topics, such as non-discrimination, valuation of contracts, technical specifications, procurement methods, qualification of suppliers, procedural rules regarding invitations to participate, time limits for tendering and delivery, tender documentation, and award of contracts. His delegation had tried to develop proposals for procedural rules on government procurement in services with respect to these topics. The proposals were guided by some key principles: that the rules be simple, easy to understand and easy to apply. This had led his delegation to propose thresholds at the same level for all WTO Members. While he had previously pointed out that the flexibility of the GATS could allow each Member to set a threshold at the level it wished, some delegations had expressed concerns about a non-transparent and too complex system. The use of common thresholds would provide for simplicity and transparency, and implied that many procurement markets in developing countries or small economies would not be covered by the relevant rules to be developed in the GATS. His delegation had also taken due note of some delegations' call for provisions on S&D treatment.

40. Past discussions had suggested that Members preferred that the MFN obligation in respect of government procurement apply to all sectors, including where no commitments had been made, along with the possibility of MFN exemptions and the inclusion of an exception relating to the plurilateral Government Procurement Agreement (GPA). Regarding technical specification, qualification of suppliers, award of contract, and appeal procedures, he recalled the applicable rules in the context of Article VI of the GATS, in particular paragraphs 2, 3, and 4. It would be useful to consider specific rules applicable to government procurement in addition to those of Article VI. With regard to valuation of contracts, procurement methods, time limits for tendering and delivery, and tender documentation, the communication put forward questions which should help define the procedural rules to be developed and suggested some options in that regard. Noting the Chairperson's comments on the need for a reality check, he believed that the problem at issue was clear: a significant part of

services markets were not subject to the obligations of market access and national treatment. In certain sectors, government procurement represented more than 50% of business opportunities. Solutions appeared increasingly clear and it was desirable and technically feasible to advance on this topic. He hoped to focus discussions on procedural rules and on the structure and content of a possible GATS Annex on government procurement.

41. The representative of Brazil recalled that the issue of government procurement had been dropped from the Doha Development Agenda in 2004. While the topic might have proved of interest to some delegations who wished to postpone discussion on issues of vital importance for the Round, such an exercise should not be repeated in the area of services. Negotiations on government procurement as suggested by the EC communication, did not fall under the mandate of Article XIII. Market access, national treatment and MFN clearly did not apply to government procurement. The procedural aspects mentioned in the EC paper contained elements of market access and therefore also fell outside the scope of Article XIII. His delegation thus had serious concerns about the proposal for an Annex on Government Procurement. In addition to the issue of mandate, he had concerns about the points made in relation to Article VI and the idea of a negative list of entities.

42. The representative of Canada said that the paper was still being reviewed by her authorities and that comments would be made at a later stage. The representative of Switzerland said that government procurement in services was an important topic and that the EC contributions formed a good basis for further discussions. Part I, paragraph 10 said that, according to studies conducted by the EC, no effective cross-border procurement took place below certain thresholds and that the EC therefore considered that all Members should apply the same level of thresholds, regardless of the size of their procurement market. She thought that it was a valuable idea to combine the general flexibility of the framework proposed with increased efficiency and transparency in that regard. She sought further information on the thresholds above which effective cross-border procurement took place. What did 'effective' mean in that context? Did the EC propose to apply the same thresholds for all sectors? Concerning Part II of the communication, her delegation was ready to discuss procedural rules because these were relevant to ensuring effective opening of procurement markets. The Secretariat Note S/WPGR/W/49 provided a useful source of inspiration in that regard. Paragraph 17 of the EC communication said that valuation rules should enable Members to identify whether services were the primary subject of a given government procurement contract. She hoped the EC delegation could elaborate. She also asked for an explanation of the terms, used in paragraph 19, "when technical specifications are drawn up in terms of functional performance".

43. The representative of India thought that the EC communication was not different in substance from that of May 2004. He therefore reiterated previously expressed concerns on the scope of the mandate under Article XIII; paragraph 2 was guided by paragraph 1. While the EC paper claimed to focus on procedural rules, it covered such a fundamental principle as non-discrimination, despite the exclusion of national treatment and MFN treatment through Article XIII. Other elements such as valuation of contracts, procurement methods or invitation rules had been discussed in the Working Group on Transparency in Government Procurement and strong concerns had been expressed in that context about the overly prescriptive character of such norms. This had to be kept in mind.

44. The representative of Chinese Taipei wondered whether it would be appropriate to have different threshold levels for countries at uneven stages of economic development. Moreover, she asked the EC to elaborate on paragraph 17 of the communication, which said that valuation rules should enable Members to identify whether services were the primary subject of a given government procurement contract.

45. The representative of Japan remarked that paragraph (e) of Annex C of the July Package required Members to intensify their efforts to conclude the negotiations on rule-making under GATS Articles VI:4, X, XIII and XV in accordance with the respective mandates and deadlines. He did not

understand why the delegation of Brazil thought that the situation had changed as a result of the July Package. He wished to come back to the EC communication at the next meeting.

46. The representative of Malaysia echoed the statements made by Brazil and India on the scope of the mandate under Article XIII and on the fact that, through the July Package, Members had dropped the issue of transparency in government procurement from the Doha Development Agenda. Elements proposed for discussion by the EC related to what had been discussed in the Working Group on Transparency in Government Procurement. She did not want to see these issues brought back in the WPGR.

47. The representative of Hong Kong, China said that he was open to discussing substantive issues without prejudice to the question of the mandate. A protracted discussion on the mandate would not lead anywhere. Nevertheless, he wondered whether a suggestion had been made about the need to seek clarification or guidance regarding the specific mandate under Article XIII:2. He was perplexed by some of the previous interventions, which seemed to suggest that the mandate in Article XIII:2 was devoid of any content. Turning to the communication from the European Communities, he considered that some of the questions raised previously, such as in JOB(04)/130, remained unanswered, including on the relationship between the proposed government procurement framework and the GPA. Regarding the section of the EC communication on non-discrimination, he took note of the suggestion that the MFN obligation should be applied across the board, which was consistent with the position of his delegation. However, apart from the suggested exception from MFN treatment for the GPA, no solid argument had been made for other MFN exemptions for government procurement in services. Judging from experience with current exemptions under Article II, including the past two MFN reviews, his delegation would be extremely hesitant to consider any such exemptions for government procurement, unless there were compelling reasons for doing so. Any such exemptions would need to be carefully circumscribed and limited in their application. Regarding thresholds, he supported the questions put forward by Switzerland. He hoped that the EC delegation could put together a comparison between the provisions it had put forward so far and those of the GPA and of other economic integration agreements as identified in S/WPGR/W/49.

48. The representative of the United States echoed the delegation of Japan's comments concerning the mandate under Article XIII, including in the context of Annex C to the July Package. She recalled her remarks in past meetings. Turning to the EC communication, her delegation was hard-pressed to make a distinction between goods and services when dealing with government procurement. In the context of the Tokyo Round Agreements, goods were clearly covered as were services incidental to the supply of goods. The GPA negotiated in the Uruguay Round drew no distinctions in the rules covering the procurement of goods and services. From her perspective, there was an interest in keeping the relationship of goods and services as in the GPA, despite the existence of the mandate under Article XIII. She acknowledged the challenge in reconciling that mandate with that of the GPA. In her view, Article XIII clearly encompassed transparency aspects. She took note, in particular, of paragraphs 10 and 23 in the EC communication regarding transparency. Her delegation was interested in further discussing specifically these elements.

49. The representatives of China and Indonesia shared the concerns of Brazil and India on the interpretation of the mandate under Article XIII. The representative of Indonesia believed that the scope of the mandate should be examined carefully before entering into negotiations.

50. Reacting to comments made by the delegations of Japan and the United States, the representative of Brazil agreed that Annex C of the July Package called for negotiations on government procurement and other rules areas within the mandates provided by the GATS. However, the communication by the EC did not comply with the relevant mandate. He hoped that the United States and Japan would pay similar attention to other paragraphs of Annex C, namely the call for offers in sectors and modes of supply of interest to developing countries. He also felt that some

delegations had earlier put into question what was mandated in Annex C and in Article X by saying that safeguard measures might not be needed. Article X provided for negotiations and not for an examination of whether safeguards were desirable or feasible. The mandate to negotiate on government procurement did not entail derogation from paragraph 1 of Article XIII. Nothing suggested that paragraph 1 was temporary in nature.

51. The representative of Chile echoed the questions put forward by the delegation of Switzerland regarding thresholds. She also wondered whether thresholds would differ for different government entities. Concerning S&D treatment, she observed that paragraph 12 included an example and invited the EC to provide others. Regarding MFN treatment, she agreed fully with the delegation of Hong Kong, China in relation to paragraph 15. On the valuation of contracts, she requested clarification on the common rules mentioned in paragraph 17. Finally, regarding paragraph 19, she asked whether the EC wanted to engage in work additional to that being conducted under Article VI:4, and under what mandate.

52. The representative of Argentina agreed with the delegations of Brazil, India and China regarding the scope of the mandate. As pointed out by the delegation of Hong Kong, China, a discussion of the mandate might not lead anywhere, but the same was true for the discussion of non-mandated topics. The Working Party was supposed to negotiate and not simply to engage into discussions for the sake of discussions. The *demandeurs* on this topic should aim to limit themselves to the mandate so that their communications might be met with interest.

53. Reacting to the intervention by the delegation of Brazil, the representative of the United States said that her delegation was complying with Annex C of the July Package, including with respect to giving special attention to sectors and modes of supply of interest to developing countries. Nothing in Annex C said that a Member had to respond to every single request. Concerning Article XIII, her delegation was concerned about suggestions that the decision in the July Package to put aside the Singapore issue of transparency in government procurement somehow affected the mandate under that Article, which was specifically reaffirmed. While her delegation might have some questions about Article XIII, she strongly disagreed with the view that transparency was outside of its mandate. Nothing in the July Package took the notion of transparency out of the negotiations under Article XIII. That said, she had indicated that her delegation was struggling with the notion of how to approach government procurement in services given that, domestically, rules for goods and services were linked. Concerning points made in relation to Article X, she did not think that discussions in the past 10 years on the question of emergency safeguard measures amounted automatically to a mandate to negotiate an ESM. Her delegation had thus fully complied with Annex C.

54. The representative of the Republic of Korea was open to discussions on this issue regardless of the mandate. She welcomed the focus on procedures, but thought that elements of market access were also contained in the EC communication. Concerning paragraph 18, she wondered about the intentions of the EC in making links to the negotiations on domestic regulation. The representative of Pakistan wished to associate her delegation with statements made by Malaysia, China, India and Brazil. It was important to have clarity on this issue, especially since 50% of the activities in some services sectors related to procurement.

55. The representative of Singapore recalled his previously expressed views on Article XIII, including on the mandate. He took note of the suggestion in paragraphs 15 and 16 of the communication from the EC to address the relationship between the GPA and a possible Annex in the GATS. This provided a good way forward. On domestic regulation, in particular paragraphs 18 and 19, he asked the EC to give examples of the proposed additional provisions on technical specification and qualification of suppliers for government procurement that might be needed.

56. The representative of the European Communities believed that Article XIII was clear. Paragraph 1 said that obligations under Articles II, XVI and XVII did not apply to government procurement, which meant that all other provisions of the GATS already applied. Paragraph 2 contained a general mandate for negotiations on government procurement in the GATS, which, so as to be meaningful, related to Articles II, XVI and XVII. He wished to associate himself with the position expressed by the delegations of the United States, Japan and Hong Kong, China concerning the first intervention by the delegation of Brazil. He also disagreed with the comment by the delegation of Brazil to the effect that a negative listing of entities would be contrary to the spirit of the GATS. The EC had suggested to adopt either a positive or a negative list of entities. Regarding the possibility of different threshold levels according to stages of development, his delegation had considered such an approach. However, some delegations had commented that it would be too complex. Further, internal studies had showed that service suppliers did not make the effort to bid for a procurement contract in a foreign market below a certain level. It thus seemed simpler and more consistent with business practices to have common thresholds. In most agreements, the thresholds used were the same for all services sectors, except for construction where they were typically higher. One could thus envisage a higher threshold for construction and a common threshold for all other sectors. He did not want to prejudge negotiations by suggesting what the specific levels should be.

57. Regarding questions on valuation of contracts, the representative said that the scope of the provisions would be limited to situations where services were the primary subject of government procurement contracts. The best way of determining the primary subject would be decided by the Working Party. One option would be to focus on when services represented the majority of the value of a contract, but other options were possible. With respect to comments by the US delegation on the distinction between goods and services, the representative pointed out that, while the GPA's procedural rules covered both goods and services, it contained different schedules of commitments for goods and for services. He did not see problems in developing rules of procedures in the GATS which would be compatible with each Member's domestic system. Concerning the relationship between the GPA and the proposed framework under the GATS, it would be necessary to have an exception from the obligation of MFN treatment so that commitments undertaken by Parties to the GPA were not automatically extended to all WTO Members. The communication also proposed the possibility to take exemptions to the obligation of MFN treatment. It seemed appropriate to offer the possibility to take such exemptions since the need to do so when the GATS entered into force did not exist. These exemptions would be subject to negotiations. With regard to questions relating to Article VI, the communication had noted the possible usefulness of negotiations on domestic regulations for similar issues in respect of government procurement, while indicating that there might be a need to develop rules specific to government procurement. The intent was not to bring aspects of Article VI:4 negotiations into the negotiations pursuant to Article XIII, but rather to try to benefit from the former in order to develop rules adapted to government procurement on, for example, qualification of suppliers and technical specification.

58. The Chairperson observed that, since the paper had been recently circulated, a number of delegations had expressed a desire to come back with substantive comments at the next meeting. The well-known and wide divergences on the scope of the mandate, in particular whether it covered market access issues, had again surfaced in the discussions. The EC had indicated an intent to focus on procedural rules, but some delegations said that elements of the paper concerned market access as well. Specific questions were put forward in respect of varying versus common threshold levels, as well as in relation to the studies referred to in the communication. Suggestions were also made regarding the need to further look at the relationship with the GPA. Some delegations had also sought greater clarity regarding the links made to Article VI and hoped that examples could be presented. He proposed to revert to this paper at the next meeting and invited the Working Party to take note of the comments made.

IV. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV)

59. The Chairperson invited delegations to consider the recent proposal from the delegations of Chile, Hong Kong, China, Mexico, Peru and Switzerland, contained in JOB(05)/96 on a provisional definition of subsidies in services. It also called on Members, for the purpose of the information exchange under Article XV, to provide information in five sectors of their choice by November 2005. Delegations might also want to come back to communications circulated just prior to the last formal meeting which touched upon related issues, namely the Secretariat's synthesis of views expressed on the issue of definition, JOB(05)/4, and a communication from the United States on the information exchange, JOB(05)/5.

60. In presenting the communication, the representative of Hong Kong, China said that it followed up on previous discussions on the definition of subsidy, including the suggestion by the United States in JOB(05)/5 to agree provisionally on a basic definition as a first step to have a focused information exchange. Many delegations had expressed the view that the definition contained in the Agreement on Subsidies and Countervailing Measures (ASCM) could be a useful starting point for considering a definition for services. Part of the motivation for the paper was that the lack of a definition had been mentioned by some delegations as reason for the chicken-and-egg problem that had plagued discussions under Article XV. The lack of definition had also been cited as a reason for difficulties in fulfilling the mandate on information exchange. The communication put forward some ideas to help move towards a working definition for the purpose of both the information exchange and further work under Article XV. Such a working definition should not prejudge any definition that might be adopted for the purposes of possible disciplines. The communication did not presume that subsidies falling under the provisional definition should be disciplined or that they were trade distortive. The provisional definition would facilitate the information exchange, which in turn would facilitate Members' consideration of relevant issues. Elements of the provisional definition contained in the annex to the communication were primarily based on the ASCM, subject to some necessary adjustments in the context of services. The communication thus retained the core notion of financial contribution, as well as the concept of price or income support. On the issue of benefit or advantage conferred, the sponsors had largely followed the jurisprudence on the goods side. The concept of specificity was also retained as part of the definition, but without trying to define it in detail at this stage. It should be further developed over time. In addition, the proposal referred to Article 1:3(a) to further define the scope of relevant measures, namely those taken by central, regional or local governments and authorities, as well as non-governmental bodies in the exercise of delegated authority. The annex also included a list of circumstances of financial contributions, with small adjustments in relation to the ASCM. For example, point (d) referred to government services and the notion of general infrastructure was extended to include the provision of public services by governments; and point (e) referred to government purchases of services. The working definition was not intended to be perfect, but to facilitate work on information exchange and other substantive discussions. The communication also suggested that Members provide information in five sectors of their choice by November 2005. Failure to fulfil the mandate for information exchange would be of major concern and would have to be brought up for further attention at higher levels.

61. The representative of Japan compared the proposal by the group of Members with the previous one by the United States. Though both stressed the importance of narrowing down the scope of subsidies examined, they significantly differed in some respects. The more recent one suggested that information be provided in five sectors, while the US proposal suggested that one or two sectors be selected. As seen at the last meeting, it was difficult to get Members to agree on one or two sectors. On the other hand, leaving it to each Member to choose relevant sectors might undermine the comparability of the data. In contrast to the more recent proposal, the United States was concerned that a working definition close to that of the ASCM would capture too wide an array of subsidies. The proposal by the group of Members therefore seemed more user-friendly at the stage of collecting information, while the US proposal was more user-friendly at the stage of analysing information. The

issue was to agree on the priority. Regarding JOB(05)/96, he wondered how broadly the five sectors mentioned were to be defined: should they be picked out of the 12 sector groupings of MTN.GNS/W/120? Further, was it necessary to collect information exhaustively for each sector selected? If so, it seemed very difficult to complete this exercise by November. He also wondered whether the elements listed in paragraph 8 were meant to be exhaustive, since some elements might be missing.

62. The representative of the European Communities thought, in a preliminary manner, that any definition that might be developed for services would not be very different from what existed in the context of goods. The definition of subsidy used within the EC was the same for goods and services. While the first part of the provisional definition in paragraph 1 of the annex seemed clear, this was not the case for the last part, i.e., "on terms more favourable than those available to the potential recipient or beneficiary in the market". Even if the proposed definition was meant to be provisional, the anti-circumvention provision of the ASCM did not seem to have been taken into account. Also, it was not clear whether the sponsors were calling for an exchange of information or rather for a notification of all subsidies in five sectors. His delegation had previously said that notification should take place only once an agreement had been set up, not before. The information exchange pursuant to Article XV should not be confused with a notification. He wondered whether the sponsors of the communication would be able to offer by November all the information they were asking for. In the EU, notification requirements comprised a *de minimis* rule; only subsidies beyond a certain level, where distortive effect might be considered to arise, were notified. It did not seem realistic to omit such a rule. He recalled that the EC had concerns regarding notifications, not information exchange, and said that information on subsidies in the EC could be found at: <http://europa.eu.int/grants> (for aids at the community level) and http://europa.eu.int/comm/competition/state_aid/scoreboard (for aids at the level of Member States).

63. The representative of Pakistan was interested in rules on subsidies in order to respond to concerns from domestic stakeholders when market access commitments were undertaken. Subsidies by the home country of multinational service companies might artificially boost the competitiveness of these firms when operating abroad and negatively impact upon small and medium size enterprises in the host country. Regarding the communication, she asked the sponsors whether the information exchange would be confined to those sectors where specific commitments had been made and where market access was being sought. She thought that the burden of information exchange might be avoided where no commitments had been taken and where there was no competition with suppliers of other countries.

64. The representative of El Salvador did not think that the establishment of a deadline for the submission of information, as suggested in paragraphs 7 and 10 of the communication, was appropriate. The representative of Turkey considered that the concept of specificity found in the communication from the group of Members did not exist as such in the definition of subsidy in the ASCM. Rather, specificity was used for the definition of the scope of a subsidy. In the communication, specificity was one of the essential elements and it was therefore necessary to clarify its meaning so as to facilitate the information exchange.

65. The representative of Thailand felt that the proposed provisional definition was a practical approach given the lack of progress on the information exchange mandated by Article XV. The lack of a definition had made Members unsure of what information to share. The proposed approach was flexible, as modifications were possible along the way. She agreed that the ASCM was a good starting point. Regarding the definition in the annex, she had concerns about the exclusion of non-specific assistance schemes from the outset, but understood that this was a starting point and that sponsors might have wished to narrow down the scope to subsidies more likely to have trade distortive effects. Concerning paragraph 2 of the annex, she wondered if the term "non-governmental bodies in the exercise of delegated powers" included private bodies in the sense of

Article 1.1(a)(1)(iv) of the ASCM. Finally, she thought that elements contained in paragraph 8 would allow to obtain sufficiently detailed information to better understand assistance programmes; analysis of potential trade distorting effects and the information exchange could thus go hand in hand.

66. The representative of Norway supported the outgoing Chairperson's assessment and thought that a reality check was highly needed. There was merit in agreeing on a provisional definition of subsidy to advance on the information exchange. As a preliminary comment, he was somewhat concerned about the proposed deadline of November 2005, just before the Hong Kong Ministerial. He asked the sponsors to clarify whether they were calling for a notification of subsidies by such date.

67. The representative of Canada remained sceptical that the concepts and rules contained in the ASCM could be readily transposed to the services context. Some issues raised in the communication required further clarification. While she supported conceptual consistency between agreements to the extent possible, services sectors were unique and did not easily lend themselves to the determination of like services. This gave rise to problems in such areas as the definition of domestic industry. The use of the ASCM also presumed the existence of consistent and internationally-agreed sources of statistical data. In the absence of such data, it would be difficult to assess the magnitude of any alleged subsidy and to engage in a meaningful information exchange concerning relative levels of subsidization. The scope of any new definition of subsidy, as well as any resulting disciplines, should not compromise policy imperatives in respect of access to, and delivery of, public services.

68. The representative of Chinese Taipei shared the view that it was unavoidable to touch upon definitional issues in order to have a focused information exchange and consider possible disciplines. The same had applied in the goods context. The development of a provisional definition would encourage Members to share their subsidy information. Regarding paragraph 1 of the annex and in particular the concept of specificity, she wondered if the sponsors could further elaborate. In the ASCM, subsidies granted not only to particular sectors, but also to certain groups of enterprises, were considered specific. She further asked about the level of aggregation of the proposed sectors and the number of subsidies to be notified per sector.

69. The representative of Brazil anticipated some difficulties with the proposed provisional definition as well as the deadline of November 2005. Like others, he hoped the sponsors would clarify whether they were looking for a notification or an exchange of information. In approaching this debate, his delegation was guided by some parameters. First, the ability to provide public services should in no way be harmed by any disciplines. Second, Article XV specifically provided additional flexibility for developing countries and this should be taken into account.

70. The representative of China saw the benefits of a provisional definition for the purpose of information exchange and further negotiations. However, the limited capacity and resources of developing Members might cause some difficulties in collecting information on subsidies in a short period of time; those more capable could take the lead. Regarding the annex, the representative hoped that item (c) of paragraph 3 could be made more specific and that a definition of "general infrastructure and public services" could be provided so as to clearly differentiate with services provided in the exercise of governmental authority. He also enquired how the sponsors wanted to address subsidies in sectors other than general infrastructure and public services when these were of no trade distortive effect such as subsidies granted in relation to universal service.

71. In a preliminary manner, the representative of the Philippines thought that the information exchange would be an important basis for developing the necessary disciplines contemplated under Article XV. However, given the time and resources implications, the process needed to be governed by a coherent framework so as to make it as useful as possible to the negotiations. With respect to the communication from the US, he wondered if the proposed approach would be helpful for collecting and analyzing relevant information since services sectors seemed diverse and complex. Regarding

JOB(05)/96, he wondered whether the sponsors had taken into account the concern expressed by the US that relying upon the ASCM definition for the information exchange might lead Members to list a vast array of potential subsidies. Was it correct to presume that sectors not subject to any specific commitments would be included? Would it be more useful to agree on the same five sectors for all Members? While some Members might not have subsidies in these sectors, common benchmarks could nevertheless provide useful insights on subsidies being granted, including on disparities between developed and developing countries. He also asked whether there was a particular relevance for the date of November 2005 which might be too soon. The challenge was to strike an appropriate balance between avoiding information overload and having too little information to be useful.

72. The representative of Guatemala favoured the use of a provisional definition in order to assist the exchange of information, without prejudging the future development of disciplines. Regarding paragraph 3(e) of the annex, on government purchases of services, the representative of India asked whether the sponsors saw any link with Article XIII of the GATS on government procurement. With respect to paragraph 3(d) of the Annex, on government goods and services, he asked the sponsors how this squared with the scope of the GATS, especially paragraphs 3(b) and 3(c) of Article I. Finally, he thought that the proposed deadline for the provision of information might prove very demanding, especially given the upcoming Ministerial Conference.

73. While the communication used elements from the ASCM, the representative of Qatar thought that its use was controversial and sponsors needed to do more work on the definition. The deadline of November 2005 was not realistic and could be decided upon at a later time. Disparities in capacity to provide statistical information existed; many developing countries did not have readily available data. The characteristics of services, including their intangibility, did not seem to be properly captured by the proposed definition. He supported the comments made by Canada and Norway.

74. The representative of Australia saw the merit of a provisional definition which might help to overcome the chicken-and-egg situation. There might be difficulties in applying the proposed definition in certain sectors, and Members might usefully identify elements of the definition that would pose difficulties in that regard. It was clear that for many Members the provision of information proved sensitive. His delegation was thus still reflecting on the proposal to submit information in five sectors and had some concerns regarding the November deadline. This might not be the best way to build confidence in the process, and he wondered whether it would not be better for Members to provide generic examples without identifying particular subsidies.

75. The representative of New Zealand said that her delegation was one of the few that had provided information in the 1997 exchange on the basis of the ASCM definition. In doing so, her delegation had been clear that it was not notifying subsidies, nor making assumptions about the transposition of the ASCM definition to services. The provision of information had not proved very demanding in terms of resources, nor had it had adverse or unanticipated results. The representative of Singapore said that some commentators had noted that the GATS might not necessarily cover export-oriented measures. He thus wondered whether the sponsors intended to cover subsidies granted in relation to exports. Second, he fully associated his delegation with comments made by Canada and Brazil regarding subsidies for public services, as well as with Brazil's reference to Article XV:1 on flexibility for developing countries.

76. The representative of the United States considered that the communication was a pragmatic approach to encourage progress in connection with the information exchange. However, regarding the proposed provisional definition, his delegation remained somewhat uncertain as to the kind of subsidies that Members might be expected to report. For example, how might one report on subsidies in health care, education or public utility services without providing an elaborate description of the domestic regulatory regime for these sectors, if these were to be part of a definition. While this was not to say that subsidies in these areas should be excluded or not, further guidance would be needed to

narrow down the scope of the enquiry. It could address the nature of subsidies to be reported, such as subsidies that could reasonably be considered to have a direct effect on exports. Focusing initially on such subsidies would advance work towards developing necessary disciplines in the area that mattered most. Such a targeted approach would also make any exchange of information more manageable and productive. He agreed with the sponsors of the communication that the substance of a provisional definition could largely be drawn from the ASCM. However, as noted in his delegation's communication, there might be scope for appropriate changes. He was not entirely certain about each of the changes that had been made to the ASCM definition in order to produce the proposed provisional definition. He wondered whether the specificity concept of the ASCM really applied to the provisional definition proposed. The adjective specific in paragraph 1 of the Annex only modified the terms financial contributions and this differed significantly from the ASCM. Even within a non-specific subsidy programme, each financial contribution went to a particular firm and was by definition specific. He thus wondered why specificity would modify 'financial contribution', as opposed to 'subsidy' or 'programme'. Further, the adjective specific did not seem to modify the terms 'income or price support' and he wondered about the intent of the sponsors in that regard. With respect to paragraph 3 of the annex, he thought that some changes to the ASCM terminology appeared to fundamentally change the meaning of the disciplines and might not be required by the different characteristics of services.

77. The representative of Bolivia hoped that the sponsors could clarify the scope of paragraph 10(b) of the communication, where it was suggested that Members provide information on subsidies in five sectors by November 2005. The representative of Malaysia sought clarification on whether the sponsors were contemplating a notification exercise or an exchange of information. She had concerns about the deadline of November 2005. She also drew attention to paragraph 1 of Article XV, which recognized the role of subsidies in relation to development programmes of developing countries.

78. The representative of Hong Kong, China said that the sponsors of the communication were encouraged by the apparent interest in making substantive progress. The proposal was squarely within the mandate for information exchange in Article XV:1 and did not imply a notification process. The information exchange had to be useful for the purpose of the negotiations, which was why the communication proposed some parameters. He was interested in knowing whether any of these parameters, as set out in paragraph 8, were causing particular problems. He did not have strong views as to what five sectors should be selected or whether these sectors should be committed or not. The proposal had emphasized that this was a matter of choice for individual Members, at least for the purpose of starting the information exchange. Given the different interests of Members, proceeding in such a way would yield information on a reasonably wide array of sectors to enable appropriate analysis and discussions. Concerning public services, the purpose of a provisional definition was to facilitate the information exchange and there was no presumption that these subsidies were trade distortive or that they should be disciplined. In supplying information on subsidies, Members might also provide their views on subsidies that in their opinion served important public policy objectives and deserved special consideration in any subsequent discussion. With respect to the question put forward by the delegation of Singapore on export-related measures, he thought that the US delegation had provided an answer by mentioning export subsidies in its communication. He asked the delegation of Singapore to indicate what part of Article I of the GATS, which defined the Agreement's scope, precluded the discussion of subsidies relating to exports of services. He would come back to other questions raised, including on definition, at the next meeting.

79. The representative of Singapore said that his comment was based on the observation that some commentators had suggested that the GATS' four modes of supply covered import-related measures only.

80. Taking note of delegations' comments in regard to the proposed deadline of November, the representative of Hong Kong, China said he hoped that delegations would indicate what they saw as a

reasonable timeframe, especially since the sponsors of the communication were not proposing an exhaustive notification of subsidies in the chosen sectors. Regarding the intervention by the delegation of Singapore, he noted that the interpretation of the GATS was the prerogative of Members. He wished to know whether Singapore thought that the GATS only covered measures relating to the import of services and, if so, what was the basis for such a view.

81. The Chairperson suggested that delegations continue the discussion of this communication at the next meeting and invited the Working Party to take note of comments made.

V. DATE OF THE NEXT MEETING

82. The Chairperson indicated that the Working Party would hold its next formal meeting during the next cluster of services meetings, the exact date of which would be announced in due course.

VI. OTHER BUSINESS

83. The representative of Brazil wondered why documents from the OECD had been made available for the meeting. The Secretariat said that this had been done at the request of delegations, as noted in the report of the last meeting. The representative of Chile recalled that her delegation had initially raised this issue because these OECD documents contained some examples of subsidies, even if many were not trade distortive.

Working Party on GATS Rules

REPORT OF THE MEETING OF 7 FEBRUARY 2005

Note by the Secretariat¹

1. The meeting of the Working Party on GATS Rules was chaired by Ms. Clare Kelly, from New Zealand. The agenda for the meeting, contained in WTO/AIR/2485, included the following items: subsidies, government procurement, emergency safeguard measures, date of the next meeting and other business. To assist delegations in the preparation of the meeting, the Chairperson had prepared an annotated agenda, contained in JOB(05)/7. The agenda was adopted.

I. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV)

2. The Chairperson called attention to the three documents circulated since the last meeting. First, the Secretariat had prepared a synthesis Note on the definition of subsidies, contained in JOB(05)/4. Further, the delegation of Singapore had circulated an informal communication (JOB(04/180), which enumerated a number of relevant issues for the negotiations, in particular with respect to definition. Finally, an informal communication from the United States (JOB(05)/5) put forward some thoughts in relation to the information exchange. She called on delegations to make the necessary distinctions between the issues of definition and information exchange since, in past meetings, many had seemed to feel that the exchange of information was not conditional on prior agreement on a definition, or vice-versa. On the information exchange, a basic question before the Working Party was how the provision of useful information could be encouraged. On the definition of subsidy, an important issue to consider was whether the elements found in the Agreement on Subsidies and Countervailing Measures (ASCM) were adequate in the context of services or, if not, what modifications might be relevant.

3. A representative of the Secretariat said that the Note mentioned by the Chairperson provided a synthesis of the views expressed by delegations, either orally or through submissions, on definitional issues since the beginning of the negotiations. It was intended to assist discussions by refreshing delegations' minds on what had been said. The Note was organized on the basis of points raised, e.g., price or income support, financial contribution, conferring of a benefit. It was not intended to express views on what might need to form part of a definition of subsidy. Neither did the Note wish to imply any form of consensus in the Working Party on this issue.

4. The representative of the United States said that the informal communication from her delegation was intended to assist in the discussions, in particular with regard to the information exchange. While recognizing the obligation to exchange information concerning all subsidies relating to trade in services provided to domestic suppliers, she stressed that this was not tantamount to having to provide all possible information in advance of the negotiations. She was concerned that the submission of much information in an unfocused manner could create a significant burden without yielding useful results. It would slow down work and, thus, be counterproductive for those having particular interests in these negotiations. Narrowing the scope of enquiries to a manageable range

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

would contribute to a more productive exchange of information. One way would be to adopt provisionally a definition of subsidy for services. Many had suggested that the definition contained in the ASCM could provide a useful starting point. While her delegation shared this view, the relevant definition was still broad enough to confront delegations with a vast array of potential subsidies. To make the information exchange more worthwhile, other means of focusing efforts could be considered, such as analyzing examples of subsidies on an industry-by-industry basis or concentrating on certain types of subsidies that caused trade-related problems. The Working Party might thus want to discuss which sectors could provide a useful starting point. Tourism could be considered because this was a sector of importance to a wide range of Members, although she did not want to preclude other sectors. Similarly, it might be useful for the Working Party to consider which kinds of subsidies to examine initially, like those explicitly linked to export performance. She hoped that such a targeted information exchange would help to assess the extent to which new disciplines on subsidies were merited and, at the same time, provide a foundation for considering the form that any new disciplines might take.

5. The representative of Singapore recalled that he had provided an extensive preview of his delegation's informal communication at the last meeting. The document suggested that the ASCM definition be used as a starting point for work on a definition of subsidy in services. It also provided an illustrative list of issues that could relate to subsidies in services. The synthesis Note by the Secretariat captured some similar elements.

6. The representative of Chile wished to answer questions with respect to the information she had provided at the last meeting on some domestic support programmes. One question was about the access of foreign-owned companies to programmes in the sectors of telecommunications, electricity and maritime transport. Her government did not impose restrictions relating to foreign investments through any of these programmes. However, the necessary entry requirements in relation to foreign capital had to be observed in each of the sectors. Another question was whether the rural electrification programme was limited to families, which she said was not the case. A delegation had also asked for more information on the programme relating to maritime transport. She said that she would provide the Secretariat with additional information on the programmes mentioned. Furthermore, documents produced for a recent OECD meeting of services experts already contained relevant information on two programmes.

7. The representative of the United States wished to comment on the synthesis Note by the Secretariat and the informal communication from the delegation of Singapore. She thought that the former Note effectively brought together the main ideas expressed to date on the subject. The synthesis also showed that, on the issue of definition alone, many topics could be explored further, possibly for an indefinite period. Many of the suggestions put forward seemed to be more about defining what was not a subsidy. She wondered whether it could be inferred from the synthesis that Members were not foreseeing any particular type of subsidy as problematic. It would be good to have a better idea of the types of subsidies that Members thought should be disciplined, so as to get a sense of their prevalence. This would help to determine the nature of the problem at hand, which in turn would help in crafting an appropriate definition. On Singapore's contribution, she noted that the communication seemed to suggest that certain aspects of subsidies might already be covered by disciplines, that other subsidies might be excluded because they achieved an important public purpose, and that some kinds of government support, such as government purchasing, might not be relevant to services. She wondered what was left when all these elements had been stripped away. Were there any particular types of subsidies that actually presented a significant problem in the services context? She hoped to hear the views of other Members on this point. While she would not like to see subsidy provisions interfere with important public policy objectives, it could not be said with certainty that policy measures designed to achieve a public purpose could never have adverse effects on trade. Consequently, it seemed more prudent to use a broad definition, at least from the outset. The representative noted that Singapore referred, in paragraph 3(c) of JOB(04)/180, to the concept of income or price support and that it questioned whether regulatory measures could be

considered a form of price support. She sought further clarification on the kinds of regulatory measures that might be relevant.

8. The representative of Hong Kong, China said that he was puzzled by the interpretation given to the mandate on information exchange in the communication from the United States. He thought that the mandate was sufficiently clear: Members had to exchange information regarding all subsidies related to trade in services that they provided to their domestic service suppliers. The terms "for the purpose of negotiations", to which the United States had drawn attention, did not limit the scope of the information exchange. It was mandatory for all Members to provide information relating to all relevant subsidies. That being said, he thought that the ideas put forward by the United States were positive since they suggested practical ways to engage in a more focused exchange of information. One constructive idea was to agree provisionally on a definition of subsidy. He noted that the ASCM was a useful starting point; previous discussions on definition in the Working Party, as captured by the Secretariat Note, had often referred to it. The synthesis Note served to remind delegations of the work ahead in reaching a definition of subsidy in the context of services. While he agreed that it was useful to try to develop a workable definition of subsidies for the purpose of the negotiations, other areas of work should not be held hostage; the chicken-and-egg syndrome that had plagued negotiations in the past should be avoided. On the sectoral focus proposed, he considered that this was a constructive suggestion and a practical way of proceeding. His delegation had mentioned such an option in JOB(04)/127. Providing information in a gradual manner could be a way forward if doing so at once proved too difficult. He wished to know what information the United States would be able to provide under the approach it suggested. On the choice of sector, he wondered whether the sector of tourism had particular problems with subsidies as compared to other sectors such as transport or construction. These had been mentioned in the past as sectors where subsidies might be more prevalent. In that regard, he wished to be updated on the status of the study undertaken by UNCTAD on services subsidies. He did not think that agreement of all delegations on a sector was needed before proceeding further; it could be left to individual Members to choose the sectors they thought would be useful for the purpose of information exchange. Leaving the choice of the sector to each Member would not lead to less focused discussions since mandated negotiations contemplated horizontal rules.

9. Reacting to the communication from the United States, the representative of Japan considered it was useful to narrow the scope of the information exchange by focusing on certain sectors. However, his delegation was not convinced by the choice of the tourism sector. It was a sector where subsidy programmes served, for example, to improve the infrastructure or otherwise helped attract tourists. Many levels of governments, as well as non-governmental organizations, were involved in providing support for this sector. In that context, it might be difficult to determine which subsidies should be the subject of information exchange. He also considered that tourism was in certain regards quite different from other sectors, where the main focus was on how to supply services abroad. In the case of tourism, the main focus was to promote activities within one's own territory. He thus wondered whether tourism was the appropriate choice if the main purpose of the information exchange was to assist in the negotiations.

10. The representative of Thailand thought that the suggestion to focus on relevant sectors was useful. She did not mind starting with tourism, although exploring subsidy schemes in infrastructural services such as telecommunications or transport could also be quite relevant. She noted that the earlier communication from Chile (JOB(03)/218) included an example in this sector. While measures such as tax exemptions or duty free concessions might be seen to constitute a subsidy in the light of the ASCM definition, these would not be subsidies under mode 2 because they did not restrain a Member's own citizens from going abroad. In such cases, exports actually occurred within the country, and the GATS did not address this reverse territorial aspect of subsidies. In Thailand, the board of investment offered, with conditions, corporate tax exemptions to hotel and other tourism-related services. Foreign ownership was allowed in that sector. She doubted that a modal approach was relevant to subsidization of this nature. The determination of whether subsidies in the tourism

sector had distortive effects was problematic. For one, the issue of like services was difficult, given the various consumer preferences at play. How to determine the degree of substitutability of staying in different locations? Further, competition in the tourism industry was not based solely on, for example, the price of a hotel; competition depended on many other factors, e.g., cultural or natural endowment of the destination country. Possible trade-distortive effects of subsidies, if any, had to be seen in that broader context and could be cancelled out by other influences in the tourism industry.

11. In a preliminary manner, the representative of Pakistan welcomed efforts by the United States to suggest ways towards a constructive information exchange. She agreed with the suggestion to narrow down the scope of the information exchange by working on the basis of a provisional definition of subsidy, adopting a sectoral focus, and concentrating on particular types of subsidies, such as those directly linked to export performance. She also took note of suggestions made in an earlier communication from Hong Kong, China and supported the proposal to invite UNCTAD to present its study on services subsidies. In concluding, she felt, in the light of the three communications discussed today, that it might be advisable to try to agree upon a satisfactory definition while endeavouring to collect information on a step-by-step basis.

12. The representative of Chinese Taipei asked whether the United States wished to develop a provisional definition of subsidy before proceeding with the information exchange or, alternatively, develop a definition on the basis of the information gathered on a sectoral basis. She also wondered, in regard of examples provided in paragraph 5 of the document, whether the United States considered it necessary to formulate a definition that would exclude the elements referred to or, rather, include such programmes in a definition but exempt them from legal challenge. Further, she welcomed the proposal to proceed on the information exchange on a sector-by-sector basis. However, other sectors mentioned in the Secretariat Notes on subsidies covered by Trade Policy Reviews (S/WPGR/W/25 and addenda) could also be examined. On the communication from Singapore, she thought that the ASCM definition provided a useful starting point, but she had various specific comments. With respect to paragraph 3(b), the notion of price or income support should be included in a definition of subsidy in services so as to cover all relevant measures. Subsidy-like effects of regulatory measures should not form part of a definition, but be covered by other provisions of the GATS. On the issue of benefits, she thought that inadequate statistics, as well as the complexity associated with multiple modes of supply, made the measurement of benefits conferred on recipients particularly challenging.

13. The representative of the Republic of Korea sympathized with concerns that too broad a definition might make the information process too burdensome; the ASCM definition constituted a good basis. She wondered whether concentrating on certain specific sectors would help to narrow down the definition. She hoped that the information exchange could proceed, first, with tourism and then move on to other sectors. While tourism might be a peculiar sector, gradually extending the information exchange to other areas could reveal other sectoral peculiarities. She agreed with the suggestion by Chile to circulate the OECD papers mentioned.

14. With respect to the communication from the United States, the representative of Chile supported the interpretation of the mandate put forward by the delegation of Hong Kong, China. Article XV contained an obligation to provide information on all subsidies. Second, while agreement on a provisional definition might be useful, this was not a prerequisite for exchanging information. From the Working Party's experience so far, she did not think that the absence of a definition would lead to too much information. Third, while proceeding on a sector-by-sector basis was positive, sectors other than tourism, such as construction or transport, might be more relevant, given their clearer link to exports. She understood that the United States was also open to look at such sectors. Fourth, she thought that the Working Party could pursue various avenues in a simultaneous manner; the information exchange could proceed alongside a discussion on definitional issues, including the question of whether programmes with public policy objectives would be relevant.

15. The representative also wished to provide preliminary comments with regard to the communication from Singapore. On paragraph 3(a), she thought that the various elements forming a financial contribution in the ASCM would also capture the reality of services trade. Subsidization of such services as telecommunications, computer, tourism, or transport services through grants, tax credits, etc. was easily conceivable and could be the subject of further examination. With respect to paragraph 3(b), she did not think that there was a direct relationship between negotiations under Article XV and those under Article VI:4. The subject matter of the latter negotiations was well defined, while types of subsidy disciplines that could be negotiated under Article XV were still being discussed. However, regulatory measures might have subsidy-like effects. While regulations could distort trade in services, a subsidy, in turn, might be considered to constitute an unnecessary barrier to trade. From that perspective, there might be a link between the two Articles. This topic should be further discussed. On paragraph 3(d), she hoped that Singapore could elaborate on the definition of the term 'benefit', and possibly provide more concrete examples. Concerning paragraph 3(e), she thought that a definition would have to cover actions taken by all levels of government. With respect to paragraph 3(h), it would be useful to consider the "traffic light" approach in the context of services. It could assist in addressing particular sectoral sensitivities. "Green light" or non-actionable subsidies could be those used in the fulfilment of a public policy objective. Examples of such subsidies were to be found in the previously mentioned OECD documents on universal service, which could be circulated.

16. The representative of Switzerland said that the communication from the United States was a constructive contribution to the negotiations. Article XV:1 called for the provision of information on all subsidies relating to trade in services that governments provided to their service suppliers. This mandate was clear and not limited in scope. It was also important to discuss how to proceed in fulfilling such an obligation. She agreed with the United States' suggestion on the understanding that it did not deal with the scope of the information exchange or of the mandate, but with the procedural question of how to proceed. It was up to each Member to decide how it wanted to fulfil that mandate, e.g., provision of information all at once or on a step-by-step basis. Members did not have to proceed in the same manner. However, she had concerns about using the information exchange as a basis for deciding whether disciplines were necessary or not. The information provided might be partial and incomplete. She was particularly concerned about paragraph 7 in the communication from the United States, which stated that a targeted information exchange might help to assess the extent to which new disciplines on subsidies were merited. Furthermore, the communication contained interesting thoughts about definitional issues. A definition was relevant in two contexts, that of the information exchange and that of the negotiation of disciplines. For the purpose of the information exchange, the definition contained in the ASCM could be used. Relying on that definition did not carry any legal implications in terms of rights and obligations, but provided an opportunity to test that definition, in addition to saving time.

17. With respect to the synthesis Note by the Secretariat, she appreciated in particular that it elaborated on the concrete critiques and proposals for improvements made by delegations in relation to the ASCM definition. Paragraph 4 of that Note highlighted the concrete modification proposals made regarding the concepts of purchase of services and of income or price support. Another specific point underscored in the Note concerned the issue of the GATS carve-out for governmental services. She thought that the subsidy definition used in the ASCM provided a good basis for work on subsidy disciplines in services.

18. The representative of India appreciated the efforts by the delegation of the United States to propose a practical way of moving ahead on the information exchange. However, he wondered about the choice of tourism as a focal sector and asked if the United States considered that it caused particular trade-related problems. Delegations might have to grapple with the fact that the choice of the sector depended on the information available. The suggestion to focus on subsidies directly linked to exports might be a useful starting point. With respect to the Secretariat Note, he recalled that many

delegations had not expressed any views on the definition of subsidy and that there were many differences of opinion among those that had done so.

19. The representative of Colombia believed that the terms "for the purpose of negotiations" in Article XV had been included so that the information exchange could proceed in parallel with, and contribute the necessary inputs to, the negotiation of disciplines. She welcomed the suggestion to adopt a provisional definition. The Working Party should discuss the necessary elements. The definition contained in the ASCM could be used as a starting point. Like the delegations of Switzerland and Hong Kong, China, she believed that the mandated information exchange concerned all subsidies, not solely some of them. Concerning the proposal to start with tourism, she thought that distortive effects were much more significant in other sectors, such as construction, audiovisual or maritime transport services. An alternative approach might be to discuss, in a general manner, the different types of measures that might have trade-distortive effects, for example investment incentives, research and development subsidies, export credits and tied aid.

20. The representative of Singapore said that even though the Working Party had discussed this topic for the last 10 years, little progress had been made. This highlighted the complexity of the issues involved. The communication from his delegation raised a number of questions that were relevant to the discussion, but did not aim to provide answers; the Working Party still had much work to do. Many Members still had not articulated their views on the issue of definition. The communication from his delegation had highlighted that a number of GATS provisions already covered aspects of subsidies. The ASCM might also be relevant to aspects of services subsidies. These provisions had to be kept in mind so as to avoid duplication, e.g., as regards negotiations under Article VI:4.

21. The representative of Indonesia believed that the ASCM definition could constitute a useful starting point for a definition of subsidy for services. He agreed with the United States that the scope of the information exchange might need to be narrowed by focusing on selected sectors, which needed to be chosen with care. It was preferable not to start with sectors that received government support for public service purposes, such as health and education. While committed to meeting its obligations under the WTO, his delegation thought that a suitable timeframe for developing countries might need to be considered with respect to the information exchange. The information exchange amounted to an additional obligation to fulfil.

22. The representative of Canada believed that it might be useful to discuss what the Working Party was expecting the information exchange to achieve. There was no guarantee, even with a provisional definition, that Members would rush to provide information. Informal discussions might be warranted. It was not clear what the link was between the information exchange and the negotiations. He agreed with the point made by the delegation of Switzerland that the information exchange should not represent a decision point to agree on either the need for disciplines or the form any disciplines might take. An interesting avenue to explore would be concrete examples of adverse effects. Some had suggested a sectoral focus and, in that regard, it would be useful if Members that had been adversely affected could come up with specific sectoral examples. This might allow the Working Party to determine whether there was a problem and, if so, its magnitude. One could then better determine how to proceed.

23. The representative of Australia noted that these negotiations involved complex technical issues. He agreed that Members needed to arrive at a provisional definition of subsidy, for which the ASCM provided a good starting point. He supported the suggestion to start with the tourism sector, as this was a sector of interest to a wide range of Members. Such a sectoral discussion should be of a generic nature rather than Member-specific. It should proceed in parallel with efforts to further consider the definition of subsidy in the context of GATS. As Singapore had noted, the Working Party had had discussions on the definition for a long time. A previous communication from Poland (JOB(02)/207) had rightly pointed out that the issue of who was granting the subsidy was a basic

element to be considered in the context of a definition. The ASCM could also provide some useful guidance to differentiate between trade in services subsidized by governments and the provision of public services by governments. The delegation of Hong Kong, China had pointed out the relevance of GATS Articles 1:3(b) and 1:3(c) in this context. Members needed to distinguish between what was a public subsidy and what was a subsidy conferring a benefit in the commercial sense.

24. The representative of Hong Kong, China thought that the point made in the communication from Singapore with respect to the relationship between Article XV and existing provisions under the GATS (e.g., Articles VI:4, VIII, IX, XVII, XXIII:3) should be examined further. Given time constraints, he suggested that issues flowing from that communication, as well as from the Secretariat Note, be taken up in more detail during an informal meeting. This would also help to reach a provisional definition of subsidy, as suggested by the delegation of the United States. Regarding the OECD studies, he considered that they contained a number of interesting observations about the role of subsidies in certain services sectors, in particular their contribution to the achievement of public policy objectives, which had to be recognized. Examples provided in paragraph 5 of the communication from the United States alluded to this aspect. Future discussions might shed light on what could be regarded as non-actionable subsidies. He might share his delegation's thoughts on this issue at a later point. In regard to the points made by the delegation of Canada about the information exchange, he said that, while it would be logical to determine what might be achieved before embarking upon any exercise, the reality was that issues relating to the Article XV mandate had already been discussed for 10 years. It was now time to act upon the information exchange rather than talk about it.

25. The representative of the European Communities wished, at this point, to raise two questions on the communication from the United States. First, he enquired what type of information would be the target of the proposed exercise. Did the proposal contemplate a notification of each subsidy or the sharing of information of a more general nature? Second, would it cover only direct and specific subsidies to a service supplier, and not indirect subsidies, for example the organization of Olympic Games which, by attracting tourists, might benefit a city? Finally, he reiterated that the best way to obtain information for the negotiations would be for those Members that considered themselves adversely affected by subsidies of others to share their experience in that regard. Article XV:2 provided for consultations in such instances. Had any Member been adversely affected and requested consultations pursuant to Article XV:2 and, if so, what had been the result?

26. The representative of South Africa welcomed the approach taken by the delegation of the United States in its informal communication. While Article XV referred to subsidies that might have trade-distortive effects and also recognized the important role of subsidies in relation to development programmes, the information exchange referred to all subsidies granted to service suppliers. This complicated the situation. For her delegation, it was more important to have disciplines on subsidies that had a trade-distortive effect than trying to examine a large amount of subsidies that might not be useful for the Working Party's purposes at this juncture. On the proposal to adopt a sectoral approach to the information exchange, she had doubts about the choice of the tourism sector and preferred discussing construction and transport services.

27. With regard to the communication from the United States, the representative of Mexico believed that the mandate on information exchange contained in Article XV was clear. It concerned all subsidies. He thought that the suggestion to develop a provisional definition might facilitate the exchange of information, but it should not prejudice the final outcome of disciplines to be developed. His delegation needed to analyse further the implications of the proposed sectoral focus, but he thought, as others, that it might be best to start with sectors other than tourism. He expressed some concerns with respect to the comment contained in paragraph 7 of the communication from the United States to the effect that a sectoral focus could assist in assessing the extent to which new disciplines on subsidies were merited. The information exchange was not a prerequisite for the development of disciplines. The result of the information exchange would not determine whether disciplines should

be developed. Both avenues were complementary. Discussion of the objectives of the information exchange should not prevent it from taking place. Concerning the intervention by the European Communities, he believed that Article XV:2 was independent from Article XV:1 and did not substitute for the information exchange foreseen in paragraph 1.

28. The representative of China, in a preliminary manner, thought that the suggestions by the United States might represent a practical way forward. However, further consideration was needed by his authorities, in particular with respect to the selection of tourism as a starting point for the information exchange.

29. The representative of the United States wished to react to some of the questions raised. She recalled that the purpose of the communication from her delegation was to stimulate a more fruitful discussion and, hopefully, encourage a substantive exchange of information. She appreciated that the delegation of Thailand did not want to await a consensus before providing examples in the tourism sector. Her delegation was not wedded to any particular sector, but had simply thought that a large number of delegations shared an interest in tourism. She took note of the suggestion that the Chairperson conduct consultations on the organization of work, but the communication had been introduced with a view to simplifying the exchange, not to create more discussions about where to start. Her delegation had reiterated that the ASCM definition could be a useful starting point, but it had to be recognized that this definition had its limits. In that regard, paragraph 5 of the communication gave examples of certain types of measures that might not reasonably be considered as part of a definition in the context of services. In response to the question by India as to whether the U.S. had experienced particular subsidy-related problems, she said that the intent was to stimulate discussion of what might be problematic and not to invoke paragraph 2 of Article XV. It was not implied that any problem raised should be acted upon or disciplined. It was important to get a better sense of what the problems were, and a way to do so was to proceed sector by sector. This would prevent delegations from getting lost in details.

30. Reacting to comments from Mexico and Switzerland in relation to paragraph 7 of the communication, the representative said that her delegation did not want to condition the information exchange, but help to provide the Working Party with a better idea of where disciplines might be needed and where they were not. She did not see what was problematic with such an approach given the mandate in Article XV. This was not prejudging how the negotiations might evolve. The proposed alternative - putting aside different views about the interpretation of the last sentence of Article XV:1 - to amass information on all possible services subsidies might take up all of the Working Party's time and resources, and ensure that work on disciplines never advanced. Her delegation's communication wished to avoid protracted debates about interpretation and to propose a practical way of moving ahead. This was not prejudging future disciplines and whether such disciplines, if any, should deal with concepts such as actionable/non-actionable subsidies. Problems had to be identified, notwithstanding the fact that paragraphs 1 and 2 of Article XV were completely separate. The first two sentences of paragraph 1 were clear and provided direction to the work on information exchange. The Working Party's goal was to come up with disciplines to address problems, and the purpose of the information exchange should be seen in that context. She took note of the interest of some delegations in other sectors. Her delegation had not intended to start with sectors where trade distortive effects might be of particular concern to the United States, but with a less controversial area that was of interest to many developing countries.

31. The representative of Hong Kong, China sought some clarifications on the intervention by the delegation of the United States. He understood that the suggestion was to leave it to each delegation to identify focal sectors for the purpose of the information exchange. Paragraph 7 of JOB(05)/5 suggested to exchange information by focusing on one or two sectors at a time, such as tourism, or on certain types of subsidies, like those directly linked to export performance. He wondered why there would be a need for the Working Party to express further recommendations in that context. The provision of any information about subsidies that might affect trade in services would be a useful

starting point. He was looking forward to the information that might be provided by the United States at a later stage.

32. The representative of the European Communities recalled that it would be useful, in preparing more detailed comments on the communication, to receive answers to the two questions that his delegation had raised. In relation to a comment by the delegation of Mexico, he agreed that paragraphs 1 and 2 of Article XV were distinct. Article XV:1 said that Members had to exchange information on their own subsidies, but most of the information brought to the Working Party in recent years had nothing to do with this provision. Many Members were still asking for additional information not falling within the ambit of paragraph 1, e.g., Secretariat Notes on provisions contained in RTAs or information contained in Trade Policy Reviews. Information pursuant to paragraph 2 would not be most useful in assessing what kinds of problems existed, their magnitude, and possible means to address them. The European Communities had never asked for consultations pursuant to Article XV:2 since the entry into force of the GATS, nor had any Member requested such consultations with the EC. Regarding Article XV:1, he recalled that his delegation had circulated an informal communication with information on the subsidy regime of the European Union. He thus thought that the EC had complied with this aspect of Article XV.

33. The representative of the UNCTAD wished to inform the Working Party that her organization's paper on government support measures would be made available at the forthcoming meeting of the UNCTAD Commission on Trade in Goods and Services and Commodities on 14-18 March 2005. She hoped that it would help to build consensus in the Working Party and to improve the understanding of relevant facts and issues.

34. In summing up, the Chairperson said that while not all delegations shared the U.S.' interpretation of the mandate for the information exchange, many found the suggestion of a sectoral approach to be useful. However, views differed on which sectors to start with. Tourism had attracted much support, although its peculiar characteristics had been noted. Transport, telecommunications and construction had also attracted some interest. Another key element emerging from the meeting was the degree of support for using the definition of the ASCM as a basis for a working definition for the information exchange. Support had also been expressed for this definition to serve as a basis for discussion on disciplines. Some delegations had also emphasized public policy objectives as an area for further work. Others had noted the importance of discussing concrete examples of problems. Some delegations had called for informal discussions on the information exchange as well as on definitional issues.

35. Recalling that 2005 was an important year in the negotiations, the Chairperson called on the Working Party to focus its work if progress was to be made. This was not an academic exercise. It was now time to concentrate on the key issues, and she urged delegations to consider whether the various proposals put forward would allow for information to be tabled at the next meeting. This could be done in relation to tourism or any other sector on which delegations could offer information. Proponents should lead the way. Further, she noted that many delegations had not yet expressed detailed views on various issues under consideration, including on definition, and it would be important for them to participate as the Working Party moved forward.

36. The representative of Chile suggested to circulate the previously mentioned documents from the OECD. The Chairperson agreed and invited delegations to take note of the comments made.

II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII)

37. The Chairperson invited Members to pursue their discussions, which had centred recently on the proposal by the European Communities (S/WPGR/W/48). While divergent views and different levels of ambition remained, delegations had examined a number of issues related to the proposal for a framework of rules in this area. These included: the application of the MFN obligation, concrete

ways in which contracts covering both goods and services might be dealt with, and modal distinctions. Delegations might also want to express specific views with respect to procedural or transparency provisions. Recent Notes by the Secretariat on government procurement provisions and scheduling approaches in RTAs might provide useful background material.

38. The representative of the European Communities recalled that at the last meeting a number of delegations had said that they were ready to work on procedural rules that could be developed for government procurement in the context of the GATS. The Secretariat Note S/WPGR/W/49, on the government procurement provisions contained in economic integration agreements (EIAs), provided a good working basis and a useful source of inspiration in regard to procedural rules. Most of the agreements reviewed in that Note contained procedural rules typically covering such topics as: non-discrimination, valuation of contracts, technical specifications, procurement methods, qualification of suppliers, procedural rules regarding invitations to participate, time limits for tendering and delivery, tender documentation, and award of contracts. This provided the structure of an annex to the GATS on procedural rules for government procurement and the question now was what types of rules should be developed under relevant headings. His delegation believed that these rules should be simple, easy to understand, and easy to apply. They would apply to committed sectors. The intent was to use the flexibility of the GATS to develop a framework on government procurement that suited everyone and enabled each Member to undertake relevant government procurement commitments in the sectors it wished to open to international competition and according to the limits it would set in order to fulfil its public investment and development needs. His delegation was reflecting on rules of procedure that met such objectives, and he invited interested delegations to provide suggestions, in particular in regard to special and differential treatment in favour of developing countries. He underscored that the negotiations on the three topics falling under the responsibility of this Working Party should advance at the same rate and invited all delegations to engage in discussions on government procurement as they did for other topics.

39. The representative of Egypt wished to reiterate the position of his delegation according to which the mandate of Article XIII did not include MFN, market access or national treatment. He did not think that the approach proposed by the European Communities fell within the scope of that mandate. He also wished to echo the views expressed by some delegations regarding the implications of the July Package, which had dropped the issue of transparency in government procurement from the negotiations under the Doha Development Agenda. For the negotiations to proceed in a more meaningful manner, it would be essential for the Working Party to agree on the scope and purpose of the mandate under Article XIII before engaging into in-depth and complex discussions on matters on which serious reservations had been repeatedly expressed.

40. The representative of Canada thought that the Secretariat Note on government procurement provisions in EIAs (S/WPGR/W/49) clearly pointed out extensive commonalities of procedural rules across the different agreements. Many useful precedents and references thus existed for the Working Party in identifying rules that might be appropriate for government procurement commitments in the GATS. On that basis, she believed that there was value in continuing to discuss this issue, particularly with respect to transparency and other rules.

41. The representative of the United States first wished to answer some of the questions included in the Chairperson's annotated agenda, even if these might have been mainly directed at the EC. The first question was whether the MFN obligation should apply in sectors where no government procurement commitments had been taken. Her delegation thought that, in principle, the same rationale would seem to apply to procurement as to other policies already covered by the GATS, namely that Members should endeavour to treat all other Members on an equal basis. The second question was whether any of the suggested derogations from the MFN obligation (e.g., MFN exemptions, Article V, provisions on the relationship with the GPA) would allow a Member to deviate from the level of treatment committed in the proposed government procurement column in schedules. In her view, it would seem necessary to allow for deviations from the MFN principle in order to

accommodate EIAs, existing obligations under the GPA, and existing policies that accord more favourable treatment to selected countries. She hoped that the EC could provide answers. In reaction to the intervention from the delegation of Egypt, she reiterated that the mandate in Article XIII had been reaffirmed by the General Council in Annex C of that document. The decision on transparency in government procurement in the context of the July Package related to the relevant Singapore issue and did not affect Article XIII. This interpretation was reinforced by the content of Annex C.

42. The representative of India wished to lend support to the delegation of Egypt. He recalled that these points had been raised by his delegation and various others at every meeting. There was a serious divergence on the scope and purpose of the mandate. Ignoring it was not the best way of moving forward. Even on the issue of transparency in government procurement, a large number of Members had expressed serious reservations. As a result, the issue got dropped from the Doha Development Agenda. Since the situation had not changed, a reality check was needed. On the procurement rules contained in EIAs, he wished to recall that many Members had no experience with such types of provisions. The fact that some Members had agreed upon such rules amongst themselves should therefore not suggest that their multilateral extension would be the best option.

43. The representative of Brazil shared the concerns expressed by Egypt and India on this question. The scope of the mandate should be examined carefully before entering into negotiations on an annex as proposed by the EC. Article XIII pointed in a different direction. Paragraph 1 of that Article provided that MFN, market access and national treatment were not part of the negotiating mandate in paragraph 2.

44. The representative of Hong Kong, China wished to respond to questions included in the annotated agenda. Concerning the first question, he understood that the EC's proposal followed the structure of the GATS. If so, the MFN obligation should logically apply as provided in Article II, i.e., across all sectors irrespective of whether government procurement commitments had been undertaken. Concerning the second question, he wished to stress that derogations from MFN (be it Article V, a provision on the relationship with the GPA or MFN exemptions) would not allow a Member to grant less favourable treatment than had been inscribed in its schedule of commitments. He recalled that his delegation was willing to pursue discussions under this agenda item without prejudice to the question of the mandate. Focusing on substance would be preferable to protracted debates about what the mandate effectively covered. He wished to note that other provisions of the GATS, apart from those excluded by Article XIII, already applied at present to measures pertaining to government procurement, assuming these measures affected trade in services pursuant to Article I. Therefore, government procurement was already subject to Article III on transparency, insofar as it related to measures of general application which pertained to or affected the operation of the Agreement, or significantly affected trade in services. Accordingly, he was not sure why there was a need for further debate in that regard.

45. The representative of Canada wished to support the delegation of Hong Kong, China in its call for focusing on substantive issues. Members had to engage constructively and positively in all discussions in this Working Party.

46. The representative of Switzerland wished to answer the questions in the annotated agenda, and hoped that the delegation of the European Communities could do likewise. She thought that confining the MFN obligation to sectors where government procurement commitments had been taken would not be compatible with the structure of the GATS. The GATS' MFN obligation was a general obligation which applied across the board. The MFN obligation should thus apply to all government procurement in services under the GATS, irrespective of specific commitments. Concerning the need for MFN exemptions, she wondered whether many preferential arrangements in this area actually lied outside the ambit of Article V and of the GPA.

47. The representative of Japan said that Article XIII covered market access issues and not only transparency. Like the delegations of Canada and Hong Kong, China, he did not think it was very productive to further discuss the mandate. It would be preferable to assess how practical and useful the framework proposed by the EC really was. In reference to the intervention by the delegation of India, he considered that the Singapore issue of transparency in government procurement was different from what was discussed under this agenda item. The EC was proposing a framework allowing Members to include government procurement commitments in their GATS schedules; Members who did not want to undertake such commitments were free not to do so. The Singapore issues had concerned rules applying to all Members, which had made some delegations hesitant to engage in negotiations. Given the flexibility of the GATS, it was not unrealistic to discuss such a framework of rules for procurement.

48. Concerning the questions contained in the annotated agenda, the representative of the Republic of Korea agreed with other delegations that the MFN obligation should also apply to sectors where no commitments on government procurement were taken. MFN derogations might be necessary for GPA Members or for agreements falling under Article V, although this could be discussed further in the course of negotiations. She was disappointed that the Singapore issue of transparency in government procurement had been dropped from the Doha negotiating agenda, but that did not change the relevant mandate under the GATS.

49. The representative of South Africa wished to support the interventions of the delegations of India, Egypt and Brazil in regard to the mandate. A reality check was needed; it did not seem wise to proceed without having a clear idea of what the Working Party sought to achieve. The same applied to the topic of subsidies. Agreement on the scope of the mandate was needed before proceeding to any substantive negotiations.

50. The representative of the United States wished to react to some of the previous interventions regarding the mandate. She thought that, while the July Package did not, from a legal point of view, affect the transparency aspects of the mandate under Article XIII, the delegation of India had indicated political concerns to negotiate on transparency, whether in the context of the Singapore issues or elsewhere. India had not questioned that transparency was included in the mandate under Article XIII. She would be concerned if arguments relating to transparency in government procurement in the GATS were made contingent on the existence of a mandate under the Singapore issues. In the past, her delegation had said that it was useful to bear in mind any results achieved in respect of the Singapore issues, but this was not intended to prevent negotiations under Article XIII or conditioning them on discussions on Singapore issues. Her delegation had never implied that the Article XIII mandate excluded transparency or was linked to the Singapore mandate. She could not concur with any insinuations that the Article XIII mandate had been rendered superfluous by decisions on the Singapore issue of transparency in government procurement. Annex C of the July Package explicitly affirmed the negotiating mandate under Article XIII. If, as some seemed to suggest, transparency was not part of the Article XIII mandate, what would be left? No delegation had ever implied a link between Article XIII and the Singapore issues in the context of the discussions on the July Package.

51. The representative of Egypt reiterated the view that it might be suitable for the Working Party to address the implications of the July Package on the mandate of Article XIII. The representative of Mexico supported the interventions by the delegations of Egypt, India, Brazil and South Africa, in particular with regard to the need to clarify the mandate.

52. The representative of the European Communities recalled his delegation's long-held views on the mandate. Paragraph 2 of Article XIII provided for negotiations on government procurement without any qualification. It did not limit the negotiations to transparency aspects. If the intent had been to exclude market access from the negotiations, this would have been specified. A distinct issue was that certain Members might not want, or did not have the political will, to negotiate on this topic.

Lack of political will had been apparent in the case of the Singapore issues, but the current context was different since the relevant mandate directly came from an international agreement that bound every Member. Further, while various delegations had serious doubts about other mandates in the area of rules, this did not prevent them from actively participating in the discussions. With respect to the application of the MFN obligation, his delegation shared the interpretations put forward by some delegations. The intent was to extend to government procurement the obligations of the GATS: the MFN obligation would apply, but as in the GATS certain derogations would be permitted, taking into account economic integration agreements and the specificities of the GPA. He invited delegations to participate actively in all areas of the rules agenda and not just in some of them.

53. The representative of Mexico confirmed that his delegation did not share the interpretation of the European Communities with respect to the mandate on government procurement.

54. The Chairperson noted that discussions had focused on the scope of the mandate and that divergences of opinion were clear. Some delegations thought that it would be more productive to focus on substance rather than engage in a circular discussion on the mandate. Others had said that the mandate needed to be addressed before discussing substance. Concerning the issue of MFN, there had been a good degree of support for broad application, consistent with relevant principles of the GATS. However, there would be a need for derogations to take into account preferential trade agreements and the GPA. She wished to reiterate that 2005 was an important year in the negotiations and that time was running short. Delegations now needed to focus on what they considered doable and achievable. She invited the Working Party to take note of the comments made.

III. EMERGENCY SAFEGUARD MEASURES (ARTICLE X)

55. The Chairperson suggested that Members pursue their discussion in the light of the latest document brought to the Working Party's attention, JOB(04)/175, in which a group of Members from ASEAN provided written answers to previously raised questions. Issues raised included the availability of statistics, the definition of domestic industry, the relevance of obligations contained in bilateral investment treaties, the link between an ESM and progressive liberalization in the market access negotiations, and the relevance of certain entries in schedules.

56. The representative of the Philippines, speaking also for the delegations of Brunei Darussalam, Indonesia, Malaysia, Myanmar and Thailand, elaborated on issues previously raised in the light of questions listed in the annotated agenda. With respect to statistics, relevant issues related, on the one hand, to the determination of injury and, on the other hand, to the increase in imports. Concerning the former element, he recalled that the delegation of the United States had said at the last meeting that the information provided for a particular example, optometry, did not make a compelling case to suggest that a domestic industry had been injured or that injury had been due to trade. The U.S. delegation had not only mentioned a number of indicators which would need to be considered (e.g., past sales volumes, revenue of the sector, employment, compensation of opticians), but expressed doubts whether such information actually existed. The representative said that such data should be provided by the firms constituting the domestic industry or associations representing the industry. If they could not produce the required statistics to substantiate their claim of injury, the investigation would conclude that the case for a safeguard measure had not been made. The following data might be generated by petitioning firms: decline in profits, returns on investment, cash flow, occurrence of losses, price reductions, fundamental changes in the price structure in relation to losses or decline in profits, reduction in the number of domestic suppliers, decline in the growth of output or sales, change in market share, reduced level of capacity utilization. These indicators were drawn from the original ASEAN non-paper (Job. 6830) from 2000. A point had also been made that employment, wages and sales volumes could have increased for the sector as a whole. In this case, there would be no injury to the domestic industry.

57. Turning to the use of relevant import statistics, the representative considered that this aspect merited further thought. The original non-paper from ASEAN had referred to a number of indicators either in absolute or relative terms. These included information provided by professional associations, affected firms, regulatory authorities, and immigration or labour authorities, as well as, for mode 3, statistics on foreign investment, such as data on capital flows compiled by the central bank, the board of investment or the securities and exchange commission. Research institutes, think-tanks or even consulting firms might also have useful data. Relevant statistics for modes 3 and 4 might not appear to be too problematic. Even data sources for imports under modes 1 and 2 might exist. Again, if the key question of increased imports could not be addressed by the petitioning industry, the case for applying a safeguard measure would presumably fail.

58. The representative wished to come back to a question put at the last meeting with respect to the temporary suspension of regulatory reform. The point had been made by a delegation that more competition, not less competition, was the most effective means of achieving universal service objectives. He agreed that this might indeed be the case in several situations, although there could be others where liberalization would not ensure the kind of universal service that a government might want to achieve. In such cases, governments had to intervene and implement the necessary regulatory measures. This was evident from the documents discussed during a recent meeting at the OECD. The example that the group of delegations from ASEAN had provided was one where the initial measures that a Member had bound proved ineffective in ensuring access to universal service. A related safeguard measure was not intended to restrict competition, but to temporarily modify the regulations bound in order to ensure provision of universal service.

59. On the relationship between bilateral investment treaties (BITs) and the application of safeguard measures, he thought that this issue was dictated to a large extent by the mandate in Article X, which underscored the principle of non-discrimination. Any safeguard would need to be applied on an MFN basis. Some had raised the concern that a Member party to a BIT might face the possibility of having its safeguard measure challenged not in the context of the WTO but in that of a BIT or free trade agreement. While not foreclosing such a possibility, he thought that a Member intending to invoke a safeguard that would derogate from BIT obligations would have to decide whether it wanted to comply with the non-discrimination obligation of the GATS and risk legal challenge under the BIT or, alternatively, whether it wanted to exempt the other party to the BIT from the application of the safeguard measure. The second scenario was a non-starter given that an ESM would have to be applied on a non-discriminatory basis. The Member would have to make a judgement as to what legal challenge it would want to risk facing: one under the WTO for violation of the MFN obligation or one under a BIT.

60. Turning to the link between an ESM and progressive liberalization in the market access negotiations, he reiterated that it was up to individual Members to make the kind of links they deemed appropriate. Some of the delegations for which he was speaking had previously indicated that they would be more flexible in terms of undertaking further commitments in the presence of an ESM. These commitments might vary from one Member to another. With respect to concerns that an ESM might not yield greater commitments than would otherwise have been the case, the representative said that all Members had high levels of ambition in the services negotiations, as reflected in the types of requests received. Developing countries had also expressed clear offensive interests. A safety net would be needed to safeguard the higher levels of liberalization proposed in offers, assuming that they actually materialized. With respect to a point made by Mexico about other measures to address similar situations, he thought that, should an ESM not be available, the alternative might be to adopt a scheduled approach whereby each Member would condition its commitments on the application of a safeguard mechanism as already appeared in some schedules. Another alternative would be to use Article XXI procedures, although the purpose of that Article was to address situations where a Member wanted to permanently modify its schedule of commitments. A Member could also inscribe as many economic needs tests (ENTs) as possible in its schedule. He had not advocated such an alternative, because a more transparent and objective use of ENTs, if not full elimination, was being

advocated in other fora. However, if there was no ESM, a viable option for many Members would be to include many ENTs in their schedule. This might not be the best solution for the system, given that many ENTs suffered from a lack of transparency and objectivity of criteria. An ESM seemed preferable because it would be multilaterally agreed upon, with clear and transparent criteria.

61. The representative of the United States wished to draw attention to the question of like services. For an injured industry to produce relevant information to the government, similar things needed to be compared. For example, a memoranda from one lawyer might not be exactly like that from another lawyer; the quality of the service might be different. She still felt that no clear answer had been put forward on how to establish injury. How could it be ascertained whether the cross-border supply of legal services by fax, mail, e-mail or telephone was causing injury? She was concerned that Members at lower levels of economic development might face difficulties, because of resource constraints, in amassing all the types of information mentioned by the delegation of the Philippines. She wondered, in that context, which Members might be most likely to use an ESM.

62. The representative wished to register a clarification with respect to paragraph 49 of the report of the last meeting (S/WPGR/M/50) in relation to an intervention by her delegation. It was noted that the delegation of the United States had said that it was not useful to look at other tools that were available in the GATS. She clarified that this remark related to attempts to compare the type of analysis that was needed for an ENT and that for an ESM. Questions with respect of an ESM related to a tool that would be negotiated multilaterally for all Members to use on an MFN basis, while ENTs tended to be customized by the particular Member that was including them in its schedule. What was under consideration pursuant to the mandate of Article X were negotiations on the question of a multilateral mechanism. If criteria were to be developed for such a mechanism, the kind of questions asked would be different from those posed in respect of customized entries in a Member's particular schedule. The relevant section of S/WPGR/M/50 should be read accordingly.

63. The representative of Mexico said that the points made by the delegation of the Philippines in response to previous comments from his delegation had not alleviated his concerns. He wished to reflect further on the issue and hoped to come back with examples of measures that could be useful in addressing the types of situations mentioned by the group of Members from ASEAN.

64. The representative of Hong Kong, China remarked that the issues mentioned in the annotated agenda all pertained to feasibility, which was understandable since these were the topics that delegations had recently focused upon. However, for his delegation, the fundamental questions were: what were the circumstances justifying a safeguard and, especially, who was going to be protected by its application, and against what would protection be provided? These remained to be answered satisfactorily. While he had said at the last meeting that it might not be useful to try to exhaust all circumstances where a safeguard might be necessary, he clarified that he would deem it useful if proponents could demonstrate to other Members, in at least a few cases, the circumstances where a safeguard would be needed as opposed to other available means. This might yield more information on the desirability of an ESM. Concerning feasibility aspects, he was not trying to suggest that ENTs raised the same issues as an ESM. Safeguard measures and ENTs were designed for different objectives and were to be used for different purposes. He was thus not arguing in favour of the use of ENTs in order to substitute for an ESM, or vice-versa. Neither did he want to pass judgement on whether one of these was more desirable than the other. However, he was trying to shed some light on feasibility questions. Issues pertaining to the application of an ENT could be very similar to those relating to the application of an ESM. He wondered about the extent to which issues relating to the determination of economic harm in the context of an ESM would not also arise with respect to the determination of economic needs in the context of an ENT. In the latter case, would a Member have to substantiate the notion of economic needs through statistics on trade in services? In the last meeting, the delegation of the United States had cited some statistical elements that a government might have to compile in order to substantiate the use of an ESM, such as past sales volumes, revenue of the sector, employment, compensation of opticians. Would these elements also be relevant for the

application of ENTs? If so, it might be instructive to learn about the experience of Members in applying ENTs. If feasibility issues had been resolved for ENTs, could one assume that they would not be a problem in the context of an ESM? Conversely, if feasibility questions were a problem for an ESM, they might also be problematic in the context of ENTs. He thought that the second avenue was the most likely. He also asked Members that had either safeguard-type entries in their schedule or safeguard-like mechanisms in free trade agreements to explain how they had resolved feasibility issues. He was not questioning the purpose of such mechanisms in free trade agreements, which had been discussed in past meetings, but asked how feasibility issues had been dealt with.

65. With respect to the relationship between BITs and ESM, he reiterated that the Article X negotiations were based on the principle of non-discrimination. This would mean that safeguard measures would have to be applied on an MFN basis. In that context, rather than discussing the compatibility of safeguard measures with BITs, the more relevant question might be that of the compatibility of BITs with the MFN obligation. Another issue was the extent to which an ESM, should one be developed, related to the free trade agreements concluded by WTO Members. A previous Secretariat Note (S/WPGR/W/4 and addendum) had highlighted that some EIAs contained safeguard-type provisions, while others did not. To what extent would those Members that had no such provisions in their EIAs be able to apply an ESM that might be elaborated in the WTO? Reacting to a point made by the representative of the United States with respect to the determination of likeness, the representative believed that such issues would be relevant not only for the application of a safeguard, but also for various other measures. For example, likeness had to be taken into account in the context of the national treatment obligation.

66. The representative of the European Communities considered that the discussion had still not yielded sufficient insights regarding situations justifying the application of a safeguard. He asked the group of delegations from ASEAN whether, in their proposal, a safeguard would apply to all commitments or only to commitments that were not subject to quantitative restrictions. For example, if a Member had a horizontal limitation providing that foreign ownership was limited to 30%, it seemed difficult to conceive that an established foreign supplier could cause injury to local service suppliers. If a Member had taken a commitment limiting to three the number of licences for foreigners, would it be possible to apply a safeguard measure to any of the three foreign suppliers allowed? He also wished to obtain more information on possible sources of injury. Would it be solely an increase in the number and/or an increase in the value of services provided? Would it be in absolute terms or rather in relative terms compared to local service suppliers? With respect to the point raised by the delegation of Hong Kong, China on the relationship between an ESM and provisions in EIAs, he thought these issues were already being addressed for goods trade in the Negotiating Group on Rules. This issue might also need to be considered in the context of services, but he did not want to prejudge the work of the Negotiating Group on Rules.

67. The representative of the Republic of Korea wished to ask some questions to the group of delegations from ASEAN in relation to suggestions that ENTs might become an alternative approach to an ESM. First, would ENTs address issues such as injury caused by the increase of trade? Second, would they target consumers or providers? Third, would they allow for discriminatory measures as in the case of an ESM? Fourth, if ENTs were to be used as an alternative, would this mean that they would be linked solely to future commitments?

68. The representative of Canada said that the challenges associated with an ESM had been discussed for about 10 years because of a lack of convergence within the Working Party over its relevance in the context of trade in services. Concerning data collection problems, he noted that the issue of causality had not been addressed by proponents. Given the characteristics of trade in services, a safeguard measure could have a wide and quick effect on various sectors of the economy that were not intended to be affected by the measure in the first place. He was not certain about the points made with respect to the relationship between BITs and an ESM, given that bilateral investment agreements did not have the same characteristics as free trade agreements.

69. The representative of the United States associated herself with some of the questions raised by the delegations of the EC and the Republic of Korea with regard to ENTs. She reiterated that even if an ESM were – despite efficiency problems – negotiated, this would provide no guarantee that ENTs would not continue to be used. Bringing ENTs into a discussion on the question of an ESM thus did not appear very productive. She would have doubts about a Member that decided to include various ENTs in its schedule solely for the sake of strengthening its position in the Article X negotiations. The ineffective use of any tool should not be encouraged. She doubted that efforts to include as many ENTs as possible in schedules would be a good solution from a systemic point of view, whether an ESM existed or not. The delegation of Hong Kong, China might produce, if it wished, examples of ENTs that displayed direct similarities with safeguard measures. However, it would not be for delegations that were not *demandeurs* to bear that burden. The delegation of the Philippines might be contemplating that the existence of an ESM would lead governments to forego using ENTs, but she doubted that every Member would want to make that commitment.

70. The representative of Chile wished that the Working Party further discuss what might be the scope of a safeguard measure in relation to the dispute settlement provisions of BITs or EIAs. It might be interesting to hear the views of Members in that regard. He also hoped to further deepen the analysis of issues relating to ENTs.

71. The representative of Brazil suggested that UNCTAD be invited to present its paper on ESM which, he understood, would be made available for the next UNCTAD Commission on Trade in Goods and Services and Commodities. The representative of UNCTAD confirmed that the document would be circulated at the Commission meeting on, 14-18 March and welcomed the opportunity for a representative of the organization or the author of the document to present it in the WPGR.

72. The representative of the United States sought clarification of Brazil's request with respect to circulation and presentation of the UNCTAD document. The representative of Brazil said that he proposed that that UNCTAD be invited to present their document. It would be useful if Members could obtain a copy at the UNCTAD meeting in March so as to prepare themselves for discussions. His delegation was still planning to eventually present a paper on safeguard-type entries contained in schedules of Members.

73. The representative of the Philippines wished to offer preliminary responses, on behalf of the group of delegations he was speaking for, to some of the questions raised. Concerning the link between ENTs and an ESM, he understood that this topic had been raised so as to see whether questions of feasibility existed in both contexts. In responding to a question of what might be alternatives to an ESM, he had suggested that one such alternative might indeed be the scheduling of ENTs in relevant sectors, although he recalled that this was not an idea that had originated from his delegation. Because of the lack of transparent and objective criteria, it was often unclear whether ENTs were intended to address situations of injury to the domestic industry. While ENTs and ESM were not the same instruments, they were not completely different either. From his perspective, ENTs were not the preferred option, but they were tools that were available under existing rules. While the delegation of the United States had said that there were no guarantees that, with an ESM in place, ENTs would not be scheduled, it could also be said that the existence of an ESM might strengthen arguments for keeping ENTs to a minimum. Members that had experience with using ENTs could share their insights as this might shed some light on feasibility issues in the context of an ESM. In response to a question from the delegation of the Republic of Korea on whether ENTs would be linked to future commitments, he thought that Members could only schedule new ENTs in respect of future commitments, and not of existing commitments. He was not suggesting that one tool was better than the other, but clear multilateral rules and criteria appeared to offer greater certainty and predictability in comparison with a tool that lacked transparency and objective criteria.

74. Concerning the link with BITs, many relevant questions had been put forward, for example, whether Members that had no safeguard provisions in their trade agreements could have recourse to a

multilaterally established ESM. Because of the non-discrimination principle enunciated in Article X, he thought that Members that did not have safeguard-type provisions in their BITs would still be able to use a multilaterally agreed ESM and apply it to other parties to that BIT. With respect to the issue of like services, he believed that it might be difficult to determine likeness a priori. Relevant contexts would have to be taken into account on a case-by-case basis. This issue of likeness had many facets, including, for example, with respect to the national treatment obligation and not solely in relation to an ESM. In response to a comment that the amount of information needed for the operation of an ESM might make its use by developing countries more difficult, he noted that the special and differential treatment provisions proposed might help to address such concerns. At the same time, his group of delegations had not wanted to propose an ESM that would cater solely to interests of developing countries. While, on the goods side, cases attracting most attention were those where developed countries invoked a safeguard, experience with the Agreement on Safeguards showed that the propensity for developing countries to impose safeguard measures had increased over the years. This trend suggested that an ESM could be relevant to both developing and developed countries. A challenge for this Working Party might be to ensure that the criteria to be complied with would not be so onerous as to prevent use of an ESM by developing countries.

75. Concerning a question by the delegation of the European Communities on whether a safeguard would apply in a situation where there were only three licensees in a particular sector, the representative considered that the answer depended on how domestic industry was defined. If the three foreign licensees were considered as part of the domestic industry under a Member's domestic legislation, they would obviously not be subject to a safeguard measure. If the licensees did not fall within a Member's definition of domestic industry despite having a commercial presence, a safeguard measure could be applied. He thought that unanticipated consequences could still occur, despite efforts by the government to calibrate the commitment. This needed to be examined on a case-by-case basis. Even if a government had estimated that the granting of three licences would not cause serious injury, it was possible that the increase in the supply of services by the three licensees, or their dominance of the market, went beyond of what had been foreseen. Concerning a question by the delegation of the EC on whether injury would be measured in relation to the increase in number or value, he recalled that the original proposal from ASEAN had said that no single criterion might be decisive. Again, the circumstances would have to be examined case by case. The same logic would apply to the question of whether values and numbers should be examined in relative or absolute terms; it might be useful to look at both aspects. In addition, he recalled that under the proposed ESM causality would have to be established on a case-by-case basis as well. It had to be ascertained that injury arose from the increase in imports and related unforeseen developments, and was not due to other factors.

76. In summing up the discussion, the Chairperson noted the broad range of issues raised, including the relationship between BITs and an ESM, the link with ENTs, the relationship of an ESM with progressive liberalization, as well as issues relating to statistics. UNCTAD had been invited to present a paper on safeguards at the next meeting, to which no objections were voiced. She invited the Working Party to take note of the comments made.

IV. DATE OF THE NEXT MEETING

77. The Chairperson indicated that the Working Party would hold its next formal meeting during the next cluster of services meetings, the exact date of which would be announced in due course. Noting that some delegations had mentioned the possibility of holding an informal meeting, she thought that this was a sensible idea and suggested that such a meeting be considered before the next cluster of services meetings. It was important however that delegations came prepared with clear ideas of what they saw as being achievable this year, their priorities in terms of what could be done in the light of the Hong Kong Ministerial, and how to implement them. Reality checks had to be applied across the board in the Working Party; delegations needed to focus on what was achievable, doable and realistic.

78. The representative of the Philippines asked whether particular dates were being contemplated. The Chairperson said that possible dates included the first week of April or the week of 25 April. She would consult delegations about timing and content of such an informal meeting. While he agreed to work on the assumption that one informal meeting would be held before the next cluster, the representative of the Philippines said that the possibility to hold additional meetings should be kept open, given the possibility that new contributions might be circulated.

79. While not opposing additional meetings, the representative of Japan doubted that these would be productive if no new inputs were put forward by the proponents. The representative of South Africa wished to be consulted in due course. The representative of Hong Kong, China said that, since some recent contributions to the Working Party on the topic of subsidies had not yet been fully discussed (e.g., JOB(05)/4 and JOB(04)/180), the decision to convene an informal meeting should not hinge upon the submission of new contributions. He recalled that his delegation was also working on a paper on the topic of subsidies. The Chairperson said that an informal meeting should add value to on-going work, as opposed to repeating the same points that had been made over the last 10 years.

V. OTHER BUSINESS

80. The Chairperson wished to clarify that her successor would only be elected at the beginning of the next formal meeting.

WORLD TRADE ORGANIZATION

RESTRICTED
S/WPGR/M/50
17 January 2005

(05-0194)

Working Party on GATS Rules

REPORT OF THE MEETING OF 24 NOVEMBER 2004

Note by the Secretariat¹

1. The meeting of the Working Party on GATS Rules was chaired by Ms. Clare Kelly, from New Zealand. The agenda for the meeting, contained in WTO/AIR/2443, included the following items: adoption of the annual report to the Council for Trade in Services, subsidies, emergency safeguard measures, government procurement, date of the next meeting and other business. To assist delegations in the preparation of the meeting, the Chairperson had prepared an annotated agenda, contained in JOB(04)/167. The agenda was adopted.

I. ANNUAL REPORT OF THE WORKING PARTY ON GATS RULES TO THE COUNCIL FOR TRADE IN SERVICES (2004)

2. The Chairperson invited the Working Party to adopt the draft annual report contained in document S/WPGR/W/50 and transmit it to the Council for Trade in Services. It covered the meetings of the Working Party from December 2003 to September 2004.

3. Some delegations proposed changes to the draft report. The following delegations participated in the ensuing discussions: United States; Hong Kong, China; India; the Philippines; European Communities; Brazil; Mexico; Canada; and Chinese Taipei. After some modifications had been made to the draft, the Working Party adopted the Annual Report, which was circulated as document S/WPGR/14.

II. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV)

4. The Chairperson suggested that delegations pursue their discussion of the informal communication from Hong Kong, China, contained in JOB(04)/127, which provided suggestions on the way forward with respect to various aspects of these negotiations. Concerning the information exchange, delegations could consider ways to encourage a greater number of inputs. Delegations might also want to reflect on the extent to which they had used other existing sources of information, for example Secretariat Notes on information contained in Trade Policy Reviews. A significant amount of information was available and might allow interested Members to develop their views on any specific problems to be addressed or any necessary disciplines. On the definition of subsidy, she noted that the relevant elements in the Agreement on Subsidies and Countervailing Measures (ASCM) could provide a useful starting point for further discussion. She indicated that UNCTAD was not yet ready to present a study on subsidies, and that the Working Party would be kept informed of any development in that regard.

5. The representative of Chile wished to provide some information on domestic support programmes relating to services. She reiterated that the primary objective of her delegation in this area was to increase transparency so as to comply with the mandate in Article XV and paragraph 7 of

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

the Guidelines and Procedures for the Negotiations on Trade in Services. With such objectives in mind, her delegation had presented a simplified questionnaire jointly with Hong Kong, China and Argentina in 2002, as well as a list of examples of subsidy programmes in December 2003. She supported the ideas put forward by Hong Kong, China in JOB(04)/127 to encourage the exchange of information, and recognized that Chile had lagged behind in providing information on activities receiving governmental support. Her delegation did not consider this exercise as equivalent to a notification; the exchange of information should rather permit Members to elaborate a list of activities, which could subsequently be analyzed to see whether disciplines were needed. In that light, she wished to mention some activities that received government support in Chile. The three programmes concerned fulfilled public policy goals and, in her view, did not distort trade. She hoped that the provision of these examples could encourage participation by other Members in the exchange of information.

6. The first example was the Development Fund for Telecommunications, enshrined in Law 18.168 (the General Telecommunications Law). This fund was constituted from appropriations yearly earmarked in the budget, but there also could be other appropriations. The objective of the Fund was to increase the coverage of telecommunication services in rural areas and low income urban areas, in particular in geographically remote towns and villages. The Sub-Secretary of Telecommunications, on the basis of specific requests, would be elaborating a yearly programme of projects eligible for subsidies. The programme focused on the following types of undertakings: public telephony or call centres; community telephone information centres; telecommunication services of free reception or local broadcast, whose transmissions were to be made available directly to the public at large free of charge; and any other telecommunication service that directly benefited the relevant community. All projects could be complemented by the installation of further lines. The second example was the programme of Rural Electrification for Poor Families, which was launched in 1994; the State financed 70% of investments under such programmes. The third example was in the area of maritime transport. When the State wanted services to be provided on special shipping lines that were not covered by domestic companies, a competitive bidding process was held to grant a subsidy to those Chilean shipping companies that committed to provide the required service. More information could be found on these programmes through the internet. A number of Members probably engaged in similar activities, and she invited them to share such information so as to deepen knowledge and increase transparency. More transparency meant greater certainty at the time of undertaking new commitments.

7. The representative of the United States recognized the concerns expressed by some delegations regarding the information exchange, as well as fears of getting bogged down in definitional issues. She believed that the merits of an exchange of information would be enhanced by some sort of understanding on how subsidies might be defined in the services context. Her delegation was trying to explore possible ways of capturing both aspects. She had suggested at the last meeting that Members' resources could be used to contribute analytical papers that would assess whether subsidies were more likely in certain sectors or whether, for example, certain kinds of subsidies might be more relevant to trade than others. Noting that some of the proponents had not yet provided information, even of a partial nature, she thought that such analysis might help reduce the scope of issues to be confronted and thereby focus discussions. In preparing such analysis, account could be taken of previous contributions in the Working Party, including those from Chile and Poland. One way of approaching the analysis could be to explore a few services sectors and consider how the definition of subsidy contained in the ASCM might apply. For example, would government support of health care and education be captured in this definition? What about subsidies that supported mass transit or those underpinning universal access to telecommunications, electric power or postal services? How would the specificity test in the ASCM affect the scope of services subsidies that could be captured by a definition? Because the ASCM had been negotiated in the context of trade in goods, it should not necessarily be assumed that its definition would be entirely appropriate for services. Consequently, another question to consider was whether any aspects of the ASCM definition needed to be adapted to better correspond to the context of trade in services. Her delegation

was working on a paper addressing such points (whether subsidies were more likely to be applied in certain sectors, whether some types of subsidies were more relevant to trade than others, and definitional aspects) and thought it could help advance discussions, including the exchange of information. She hoped to be able to present such a paper at the next meeting, but could make no promise. With respect to the presentation by Chile, she wondered whether non-Chilean companies were also eligible for the programmes relating to telecommunications. In the case of the programme relating to electricity, she asked whether it was only available to homes or also to industrial facilities in rural areas. Concerning shipping, she hoped to obtain more information on the programme; how could reducing shipping costs not distort trade?

8. The representative of Chile said that some of the issues mentioned by the delegation of the United States, such as public policy objectives, trade distortion, definition, and the relevance of the ASCM, needed to be further analyzed. On the questions raised, she noted that any company established under Chilean law would have access to the programmes mentioned, even if foreign-owned. The Chilean telecommunication sector was open to foreign competition. She indicated that she would reply to other questions at the next meeting.

9. The representative of Singapore recalled that, along with other delegations, he had suggested that focusing first on the definition of subsidy would help address the “chicken and egg” problem in the negotiations. The ASCM definition could serve as a starting point for such discussions as had already been argued in the Working Party in the past. For example, earlier in the negotiations, certain Members had suggested that some modifications to the ASCM definition might be necessary in order to cater to the characteristics of services trade. The Secretariat had also done a useful background paper in 1996, S/WPGR/W/9, which touched upon these issues. It might be useful to revisit this and discuss how such concepts as the “existence of a financial contribution”, “government or any public body”, “any form of income or price support”, or the “conferral of a benefit to the supplier”, which were used in the ASCM, could apply in the services context. Accordingly, he wished to highlight some of the salient issues and questions pertaining to the applicability of the ASCM to services.

10. First, could the various elements of financial contribution listed in the ASCM (e.g., grants, loans, equity infusion, loan guarantees, tax credits) be used in the services context? Second, some Members had highlighted that regulatory measures could have subsidy-like effects. In that context, how should the negotiations under Article VI:4 inform the Article XV negotiations? Would disciplines resulting from the negotiations under Article VI:4 be sufficient to address issues relating to regulatory measures? Should the WPGR avoid creating overlapping disciplines relating to such measures? Third, while the term “benefit” was not defined in the ASCM, it had been discussed and clarified in the jurisprudence. For instance, the Appellate Body had clarified that a “benefit to the recipient” meant that the recipient must be a natural or legal person. The term did not imply a benefit to a company's productive operations. He wondered whether it would be appropriate for the Working Party to consider such jurisprudence, even if it did not relate to trade in services.

11. Fourth, in addition to the reference to “government or any public body”, Article 1.1(a)(1)(iv) of the ASCM also covered situations where a government entrusted or directed a private body to carry out the functions illustrated in Article 1.1(a)(1)(i)-(iii) “which would normally be vested in the government and the practice, in no real sense, differs from practices followed by governments”. Taking Article 1.1(a) as a whole, could it be inferred that the ASCM captured subsidies granted by various levels of government and private entities, which had been entrusted with certain governmental functions? If so, the ASCM notion of imposing obligations on central, regional and private bodies might not be altogether new to the GATS. Through Article I:3(a), the GATS applied to measures taken by “central, regional or local governments authorities” and by “non-governmental bodies in the exercise of powers delegated by central, regional or local governments or authorities”. He thought that the formulation used in the GATS provided greater clarity and wondered whether it might be appropriate to use such language in a definition of subsidy for services. It should nevertheless be kept in mind that, as stipulated in GATS Article I:3(c), subsidies granted by these bodies neither on a

commercial basis nor in competition with other service suppliers should be outside the remit of the GATS. Fifth, he wondered whether the "traffic light" approach used in the ASCM to classify subsidies could be applied in the services context. Should legitimate subsidies such as those granted for social services, health services, or basic education services be included in the category of green-light subsidies? In fact, Article XV appeared to provide for this through its recognition of the "role of subsidies in relation to the development programmes of developing countries". Article XV also required the taking into account of the "needs of Members, particularly developing countries". Regarding the category of red-light subsidies, he noted that the ASCM prohibited export subsidies and local-content related subsidies. One view, as expressed by some commentators, was that the GATS did not cover export-related measures. If so, could export subsidies fall within the remit of Article XV? This issue might need to be discussed further. Sixth, he drew attention to the fact that paragraph 40 of the Secretariat Note S/WPGR/W/9 said that "an important objective of the GATS Article VIII was to prevent cross-subsidization from occurring across activities or sectors". Though not particularly rigorous, Article IX, which related to business practices, also extended some competition disciplines to the GATS. He considered that these provisions might relate to some aspects of subsidies and wondered how they should inform work pursuant to the mandate in Article XV. Shouldn't the WPGR avoid duplicating disciplines relating to competition-related issues as well?

12. The representative considered that other provisions in the GATS, in addition to those he had just mentioned (Articles VI, VIII, IX), might also address certain aspects of subsidies. As a reality check, it was important to keep these provisions in mind, since they might have a bearing on the scope of eventual Article XV disciplines. First, the national treatment obligation was potentially far reaching; it captured discriminatory subsidies granted in sectors listed in a Member's schedule of specific commitments, unless an appropriate limitation had been inscribed. Second, given that Article XXIII:3 provided for non-violation complaints, even if a subsidy - or for that matter any measure - did not violate any GATS provisions, it might need to be modified or withdrawn if a Member considered that any benefit it could reasonably have expected to accrue under a specific commitment of another Member was being nullified or impaired as a result of the subsidy. Third, Article XV:2 provided that if a Member was adversely affected by a subsidy of another Member, it might request consultations. Such requests had to be accorded sympathetic consideration. Finally, the representative also stressed that the statistical and measurement difficulties in services trade had to be recognized as work proceeded in the negotiations, even if such difficulties should be no reason to ignore the mandate in Article XV. Additional issues could also be raised. For example, in relation to the issue of definition, the Working Party might need to consider the applicability to services of other ASCM concepts such as specificity and serious prejudice. The points he had highlighted were for discussion purposes and without prejudice to Singapore's position on the scope of the mandate or other aspects of these negotiations, such as the applicability of the ASCM definition to services.

13. In response to comments from the delegation of Chile, the representative of Hong Kong, China wondered whether distinctions could be made between domestic and foreign services on the basis of particular modes of supply. Certain modes of supply might be particularly important in some of the sectors mentioned, for example in shipping. He was grateful that Chile set an example on how the exchange of information might be advanced and hoped that others could do the same. The various programmes mentioned by Chile were in support of public policy objectives, for example to ensure the supply of essential utilities in certain areas. He wondered how the issue of public policy objectives should be treated in the development of disciplines. While some subsidy programmes aimed to further certain legitimate public policy objectives, it was hard to envisage that such programmes would not have any distortive effects. If so, how could a balance be struck? In that context, he had been reflecting on the extent to which an ASCM-type "traffic light" system might be applicable to subsidies in services. Could certain subsidies granted in pursuance of some public policy objectives, possibly in certain specific sectors, be defined as tolerated or non-actionable even if they had certain trade distortive effects? He hoped to provide further thoughts on this at an appropriate juncture.

14. On the definition of subsidy, he looked forward to the upcoming contribution from the United States and agreed that it would be useful to examine a few services sectors. He concurred that the ASCM definition provided a useful starting point for the purpose of comparison. The Working Party already had had extensive discussions on the issue of definition on the basis of contributions from Members (e.g., Argentina; Poland; Chinese Taipei; Hong Kong, China), which had touched upon the ASCM definition. It would be useful to refresh delegations' minds and build on these previous discussions. He suggested that the Working Party request the Secretariat to produce a synthesis Note on the basis of the background Note that they had produced in 1996 (S/WPGR/W/9), communications from Members, and ensuing comments by delegations. The Note could provide information on various issues relating to the definition of subsidy. Singapore's intervention today had already alluded to a structure that could be used in such a Note. Such a synthesis note would be helpful in facilitating and advancing discussions efficiently on the definition of subsidy. Concerning the information exchange, he thought that no delegation disputed that the information exchange had to be done. However, the issue of how to carry it out remained. For the moment, the meaning of the relevant mandate in Article XV could be left aside and delegations might instead focus on what could be done. Various suggestions had been made and Members now had to provide information rather than talk about it. While Switzerland's suggestion to set a timeframe was attractive, some delegations had indicated that information would be forthcoming. Progress could thus be assessed later, for example during the first cluster of next year. He underscored that the mandate had to be fulfilled for the purpose and as part of the negotiations.

15. The Chairperson said that, in assessing progress on the information exchange, delegations might want to reflect on whether some subsidy-specific transparency issues warranted particular attention.

16. The representative of Switzerland recalled that Article XV contained a clear legal obligation to exchange information concerning all subsidies related to trade in services. This obligation existed since 1994 and its fulfilment had therefore been long overdue. The Working Party now needed to be concrete and her delegation accordingly had invited Members to fulfil the obligation to exchange information by the second cluster of 2005. Members had to make sure that the two mandates contained in Article XV - one on the development of multilateral disciplines and the other on information exchange - were implemented. The proposed concrete timeframe had to be seen in this light; it should be understood as an implementation measure and would not entail a change of the mandate. With regard to JOB(04)/127, she drew attention to paragraph 16 where the delegation of Hong Kong, China proposed that the Secretariat prepare a composite note on issues to be considered for a definition of subsidies. She supported this idea, which would be an important contribution to advance work in this area. Various Members were of the opinion that the definition in the ASCM could provide a useful starting point for further discussions in the services context. That raised the question of whether any elements should be added, modified or omitted in order to take into account the particularities of services. She proposed that the Secretariat elaborate, in addition to the composite note proposed by the delegation of Hong Kong, China, a separate note regarding, on the one hand, concrete critiques that were raised against using the ASCM definition and, on the other hand, concrete improvement proposals made in the Working Party. She noted that various Members had submitted contributions touching upon the issue of the definition of subsidy in services, and substantive discussions had ensued during previous meetings. A note providing an overview of these points would help highlight elements of the definition where further work was needed.

17. The Chairperson said that the specific suggestions of the delegation of Switzerland for further Secretariat work might be incorporated in the proposal for a new Note as suggested by the delegation of Hong Kong, China, rather than as a separate Note. A possibility might be to update the Secretariat Note from 1996 circulated as S/WPGR/W/9 so as to reflect the discussions since. The representative of Switzerland found this to be acceptable as long as the specific elements that she had highlighted were addressed, i.e., concrete criticisms by delegations regarding the use of the ASCM definition of subsidy and concrete improvement proposals. The Chairperson indicated that all elements raised by

delegations, including the aspects just mentioned, could be reflected in a Secretariat Note on the definition of subsidy.

18. The representative of Canada sought clarification on the proposal for further work. He understood that what was proposed was basically a reminder of all existing proposals regarding a possible definition of subsidy. He wished to clarify that the work requested from the Secretariat would not involve the consolidation of existing proposals into a draft text of a definition. Regarding the proposal by the delegation of Switzerland, he thought that there had not been many substantive comments on the issue of definition; this could not, however, be seen as implying any kind of agreement on definition. The Note should be allowed to be updated to incorporate any further comments.

19. The Chairperson said that her understanding of what was being proposed was a synthesis of comments and contributions made in the Working Party on the issue of definition. Such a synthesis would include the relevant caveats to reflect that it was work in progress and did not represent any consensus.

20. The representative of the European Communities noted that the Chairperson had in the past produced a checklist of issues which touched upon the definition of subsidy. A possibility might be to update that document. He hoped that the delegations of Hong Kong, China and Switzerland could elaborate on their proposal for further work.

21. The representative of Hong Kong, China said that his intent was not to foreshadow any potential agreement among Members. He was looking for a synthesis of what had been done so far, which, of course, was work in progress. Many delegations had expressed an interest in advancing work on the definition of subsidy. A Note would help refresh everybody's memory in a systematic manner as to what the issues were and what views or proposals had been expressed so far. The intervention by Singapore and the original background Note by the Secretariat (S/WPGR/W/9) could be useful points of reference. The proposed composite note would help structure and focus the discussions in the Working Party on the various aspects relating to the definition of subsidy. Such a Secretariat Note might also take note of the points made by the delegation of Singapore regarding the various other provisions in the GATS that could be relevant for subsidies. He agreed that duplication should be avoided, although this was not a pressing concern as long as the substantive work pursuant to the mandate under Article XV was not further advanced.

22. The representative of the United States said that her delegation's impression was that the essence of what had been proposed was a reminder of what Members had tabled or introduced. Her delegation might be able to consider a Note in the form of a succinct recording of what Members had said in a category format. She was concerned about the Working Party developing some sort of an illustrative list of elements of a definition; the usual caveats would not prove sufficient. The standing of the document should also be discussed. Her delegation would prefer that its forthcoming paper be included in the proposed Note, rather than included in an update. The possibility to go back to the checklist approach could be explored as a first option. She agreed that it was important to keep in mind the ideas expressed in the past on the issue of definition so as to not repeat the same discussions.

23. The Chairperson asked the Secretariat to clarify the work that had been done in the past on this issue. A representative of the Secretariat said that the checklist was a short informal communication from the Chairperson, which had been updated in the past and could be updated again. Another idea expressed was to update the Secretariat Note prepared in 1996 (S/WPGR/W/9), which provided background information on relevant issues pertaining to subsidies in the context of trade in services. That Note touched upon a series of issues, including definition. Given that these two Notes were quite different, delegations might wish to clearly specify the type of work that they wanted the Secretariat to undertake.

24. The representative of the United States said that her delegation's preference was closer to what Hong Kong, China had originally proposed or to the idea of a checklist than to that of an update of S/WPGR/W/9. Her delegation could not support an exercise that would criticize anything. Nothing in the ASCM had changed since the preparation of S/WPGR/W/9 and discussions in the Working Party were still at an early stage, where delegations could forward their views.

25. The representative of Hong Kong, China said that three types of work had been mentioned today. The first was the idea of an update of the Chairperson's checklist (JOB(03)/57). That document was a succinct list of issues that might be relevant to the negotiations under Article XV. Such a list contained no information on work that had been done by the Working Party so far. He was open to updating the checklist. However, recent discussions in the Working Party related to elements that had already been mentioned in the checklist. An additional element might be added to cover what the delegation of Singapore had raised today with respect to the relevance of other GATS provisions. Paragraph 4 of the checklist ("to what extent do WTO rules already discipline services subsidies?") already captured that aspect, but could specify the various provisions to which the delegation of Singapore had drawn attention to. The second type of work was more analytical in nature and consisted in building upon the Secretariat Note from 1996. The third type of work was what his delegation had originally asked for: a synthesis of the contributions and discussions so far in the Working Party on the question of the definition of subsidy. This would be done on the basis of the various communications from Members on the issue, the ensuing discussions, and comments by delegations. Such a synthesis note would provide a structured reminder and would be work-in-progress and could be updated as needed. If some had concerns about the status of any such Secretariat Note, a possibility could be to circulate it as a room document.

26. The Chairperson confirmed that what was under consideration was the third type of work just mentioned, i.e., a neutral synthesis of contributions and discussions which would assist delegations in approaching future work on the issue of definition.

27. The representative of the European Communities indicated that the purpose of his previous intervention was to seek clarification on the work proposed and not to put forward a specific view as to what should be produced by the Secretariat. He cautioned that most of the interventions on the definition of subsidy were limited to raising questions, rather than providing answers.

28. The representative of South Africa expressed concerns about the proposal by Switzerland to set a concrete timeframe for the information exchange. While committed to providing information on subsidies, she felt that setting specific timelines would amount to imposing additional obligations.

29. In summing up the discussions under this agenda item, the Chairperson highlighted, in relation to the information exchange, the presentation of information by Chile and the proposal by one delegation to set a concrete timeframe for compliance with the mandate in the last sentence of Article XV:1. On the definition of subsidy, discussions had focused on the applicability of the definition contained in the ASCM. She highlighted the intervention made by the delegation of Singapore and hoped that it could be circulated to Members. Links between the negotiations under Article XV and other GATS provisions were also underscored, as was the role of public policy objectives in informing possible approaches to subsidy disciplines. She welcomed indications from some delegations that communications would be submitted, hopefully for the next meeting.

30. Concerning future work by the Secretariat, the Chairperson recalled that the proposal originally put forward by Hong Kong, China was for the Secretariat to prepare a synthesis Note on past contributions and discussions in the Working Party on the definition of subsidy. She had consulted interested delegations and, on that basis, wanted to propose that the Secretariat be tasked to prepare such a Note and circulate it as a JOB document. The representative of Switzerland said that she could go along with the proposal on the understanding that the aspects she had earlier mentioned would also be covered in the JOB document. The Chairperson said that the Note would cover all

relevant aspects of the discussions and contributions made so far. The representative of the United States said that her understanding was that the paper would organize the issues that had been raised by delegations, as opposed to analyzing or criticizing ideas expressed, or introducing new ideas. The Chairperson said that the proposed Note would not go beyond presenting the issues raised so as to help organize and structure discussions. At the request of the delegation of Brazil, she also confirmed that work by the Secretariat would concern solely the synthesis, as opposed to updates of the checklist and of S/WPGR/W/9.

31. The representative of Hong Kong, China recalled that other suggestions included in his delegation's informal communication (JOB(04/127) remained on the table; agreement on the synthesis note should not be seen to imply that the information exchange mandated under Article XV:1 had been complied with. This remained to be addressed.

32. As there was no opposition, the Chairperson concluded that the Secretariat should prepare the Note as just set out and invited the Working Party to take note of the comments made.

III. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (ARTICLE X)

33. The Chairperson suggested that delegations continue their discussions under this topic on the basis of the answers provided by the group of Members from ASEAN to questions surrounding their proposal contained in JOB(04)/4. These answers were contained in JOB(04)/175.

34. The representative of the Philippines, on behalf also of the delegations of Brunei Darussalam, Indonesia, Malaysia, Myanmar, and Thailand, clarified that the content of JOB(04)/175 was the same as that of the room document circulated at the last meeting. Acknowledging that delegations had not had much time to study the answers provided at the last meeting, he invited questions and comments on the informal communication. He also reiterated his invitation for Members to send written questions to the group of delegations he was speaking for.

35. In reviewing the answers provided, the representative of the United States said that she found herself drawn back to issues such as situations that might justify the use of a safeguard, the feasibility of determining injury and of applying remedial measures. Regarding situations justifying a safeguard, the information provided in the optometry scenario did not make a compelling case that a domestic industry had been injured or that the alleged injury was due to trade. To make this case more compelling, information would be needed on such elements as past sales volumes, the revenue of the sector, employment, compensation of opticians and other technicians. She wondered whether such information existed. As currently described, one could infer that an established group of opticians had experienced a decline in profitability due to competition from more efficient service suppliers. However, employment, wages and sales volumes could have increased for the optometry sector as a whole. Regarding the example referring to temporary suspension of regulatory reform, she noted that regulatory reform involved a degree of uncertainty regarding the future development of a market and thought that it was understandable that one would consider whether a safeguard would enable countries to undertake more ambitious liberalization. However, the question remained as to whether Members retained sufficient discretion to address an ensuing crisis without resorting to a safeguard mechanism. For example, JOB(04)/175 indicated that competition from foreign service suppliers had somehow undercut the ability of domestic suppliers to fulfil their universal service obligation. If such a scenario were to occur, the appropriate regulatory action was to adapt the mechanism providing for universal service, and not to limit the cross-border supply of services. The Reference Paper in telecommunications acknowledged that each Member had the right to define its own universal service programmes. However, these had to be administered in a transparent, non-discriminatory and competitively neutral manner and should not be more burdensome than necessary. Ensuring the viability of such programmes was certainly laudable, but not if done in a discriminatory manner or in a way that only served to protect a revenue stream for incumbent operators. More competition, not less, was the most effective means to achieving universal service objectives.

36. The representative considered that the answers concerning the source of statistics did not seem to reflect the actual situation, where reliable data was simply difficult to compile in services. In the case of the United States, most official data on services was collected through periodic surveys that were not nearly as detailed as customs data for merchandise trade and suffered from significant time lags. For example, the United States did collect data on the sale of services through foreign-owned affiliates, but such data was reported with a two-year delay and the sectors covered were not highly detailed. For example, architectural, engineering and construction services tended to be bundled together. Country-specific details on a sector-by-sector basis were available only for about a dozen countries. In light of these limitations, she asked whether the proponents of an ESM had any ideas on how official data from their own systems could demonstrate a link between trade in services and economic harm. Even the United States would have very severe difficulties doing this. What would developing countries from various parts of the world be able to do? The provision of real life examples by the proponents might help to advance the debate.

37. The representative of Canada said that his delegation continued to question the need for an ESM. Nevertheless, it remained engaged on the issue and aimed to ensure that a useful discussion continued. On the concept of a limited window, he thought that, if an ESM was something Members were ready to agree to, his delegation would see a certain logic in this concept. Unexpected developments, if any, associated with liberalization initiatives would most likely reveal themselves within a fixed period of time after implementation. Regarding the proposal that each Member use its own definition of domestic industry, his delegation believed that such an approach was undesirable. It would encourage Members to offer definitions of domestic industry that would allow for the maximum possible use of an ESM. Introducing such tailored definitions would lead to uncertainty and would undermine confidence in the ability of the WTO system to deliver reasonable outcomes. With respect to the relationship between an ESM and bilateral investment treaties (BIT), he noted that the group of ASEAN Members conceded, in JOB(04)/175, that the application of an ESM could create legal conflicts with the provisions of BITs. It might thus be useful for the Working Party to consider this relationship more closely. In light of potential conflict, the Working Party might also want to consider whether an ESM would undermine efforts aimed at creating the positive investment climate needed to promote trade and development. On the issue of injury determination, the group of ASEAN Members conceded in JOB(04)/175 that services trade statistics could not be expected to be consistently available at a sufficiently disaggregated level or according to the four modes of supply. Confidence in the ability of the system to deliver fair outcomes could again risk to be undermined if services trade data was not available at the level needed for the credible application of an ESM. This might lead to investigations being initiated without just cause being shown. Burdening enterprises with the task of having to react to investigations launched on less than solid grounds would be hugely unpopular, as well as wasteful and unreasonably intrusive.

38. The representative of Hong Kong, China wished to raise a few points. On situations justifying a safeguard, he wondered whether it was necessary to exhaust all possibilities. There might be value in an approach where the merit in using a safeguard was assessed for each particular situation. His delegation considered that the various examples provided so far suggested that some Members might want to invoke a safeguard, but the examples did not justify the use of safeguard measures. On the definition of domestic industry, he considered that it would be difficult to advance without settling the fundamental issue of who was to be protected. Individual Members could let the Working Party know whom they would want to protect – assuming there was to be an ESM. This could help consider a common definition of domestic industry, if such was the intent of Members. On the relationship between BITs and an ESM, he drew attention to the fact that the mandate in Article X called for negotiations "based on the principle of non-discrimination". He understood this to mean that any safeguard would be applied on a MFN basis. In that context, he did not see the need to talk about any deviations from the obligation of most-favoured-nation treatment. Issues relating to BITs had been discussed during the last review of MFN exemptions. Some had argued that measures relating to BITs were not inconsistent with the MFN obligation; the issue of whether MFN exemptions were required for such agreements had also been raised. He would have thought that the

broader issue of the relationship between BITs and the MFN obligation was more relevant than that of the link between BITs and safeguard measures.

39. The representative of Japan first sought clarification from the group of ASEAN Members regarding the distinctions drawn between the definition of domestic industry and of domestic companies. He thought that the proposed approach did not correspond to the definition of domestic industry used in the Agreement on Safeguards, or what might commonly be understood by such terms. For example, assume that foreign coffee shop chains had greatly increased their market share in Japan. Some might say that this had caused a certain amount of injury to traditional domestic coffee shops. However, as a result of the arrival of these foreign chains, the coffee shop industry in Japan had flourished. To the average consumer, all these companies, all suppliers - traditional shops as well as foreign-owned chains - constituted the domestic industry. Second, with respect to the example relating to opticians, he wondered whether the impact had really been unintended or unanticipated for the government, although it might have been unexpected for some opticians. When a government decided to open the market to foreign suppliers, such consequences were usually anticipated.

40. The representative of Switzerland recalled that her delegation, at the meeting of March, had elaborated on four concerns in the light of JOB(04)/4. Her delegation had considered the answers provided in JOB(04)/175 in the light of these concerns. On the link between an ESM and progressive liberalization in market access negotiations, she regretted that some Members had so far made a negative link only. As indicated previously on many occasions, she would prefer to see a concrete positive link between the market access negotiations and an ESM. JOB(04)/175 said that an ESM would make it easier to convince domestic constituencies to accept greater liberalization. It also indicated that the group of ASEAN Members was open to suggestions on how to further elaborate such a link, but did not suggest a concrete positive connection. Her delegation hoped that the group of ASEAN Members could indicate the sectors or sub-sectors where they were prevented from taking commitments because of the absence of an ESM. Another concern related to the fact that an ESM would compromise commitments negotiated in the last round. Her delegation was very concerned to see that JOB(04)/175 advocated an ESM for future as well as existing commitments. The concerns previously expressed by her delegation thus remained.

41. The representative of Mexico believed that the communication failed to answer two fundamental questions. First, what alternative measures existed in WTO Agreements to address the kind of situations identified by the group of ASEAN Members? There had not been appropriate evaluation of this aspect. Second, assuming - without conceding - that there would be an ESM, how could it be ensured that a safeguard measure was the least-trade restrictive alternative available? He thought this was a key aspect in the discussion. Recalling his delegation's position on this issue, he indicated continued interest in pursuing constructive exchanges.

42. The representative of the Philippines wished to provide preliminary answers to questions raised. On situations justifying a safeguard, he agreed that it might not be necessary to exhaust all possible situations. Each example would have to be examined on a case-by-case basis. Concerning opticians, he said that in domestic consultations the industry representatives had referred to revenue and employment losses and to closure of operations. Some but not all of the employment lost had been compensated by new hiring by the foreign suppliers that had caused injury. He considered that all the information on the injury suffered would, of course, have to be substantiated by a petitioning industry. An earlier communication from his group of delegations had referred to the kind of information that would need to be provided to show that the situation justified the imposition of a safeguard measure. On points raised by Japan, he acknowledged that turnover might have increased for the sector as a whole, but this could be due to an increase in the revenue of the foreign-owned suppliers at the expense of domestic ones. With respect to the example on regulatory reform, he considered that the flexibility of the GATS with respect to regulatory measures only existed in the absence of certain additional commitments. The example was relevant where such additional

commitments had been undertaken. The issue in this example was not one of restricted competition; it captured a situation where a Member had committed to a particular way of determining the interconnection rates, which affected the ability of the domestic service supplier to provide universal service. Expected revenue relating to the commitment with respect to the determination of interconnection rates had not materialized, thus affecting the possibility to provide universal service. Accordingly, there should be some scope to temporarily modify or withdraw the commitment with respect to the determination of interconnection rates.

43. Concerning the definition of domestic industry, he noted that the proposal to let each Member use its own concept did not aim to encourage the development of definitions that would suit a particular desire to impose a safeguard. Using the definition found in Article XXVIII of the GATS as a common basis was difficult since it was, for some Members, contrary to their domestic legislation or Constitution. Rather, each Member could notify its definition of domestic industry. Given that such definitions already seemed to exist in some cases, the scope for manipulations would be limited. Regarding a point made by the delegation of Hong Kong, China, he thought that the target group for protection would be the domestic companies, defined according to foreign equity participation. When notifying their definition of domestic industry to the Council for Trade in Services (CTS), Members would make a policy judgement concerning the target group for protection, i.e., whether it would include established foreign suppliers. Those who disagreed with such a concept could put forward their own thoughts; common elements might thus be developed to form the basis of an alternative approach to defining domestic industry. In reference to points raised by the delegation of Japan, he noted that under the approach proposed by his group of delegations, Japan would be free to include foreign chains of coffee shops in the definition of domestic industry that it would notify to the CTS. He recalled that some delegations had criticized proposals made on ESM because these were considered too similar to the Agreement on Safeguards, but on this issue particular efforts had been made to be creative and deviate from the goods model.

44. On the issue of statistics, the representative recognized that there might be a lack of disaggregated data according to specific modes of supply or particular activities in some sectors, but work was underway in international organizations to develop appropriate statistics for trade in services. His delegation had begun looking at systems for developing databases for services statistics. Professional associations also kept statistics. Not one source of statistics could provide all the information necessary to establish that a safeguard was justified. Looking at all sources concurrently could provide an appropriate picture. He recalled that Australia had made a contribution on how to ascertain injury. Statistics could also be complemented by some form of qualitative assessment of the injury suffered. Turning to questions on the relationship between bilateral investment treaties (BITs) and the imposition of safeguard measures, he noted that Article X provided that an ESM should be based on the principle of non-discrimination. Therefore, ideally, an invoking country would have to apply a safeguard measure on a non-discriminatory basis, possibly without regard to its BIT obligations. That gave rise to the possibility that the other party to a BIT could raise a legal challenge in the context of the dispute settlement proceedings of the bilateral agreement. That possibility existed not solely in the context of a possible ESM, but also with respect to other obligations that a WTO Member might have undertaken, and which might create some legal tensions with another party to a BIT. At the last meeting, he had drawn attention to how the MFN provision had been broadly interpreted in dispute settlement proceedings of BITs. Possible conflicts between BITs and an ESM might then be more apparent than real. He agreed with Canada's suggestion to examine this relationship further. On the link between an ESM and progressive liberalization, he considered that it was difficult to identify either the sectors that Members would open to competition if an ESM was agreed upon or those that would remain closed in the absence of an ESM. A more enlightening approach might be to examine cases in the market access negotiations, where a Member, for example, had said that it was prepared to open certain sectors if an ESM was established. Others had said that they would consider conditioning their forthcoming offer in a similar manner. This could suggest the sectors that might be opened with an ESM in place.

45. The representative of the United States clarified that her intervention had been intended to focus on technical aspects, even if some broader concerns remained. On the example relating to regulatory reform in telecommunications, she noted that JOB(04)/175 had said that competition from foreign service suppliers was undercutting the ability of domestic suppliers to fulfil their universal service obligation. If such a scenario were to occur, it seemed logical that the appropriate regulatory action would be to adapt the mechanism providing for the universal service, not to limit the cross-border supply of services. The answer provided by the group of delegations did not address this point. On the issue of statistics, she thought that the responses - for example in paragraphs 33 and 34 of JOB(04)/175 - only attempted to address the questions in a very general manner. It was not clear how data problems could be solved in practice. It would be useful if the proponents could provide more information on the kind of data that they could actually produce, as well as possible examples, for a given sector in order to determine injury, for example under modes 1, 3 and 4.

46. The representative of Japan said he understood that the proponents suggested that domestic industry could be defined so as to exclude segments on the basis of some percentage of foreign equity. However, employees of foreign coffee shops in Japan were Japanese. Applying a safeguard measure to such shops would have a negative impact on Japanese employees. He doubted that such an approach was reasonable in terms of benefits to the national economy.

47. Commenting on the technical feasibility of safeguard measures, the representative from Hong Kong, China considered that useful inferences could be drawn by looking at economic needs tests (ENTs). Even if ENTs and ESM were different, the same arguments made regarding the technical infeasibility of an ESM could be made concerning ENTs if one were to substitute the terms "economic needs" with the concept of serious injury caused by increased imports. Nevertheless, ENTs were inscribed in schedules for the four modes of supply, suggesting that they could be applied in each of these modes and sectors. Experience from Members in applying economic needs tests might thus help to answer some of the questions put forward regarding the feasibility of applying safeguard measures. A key distinction between an ESM and ENTs was that the former might involve a multilaterally-agreed criteria. For many ENTs, it was not clear what type of measure could be imposed and on the basis of what criteria. Technical problems relating, for example, to statistics might suggest that ENTs were not feasible after all.

48. The representative of Brazil recalled that his delegation had said that this issue was of significant interest and that examining fictional situations was not the only way to pursue discussions. He had invited the Members with safeguard-type entries in their schedule to explain how they had dealt with feasibility issues. Such entries seemed to pose similar challenges than had been raised regarding an ESM. His delegation was hoping to present, at the next meeting, a document which would look at schedules of Members and examine safeguard-type entries or limitations that could produce equivalent effects to that of an ESM. The questions put to the proponents of an ESM might also be put to those having such entries. A discussion on the basis of such concrete examples might prove useful in the lead-up to a review of negotiations in 2005.

49. The representative of the United States thought that some of the issues raised by Brazil had been dealt with in the bilateral request-offer process since they concerned schedules of commitments. In reaction to points made by the delegations of Brazil and Hong Kong, China, she thought that ENTs were different from an ESM and doubted whether comparisons could usefully be made. The mandate in Article X concerned the question of an ESM and therefore related to elements such as unforeseen circumstances and serious damage. It was not useful to look at other types of tools that were available in the GATS. She wished to explore more carefully some of the technical questions rather than engage in a political discussion. She was not looking for additional hypothetical examples, but for real situations. In the case of legal services supplied under mode 1, for example, how many memoranda, destined for how many citizens, would have to cross the border for harm to be caused to a domestic industry in, say, the Philippines? Suppose a consumer in the Philippines decided to seek legal advice from a Philippine lawyer who had moved abroad and established a practice in the

United States. Even though employing mostly Americans, that practice could still have many clients from the Philippines, which might affect Philippine lawyers operating in the Philippines. Her delegation was not asking for all possible scenarios to be exhausted, but was looking at the types of statistical issues that, for example, a developing country might face. The coffee shop example discussed earlier showed that the use of a safeguard against established foreign suppliers could actually result in a government hurting its own citizens by reducing the total number of employees in the industry. With respect to mode 4, she wondered to what extent natural persons from various Members would need to provide sufficiently similar services to allow for the determination of an injury. She reiterated her interest in examples that might help to clarify how and on what basis governments would determine whether to impose a safeguard.

50. The representative of the Philippines appreciated these efforts to look at some of the more technical issues. Concerning the example relating to regulatory reform, he was not suggesting that access of new foreign service suppliers be restricted. Instead, the point was that an additional commitment might need to be modified or withdrawn in cases where a Member might want to use a particular method of calculating interconnection rates rather than another. With respect to statistics, he recalled that past contributions from Venezuela and Australia had referred in more detail to this issue. This had been discussed and addressed in past contributions from his delegation, which had listed about 15 determining factors that had to be evaluated. All of these factors could be looked at by the companies petitioning for a safeguard measure; regulatory authorities and professional associations could also make contributions. He thought that his authorities, as well as those of other countries he was speaking for, knew how to obtain such data, although it might not be as easy for all developing country Members. In most situations, the relevant domestic companies would have available the data needed to show the kind of injury being suffered. For instance, the ASEAN contribution from 2000 had referred to declining profits, returns on investment, cash flows, occurrence of losses, price reductions, etc. The representative recognized the points made by the delegation of Japan on possible effects on employment. In the end, one had to balance the interests of service suppliers against those of consumers and of employees of foreign service suppliers. He was not suggesting that in all cases the interests of consumers or employees of foreign service suppliers should be set aside. He had indicated in the past that all such interests would have to be ascertained on a case-by-case basis. Concerning the example on legal services raised by the United States, he thought that the issue of like services, as explained in a recent contribution from his group of delegations (JOB(04)/4), would also have to be assessed on a case-by-case basis. On the points made with respect to ENTs, he thought that there were some links with the concept of ESM, although ENTs were scheduled ahead of time and often did not contain clear criteria. In contrast, an ESM would be governed by strict criteria.

51. The representative from Hong Kong, China wished to react to previous interventions on the issue of ENTs. The delegation of the United States had asked what might be the elements of an ENT relating to injury or other factors that might be taken into account in the application of an ESM. It was hard for him to answer such a question since his delegation did not have ENTs in its schedule. In addition, most ENTs did not clearly indicate the criteria guiding their application, which made it difficult to assess whether such criteria were similar to the factors governing the use of an ESM. Some criteria could be similar, but more transparency with respect to ENTs was needed. Turning to another point made by the delegation of the United States, he recognized that ENTs and ESM were different types of instruments that had different objectives. However, issues of feasibility would often be the same, for example as regards the compilation and use of statistics to ascertain whether action was needed. The application of both instruments also raised questions with regard to particular modes of supply.

52. The representative of Japan looked forward to the forthcoming contribution by the delegation of Brazil and hoped that it would introduce new elements and avoid repetition of past discussions. Concerning the limitation in Japan's initial offer on road transport services, he said that such a measure did not discriminate against foreigners and was therefore different from an ESM.

53. The representative of the European Communities considered that the discussion at this meeting had not brought forward any new elements, except maybe with respect to BITs. His delegation did not agree that an analogy could be drawn between ENTs and an ESM. Concerning the link between an ESM and progressive liberalization, he expressed serious concerns about comments suggesting that certain offers were conditional on the existence of an ESM. Given the content of these offers, he wondered what commitments might be offered in the absence of an ESM.

54. The representative of the United States thought that it was critical that all delegations participate in the discussions on substantive and technical issues. She disagreed with points made by the delegation of Hong Kong, China regarding ENTs. While some ENTs might lack transparency, the criteria relating to statistics might be totally different from what might be relevant in the case of an ESM. She doubted the usefulness of engaging in a comparison given the dearth of information on ENTs; this might distract the Working Party from a detailed discussion of the question of an ESM.

55. In summing up, the Chairperson noted that positions were still far apart and did not seem to be converging. Nevertheless, delegations had engaged in a substantive technical discussion on such issues as the definition of domestic industry, the availability of appropriate statistics, and the concept of a limited window. There was disagreement on possible analogies between ENTs and an ESM. She invited the Working Party to take note of the comments made.

IV. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII)

56. The Chairperson suggested that delegations pursue the discussion of the latest proposal from the European Communities on a framework under GATS for government procurement in services, contained in S/WPGR/W/48. Issues that could be examined further had been mentioned, for example, in the informal communication from Hong Kong, China (JOB(04)/130), in an earlier communication from Singapore (JOB(03)/216) as well as in the annotated agenda and the report of the last meeting. These issues included: whether the MFN obligation would apply in sectors where government procurement commitments were not taken; the relationship between the MFN obligation and reciprocity provisions in the Government Procurement Agreement (GPA); and, more generally, whether the manner in which commitments were undertaken in the GATS was best suited for liberalization of government procurement. The Chairperson noted that interest had been expressed in further discussing issues relating to transparency and procedural rules and recalled that various delegations also had reiterated that negotiations should not cover market access issues. In that context, and in the light of the Note requested from the Secretariat on government procurement provisions in economic integration agreements, S/WPGR/W/49, delegations might want to consider what type of procedural rules might be relevant in the context of these negotiations.

57. The Chairperson noted that the Secretariat had prepared, as requested, a Note providing summary observations on approaches taken in economic integration agreements (EIAs) regarding commitments on government procurement (S/WPGR/W/51). In presenting this document, a representative of the Secretariat pointed out that government procurement provisions in EIAs generally did not use terms such as "schedules" or "commitments" and that such provisions did not form part of a services chapter; they constituted a distinct set of provisions, alongside sets of disciplines relating to trade in services. In general, the scope of the procurement-related disciplines, including liberalizing obligations, was further defined through annexes, which typically specified the sector coverage, the procuring entities covered, and threshold values above which the provisions applied. The Note provided further details on some key features of these annexes, for example classification issues or whether a positive-list or negative-list approach was followed. The agreements reviewed covered both goods and services. The Note also highlighted that while the relevant agreements did not provide for the inscription of limitations or reservations to particular liberalization obligations, many of them allowed for country-specific exclusions from the scope of the set of provisions. These tended to take the form of notes in the annexes. In addition, the agreements reviewed usually did not make distinctions between modes of supply. The representative said that

further details might best be provided by the parties involved, since scope and coverage of the agreements, including annexes, differed significantly.

58. With respect to the latest Secretariat Note (S/WPGR/W/51), the representative of the European Communities noted that in most EIAs the sectors and entities covered, as well as the thresholds, were specified in annexes. In the context of the GATS, these would correspond to schedules of commitments, to which his delegation had proposed to add a fifth column for government procurement, where the sectors covered and thresholds would be specified. In the case of the GATS, the sectors would be listed on the basis of a positive-list approach. With respect to procuring entities, his delegation had proposed that they be listed in the schedule, sector by sector, on the basis of either a positive-list or negative-list approach. To accommodate concerns that it might not be practical to include long lists of entities alongside sector-specific commitments, it might be preferable to list covered entities - especially if they were the same for all sectors - in an annex to the schedule. With respect to the sectoral scope of government procurement provisions in EIAs, he noted that the lists of covered sectors contained in annexes (whether based on a positive-list or negative-list approach) were generally not exhaustive. The question of how to treat procurement contracts covering simultaneously sectors committed and sectors where no commitments had been taken also arose in most EIAs. This was therefore not a new issue. Concerning modal application, the Note indicated that a few EIAs made distinctions for certain modes of supply. For example, an agreement did not cover mode 1 for financial services and another exempted mode 2. The GATS' Understanding on Commitments in Financial Services limited commitments on government procurement to mode 3. It was thus possible - and in some cases desirable - to undertake commitments on government procurement mode-by-mode. The EC proposal allowed Members to undertake mode-specific commitments, although in most cases Members making government procurement commitments would not draw distinctions between modes of supply. The information contained in the two recent Secretariat Notes (S/WPGR/W/49 and S/WPGR/W/51) provided a good basis to develop the procedural rules and scheduling guidelines that were needed to open procurement markets in the context of the GATS.

59. Turning to questions mentioned in the Chairperson's annotated agenda, he first indicated that it was appropriate to allow Members, only at the time of entry into force, to list procurement-related exemptions to the MFN obligation, as was done in 1994 for all services. In addition, his delegation had proposed an exception to cover the preferences that parties to the GPA granted each other. In addition, Article V of the GATS would cover the preferential treatment granted as part of EIAs with respect to government procurement. On the question of the relationship between the MFN obligation and the reciprocity provisions in the GPA, the representative said that the commitments taken in the GPA, with the limitations they contained, could obviously not affect commitments taken in the GATS. Such limitations would only have value for parties to the GPA to the extent that the sectors concerned were not committed, or were committed at a lower level, in the GATS. Concerning the general question of whether the structure of the GATS was suited for commitments on government procurement, he reiterated that this was the case. The structure of the GATS provided for maximum flexibility and should thus permit Members to take commitments according to their needs.

60. With respect to S/WPGR/W/51, the representative of Hong Kong, China observed that all EIAs reviewed covered both goods and services. Accordingly, the question of how to treat government procurement contracts involving the supply of both goods and services, which confronted the Working Party, did not arise in EIAs. The Note also highlighted that the EIAs generally did not make distinctions between different modes of supply. While under the European Communities' proposal a Member could choose not to differentiate between modes of supply, government procurement commitments would still have to be read in conjunction with market access and national treatment commitments that were made under the respective modes of supply. Hence, modal issues would not go away even if government procurement commitments did not draw modal distinctions. For instance: how should one interpret a situation where a government procurement commitment was combined with a "none" in mode 1 and an "unbound" or a partial commitment in mode 3?

Divergences thus existed between the approach typically taken in EIAs and the one being proposed by the European Communities in the Working Party.

61. Putting aside questions surrounding the negotiating mandate for the time being, the representative raised certain fundamental issues which he thought had to be fully addressed before further considering the European Communities' proposal. Such issues were: the relationship between the proposed framework and the GPA; the application of the MFN obligation; the reconciliation of the proposed MFN exemptions with the non-application and reciprocity provisions in the GPA; modal application; and the scheduling approach for government procurement commitments. His delegation saw MFN as a general obligation under the GATS and as a fundamental principle of the multilateral trading system. If the GATS were to be extended to cover government procurement in services, MFN should be a general obligation applicable to all government procurement in services covered under the GATS, irrespective of whether government procurement commitments were made in the additional column being proposed. Ample derogations from the MFN principle already existed under the GATS framework and his delegation would be very hesitant to see any further carve-out. The delegation from the European Communities had said that the proposed framework would provide for the application of the MFN obligation as a general rule. However, his understanding of the EC proposal was that the MFN principle would not apply in sectors where no government procurement commitments had been undertaken. In contrast, the MFN obligation in the GATS applied to all services sectors, irrespective of specific commitments. The possibility to take MFN exemptions did not obviate the need to apply the MFN obligation across the board. His delegation would have serious doubts about the usefulness of the proposal of the European Communities if it allowed Members to freely deviate from the MFN obligation or permitted Members to maintain largely bilateral or plurilateral reciprocal systems for government procurement in services. If this were the case, he wondered whether time should be spent on discussing this issue multilaterally.

62. His delegation had previously signalled its willingness to discuss proposals without prejudice to the question of the negotiating mandate. However, he was intrigued by the views of the European Communities concerning the distinction made between implementation and the mandate for the negotiations, as recorded in paragraphs 62 and 79 of the report of the previous meeting. He wondered, if such logic was to apply in regard of Article XIII, whether the question of the mandate should be treated as an implementation issue and referred to the Regular Session of the Council for Trade in Services for resolution. He was open to pursuing discussions in this Working Party before involving the Council for Trade in Services. He disagreed with the interpretation put forward by the delegation of the European Communities on the issue of the mandate, and was open to further work on this item on the basis of any proposal put forward by Members.

63. Without prejudice to his delegation's position on the negotiating mandate or other issues under Article XIII, the representative of Singapore recalled the issues and questions raised by his delegation in the informal communication circulated as JOB(03)/216. Recognizing the divergence of views among Members on the negotiating mandate, he pointed out that Article XIII specifically mandated negotiations on government procurement. If there was to be progress on this issue - as for all other negotiating issues in services and in the Doha Development Agenda -, the Working Party had to start addressing the technical aspects. His delegation was not a *demandeur* on this issue, but recognized the existence of the various mandates in services and remained engaged and constructive in all aspects of the negotiations. While some of the issues arising from the European Communities' proposed framework had been clarified over the past year, a number of questions had to be further discussed. For example, one basic question was whether a clear distinction could be made between goods and services for the purpose of procurement. The relevant provisions in the GPA and in the EIAs mentioned in the Secretariat Notes S/WPGR/W/49 and S/WPGR/W/51 related to both goods and services; no distinctions were made. He also underscored the comments made in past meetings by other Members to the effect that government procurement policies were not developed in the perspective of the GATS' modes of supply. As highlighted in S/WPGR/W/51, EIAs generally did not make modal distinctions. He considered that there was scope for further discussions on the

framework proposed by the European Communities, as well as on other issues in the Article XIII negotiations; information on the way government procurement commitments had been undertaken in EIAs, as summarized in S/WPGR/W/51, constituted useful reference material. By the same token, it might be timely to look at transparency and procedural rules relating to government procurement.

64. In its most recent communication (S/WPGR/W/48), the European Communities had suggested that relevant rules be contained in an Annex to the GATS. This seemed a logical suggestion. However, what type of procedural rules might be contained in such an Annex? Another question, highlighted in the annotated agenda, concerned the approach that might be contemplated for the negotiation and application of such rules. Procedural rules contained in EIAs might provide a starting point. In that regard, S/WPGR/W/49 mentioned such issues as non-discrimination, valuation of contracts, technical specifications, procurement methods, qualification of suppliers, invitations to participate, time limits, tender documentation, and award of contracts. Further, in paragraph 4 of S/WPGR/W/49, the Secretariat had noted that some provisions of the GPA had often been incorporated by reference in EIAs. There was a fairly extensive commonality of procedural rules in the EIAs. It might be useful for the Working Party to discuss how existing rules, with appropriate modifications, might provide a working basis. Secretariat Notes prepared for the Working Group on Transparency in Government Procurement (WGTGP/W/6, WGTGP/W/32, WGTGP/W/33) might also prove useful. In his view, the two following elements were critical: private challenge procedures, and special and differential treatment for developing countries. Concerning the first element, procurement was often a one-shot event that could not be reversed. Accordingly, in addition to typical dispute settlement procedures, Article XX of the GPA and relevant provisions of EIAs provided for private challenge procedures at the national level. Possible models were listed in S/WPGR/W/49. Members might also want to consider whether domestic review procedures contained in Article VI:2 of the GATS were sufficient for the purpose of Article XIII disciplines. Concerning the second element, he considered that procedural rules would also have to address the concerns of developing countries; special and differential treatment might therefore be necessary. For example, Article XVI:2 of the GPA provided that developing countries might "at the time of accession negotiate conditions for the use of offsets, such as requirements for the incorporation of domestic content". It also stated that the "conditions shall be objective, clearly defined and non-discriminatory". He wondered whether such provisions might be applicable in the context of the Article XIII negotiations and what modifications, if any, might need to be made in order to address the legitimate concerns of developing countries. In closing, he recalled that government procurement provisions in the EIAs to which Singapore was party were not negotiated in isolation, but as part of an overall package of rights, obligations and concessions.

65. The representative of Canada hoped to comment on S/WPGR/W/51 at a future meeting. He wondered whether the delegations of the European Communities and Singapore could circulate copies of their interventions, either formally or informally. The feasibility of any approach to scheduling commitments in this area was strongly linked to the procedural rules that would apply. These rules should be simple (e.g., one set for all procurement) and provide for transparency (e.g., posting of all procurement notices). Further, open competition should be the norm rather than the exception, and such rules should build on the existing structure of the GATS.

66. The representative of Mexico noted that various EIAs to which his country was a party were mentioned in the Secretariat Note S/WPGR/W/49. He wished to draw attention to the clarification made in paragraph 2 of the Note to the effect that the procurement provisions reviewed had to be read in the light of the totality of the rights and obligations contained in such agreements. These provisions resulted from bilateral negotiations and formed part of a broader package of rights and obligations. He underscored the need for the Working Party to focus on transparency given that no consensus on the scope of the negotiating mandate could be reached.

67. The representative of Switzerland noted that most agreements reviewed in the Secretariat Note S/WPGR/W/51 specified in annexes the services sectors that were subject to the government

procurement provisions. While some EIAs followed a positive-list approach, others used a negative-list approach. The Note also pointed out that most agreements limited the scope of the relevant provisions to specified entities, as well as to procurement above a certain threshold value. These EIAs thus clearly provided considerable flexibility to parties with regard to many key aspects. She considered that the approach proposed by the EC was well suited for liberalization of procurement; a very positive aspect of the EC proposal was its flexibility, based upon the GATS' approach to scheduling commitments. The contributions by the European Communities provided a good basis to deepen discussions and should be further considered in detail.

68. The representative of the European Communities wished to address some questions raised by delegations. The first concerned differences between procurement contracts for goods and for services. While the mandate in Article XIII provided for negotiations on government procurement for services, the recent Notes by the Secretariat highlighted that in all the EIAs reviewed certain services and goods were covered and others were not. Accordingly, the need to determine whether a given contract was within the scope of procurement provisions arose in EIAs in the same way that it might arise in future GATS provisions on government procurement. Another relevant example related to the GATT Agreement on Government Procurement, which covered only goods and not services. Therefore, this issue was neither new nor difficult to address. In a GATS framework on procurement, certain services sectors would be covered and others would be excluded, as in all existing agreements. The second question concerned modal application. He considered that the flexibility to take procurement commitments for particular modes only, which was provided in certain agreements as well as in the GATS' Understanding on Commitments in Financial Services, was useful even if such flexibility might not be used extensively. With respect to the work ahead on procedural rules, he shared the proposals made by the delegation of Singapore. The Notes by the Secretariat, in particular S/WPGR/W/49, contained useful information that could be used to define the content of a future GATS Annex on Government Procurement. Echoing comments by the delegation of Canada, he thought that such rules should be simple and the same for all sectors. Concerning the rules for the scheduling of commitments, the latest communication from his delegation provided some indications in this regard. Flexibility had to be a guiding principle in developing scheduling guidelines for government procurement commitments. Concerning comments made by the delegation of Singapore on the specific needs of developing countries, the representative underscored that the structure of the GATS provided all Members - but in particular developing countries - with the necessary flexibility to cater to particular needs.

69. Concerning the Secretariat Note S/WPGR/W/51, the representative of the Dominican Republic highlighted that the government procurement provisions in EIAs applied to both goods and services. Government procurement had to be dealt with in an integral manner. In the relevant body, her delegation had indicated a willingness to negotiate transparency in government procurement, but not market access. Progress in this area had been linked to the improvement of conditions of access with respect to mode 4. The issue of government procurement involved aspects of governance and development policy, for which this Working Party was not the most appropriate forum.

70. In summing up the discussion, the Chairperson said that delegations, in discussing S/WPGR/W/51, had highlighted features of EIAs such as modal application and coverage of both goods and services. Delegations had also looked at issues arising from the proposal by the European Communities, relating for example to MFN application. Key principles and possible ways forward in relation to the development of procedural rules had also been mentioned. She invited the Working Party to take note of the comments made.

V. DATE OF THE NEXT MEETING

71. The Chairperson indicated that the Working Party would hold its next formal meeting during the next cluster of services meetings, the exact date of which would be announced in due course.

VI. OTHER BUSINESS

72. No point was raised under this item.
-

Working Party on GATS Rules

REPORT OF THE MEETING OF 20 SEPTEMBER 2004

Note by the Secretariat¹

1. The meeting of the Working Party on GATS Rules was chaired by Ms. Clare Kelly, from New Zealand. The agenda for the meeting, contained in WTO/AIR/2375, included the following items: government procurement, emergency safeguard measures, subsidies, date of the next meeting and other business. To assist delegations in the preparation of the meeting, the Chairperson had prepared an annotated agenda, contained in JOB(04)/129. She noted, in response to previous queries, that UNCTAD's study on services subsidies had not yet been completed. The agenda was adopted.

I. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII)

2. The Chairperson suggested that delegations pursue their discussion of the latest communication from the European Communities on a proposed framework under GATS for government procurement in services (S/WPGR/W/48). A number of questions had been put forward, as reflected in the report of the last meeting, contained in S/WPGR/M/48. A few of the issues raised were mentioned in the annotated agenda prepared for this meeting. She noted that a number of delegations had reiterated their views on the scope of the negotiating mandate or had reserved their positions for the time being. Also, the delegation of Hong Kong, China had recently submitted an informal communication (JOB(04)/130), which raised some questions in relation to the proposal from the EC. She also recalled that the Working Party had requested the Secretariat to expand upon earlier work on government procurement-related provisions in economic integration agreements (EIA). The new Note was circulated as S/WPGR/W/49.

3. A representative from the Secretariat explained that the document elaborated upon the earlier Secretariat Note of June 2003 on the same subject (S/WPGR/W/44). It provided an overview of the main types of provisions across agreements, and highlighted some similarities and differences. The Note did not attempt to simply replicate all relevant content of the agreements, since this would have led to an unreasonably long document. Nevertheless, it reproduced a significant number of relevant provisions. The representative stressed that a few important caveats had to be kept in mind, as spelled out in Part I of the Note. For instance, no attempt had been made to assess the scope and coverage of the various agreements, for example their definition of procurement, the sectors covered, etc. This obviously called for caution in assessing the impact of the provisions reviewed. Part II of the Note highlighted key observations. It underscored, for example, various similarities across the agreements reviewed, which tended to include, in addition to rules on non-discrimination, procedural rules relating to such issues as transparency, fair and open procurement procedures, accountability and due process. At the same time, differences between agreements also existed, mostly in terms of the types of provisions included and the level of detail or comprehensiveness. Indeed, the rules contained in a good number of agreements approached in their comprehensiveness - and in some instances went beyond - those contained in the WTO's Government Procurement Agreement (GPA), while other

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

agreements provided for a less extensive or detailed set of procedural rules. Part III of the Note contained information on the relevant government procurement provisions, and sought to make it easily accessible.

4. The representative of Hong Kong, China said that he would share observations on the Secretariat Note at a later time. The informal communication from his delegation elaborated on questions that he had raised at the previous meeting about the EC's proposal, and he hoped that it would lead to constructive discussions in the Working Party.

5. The representative of the European Communities thought that the Note from the Secretariat contributed to a better understanding of provisions relating to government procurement in EIAs. The Note showed that such agreements had been signed by many Members, both developed and developing, as well as by signatories and non-signatories to the GPA. This showed that agreements on government procurement were in the interest of all Members, notwithstanding their size or level of economic development. Many Members were parties to various regional, bilateral or plurilateral agreements, and the relevant procurement commitments were fully compatible. A framework for government procurement in the GATS could thus also be perfectly compatible with other agreements. It would provide a multilateral point of reference for future bilateral or regional agreements on government procurement. The Note also highlighted similarities of provisions across agreements, and he thought that this could provide inspiration for developing appropriate procedural rules for government procurement in the GATS.

6. The latest communication from his delegation (S/WPGR/W/48), which provided examples of government procurement commitments that could be made in the GATS, underscored the practical feasibility of the proposed framework, and he wished to recall its key principles. The objective was to use to the maximum the flexibility of the GATS to develop an agreement allowing each Member to undertake government procurement commitments in the sectors it wished to open to international competition, and within the limits it wished to set, so as to suit its needs in matters of public investment and development. Since such commitments would be taken sector-by-sector, his delegation was not proposing that the national treatment obligation apply horizontally. Given that the GATS' MFN obligation applied to all sectors, he wondered whether this obligation should, with respect to government procurement, also apply in an horizontal manner or only to sectors where commitments were made. He was open to further discussions and thought it was up to the Working Party to determine this issue. With respect to the relationship between the GPA and a future GATS framework on government procurement, his delegation had suggested the inclusion of an exception to the GATS' MFN obligation that would preserve the rights and obligations of parties to the GPA, including reciprocity requirements. He noted that certain GPA Members had signalled their interest in jointly elaborating a provision addressing the relationship between the two agreements.

7. In response to questions raised by delegations on modal application, he drew attention to the fact that government procurement commitments in the Understanding on Commitments on Financial Services only covered mode 3. Accordingly, there already was a precedent for government procurement commitments limited to one particular mode of supply. With respect to contracts covering various services sectors with different levels of commitment, he did not think this was a new issue. It already existed in sectors which in the GPA were not subject to the same regime, as well as for the supply of services involving clusters of sectors in the GATS. The representative noted that many questions had also been raised regarding the conventions to be used in scheduling government procurement commitments under the GATS. For example: Should the conventions used for the scheduling of commitments pursuant to Article XVI and XVII be used or those for the scheduling of additional commitments under Article XVIII? How should government procurement commitments be read in the light of commitments under Articles XVI and XVII? It would be useful to develop scheduling guidelines for this purpose and the latest communication from his delegation could help to identify some elements in that regard. Members could jointly develop such guidelines.

8. The representative of India recalled past discussions about the mandate in Article XIII and underscored, in that regard, that his delegation had not accepted the type of approach contained in the EC's proposal, in particular the fact that it provided for market access and national treatment. It might also be useful for the Working Party to keep in mind that, pursuant to the July Package, the uncertainty regarding the Singapore issues had largely been resolved, with the issue of transparency in government procurement being dropped from the negotiating agenda. This had occurred after long and difficult discussions, where a large number of Members had raised objections to the inclusion of transparency issues relating to government procurement. Note should be taken of that experience. The Working Party was currently discussing not only transparency, but also market access issues. The approach proposed by the EC even linked the issue directly with Article XIX. Delegations needed to keep in mind the decisions taken as part of the July Package and determine how to address the mandate in Article XIII, as this was central.

9. In considering the latest communication from the European Communities, the representative of the United States said that the attention of her delegation focused on the substance of government procurement policies, rather than on the specific sectors involved or the modes by which services were supplied. This reflected the policy reality, since procurement policies were not elaborated in view of the services sectoral classification list (MTN.GNS/W/120), the GATS' modes of supply, or a distinction between goods and services. Rather, procurement policies were developed with the more general purpose of providing broad guidance to many diverse government agencies on how to meet their individual needs. She thought that the examples provided in S/WPGR/W/48 reinforced the fact that procurement policies tended to be more cross-cutting. The examples suggested that commitments might be based upon some threshold value of contracts, that there might be reservations relating to certain domestic laws and practices, or that the scope of commitments might be limited solely to central, as opposed to local, government entities. But there was no indication that policies were inherently more relevant to one sector than another, such as architectural services, as opposed to telecommunication services. Similarly, example 5 provided by the EC shed some light on how government procurement rules could be crafted to exclude certain modes of supply, such as mode 1. While such an approach was conceivable, it seemed unlikely that it would be applied on a sector-specific basis. Scheduling commitments in the form of a GATS schedule seemed rather ill-suited to the objective. She indicated that her delegation questioned whether an approach to government procurement based upon GATS scheduling of specific commitments would not be unduly complicated. Currently, there were few, if any, sectoral or modal distinctions in procurement policies. But if governments were to be presented with a list of sectors in which to liberalize procurement and given the opportunity to distinguish between four modes of supply, this could result in an untenable level of complexity that ultimately might be less liberalizing than a more horizontal approach, such as in the GPA. The end result could be procurement policies that tried to affect specific sectors or modes of supply in response to political pressures.

10. She appreciated that the communication from the European Communities pointed to the need for careful consideration of MFN implications. As noted by the EC, Article XIII could be read to exclude government procurement from the scope of Article II, as well as Articles XVI and XVII. The communication therefore suggested that, should procurement disciplines be developed, Members be given the opportunity to list relevant MFN exemptions. Her delegation also appreciated the fact that Part III of the paper recognized that extending any new GATS rules to procurement on an MFN basis could undermine the value of commitments under the GPA. She took note of the invitation, in Part IV of the communication, to discuss procedural rules. In particular, her delegation agreed that transparency in bidding procedures was an important issue. She thought that the Note by the Secretariat might constitute a useful reference document for the Working Party's discussions in that regard. While still examining the information contained, she observed, in a preliminary manner, that the provisions reviewed did not appear to differentiate between goods and services. Her delegation had already indicated in the past that drawing such distinctions seemed difficult. The Note also demonstrated that there did not appear to be sectoral variations. While most if not all of these

agreements allowed for inclusion or exclusion of selected sectors or products through annexes, the provisions themselves did not appear to vary by sector. She looked forward to a more detailed reaction from the EC to the questions raised, including those included in JOB(04)/130.

11. With regard to the Note by the Secretariat, the representative of Canada observed that many EIAs included government procurement provisions, and that participants to these agreements were both developed and developing countries. He also thought that the document highlighted a fairly extensive commonality of procedural rules in the various agreements, which the Working Party could usefully build on. Regarding the proposal by the EC, he hoped to further pursue discussions on issues previously raised, for example scheduling approaches. For more detailed discussions, government procurement experts from capital might have to provide specific inputs or attend the meetings. With respect to comments made by the delegation of India, he hoped that the representative could clarify the relationship implied between the July Package and the mandate in Article XIII.

12. The representative of Brazil expressed support for the Indian delegation's position regarding the mandate and scope of Article XIII of the GATS. In the view of her delegation, the mandate did not provide for negotiations on market access and national treatment, but only on transparency.

13. Without prejudice to the negotiating mandate, the representative of Singapore recalled the questions raised in the informal communication from his delegation, circulated as JOB(03)/216. A critical issue to discuss was the interface between the GPA and the proposed Annex on Government Procurement in the GATS. He drew attention to the question raised in paragraph 2(e) of his delegation's communication, which noted that the annexes to the GPA contained specific non-application or reciprocity conditions among parties to that agreement, relating for example to sectors and thresholds. How could such conditions apply in the GATS context? This key question was also raised in JOB(04)/130. If one wanted to follow the precedents of the GPA, what had been suggested by the EC might not be sufficient. Regarding the Note by the Secretariat, he noted, in a preliminary manner, that the trade agreements concluded by Singapore were comprehensive and covered a wide set of trade issues. The government procurement chapters should not be seen in isolation; they were negotiated as part of an overall package. Government procurement represented between 10% and 15% of GDP in a number of countries and there was therefore a trade rationale for including chapters on government procurement in Singapore's free trade agreements. Among other benefits, government procurement disciplines helped to attain value for money for taxpayers, and benefited governments and consumers alike. The procurement provisions in these agreements were comprehensive and largely based on the GPA. They also took into account technological developments. Information on Singapore's government procurement regime could also be found in a communication circulated to this Working Party in 1997 (S/WPGR/W/11/Add.16).

14. The representative of Peru underscored that, despite the participation of some developing countries in the EIAs reviewed in the Note by the Secretariat, the nature and scope of procurement-related provisions seemed limited. This reflected the complexity of the issue in particular for developing countries. He noted that the Doha Agenda was supposed to benefit in a greater manner developing countries and considered that including the issue of market access in government procurement in the negotiations would directly affect the interests of developing countries. He wished to support the interventions made by the delegations of India and Brazil. His delegation was, however, willing to discuss the issue of transparency in government procurement.

15. The representative of Indonesia reiterated the reservations of his delegation regarding the scope of the mandate contained in Article XIII, which was limited to transparency issues and did not include MFN, market access or national treatment. The representative of Chinese Taipei, like the delegations of Singapore and the United States, highlighted that government procurement encompassed a wide range of issues, including goods, which were not covered by the GATS. With respect to the proposal by the European Communities, she thought that certain aspects remained to be

clarified and she therefore appreciated the questions circulated by the delegation of Hong Kong, China. She wondered, in particular, whether the delegation of the EC could provide more concrete examples to illustrate how government procurement commitments applied across different modes of supply. Concerning the intervention by the delegation of India, she sought clarification on the relationship established between the Singapore issue of transparency in government procurement and the mandate in the GATS.

16. The representative of Venezuela expressed concerns with respect to these negotiations. Her Minister had stressed, at the Ministerial Conference in Cancun, the need to incorporate development-related elements that would involve the population in its entirety. Tellingly, paragraph 15 of the Doha Ministerial Declaration stated that the negotiations on trade in services should be conducted with a view to promoting the economic growth of all trading partners and the development of developing and least-developed countries. Her delegation considered that asymmetries between countries had increased. Developing countries still exported traditional services, while developed countries exported modern services. The importance of an assessment of trade in services for developing countries also had to be kept in mind. Asymmetries in levels of development between Members were evident and underscored the unsuitability of negotiations on issues which could negatively affect the economies of developing countries. Government procurement was a necessary public policy tool to foster equitable, democratic and environmentally sustainable development. Regarding the proposal from the EC, she supported the interventions by the delegations of India and Brazil. The General Council had decided not to pursue negotiations on transparency in government procurement under the Doha Agenda. It thus seemed illogical to raise the same issue in the GATS' context. Before discussing possible modalities for the adoption of government procurement commitments, Members should clarify the mandate under Article XIII of the GATS, as the second paragraph of Article XIII did not specify the scope of the negotiations.

17. The representative of Australia said that, since the Note by the Secretariat mentioned agreements to which his country was party, it was being further examined by his authorities. He was particularly interested in comparing the way government procurement chapters were framed in EIAs with what the European Communities were proposing. In relation to S/WPGR/W/48, he indicated that, like Canada, his delegation was interested in discussing the appropriate procedural rules.

18. The representative of Hong Kong, China said that his delegation had engaged in substantive discussions on the proposals submitted, but this was without prejudice to the question of the mandate. A discussion of the mandate did not appear fruitful at this stage and the scope of the negotiations would partly be defined in the course of the negotiations themselves. A key question was how to reconcile the MFN obligation, as well as proposed MFN exemptions, with reciprocity provisions under the GPA. Taking a commitment approach to government procurement in the GATS meant that such commitments would guarantee a minimum level of treatment that had to be accorded to all Members. MFN exemptions would only allow to grant to some Members better treatment than that provided for in the scheduled commitment. He was not yet sure how such an arrangement would fit with existing reciprocity arrangements under the GPA and sought further clarification. Regarding modal application, he sought clarification on the proposal that government procurement commitments be read together with market access and national treatment commitments already inscribed in Members' schedules. Questions (d) and (e) in JOB(04)/130 related to that particular issue. He took note of the intervention by the delegation of the United States regarding the relevance of the GATS' scheduling approach to government procurement. In that regard, it might be useful if the Secretariat prepared a summary of the type of approaches taken in EIAs with respect to the undertaking of commitments on government procurement. This might help clarify some scheduling issues.

19. The representative of Switzerland thought that the Note prepared by the Secretariat provided an important background for the discussion on procedural rules. Procedures were important to ensure effective competition in government procurement. She noted that Switzerland was party to some

agreements reviewed in the Note, including the EFTA-Mexico Agreement and the EFTA Convention. In the framework of the EFTA Convention (Article 37), Member States reaffirmed their rights and obligations under the GPA and broadened the scope of their commitments with a view to liberalizing public procurement markets in accordance with the relevant annex to the Convention. The underlying purpose was to equalize the level of obligations with that of the bilateral agreement on government procurement between Switzerland and the European Communities. Regarding the EFTA-Mexico agreement, she noted that the relevant provisions were found in Articles 56 to 68, as well as in annexes XII to XVII, and was uncertain about the information contained in the table on page 5 of the Note. The recent contributions from the EC provided a good basis to deepen discussions on government procurement; the proposed approach was easily understandable and interesting. She recalled her delegation's interest in discussing how situations where a contract covered sectors with different thresholds would be handled.

20. The representative of Malaysia expressed reservations regarding the mandate on government procurement in the GATS in the light of the July Package, which had dropped transparency in government procurement from the Doha Development Agenda. In the Working Group on Transparency in Government Procurement, developing countries had strongly opposed negotiations on this issue on the grounds that it might ultimately affect market access. Developing countries were not ready to negotiate, as government procurement was a key tool for development.

21. According to the representative of the Republic of Korea, the Note by the Secretariat suggested that procedural rules were very important elements in developing a procurement agreement. Without a common understanding on procedures, commitments might not achieve their initial purpose. She was interested in detailed answers from the delegation of the EC to questions listed in JOB(04)/130. Turning to S/WPGR/W/48, she thought, in a preliminary manner, that the proposal to add an additional column for government procurement commitments might not be as simple as envisaged. Factoring in the different governmental entities and different thresholds for each sector in regard of which a Member would assume commitments, as well as issues relating to the application of the MFN obligation and the relationship with the GPA, increased complexity. She wondered about the costs and benefits of having another agreement in addition to the GPA and the regional trade agreements.

22. Reacting to the intervention by the delegation of India, the representative of Japan believed that the mandate in paragraph 2 of Article XIII did not preclude negotiations on market access and national treatment. And it was not affected by decisions on the Singapore issues. Turning to the communication from the European Communities, he thought that the proposed approach to scheduling commitments was interesting and clear. At the same time, he understood the concerns expressed by the delegation of the United States and was open to other approaches. Regarding procuring entities, paragraph 4 of the EC communication proposed to include those covered by Article I:3 of the GATS. However, such entities were different from those covered by the GPA. He hoped for more elaboration from the EC on that point. Further, he was wondering what the EC's intentions were with respect to the development of procedural rules. Were they aiming at something similar to the disciplines found in the GPA or something different?

23. The representative of Egypt lent support to India's intervention regarding the scope of the mandate under Article XIII. For various countries, especially those that had chosen not to be part of the GPA, government procurement regulations did not differentiate between goods and services. It was thus difficult to accept the approach proposed by the EC. The representative of South Africa indicated that she preferred not to enter into discussions on this issue without first determining the scope of what was to be included. Clarity should be sought, beforehand, on the objectives to be achieved and the scope and extent of these negotiations. She agreed with the delegations of India, Brazil, Peru and Venezuela that the market access and national treatment obligations proposed by the EC did not fall within the mandate of Article XIII.

24. In a preliminary manner, the representative of China felt that the Note by the Secretariat highlighted the complexity of government procurement issues. She shared the reservations expressed by previous speakers on the scope of the mandate in Article XIII. Turning to the communication from the European Communities, she thought that the proposed approach to scheduling commitments was difficult to understand since negotiations on specific commitments proceeded pursuant to Article XIX, while negotiations on government procurement were dealt with under Article XIII. Reacting to previous interventions, the representative of the United States said that discussions on the scope of the mandate in Article XIII should not be confused with decisions taken on Singapore issues in the July Package. Delegations needed to be cautious not to mix up different issues and mandates.

25. With respect to the Note by the Secretariat, the representative of Chile said that the information contained was being further studied and stressed that government procurement disciplines in EIAs were negotiated in a broader context, as part of a trade-off. Her delegation therefore did not necessarily want to see such disciplines transposed in another context. While she did not agree with some of the views expressed on the scope of the mandate, she acknowledged that concerns existed and hoped to discuss them further. Turning to the communication from the EC, she agreed with the delegation of the Republic of Korea that, while straightforward at first sight, the proposal involved complex technical issues that required detailed analysis. A better assessment and understanding of the costs and benefits of the proposed approach was needed, especially for developing countries.

26. The representative of the Philippines recalled that his delegation had expressed reservations on the scope of the mandate under Article XIII. He thought that paragraph 2 of Article XIII was necessarily limited by paragraph 1 of the same Article. The Vienna Convention on the Law of Treaties clearly allowed to deduce that the scope of the negotiations was limited to transparency issues, and did not cover market access, MFN or national treatment. He thus wondered whether the mandate was affected by the July decision of the General Council. A possible view was that, since the Singapore issue of transparency in government procurement did not make a distinction between goods and services, the decision might also have an effect on the mandate on transparency in government procurement for services. One might then wonder the extent to which Members should continue their work in this Working Party without a clearer indication of whether the mandate in Article XIII had been somewhat modified. He did not wish to suggest a particular position, but thought that delegations had to bear this aspect in mind. If the delegation of the EC continued to believe that the mandate in Article XIII covered market access as well, it might be useful to examine the appropriate form for a continued discussion of such issues.

27. The representative of India wished to clarify his position. He noted the continued wide divergence of views about the scope of the mandate. In addition, the implications of the July Package had to be considered. On the one hand, there was the legal aspect alluded to by the delegation of the Philippines. The second aspect, which his delegation had tried to highlight, was the need for a reality check. After a prolonged period of discussion, the issue of transparency in government procurement had been dropped because of strong reservations voiced by a large number of Members. And that development had to be taken into account.

28. The representative of Canada felt that some of the options just outlined by the delegation of the Philippines were not options that his delegation had considered and he did not think that they were accurate. He supported the suggestion made by the delegation of Hong Kong, China for further work by the Secretariat on the scheduling approaches used in EIAs. The representative of Cuba wanted to associate her delegation with those that had reservations about the scope of the mandate under Article XIII. An acceptable understanding between Members should be a precondition for more technical discussions on a multilateral framework. Market access and national treatment issues were not part of the mandate. She reserved the right to come back to these issues.

29. The representative of the United States shared the assessment of the delegation of Canada regarding what she viewed as theoretical questions put forward by the delegations of the Philippines and India. She stressed that the mandate under Article XIII had always existed independent of any other mandates, including those concerning the Singapore issues. Her delegation had registered many times its interest in exploring the scope for progress with respect to the Singapore issue of transparency in government procurement, but never put any conditions or made legal linkages with the work under Article XIII. In the past, she simply had drawn attention to comparisons between proposals in this Working Party and what already had been committed by Members of the GPA, and the interest in exploring how one could proceed with transparency in government procurement in a broader sense in the WTO. Her delegation had also noted the difficulties in making distinctions between services and goods when examining proposals under Article XIII or obligations assumed under EIAs or the GPA. But this had nothing to do with the legal status of any of those mandates, which stood on their own. She could not accept, contrary to some views expressed, that Ministers could in any way have modified the mandate in Article XIII of the GATS. This certainly had not been the intent of those who took the decision in July.

30. The representative of Japan agreed that Members had decided in the July Package that no further work towards negotiations on three Singapore issues would take place within the WTO under the Doha Agenda. However, at the same time, Annex C to the July Package mandated Members to intensifying efforts to conclude negotiations in four rule-making areas, including the negotiations pursuant to Article XIII. The mandate under Article XIII thus continued to exist after the July Package. While acknowledging that delegations had different views about its exact scope, he disagreed with suggestions that it had been modified. The representative of Chinese Taipei supported the views just expressed by the delegations of Japan and the United States. She also called attention to the fact that the services section of the July Package called for intensified efforts in negotiations on Article XIII. Although her delegation was particularly interested in discussing procedural issues relating to government procurement, it was not clear, in the light of previous interventions, how the Working Party would approach this agenda item in future meetings.

31. On the issue of the negotiating mandate, the representative of the European Communities said that no delegation had the authority to modify Article XIII; rather the WTO membership would need to amend the agreement. He agreed that Article XIII had to be interpreted according to the Vienna Convention, but did not share the interpretation put forward by the delegation of the Philippines. Paragraph 2 of Article XIII said, literally, that there should be multilateral negotiations on government procurement, not that there should be multilateral negotiations on transparency in government procurement. The paragraph also provided for negotiations to take place under the GATS, and not in a different context. He agreed that paragraph 2 had to be read in its proper context, together with paragraph 1. Doing that revealed that all provisions of the GATS already applied to government procurement, except Articles II, XVI and XVII. He wondered why Members would negotiate on issues already covered by the agreement, although it was possible to build on existing obligations. If the intent had been to exclude Articles II, XVI and XVII from negotiations, the Article would have been drafted differently: it would first have provided for negotiations and, second, excluded Articles II, XVI and XVII. Further, negotiations on government procurement were consistent with the GATS' objective of progressive liberalization. Since government procurement was important in numerous services sectors, many commitments would have little value if it was excluded. It thus made sense that government procurement commitments be undertaken in as many sectors as possible.

32. He wished to associate himself with the comments of the US, Japan and Chinese Taipei on the relationship between the July Package and Article XIII. How could the General Council have decided that efforts should be intensified in the services rule-making areas, including procurement, if, according to some, the mandate in Article XIII was limited to transparency and, at the same time, negotiations on transparency in government procurement pursuant to Article XIII had been dropped? Why then would the reference to Article XIII have been kept in the services part of the July Package?

If such interpretations were true, reference to Article XIII in the July Package would have been deleted, unless the General Council implicitly agreed that the mandate in Article XIII was not limited to transparency. Regarding the link between procurement and development, he said that the proposal from his delegation provided sufficient flexibility to take into account the level of development of every Member. It was difficult to rule out, from the outset, that a government taking commitments on procurement would not get better value for money and foster the development of its own service suppliers. Lack of competition might simply perpetuate existing inefficiencies. Some developing countries exported computer services under mode 4, which was an area where extensive government procurement occurred. The countries concerned might wish to see some government procurement commitments under relevant modes. The proposal also provided for sufficient flexibility in scheduling commitments. He hoped for further clarification from the delegation of the United States regarding comments that the GATS' modes of supply and the services sectoral classification list were not well suited for government procurement.

33. The proposed additional column for government procurement commitments served to indicate whether the award procedure for contracts was open to foreigners or not. Once access to the award procedure was provided, the market access and national treatment limitations, if any, applied to the supply of the service. A separate column for government procurement made it easier for operators to assess market opportunities. On the question from the delegation of Switzerland on how to schedule the absence of government procurement commitments, he noted that his delegation was open to either inscribing an "unbound" or leaving a blank entry. That could be discussed and agreed upon in eventual scheduling guidelines for government procurement. Concerning questions on procurement contracts covering many services sectors, he did not see this as something new or as posing technical problems. Such situations occurred under other agreements on government procurement as well as within the GATS. Many services were combinations of different services. Determining the main object of each contract, based on the value of individual parts, was of key importance. The Note by the Secretariat listed various provisions in EIAs on the valuation of contracts and this might help to provide a solution. With respect to questions on whether the thresholds for the two sectors mentioned in example 6 of S/WPGR/W/48 would be added up, he thought that the answer depended on whether the two contracts could be separated. If so, each threshold would apply to the relevant part. If the contract could not be separated because the various elements were closely linked, the main object of the contract would need to be determined. Regarding the question on the procurement entities to be covered, his delegation proposed to use Article I:3 of the GATS as a reference. Any entity falling under the Article could be covered although, of course, each Member could take commitments with respect to a more limited number of entities, excluding for example the sub-federal level. He then turned to a question from the delegation of Chinese Taipei on whether a Member could violate, through measures relating to government procurement, the obligations of Article VI of the GATS that applied to sectors where specific commitments were undertaken. In his view, the Article VI applied to government procurement since it was not excluded by Article XIII, although provisions in that Article often applied only to the extent that a commitment had been undertaken. Insofar as there were no commitments on government procurement at this time, there was room to manoeuvre in applying Article VI to government procurement. Concerning a question on whether it was necessary to list the covered entities for the purpose of establishing legal certainty, he emphasized that his delegation's proposal provided ample flexibility in terms of scheduling.

34. Regarding the question by the delegation of Chinese Taipei on a hypothetical scenario where a Member had inscribed "unbound" in the market access column and "none" in the national treatment and government procurement columns, he wondered about the practical value, in such cases, of making commitments on government procurement. The issue could be addressed in negotiations, nevertheless. Regarding a question from Hong Kong, China on the interaction with the GPA, he was open to working with interested delegations on an annex on government procurement and did not foresee any significant technical problems. With respect to the definition of procurement, he referred to the definition contained in Article XIII:1. Regarding the definition of what was being procured, he

thought that this would be defined on a case-by-case basis by each procurement contract. On questions put forward by Japan on scheduling issues, he recalled that it might be useful to jointly develop relevant conventions. With respect to entities covered, he agreed that the coverage of Article I:3(a) of the GATS was different from the GPA, but noted that the proposal provided ample flexibility. Article I:3(a) was only a starting point. On whether the EC was aiming at procedural rules similar to those found in the GPA or more flexible provisions, his delegation was not opposed in principle to having more flexible rules under the GATS. In concluding, he invited delegations to put their questions in writing and have them circulated sufficiently in advance of the next meeting to allow for the preparation of appropriate answers. His delegation was surprised to see the issue of the mandate being raised again; issues of political will should not be mixed up with interpretations of Article XIII. Ministers had agreed that work under this mandate be pursued.

35. The representative of the Philippines said that the delegation of the European Communities should not be surprised about disagreement with regard to the mandate in Article XIII. Reservations to that effect had continuously been expressed. Paragraph 2 of Article XIII must not be interpreted in isolation, but in the context of paragraph 1. He saw paragraph 1 as a provision of a permanent nature which informed the interpretation of paragraph 2. On the relationship between the July Package and the mandate under Article XIII, he merely sought to better understand other delegations' views. He had not wished to put forward a particular interpretation. The mandate in Article XIII pertained to transparency in government procurement, and he had not objected to proceeding in the Working Party in accordance with that mandate. If proponents endeavoured to focus on transparency rather than market access issues, the membership might better appreciate this issue.

36. The representative of the United States thanked the delegation of the Philippines for the clarification. Given time constraints, she indicated that she would pursue discussions with the delegation of the EC on a bilateral basis. The representative of India said that, even though he had mentioned that there was a divergence regarding the mandate, he had not put forward a legal interpretation suggesting that the mandate in Article XIII was dead. Discussions had proceeded on the basis of other delegation's interpretation of what the delegation of India had said. He had simply indicated that Members should recall the experience in the July Package in terms of the EC proposal, which related not only to transparency, not only to market access, but also had a link to Article XIX.

37. The representative of Pakistan noted that asymmetries between developed and developing countries, as reflected in the context of the July Package, needed to be kept in mind when discussing government procurement in the Working Party. The representative of Hong Kong, China expanded upon his proposal for further work from the Secretariat. The discussions today had highlighted various options of how government procurement commitments could be undertaken. In that context, the Secretariat could provide some summary observations on how EIAs addressed this issue. Was it done on a sectoral or modal basis? Was a distinction drawn between goods and services?

38. In summarizing key points of the discussion, the Chairperson noted that a range of views had been expressed on the interpretation of Article XIII. A number of delegations had reiterated their position that paragraph 1 affected the scope of the negotiating mandate and wondered whether the July Package had further implications for these negotiations. Others had held the view that paragraph 2 of Article XIII did not preclude the discussion of market access issues and failed to see linkages between the July Package and discussions in the Working Party. She noted that there had been a useful technical discussion of the latest communication from the European Communities. Issues raised included the issue of MFN treatment, MFN exemptions, and the relationship to the GPA. Some concerns were also raised on the applicability of the GATS' scheduling approach to government procurement commitments. These issues warranted further discussion. She noted that delegations generally felt that the Secretariat Note contained in S/WPGR/W/49 provided useful background information. It showed that many EIAs had procurement disciplines, although some delegations had noted that commitments exchanged under such agreements were part of a more comprehensive

package and that this context had to be kept in mind. Further, pursuant to the proposal by the delegation of Hong Kong, China, she said that a Note by the Secretariat summarizing how EIAs addressed issues relating to scheduling approaches should be a helpful contribution to discussions. She proposed that the Working Party take note of statements made.

II. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (ARTICLE X)

39. The Chairperson suggested that the Working Party pursue its discussion of issues raised in the informal communication from Brunei Darussalam, Indonesia, Malaysia, Myanmar, the Philippines and Thailand, contained in JOB(04)/4. This could be assisted by questions compiled in the Note from the Chairperson (JOB(04)/49) as well as by points raised at the informal meeting of 11 June, some of which had been mentioned in the annotated agenda. She thought that all delegations would benefit from a thorough examination of these issues, including the technical aspects involved. She noted that the group of Members from ASEAN had made available a room document providing answers to questions raised on their proposal.

40. The representative of the Philippines apologized for the late circulation of these preliminary answers. Rather than discussing the room document in detail, he wished, given time constraints, to focus in particular on issues mentioned in the annotated agenda. On acquired rights and the definition of expansionary activities, he recalled that the group of delegations for which he was speaking had originally suggested that certain expansionary activities not be covered by the concept of acquired rights, namely: establishment of additional branches or subsidiaries; acquisition, merger or consolidation with any other service supplier, whether foreign or national; supply of additional capacity of the relevant service to the domestic market; infusion of additional capital; and acquisition of additional equity. Upon presenting JOB(04)/4, the group of delegations had indicated that the list of examples could be refined. He thought that the acquisition of new facilities, new hiring, expansion of consumer base or new strategic alliances also seemed to be expansionary activities, which should be restricted during the safeguard period. Of course, nuances were necessary. For example, replacements of existing staff should not be considered an expansionary activity. All these activities would further enhance an established foreign service suppliers' market share at a time when their dominance was a factor contributing to the injury being suffered. Allowing such expansionary activities would appear to perpetuate or aggravate the situation. He considered that such items as increases in turnover or profits would fall within the ambit of acquired rights, rather than expansionary activities. A firm established in a particular market would endeavour to maximise profits, and that was an acquired right of any firm. However, increases in product range and in regional representation were expansionary activities.

41. On the question of whether discriminatory restrictions would be consistent with bilateral investment treaties (BITs) providing for national treatment of established foreign producers, including service suppliers, he said that to the extent that an emergency safeguard measure might affect the more favourable treatment accorded to a particular Member under a bilateral investment treaty, the invoking Member might either (i) exempt the other Member from the application of the safeguard, thus respecting in full the acquired rights of service suppliers of that other Member, or (ii) subject it to the non-discriminatory application of the safeguard measure. In the latter case, the invoking Member precluded certain expansionary activities of service suppliers of the other party to the BIT and assumed the risk of a legal challenge under the dispute provisions of that treaty. A fundamental question was the extent to which Members wanted bilateral treaties to prevail over their multilateral treaty obligations. He thought, from a precautionary perspective, that it might be preferable to preclude potential litigation between parties to a BIT by opting against a non-discriminatory approach. Adopting a discriminatory approach, on the other hand, would appear to perpetuate a particular MFN exemption-type situation. Recent jurisprudence under BITs might suggest an increasing pattern for tribunals to interpret MFN clauses in a broad manner. He referred to the decision in *Maffezzini vs. Spain*, which could be found on the World Bank website (ICSID Case No.

ARB/97/7). Of course, this was not to suggest that this particular decision would have probative value in any dispute under WTO law. With respect to questions on the implications of different definitions of domestic industry for a determination of injury or for the definition of acquired rights, the group of delegations for which he was speaking had thought that Article XXVIII of GATS provided ample guidance. But several delegations had expressed concerns because their domestic definitions were different. To avoid such problems, it might be left to each Member to define domestic industry in accordance with its own legislation. The possible uncertainty of such an approach would be avoided if each Member notified its national definition of domestic industry to the Council for Trade in Services. In case of a safeguard measure, any affected Member might examine whether the threshold established in the notified definition had been met. On the type of statistics to be used, he considered that national statistical offices, as well as the relevant regulatory authority for a particular sector or sub-sector, would be the first recourse. When not sufficient or adequately disaggregated, statistics kept by international organizations might provide a useful alternative or supplement. Statistics maintained by relevant professional associations might also be pertinent. He acknowledged that services trade statistics would not be consistently available in a disaggregated manner according to the four modes of supply. Other information might need to be provided as part of the determination of injury.

42. Regarding the mode-specific use of safeguard measures, he indicated, in the case of mode 3, that a Member should not seek to fully restrict further entry of foreign service suppliers as a first option. Where appropriate, a Member might impose additional conditions for establishing a commercial presence. In the case of Shangri-La, foreign service suppliers might be required to enter into joint-venture arrangements with smaller local retailers. In mode 2, in the example of ship repair and maintenance, measures might range from the imposition of fees and charges to outright prohibition so as to discourage or restrict the propensity to consume abroad. A Member seeking to invoke a safeguard measure should contemplate less trade restrictive policy approaches. In that particular case, the imposition of fees and charges might be a less trade restrictive option and, if resources were available, it could be complemented by subsidies. Concerning the concept of 'limited window', he considered that there was no justification or precedent for making distinctions between those commitments providing for actual liberalization and those merely binding existing policies. There seemed to be little value-added in further complicating the issue by drawing such distinctions. The link between the proposed ESM and liberalization should not be overly formalized. An ESM would make it easier to convince domestic constituencies to accept greater liberalization. His group was open to ideas on how to further elaborate this concept.

43. The representative of Japan said that he needed more time to study the room document. On acquired rights, he thought that activities such as the establishment of new branches or acquisition and mergers formed part of the initial business plan of a company investing in a foreign country. Such activities were essential to recoup the initial cost of investment and generate revenue for shareholders. Permitting Members to stop such activities would deter foreign investment. Concerning the definition of domestic industry, he doubted that defining domestic industry on the basis of the percentage of foreign capital participation would help achieve the objectives of the proponents.

44. The representative of Hong Kong, China said that he would further reflect on the room document. On situations justifying safeguards, the examples hitherto provided - Shangri-La and the optometrists - had not clarified the more fundamental issue of why an ESM was called for. At best, the examples depicted situations where some Members might want to use an ESM, but not situations where the use of an ESM would be justified. For instance, in the Shangri-La example, what had been unforeseen at the time of undertaking commitments? Why would an ESM be needed when it was acknowledged that other policies would have to be adopted to address a situation that was primarily structural in nature? On the example of optometrists, he remained uncertain about the real cause of the problem. On the one hand, the main professional services provided by optometrists, i.e. eye examination, were not subject to any commitment and were not affected by the influx of foreign

services. On the other hand, the business of preparing and selling glasses, the most lucrative part of the business, was covered by the liberalization commitment under retail services and might have been foreseen in the first instance. An analogy might be drawn with pharmacists, where very often the dichotomy between their services of advising on the need for medicine and the more lucrative business of selling medicine called for regulatory responses, such as the institution of professional standards to ensure that the sale of medicines was accompanied by a certain degree of professional expertise, including for consumer protection.

45. On the link to progressive liberalization, he did not consider that the room document suggested a concrete, substantive and positive linkage to liberalization. The question was whether the membership would benefit overall in terms of progressive liberalization. On the one hand, an ESM would allow roll-back of liberalization commitments on a temporary basis, but on the other hand there might not be any substantive improvement to the package that was being negotiated. He noted the analogy being drawn with the history of the goods safeguards, but recalled that his delegation had serious misgivings about this mechanism. Perhaps a more appropriate analogy was a positive effect that might be expected in the market access negotiations, but that did not appear to be the case so far in services. Finally, regarding the concepts of acquired rights and domestic industry, he did not think that these were entirely new issues given the existence of various economic needs tests (ENTs) in each mode of supply. Even though they served a different purpose, ENTs did not specify the type of quantitative limitation that could be imposed as a result. It might be useful to draw on the experience of Members that had ENTs. What type of measures did they impose to stop new economic activities?

46. The representative of China wished to comment on the point made by the delegation of Japan regarding the effect of an ESM on investment. Article XXI of the GATS allowed a Member to withdraw its commitments permanently, which certainly had an effect on investment. Therefore, she did not think that an ESM could be said to be unnecessary or undesirable because of its effects on investment. Since a permanent withdrawal of commitments was feasible, it should also be feasible to have an ESM to suspend commitments temporarily.

47. The representative of the European Communities signalled that he would come back to the written answers at the next meeting. He could not agree with the suggestion to leave it to each Member to determine its own concept of domestic industry. On situations justifying a safeguard, his delegation considered that neither of the two examples justified a safeguard. Such situations could either be dealt with through domestic regulation or have been foreseen at the time of undertaking a commitment. There also remained the option of withdrawing a commitment through Article XXI. On the link to progressive liberalization, he thought, assuming that an appropriate example of a safeguard situation could be found, that a positive linkage would have to be demonstrated. He failed to see that a Member having made commitments subject to quantitative restrictions or other limitations should be able to invoke a safeguard.

48. The representative of Canada hoped to come back with questions at the next meeting. However, he wondered why the room document only focused on the questions listed in the Chairperson's annotated agenda. His authorities thought that it would be useful to address other issues raised in past meetings. For example, his delegation had asked a question on the role that domestic regulation and capital markets would play in restoring equilibrium in the absence of an ESM. He hoped to get a response from the group of ASEAN Members. The Chairperson explained that the room document from the group of ASEAN Members was in response to the compilation of questions contained in JOB(04)/49, which was an indicative list of questions raised. Delegations might of course want to raise further questions.

49. The representative of Chile expressed concerns with the approach proposed for the definition of domestic industry. A problem with the application of trade remedy law in the goods area related to the degree of discretion implied. Proposing that domestic industry be defined by each Member and

linking such a definition to the determination of injury resulted in a high level of discretion, which was a concern to investors and service exporters. In the case of optometrists, consumer interests were highly important since liberalization led to lower prices. She also wondered whether the proponents had thought of an example of safeguard situation for mode 1 and wondered about the type of measures envisioned. While she recognized that there might be difficulties in distinguishing between commitments providing for actual liberalization and those binding the status quo, she thought that the approach proposed posed problems with respect to the concept of unforeseen circumstances or the length of the 'limited window'. In addition, she shared concerns expressed by others regarding the definition of expansionary activities. Finally, with respect to mode 4, she had concerns about a quota being imposed on top of a quota and about how the number of suppliers below the average level of a recent representative period would be defined. How could it be calculated in the first two or three years of liberalization if entry of suppliers had not been allowed before?

50. In a preliminary manner, the representative of Australia thought that the example of optometry services was not entirely convincing. It was difficult to distinguish between foreign and domestic suppliers when both were supplying the service from the same territory. A Member making a commitment on retail services still had the option of qualification and licensing measures to regulate who could perform certain types of activities. He had strong reservations about the idea of leaving it to each Member to define domestic industry. Allowing a Member to unilaterally change its definition would have implications on the type of safeguard measures imposed.

51. The representative of Switzerland said that she would come back to the room document after further examination. On acquired rights, the group of ASEAN Member had tried to address previous criticism about adverse effects of an ESM on legal certainty and predictability of market liberalization undertaken in negotiations based on a balanced exchange of concessions. A number of countries wanted to ensure that investment conditions for entering their market were liberal, and the GATS was the main instrument for concretizing that policy, as it was multilateral and legally binding. However, an ESM would conflict with such policy approach by making the legal environment much less certain, both for pre-established foreign service suppliers and for those that wanted to enter new markets. Second, on the link to progressive liberalization, she did not think that the room document addressed the issue of a positive linkage. She had suggested that the proponents identify the particular commitments that an ESM might prompt them to undertake and which they would not have undertaken otherwise. She hoped that the group of Members from ASEAN could elaborate in this regard.

52. The representative of Japan disagreed with the argument made by the delegation of China regarding Article XXI. Commitments could be modified if a certain procedure was followed. Such procedures provided for a certain degree of legal stability. It would be much easier to modify commitments under the proposed ESM. A key difference between trade in goods and trade in services pertained to mode 3, where the importance of legal stability was even greater. When investing in a foreign country, a longer-term outlook was necessary. The fact that safeguard measures were allowed in goods did not provide justification for safeguards in services. Each Member could inscribe certain conditions in its schedule. This was a matter for negotiation, like ENTs. It would be harmful to investments to have an agreement on safeguard measures.

53. The representative of Brazil wished to emphasize the importance, especially for developing country Members, of having more flexible mechanisms to modify commitments in emergency situations. The possibility to use an ESM, which would be more flexible than Article XXI, would provide a safer regulatory context and even a more stable legal context, with clear rules applying only to emergency situations. This could stimulate countries, especially developing ones, to schedule more commitments. The representative of China did not think that it could be said that an ESM was not needed because it would have an effect on investment. Permanent withdrawal of commitments under Article XXI had larger effects on investment. While certain procedures needed to be followed under

Article XXI, certain rules and procedures, still to be negotiated, would also need to be followed under an ESM.

54. The representative of the Philippines wondered whether questions raised at this meeting could be compiled in another Note from the Chairperson so as to facilitate the provision of answers. On the comments from Japan, he said that the list of expansionary activities provided was preliminary and was intended to spark discussions. He welcomed comments to the effect that mergers and acquisitions were part of the normal business plan of companies and indicated that the group of delegations he was speaking for would continue to reflect on these issues. Where certain established foreign service suppliers had caused injury, allowing these suppliers to establish new branches or make acquisitions during that critical period of time might aggravate the situation. They should thus be precluded from expansionary activities in the relevant period. Outright prohibition of entry or participation in the market should be the last resort, as other measures should be examined beforehand. Turning to another comment from the delegation of Japan, he said that if a Member defined domestic industry as including all established suppliers, whether foreign or national, the foreign suppliers already established could continue to merge, expand, or make acquisitions. The only effect of a safeguard measure would then be on foreign service supplier who had not yet entered the market. The situation would be different if a Member defined domestic industry as including solely domestically-owned suppliers. In that situation, established foreign service suppliers would be subject to a safeguard measure, keeping in mind that certain acquired rights would be protected. The notion of expansionary activities was relevant in that context. With respect to Article XXI, he underscored that an ESM would provide for a temporary modification or withdrawal of commitments, whereas Article XXI provided for a permanent one. Article XXI required compensation to be offered, and that was a key distinction with the proposed ESM, where no compensation was required during an initial period of three years. A degree of legal stability and certainty was nevertheless maintained. There would be more instability in an Article XXI situation in which there was continued disagreement on the level of compensation to be granted.

55. Turning to questions from the delegation of Hong Kong, China, he indicated that in the Shangri-La example the authorities might not have foreseen, in making the commitment, the pace and extent of foreigners' impact on the domestic market. By way of example, the authorities might have anticipated that foreign suppliers would reach a market share of 50% over 5 years, but they actually reached 60-70% over a period of three years. Regarding the link to progressive liberalization, he indicated that domestic consultations had suggested that an ESM might contribute to undertaking more liberal commitments. He was open to listening to delegations on how to formalize such a linkage. On comments made to the effect that the Shangri-La example represented a problem of a structural nature that could not be addressed by a safeguard measure, he felt it was not fruitful to try to define a 'structural problem'. He also wondered why a temporary reprieve in the form of a safeguard measure could not form part of a broader policy package undertaken to address any such problem. Regulatory responses were not always sufficient. On comments by the delegation of Australia, he considered that fears relating to Members unilaterally changing their definition of domestic industry could be addressed by a notification procedure. An additional requirement could prohibit safeguard measures from being imposed during a given period of time after a change in the definition of domestic industry. On the question put by Canada, he noted that there would be a role for regulatory authorities in addressing the situation. Indeed, his group of delegations advocated a procedure prompting Members to see whether less trade-restrictive policy tools, such as domestic regulations, were available. If such regulatory measures were not sufficient, or not deemed sufficient, safeguard measures could be used as a complement. He hoped to be able to provide further written answers upon receiving questions in writing.

56. The Chairperson urged delegations to forward their questions to the group of Members from ASEAN. A decision on whether to draw up a new list could be taken at a later time, if necessary.

57. The representative of Japan wished to react to statements from the delegations of China and the Philippines. He underscored that a Member could only modify commitments pursuant to Article XXI if an agreement had been reached with affected Members or if an arbitration had been made. In the case of a waiver, a decision by the Ministerial Conference was needed. Under the proposed ESM, however, commitments could be modified and affected Members could only see if this was done properly after the modification had occurred. This was a key difference from Article XXI or Article IX of the Marrakesh Agreement, and it had implications for legal stability.

58. The Chairperson said that the room document from the group of delegations from ASEAN helped to focus discussions. Areas that could usefully be pursued further included issues of domestic industry and acquired rights, situations justifying safeguard actions, and links between an ESM and progressive liberalization. She invited the Working Party to take note of the comments made.

III. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV)

59. The Chairperson suggested that delegations focus their attention on the recent communication from the delegation of Hong Kong, China, contained in JOB(04)/127. It put forward some thoughts and proposals on the possible way forward on such aspects as the information exchange, the definition of subsidies or trade distortions. As requested, the Secretariat had produced an update of previous Notes on subsidy-related limitations in schedules, circulated as S/WPGR/W/13/Add.2. The Note, covering the period from June 2000 to the present, was brief and self-explanatory. Pursuant to a query from delegations at the last meeting, it observed that no definition of subsidies could be identified in schedules. Delegations might also want to further comment on issues raised in past communications from Chinese Taipei on the definition of subsidies and from Chile on the list of examples of subsidy programmes, or to pursue past discussions on export subsidies.

60. The representative of Hong Kong, China believed that the negotiations on subsidies had picked up momentum over the last year and welcomed contributions by a number of delegations. The communication from his delegation was intended to contribute to this process. He did not wish to initiate a procedural debate; the negotiations should be driven primarily by contributions from Members. Discussions on subsidies had so far focused on four main aspects. The first was the information exchange required under Article XV. The second was the information on subsidies from other sources, as a supplement to the information exchange. The third was the discussion on the definition of subsidies, which partly responded to the views of some delegations that the lack of a definition might have hampered the information exchange as well as further discussions on the development of any necessary disciplines. The fourth, which was more recently introduced by a contribution from Chile, related to the trade distortiveness of subsidies. On the information exchange, he noted that Article XV:1 provided that all Members should exchange information concerning all subsidies related to trade in services that they provide to their domestic service suppliers. The mandate was sufficiently clear. So far, only four Members had provided such information, despite efforts by various delegations to facilitate the information exchange through the preparation of a revised questionnaire, the use of alternative definitions of subsidies, or the gradual provision of partial information. Lack of engagement in the information exchange was a cause for concern not only because it amounted to an unfulfilled mandate, but also because it perpetuated the existing lack of transparency. Delegations that had not yet shared information could provide an indicative timeframe for that contribution. He also suggested that Members explain the difficulties encountered so that these could be addressed. Members that had listed limitations relating to subsidies in their schedules could explain what subsidy programmes were covered by such limitations. He noted that information on subsidies should in any event be readily available upon request through enquiry points pursuant to Article III. Members that had subsidies identified in their trade policy reviews, as compiled by the Secretariat in S/WPGR/W/25 and addenda, could share information about such programmes. He emphasized that, should the information exchange remain unsuccessful, it would be necessary to

request the Chairperson to highlight such failure in her report to the Special Session of the Council for Trade in Services, with a view to seeking further guidance on how to proceed.

61. Concerning other sources of information on subsidies, he hoped that the Chairperson could continue to report on the status of work being done by UNCTAD and that the Secretariat could keep the Working Party informed of any other sources relating to subsidies in services. Members could also draw the Working Party's attention to any information of relevance. On the definition of subsidies, the contributions from Members had provided a good basis for further discussions. In order to move forward, Members that had subsidy-related limitations in their schedules could share the definitions that they used or the scope of such limitations. Members that were parties to economic integration agreements containing provisions on services subsidies, as reflected in S/WPGR/W/46, could also indicate the definitions used for such purposes. If the definitions used in schedules or EIAs were not deemed relevant for the purpose of the negotiations under Article XV, delegations could explain why. He also wished to suggest that the Secretariat compile, on the basis of previous contributions and discussions, a composite note on issues to be considered for a definition of subsidies. On the issue of trade distortion, Members with subsidies identified in their trade policy reports, as well as those that were parties to EIAs containing disciplines on services subsidies, could share their views on whether such subsidies were trade distortive and on why they had wanted to include relevant disciplines in EIAs, and how such disciplines were operationalized. In providing information pursuant to the information exchange, delegations might comment on the possible trade distortive effects and on the need for disciplines. In that context, Members might wish to provide information on the policy objectives behind subsidy programmes and whether such objectives impinged on consideration of trade distortiveness. He also invited those Members that had raised subsidy-related issues in negotiating proposals to Special Sessions of the Council for Trade in Services to elaborate on these issues and indicate whether and how Article XV negotiations might be relevant. Delegations might also want to comment on subsidies that played a particular role in relation to the development programmes of developing countries.

62. In a preliminary manner, the representative of the European Communities wished to clarify a few points. He agreed that Article XV:1 contained an obligation to exchange information, but, as previously indicated, he did not think that exchanging information was tantamount to notifying all subsidies. It was not appropriate to start with a general notification exercise. Regarding the suggestions made in JOB(04)/127, he noted that the questionnaire had not been very popular, including for those that had proposed it. The reference in paragraph 12 of the communication from Hong Kong, China to the information provided by the European Communities on its own regime for state aid should be considered as falling under the exchange of information, and not under other sources of information. A communication from the European Communities, circulated as Job. 4302 from 6 July 2000, had responded to his delegation's obligation to exchange information with other WTO Members. If the ambiguity between notification and exchange of information could be resolved, many more Members might make similar contributions. He noted that paragraph 9 of JOB(04)/127 suggested that the Chairperson of the WPGR raise the issue at the Special Session of the Council for Trade in Services. He was not convinced that such process was the most appropriate, as this issue pertained to implementation more than to negotiations. Such reports might more appropriately be made to the Regular Session of the Council for Trade in Services. On the definition of subsidies, he thought that Members with subsidy-related limitations in their schedules would most likely provide the broadest possible definition of such limitations. For obvious reasons, nobody would want to create problems with respect to the interpretation of its schedule. He was not sure that suggestions regarding definitions of subsidies in EIAs would necessarily be very useful, at least as far as the European Union was concerned, since the relevant agreements provided for maximal integration, with full liberalization. In such cases, the concept of state aid had been used, as explained in the previous EC communication on the Community regime. Finally, regarding the issue of trade distortion, he believed that the key point that was not addressed in the communication was whether Members detecting distortions caused by subsidies or proposing relevant disciplines had made use of

the consultations provisions of Article XV:2, thus indicating that they considered themselves adversely affected by a subsidy of another Member. He was interested in the results of such consultations, if any, and thought that relevant information might help to advance discussions in a concrete and useful manner.

63. The representative of the United States warned that without an agreed definition of what constituted a subsidy Members might well be wasting their time and resources to develop lists of subsidies that in the end might not be considered subsidies. Vastly different lists of subsidies might be submitted, with some Members reporting substantially fewer subsidies than others. The fact that one Member reported fewer subsidies might simply be the result of a Member having defined subsidies more narrowly. Resources could be more productively used to contribute analytical papers that could help assess whether subsidies were more likely to be applied in certain sectors or whether certain kinds of subsidies might be more relevant to trade than others. Such contributions might be instrumental in reducing the scope of issues to be confronted and thereby focusing discussions. Further, her delegation disagreed with Hong Kong, China's interpretation of Article XV:1 with respect to the exchange of information. The relevant mandate was qualified by the terms "for the purpose of such negotiations". In addition, it did not call for the information to be provided in advance of the negotiations. It would not make sense for Members to provide information without having some common understanding of what would constitute a relevant subsidy. Consequently, there was no obligation to embark upon an exhaustive information exchange of the kind described by the delegation of Hong Kong, China.

64. On the Note by the Secretariat, she wished to point out that the reservations listed appeared to apply either to all sectors or to sectors where direct and indirect government participation was common for public welfare reasons, such as in health and education services. Moreover, Members had not specified whether they maintained subsidies, but had rather sought to ensure that the commitments did not cover subsidies, should any exist. This could suggest that Members were uncertain about the kind of policies that could constitute services subsidies. If no subsidies were actually granted, she further doubted whether an inscription in the market access or national treatment columns would be considered to constitute a restriction. In domestic consultations, her delegation had encountered confusion within the education community on whether research grants or student loans would constitute a subsidy. Since every country maintained some level of public support for education, healthcare or urban transportation, it might not be wise to include certain public welfare policies in any discussions of trade-related subsidies.

65. The representative of Mexico said that the communication from Hong Kong, China was being further examined by his authorities. In his view, transparency and the exchange of information were key elements of these negotiations. However, they were not preconditions. Discussions on the various aspects of these negotiations should continue independently of the information gathered. Such information, as well as that which could be provided by the Secretariat or observer organizations could obviously be very helpful, but, as signalled by the delegation of the United States, progress also depended on Members making significantly more analytical contributions.

66. The representative of Switzerland considered, on the basis of S/WPGR/W/13 and addenda, that more than 35 Members had entered limitations regarding subsidies. The absence of an agreed definition of subsidy did not seem to pose problems for the scheduling and implementation of these limitations. This should be borne in mind in future work. Further, she expressed support for the communication from Hong Kong, China and thought that the invitation to Members, in paragraph 3, to present concrete proposals was of crucial importance. On the information exchange, she endorsed the suggestion, in paragraph 7(a), to set an indicative timeframe by which information would be provided. Her delegation considered that the mandate entailed a clear obligation to exchange information concerning all subsidies related to trade in services. Setting a concrete timeframe seemed the most appropriate way to make progress and she invited delegations to fulfil the obligation to

exchange information by the second cluster of next year. She suggested that the Chairperson put on record that the information exchange had to be fulfilled by such proposed timeframe. Substantive work relating to these negotiations could proceed simultaneously with the information exchange.

67. She reiterated that export subsidies were the most harmful type of subsidy; their purpose was always to affect trade and they distorted competition in third markets. What would be the value of securing market access commitments in sectors where competition was being distorted by operators of third countries subsidized by their home governments? Such practices could create problems for all Members. In addition, there was no obligation to schedule export subsidies if these were granted on a national treatment basis. There was a clear need for action on this issue. On definition, she believed that export subsidies in services could, in general terms, be circumscribed as support measures of a Member granted to a service provider in respect of, or in direct connection with, the supply of a service in the territory of another Member. The ASCM defined export subsidies as subsidies contingent upon export performance and Annex 1 to that agreement provided an illustrative list of such subsidies. She thought that it would be helpful to examine whether a similar concept could also be used in the context of services.

68. The representative of Chinese Taipei welcomed the contribution from the delegation of Hong Kong, China. She saw value in the suggestion to set a timeframe by which Members would provide the relevant information. However, such information should assist the Working Party in assessing issues relating to the development of disciplines on subsidies, but not be used for negotiations or disputes in the future, since no disciplines had been developed under Article XV. Regarding the previous communication from her delegation, she wished to emphasize that it was designed to test, with the use of concrete examples, whether and to what extent the ASCM could provide a good basis for developing a working definition of subsidies. Dealing with definitions was inevitable if disciplines were to be developed. However, this was not necessarily the first priority. The issues of definition and trade distortion could be discussed in parallel, as they were separate, although related, concepts. There was no particular reason why the two concepts should be linked up for the purpose of analysis as part of negotiations. Regarding Switzerland's intervention, she thought that export subsidies could be a priority issue. Turning to the discussion at the last meeting of the first example listed in the communication from Chile, in particular the issue of who would be the beneficiaries of the programme, she noted that the companies concerned needed to have exportable services with a local content of at least 50% and thought that this gave an advantage to domestic services, compared with services provided from abroad. It would cause unfair competition in third markets. Export subsidies in general had trade distortive effects, in particular under mode 1, which was a situation comparable to trade in goods. However, it was difficult to see how the programme's requirement that 50% of the exported service be of domestic content could be achieved in relation to modes 3 or 4.

69. The representative of Thailand considered subsidies an important area of rule-making. She hoped that a definition could be reached and the extent to which subsidies existed in services industries and distorted trade could be determined. The issues of definition and trade distortion could be examined separately. Notwithstanding their policy goals, subsidies altered the conditions of competition and interfered with price signals. Nevertheless, she acknowledged that the effects depended on the form of subsidy, the market structure, the eligibility conditions, and how they interacted with other policies. Turning to the Note by the Secretariat, she considered that the subsidy-related entries in schedules, while not providing much information on definition, revealed certain policy intentions. For example, in mode 3, only those companies that were present on the territory were eligible for subsidies. In mode 4, only citizens and/or residents were eligible. Things were less clear for modes 1 and 2. The entries also highlighted the sectors and areas that were of particular concern to some Members, such as research and development, audiovisual, and education. Examining these sectors could be a good starting point.

70. The representative of Chile hoped that the list of suggestions contained in the communication from Hong Kong, China could motivate Members to provide information on their subsidies. Her delegation hoped to do so at the next meeting. This was an information exchange, not a notification exercise. It could help to provide an inventory of subsidies which could then be analyzed to assess trade distortive effects. Eventually, the Working Party might be able to develop some disciplines. On the other hand, further analysis could also permit to highlight programmes meeting certain public policy objectives. More information was needed in order to proceed to such analysis. Like Switzerland, she considered that setting a timeframe for the information exchange was a practical way to advance the matter. She also thought that it would be useful to know the status of the work carried out by UNCTAD and to be informed of other relevant sources of information. She called on Members to submit communications on specific issues, in particular regarding definition or trade distortion. She hoped to deepen the discussion of the first examples contained in her delegation's communication at the next meeting.

71. On the communication from the delegation of Hong Kong, China, the representative of Australia thought that the suggestion for more focused work on the issues of definition and trade distortion was particularly useful. His delegation considered that priority should be given to the definition of subsidy. Otherwise, the chicken-and-egg problem would persist and complicate the exchange of information. A common definition would allow Members to exchange information in earnest without being required to subjectively evaluate what subsidies created trade distortions. He wondered whether the communication from Hong Kong, China did not place too much emphasis on the concept of trade distortion, rather than on the need for a definition.

72. The representative of the Republic of Korea expressed general support for the proposals in JOB(04)/127 on the information exchange and wanted to be kept informed of the status of UNCTAD's work on subsidies. She recalled her view that the subsidy definition of the ASCM could be used as it was. No specific objections had been voiced. Since it had been suggested that the definition of the ASCM be used as a guide for the information exchange, those who wished to use a different definition could explain why. On the issue of export subsidies, she supported the idea of closely examining the illustrative list of export subsidies found in Annex 1 to the ASCM to see how this could be applied in services. With respect to the discussion at the last meeting on the issue of the conferment of a benefit, she did not think that a modal distinction could be made when providing a subsidy. The beneficiary was the company that supplied services, whether that beneficiary decided to export services under modes 1, 2, 3 or 4. In this regard, government support to trade associations, part of Chile's first example, might not fall within the definition of direct beneficiaries because these were not service suppliers *per se*. They rather supported their members through marketing and exhibition activities, which were not directly related to export performance. Such types of indirect support were not in the illustrative list in the ASCM. Regarding trade distortive effects, she noted that in the case of mode 3 the subsidy aimed to support the company to go abroad and establish subsidiaries. The subsidies used might include insurance guarantees for outward foreign investment, or income or corporate tax reductions for related remittances. At the same time, the company might benefit from investment incentives offered by the host country. In such cases, how could trade distortive effects be determined? The situation was similar for mode 4. While government support for mode 4 exports would fall within the ambit of export subsidies, subsidies to workers might be motivated by social policies to alleviate unemployment problems. At the same time, since Members had scheduled such policy tools as ENTs and labour market tests, it seemed difficult to assess the degree of trade distortive effects. With respect to definitions of services subsidies found in schedules or EIAs, she did not think that her delegation had envisioned specific definitions. There was thus ample room for discussing definitions to be used in the future.

73. The representative of the United States added that the definition in the ASCM seemed to be an appropriate starting point for the purpose of comparison. The representative of Singapore said that he would revert to the communication from Hong Kong, China at a later time. An important point

highlighted in previous interventions was the role that subsidies played in relation to legitimate public policy objectives. This was already envisaged in paragraph 1 of Article XV, which specified that negotiations should recognize the role of subsidies in relation to the development programmes of developing countries and take into account the needs of Members, particularly developing country Members, for flexibility in this area. On export subsidies, he recalled that a number of commentators had said that the GATS might not necessarily cover export-related measures. He still was not sure whether or how export subsidies were captured by the negotiating mandate under Article XV. Finally, like Australia, he emphasized the need to focus on the definition of subsidy, using, as suggested by the US, the ASCM as a possible starting point.

74. The representative of El Salvador expressed concerns regarding paragraphs 7(f), 10(a) and 18(a) of the communication from the delegation of Hong Kong, China. Since there was no agreed definition of subsidies, her delegation had reservations regarding the information contained in the Note by the Secretariat circulated as S/WPGR/W/25 and addenda. Consequently, she did not think that it was yet appropriate to try to further clarify its content. The representative of Guatemala shared Hong Kong, China's concerns with respect to the non-fulfilment of the information exchange. Lack of clarity with respect to subsidies and their effects produced uncertainty, which could even have an impact on the scheduling of commitments. He considered that it would be useful to be informed of the results of the study on services subsidies conducted by UNCTAD, and hoped that it could be presented in the Working Party.

75. On the Note by the Secretariat contained in S/WPGR/W/13/Add.2, the representative of China sought clarification regarding the statement in paragraph 2 to the effect that discriminatory subsidies might also be granted in situations where no commitments had been undertaken. She wondered whether that meant that certain subsidies were provided to domestic service suppliers even if not inscribed in Members' schedules. Regarding the communication from the delegation of Hong Kong, China, she wished in particular to echo the proposal in paragraphs 13(a) and 13(b) concerning the study by UNCTAD and the provision of additional sources of information by the Secretariat. A representative of the Secretariat clarified that the scheduling of limitations to national treatment in schedules was intended to provide cover for discriminatory effects of subsidies in situations where national treatment commitments were undertaken. In sectors or sub-sectors where such commitments had not been undertaken, there was no requirement to list such measures.

76. The representative of Hong Kong, China wished to react to points made. He considered that the suggestion by the delegation of Switzerland regarding a timeframe for the information exchange was quite useful, as it could help authorities to plan ahead. On the definition of subsidy, the suggestions in his delegation's communication were aimed at avoiding the chicken-and-egg syndrome. He agreed with the delegation of Australia that it would be important to move forward on the definition of subsidy, but felt that the various issues under discussion under this agenda item had to proceed in parallel. The discussion on definition or trade distortion should not be conditioned upon the information exchange, or vice-versa. In order to build on the work done so far, he had requested the Secretariat to produce a composite note on the issue of definition. Responding to a comment from the delegation of Singapore, he believed that export subsidies were clearly within the scope of the GATS and of the mandate under Article XV. First, Article XV said that Members should enter into negotiations with a view to developing the necessary multilateral disciplines to avoid trade distortive effects of subsidies. To the extent that export subsidies might have trade distortive effects, these should be addressed in the negotiations. Second, nothing in Article I:1 of the GATS confined the meaning of measures affecting trade in services solely to measures affecting imports.

77. He would reflect further on the remarks by the delegation of the European Communities and comment more extensively at a future meeting. He did not agree that issues relating to the information exchange were within the ambit of the Regular Session rather than the Special Session of the Council for Trade in Services. Negotiations under Article XV were part of the services

negotiations, which were overseen by the Special Session. They included the information exchange, as exemplified by the fact that such article specified that the information exchange was for the purpose of negotiations. On comments regarding paragraph 2 of Article XV, he noted that he also would be pleased if any delegation wished to share experience in that regard. Referring to earlier discussions on the scope of the mandate under Article XIII, he cautioned against reading too much into Article XV:2 when entering into negotiations pursuant to Article XV:1. Turning to comments from the delegation of the United States, he noted that he had encouraged delegations to make concrete proposals and did not think that their discussion should be conditional on the information exchange. He took note of the difficulties affecting the information exchange, but hoped that the delegation of the United States could further explain what, in their view, should be done in respect of the last sentence of paragraph 1 of Article XV. Regarding comments on the need to recognize the role of subsidies in relation to public policy objectives, he said that this aspect had to be taken into account in any future discussions on trade distortiveness. His delegation intended to provide further thoughts on this issue.

78. The representative of Canada said that the proposals and suggestions raised today would be carefully examined by his authorities. Accordingly, he did not wish to express any definitive views at this stage. An informal meeting in advance of the next formal meeting could be held to discuss the way forward, if needed. The representative of the United States indicated that she did not share the interpretation of the delegation of Hong Kong, China with respect to the relationship between the negotiations in this Working Party and those pursuant to Article XIX. These were parallel negotiations governed by different mandates. She could not support the proposal concerning the setting of a timeframe for the information exchange, as it would in effect amend Article XV:1.

79. The representative of the European Communities wished to react to the latest intervention by the delegation of Hong Kong, China. He could not see any relation between the points made regarding the interpretation of the different mandates. Rather, he had noted that a number of proposals had been put forward relating to the concept of trade distortion. The best way to gather information on this issue seemed to be to ask Members that had encountered problems because of subsidies granted by others to inform the Working Party of their experience under Article XV:2. With respect to the suggestion relating to the Chairperson's report, he noted that the negotiations were under the umbrella of the Special Session. However, the problem raised related to the implementation of an obligation that had been in effect since 1994 and not to the ongoing negotiations. Issues of implementation were dealt with in the Regular Session.

80. In summing up discussions, the Chairperson noted that many procedural and substantive suggestions had been made in the light of the informal communication from the delegation of Hong Kong, China, including on timeframe and on further work by the Secretariat. She urged all delegations to carefully consider these suggestions in preparation for the next meeting. On the study by UNCTAD, she undertook to let the membership know when the document would be available. On information exchange, useful ideas suggesting some flexibility regarding the relevant format were discussed; delegations might want to exhaust existing resources in the first instance. She also considered that the proponents of the discussions on subsidies might want to set an example, and commended the delegation of Chile for intending to submit information at the next meeting. Hopefully others would do the same. She noted that some delegations had called for concrete negotiating proposals and that a range of views had been expressed regarding the nature of the information exchange. A delegation, supported by others, had called for a concrete timeframe for the submission of information, while others placed higher priority on the development of a definition. A large number of delegations would prefer the various aspects to proceed in tandem. There seemed to be general agreement that the definition of subsidy in the ASCM provided a useful starting point for further discussion on this issue. She proposed that the Working Party take note of statements made.

IV. DATE OF THE NEXT MEETING

81. The Chairperson indicated that the Working Party would hold its next formal meeting during the next cluster of services meetings, the exact date of which would be announced in due course.

V. OTHER BUSINESS

82. The representative of Chile wished to draw the attention of delegations to the discussion in the Negotiating Group on Rules, the following day, of a communication from Chile on Article V of the GATS.

Working Party on GATS Rules

REPORT OF THE MEETING OF 23 JUNE 2004

Note by the Secretariat¹

1. The meeting of the Working Party on GATS Rules was chaired by Ms. Clare Kelly, from New Zealand. The agenda for the meeting, contained in WTO/AIR/2337, included the following items: subsidies, government procurement, emergency safeguard measures, date of the next meeting and other business. To assist delegations in the preparation of the meeting, the Chairperson had prepared an annotated agenda contained in JOB(04)/74.
2. The Chairperson noted that the order of the items on the agenda had been modified and indicated her intent to continue to do so, taking into account a variety of factors. She did not think that the order of the items should have any substantive bearing. Delegations needed to discipline themselves, including regarding the length of their interventions, so that all issues could be appropriately discussed. Even though the current meeting of the Working Party would last only a half-day, the informal meeting of 11 June had permitted to alleviate some of the time pressure. The agenda was adopted.
3. The Chairperson indicated that she had held, since assuming her new position, informal discussions with many delegations regarding the work of the Working Party. It was evident that not all delegations attached the same priority to each of the three issues under the responsibility of the Working Party. However, she thought that all delegations did want to thoroughly examine the three topics, discuss various technical issues without prejudging any given outcome, and avoid getting tangled in procedural problems. She would pursue consultations with delegations as she had not yet been able to talk to all.
4. The Chairperson also recalled that no decision had been taken at the informal meeting on whether the Secretariat should prepare a non-attributable and informal summary of discussions at that meeting. Indeed, a delegation had expressed concerns regarding how such informal summaries could be interpreted. The Chairperson believed that a summary would help keep track of the Working Party's discussions and avoid repetition. In addition, it had to be kept in mind that many developing countries had limited resources and could not attend the informal meeting. A summary might also be of assistance to them. To alleviate the concerns expressed, she suggested that the non-attributable summary by the Secretariat take the form of a non-paper instead of a JOB document. The representative of Hong Kong, China enquired about the difference between a summary in the form of a non-paper as opposed to a summary in the form of a JOB document, as had typically been done in the past. The Chairperson noted that a key difference was that the status of the proposed summary would be like that of a room document and, as such, it would not appear on the document distribution facility. It would however be translated and distributed to delegations. Since there were no objections, she suggested that the Working Party proceed as suggested. It was so agreed.

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

I. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV)

5. The Chairperson said that discussions during the last meeting had focused on the list of examples of subsidy programmes provided by the delegation of Chile in the informal document JOB(03)/218. Many felt this was a useful way to advance work, as it could help delegations assess whether some types of subsidies created trade distortions of concern to them. Also, she noted that the delegation of Chinese Taipei had recently circulated an informal communication (JOB(04)/78). Like the room document presented by that delegation at the last meeting of the Working Party, it discussed the definition of subsidy and other issues in the light of the examples mentioned in Chile's communication. In addition, the delegation of Chinese Taipei had circulated a new room document, which provided answers to questions raised on its contribution during the last meeting.

6. The Chairperson invited delegations to offer any additional comments on the latest Note by the Secretariat (S/WPGR/W/25/Add.4), which contained information on subsidies found in recent Trade Policy Reviews (TPR). Delegations might also want to build on previous discussions on the definition of subsidies and to see how progress could be made on the information exchange. Those that had not yet shared information might be able to provide suggestions as to how to overcome the difficulties encountered. Further, she asked delegations to start giving some thought to how best to organize future discussions so as to get a clearer picture of the need for disciplines to avoid the trade distortive effects that subsidies might have. In the last two or three meetings, various delegations had raised a number of issues and basic questions that had not been fully discussed, even though they often concerned core tasks of the Working Party. This might be more fully addressed at the next meeting. Finally, she reported that UNCTAD had not yet finalized its study on subsidies.

7. The representative of Chinese Taipei said that the informal communication from her delegation, contained in JOB(04)/78, was based on the room document which she had presented at the last meeting. It had been modified to take into account the comments then made by various delegations. She reiterated that the purpose of this document was to test, in the light of some concrete examples, whether and to what extent the Agreement on Subsidies and Countervailing Measures (ASCM) provided an appropriate basis for developing a working definition of subsidies in services. She did not think that the ASCM necessarily was the only source of inspiration. The Agreement on Agriculture contained subsidy disciplines and her delegation did not wish to preclude looking at this model, even though that Agreement used the ASCM definition as its reference. She also drew attention to the room document that her delegation had circulated for the current meeting, which contained answers to specific questions raised pursuant to her intervention at the last meeting.

8. The representative of Switzerland thought that the submissions from Chile and Chinese Taipei contributed to improving the Working Party's understanding of the issue. Her delegation thought that export subsidies had to be addressed as a priority; they were the most harmful type of subsidies. Export subsidies distorted competition in third markets; suppliers from such markets faced unfair competition from abroad, as did exporters from other countries. In addition, export subsidies did not appear in Members' schedules. The value of new market access commitments would be diminished if competition was distorted by subsidized suppliers of a third country. Another advantage of dealing with export subsidies as a priority was that it seemed easier to tackle the most harmful categories of subsidies rather than all of them at once. For subsidies other than export subsidies, it was not always obvious to determine whether a trade distortive effect existed. In contrast, trade distortive effects were inherent to export subsidies. Further, while many subsidies were motivated by national policy objectives, export subsidies were in the overwhelming majority pure trade measures. Focusing on them thus did not involve discussing the issue of legitimate policy objectives and might allow Members to have an early harvest. Her delegation hoped that Members, in the context of the current Round of negotiations, could design and agree on a process of progressive phase-out of export subsidies in services sectors. She envisaged a process that was flexible and compatible with the architecture of the GATS.

9. With respect to the informal communication from Chinese Taipei, she noted that paragraph 12 stated that service suppliers under mode 1 would probably be beneficiaries of the programme. She considered that suppliers under modes 3 and 4 would also be covered by the programme. As far as the effects of the programme were concerned, she hoped to hear the views of the delegation of Chinese Taipei with respect to the effects of the subsidy programme under these modes. Concerning the sharing of information, it was important to comply with the clear mandate in Article XV. Since achieving transparency was crucial and no progress had been made on this issue, she considered that it was time to agree on a target date for the required exchange of information. With respect to the definition of subsidies, she wished to draw attention to two past Notes prepared by the Secretariat, S/WPGR/W/13 from 1996 and S/WPGR/W/13/Add.1 from 2000, which listed limitations related to subsidies contained in Members' schedules. She asked whether the Secretariat could prepare a Note, before the end of the year, on the definitions of subsidies contained in schedules.

10. The representative of Colombia wished to focus on the first example contained in the communication from Chile, the Exportation Programme. She raised four issues: the financial contribution, the benefit, the provider of the subsidy, and domestic content. First, she thought that it was pertinent to assess whether the programme involved a financial contribution. This assessment was made difficult by the lack of detailed information, particularly on the type of activities covered by the programme. For example, the programme allegedly provided for a sharing of the costs of export market development activities, but it was not clear what such activities entailed. Did the programme cover such activities as market intelligence, development of commercial offices abroad, information on regulatory conditions designed to improve exporters' knowledge of foreign markets? Would such activities be permitted? The representative pointed out that the description of the programme said that the activities contemplated were those that suppliers could not, or would not, normally attempt on their own. Could that mean that the activities concerned general infrastructure, that is the type of services that governments should provide? Second, assuming there was a financial contribution, it would be necessary to analyse the value of the contribution received by the exporter. The description of the Exportation Programme did not make clear whether the exporters would reimburse the costs incurred by the government. If there was full reimbursement, no benefit would be conferred. An element of benefit could be identified if it were clear that the programme resulted in lower costs for the exporter. She wondered whether, in such a context, repayment of 4% of the company's incremental revenues was equal to the costs to the government. Third, regarding who granted the financial contribution, she considered that the terms "a government or any public body within the territory of a Member", which were used in the ASCM, could apply and cover all levels of government. Fourth, concerning domestic content, which was a condition of eligibility for the Exportation Programme, she thought that this concept was probably more difficult to use in services than in goods trade. Defining the origin of a service might be more complex for certain modes of supply. This issue could benefit from further discussions.

11. The representative of the Republic of Korea agreed with Switzerland that discussions should concentrate on export subsidies and lead to a concrete result at the end of the negotiations. Regarding the definition of subsidies, she considered that the definition in the ASCM could be applied to services. She wished to focus on the three questions listed in Chile's communication. Concerning the first question, on the element of subsidy, she thought that the Exportation Programme involved a financial contribution, but sought clarification on the comments by the delegation of Chinese Taipei concerning the repayment of 4% of incremental revenues. The fact that support was not provided directly to enterprises but rather to trade associations, which she assumed were not governmental organizations, made the analysis more complex. The government was not providing subsidies directly to a company; the relationship was indirect. With regard to assistance for market information and intelligence, she thought that the link to exports was more limited and lacked specificity. Concerning the beneficiaries of the programme, she did not think that distinctions pursuant to modes of supply were made when granting subsidies to companies. For example, the companies that received the

subsidies could use the contribution for advertisement or promotion to attract foreign consumers. Complexities relating to mode 3 should also be further discussed. Concerning the effects of the programme, she considered that the issue of subsidy and that of distortion should be separated. Based on the ASCM, the Exportation Programme would be considered a prohibited export subsidy because it included a domestic content requirement. The analysis of trade distortions should take into account the situation of small and medium-sized enterprises, but this could best be addressed horizontally as part of the discussion of legitimate policy objectives. Further, regarding the contribution by Chinese Taipei, she wished to point out that Article 2.3 of the ASCM provided that any export subsidy would be deemed specific. Hence, there was no need for further analysis in this regard.

12. The representative of Japan thought that the communication from Chile was useful for advancing discussions and welcomed the contribution from Chinese Taipei. He hoped Members could present information on subsidies they found trade distortive, on the basis of the inputs provided by their national industries. The representative of China thanked the delegation of Chinese Taipei for providing, in its room document, written answers to questions raised at the last meeting and indicated she would revert to this at a later time.

13. The representative of Hong Kong, China noted that the communication from Chinese Taipei, even though its purpose was to contribute to the development of a working definition of subsidies in services, referred to some notions in the ASCM that did not relate to the definition of subsidies. For example, the paper touched upon issues relating to trade distortions, which he felt should be examined separately from the definition of subsidies. He agreed that it was useful to examine the applicability to services of concepts contained in the ASCM, and he saw four key elements in that regard. The first was the definition of subsidy in Article 1, which was generic and unrelated to the notion of trade distortion. Second, the concept of specificity in Article 2 was related to the concept of trade distortion since only specific subsidies could be actionable under the ASCM. A third element was the scope of prohibited subsidies in Article 3, which was distinct from the notion of specificity. A fourth element related to the scope of actionable subsidies. In that regard, Article 5 of the ASCM mentioned adverse effects on other Members: injury to domestic industry, nullification and impairment of benefits, and serious prejudice to Members' interests. He thought that it would be useful to distinguish these elements so as to better structure discussions in the Working Party. The representative considered that apart from the definition, all other elements related, to varying extents, to the notion of trade distortion. However, trade distortion should not be directly equated with these elements. The fact that certain subsidies were not specific did not necessarily mean they were not trade distortive. For example, prohibited subsidies were deemed specific even if not captured by the concept of specificity in Article 2.1. Likewise, possible difficulties in assessing adverse effects of subsidies in services did not necessarily mean that these were not trade distortive. Moreover, the representative noted that the communication made various references to adverse effects as well as to trade distortions. However, adverse effects were not the only conceivable type of distortion; for instance, subsidies contingent on exports were prohibited in the ASCM. He thought that notions such as adverse effects, injury, or actionable were not directly relevant to the examination of subsidies contingent on exports.

14. Turning to the first example listed in the communication from Chile, the Exportation Programme, he wished to echo the comments of the delegation of Switzerland on the trade distortiveness of export subsidies, especially given the relevance of such effects to all Members. It might be useful to focus on the concept of export contingency in order to see whether it could be applied in the context of trade in services. This might provide some insights into the possibility or necessity of developing disciplines. In examining this issue, a key distinction to keep in mind was that services, unlike goods, were generally intangible. Further, he agreed with comments made by the delegation of the Republic of Korea on the relevance of making distinctions by mode of supply. He did not think that the effects of export subsidies could easily be distinguished or analysed on a modal basis. Subsidy programmes related to the export of services were not specific to any particular mode. Effects in third markets might not be best captured by an analysis according to mode of supply.

Regarding information, he welcomed the suggestion by the delegation of Japan that Members provide information on the subsidies which their suppliers have found to be distortive, but he thought this could not be a substitute for the information exchange mandated under Article XV. Paragraph 1 of that Article referred to the exchange of information on all subsidies affecting trade in services and not only to trade distortive subsidies. He recalled that his delegation had made various suggestions in the past, for example that Members use their own definition, share information in a gradual manner, or share the difficulties they had encountered in collecting information. He asked those delegations that had scheduled limitations relating to subsidies to indicate the definition they used. Members whose subsidies had been identified in the TPR reports, as compiled by the Secretariat in S/WPGR/W/25 and addenda, could share information on these subsidies and, if appropriate, explain why they did not think that the measures involved actually constituted subsidies.

15. The Chairperson said that the Secretariat was not aware of definitions of subsidies contained in schedules, but could verify and report at the next meeting.

16. The representative of Chile considered that the communication from his delegation had helped to initiate a substantive discussion and move away from the chicken-and-egg problem, which had characterized deliberations on the need for a definition. Many themes could be further analysed, but he thought that delegations wanted to concentrate on export subsidies. Obviously, many aspects needed to be discussed, relating for example to definition, domestic content, or the applicability of the modes of supply. His delegation aimed at providing a more detailed intervention in this regard at the next meetings. All issues, however, could not be addressed at once but might better be tackled in a gradual manner. Discussions so far seemed to suggest that delegations agreed that export subsidies could distort trade in services. It therefore seemed reasonable to focus work on them. He hoped to see Members' positions start converging towards the need for disciplines in this area. Many limitations in schedules related to subsidies, often in the horizontal section, without providing any definition. However, this should not prevent Members from discussing issues relating to export subsidies. After all, the GATS did not contain a definition of services. He agreed with other delegations that the definition in the ASCM could be used as a basis. Concerning the link between subsidies and modes of supply, his delegation did not have a final position, but thought that the delegation of Hong Kong, China might be right in saying that such a distinction was not fundamental. Regarding the exchange of information, he indicated that his delegation hoped to soon make a contribution. He supported the idea of fixing a target date for the exchange of information and thought that the end of the year could be a reasonable timeline. Finally, regarding the requests made for work by the Secretariat, he believed that, even if no definitions were found in schedules, further information could be provided on limitations relating to subsidies. Members that had scheduled limitations could explain what definition of subsidies they had in mind.

17. The representative of the United States said that her delegation continued to question the usefulness of hypothetical subsidy programmes, as contained in the communication from Chile. The mandate under Article XV:1 referred to the voluntary submission of information by Members on their own subsidies. The communication from Chile and other recent contributions did not follow this approach. She hoped that interested Members would provide information on their own domestic subsidies, if any. To go beyond what was contemplated in Article XV:1 meant going beyond what Members had agreed and presupposed the existence of a definition of subsidies in the services context, which was not the case. To illustrate problems of using hypothetical examples, she noted for discussion purposes that even under the disciplines of the ASCM, which might or might not be relevant in the context of services, some of the examples would not be classified as actionable subsidies. For example, many governments provided general trade statistics and information regarding export market opportunities. Export promotion activities could encompass government guides on how to export, overseas marketing reports, and marketing bulletins. She questioned whether such activities should be subject to specific disciplines. However, export promotion programmes that provided, for example, low cost loans to particular companies might be an area that

the Working Party might want to examine further. Regarding Chile's example on infrastructure, she noted that under Article 1 of the ASCM the provision of a good or service by a government could be considered a financial contribution and potentially a subsidy if a benefit was provided to the recipient. However, the provision of general infrastructure was not a financial contribution. The issue, in the context of the ASCM, was how general infrastructure was to be defined. In the view of her delegation, certain types of infrastructure created for the broad societal welfare of a country, region, state or municipality should not be subject to specific disciplines. This category included, for example, interstate highways, schools, health care facilities, sewage systems or police protection, assuming they were provided for the public good and where available to all citizens on the same terms. Obviously, some other types of infrastructure could be more difficult to categorize in this way. In concluding, she reiterated the need for caution relating to questions on what would fall under Article 1:3(b), what would fall under the scope of the GATS, and what would fall under the scope of scheduled commitments. Her delegation was uneasy about the Working Party discussing interpretations of the ASCM. That Agreement was monitored by another Committee of the WTO.

18. The representative of Mexico considered that contributions such as that of the delegation of Chinese Taipei provided a basis for substantive discussions and decisions on the types of disciplines to elaborate. He wanted to follow the approach taken by Chile and Chinese Taipei, that is to consider concrete examples on the basis of three questions: what was the form of the subsidy, who was the beneficiary, and what were the effects on trade? Regarding the aspect of the first example that related to the industry, he agreed that to the extent that specificity existed and adverse effects could be demonstrated, there was no doubt that the programme entailed a subsidy. Concerning the second aspect that related to trade associations, he believed that more analysis would have to be conducted before determining whether a subsidy was involved. He thought that the second example was very clear and he considered that Chinese Taipei's identification of elements of subsidies in sub-paragraphs (ii) and (iv) of its communication, relating to income tax exemptions, was accurate. With respect to the third example, relating to tourism, he believed that the import duty exemption on advertising and promotional material, which benefited only some suppliers, was more of a national treatment issue. In such a case, the commitment, if any, would have to reflect such measures. He wondered why the contributors thought it was necessary, at this stage of the discussions, to identify the beneficiaries, or those affected by the subsidy, according to modes of supply. It was more important to identify whether a subsidy existed and leave aside, for the moment, the issue of the modes of supply.

19. Concerning the fourth example, on scientific research and technology transfer, he considered that the effects would have to be further analysed before determining whether or not a subsidy was involved. This could be done through an investigation, and delegations might better focus on the parameters upon which it should be based. Regarding the fifth example, he again wondered why it was necessary to discuss the modes of supply at this stage of the analysis. If the subsidy resulted in a change in the conditions of competition in the market, certain suppliers would be affected, but this could be determined through a subsequent investigation. Finally, he wished to provide answers to each of the questions listed in paragraph 31 of the communication from Chinese Taipei. Regarding sub-paragraph (a), he answered in the affirmative to both questions. On sub-paragraph (b), he also answered positively. The definition of subsidy should be based on experience. Concerning sub-paragraph (c), his answer was positive, but only in part, because further discussions would be needed. With respect to sub-paragraph (d), he agreed that certain subsidies should be characterized as non-actionable, for example subsidies aimed at the development of a viable services sector in developing countries. Developing countries should benefit from certain prerogatives. On sub-paragraph (e), he believed that beneficiaries could, in principle, be identified, although more analysis was needed and much could be gained from the experience acquired in other areas. Concerning sub-paragraph (f), he thought that the answer to this question was found in the first element of the first example, which in his view included the import substitution effect. Regarding sub-paragraph (g), he believed it was difficult to answer all questions at this time, noting that the task at hand was the elaboration of disciplines, which would form the basis for investigations that might be conducted. Keeping that in

mind, he thought that if a subsidy affected trade in more than one mode of supply, such effects would have to be considered in the light of possible countervailing measures. On sub-paragraph (h), the concept of trade distortions in services would have to take into account the modes of supply. He reiterated that this should be discussed after other elements of disciplines had been identified. On sub-paragraph (i), he believed that subsidies mentioned in schedules should be assessed case-by-case. Finally, lack of information should not be used to avoid substantive discussions on this issue. The communications from Chile and Chinese Taipei provided a useful basis for developing disciplines pursuant to the mandate in Article XV.

20. The representative of Australia considered the contribution by Chinese Taipei to be useful for discussions. The Agreement on Agriculture, even though it contained disciplines on domestic support, did not contain a definition of subsidies. The definition contained in the ASCM was the reference point. In paragraph 14, the contribution noted that the ASCM prohibited export subsidies and import substitution subsidies because of their impact on trade. He wished to draw attention to the fact that certain subsidies were considered non actionable if they were not specific and made widely available. Regarding paragraph 15, he noted that subsidies contingent on exports or on the use of domestic over imported goods were deemed specific in the ASCM. They were prohibited because they were presumed to cause serious trade distortions. In such cases, a complainant did not need to show trade effects. Finally, he thought that the question contained in paragraph 31(b) was interesting, as it seemed to suggest that the development of future disciplines on services subsidies might follow the development of rules on subsidies for goods. For example, during the Tokyo Round, an illustrative list of export subsidies was developed, without having a definition of subsidies.

21. The representative of the European Communities said that his intervention was without prejudice to the EC's final position on necessary disciplines. He reminded that on 6 July 2000, his delegation had circulated an informal communication describing the Community regime for state aid. The rules applied both to services and to goods sectors. The application to services might raise particular issues, namely when determining whether a subsidy was trade distortive. For example, it was not always easy to establish the productive capacity of a service company or sector. These concepts were normally used in certain state aid disciplines in the EC. The core issue was whether state aid distorted competition, and not solely whether it distorted trade. Hence, EC rules in this area were more stringent than any disciplines that could be developed in the Working Party. In addition, as highlighted in his delegation's communication from 2000, compliance with the EC rules on state aid was monitored by a central and independent authority, i.e., the Commission. The general principle was that state aid was banned because it distorted competition by giving some enterprises an advantage over others. However, the possibility existed that certain state aids be permitted by the Commission. In this regard, a number of public policy objectives were exhaustively listed in the Treaty. In addition, specific rules regarding transport were in place, given the different policy framework for that sector. Provision was also made to ensure that the provision of services of general interest was not prevented. He reminded delegations that the Commission published every year a scoreboard on state aid, which was available on the Commission's website. However, the information did not distinguish between services and non-services sectors.

22. His delegation needed additional time to further analyse the communication from Chinese Taipei. In a preliminary manner, he observed that the only example listed in the communication from Chile that could eventually be considered trade distortive, was the first one, the Exportation Programme. While others had noted that export subsidies were trade distortive *per se* and could not be justified by public policy objectives, he hoped for further elaboration on this point. Such statements might be too sweeping. Further, he recalled that paragraph 2 of Article XV provided for consultations in cases where a Member felt that it had been adversely affected by a subsidy of another Member. He proposed that Members that had received complaints from their industry and engaged in consultations pursuant to Article XV share the results with the Working Party.

23. While noting that the communication from Chinese Taipei was being further analysed by his authorities, the representative of Canada recalled that his delegation had expressed doubts as to whether the ASCM could readily be applied to services. Caution needed to be exercised in that regard. In light of the discussion today, he thought it might be worthwhile to further discuss the concept of trade distortion. The Working Party needed to consider whether there was a problem and, if so, what its scope and magnitude was. Since the discussion of hypothetical examples had highlighted that information was lacking to assess the effects of programmes, Members might want to come forward with actual cases of distortive subsidy programmes.

24. The representative of Chinese Taipei thanked delegations for the comments and questions raised with respect to the informal communication from her delegation. She considered that the discussion had underscored a few key questions, such as the meaning of export subsidies, the definition of trade distortion, and the relevance of the modes of supply. Given time constraints, she said that she would provide detailed replies for the next meeting. In her view, the discussion had helped to highlight a number of areas where, given the special characteristics of trade in services, further work would have to be done. In this regard, she drew attention, in particular, to paragraph 31(e) of the communication, which asked how the benefits to the recipient of the subsidy could be defined under the various modes of supply when traditional notions of domestic and foreign origin, exports and imports, could not readily be transferred to services. Also, paragraph 31(f) raised the question of how export subsidies could be defined under modes 3 or 4, and paragraph 31(i) whether subsidies inscribed in services schedules should be exempt from eventual disciplines.

25. The Chairperson noted that the Working Party had had a very useful discussion of the informal communications from Chinese Taipei and Chile. Export subsidies, the definition of subsidy, and possible trade distortive effects had attracted particular interest. Delegations had also raised the question of the information exchange and a variety of ideas had been put forward so as to make a greater collective effort to meet the mandate under Article XV. In addition, a suggestion had been made for the Secretariat to take a closer look at the limitations relating to subsidies found in schedules and, in particular, to see whether any definitions had been included. She proposed that the Secretariat update its previous Notes on this issue, contained in S/WPGR/W/13 and S/WPGR/W/13/Add.1, and use the opportunity to list any definitions of subsidies contained in schedules. She proposed that the Working Party take note of statements made.

II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII)

26. The Chairperson suggested that delegations concentrate on the new contribution from the delegation of the European Communities, contained in S/WPGR/W/48, concerning a framework under GATS for procurement of services. She recalled that it had been agreed at the last meeting that the Secretariat expand on its earlier Note on government procurement provisions in regional trade agreements and noted that, given the amount of information involved, it could be ready for Members' consideration at the next meeting of the Working Party.

27. Concerning the Note being prepared by the Secretariat, the representative of the United States said that her delegation had expressed a concern at the last meeting about the identification of relevant provisions. She thought that consultations with delegations from countries participating in such agreements might be warranted before the document was circulated. She wondered whether, if a particular agreement did not specifically identify a government procurement provision, the Secretariat would make a judgement as to what was effectively involved. She wished to know whether the Secretariat had so far only considered provisions explicitly referring to government procurement. If so, no consultations might be needed. After consulting with the Secretariat, the Chairperson said that the Note was examining those provisions which the relevant agreements presented as pertaining to government procurement.

28. The representative of the European Communities indicated that the new communication built on two previous contributions from his delegation, from July 2002 and May 2003. It aimed at providing some answers to questions raised during the last meetings, notably by Singapore in an informal communication of December 2003, contained in JOB(03)/216. As requested by a number of delegations, the communication provided examples of commitments and MFN exemptions relating to government procurement. These examples underscored the feasibility of commitments on government procurement in services, including with respect to thresholds, possible limitations on the coverage of entities, and various modes of supply. The examples illustrated the flexibility of the framework proposed, which allowed Members to adjust their commitments in line with their developmental and public policy objectives. The proposed framework would also permit to grant more favourable treatment to services suppliers from developing countries or regions. The communication further addressed the relationship between, on one hand, commitments relating to government procurement and, on the other hand, commitments under Articles XVI and XVII of the GATS. It also aimed to respond to questions about the treatment of public contracts covering services under different CPC categories, as well as questions about the scope of the agreement, in particular the distinction between services contracts and goods contracts. On this issue, his delegation proposed to follow, *mutadis mutandis*, the precedent used in the GATT Code on Government Procurement. With respect to the relationship with the Government Procurement Agreement (GPA), the communication proposed to include an exception in a GATS Annex on Government Procurement so as to exempt GPA commitments from the application of the MFN obligation. Finally, the contribution underlined the importance of developing appropriate procedural rules in order to ensure the commercial value of future GATS commitments on government procurement.

29. The representative of Chinese Taipei had a number of questions on the communication. First, paragraph 3 suggested that even when no commitments had been made on government procurement, all GATS provisions except Articles II, XVI and XVII applied to relevant laws, regulations and requirements. She asked whether the conditional obligations would apply to government procurement once a sector was included in the schedule, even if no government procurement commitment was taken. For example, if a Member's government procurement regulations or practices were inconsistent with the obligation contained in Article VI:2, in particular with respect to domestic review, could another Member have recourse to the DSU pursuant to Article XXIII? She noted that provisions of the GATS other than Articles II, XVI and XVII might apply to government procurement since they had not been explicitly excluded through Article XIII:1. However, paragraph 2 of Article XIII, which called for negotiations, cast doubt on whether all other GATS provisions applied to government procurement. Second, did the EC consider Article I:3(a), which referred to measures taken by central, regional or local governments and authorities, as well as to non-governmental bodies in the exercise of powers delegated by governments, to be relevant in the context of their proposed framework?

30. Third, regarding example 6 in the communication, she said that the limitation inscribed for government procurement was quite different from that used in the market access and national treatment columns. In these two columns, the annotation "unbound except..." clearly indicated what was not subject to the obligations. In contrast, the government procurement column said "none for contracts above 200,000 SDR". There was no mention of the level of treatment granted for contracts below 200,000 SDR. Fourth, would it be necessary for a Member to list the covered entities? Fifth, could the EC explain how Members could schedule their government procurement commitments under the various modes of supply. What was the meaning of a government procurement commitment under mode 4? This issue needed to be further clarified and should be subject to further discussions. Finally, she asked how the proposed framework would apply to two scheduling situations. In the first case, market access was "unbound" and the commitments in both the national treatment and government procurement columns read "none". In the second case, commitments in both the market access and government procurement columns were without limitations and national

treatment was "unbound". What was the value of commitments under government procurement in such situations?

31. The representative of Singapore drew attention to an earlier informal communication from his delegation, contained in JOB(03)/216. He thought that the examples provided in the communication from the EC helped to illustrate what government procurement commitments would look like and how they would relate to commitments in the market access and national treatment columns. These examples were further studied by his authorities and he would provide more detailed views at a later time. Without prejudging the scope of the mandate under Article XIII, he assumed that there would be two parts to the negotiations. First, the government procurement commitments and, second, the Annex which would contain certain disciplines to govern these commitments. Work on this Annex would help to better understand the implications, reach and depth of government procurement commitments. The communication from the EC provided some answers to questions raised in the earlier communication from his delegation. The communication had noted, in paragraph 2(b), that while GATS Article XIII:I referred to the exclusion of MFN, market access and national treatment, possibly in the interim period, it was silent on the applicability of other GATS provisions to government procurement in services. Could this be interpreted, by implication, to mean that all other GATS provisions already applied? Paragraph 3 of the EC's communication indicated that government procurement laws and regulations were subject to all GATS provisions apart from those contained in Articles II, XVI and XVII. He took note of this view, and his authorities would reflect on it. Paragraph 4 of the communication suggested that government procurement commitments should apply to all levels of government, as envisaged in GATS Article I:3. He felt it was appropriate to put commitments on government procurement on the same footing as other GATS commitments.

32. The representative then drew attention to the question contained in paragraph 2(f) of his delegation's communication, which related to Article III:3 of the GPA. He thought that the communication from the EC captured the concepts reflected in this Article. Indeed, paragraph 8 of the communication stated that any benefit gained from government procurement commitments under the GATS would be subject to the traditional commitments on market access and national treatment. He hoped the EC could confirm the intention to apply the concepts found in GPA Article III:3. His next question related to the interface between the GPA and the GATS obligation of MFN treatment. The EC, in paragraph 15, proposed a one-off possibility to schedule MFN exemptions. Paragraphs 21 to 25 further elaborated on the interface between the GPA and the MFN obligation of the GATS. He felt, on a preliminary basis, that the EC's suggestions in that regard were practical. Concerning example 6, which addressed a situation where a contract covered several services sectors, he asked how the "main object of the contract" could be determined in practice. What was the threshold value of the covered services? What percentage of the total value would be governed by the commitment? Concerning paragraphs 18 to 20 of S/WPGR/W/48, where the EC suggested possible ways to address contracts involving the provision of both goods and services, he thought that the EC's proposed use of Article 1.1 (a) of the GATT Code on Government Procurement was interesting and invited the EC to operationalize this proposal.

33. The representative of Canada wished to offer some preliminary comments and seek clarifications. She appreciated the concrete nature of the EC communication which allowed the discussions to move forward. However, her delegation had some reservations about the level of complexity involved in determining what commitments actually applied to a specific procurement case. The EC might wish to simplify the approach. With respect to example 2, paragraph 4 pointed out the breadth of the organizations covered by the government procurement commitment. She wondered if the EC could explain how partial commitments, both within a specific level of government and for an entire level of government, would be expressed. Concerning example 3, she noted that many WTO Members had structures where decision-making about the type and form of preferential policies was decentralized. How could this be addressed? She also wished to see how an exception for a 5% domestic price preference would be dealt with.

34. Examples 4 and 5 reflected a situation where government procurement commitments for mode 4 were more open than the corresponding market access and national treatment commitments. She wondered whether the delegation of the European Communities could provide further explanation. She understood that example 5 also dealt with a situation where no limitations appeared in the market access and national treatment columns under mode 3, but the government procurement commitment was more restrictive. How would these restrictions be operationalized in individual procurement cases? Moving to example 6, where a procurement covered several sectors, she referred to paragraph 13 of the EC communication ("and if the contract cannot be divided into two different contracts"). She asked if the intention of the EC was to suggest that procurements be divided on the basis of GATS commitments? With respect to MFN exemptions, she hoped the EC could provide practical examples of preferential conditions, and indicate how these would be operationalized in individual procurement cases. Finally, with respect to thresholds, she asked if the EC had considered the possibility of scheduling thresholds horizontally so as to reduce complexity. In concluding, she indicated that the proposal helped to clarify one possible methodology for the scheduling of commitments on procurement in the GATS. The feasibility of such an approach was closely linked with the procedural rules that would apply. Her delegation shared the EC's view on the importance of developing such rules.

35. The representative of Hong Kong, China wished to focus on some technical issues raised by the EC's communication. As a general point, he believed that the proposed framework should not affect Members' obligations under the GPA in respect of services. The relationship of the proposed framework with the GPA should be clearly addressed in the proposed GATS Annex on Government Procurement. He asked how the proposed framework would relate to Members' obligations under the GPA in respect of services. More particularly, which rules would apply in situations where certain services were covered by commitments under both the GPA and GATS? Would bidders from Members who are Parties to the GPA and those of Members who are not Parties be subject to different rules? What would be the situation if both types of bidders were involved in a particular procurement? Would there be any difference in the obligations applied to them? With respect to the scheduling of commitments on government procurement, he asked whether the EC was proposing MFN and national treatment obligations as general obligations or as obligations only applicable to those sectors where commitments on procurement were undertaken? Further, he noted that the communication proposed that commitments in the government procurement column should be read in conjunction with Members' existing commitments on market access and national treatment for the relevant sector and mode. He noted the examples included in the communication, but hoped the EC could provide greater clarity on this issue. For instance, in example 4, "unbound" was inscribed under both modes 1 and 2 for national treatment, while the government procurement commitment said "none for contracts above 5 million SDR". In such a situation, would the latter commitment be confined, in practice, to mode 3?

36. Moreover, the representative invited the EC to explain how the government procurement commitments applied across different modes of supply, especially in respect of modes 1 and 2. He also wondered how a commitment in the government procurement column would be read in conjunction with national treatment commitments across different modes. For instance, under example 3, where full national treatment commitment was granted under modes 1, 2 and 3, would the Member be obliged to provide the same treatment to bidders across all modes of supply? With respect to paragraphs 14 to 17, which related to MFN exemptions, his delegation considered MFN treatment as a fundamental principle of the multilateral trading system. Should the GATS' coverage of government procurement be extended, he did not see why the MFN obligation should not be a general obligation. His delegation needed to reflect further on the EC's suggestion to permit MFN exemptions with respect to government procurement in services. In considering whether new derogations to the MFN obligation were warranted, his delegation would take into account the experience with existing MFN exemptions. He asked the EC whether, and if so how, the elements of non-application and reciprocity in the GPA could be reconciled with the proposed MFN exemptions

for government procurement in services. He also wished to obtain more specific details on the proposed provision in the Annex that would exclude GPA commitments from the MFN obligation.

37. With respect to example 1 of the EC's communication, where no commitments were taken for government procurement, the representative of Switzerland asked why the EC considered that it was necessary in such cases to inscribe "unbound" in the government procurement column. In comparison, when no additional commitments were undertaken, the additional commitment column remained empty. She wondered why the EC was proposing in that regard an approach different than the one taken in the case of additional commitments. Concerning example 6, the communication stated that in cases where government procurement commitments had been made only in one of the two sectors concerned by a given contract, a specific provision of the GATS Annex on government procurement would define the main object of the contract, which would be determined according to the value of each category of service covered. She invited the EC to elaborate on how the relevant value would be defined. Further, in example 6, government procurement commitments for each of the two sectors (computer services and management consulting) were taken for contracts above 200,000 SDR. Would that mean that for a specific contract covering both sectors, the thresholds added up to 400,000 SDR, or would the threshold of 200,000 SDR apply to the whole contract? In a situation where the thresholds were not added up, what would happen if the threshold for computer services was 200,000 SDR and that for management consulting services 40,000 SDR? What threshold would apply to a contract covering both sectors?

38. The representative of the United States hoped to be able to provide further comments and questions at a later time. While believing that Article XIII provided the basis for discussions on government procurement in services, her delegation wanted to ensure that any proposal arising from such discussions supported existing commitments and efforts to broaden commitments under the GPA. She hoped that delegations could circulate the questions raised.

39. The representative of India wished to recall that Members held different views about the scope of the mandate under Article XIII. While paragraph 1 of the communication from the EC stated that the proposal was made within "the framework of the negotiations under the mandate given by GATS under Article XIII:2", he indicated that Article XIII:1 was also relevant, reiterating his delegation's previously expressed position. He also drew attention to the uncertainty that existed with respect to the Singapore issues in the Doha Round. As said in the past, without a clear understanding on the status of these issues, his delegation had to reserve its position in the Working Party in that regard. Notwithstanding these general positions, he hoped to get back to specific questions in upcoming meetings.

40. The representative of Malaysia fully supported the views expressed by the delegation of India.

41. The representative of Japan said that his delegation recognized the potential importance of government procurement in services. The communication from the EC provided a good basis to deepen discussions on this issue. He considered that the proposed approach to schedule commitments on government procurement was easily understandable and interesting. He hoped to hear the opinions of other Members in that regard, especially developing countries. He understood that, according to the EC's proposal, the MFN obligation would always prevail, no matter whether a commitment was made in a particular area. On the other hand, in the GPA, MFN only applied in areas where Members made commitments. The proposed approach thus needed to be further examined. With respect to the entities covered by the potential rules on government procurement in services, he noted that the EC proposed that all entities falling under Article I:3(a) be covered. However, these entities were different from those falling under the GPA. He wondered how such differences could be addressed. In addition, he drew attention to paragraph 22, which mentioned that the GATS agreement on government procurement would not affect GPA rules and obligations. He believed that such a

provision would be important. Finally, with respect to procedural rules, he wondered how far the EC intended to go. Was the intent to follow the approach taken in the GPA with respect to rules on transparency or tendering procedures?

42. The Chairperson suggested that delegations share copies of their questions to the delegation of the European Communities and hoped that written answers could be provided in preparation of the next meeting of the Working Party.

43. The representative of the European Communities said that he hoped to start the next session by providing answers to questions he would not have time to address today. Receiving questions in advance could enable his delegation to prepare written answers before the next meeting. With respect to the question by Chinese Taipei on the applicability of GATS to government procurement, he agreed that all GATS Articles other than Articles II, XVI and XVII already applied to government procurement. A distinction had to be drawn between, for example, Article III on transparency which applied to government procurement in all services sectors and provisions of Article VI which applied to sectors where government procurement commitments had been made, that is only for certain Members through the Understanding on Financial Services. He noted that the negotiating mandate in paragraph 2 of Article XIII was not limited to Article II, XVI and XVII. Negotiations could also touch upon the application of any other Article. With respect to the point made by Chinese Taipei on the meaning of limitations on government procurement, he indicated that such limitations referred to the opening of government procurement. He wished to avoid ambiguities with respect to limitations on national treatment or market access. The inscription "none for contracts above 200,000 SDR" implied that the commitment was "unbound" below that threshold. This could be more explicitly expressed in Members' commitments so as to avoid ambiguity.

44. Some delegations had asked whether it was necessary to list the entities covered by the commitment in the government procurement column. Obviously, if all entities were covered, it was not necessary to list them. However, pursuant to his delegation's proposal, Members would be free to establish either positive or negative lists of entities. Regarding a question by Canada on the different levels of government, he believed that Members could, for example, inscribe "none" for the central government and "unbound" for local governments. The same could be done for entities within a given level of government. Concerning Members that had a federal structure and could thus have different limitations in place for different sub-federal governments, he noted that it was already possible in the GATS to list market access or national treatment limitations for certain specific sub-central governments. The same approach could be taken for commitments on government procurement. With respect to questions relating to Article III of the GPA, he wished to confirm that the same approach would be taken in the proposed GATS Annex on Government Procurement. Government procurement commitments in the GATS would cover the award of contracts, while the provision of the service thereafter would be covered by Articles II, XVI and XVII of the GATS. A foreign company participating in a procurement of another Member would still be subject to any limitations inscribed in that Member's schedule when supplying the service to fulfil the contract. The representative indicated that, due to lack of time, he would answer the remaining questions at the next meeting.

45. The Chairperson noted that the presentation by the European Communities had generated a number of questions, which focused on the scheduling of commitments on government procurement, the scope of the mandate in Article XIII, the nature and scope of the proposed Annex on Government Procurement, and coherence between Members' commitments under the GPA and commitments on government procurement in the GATS. She invited the Working Party to take note of the comments made.

III. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (ARTICLE X)

46. The Chairperson said that the Working Party would not be able, due to lack of time, to enter into a substantive discussion on emergency safeguard measures and suggested that the issue be reverted to at the next meeting. The representative of Venezuela indicated that this agenda item was of significant importance to his delegation, and experts were taking part today. He said that his authorities were revising a communication which they had previously circulated in the Working Party, contained in JOB(01)/48, and that his delegation had wished to offer comments in this regard. He had also hoped to comment on the latest contribution from a group of ASEAN countries, in particular with respect to acquired rights, the duration of the safeguard measure, surveillance, and special and differential treatment. Given time constraints, he agreed to come back to this issue at the next meeting of the Working Party.

47. The representative of the Philippines suggested that emergency safeguard measures be the first issue to be raised at the next meeting of the Working Party. The representative of the European Communities enquired whether the intent was to address government procurement before emergency safeguard measures. The Chairperson said she saw no need now to discuss the order of the agenda items of the next meeting and expressed confidence that all interests could be met.

IV. DATES OF THE NEXT MEETING

48. The Chairperson indicated that the Working Party would hold its next formal meeting during the next cluster of services meetings, the exact date of which would be announced in due course.

V. OTHER BUSINESS

49. No point was raised under this item.

Working Party on GATS Rules

REPORT OF THE MEETING OF 24 MARCH 2004

Note by the Secretariat¹

1. The Working Party on GATS Rules held this meeting under the chairmanship of Mr. Santiago Urbina, from Nicaragua. The agenda for the meeting was contained in WTO/AIR/2271. It included the following items: emergency safeguard measures, government procurement, subsidies, date of the next meeting, other business, and election of the new chairperson. To assist delegations in the preparation of the meeting, the Chairperson had prepared an annotated agenda contained in JOB(04)/11. The agenda for the meeting was adopted.

I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (ARTICLE X)

2. The Chairperson recalled that the decision taken by the Council for Trade in Services on the extension of the negotiating mandate, pursuant to a recommendation from the Chairperson of the Working Party on GATS Rules, could be found in document S/L/159. He then drew attention to the fact that a group of ASEAN Members had circulated a communication (JOB(04)/4) providing further thoughts on an emergency safeguard mechanism. Members now had the opportunity to express their views on that contribution or to raise other substantive or technical issues. In that regard, the discussion of hypothetical examples might continue to prove useful. Members had expressed different views on whether the Shangri-La example justified the application of safeguard measures. However, setting that aside, the type of safeguard measure proposed to be applied in that particular situation and its effects, as well as the determination and calculation of injury, still could be discussed. As always, Members could also consider alternative approaches or other hypothetical situations.

3. The representative of the Philippines noted that the communication from the group of ASEAN Members had been presented during an informal meeting and he asked that his intervention at the time be reflected in the records of this meeting (see paragraphs 4 to 8 below).

4. The representative of the Philippines, speaking also on behalf of the delegations of Brunei Darussalam, Indonesia, Malaysia, Myanmar and Thailand, stressed the importance of the negotiations on rules and on emergency safeguards in particular. He wished to present an informal communication providing further thoughts on an emergency safeguard mechanism. The context for this new contribution was, first, that the delegations concerned had thought of revising the ASEAN draft text submitted to the Working Party in 2000 in order to look where further flexibility could be provided. This exercise also helped to identify points of convergence that had emerged since 2000. He wished to highlight key points of the paper. In terms of the policy context for establishing an emergency safeguard mechanism, he emphasized that given the binding and largely irrevocable nature of services commitments, some form of an ESM would be needed to address, on a temporary and extraordinary basis, adverse consequences that might arise in the implementation of services commitments. He

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

agreed that the application of an emergency safeguard mechanism would not be appropriate for situations not attributable to commitments made by Members. While he thought that regulatory measures could in some instances be adequate, such measures would not be sufficient to adequately address all emergency situations. At the same time, the existence of an ESM would not necessarily mean that a safeguard measure would be the only means of resolving an emergency situation, as various policy tools might be needed. An ESM would provide the necessary margin for the effective combination of policy tools. While some had questioned the usefulness of establishing an ESM because some situations might arise out of structural factors calling for longer-term solutions, it should not be assumed that all emergency situations were structural in nature. An ESM would be a necessary element of a solution in cases where domestic private stakeholders suffered injury, or threat of injury, as a consequence of liberalization and regulatory reforms bound in schedules of commitments. An ESM would be an essential safety net for services liberalization. He thought that most Members, especially developing countries, saw an ESM as an integral component of the overall balance sought to be achieved in the current round of services negotiations. An ESM might be seen as a condition *sine qua non*, or at least something that would be likely to induce, a positive outcome in the overall services negotiations. It would also help governments, particularly in developing countries, to alleviate their constituents' concerns about making commitments. An ESM would provide some comfort since a temporary safety net would be available if the extent or pace of committed liberalization had been misjudged. An ESM might be seen as filling the gap between permanent commitment and permanent withdrawal. Such a safety net would be expected, at least, to encourage Members to consider certain requests for liberalization which would not otherwise have been contemplated. This positive linkage was buttressed by certain delegations stating that they could accommodate greater liberalization given the comfort level that an ESM would bring.

5. With respect to the elements that an ESM could include, the representative of the Philippines said that an attempt had been made to pay heed to calls of various Members for a more creative approach, not too closely patterned after the Agreement on Safeguards. Nevertheless, he considered that some elements of the goods model remained essential for an ESM to be workable and effective. A first element was that any safeguard measure be taken on an MFN-basis, as already reflected in Article X of the GATS. Second, it had been argued that any injury or threat thereof which could arise as a result of liberalization would presumably manifest itself within a concrete period of time. If so, Members could consider a limited window of time during which an ESM could be invoked. Logically this should be a certain period after the actual liberalization or reforms entered into force, although the full entry into force of a Member's commitments might be a better benchmark since the ESM was intended to apply only to liberalization and reforms which had been committed under a Member's schedule of commitments. The third element related to limited duration. A number of Members had said that the period of application of a safeguard measure should be relatively short. While the draft text proposed by ASEAN in 2000 had envisaged an initial period of application of three years, with a maximum of seven or eight years, he thought that the total period would need to be reduced. Maybe this could be seen from the perspective of special and differential treatment, in the sense that developing countries could be the beneficiaries of an extension. Such extension could be of a maximum of three years and subject to either prior review by Council for Trade in Services (CTS) confirming that reasonable grounds existed for continuing the application of the safeguard measure or, alternatively, adopting Article XXI-type procedures. Where a longer or even indefinite suspension of commitments was needed, the situation would probably lend itself to a permanent modification or withdrawal of commitments under Article XXI. In other words, any measure extending beyond the time limit should automatically lead to the initiation of Article XXI procedures. Related to the issue of duration was the notion of provisional safeguard measures. A lot of Members might feel that, given the shortened timeframe and streamlined procedures for invoking an ESM, the provisional safeguard measures proposed in the ASEAN draft text of 2000 might not be indispensable.

6. The fourth element related to acquired rights. A major criticism levelled against an ESM was that it would erode the legal certainty and predictability of market liberalisation and regulatory reform

undertaken by Members as a result of negotiations. Regarding mode 3, where the supply of a service was accompanied by substantial capital investment, concerns had been raised about the possibility that foreign service suppliers be required to disinvest. Given governments' keen interest in attracting investment, they would be most reluctant to consider measures tantamount to forcing disinvestment. Nevertheless, the ASEAN draft had sought to alleviate such concerns by proposing three options regarding acquired rights. For example, the first option aimed at protecting all acquired rights of pre-established foreign service suppliers. Additional concerns had been raised to the effect that the application of a safeguard measure might have anti-competitive effects in a given sector. He thought that the second and third options of the ASEAN draft text addressed such concerns. Based on discussions of the ASEAN draft text, he considered it was logical to adopt an approach that would protect acquired rights along the lines of the second option. However, there might be a need to revisit and refine, in light of the views expressed, the list of activities that the ASEAN draft considered as falling outside the ambit of acquired rights.

7. With respect to the fifth element, conditions of application, the representative of the Philippines thought that, while the onus of proving the need for an emergency safeguard measure should rest with the Member invoking an ESM, the ASEAN draft text could be reconsidered in favour of a more streamlined approach, as suggested for example in the communication from Australia circulated in 2002 (JOB(02)/8), in particular model II. Nevertheless, certain elements remained fundamental. These included: that the situation faced by the domestic industry resulted from the implementation of a Member's commitments undertaken under Part III of the GATS; that there be a sudden increase in the supply of services by foreign suppliers; that injury or threat of serious injury be determined for the relevant domestic industry; that there be causality between injury and the increase in supply of the relevant service; and that the situation be of an emergency nature. In terms of procedure, he considered that Australia's Model II approach could provide a useful template. In exchange for less prescriptiveness at the invoking Member's end, an ESM should provide for more accountability *vis-à-vis* affected Members and a stronger surveillance role for the CTS. Therefore, a Member should be allowed some latitude in conducting an investigation and suspending its commitments, akin to what was allowed under Article XXI, as long as the substantive elements previously mentioned were duly established. If the threshold was met, the justification for invoking a safeguard action could form part of the notification submitted to the CTS, possibly through a "show just cause" report, as suggested by Australia. The report could be based on a checklist of issues which would include the following: who requested the action and why; how implementation of GATS commitments had caused injury or damage; extent of injury or damage; sector and modes affected; who had been consulted during the investigation process; what less trade-restrictive options had been considered and why these had been deemed inadequate; how this approach would remedy the situation; the duration required; and the phase-out plan, where appropriate. This would provide greater transparency on the part of the invoking Member, a chance for the membership to be appraised of the situation, and a stronger surveillance role for the Council for Trade in Services.

8. The sixth element related to the definition of domestic industry. Recognizing that a number of delegations had some concerns with the proposed use of the definition found in Article XXVIII of the GATS, he considered that determining which entities fell under the definition of domestic industry had to be largely left to the national laws of each Member. This amounted to a radical departure from the previous ASEAN draft text. Seven, with regard to applicable measures, he indicated that the principle that safeguards be applied only to the extent necessary to prevent or remedy serious injury or threat thereof remained paramount. In order to address some concerns, it was important that measures inconsistent with commitments should, to the extent possible, only be taken as a last resort. Regarding coverage, he still considered that an ESM should apply to all modes of supply, even though it might appear more difficult in some sectors to enforce a safeguard measure in certain modes. In addition, he considered that most delegations seemed to think that a safeguard measure should be sector-specific and, to the extent possible, mode-specific. The eighth element of a revised ESM concerned a surveillance mechanism. This might require further elaboration if an increased role was

to be accorded the CTS. Various submissions and interventions had alluded to the need for a mechanism to be set up to ensure that an ESM was credible and not subject to abuse. In this respect, the ASEAN draft text probably needed to be revisited and revised. The ninth element concerned special and differential treatment for developing countries. Given that many developing countries were increasingly dependent on, and had expressed interest in the temporary movement of natural persons, he thought that in cases where a quantitative restriction was used as a safeguard measure on Mode 4, it should not reduce the number of mode 4 suppliers in the affected sector below the level of a recent representative period. One of the additional elements that had not been elaborated upon in the communication related to compensation. Since the period of applicability of a safeguard would be shorter and an extension would be subject to an approval process, compensation might not be necessary. Another element concerned the concept of unforeseen circumstances, which remained key. In light of a previous submission from Argentina, he thought that perhaps unforeseen circumstances should relate primarily to increases in the supply of services. He did not think that unforeseen circumstances should be defined in an ESM and thought it might be preferable to let jurisprudence develop. The same would go for the concept of like services. The onus would be on the invoking Member to establish likeness. In concluding, he stressed the importance that the group of delegations he was speaking for attached to the issue of an ESM and wished to emphasize the flexibility shown by indicating readiness to move away from the ASEAN draft text presented in 2000.

9. The representative of the United States said that her delegation would want to have its statements made at the informal meeting on the communication from the group of ASEAN Members reflected in the record of this meeting (see paragraph 10 below).

10. The representative of the United States said that the issue of emergency safeguard measures was very sensitive, but that it was important to assess where the divide lied, so that obstacles to finding common ground could, if possible, be surmounted. She noted that concerns raised over many years of discussions still remained to be addressed, including the questions raised in the communication from the EC on modal application. She felt that the presentation by the delegate of the Philippines appeared to yield little in terms of new thinking. The focus was still on the mechanism approach.

11. The representative of Hong Kong, China, while stressing that his delegation remained to be convinced of the need for and the value of an ESM, noted the importance of pursuing substantive discussions and technical analysis. He wanted to comment on three parts of the communication. First, regarding part II, he took note of the situations described in paragraph 6 where a certain group of stakeholders suffered injury consequent to bound liberalization commitments. He wondered what such a situation could be. For instance, who would be the stakeholders in that situation, why did the injury in such a situation need to be redressed through a safeguard, and what was the safeguard intended to protect against? In that regard, it would also be interesting to get a better understanding of what was meant by "unintended or unanticipated consequences" in paragraph 3. While helpful to the discussions in past meetings, the Shangri-La example did not seem to provide clear answers to these questions since it implied structural problems rather than a safeguard situation. Clearer examples of the situations referred to in paragraph 6 might prove helpful. Second, regarding part III, he took note of the fact that the communication highlighted the link between an ESM and progressive liberalization in market access negotiations; this probably related to the issue of desirability. He wondered whether the use of the terms "safety net" implied that an ESM was to be used in situations where structural adjustments were required as a result of liberalization. He doubted that an ESM should aim to address such situations, which could and should be anticipated. Rather, the purpose of an ESM might be to address emergencies or unforeseen circumstances. Third, concerning part IV, he took note of the fact that the proponents found it desirable or even necessary to have an ESM in place when undertaking liberalization, although he did not necessarily agree that an ESM should be a pre-condition for further liberalization. It was not clear how the ESM described in the communication would establish a concrete, substantive and positive linkage to liberalization. The communication did not suggest how

Members would find it compelling to undertake liberalization if and when there was an ESM. He wondered whether the proponents could elaborate further on this issue, especially since the initial offers received so far did not point out the existence of such a positive linkage.

12. The representative of Chinese Taipei considered that the communication from the group of ASEAN Members was a useful basis for constructive discussions, which she hoped could focus on technical issues relating to the feasibility of safeguards in services. She had several preliminary comments on the communication. Regarding parts III and IV, she was sympathetic to the view that an ESM would make it easier to persuade domestic industries in developing countries to accept further opening of markets. Also, she agreed that a safeguard measure could only be applied as a result of an emergency situation, which was characterized by its extraordinary nature and its link to unforeseen developments. With respect to part V, she agreed that certain elements contained in the goods model, such as MFN or conditions of application, were also important in the services context. Regarding procedures, she concurred that model II in the submission by Australia provided a basis for discussing a more simple and streamlined ESM. However, the particular nature of services trade probably meant that a more creative approach was needed in some respects. More time was also needed for in-depth discussions of such topics as the definition of domestic industry and the cross-modal application of safeguard measures. Her delegation also asked whether her delegation was correct in assuming that an ESM could only be invoked in relation to further liberalization commitments and not with respect to existing commitments. Further, paragraphs 13(a) and 13(b) indicated that the determination of situations justifying a safeguard, as well as the concept of like services, were best left to jurisprudence. However, she thought that panels and the Appellate Body had not generally examined these elements in disputes arising out of the Agreement on Safeguards. Rather, their existence was determined by the investigative authorities, who had to give reasoned and adequate explanations in their reports. Without prejudice to the position of her delegation, she thus felt it might be inappropriate, if the intent of the proponents was to mirror the disciplines in goods, to let panels determine such issues on a case-by-case basis. Rather, investigative authorities might be vested with such issues. Finally, regarding paragraph 13(c) on compensation, she wondered what would constitute a "relatively short period of application of a safeguard measure".

13. The representative of the United States wished to give a number of comments and raise questions on the communication by the group of ASEAN Member to try to get a better and clearer understanding of the underlying intentions. The questions should in no way be perceived as an endorsement of the approach taken, on which she had, in the past, expressed concerns. Noting that the Working Party had recently agreed to extend the mandate in an open-ended and indefinite fashion and that there was no guarantee of an outcome or of the timing of any outcome, she indicated that her delegation was interested in a substantive and technical discussion on issues regarding feasibility. First, with respect to paragraph 3 of the communication, she asked how the proponents proposed to determine whether serious injury or threat of serious injury was being caused by liberalization undertaken according to a Member's schedule of commitments as opposed to other factors. She also hoped to get further details regarding transparency and the type of information that would be considered in making a determination of injury or threat thereof. For example, what would be the source of statistics used by the group of ASEAN Members? Would these statistics be provided according to mode of supply? Second, her delegation wished to have a description, for each of the countries that had prepared the submission, of a transparent process which would allow for public comment by all interested parties and the legal basis for such a process that the respective countries would be able to undertake. Some of the information provided in paragraph 12(e) only described the conditions of application in very general terms and, hence, did not help to examine the feasibility of a possible emergency safeguard mechanism. Third, concerning paragraph 4, she sought clarification of what was meant by the terms "or are never scheduled as part of a Member's liberalization commitments" and how they related to the scheduling guidelines. Fourth, regarding paragraphs 10 and 12(b), she wondered what type of regulatory reform was referred to, and how an emergency safeguard measure would be imposed? Regarding paragraph 12(b), she thought that some of the

comments by the representative of Hong Kong, China were very relevant. Fifth, she took note of the fact that paragraph 12(c) mentioned special and differential treatment in favour of developing countries with respect to duration. She wondered what would happen in situations involving predominantly developing countries. In such instances, would the beneficiary of special and differential treatment be the developing country whose industry suffered injury or the developing countries whose suppliers had caused injury?

14. Sixth, regarding paragraph 12(d) on acquired rights, she thought that it was imperative that these be protected, should there be agreement to negotiate provisions on emergency safeguards. Introducing restrictions not contemplated by services suppliers at the time of establishment would result in a poor investment climate, provide an unstable basis for business decisions, and could have a negative effect on employment in the country imposing the safeguard. Since the sponsors of the communication did not think that the concept of domestic industry should be defined, she asked for a clarification of the relationship between the proposed approach on acquired rights in option 2 and national treatment commitments and any other bilateral commitments not captured by Article V of the GATS such as those flowing from bilateral investment treaties. Seventh, regarding paragraph 12(d), she had concerns about the proposal to extend acquired rights to mode 4. Acquired rights had been mentioned in the context of establishing a commercial presence, where stability and predictability were important for making long-term investment decisions. Mode 4 implied temporary movements and, hence, should not carry the same implications. Foreign natural persons, by definition, were not permanent parts of the labour market. She wondered whether mode 4 was not indeed the mode where it might be easier to transpose a goods-type safeguard mechanism.

15. The representative of Canada, while reiterating concerns regarding the case for an ESM in services, wished to ask preliminary questions on the communication. He first wondered why the proponents felt comfortable with transposing the goods model to services given that goods trade was similar only to mode 1, but not to other modes of services supply. With respect to acquired rights, he noted that paragraph 12(d) mentioned that expansionary activities of established firms would not fall under acquired rights and, hence, could be subject to safeguard measures. He asked how that would apply in practice and wondered what limiting expansion might entail. For example, did that mean banning acquisitions of new facilities, new hiring, increased marketing, expanding consumer base, or new strategic alliances? Would domestic suppliers also be subjected to such restrictions? Regarding paragraph 12(e)(v), he considered that it would be important to have a better understanding of what might be an emergency situation in mode 3. Finally, he wondered what role domestic regulation and capital markets would play in restoring market equilibrium in the absence of an ESM.

16. The representative of Venezuela wished to provide preliminary comments on the communication. She noted that her authorities had some concerns with regard to issues such as the application of a safeguard measure to all modes of supply, in particular modes 1 and 3, acquired rights, compensation, and duration. She thought, like the group of ASEAN Members, that emergency safeguard measures were part of the overall balance to be achieved in the current round of negotiations. An effective safeguard mechanism could facilitate liberalization. In particular, developing countries, who were net importers of services, could benefit from a safety net, which would help to overcome domestic resistance to greater commitments that could have unforeseen economic effects, for example in financial services, transport, and professional services. At the same time, an ESM should allow for special and differential treatment of developing countries as provided for in the GATS. An ESM should not be conditional on new commitments to greater openness, but rather would help to comply with commitments already undertaken and to support liberalization in line with the principles set out in Articles IV and XIX of the GATS. With regard to the extension of the period of application of a safeguard measure, in paragraph 12(c), she considered that a review or approval process in the CTS would put a greater burden on the invoking Member than the use of Article XXI procedures. She also highlighted the continued relevance of the two previous contributions from her delegation, on indicators for the determination of injury and on the causal

relationship (JOB(01)/48, JOB(01)/101, and JOB(01)/101/Add.1). She indicated that her delegation would present a modification to the section of JOB(01)/48 relating to statistics.

17. The representative of Chile also wished to put forward some preliminary questions and comments. Regarding paragraph 7, she clarified that, although a developing country, Chile did not consider an ESM necessary. It still was not clear how, from a technical point of view, such a mechanism could work. Much had been said about the political rationale, but fundamental questions of a technical nature still remained to be answered. Regarding paragraph 12(b), she asked about the proposed duration of the limited window. Did such limited window refer only to actual liberalization commitments, in contrast to commitments that merely bound policies that had been in place for some time? Concerning the issue of special and differential treatment, would such treatment be for developing countries subject to a safeguard measure or those imposing a safeguard measure? With respect to paragraph 12(g), she asked what less trade restrictive options, or policy tools, regulations and solutions were being referred to and whether examples could be provided. Regarding paragraph 12(h), she wished to hear more from the proponents with respect to the type of surveillance exercised, the role of the Council for Trade in Services, and the information to be presented. On paragraph 12(i), she wondered why special and differential treatment was only mentioned with respect to mode 4, given that various developing countries, including Chile, had interests in other modes of supply as well. She also asked what type of special and differential treatment was contemplated. Moreover, like Hong Kong, China, she enquired how the link between liberalization and an ESM could be operationalized, and be reflected in the offers that would be submitted in the coming months. Finally, she emphasized that the issue of acquired rights was very sensitive for her delegation and, as the delegation of Canada, wondered what was the proposed scope of the term "expansionary activities".

18. The representative of Brazil commended the quality of discussions and, in this context, expressed satisfaction about the extension of the mandate. He suggested that, in the future, the sessions be organized so as to permit more interaction. In his view, the establishment of an ESM was not a prior condition for further market access commitments, because the GATS had other mechanisms that provided flexibility. It was nevertheless an important element since it could provide some comfort to domestic constituencies. On the submission by the group of Members from ASEAN, he wondered why the idea of limited window was being introduced since it had no counterpart in goods trade. He failed to see why, in services, an ESM should be applied only until a certain point in time. Regarding limited duration, he also wondered why a shorter duration was contemplated than for trade in goods. Reacting to comments of other delegations, and recalling the open and constructive approach of his delegation, he also wondered why feasibility issues raised regarding an ESM would not also arise under Article XXI. He then asked how Article XXI could be implemented in that context and what would be the consequences. The case currently discussed under Article XXI might also provide some guidance for temporary modifications of commitments. Finally, he reiterated interest in examining safeguard clauses found in schedules and initial offers so as to see how feasibility issues were dealt with in such cases.

19. Regarding Brazil's suggestion on the organization of discussions, the Chairperson proposed, in order to help structure the debate, to compile questions raised.

20. While the communication from the group of ASEAN Members was still being analysed by his authorities, the representative of the European Communities considered, at first sight, that it did not really bring forward new elements and that it did not contain answers to previously raised questions on modal application or on situations justifying a safeguard. It was important to focus discussions and work on the issues raised today. He wished to make a few specific points. First, he wondered why the paper suggested that an ESM would require neither previous authorization nor compensation. Compensation was needed under Article XXI while under waiver procedures, which entailed exceptional circumstances, authorization was required. Second, regarding paragraph 12(f), he wondered why the paper suggested that each Member adopt its own definition of domestic

industry, as opposed to having a clear and multilaterally-agreed definition. Third, on surveillance procedures, he asked whether the proponents were revising the ASEAN draft text, as hinted in paragraph 12(h). Finally, regarding the link between ESM and liberalization, he mentioned a hypothetical scenario where a horizontal limitation provided for maximum foreign ownership of 49%, conditional on a safeguard. It was not clear how such safeguard could work since there were no foreign suppliers that could injure domestic suppliers.

21. Taking up the issue of acquired rights in paragraph 12(d), the representative of the Republic of Korea noted that the communication seemed to suggest that, should the second option be followed, disallowing mergers and acquisitions could alleviate concerns about possible anti-competitive effects. Such limitations on mergers and acquisitions, especially if in place for three years, appeared very restrictive and would seem to impact on the overall economic environment. She thought that this issue highlighted the need for further discussion on the type of measures that could be taken as safeguards.

22. The representative of China considered that, although some Members' commitments tended to simply reflect the level of liberalization in place during the Uruguay Round, it had to be recognized that others had undertaken commitments beyond their actual regulatory capacity and the then prevailing liberalization level. At the end of the current round, some Members might also have to make commitments that go beyond the status quo. These Members should be given the option of invoking safeguard measures in case of emergency. Her delegation therefore considered that it was necessary to have an ESM in services. Nevertheless, a number of technical issues needed to be addressed. She asked Members that had safeguard-type measures in their schedules to explain how these were intended to be implemented. Turning to the communication, she expressed support for the efforts of the group of ASEAN Members, as well as for the idea that the Council for Trade in Services should assume greater responsibility in monitoring the implementation of an ESM. With respect to the concept of limited window, she asked whether the period of entry into force of a Member's commitments, mentioned in paragraph 12 (b), referred to the date of entry into effect of a schedule or, rather, to the date when the implementation period in the sector ended. In addition, it was important that a mechanism include the possibility of provisional safeguard measures. As well, her delegation was still considering the need for compensation, which might be necessary in order to discourage Members from using an ESM at their discretion. Concerning acquired rights, these should not be confined to modes 3 and 4, as they might be relevant for other modes. Finally, regarding duration, she wondered why the communication proposed three years given that the Agreement on Safeguards allowed up to four years, with the possibility of an extension for another four years.

23. While considering that the communication contained to a certain extent new elements including some positive points, the representative of Switzerland thought that, overall, it remained close to the draft text presented in 2000. Although paragraph 4 of the communication suggested that some Members considered regulatory measures to be in themselves unfailingly sufficient to redress injury, she reiterated that her delegation had never argued that a given measure might fully address the problem at hand. Regarding paragraph 11, she felt that the modalities for autonomous liberalization had a major role to play in the discussions of an ESM. Countries could liberalize progressively and take into account their own experience with liberalization. In such a context, unexpected effects of undertaking commitments were largely sidelined. So far, countries had tended to take commitments when they felt confident to bind themselves at the international level. She thought that the idea of a limited window, in paragraph 12(b), was extremely useful. Also, the communication contained some constructive thoughts on the issue of acquired rights.

24. She wished to elaborate on four concerns of a non-technical nature, which her delegation hoped could be taken into account in the discussions. First, it had to be recognized that some Members wanted to send a clear and firm message to investors that their policy was to provide for liberal conditions of market entry. Because of its legally binding and multilateral character, the

GATS was the main instrument in pursuing such a policy, but an ESM would go against such policy by making the legal environment less certain for all Members. The establishment of an ESM thus had a cost. Second, an ESM would compromise all commitments made in previous negotiations. Third, there could only be a very limited set of situations, if any, where an ESM might be necessary. However, the communication did not take this into account. Her delegation would have preferred to see proposals that would limit the scope of an ESM to what was strictly necessary. Fourth, while some delegations were trying to make a link between ESM negotiations and market access negotiations, it was unfortunate that a negative link was drawn. Proponents should rather create a positive and concrete link by identifying the commitments they could undertake if there was an ESM. These four concerns were of a political nature and related to the issue of desirability; she hoped they would be taken into account.

25. The representative of Australia recalled that Australia's communication circulated in 2002 had been without prejudice to his delegation's position on desirability and feasibility of an ESM. The communication from the group of ASEAN Members still needed to fully address the issues of desirability and feasibility, and failed to concretely address definition of injury in services. In relation to injury, he considered that the communication focused only on one aspect, that is injury to service providers in a particular sector. The national economic interests of a Member imposing a safeguard might be more relevant. It consisted of the benefits conferred by a safeguard on all participants, minus the cost to those that did not gain from its imposition. Determination of injury needed to take both aspects of the equation into account. Members should also have deeper discussions on the factors that had to be examined in any determination of injury. For example, reduction in competition in the retail sector might have adverse consequences for consumers, while an increase in the price of financial and telecommunication services might negatively impact on intermediate users.

26. The communication from the group of ASEAN Members proposed that any safeguard measure extending beyond the permitted time limit should automatically lead to the initiation of Article XXI procedures. He believed that the conversion of a temporary measure into a permanent measure defeated the purpose of an ESM, were it considered to be desirable. The maximum period of application proposed, six years, seemed overly long for a domestic industry to engage in restructuring. In contrast, the Australian communication had mentioned a period of two years. With respect to acquired rights, he doubted that the second and third options proposed were practical. Asking a foreign service supplier to limit its operations might work in some sectors, but not in others. For example, requesting a retail chain to place a cap on the number of outlets might be relatively straightforward, but things were more problematic when the ongoing provision of a service was concerned. A safeguard measure in insurance services might deprive policy holders of insurance cover, interrupt the flow of pension contributions, and threaten the prudential standing of companies by interrupting the flow of new contracts. In addition, Members would need to take into account commitments made under bilateral investment treaties, particularly the possible violation of the MFN obligation with regard to the treatment of established foreign firms. He also remarked that, in many instances, the communication proposed to leave important aspects of an ESM in the hands of the authorities of the invoking Member, for example the determination of likeness. This raised concerns with regard to transparency, objectivity, and fairness. Such concerns were even greater in the case of services than for goods. He also wished to challenge the assumption reflected in footnote 4 that permanent modification of commitments pursuant to Article XXI was a right and, thus, that a temporary modification should be construed the same way. He recalled that a permanent modification of commitments had to be accompanied by compensation. Finally, he welcomed the reference to the Australian proposal for the inclusion of a "show just cause" report. However, it needed to be recalled that the indispensable information listed in the proposal was only indicative and represented the absolute minimum that needed to be included.

27. The representative of Colombia thought that focusing, as a start, on technical elements included in the communication from the group of ASEAN Members would help to advance and

organize discussions. Colombia's participation in discussions was without prejudice to its ultimate position. The negotiations attracted significant interest in the public and private sectors in her country. While some elements of the Agreement on Safeguards could be used in a possible mechanism for services, others could perhaps be left aside. She understood the need expressed in paragraph 3 of the communication to protect the domestic industry against injury resulting from liberalization commitments, but it was not clear how one could make a distinction between such cases and others not directly related to the implementation of commitments. Concerning paragraph 12(c), she wondered whether the proposed duration should be the same as the one provided for in the goods area. Regarding paragraph 12(e), her delegation thought that any ESM should not apply to foreign suppliers already established. Rather, safeguard measures could apply to future entrants. With respect to paragraph 12(i), she considered that the concept of special and differential treatment should apply to all four modes of supply. The Safeguards Agreement, as well as the earlier ASEAN draft text, could provide useful elements in that regard, for example the establishment of a *de minimis* clause providing for non-application of a safeguard in certain cases. She noted that mode 4, given its scope, could benefit from various regulatory safety nets, which made effective application of a safeguard more difficult. Finally, she expressed support for the idea of compiling a list of the questions raised, and wondered whether the previous synopsis by the Chairperson could be updated.

28. The representative of New Zealand reiterated that her delegation remained to be convinced of the usefulness of an emergency safeguard in services. A compilation by the Chairperson of questions raised would be helpful. Regarding injury, she wondered, in light of the importance of considering a broader economic picture than solely damage to a particular industry, whether consumers' views would also be taken into account in a process of assessing injury, and what weight would be given to them. Imports that a domestic industry might consider to be damaging could provide consumers with more choice and lower costs. Concerning modal application, she wondered, in view of paragraph 12(g), what type of safeguard measures the group of ASEAN Members could envisage under mode 2. She thought that applying safeguard measures to such a mode of supply seemed as problematic as the notions of forced disinvestment or of labour deportation with respect to modes 3 and 4. Also, she asked whether the use of the terms "prevent injury" in paragraph 12(g) meant that an ESM could be invoked as a pre-emptive measure in the face of potential injury and, if so, how such a situation could be considered an emergency, and how such emergency could be demonstrated. Finally, she wondered about the role that the group of ASEAN Members envisaged in future discussions for the 2002 communication from Australia.

29. The representative of Cuba highlighted the political importance of the negotiations on emergency safeguards and their influence on the market access negotiations. He expressed support for the concept of limited window in paragraph 12(b) and thought that the issues of acquired rights, mentioned in paragraph 12(d), and of prior notification to the Council for Trade in Services, in paragraph 12(e), should be further elaborated on. Finally, regarding paragraph 12(f), he considered that it was not optimal to allow each Member to use its own definition of domestic industry.

30. The representative of the United States said that she could not agree at this juncture to an update of the synopsis, recalling concerns previously expressed with this particular document. She was not objecting to a compilation of questions, however. The Chairperson took note of the reservations regarding the synopsis. The proposed list of questions was simply intended to facilitate the preparations of an in-depth discussion.

31. The representative of Japan recalled his delegation's position on the issue of an ESM. Regarding acquired rights, he said that the application of safeguard measures to mode 3 would deter investors wanting to establish a commercial presence. The representative of Mexico did not think that safeguard measures were necessary in the context of trade in services. Other domestic policy instruments could be used to deal with circumstances that, according to some, could justify the application of safeguard measures.

32. While she did not want to associate her delegation with any particular position on an ESM, the representative of Trinidad and Tobago thought that it was important to discuss ways to minimize the possibility of abuse. In that context, the concept of surveillance could be elaborated on. She wondered whether the idea of progressively reducing the restrictiveness of a safeguard measure as conditions improved was being considered. The communication could further address ways to minimize the damage that safeguard measures might cause to foreign suppliers that had already invested. She also shared some of the questions put forward by New Zealand and Australia concerning the impact of safeguards on consumers.

33. The representative of Hong Kong, China felt that various delegations, when speaking on the issue of an ESM, might have different types of safeguard measures in mind. It was thus important to clarify this question. First, he wondered how safeguard measures would be different from market access or national treatment limitations listed in schedules. If possible safeguard measures were the same, or a subset of the range of conceivable market access or national treatment limitations, why would such measures be less feasible than a market access or national treatment limitation? He recognized that measures listed as limitations in schedules tended to be in place and then to be progressively liberalized, whereas safeguard measures were introduced after liberalization had occurred. If safeguards were less feasible for modes 1 and 2, would this imply that market access and national treatment limitations were also less feasible in those modes? If so, what would be the purpose of the GATS of covering these modes of supply? Second, should there be a situation justifying safeguards, one feasible measure that could be taken against a surge of services imports were discriminatory subsidies to support competing domestic suppliers. Such subsidies could be effective under any mode of supply, provided that the suppliers to be safeguarded could be clearly identified. The problem was that such type of measure was costly and might thus be more affordable for some Members than for others. Third, economic needs tests (ENT) were found in schedules for mode 3 but also for modes 1, 2 and 4. Presumably, these ENTs were meant to be used to restrict the imports of services. While the underlying objectives were different from safeguards, they might entail the same type of measures. The argument that safeguard measures were not feasible for all modes, for example modes 1 and 2, would thus also mean that ENTs were not feasible and, hence, had to be removed from schedules. Finally, he considered that the feasibility of safeguard measures would depend mostly on the type of measure that might be taken as well as on the particular circumstances of individual sectors. One inference to be drawn from the earlier communication from the EC on modal application (S/WPGR/W/38) could be that there was possibly no single type of safeguard that would fit all modes and sectors.

34. The representative of Argentina said that he agreed with the first point made by the representative of Hong Kong, China. Questioning the feasibility of applying a restriction to trade in services amounted to questioning the feasibility of the GATS. He also agreed that feasibility of safeguards under certain modes depended on the type of measure being contemplated. Discriminatory subsidies could be one feasible measure, although they were costly. A similar option consisted of discriminatory taxes. Apparently less costly, they were technically feasible for any mode of supply. The representative of Brazil also reacted to the intervention by the representative of Hong Kong, China. Stating that trade under modes 1 and 2 could not be restricted meant that there was no need to seek market access through these modes since such trade could, in any event, not be prevented. Delegations should also address entries in schedules and offers that had an effect similar to those of safeguard measures.

35. The representative of the United States expressed strong concerns about the points made by the delegations of Argentina and Brazil. There was no point in shifting the debate to such issues as the value of existing commitments, which did not provide answers to the technical questions raised on the communication from the group of ASEAN Members.

36. The representative of the Philippines wished to answer as many questions as possible, but considered that a written compilation would be of significant assistance. Future discussions could be structured so as to permit a more interactive debate. On the general question why an approach based on the goods model was deemed preferable, he acknowledged that the group of delegations he was representing was not entirely comfortable with a strict transposition of the goods model to services. Nevertheless, it provided useful elements, some of which could not be set aside in a services context. For example, the concept of injury seemed indispensable. It was also important to assess whether injury was being caused by factors not related to a Member's liberalization commitments. Regarding the comments by Hong Kong, China on the possible use of discriminatory subsidies as safeguard measures, he thought that not all countries had the resources to provide subsidies. On Argentina's related point that discriminatory taxes might be used instead, he was not sure whether all such measures were necessarily covered by the GATS. Concerning the reference to economic needs tests, he indicated that not all Members had included them in their schedules and that the greatest number of ENTs were found in schedules of developed countries. Using ENTs as an alternative instrument of flexibility would mean that not all Members would be on an equal playing field. With regard to consumers interests, he thought that an investigative authority would be expected to consult and take into account the broadest range views possible, including those of consumers. The investigation would have to involve as many potentially affected sectors as possible. With respect to the statistics used for injury determination, he said that the source would be national statistics. For many Members, little information existed at a sufficiently disaggregated level so as to be used for mode-specific purposes. But statistics were perhaps not the sole determinant of whether injury was being caused to a domestic industry. Rather, they could serve to buttress the petition of a sector claiming injury.

37. In response to comments about the role of domestic regulations, he emphasized that regulations would not always be effective in responding to injury caused to the domestic industry. While some problems might be structural in nature, he did not wish to convey the idea that this was true in all cases, quite the contrary. Trying to characterize, in the Working Party, situations that were structural in nature could lead to endless debates, and it might be preferable to leave this for the investigating authorities to determine. Reacting to a related point, he agreed that an ESM should not be used mistakenly as a remedy for structural problems. When injury in a given sector called for the application of an ESM, the invoking Member was not precluded from using other policy tools that might be available. An ESM could not cure all problems. If the authorities realized, after the limited period of time during which a safeguard measure could remain in place, that a structural problem existed, they would then have to decide whether to invoke Article XXI procedures. With respect to the question from the representative of Hong Kong, China on whether a safeguard measure could be used in situations where structural adjustments were required as a result of liberalization, he reiterated that applying a safeguard measure for three or more years in response to structural problems would not provide a cure for such problems and that, if the problem had not been cured, a Member would have to decide whether to invoke Article XXI procedures. On a point made by the delegation of Switzerland concerning autonomous liberalization, he believed that an ESM, by providing an additional safety net, could encourage a Member to bind liberalization previously undertaken autonomously. He was open to further discussion on that point.

38. The Chairperson suggested, given time constraints, that the delegations representing the Members that had prepared the communication consider providing answers in writing in preparation of the next meeting.

II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII)

39. The Chairperson recalled that the delegation of Singapore had presented, at the last meeting, a communication, circulated as JOB(03)/216, which proposed some issues and questions for discussion in the Working Party. He invited Members to take up the paper again since, at the December meeting,

only preliminary comments could be made. Members might also want to further comment on the proposal by the European Communities for a framework of rules in the area of government procurement under the GATS. In that regard, he recalled that a number of delegations had noted the importance of using concrete examples, including scheduling examples, to better understand how such a framework might apply.

40. The representative of Singapore recalled that his delegation had submitted the communication to help focus work, and without prejudging the scope of the mandate. As a Member of the Government Procurement Agreement (GPA), his authorities had to ascertain how results of negotiations pursuant to Article XIII could relate to GPA commitments. He thought that the communication from the European Communities had helped domestic consultations on that point. He considered that the issue mentioned in paragraph 2(j) of his delegation's communication, relating to private challenge procedures, might not necessarily be ready for consideration at this juncture. Paragraph 2(h), which asked how the proposed framework could be operationalized under the various modes could be addressed as a priority. The EC could perhaps provide examples to show how scheduling would work under varying circumstances. For example, what if there were varying thresholds for different modes? Examples could also touch upon the possible format and content of MFN exemptions. Regarding paragraph 2(g) of his delegation's communication, which alluded to the work in the Working Group on Transparency in Government Procurement (WGTGP), he wondered, given the uncertainties surrounding the WGTGP, whether the Secretariat could prepare, for ease of reference, a compilation of government procurement procedures and disciplines in regional trade agreements. He wondered whether similar work had already been done in the past in other fora.

41. The Chairperson noted that the Secretariat had prepared, for the WGTGP, documents on procurement disciplines found in regional trade agreements, for example WT/WGTGP/W/6, WT/WGTGP/W/32, and WT/WGTGP/W/33. In addition, the Secretariat had recently circulated to the Working Party an overview of government procurement-related provisions in economic integration agreements (S/WPGR/W/44).

42. The representative of the European Communities expressed support for the suggestion that the Secretariat prepare a compilation of procurement provisions contained in the economic integration agreements listed in S/WPGR/W/44. That Note could be elaborated upon by compiling the relevant procedural rules. Work done in the WGTGP only focused on certain provisions relating to transparency. The representative of Chinese Taipei, like the delegation of Singapore, asked the European Communities to present concrete examples so as to help clarify the concepts used in their proposal. Regarding provisions on procedures, he agreed that, given the situation surrounding the WGTGP, the Working Party might want to use, for the time being, examples of such provisions from economic integration agreements.

43. The representative of the United States noted that her delegation was seeking greater transparency in relation to procurement of both goods and services. She considered that it was difficult, as a practical matter, to distinguish between services procurement and goods procurement since most cases involved a mixture of both. Existing international instruments, including the GPA, UNICTRAL, and the World Bank instruments had rules covering services and goods. Procurement laws and regulations generally did not distinguish between them, and drawing a distinction for purposes of transparency did not seem practical nor necessary. She thought that the communication circulated by Singapore would help focus discussions in the Working Party. Following up on a question put to the EC in that communication, she enquired whether the EC considered that Article I:3(a) of the GATS was relevant in that context.

44. The representative of Australia believed that the questions surrounding the scope of the mandate contained in Article XIII of the GATS, particularly whether it covered market access issues, needed to be resolved for progress to be made. He also supported Singapore's suggestion to look at

examples of government procurement procedures in regional trade agreements. The Secretariat Note circulated as S/WPGR/W/44 provided a good basis and could be expanded. Another issue of importance for his delegation was whether the MFN obligation should apply. He noted in that regard that the EC proposed the possibility of listing MFN exemptions, and that an option could be to include a specific exception in order to protect the preferential treatment amongst signatories to the GPA. These issues needed to be discussed further.

45. The representative of Chile indicated that her delegation saw various elements of interest in the communications from the European Communities and Singapore. Given the current uncertainty surrounding the WGTGP, she had doubts about whether this was the appropriate moment to enter into detailed discussions on this issue. Nevertheless, she wondered whether the EC could present statistics on government procurement in services, more specifically with respect to sectors and markets where there was participation from developing countries. This would prove helpful in assessing the benefits of disciplines in this area for developing countries. Also, she expressed interest in concrete examples of how such commitments could be incorporated in schedules. Finally, she supported the suggestion to have the Secretariat prepare a Note on provisions on transparency and procedures found in bilateral and regional trade agreements.

46. The representative of China recalled her delegation's position on this issue and, without prejudice to that position, wished to raise questions concerning MFN treatment in light of the proposal by the EC. She thought that MFN exemptions found in existing lists of Members could not be expanded. In that context, how could the GPA be added to those lists of exemptions?

47. Reacting to questions mentioned in paragraph 2(b) of the communication from Singapore, the representative of Hong Kong, China indicated that the preliminary view of his delegation was that, to the extent that the conditions in Article I were met, the Articles of the GATS other than Articles II, XVI and XVII, already seemed to be applicable to government procurement. Would that include the general transparency provisions in Article III and, if so, to what extent were they being complied with? Similarly, did the generally applicable provisions in Article VI already apply? With respect to the proposal by the EC to schedule government procurement commitments in an additional column, he noted that Article XIII excluded the application of Articles XVI and XVII, but not Article XVIII. A Member might thus have the possibility to undertake additional commitments with respect to government procurement in the current negotiations.

48. The representative of the Republic of Korea hoped that the EC could provide further statistics, as mentioned by Chile. In view of paragraph 5 of the Secretariat Note circulated as S/WPGR/W/44, she asked the EC to explain the rationale for having services contracts in sectors of telecommunications, water, energy and transport covered by a separate EC directive. Regarding the question raised by China on MFN exemptions, she thought this depended on the scope of negotiations pursuant to Article XIII. If negotiations were about transparency, MFN treatment should be granted. If they involved market access, the issue would need further thought since the preferential treatment flowing from the GPA needed to be taken into account.

49. The representative of Japan said his delegation was still reflecting on elements contained in the communications from the EC and Singapore, including proposals with respect to MFN, and wished to come back to this issue at the next meeting.

50. The representative of Singapore referred to the point made by the representative of the United States that procurement contracts often covered both goods and services. Sometimes services could be incidental to goods procurement, while at other times goods could be incidental to services procurement. He wondered whether the Tokyo Round Code on procurement had provisions to address such situations.

51. The representative of Hong Kong, China called attention to the fact that paragraph B.2 of the Understanding on Commitments in Financial Services contained provisions on procurement. This underscored the point that there was already scope under the GATS for procurement disciplines. He did not want to establish a link between the provisions of the Understanding and his earlier comment about Article XVIII, but there was an element of complementarity.

52. The representative of the European Communities wished to answer some of the questions raised. On the issue of MFN treatment, he indicated that Article II of the GATS currently did not apply to government procurement and recalled that Members were allowed to list exemptions at the end of the Uruguay Round. He considered it logical that an extension of the scope of application of Article II to government procurement be accompanied by an opportunity for Members to list relevant exemptions since there had been no need to do so during the Uruguay Round. With respect to the GPA, he did not propose an exemption, but rather an exclusion from the application of the MFN obligation. An exclusion was more practical since additional Members could, in the future, become signatories to the GPA. With respect to the points raised regarding the importance of distinguishing between procurement of goods and procurement of services, he considered that the situation under the GATS was similar to that which prevailed when the GATT Code on Government Procurement only covered goods. Article 1.1.a. of that Code specified that it applied to laws, regulations, procedures and practices regarding procurement of products by the entities subject to this Agreement, and that this included services incidental to the supply of products if the value of these incidental services did not exceed that of the products themselves, but not service contracts *per se*. A similar provision could be contemplated in a GATS Annex on Government Procurement. Such distinctions worked well in practice. For example, the European Union had different laws for government procurement of goods and services. The question of which law applied regularly came up. The distinction was based on whether the principal purpose of the contract was procurement of goods or procurement of services in function of the value of the goods and services supplied. He agreed with Hong Kong, China's interpretation that the GATS, other than Articles II, XVI and XVII, applied to government procurement. He also agreed that various Members had already used Article XVIII to make commitments on government procurement for financial services. Concerning the link between government procurement disciplines and the exclusion of services supplied within the exercise of governmental authority in Article I:3 of the GATS, he indicated that Article I:3 excluded certain services, while government procurement as defined in Article XIII related to purchases of services by the government. The scope of Article XIII depended on whether the client was a public entity, and not on the type of service supplied.

53. The Chairperson asked for a clarification of the type of government procurement provisions that should be compiled in a Secretariat Note, as requested by Singapore and others. The representative of the European Communities considered that all provisions relating to procurement should be included in a compilation.

III. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV)

54. The Chairperson recalled that at the last meeting the delegation of Chile had presented and circulated a communication, JOB(03)/216, which proposed to discuss and analyse examples of subsidy programmes in services sectors. A good number of delegations felt that this was a helpful way to focus discussions. Given that reactions tended to be preliminary in nature, he invited Members to pursue that discussion. Also, the delegation of Chinese Taipei had made available a room document that analyzed the examples of subsidy programmes put forward by Chile in light of the definition of subsidies in the Agreement on Subsidies and Countervailing Measures (ASCM). He also encouraged Members to continue the discussion initiated at the last meeting concerning disciplines on services subsidies found in regional trade agreements. Finally, he indicated that, as requested, the Secretariat had prepared an update of an earlier note on information on subsidies in services sectors contained in WTO Trade Policy Reviews (TPR), circulated as S/WPGR/W/25/Add.4.

55. A representative from the Secretariat explained that the Note covered the 26 TPR reports issued since the last update in August 2002. In terms of findings, the Note highlighted that tax incentives were the preferred tool to subsidize and that subsidies were generally found in all sectors, but mainly in tourism, transport, and banking. However, as indicated on previous occasions, the Note suffered from certain limitations that had to be kept in mind. One caveat related to the fact that TPR reports tended to focus on certain sectors more than on others, depending on the particular situation of a country, which meant that the sectoral focus of subsidies mentioned could not be said to be fully comprehensive. Another limitation was that TPR reports were prepared with a broader purpose in mind; the amount of information on particular subsidy programmes was thus often quite limited and made classifications difficult. Moreover, no definition of subsidies existed in services. In that context, the overview provided by the Secretariat was to be seen as a "best estimate" on the basis of limited information. Finally, it was important to keep in mind that being listed as a donor of subsidies did not imply any wrong-doing. The Note did not address the issue of trade distortive subsidies.

56. The representative of Chile hoped that the communication presented by her delegation could lead to an interactive debate between delegations and reiterated that the purpose of the communication was to analyse and better understand the issues involved. The intent at this time was not to propose disciplines to be elaborated in this area. She thought that such an exchange of views was very relevant in the context of market access negotiations, just as the deliberations on emergency safeguard measures. Discussions of examples obviously needed to be complemented by discussions of a definition of subsidies, as well as greater information sharing. She wished to focus her comments today on the first example mentioned in the communication, the Export Programme. Such types of programmes, contingent on either export performance or the use of domestic inputs, had been prohibited in the goods area because they were considered to be trade distortive *per se*. She wished to suggest answers, in a preliminary manner, to the questions listed in part IV of the communication from her delegation. The first question concerned the element of subsidy or financial contribution in the programme. The ASCM could be used as a basis. The Export Programme was described as supporting enterprises by sharing the costs of export market development activities. She considered that by sharing costs, the government was, in effect, providing a direct transfer of funds, which was a form of financial contribution. The second question related to the beneficiary of the programme. The information found in paragraphs 4 and 7 of the communication made it clear that the programme benefited enterprises or professional associations operating within the national territory.

57. The following question asked under which modes of supply. She wished to clarify that the purpose of that question was rather to ask under which mode(s) of supply the subsidy was distorting trade in services. While the beneficiaries of the subsidy were enterprises established within the territory, the subsidy might affect conditions in foreign markets because it was contingent on exports through modes 1, 3 or 4. The fourth question related to the effects of the programme. Despite the lack of detailed information, it might be assumed that such programmes produced some effects in other markets, as the beneficiaries would have an advantage when competing with the domestic industry of another Member. A similar effect could be observed when enterprises of Neverland competed with enterprises of other countries in third markets. The fifth question asked whether these effects were trade distortive. She thought it was obvious that a support programme would have an impact on the normal functioning of a market, although such effects might not necessarily be adverse to other Members' interests. For example, it could be that export programmes benefited a small or medium size enterprise, whose development had strategic importance for the country, but whose impact in other markets was minimal given the size of the company. It could also be that enterprises benefiting from such programmes exported to markets where the services concerned were not produced domestically. She believed that it was also important to keep in mind a previous communication from Poland, JOB(02)/207, where it was recalled that the trade distortive effect was not a constitutive element of the definition of subsidies in the ASCM. The ASCM permitted the adoption of measures against subsidies only if these caused adverse effects on other Members'

interests. The ASCM, in addition, prohibited certain subsidy programmes because it was assumed that they had, *per se*, a trade distortive effect. She wished to emphasize that her delegation's intent in the discussion of examples was not to propose to prohibit any support programme in the field of services, but rather to advance discussions on an issue of great relevance for the market access negotiations. She also called on Members to share information on their subsidy programmes. Finally, she requested that the issue of subsidies be inscribed as the first agenda item for the next meeting

58. The representative of Chinese Taipei introduced a room document, which aimed to the development of definitions of subsidies in services. The document, without prejudice to her delegation's position, examined whether the ASCM, as well as the jurisprudence under that agreement, provided a suitable basis by using the concrete examples of subsidy programmes listed in Chile's communication. The analysis was based on the questions mentioned in that communication. She took note of the point made earlier by Chile that the question concerning modes of supply was not intended to refer to the beneficiary of the subsidy. Her analysis of the Export Programme proceeded in two parts, according to the two recipients: the industry and the members of national trade or industry associations. The first part of her analysis focused on the former group. Regarding the form of the subsidy, she noted that the programme was designed to increase export sales; it directly targeted the industry by sharing the costs and risks of activities through repayable contributions. She considered that the programme met the definition of subsidy under Article 1.1 of the ASCM because it constituted a financial contribution by a government. With regard to the second question, concerning the benefits to the recipient, she said that the ASCM did not contain a definition of benefit. The report of the panel on Canada/Aircraft concluded that a financial contribution would only confer a benefit, i.e., an advantage, if it was provided on terms more advantageous than available on the market. In that regard, since the programme provided that the repayment be based on 4% of the incremental revenues in the target market, she considered that the existence of a benefit to the company depended on whether the total amount of the repayment, minus disbursements under the programme, was lower than the interest that would have been incurred if the company had borrowed on the market. Identifying the beneficiary and the relevant mode of supply was more complicated, particularly for mode 2, and also because the programme required a domestic content of 50%. With respect to the third question, relating to the effects of the programme and whether such effects were distortive, she considered that the programme clearly provided a prohibited subsidy under Article 3.1 of the ASCM. Accordingly, it was likely to distort trade through mode 1.

59. The second part of her analysis focused on the part of the programme that targeted members of national trade or industry associations. Concerning the first question on the form of the subsidy, she said that the financial assistance provided to national trade associations, whose activities included helping their members to develop market information, could be considered to be a subsidy under the ASCM because it amounted to a government provision of goods or services other than general infrastructure, according to Article 1.1(a)(1)(iii). On the second question, she indicated that the beneficiaries of the programme were the members of national trade associations. Regarding the third question, she thought that determining trade effects was difficult. Nevertheless, the fact that the programme related to export promotion raised suspicions that the subsidy was contingent on export performance. In conclusion, she wished to raise three sets of questions regarding this programme. First, to what extent could the definition of subsidy in Article 1 of the ASCM be used in the services context? Should the subsidies captured by that definition, but not distorting trade, be exempt from disciplines? Should there be other exemptions, for example development-related subsidies? Second, how could the benefits to the recipient be defined under various modes of supply when traditional notions of domestic and foreign, exports and imports, could not readily be transferred to services? Third, how could export subsidies be defined under modes 3 and 4?

60. The representative of Japan considered that the communication from Chile provided a useful basis for future discussions and indicated that her delegation would come back to it at a later stage.

61. The representative of Switzerland stated that his delegation, in the context of market access negotiations, would have significant problems advising suppliers to take the risk of entering new foreign markets if the possibility existed that they could be affected by unfair competition from suppliers of third countries receiving financial support from their government and no recourse was available. This was the main reason why his delegation was interested in progress on the issue of subsidies. In addition, he wished to make some more specific points regarding the issue of export subsidies in services. First, he noted that there were various reasons, most of which were legitimate, for subsidizing service suppliers. However, export programmes were cases where the motivations for the subsidies were, in the overwhelming majority of cases, trade oriented. This had to be discussed as a matter of priority. Second, while a discriminatory subsidy had to be listed as a limitation in schedules, export subsidies were often non-discriminatory and, hence, did not need to be scheduled, despite being very distortive. This created a problem of level playing field and of lack of transparency. Third, export subsidies could only be addressed in the GATS; regional or bilateral trade agreements could not effectively deal with issues such as effects in third markets. Therefore, his delegation was seeking an agreement in this round on a framework that would allow for a progressive elimination of such subsidies. Moreover, in light of the lack of time allotted to the issue in past meetings and the recent contributions made, he supported Chile's suggestion to put the issue of subsidies as the first item on the agenda of the next meeting. He also called attention to the obligation to share information pursuant to Article XV.

62. Turning more specifically to the examples listed in the communication from Chile, the representative of Switzerland said that subsidies having effects in third markets were most relevant in these negotiations. Examples A and B mentioned in the communication from Chile referred to export subsidies. Subsidies by governments artificially allowed service providers to be more competitive by offering lower prices. With respect to mode 3, the key question was to what extent national treatment was granted, as subsidies were generally limited to domestic service suppliers. Some subsidies, while granted to suppliers having established a commercial presence, could also have distortive effects on trade under mode 1. Mode 1 imports would, in such cases, be distorted. Concerning the beneficiaries of the programme, she thought that some subsidies that were aimed at benefiting suppliers with a commercial presence could in turn affect exports of services through mode 1.

63. Regarding the first example, the Export Programme, she wished to distinguish between the part of the programme directly targeting the industry and the one aimed at national trade associations. Regarding the former, any subsidies involved were not discriminatory within the meaning of Article XVII as foreign suppliers established in the territory had the same access as domestic suppliers. The problem was that competition was distorted in third markets. Domestic companies in these markets would face unfair competition from abroad. The same was true for service suppliers of third countries who exported to these markets. Her delegation was concerned about such unfair competition and thought this needed to be addressed as a priority. Description of the programme in paragraph 5 of the communication suggested that it was akin to an export risk scheme. She considered that governments should not operate support schemes that afforded companies cheaper risk insurance than from private sources. The conditions attached to the contribution from the government, described in paragraph 6, were much more favourable than comparable schemes from a private financial service supplier. The subsidy programme thus provided an unfair advantage. The situation was different for pure political risk insurance, where the role of governments was legitimate. Turning to the part of the programme relating to national trade associations, she stressed that that part was not directed at individual companies but, rather, at the whole sector and that it did not support exports, as was the case in the other part of the programme, but aimed to promote a sector as a whole. The generic aspect of this part of the programme made it far less problematic than the other part described in paragraph 5. It was hard to see that it would artificially lower prices of services sold or exported.

64. Regarding example B in the communication from Chile, she called attention to paragraph 8(d), which in her view described a typical export subsidy that harmed foreign competitors. In conclusion, she indicated that subsidy rules in the goods area could only be used as a starting point. A lot of adjustments would have to be made, especially since services were not being checked at the border in relation to the price paid. This meant that any subsidy disciplines could not be built on the notion of countervailing duties as in goods trade. A key concern in services was to have national treatment applied, especially in mode 3. Nevertheless, as showed in the examples, some subsidies, even if granted in a non-discriminatory manner to established suppliers, could distort competition in third markets.

65. The representative of Turkey considered that the definition of subsidies and related disciplines was complicated by the fact that services sectors had very different particularities. For example, it was difficult to set rules that could meet the requirements of both banks and restaurants. The extent of trade distortion in a given sector would depend on secondary effects of the subsidy, which would be different for each sector. For example, a subsidy to the banking sector would indirectly benefit other sectors by reducing interest rates on credit. Therefore, categorizing services sectors into main sub-groups and having a study done on trade impacts per sub-group might help to advance discussions. The level of restrictions could then be determined for each sub-group. The use of sub-groups could also be useful for considering public policy objectives, which were more prominent in such sectors as health and education. It was important to keep the balance between the ability of governments to pursue social policy objectives and tackling trade distortions. Also, the scope of services sectors as defined in Article I:3(b) of the GATS included a wide range of enterprises, from small-sized firms to multinational companies. Trade distortions seemed more likely when the recipient of a subsidy was a significant player in the market, and this had to be taken into account when categorizing subsidies.

66. The representative of Colombia believed that looking at concrete examples was a positive way to advance discussions because it helped to provide more information on subsidy practices and fostered technical analysis. With respect to the Export Programme, she considered it would be beneficial to further analyze that programme in light of the criteria and concepts contained in the ASCM, for example, the existence of a financial contribution by a government or any public body within the territory of a Member or the conferring of a benefit. It was also important to further assess the applicability of the concept of specificity, as well as the granting of subsidies conditional on export performance. The update of the Secretariat Note on subsidy information found in TPR reports provided useful examples of subsidy programmes. She highlighted that the update indicated that the majority of subsidies took the form of tax incentives, duty-free inputs and free zone incentives, as well as preferential credit, sometimes linked to exports. In the banking sector, for example, 33 Member governments provided subsidies, often in the form of tax incentives. In addition, 24 Members provided subsidies to the transport sector in general, 25 to maritime transport in particular, 14 to air transport, and 14 to rail transport. The Note also listed subsidies in such sectors as energy, telecommunications, construction, software and information technology. Since the Note, which drew on TPR reports, necessarily lacked detailed information on subsidy programmes, she considered that Members that had such programmes in place could provide additional information, maybe along the lines suggested in Chile's communication.

67. The representative of Brazil characterized the position of his delegation on this issue as one of creative and careful curiosity. Whatever the outcome of the discussions, Article XV provided that the negotiations had to recognize the role of subsidies in relation to the development programmes of developing countries and take into account the needs of Members, particularly developing country Members, for flexibility in this area. He also wanted to draw attention to the Agreement on Agriculture, which he thought could be helpful in discussions. Annex 2 of that Agreement contained a list of green-box measures, one of which was referred to as general services. Such measures included research, pest and disease control, training services, extension and advisory services,

inspection services, marketing and promotion services, infrastructural services, including electricity, roads, port facilities, water supplies, etc. He thought there might be common ground between such examples and the last two examples mentioned in the communication from Chile.

68. The representative of Hong Kong, China lent support to the proposal by Chile that subsidies be the first item on the agenda of the next meeting. He wished to comment on the first example found in the communication from Chile. He had found three distinct elements of subsidies in the programme. First, there was a financial contribution by the government. Second, the contribution was to an established entity fulfilling certain export or content criteria. Third, the subsidy was contingent on exports. An additional element of importance was that of benefit, and further analysis was needed to see whether concepts used in the ASCM could be readily applied in the context of services. Regarding the second question, he considered it was clear that the company receiving support was the beneficiary of the programme. However, it was not clear that the subsidies were specific to any mode of supply. Indeed, it seemed unlikely that a subsidy programme targeting services exports would specify any particular mode of supply to be subsidized. Hence, trying to make a modal distinction in terms of the recipient of the subsidy was not very meaningful. The same could be said regarding the effects of subsidies. As pointed out by Switzerland, subsidies were likely to distort conditions of competition in a foreign market in favour of the exported services, to the detriment of the domestic services in that foreign market as well as those exported by third countries. He believed that, in such cases, the distortive effects did not easily lend themselves to any modal distinction, as they would affect all suppliers supplying services to the same market. The impact of such distortive effects would appear to arise within the boundary of the market concerned and would not be related to any particular mode of supply. Reacting to comments made by other delegations, he said that his delegation considered that the issue of distortive effects and that of the definition of subsidies should be separated. While the definition could be generic and be relevant across all sectors, the distortive effects might need to be analysed having regard to the particular circumstances of individual sectors. It would be useful to assess distortive effects in the light of the policy objectives of the subsidies. He expressed support for Switzerland's approach to the issue, emphasizing the need, first, to try to achieve transparency of subsidy practices and, second, to see whether a level playing field could be established. In that regard, he hoped to hear more on the notion of progressive elimination of subsidies. He also stressed the importance of sharing information pursuant to Article XV.

69. The representative of Canada said that the nature of the programmes mentioned in the communication from Chile, combined with the particular characteristics of services trade, underlined the difficulties involved in defining trade-distortive subsidies in services. Considering possible disciplines was equally complex. Various programmes in the communication were described as aiming to promote social prosperity, or to satisfy broad economic objectives beyond the context of trade in services, relating for example to infrastructure development. He believed that subsidies in some cases could correct distortions arising from market failure, satisfy important needs, and often contribute to what was public policy in many countries. These subsidies were not necessarily trade distortive. He agreed that it was important to structure the discussion on subsidies and that the use of examples could be helpful in that regard. Regarding the room document presented by Chinese Taipei, he was surprised by the approach used, which seemed to involve judging compliance with the ASCM. He considered that it was premature because it seemed to suggest that this Agreement should apply to services subsidies or be replicated in the GATS. Regarding the intervention by the representative of Switzerland, he wondered why reference was made to risk insurance, which he did not see in the description of the programme.

70. While reserving her delegation's position on the applicability of the ASCM to subsidies in the services area, the representative of China had some preliminary comments and questions on the room document from Chinese Taipei. She wondered whether it was appropriate to conclude that, because they were prohibited in the ASCM, subsidies contingent on local content were most likely to be

distortive in services trade. Regarding the financial assistance provided to national trade associations, she mentioned that Chinese Taipei's room document suggested that such assistance amounted to the government providing goods and services other than general infrastructure to the private sector. She asked why financial assistance to national trade association was regarded as government provision of goods and services. With respect to generic export promotion activities, the room document said that the use of the term 'export' raised suspicions that the subsidy was contingent on export performance. She found it difficult to draw such inferences. With respect to the second example listed, concerning services related to technology, the room document said that the elimination of import duties did not constitute a subsidy while income tax holidays for computer training could be considered as a subsidy. She wished to hear more about the underlying reasoning. Regarding the tourism example, she hoped that the delegation of Chinese Taipei could elaborate, in the light of the conclusion reached in the previous example, on why the import duty exemption for advertising and promotional material was thought to be a subsidy. With respect to the tourism example, she also hoped to hear more on the point made in the room document regarding the application of personal income taxes to local investors. Finally, concerning the example on scientific research and technology transfer, she wished to have further explanation of why the burden of proof should depend on whether a subsidy was deemed non-actionable or not.

71. The representative of New Zealand said she was interested to hear more from delegations about the nature of distortions. 'Distortion' was not a clearly defined term and could not be automatically associated with subsidies. She shared the view expressed by Hong Kong, China that the issue of what was trade distortive should be de-linked from the definition of subsidies. The underlying policy objectives would be a very important factor in clarifying the notion of trade distortion. In response to questions raised at the last meeting by Hong Kong, China in the context of the Secretariat Note S/WPGR/W/46, she wished to confirm that the subsidy disciplines relating to services in the Australia-New Zealand Closer Economic Relations Agreement had never been invoked. Article 11 of the Protocol on trade in services under that Agreement prohibited Members from introducing new or expanding existing export subsidies, export incentives and other assistance measures having a direct distorting effect on trade. Article 19 of the Protocol provided for consultations in cases where an obligation had not been, or might not be, fulfilled, or the achievement of an objective of the Protocol was being frustrated. To date no consultations had been requested by either party on perceived trade distorting effects arising from export subsidies in services.

72. The representative of the United States recalled the previous comments from her delegation on the exercise proposed by Chile. With respect to the update of the Secretariat Note on information on services subsidies contained in TPR reports, she took note of the caveats mentioned by the representative of the Secretariat and also wished to draw attention to paragraph 3 of the Note. Accordingly, it needed to be kept in mind that potentially relevant information was compiled against the background of the definition of subsidies and related concepts contained in the ASCM, and that not all data recorded in TPR reports might be compatible with this definition. Paragraph 3 also indicated that some of the subsidies mentioned might be financial contributions to services which were beyond the scope of the GATS, i.e., services falling under Article I:3(b) or services in areas excluded under the Annex on Air Transport Services. These caveats needed to be kept in mind in discussing the information provided in the Note. The Working Party should focus on what was covered by the mandate under Article XV. She would come back to the room document from Chinese Taipei at a later stage.

73. The representative of the Australia wished to associate himself with the statement made by the delegation of New Zealand in response to the questions previously raised by Hong Kong, China. Services subsidies were not an issue or a problem under the Australia-New Zealand Closer Economic Relations Agreement. The representative of Singapore believed that a number of commentators had said that the GATS might not necessarily cover export-related measures. If that was the case, and without prejudging the position of his delegation, how could export subsidies relate to the GATS?

74. Commenting on the Secretariat Note on subsidy-related information contained in TPR reports, the representative of the Republic of Korea noted that one of these reports pointed out that subsidies to services sectors were increasing, while those relating to goods were declining. Also, subsidies that were hidden before privatisation had now become important for pursuing certain policy objectives. The information compiled from TPR reports also highlighted that different motivations for providing subsidies existed, for example regional development, universal service obligations, or security concerns. Without implying that such subsidies should be subject to disciplines, she found it useful to see that the role of subsidies in services was growing. With respect to the definition of subsidies, she believed that definitional elements of the ASCM could apply, especially the existence of a financial contribution and of a benefit. However, a key issue in the services sector was the question of modal application, which needed to be further explored. She wondered how the concept of export subsidies could be applied to the four modes of supply.

75. The representative of Mexico indicated that the possible elaboration of disciplines on subsidies was a key aspect of the services negotiations for his delegation. He thought that the communication from Chile provided a useful way to focus discussions, and he would come back to the examples at a later stage.

76. The representative of Hong Kong, China wished to react to a comment made by the delegation of Singapore. Since Article XV provided for negotiations on subsidies that might have distortive effects on trade in services, it should be clear that delegations could talk about any subsidy issue relating to trade in services. Also, Article XV said that the exchange of information concerned all subsidies relating to trade in services. Obviously, delegations could still disagree over whether certain subsidies were trade distortive or not. With respect to the update of the Secretariat Note on information on services subsidies contained in TPR, he wished to take note of the caveats mentioned by the representative of the Secretariat. The Note included a possible subsidy being granted by Hong Kong, China, which referred to tax exemptions provided under double taxation arrangements for international operations of ships or airlines. He wished to clarify that, in his view, such measures were covered by the general exception under Article XIV(d) of the GATS and should not be subject to any subsidy disciplines to be developed. Such disciplines should not apply to measures covered by the general and security exceptions under Articles XIV and XIV *bis*, as well as perhaps to services supplied under the exercise of governmental authority and prudential measures in financial services. He suggested that Members whose subsidies had been mentioned in the Note share their views as to the types of measures that might not constitute subsidies or that should not be subject to subsidy disciplines because they did not have trade distortive effects.

77. The representative of Chile indicated that she had asked her authorities for information on the two Chilean programmes mentioned in the Secretariat Note on information contained in TPR reports. She would later come back to this issue. In a preliminary manner, it appeared that such programmes aimed to fulfil some public policy objective.

78. The representative of Chinese Taipei said she hoped to obtain in writing the questions raised regarding the room document. Concerning her reference to the ASCM for a possible model definition, she thought that the Agreement was commonly used and thus could not be ignored, although she acknowledged that services trade, given the different modes of supply, was more complex. With regard to the question raised by the delegation of Singapore, she was of the view that export-related measures, such as export subsidies, were within the scope of the GATS.

79. Regarding the preceding discussion on ESM, the Chairperson said that his successor would circulate, as quickly as possible, a list of questions raised in the light of the recent contribution by the group of Members from ASEAN. The list would serve as a tool to focus discussions and facilitate the provision of answers. With respect to government procurement, he noted that the Secretariat was asked to elaborate on its previous Note contained in S/WPGR/W/44. The additional Note might take

some time to be completed given the large amount of potentially relevant information. Concerning subsidies, he noted that the discussion inspired by Chile's communication and the room document from China Taipei had proved useful. He recalled that the delegation of Chile, supported by others, had asked for the issue of subsidies to be put as the first item on the agenda for the next meeting. He asked the membership if they could agree to such a proposal.

80. The representative of the Philippines said he was open to such an idea, but that was conditional on the incoming Chairperson conducting consultations on this issue and perhaps having informal sessions of the Working Party between the clusters of meetings so as to alleviate concerns about the lack of time to discuss all issues. The representative of the United States thought that consultations by the Chairperson might be appropriate, but was not sure about the need for informal meetings raised by the delegation of the Philippines. Regarding the work to be undertaken by the Secretariat, for example with respect to procurement, she reserved the right to provide her delegation's views and opinions at the time the relevant document was circulated so that positions or interpretations were not prejudged. The representative of Canada did not think that consultations on the order of agenda items were necessary. The representative of Chile agreed with Canada and doubted the usefulness of consultations on such procedural issues. The Chairperson preferred not to pre-empt his successor.

IV. DATES OF THE NEXT MEETING

81. The Chairperson said that the Working Party would hold its next formal meeting during the next cluster of services meetings. The exact date would be announced in due course.

V. OTHER BUSINESS

82. No point was raised under this item.

VI. ELECTION OF THE NEW CHAIRPERSON

83. The Chairperson recalled that, according to the rules of procedures, the hand-over of the chairmanship needed to take place at the end of the first meeting of the year. He indicated that, as a result of consultations, the Chairman of the Council for Trade in Services, Ambassador Camara, had announced at the meeting of the Council held on 15 March that Ms. Clare Kelly, from New Zealand, seemed to be supported by the whole membership. He thus proposed that the Working Party elect Ms. Kelly as Chairperson of the Working Party on GATS Rules. Ms. Clare Kelly was elected by acclamation.

84. The incoming Chairperson thanked delegations for their confidence and thanked the outgoing Chairperson for the work done under his tenure. Delegations expressed their appreciation for the outgoing Chairperson's engagement and congratulated the new Chairperson on her election.

Working Party on GATS Rules

REPORT OF THE MEETING OF 10 AND 15 MARCH 2004

Note by the Secretariat¹

Corrigendum

At the request of the United States, the following correction should be made:

The part of paragraph 5 that summarized the intervention of the United States should now read: "The representative of the United States said that her delegation was ready to show further flexibility and proposed to drop the reference in the draft decision to the terms "as required", which her delegation had previously insisted on. Her delegation was now satisfied with the introduction to the paragraph and thus felt that it was no longer necessary to include the terms "as required"."

Working Party on GATS Rules

REPORT OF THE MEETING OF 10 AND 15 MARCH 2004

1. The Working Party on GATS Rules held, under the chairmanship of Mr. Santiago Urbina from Nicaragua, a special meeting to discuss the deadline for negotiations pursuant to Article X of the GATS. The agenda for the meeting was contained in WTO/AIR/2258. The agenda for the meeting was adopted.

I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES UNDER ARTICLE X OF THE GATS: DEADLINE FOR NEGOTIATIONS

A. SESSION OF 10 MARCH 2004

2. The Chairperson informed delegations that he had been conducting consultations with the main protagonists regarding whether negotiations pursuant to Article X should be extended beyond 15 March 2004, and on what terms. He noted that these consultations had not yet permitted reaching a consensus. The Chairperson then proposed that the meeting be continued in informal mode. The formal meeting was adjourned and the Chairperson indicated it would be reconvened at a later time.

B. SESSION OF 15 MARCH 2004

3. The Chairperson resumed the meeting of the Working Party. He first drew attention to the terrorist attacks in Madrid on 11 March and condemned such abominable acts. To show solidarity with the families of the victims and with the people of Spain, the Chairperson asked the Working Party to hold a minute of silence. The representative of Spain thanked the Chairperson and the Working Party for sharing condolences and for expressing support.

4. The Chairperson informed delegations that he had conducted extensive consultations since the session of 10 March so as to help reach a solution with regard to an extension of negotiations under Article X of the GATS. He expressed gratitude to those delegations who had expressed flexibility, as this had allowed him, in the consultations, to focus on resolving the major points of difference. Although not all positions could be accommodated in full, the draft decision which he had circulated under his responsibility in JOB(04)/9 represented a balanced outcome. He hoped delegations could accept it, along with some modifications resulting from consultations recently held. These modifications only concerned paragraph 2 of the draft decision, which would now read: "Subject to the outcome of the mandate under paragraph 1, as required, the results of such negotiations shall enter into effect on a date not later than the date of entry into force of the results of the current round of services negotiations". The Chairperson indicated that this draft decision seemed to be gathering consensus. He stressed that in this process all protagonists had to make difficult concessions. He asked if the Working Party could agree on the content of such a decision.

5. The representative of the United States said that her delegation was ready to show further flexibility and proposed to drop the reference in the draft decision to the terms "as required", which her delegation had previously insisted on. The representative of the Philippines asked for a short

recess so as to better assess that proposal. The representative of Pakistan wished to have some time to consult with his authorities and thus lent support. The representative of Colombia wanted to bring to the attention of the Working Party that the Spanish translation of the text of the draft decision did not seem entirely accurate.

6. The Chairperson noted that the draft decision, which only had a few words in brackets, had been circulated the previous week so as to enable delegations to receive proper instructions from their authorities for today's meeting. Regarding the Spanish translation of the decision, he thanked the representative of Colombia for her comments and said he was confident that the Spanish version of any decision adopted would accurately reflect the original text. The Chairperson proposed a short recess, to which the Working Party agreed.

7. In resuming the session, the Chairperson asked if the Working Party was ready to agree on the text of the draft decision mentioned earlier, along with the modification proposed by the United States. The representative of Pakistan informed the Working Party that he was now ready to agree to the proposed draft decision.

8. The representative of the Philippines said that what he was agreeing to at this point was for the draft decision to be transmitted to the Council for Trade in Services for approval. The Chairperson confirmed that the authority to adopt the decision rested with the Council for Trade in Services. He was seeking agreement of the Working Party to send this particular decision for adoption to the Council for Trade in Services.

9. The Working Party agreed to send the draft decision, as modified, to the Council for Trade in Services for approval.

Working Party on GATS Rules

REPORT OF THE MEETING OF 2 DECEMBER 2003

Note by the Secretariat¹

1. The Working Party on GATS Rules opened its forty-fifth meeting under the chairmanship of Mr. Santiago Urbina, from Nicaragua. The agenda for the meeting was contained in WTO/AIR/2221. It included the following items: Annual Report of the Working Party on GATS Rules to the Council for Trade in Services, emergency safeguard measures, government procurement, subsidies, date of the next meeting, and other business. To assist delegations in the preparation of the meeting, the Chairperson had prepared an annotated agenda contained in JOB(03)/215.

2. The representative of Brazil enquired about the status of the study on subsidies being undertaken by UNCTAD and wondered whether the Chairperson could address this topic under "other business". The Chairperson said he would comment on this issue under the agenda item pertaining to negotiations on subsidies. There was no request to add any items under Other Business. The agenda for the meeting was adopted.

I. ANNUAL REPORT OF THE WORKING PARTY ON GATS RULES TO THE COUNCIL FOR TRADE IN SERVICES (2003)

3. The Chairperson explained that the Working Party needed to adopt its Annual Report to the Council for Trade in Services. He recalled that, in view of the Cancun Ministerial Meeting, the Working Party on GATS Rules had adopted, in July 2003, an update to its 2002 Annual Report, contained in document S/WPGR/12, which covered the meetings of the Working Party up to May 2003. Short and factual, the draft Annual Report that Members needed to adopt at this meeting covered meetings held in July and October, and was contained in document S/WPGR/W/45. It had to be read in conjunction with the July update. The Working Party was invited to adopt this report and transmit it to the Council for Trade in Services.

4. A number of delegations proposed drafting changes to the draft report. The following delegations participated in the ensuing discussion: Switzerland, Philippines, United States, Brazil, European Communities, India, Mexico, Canada, and China. Following a number of revisions, Members adopted the Annual Report, which was circulated as document S/WPGR/13.

II. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (ARTICLE X)

5. The Chairperson recalled that at the last meeting the delegation of Switzerland had presented a non-paper that examined an hypothetical scenario and analysed the possibilities available to a Member in the absence of an ESM. Also, the delegation of Thailand, speaking for a number of other delegations, had provided answers to questions previously asked regarding how a particular ESM model might apply to a hypothetical situation. He invited delegations to pursue their discussion on that basis, given that many could only express preliminary comments at the last meeting. In light of

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

some of the issues mentioned by delegations at the last meeting, he suggested that questions that could be addressed related, for example, to the following: in responding to a given situation, what was the role and relevance of domestic regulation and of other measures permitted by GATS, and what was the importance of the type of commitment inscribed in the schedule? What would be the form and effect of the emergency safeguard measure used to react to the situation described in the hypothetical example? What would be the role and relevance of an emergency safeguard mechanism in encouraging more commitments or more liberal commitments? Delegations might also wish to consider whether other ESM models or approaches, or other hypothetical situations, might help bring forward relevant considerations. While it was his desire to pursue the discussion in light of the substantive contributions made at the last meeting, the Chairperson underscored that the deadline for these negotiations was fast approaching. Document S/L/102, adopted by the Council for Trade in Services on 15 March 2002, extended the deadline to 15 March 2004. He indicated that he would subsequently take the floor in order to invite views from delegations as to how best to proceed up to mid-March, given that the Working Party currently had only one other formal meeting planned before the expiration of the deadline, tentatively scheduled at present for the first week of February.

6. The representative of Brazil thought that, in addition to the questions formulated by the Chairperson, another relevant item to guide discussions related to how a collective mechanism such as an ESM would stimulate Members to get rid of, and stop resorting to, certain entries in schedules that could have an effect equivalent to that of an ESM. The representative of the United States considered that the annotated agenda contained the Chairperson's suggestions to help guide discussions, but was not something that Members needed to agree to.

7. The representative of the Philippines, speaking also for the delegations of Brunei Darussalam, Indonesia, Malaysia and Thailand, wished to offer some observations on the non-paper from the delegation of Switzerland. While measures such as zoning or shopping-hour regulations might help to alleviate, to a certain extent, injury suffered by domestic industry, he did not think these were sufficient to address fully the problem sought to be rectified through an emergency safeguard measure. Domestic regulations did not really reduce the inflow of foreign service suppliers, in this case foreign retailers, which might benefit from such advantages as access to greater resources, economies of scale, or integrated network of affiliates. What was really required was a measure to allow domestic service suppliers to have time to adjust. Regarding zoning regulations, he considered, as mentioned by the representative of Korea at the last meeting, that such measures might be related to economic needs tests found in schedules. He also wondered whether zoning regulations would not simply result in displacing the injury from one area to another.

8. The representative of Brazil stated that his delegation was not campaigning for or against an ESM. Rather, his delegation wanted to analyse the tools available within GATS so as to make the whole architecture of the Agreement more transparent and predictable. He saw the question of ESM in that light. With respect to the non-paper from Switzerland, he agreed that the GATS was a flexible agreement but noted that Members nevertheless needed to be very cautious before undertaking a commitment. Being cautious did not preclude the occurrence of unforeseen events, however, which was why the Agreement's flexibility was not sufficient. Emergency safeguard measures thus had a role to play. He thought that an ESM would be preferable to the scheduling of economic needs tests (ENTs). Many, if not most, of the numerous ENTs listed in schedules had no clear criteria and produced an effect equivalent to that of a safeguard. He thought it was preferable to discuss the issue multilaterally so as to design a mechanism that could be supervised collectively, rather than to have individual Members craft and list their own ESM in their schedules. Regarding domestic regulations, he did not think that it was advisable to use domestic regulations as a way to overcome an unforeseen problem arising from commitments undertaken. He also wondered whether Switzerland could further explain the relevance of the non-discriminatory programme for the training of workers, which was suggested in the non-paper. Finally, he expressed doubts about two other alternative avenues

mentioned by Switzerland, i.e., Article XXI procedures and seeking a waiver. Specifically, he wondered why it would not be feasible to withdraw a commitment temporarily if it was possible to do so permanently under Article XXI.

9. The representative of Hong Kong, China thought that discussing examples was useful since it helped to focus on the concrete issues that delegations had to face in the consideration of an ESM. Regarding the non-paper presented by Switzerland, he agreed that the GATS provided great flexibility, and noted that it was essential to have the proper regulatory framework in place when undertaking liberalisation so as to cater for the structural adjustment that might occur as a consequence. He had reservations about the suggestion that economic needs tests could be a solution. It was not apparent that ENTs were intended to address situations similar to those for which an ESM might be needed. Economic needs tests were supposed to be based on clear, objective and pre-established criteria. Their application should thus be predictable. An ESM would be intended, in contrast, to address unforeseen or emergency circumstances. An ENT could thus not be used to address the latter set of circumstances. He indicated that, had he to choose between ENTs and multilateral rules to address unforeseen and emergency circumstances, the initial preference of his delegation would be the latter. Regarding economic needs tests that lacked clear criteria, he thought this was a problem in itself. Regarding the role and relevance of domestic regulation in responding to a given situation, he thought that the GATS, by permitting non-discriminatory domestic regulations, provided ample flexibility to governments in dealing with any situation that might arise, even when full commitments were undertaken. He was not certain, however, whether some of the situations suggested in the Swiss paper could really be considered as measures that would be consistent with a full commitment. With respect to the suggestion to have different shopping hours for small retailers and large retailers, he wondered, in the event all the large retailers were foreign and all the small retailers were domestic, and if the intent of differential treatment related to national origin, whether the possibility of a *de facto* national treatment violation would arise. Determination of what regulations would be consistent with commitments could only be done on a case-by-case basis.

10. Turning back to the Shangri La example previously presented, the representative of Hong Kong, China had some questions for the group of delegations that had indicated that such example could justify the use of emergency safeguard measures. He asked what were the emergency and unforeseen circumstances that required the use of emergency safeguard measures and whether such circumstances arose from liberalization undertaken or commitments made? Was that only a transitional problem? Were the circumstances mentioned in the example different from structural adjustment, which was presumably unavoidable and should have been foreseen when undertaking reforms and liberalization? What kind of measures would have been undertaken to address the situation in the example of Shangri La and why were such measures not listed in the schedule? How did the situation in that example differ from a scenario where withdrawal of commitments was intended?

11. The representative of China wished to comment on the non-paper presented by Switzerland. Referring to the perceived flexibility at the time of making commitments, he said that China's commitments had not been made according to the level of development of Chinese services industry, or to regulatory capacity, because of the nature of accession negotiations. Moreover, China had not been allowed to inscribe an ENT in its schedule. China had made commitments, including phase-in commitments, in sectors where it had little experience. He indicated that it was hard, at the time a commitment was made, to predict the results of liberalisation. As a result, ESM was an issue that was seriously considered by China during the current services negotiations. His delegation thought that a safeguard mechanism would be helpful for further liberalization in the new round of negotiations and that the absence of such a mechanism might lead the domestic industry to consider further commitments to be neither feasible nor desirable. Liberalization might then take place according to one's own development level and regulatory capacity.

12. The representative of the European Communities considered that the Shangri La example was special in that it related to the issue of large retailers versus small retailers, rather than domestic suppliers versus foreign suppliers. It might be that large retailers originated in other countries, but that was not always the case. Increasingly, supermarkets from developing countries were expanding within their own country, as well as abroad. Distinctions between large and small retailers could not simply be equated to issues relating to foreign versus domestic suppliers, which was probably why Switzerland had mentioned the role of domestic regulation. She asked whether the delegation of the Philippines could explain how time would permit small retailers to adjust to competition from large retailers, which might be foreign or domestic. She did not see how the protection of domestic industry for a period of time would allow small retailers to adjust to competition from large retailers and felt that such an issue would be more appropriately dealt with through domestic regulation than by keeping foreign suppliers out of the market.

13. The representative of Indonesia agreed with Switzerland that the GATS was flexible and that Members had policy options to react when facing a situation such as that of Shangri La. Members could, for instance, liberalize autonomously at the national level only and decide at a later stage whether to make commitments under GATS. The issue at stake, though, was whether GATS provisions as they now stood adequately addressed the situation where a Member, after having undertaken market access commitments, suffered serious injury because of a radical increase in imports of services. He said that the existing provisions of the GATS were not designed to protect the domestic industry in such a situation, as a Member currently could not respond swiftly to deal with it. Emergency situations could only be addressed through temporary measures taken in a timely manner. Temporary suspension might be appropriate in certain cases in order to address injury. Regarding domestic regulations, he considered that these might only serve as a partial solution and could not be used to address the underlying problems.

14. The representative of Switzerland indicated that the non-paper by his delegation examined a range of possibilities available to a government in a given situation, but recalled that it did not express a preference for any of the particular measures mentioned. Regarding the comments made by the delegation of the Philippines, he said that his delegation had never argued that one given measure, such as zoning plans, would be sufficient to address fully the problem at hand. He thought there was a large array of measures that could be taken and that, in such a context, an ESM did not provide added value. The non-paper showed that the GATS was flexible and that a variety of avenues could be used on a case-by-case basis. He considered that even an ESM would not be sufficient to address fully the situation at hand in the Shangri La example, because structural problems could not be solved by an emergency safeguard measure. With regard to a point previously raised about the link between zoning plans and specific commitments, he considered that zoning plans, because they were not listed as a market access limitation in Article XVI, were deemed *prima facie* to be a domestic regulation. Zoning plans had to be used sensibly and not as a disguised trade barrier. In reaction to the intervention made by the representative of China, he recognized that there was a difference in levels of commitments between original and more recent Members. In any event, he was not aware of cases where an ESM was the only possible means of resolving a given problem and felt viable alternatives existed for all Members, notwithstanding the time at which they joined the WTO.

15. Regarding a point raised by the representative of Hong Kong, China, the representative of Switzerland indicated that the problem at hand was structural and related to the relationship between small retailers and large retailers, as noted by the representative of the EC. Domestic regulations sought to address this structural issue, but not to keep foreign suppliers out of the market for a certain period of time. Restrictions on foreign suppliers through an ESM would not help to solve this problem. Concerning the points raised with regard to economic needs tests, he said that his delegation was of the view that ENTs should be removed whenever possible. When they needed to be scheduled, ENTs had to be based on objective, transparent and predictable criteria. He disagreed with

the idea that an ESM would make commitments more liberal. Rather, it would diminish and compromise the value of commitments negotiated during the Uruguay Round. Finally, recalling that the purpose of an ESM allegedly was to address emergency and unforeseeable effects caused by commitments, he wondered whether these could occur when commitments had been in effect for many years. For example, he did not see why, when Members had commitments in place for some 10 years or so, an ESM should continue to apply to all Members and all sectors.

16. The representative of Philippines, speaking also on behalf of Brunei Darussalam, Indonesia, Malaysia and Thailand, agreed, like Switzerland and others, that the GATS was flexible, but noted that because of other factors a Member might, notwithstanding that flexibility, be constrained at the time of taking commitments. Concerning the point made by Switzerland that an ESM was not needed because a government could use a variety of measures even when commitments had been made, he said that he saw domestic regulations as something that should not be used to discriminate against foreign suppliers. Domestic regulations, as understood under the GATS, should not serve as a disguised market access barrier. He considered that this discussion highlighted that an ESM was necessary, desirable and feasible, and wondered why a case could be made for an ESM in the goods sector, but not in services. Regarding the point by the representative of the EC that the use of an emergency safeguard measure in the case at hand would not help to solve a structural problem, he thought one could not imply that all problems were structural and that they could never be overcome after a given period of time. In any event, an emergency safeguard measure could only be employed for a limited period. The group of delegations he was speaking for had mentioned a time limit of three years for developing countries, perhaps with the possibility of extension. There was no intention to suggest that modification of commitments be permanent. A key difference between the model proposed by ASEAN in 2000 and a modification of commitments was that, in the former, the offering of compensation was not required for the first three years. With respect to comments by the delegation of Switzerland that the situation justifying the emergency safeguard measure needed to be "unforeseeable", he felt that this issue only arose because of the decision of the Appellate Body in US – Lamb, where unforeseen circumstances were treated as an additional element that an investigative authority needed to take into consideration. He was not certain, however, that the Appellate Body had precisely used the words "unforeseeable circumstances". He considered that the unforeseen or emergency circumstances in the Shangri La example requiring a safeguard measure related to the sudden increase in supplies by foreign service suppliers, which was not foreseen at the time the commitment was made. He indicated that he would like to revert to some of the questions asked by Hong Kong, China, at a later time. Finally, the interventions under this agenda item showed that there was interest in fleshing out and clarifying various questions. This pointed to the need to make further efforts to meet the 15 March deadline or, otherwise, to have an appropriate alternative.

17. While she did not necessarily agree with all the options mentioned in the non-paper by Switzerland, the representative of the United States thought it raised important questions about the relevance of the hypothetical example presented. The ensuing discussion still had not solved the questions of desirability and feasibility. No threshold on the question of an ESM had been reached. Looking more carefully at the paper on the modal application of an ESM previously circulated by the European Communities might have helped to focus discussions, which had often tended to be circular in nature. Reacting to a response provided by Thailand at the last meeting, she considered that the type of emergency at issue was still not apparent. She also sought additional clarification of Brazil's position, including with regard to the role of ENTs and Article XXI. Her delegation did not see that a case had been made for an ESM under modes 1, 2 or 3. Since the structure of the GATS was different from that of agreements on goods, the Agreement on Safeguards could not simply be used as a model for services, given the basic differences between the sets of relevant disciplines. She feared that the discussion was moving away from the key issues that needed to be addressed.

18. The representative of Brazil was not convinced that the hypothetical situation could be characterized as a structural issue, i.e., small versus large retailers. If the problem was caused by domestic suppliers, it could be solved through domestic procedures. If it was caused by foreign suppliers, actions of governments in addressing the situation could be inconsistent with commitments, which was why different remedies were needed for such situations. Regarding the question put by the delegation of the United States, he said that questions such as that of feasibility had not prevented negotiators from designing Article XXI.

19. The representative of Canada recalled the question he had asked at the last meeting, which related to the prospect of a pre-established foreign firm undertaking further domestic expansion after the application of a safeguard measure. The representative of Chinese Taipei indicated that she had reservations regarding some of the views expressed regarding the relation between zoning regulations and the obligations of market access and national treatment. Foreign suppliers should not receive less favourable treatment than that granted to domestic suppliers, unless it was inscribed in schedules. She shared the view expressed by the delegation of the Philippines that domestic regulations were not sufficient to address the ESM problem.

20. In response, the representative of the Philippines, speaking also for the delegations of Brunei Darussalam, Indonesia, Malaysia and Thailand, said that the concept of domestic industry, as ASEAN had proposed to define it, would be used for initiation of investigation and data collection. Whether foreign suppliers established in Shangri La would be subject to the application of an emergency safeguard mechanism depended to a large extent on the degree of acquired rights that would be granted to such suppliers, as agreed by Members. Whether a foreign supplier would be allowed to undertake further domestic expansion also depended to a large extent on the degree of acquired rights agreed upon.

21. The Chairperson thanked delegations for their interventions. He called attention to his initial intervention under this agenda item. In light of the deadline of 15 March 2004 for the negotiations on the question of emergency safeguard measures, he asked delegations for their views and suggestions regarding how best to proceed in the coming months, in light of the mandate of obtaining results by mid-March.

22. The representative of the Philippines, also speaking for the delegations of Brunei Darussalam, Indonesia, Malaysia and Thailand, reiterated the commitment to conclude negotiations by the deadline of 15 March 2004. He asked, to that end, that the Chairperson preside over dedicated informal sessions of the Working Party before the next cluster of meetings in February. The representative of China supported this suggestion. The representative of the United States indicated she could not support that suggestion, as she did not consider that such sessions would change the position of Members on the question of an ESM. No specific dates needed to be fixed for consultations by the Chairperson. Should the dates of the next cluster of meetings be available, it would be possible to work backward and suggest when he might want to have consultations. The Chairperson noted that the Working Party needed, pursuant to Article X, to obtain a result and that he remained at the disposal of delegations in order to facilitate that process. The representative of Brazil stressed the interest of his delegation in taking part in any consultations.

III. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII)

23. The Chairperson recalled that at the last meeting the delegation of the European Communities had formally explained its proposal for a framework of rules in the area of government procurement in the GATS, contained in document S/WPGR/W/42. Various delegations had made observations and asked questions relating, for example, to the role and relevance of procedural rules, the relevance for each mode of supply, and the possible use of concrete examples to facilitate discussions on the

applicability of the proposed framework. A number of delegations also had reserved the right to comment at a later point. In addition, the delegation of Singapore recently submitted a communication, circulated as JOB(03)/216.

24. In introducing this communication, the representative of Singapore noted that the mandate for negotiations on procurement in the GATS was a complex issue because of the potential overlap with the Government Procurement Agreement (GPA) and the negotiations on transparency in government procurement. Moreover, wide differences existed amongst delegations with regard to the interpretation of the mandate contained in Article XIII. The proposal by the European Communities served as a useful basis to undertake domestic consultations. He considered that the proposal provided flexible modalities to make commitments in government procurement in services. Given that consultations were still ongoing domestically, he was not in a position to express definitive views. Nevertheless, these consultations had so far permitted to identify a number of issues and questions arising from the proposal by the EC, and he hoped these could facilitate discussions in the Working Party. He then proceeded to the issues listed in the communication from his delegation. Point (a) referred to the differences of views regarding the interpretation of the mandate contained in Article XIII and asked whether the negotiating history could shed some light on the issue, as hinted in paragraph 15 of the latest communication from the EC (S/WPGR/W/42). Point (b) referred to the applicability of provisions other than national treatment, market access and MFN to government procurement in services. Point (c) addressed the potential overlap between the GPA and the modalities proposed in S/WPGR/W/42, while point (d) referred to the MFN exemption proposed in paragraphs 13 and 14 of the communication from the EC. He sought further clarification from the EC on these issues.

25. Point (e) asked how the proposed MFN exemption for government procurement in the GATS should apply, if at all, to the specific non-application or reciprocity conditions contained in GPA Annexes. Point (f) referred to the relationship between GPA Article III:3 and the modalities in S/WPGR/W/42. He wondered whether the intent of the EC was to include the qualification in paragraph 11 of its proposal into the eventual outcome of negotiations under Article XIII of GATS so as to avoid any ambiguity. Recognizing the need to avoid duplication between the work of the WPGR and that of the WGTGP, point (g) asked whether the WPGR should start looking at other sources for discussing procedural rules or rather wait further for developments in the WGTGP. Point (h) asked, as Japan did at the last meeting, how the proposed modalities might be operationalized under the various modes of supply. He considered that examples might help to clarify the issue. Point (i) asked whether some of the disciplines on government procurement contained in section B:2 of the Understanding on Commitments in Financial Services could be used for other services sectors, and, if so, how it would interact with the proposed modalities in S/WPGR/W/42. Point (j) asked to what extent Article XX of the GPA, which referred to domestic review procedures, would apply in the context of possible GATS disciplines on government procurement. He noted that Article VI:2 already contained some provisions on domestic review procedures. Finally, point (k) called attention to the fact that Articles V and XVI of the GPA, among others, contained provisions relating to developing countries and special and differential treatment. He thought these provisions might serve as a useful reference for negotiations pursuant to GATS Article XIII.

26. The representative of the European Communities intended to answer key questions raised at the October meeting of the Working Party and to react, on a preliminary basis, to some of the points in the communication by Singapore. Regarding the relationship between the GATS annex on government procurement, proposed by his delegation, and the Government Procurement Agreement (GPA), he indicated that a provision of the proposed annex could ensure that GPA commitments not be extended to all Members on an MFN basis. This would not take the form of a typical MFN exemption, but rather that of a specific article of the annex that would cover not only Members of the GPA and their current commitments, but also future GPA Members and future commitments. In

addition, his delegation had raised in its communication the possibility of listing MFN exemptions. These would not serve to clarify the relationship between the GPA and the GATS, since this would be done through the inclusion of a specific article to that effect within the text of the Agreement, but rather to address the fact that Article II of the GATS did not apply to government procurement and that, consequently, in 1994 Members had not listed MFN exemptions pertaining to government procurement. His delegation thus thought it might be appropriate that, only at the time of entry into force of a GATS Agreement on Government Procurement, Members could have the possibility to list MFN exemptions relating to procurement. The format of such exemptions could be discussed, but he did not see *a priori* why the current format would not be applicable. Concrete examples might be helpful in determining whether some adjustments might be necessary.

27. With respect to questions raised regarding procedural rules, he recalled that his delegation did not intend to duplicate discussions taking place in the WGTGP and that procedural rules developed by that Working Group could be imported into the GATS. In waiting for an agreement on transparency in government procurement to be developed, the WPGR could, as suggested by various delegations, discuss procedural rules on the basis of those contained in either the GPA or in bilateral or regional agreements. In that regard, the work done by the Secretariat, in S/WPGR/W/44, highlighted that a significant number of regional agreements contained such procedural rules. He wondered whether the Secretariat could draw up a list of provisions relating to procedures and transparency in the agreements mentioned in its previous Note. Turning to the question raised by Singapore on Article III of the GPA, he noted that national treatment in the GPA applied only to procurement laws, regulations, procedures and practices, and not to trade in services. That meant that, when actually providing the service, the foreign supplier, once selected for the procurement contract, had to conform to the rules and limitations of the GATS. The same principle was being followed in his delegation's proposal for an annex on government procurement within GATS. Article XVI and XVII would apply once the contract had been awarded. For example, should a foreign service supplier of construction services win a procurement contract in the market of a Member that had a commitment in government procurement for that sector, that supplier would still need to respect the conditions and limitations listed by the Member under Article XVI or Article XVII for that sector, for each relevant mode.

28. Concerning questions raised on the modal applicability of the commitments on government procurement, particularly those regarding modes 2 and 4, the representative of the European Communities said that, since the commitments on government procurement would relate to invitations to tender and awarding of contracts, distinctions between modes were not essential. One could imagine a single commitment for all four modes of supply in the government procurement column of the schedule, with the supply of the service then being governed by commitments in columns relating to Articles XVI and XVII. A full commitment for all modes of supply in the government procurement column for, say, computer services, would amount to non-discriminatory access to invitations to tender in that sector, as well as non-discriminatory treatment in the procedures relating to the awarding of the contract. Once the contract had been awarded, typical limitations inscribed in the market access or national treatment columns, for any given mode, would apply to the supply of the service. That being said, some WTO Members might prefer to undertake separate government procurement commitments for each mode of supply. For example, access to government procurement might be limited to firms established in the territory, as was done in the Understanding on Commitment in Financial Services. He considered that commitments on procurement for modes 2 and 4 could be relevant. Natural persons often needed to enter the market in order to submit a tender. There were some cases where governmental entities consumed services abroad for the organisation of an event in another country. He noted that many delegations had called for the use of concrete scheduling examples and thought it might indeed be useful to proceed accordingly.

29. Regarding invitations to tender covering various sectors, he thought this question was not relevant only for government procurement since many services resulted from the combination of

various other services. In such cases, commitments in the relevant sectors were needed so that the supply of the service was entirely covered. It might be examined whether some relevant clusters existed in the field of government procurement, as there might be more generally in the provision of services under the GATS. On the issue of domestic review procedures, he noted that Article VI:2 of the GATS already touched upon this issue and that Members might want to consider whether that Article was sufficient or whether more precise provisions would be needed as part of a GATS annex on government procurement. With respect to reciprocity conditions in the GPA, he noted that the GATS functioned differently, as each Member's commitments were extended to all other Members and could not contain reciprocity provisions. Concerning provisions relating to developing countries, including special and differential treatment, he recalled the views of his delegation on the benefits accruing to Members, including developing economies, as a result of a framework of rules on government procurement. The GATS' flexibility offered the possibility for each Member to take various levels of commitments, in sectors of choice, with thresholds, exclusions, price preferences, or other limitations and conditions. This would permit each Member, principally developing Members, to adapt their commitments to their developmental needs and the particular situation in each services sector. He felt that a discussion on general principles for the treatment of developing countries could be useful.

30. The representative of Canada asked some questions to the delegation of the EC in relation to paragraphs 6 and 8 of S/WPGR/W/42. Paragraph 6 mentioned procurement involving both services and goods. He indicated that, previously, the GATT Code on Government Procurement only applied to goods and that past experience might help to deal with services procurement that included some goods. He asked whether the EC thought it would be necessary to develop and agree on rules that would somehow distinguish between, on the one hand, services procurement which included incidental goods, for example a maintenance procurement that might include spare parts, and, on the other hand, goods contracts. Would it be useful to have a general statement of scope that would focus on services with incidental goods and that would let the methodology to be determined by implementing governments? He understood that this was the approach followed in the GATT Code on Government Procurement. Regarding paragraph 8, he thought the proposal by the EC implied that thresholds might differ between services sectors. He wondered whether this was indeed what the European Communities had in mind. If so, how would a Member assess the benefits of these varying thresholds and how would such multiple thresholds guarantee the efficiency of government operations? Finally, since procurement often involved a variety of services that could be brought together in a given tender, did the EC envisage developing rules to determine in which of these services sectors it might fall into?

31. The representative of Chinese Taipei made preliminary observations on the communication from Singapore. She welcomed the idea of looking into the GATS negotiating history to see whether some light could be shed on the interpretation of Article XIII. She noted that her delegation's understanding of the mandate contained in that Article was the same as that suggested by the European Communities in paragraph 15 of S/WPGR/W/42, i.e., that the obligations of market access, national treatment and most-favoured-nation should not apply to government procurement until appropriate procedural rules were developed. She also agreed with Singapore that it was important to have a clear understanding of the relationship between the GPA, the WGTGP and the GATS. Notwithstanding negotiations under Article XIII, she thought that the special rules of the GPA would continue to apply between GPA Members. Finally, coming back to some of the questions she had directed at the EC during the last meeting, she noted that procurement in services was often characterized by clusters. For example, a tender for mass transit systems might involve various services sectors, such as legal, accounting, engineering, architecture, transport, construction and other related services. Some of these sectors might be subject to commitments and others not. She thus sought the views of the European Communities on how their proposed framework would address such situations and thought that concrete and specific examples should be used in future discussions.

32. The representative of Mexico recalled the view of his delegation regarding the interpretation of the negotiating mandate contained in Article XIII. In that regard, he understood that the negotiations aimed at determining how obligations other than those of Articles II, XVI and XVII applied to government procurement. He wondered what was the basis for the EC's view on the negotiating mandate, as found in paragraph 19 of the communication.

33. The representative of the European Communities intended to answer immediately some of the questions raised. Concerning procurement covering both goods and services, he indicated that for a large number of Members the rules governing procurement were the same for goods and services. For these Members, establishing a distinction between the two types of procurement was not essential and applying GATS rules on procurement would not pose difficulties. Other Members, including the EC, drew a distinction in their domestic legislation between procurement of goods and procurement of services. A borderline had to, and could, be drawn between the two types of procurement so as to clarify which legislation had to be complied with. In GATS, it would be useful to also draw such a borderline. This would have to be discussed between Members. It might be decided that procurement which covered principally the provision of services would fall under the GATS, as opposed to procurement covering principally the provision of goods. The content of such a clause would have to be determined. With respect to the question by the delegation of Canada on thresholds, he said his delegation hoped to develop an agreement providing for maximum flexibility; each Member should be free to specify a threshold for each of its commitments. Thresholds could vary from sector to sector, as was already the case in the GPA, and from Member to Member, depending on the size of the economy or the level of development. With regard to procurement contracts covering multiple services, he indicated that this was an issue inherent to GATS itself, and was not solely arising with respect to procurement. The provision of a service that included other services classified elsewhere required commitments in all relevant sectors. The same would be true for government procurement.

IV. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV)

34. The Chairperson indicated that, as requested by the Working Party, the Secretariat had prepared two Notes. He also recalled that at the last meeting, in an effort to help discussions, the delegation of Chile, with support from a number of other delegations, had suggested that delegations provide concrete examples of subsidies that might distort trade in services. Some delegations had indicated that the compilation of such a list of examples would eventually need to be discussed further. However, Members were free to come forward with their own examples and to seek the views of Members in that regard. This seemed to be a logical step which could help to focus attention on possible subsidy-related problems and issues. In that respect, a communication from Chile, contained in JOB(03)/218, had recently been circulated. The Chairperson also recalled that delegations had had a substantive discussion on the definition of subsidy at the last meeting. Members might want to pursue that discussion by trying to assess where areas of commonality existed and what were some of the remaining key issues to be addressed. Moreover, as indicated at the last meeting, he had wanted to hear more from delegations regarding the proposal that the Secretariat prepare a Note on notifications covering services that were made to the Committee on Subsidies and Countervailing Duties. Some Members had expressed support for this proposal, while others had expressed concerns. Discussions he had had since then did not lead him to believe that these concerns had receded. He thus thought it might be more useful if each Member wishing to do so used this available information as a possible source of inspiration for providing anonymous examples of subsidies that might distort trade in services. He also reminded delegations that it had been agreed at the last meeting that the Secretariat, subsequently to the two Notes for today's meeting, would prepare an update to the Note on services subsidies in Trade Policy Reports. This could be done for the next meeting of the Working Party, depending on overall workload. Finally, regarding the question raised at the outset of this meeting about UNCTAD's work on subsidies, he said that such work had not yet

been completed yet. UNCTAD might possibly be able to inform delegations at the next meeting of the Working Party.

35. A representative of the Secretariat said that the two Notes prepared at the request of Members were short and factual. The first was an overview of subsidy disciplines in economic integration agreements notified under Article V of the GATS, circulated as S/WPGR/W/46. The Secretariat already had done a similar Note, dated 20 May 1996, which had been circulated as S/WPGR/W/12. The current Note thus only looked at the 24 agreements notified after that date. Thirteen of these agreements contained some disciplines on subsidy practices, 11 of which were agreements between the EC and other European countries. The second Note prepared by the Secretariat was a list of publications from other international organizations relating to subsidies in services, circulated as S/WPGR/W/47. While the list was not necessarily exhaustive, the Secretariat preferred it to be as comprehensive as possible. As a result, however, Members should not consider all studies listed to be of direct relevance for the mandate of the Working Party. He invited Members to contact the Secretariat, should they want to provide additional information or obtain further details.

36. The representative of Chile regretted that the communication from his delegation could only be circulated very recently. The communication was intended to further the negotiating mandate in Article XV. Since little information had been exchanged pursuant to paragraph 2 of Article XV, it was essential, in order to develop disciplines pursuant to paragraph 1 of Article XV, to know the subsidy programmes that Members currently had in force, so as to identify types of programmes and their sectoral focus, and to distinguish those that did distort trade in services from those that did not. The communication from his delegation intended to focus the discussion on real examples of subsidies that Members were applying. Although the identity of the Member providing the subsidy was not specified, the communication contained real examples found on the internet. The issue of subsidies could not be separated from market access issues. One needed to know, when undertaking a commitment, whether foreign service suppliers were benefiting from subsidies, as this could generate distortions. He considered that the discussion of examples needed to complement both the exchange of information and the work on the development of disciplines. The communication from his delegation divided examples of subsidy programmes in two groups. The first group listed two programmes which contained elements that he thought had been prohibited in the area of goods, because the subsidy was contingent on either exports or domestic content. The programmes contained in the second group did not appear to entail subsidies prohibited under the disciplines on goods. He noted that his delegation had encountered various subsidies relating to air transport and maritime transport services, but preferred not to focus discussion on such issues on this occasion, although it seemed important to discuss them in the future. Finally, the communication concluded with three questions, which he hoped would foster discussions between Members.

37. The representative of Hong Kong, China said he looked forward to an eventual circulation and presentation of the study being undertaken by UNCTAD, as had been done in other subsidiary bodies. With regard to the Note by the Secretariat on studies relating to services subsidies done by other international organizations, he indicated that his authorities were assessing whether useful information or lessons could be extracted from these studies. Concerning the Note by the Secretariat on subsidy disciplines in economic integration agreements, he observed that a significant number of economic integration agreements had been notified since the previous Secretariat Note on the subject, over half of which contained disciplines on subsidies in services sectors. He thought it would be useful if those Members that were parties to the agreements containing such disciplines could contribute to the discussions of the Working Party by expanding upon a few specific issues. The first issue related to what was the motivation or intention for including subsidy disciplines in the agreements. Second, Members might want to elaborate on the coverage of these disciplines, as many seemed to apply to both services and goods. Another aspect was whether the disciplines also covered subsidies for exports of services to other markets. He thought that one of the agreements mentioned

in S/WPGR/W/46 had disciplines explicitly covering export subsidies, and hoped that the relevant Members could elaborate as to why such scope was selected. Third, he wondered whether those delegations that had disciplines in economic integration agreements could explain how they operationalized them, including how they addressed the issue of definition of subsidy and how they determined the appropriate criteria for invoking such disciplines. In that regard, it would be interesting to understand what developments in the market could trigger the disciplines. He also asked whether these subsidy disciplines had been invoked and, if so, under what circumstances. In addition, he thought that some of the disciplines mentioned in the Secretariat Note seemed to imply recognition that subsidies could affect conditions of competition and that, more particularly, export subsidies could have a direct distorting effect on trade in services. He hoped to hear more in that regard from Members participating in such agreements.

38. With respect to the communication from Chile, he noted that the two first examples referred to situations where the subsidy was related to the export of services. The observations just made on the basis of the Secretariat Note on subsidy disciplines in economic integration agreements would also be relevant. He looked forward to views of other Members and wondered how the first two programmes mentioned in the communication from Chile would be treated under the subsidy disciplines of economic integration agreements previously referred to. It was useful to also consider the examples in light of these disciplines and to see how Members that were parties to such agreements saw such situations. The examples listed in part III of the communication from Chile showed that it might be important to discuss other types of subsidies that were, by their nature, less trade distortive and could, because they related to public policy objectives, be regarded as tolerable or non-actionable. Discussions on both types of subsidies could take place in parallel.

39. Programmes similar to the general infrastructure programme mentioned in the communication from Chile were being run by many governments. This raised the question whether certain areas or forms of government support should be considered as non-actionable under any disciplines to be developed. He believed similar considerations would apply to the example listed by Chile pertaining to scientific research and technology transfers. While some Members had scheduled limitations to national treatment for such subsidies, it was obvious that many governments provided very significant funding for technology and human resources development so as to enhance the competitiveness of their economy. He thought it was important to discuss whether such programmes, in whatever form, should be accommodated in the disciplines to be developed. With respect to the definition of subsidy, he considered that recent discussions on the issue had highlighted important areas of commonality, but he hoped to hear more from the delegations that had not intervened on this particular point. He asked whether the Chairperson, in order to assist discussions on definition, as well as on the points raised by the delegation of Chile, would consider further updating the Chair's Checklist of Issues, so as to cover points raised in recent meetings. The two key starting points for listing relevant issues were, first, the definition of subsidy and, second, the examination of subsidies that might have distortive effects on trade in services. Finally, he invited other delegations to come forward with additional anonymous examples so as to highlight the types of subsidy programmes in existence and the types of problems they might cause. This would provide the basis for further discussions of the type of disciplines that might be needed.

40. The representative of India made some observations on the examples put forward in Chile's communication. He thought a distinction was made in the first example between specific firms and the generic industry and wondered whether a similar distinction was made in the goods context and what would be the implications in services. He also wondered about cases where a subsidy targeted a service embodied in a physical good, and whether this would be considered as a subsidy relating to a good or a service, especially in light of the examples given for tourism. It could also be useful to assess how some of the examples might relate to national treatment commitments.

41. In relation to the first question posed in Chile's communication, pertaining to the elements of subsidies in each programme, the Chairperson said that the first example might include direct transfers of funds, tax breaks, loans, and provision of export development assistance. With regard to the second question, regarding the beneficiaries, he considered that the modal application needed to be assessed further.

42. The representative of the United States expressed concerns with regard to the source of the examples being provided by the delegation of Chile, given these were real-world situations. With that in mind, she had difficulty with the implicit assumption that Members had agreed to analyse the particular examples on the basis of the questions suggested by Chile. On a preliminary basis, she thought the questions were probably relevant and interesting, but it might have been easier if Members had put forward their own subsidy programmes as examples. Another avenue to consider was Article XV:2, which provided that any Member that considered itself adversely affected by a subsidy of another Member might request consultations with that Member, and that such requests shall be accorded sympathetic consideration. With regard to suggestions about pursuing various issues in tandem, she thought that, while the absence of a definition of subsidy did not necessarily mean other elements of Article XV needed to be sidestepped, a piecemeal approach might be more appropriate.

43. The Chairperson, taking note of the reservations, remarked that the discussion was analytical in nature and did not aim at determining whether given programmes were legal or illegal.

44. The representative of Brazil considered that the communication from Chile represented a useful way to focus discussions. While he thought some of the examples listed bore similarities to programmes provided in his country, his delegation was not taking a restrictive approach to the discussion but hoped to pursue the discussion further at the next meeting.

45. The representative of Canada noted that the range of examples provided by the delegation of Chile, in addition to the complexities related to the four modes of supply, underlined the difficulties in defining what was a subsidy in services trade. Trying, subsequently, to decide which subsidies were distorting and to discipline them would be a significant challenge, especially given the different aims and objectives of the various programmes. He thought that in considering whether certain subsidy programmes had distortive effects, it was important to determine the extent to which existing GATS obligations, especially national treatment, could help in addressing potential effects of subsidies. For example, with regard to the example of the infrastructure programme listed in the communication, any company supplying the service through mode 3 would, in the event of a full national treatment commitment, have access to the subsidy. He hoped to provide further comments at the next meeting.

46. The representative of Japan believed that the contribution by Chile was a positive step forward, as it permitted to better grasp the issues at hand and to avoid the chicken-and-egg situation previously experienced. He encouraged other delegations to come forward with additional real, but anonymous, examples. The issue was complex and he wondered what was the element pertaining to services trade in the examples on tourism and on scientific research and technology transfer, in particular. Further analysis of the examples would thus be useful. With respect to the Secretariat Note on subsidy disciplines found in economic integration agreements, he expressed interest, as the delegation of Hong Kong, China, in hearing more from those Members that applied such disciplines. He noted, however, that the circumstances under which such disciplines were used might be different in the context of regional trade agreements than in GATS, since the levels of integration envisaged were quite different. Under GATS, how could Members address issues arising from subsidies to a specific service sector when the levels of commitments for such a sector varied across the membership? This issue needed to be addressed in the future.

47. The representative of New Zealand considered the communication from Chile to be a useful contribution to the discussion which was being studied more fully by her authorities. Regarding a point raised by the delegation of Hong Kong, China, she believed it was very important to consider the underlying policy objectives in analyzing the examples put forward. A question to that effect could be added to the list included in Chile's communication. Particularly, what was the prime objective of the measure and were any benefits to services industries incidental or explicit? In considering these issues, she believed that limited inferences could be drawn from the treatment of subsidies in the goods context. Finding an appropriate manner to treat public service subsidies would be key to advancing the Working Party's discussions in this area. She also supported Hong Kong, China's call for participation of a greater number of delegations, including in the information exchange and the discussion of the examples put forward by Chile. With respect to the Secretariat Note on subsidy disciplines found in economic integration agreements, she noted that the entry into force, in 1988, of the Protocol on Trade in Services of the Australia-New Zealand Closer Economic Relations Trade Agreement created substantially free trade and investment conditions in services between the two countries on a negative list basis with very few exceptions. She did not recall that trade distortive subsidies had been identified in the field of services. She intended to revert to the questions raised by some delegations at the next meeting of the Working Party, after having had the opportunity to consult with her authorities.

48. The representative of Switzerland believed that the communication by Chile constituted a very good contribution to the work of the Working Party. On a preliminary basis, he thought that the paper confirmed that there was an issue to be addressed and that the membership needed to devote greater energy and resources. It also highlighted that it was sensible to discuss the issue of definition in parallel with the examination of substantive issues such as suggested in the communication from Chile. He recalled the importance of the obligation of information exchange and stressed that, while not a substitute for such an exercise, the discussion of examples was consistent with that objective. Like Japan, he hoped that this discussion would help to solve the chicken-and-egg dilemma, which had prevented progress in the past.

49. The representative of Australia stated that the Secretariat Note on subsidy disciplines in economic integration agreements confirmed the view that it was possible to consider subsidy rules for services in a manner which, if not identical, might parallel and be based on rules already applying to subsidies in goods. He would inform his authorities of questions raised regarding the Australia-New Zealand Closer Economic Relations Trade Agreement. Chile's communication was an effective way to assist the discussions of difficult conceptual issues such as definition. He would revert to the contribution by Chile at the next meeting.

50. The representative of Chinese Taipei considered that the paper from Chile was helpful in facilitating the discussions of the Working Party. On a preliminary basis, she observed that subsidies granted to service providers were sometimes associated with goods and could thus be governed by the Agreement on Subsidies and Countervailing Measures. Also, it was important to consider what modes of supply might be affected by subsidies. As mentioned by Canada, all established suppliers could benefit from the subsidy in the example of the infrastructure programme. It might therefore be difficult to identify trade distortive effects. She hoped to comment further at the next meeting.

51. The representative of Chile thanked delegations for their comments on the communication. She underscored that her delegation did not want to limit the list of examples to those that were most clearly distortive, such as export subsidies. It was also important, in the context of services, to discuss examples that related to public services or social policy objectives. Even if such subsidies might not be disciplined, they could not be ignored in the Working Party's discussion. The questions raised by India were interesting, and her delegation had some doubts regarding the issue of services embodied in goods as well as the application of the obligation of national treatment. Such issues needed to be

further discussed. Concerning the point raised by some delegations about subsidies available to foreign suppliers having established a commercial presence in the territory, pursuant to mode 3, she thought this also needed to be carefully considered. Such subsidies might have a trade distortive effect when the recipients supplied services outside the territory of the Member granting the subsidy. She looked forward to pursuing this discussion at the next meeting.

52. The Chairperson thanked delegations for their participation, and the Working Party took note of statements made. In reviewing the discussions on all agenda items, he welcomed the adoption of the Annual Report, although he had hoped delegations could avoid drafting details. On emergency safeguard measures, delegations had focused on issues arising from the non-paper by Switzerland and the proposed hypothetical application of an emergency safeguard mechanism to the Shangri La example. With respect to the upcoming deadline for the negotiations, he had gotten endorsement from all Members to conduct consultations before the next meeting of the Working Party in order to address issues relating to that deadline. With respect to negotiations on government procurement, the contribution from Singapore had helped stimulate the discussion, including with regard to the proposal from the European Communities for a framework of rules in this area. Concerning the negotiations on subsidies, the contribution from Chile, with examples of subsidy programmes and related issues, had helped to enrich the discussion. Various delegations had made preliminary comments and raised questions in light of this communication and the Notes prepared by the Secretariat for this meeting. Some reservations had been raised pertaining to the use of concrete examples.

V. DATE OF THE NEXT MEETING

53. The Chairperson noted that the dates of the next cluster of services meetings would be confirmed later in the light of further consultation.

Working Party on GATS Rules

REPORT OF THE MEETING OF 1 OCTOBER 2003

Note by the Secretariat¹

1. The Working Party on GATS Rules opened its forty-fourth meeting under the chairmanship of Mr. Santiago Urbina, from Nicaragua. The agenda for the meeting was contained in WTO/AIR/2173. It included the following items: emergency safeguard measures, government procurement, subsidies, date of the next meeting, and other business. To assist delegations in the preparation of the meeting, the Chairperson had prepared an annotated agenda contained in JOB(03)/190. The agenda for the meeting was adopted.

I. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (ARTICLE X)

2. The Chairperson recalled it was not possible to address this agenda item during the last formal meeting, even though Members had an extensive discussion of ESM during the stocktaking. He urged delegations not to repeat the general points made then, as he was convinced that the views of all Members had been registered, but rather to focus on new elements. He invited delegations to continue their discussion of actual or hypothetical situations where a safeguard action might be needed, and which form such action should take. Delegations could discuss examples against the background of the various models and proposals that had been put forward. This might help assess common elements and the possibility of combining elements, and to address questions that have been raised regarding such models, including process-related and technical issues, but also questions of desirability and feasibility.

3. The representative of Brazil considered that, while looking at hypothetical and concrete examples was a valuable exercise, it would also be useful if Members that had in their schedules or in regional trade agreements a safeguard-type measure pertaining to services explain how they met, in such instances, the issue of desirability and feasibility. The Chairperson invited Members to give due consideration to Brazil's suggestion.

4. The representative of Switzerland noted the interest in past meetings in the Shangri La example, which was one of the major inputs to the Working Party's discussion. He stressed that more work needed to be done on the basis of this example and recalled that it had been suggested in a previous meeting to go through it in light of the different models that had been put forward in the negotiations pursuant to Article X. Switzerland had tried to do that with respect to one of the models, the *status quo* model. It attempted to do so in an objective manner, covering aspects it was not necessarily supportive of. He asked delegations to indicate, including at the next meeting, if they shared the assessment or wanted to propose other considerations. Switzerland's analysis would be distributed to delegations in a non-paper, which discussed possibilities available to Shangri La in a scenario without ESM. The non-paper distinguished between the scheduling phase and the period following entry into force of Shangri La's commitment regarding the distribution sector.

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

5. Regarding the first period, the paper pointed out that the GATS was very flexible, as commitments could reflect the specific circumstances prevailing in each country and sector. Shangri La knew that its distribution sector was important and, most of all, very fragile. Given the flexibility of the GATS, one possible solution would have been for Shangri La to take only a partial commitment and to schedule limitations. A second point mentioned was that commitments did not always coincide with the actual level of liberalization. A Member could take GATS commitments only after a number of years of experience at the national level, when it considered the internal situation to be mature. In other words GATS would have enabled Shangri La to start by liberalizing its distribution sector at the national level only, monitor possible unwelcome affects, and finally consolidate the liberalization under the GATS as appropriate. The representative said that such an approach would have been even more convenient for Shangri La in light of the modalities for autonomous liberalization.

6. Apart from scheduling flexibility, the GATS was also flexible regarding national policy choices and regulation. Full commitments under the GATS only limited the ability of Members to introduce measures which did not comply with Articles XVI and XVII. However, any measure that was compatible with these Articles and respected the requirements set forth by Article VI could be introduced. Many countries had elaborated and enacted policies in the distribution sector to preserve given structures. For instance, countries had zoning plans and provisions regarding the opening hours for the retail business. The issue at stake concerned national policy choice. Even in the absence of GATS commitments, there would be an intrinsic drive in Shangri La towards bigger distribution entities, as a result of capital accumulation in the private sector, which raised problems for small and traditional shops in any event. Her delegation did not see how an ESM, which was by definition a temporary measure, could solve such problems. Switzerland thus considered the enforcement of appropriate sector policies, which, of course, did not need to be discriminatory, to be essential in this context.

7. The representative of Brazil sought clarification regarding the second stage mentioned by the representative of Switzerland, that is the period following entry into force of the commitment. He enquired what kind of measures could be taken after the scheduling of a commitment in order to overcome the kind of difficulties faced in the sector. The representative of Switzerland said that, after scheduling commitments, national policy measures such as zoning laws or opening hour provisions for retail businesses could be taken into consideration.

8. The representative of the United States said she looked forward to further discussions of the scenarios put forward by the delegation of Switzerland. The representative of Japan indicated that he supported the general thrust of the ideas expressed by the Swiss delegation. The GATS was flexible and allowed for intermediate options that contributed to liberalization. The Swiss delegation might want to elaborate on this specific question. Reactions to this non-paper from demandeurs of an ESM could help to launch a more focused discussion on the desirability and feasibility of such a mechanism.

9. The representative of the European Communities stressed that her delegation, like the representative of Switzerland, found it difficult to understand how a temporary suspension of commitments could prove an appropriate remedy in the Shangri La example. She invited delegations that had put forward the Shangri La example to explain whether the domestic regulation measures mentioned by Switzerland would not be appropriate. In response to Brazil's intervention, she indicated that her delegation had already replied earlier to such questions. When the European Union concluded agreements on services based on the GATS model, with the same flexibility, no safeguard-type provisions were included. The EU did not see the need, desirability or feasibility for provisions of this nature in such agreements. The situation was different in other agreements that had no exceptions or possibilities to withdraw commitments.

10. The representative of Brazil, in reference to the bilateral agreements concluded by the European Union, indicated he might come back to this issue at a subsequent meeting. With respect to the presentation by Switzerland, he agreed that the GATS was flexible. He stressed that many old monopolies had been open to competition in the last few years, and that many governments were still evaluating the consequences of a more liberal approach to some sectors. In light of this, they might be more cautious in taking on new commitments. An alternative could be to have an emergency safeguard mechanism that would encourage Members to be less cautious and take more commitments. Without an ESM, Members might avoid taking commitments that they might find difficult to comply with later on. Finding a middle ground could help governments, but also internal constituencies, to be more flexible with respect to facing competition from foreign suppliers. Agreeing on an ESM could also level the playing field, as such a multilateral mechanism would be preferable, including for transparency and predictability, than entries in schedules pertaining to safeguards or non-specified economic needs tests. He also stressed the importance of looking at other cases than just the Shangri La example, as an ESM might not be feasible in that particular case, but in other instances.

11. The representative of Chile, as a preliminary reaction, considered that the first situation depicted by the delegation of Switzerland did not really address the issue facing this Working Party, i.e., situations where a Member decided to liberalize and introduced a commitment and, later, faced a surge in imports that was not foreseen. Thus, the alternatives 3 and 4 of the non-paper might be the ones that Members needed to reflect upon, should the approach of the Swiss delegation be followed. She also indicated, regarding alternative 3, that the flexibility of the agreement with respect to domestic regulation was relative since regulation could not be used in a way that amounted to a market access restriction.

12. The representative of Chinese Taipei, reacting in a preliminary manner, asked the Swiss delegation to elaborate on the flexibility of GATS in terms of domestic regulation. She wondered why the imposition of different shopping hours for local small shops than for larger stores would not amount to a modification of commitments.

13. The representative of Switzerland thanked delegations for their questions and looked forward to pursuing this exchange of views. He said it was important to keep in mind that an ESM was by definition a temporary measure and, thus, could not address structural problems as those arising in the Shangri La example. The structural changes occurring in the distribution sector of Shangri La were triggered by the accumulation of capital, which encouraged the creation of larger commercial structures. This would have happened with or without GATS commitments, and domestic regulations needed to be introduced to address these structural changes. He stressed that many regulations, including zoning plans, could be used for preserving specific structures. Also, bigger shops could be required to close by a certain time and on some days. He stressed that such use of domestic regulation was consistent with Articles XVI and XVII.

14. The representative of Thailand, speaking also on behalf of Brunei, Indonesia, Malaysia and the Philippines, wished to reply to questions raised in a previous meeting on the ASEAN draft ESM and the Shangri La example. The first question was "why Shangri La had made far-reaching commitments or undertaken full commitments". She thought that this question was not really relevant. There were many possible reasons for Shangri La to make far-reaching commitments, for example political pressure that might have been brought to bear upon the authorities during the negotiations, or conditionalities required under structural adjustment programmes, or Shangri La might not have foreseen that liberalization commitments could lead to such serious injury. The second question was "whether there was a way, other than a safeguard measure, that could have allowed Shangri La to deal with this problem, for example, modification of domestic regulation or some other kind of legislative response". She replied that alternative measures could complement a safeguard measure, but not address completely or fully the problems sought to be rectified by an emergency safeguard measure. Domestic regulatory measures, like zoning ordinances or limited store

operating hours, did not really reduce the inflow or supply of foreign retailers, which had access to more and less expensive resources, integrated network of vertical and horizontal affiliates, etc. While efficiencies on the part of the big foreign retailers might be difficult to match in any case, at least with the possible resort to an ESM, domestic service suppliers would have time to adjust, if they could, to the situation. During the time that an emergency safeguard measure was in place, small domestic service suppliers might, for instance, create cooperatives in the same locality so as to try to benefit from economies of scale. Of course, this was just an example of what domestic suppliers might do during the time that an ESM was in place, but did not in any way preclude the necessity of looking at other methods to boost competitiveness in the face of foreign competition.

15. The representative of Thailand referred to the third question: "How much time would Shangri La need in order to adapt to the situation arising from the liberalization?". She stated that for a developing country like Shangri La, at least three years with the possibility of an extension were required, while such a period could be shorter for a developed country, for example from one and a half to two years. The fourth set of questions went as follows: "At what point in time could we distinguish between 'old' and 'new' service providers? How could a one distinguish between national and foreign providers, how do the authorities define domestic industry, and what would happen with acquired rights?" The group of delegations she was speaking for understood 'old' services providers to mean those, whether domestic or foreign, that were already established in Shangri La's market and 'new' service providers as those, whether domestic or foreign, which were not yet established in the market. This distinction became relevant only when an ESM had been determined necessary and would be applied to the relevant industry, in this case the retail sector. 'Old' service providers which qualified as domestic service suppliers would not be affected by an ESM. 'Old' service providers which did not qualify as domestic service suppliers and were therefore, following her proposed definition, considered as foreign service suppliers would be susceptible to the application of an ESM. Of course, the degree or extent to which an ESM would be applied to the latter would depend on the acquired rights these old foreign service providers would be entitled to. She recalled that recognition of acquired rights was set out as options 1 to 3 in the ASEAN draft, and she invited Members to negotiate on this issue. On the other hand, 'new' service providers would always be susceptible to an ESM. For example, in the situation contemplated in Shangri La, if a big foreign retailer had not yet established in Shangri La, then during the period that an ESM was applied, that retailer would not be able to enter the market of Shangri La, assuming that this was the nature of the temporary suspension availed of.

16. She noted that the distinction between domestic and foreign service suppliers was based on the definitions already agreed upon by Members in GATS Article XXVIII and the intent was not to introduce new definitions in that regard. The distinction was relevant in determining who had the right to request the initiation of a safeguard investigation. It was also pertinent in determining which service providers were deemed foreign for purposes of assessing an increase in supply and the cause of injury. In concluding, she noted that Canada had also asked how the ASEAN draft ESM would apply to the Shangri La example but indicated this could be addressed at a later point, possibly in an informal setting.

17. The representative of the Republic of Korea raised some questions with respect to the aspects of the Swiss non-paper pertaining to domestic regulation. First, with regard to differences in opening hours between supermarkets and small shops, she wondered whether these were "like" and how one could actually distinguish between big supermarkets and small shops that one wanted to protect. Second, about zoning plans, she thought such regulations might be related to economic needs tests found in schedules and wondered whether they could be treated as a domestic regulation issue. Also, she asked if, when facing a surge of imports, administrations could actually apply a stricter zoning plan without nullifying market access. In addition, she asked whether domestic regulations could be transitional measures as envisaged in an ESM and whether a new regulation to protect small shops had to be gradually lifted over a certain period so as to not nullify market access. With regard to the

non-discriminatory training programme for employees in the distribution sector, she wondered whether assistance should not rather be provided to owners of small shops since employees could work in supermarkets and earn better wages. She also sought clarification as to how a training programme could be discriminatory under GATS since it would necessarily be for domestic workers and not for foreigners. She looked forward to more interactive discussion on the examples.

18. The representative of Canada sought a clarification from the delegation of Thailand regarding the concept of domestic industry. He thought that domestic industry, as defined in Article XXVIII of the GATS, would be used in the ESM proposed by ASEAN in terms of the ability to initiate an investigation and data collection, but not as regards the application of an emergency safeguard measure. He understood that Thailand was suggesting that suppliers already established in Shangri La would not be subject to an emergency safeguard measure. He wondered whether a supplier already established would be prohibited, after application of such a measure, from undertaking further domestic expansion, for example the opening of an additional branch.

19. The representative of Switzerland, in reaction to previous interventions, stressed that cases where actual liberalization coincided with a commitment to liberalise under the GATS was the exception rather than the rule. In most cases, Members had a long experience of implementing liberalization measures before a commitment came into force. He thus thought that one should not overstate the questions raised earlier about cautiousness and time to adjust, because emergency situations arising from liberalization, if any, would have occurred before the commitment entered into force. He also indicated that, for those Members who had restrictions in place and decided to undertake a liberalization commitment under the GATS, the flexibility of the GATS allowed phase-in commitments, which entailed an adjustment period. He pointed out that Members could, for example, schedule an economic needs test only for a certain period of time, after which the possibility of using it lapsed.

20. With respect to remarks from the delegation of the Republic of Korea, he did not think that likeness played a role in the examples of domestic regulation that his delegation had raised. This issue came up only in cases where there was discrimination. Shop opening hours were frequently different for big and small shops. Persons working in small shops were often self-employed, which was not the case in supermarkets, where governments wanted to protect employees. Such provisions were in force in various countries that had full commitments in distribution services. Concerning zoning plans, he thought market access did not imply the possibility of constructing any type of building anywhere in a city. Since training programmes were directed at individuals who wanted to get vocational training and did not involve service suppliers, they did not raise discrimination issues under GATS. However, one could also imagine cases of training programme that were aimed directly at the service suppliers, to help them train their employees. For such situations, if they existed, he considered that a Member that had a commitment would have to treat all suppliers in a non-discriminatory manner.

21. The representative of Indonesia expressed concerns about some of the alternative avenues proposed in the Swiss non-paper, namely the modification of commitments under Article XXI of the GATS and the possibility of seeking a waiver under Article IX(g) of the Marrakesh Agreement. He thought that the use of the latter provisions would be more problematic than those of Article XXI, especially since issues falling under Article IX needed to be brought to the attention of the Ministerial Conference.

22. The Chairperson thanked delegations for their interventions and took note of the statements.

II. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII)

23. The Chairperson proposed to continue discussion of this topic by giving consideration to the two most recent contributions. He first recalled that, at the meeting of the Working Party in May of this year, the European Communities had introduced orally a framework for negotiations on government procurement of services. The document was later distributed as S/WPGR/W/42, but could not be discussed during the last meeting of the Working Party. Second, he also drew the attention of delegations to a Note from the Secretariat containing an Overview of Government Procurement-Related Provisions in Economic Integration Agreements (S/WPGR/W/44), dated 24 June 2003. The Secretariat had been asked, in May, to prepare a compilation of provisions relating to government procurement found in the agreements that had been notified to the WTO under GATS Article V. He indicated that the initial intention was to provide delegations with a full reproduction of the pertinent texts, but such a compilation would have amounted to more than 100 pages and, thus, proven too unwieldy for information. Therefore, the Secretariat opted for an overview of the main provisions relating to government procurement in the 25 economic integration agreements notified so far to the WTO under GATS Article V. The annex to the Note contained a list of the relevant provisions of each agreement and the Secretariat was ready to provide deeper analysis based on a specific mandate from Members. He said that discussions did not prejudge the scope and results of negotiations under Article XIII and urged delegations not to re-state well-known positions.

24. The representative of the European Communities wanted to take the opportunity to present formally her delegation's communication of May 2003 and to highlight five points in particular. First, she indicated that the communication proposed to negotiate an annex to the GATS that would lay down the conditions under which a number of GATS provisions would apply to government procurement. Second, such an annex to the GATS would extend the application of the MFN principle to government procurement and at the same time provide for an exception for GPA commitments, thereby ensuring compatibility between the GATS and GPA provisions on procurement. Third, the government procurement commitments of Members would be specified in the new columns that the European Communities proposed that Members introduce in schedules of commitments. As a starting point for the negotiations on government procurement, commitments would read "unbound" for all sectors and all Members. Fourth, she argued that the proposal for an annex to the GATS, as contained in the communication, showed that such an agreement was feasible and could easily be put in place, enabling negotiations of commitments for government procurement within the framework of the GATS. Five, she considered that the benefits for all WTO Members and in particular for developing countries would be meaningful, for example through the positive impact on national budgets and the development of key infrastructures of high quality. In addition, she wished to underscore the flexibility of the proposed framework, as it provided the possibility for each WTO Member to open government procurement in sectors where the Member would most benefit from international services, at its pace and to the extent it wished open. She noted, in that regard, that the communication mentioned that it would be possible to open only certain activities, above certain thresholds, for selected procuring entities and with the limitations a Member might wish to maintain. She also thanked the Secretariat for its note on the overview of government procurement provisions contained in economic integration agreements which clearly showed that it was possible to have procurement agreements bilaterally and plurilaterally in parallel with the GPA.

25. The representative of Brazil said that the communication from the European Communities had been submitted to domestic constituencies, but that no response had been received so far. He confirmed that his delegation would engage in discussions once responses were received, while recalling Brazil's interpretation of the mandate for negotiations on this issue.

26. The representative of Canada said the communication from the European Communities, while still being reviewed domestically, constituted a useful overview of the kind of issues that would need to be addressed in the Working Party to deal with the issue of government procurement in the GATS.

In Canada's view, among the issues mentioned in the EC communication, the Working Party should focus at this stage on the development of procedural rules. He thought it was necessary to have a more detailed understanding of the framework of rules that might be developed before looking at issues such as scheduling modalities or integration with the agreement on government procurement. In conclusion, he indicated that the Note from the Secretariat on government procurement in economic integration agreements provided a useful reference tool for examining the scope and types of procedural rules in place.

27. The representative of Australia invited the EC to elaborate on the linkages between the proposed framework of procurement rules under GATS and the GPA, given that many WTO Members were not signatories to the latter agreement. The representative of Norway said that the communication from the European Communities could serve as a basis for possible rules on government procurement under the GATS. He considered that a clear set of rules in that area was important to lowering trade barriers. Such rules would offer some minimum legal certainty to service providers, provide greater transparency, and foster competition, innovation, and investment. He stressed that his delegation believed that further discussion of rules should reflect, as contemplated in the EC communication, the need for Members to open up government procurement opportunities gradually, according to their national policy objectives.

28. The representative of the United States wanted to ask some questions on the communication from the European Communities and also signalled her intention to come back to some of the ideas expressed in that communication at the next meeting. She asked whether the EC could elaborate on paragraph 19 of the communication, which indicated that various provisions of the GATS already applied to government procurement of services, including regarding linkages. She restated her delegation's interest in transparency and, in that regard, appreciated the notion contained in paragraph 18 of the communication. Noting that paragraph 9 of the communication made reference to Article I:3 of the GATS, she expressed interest in the status of the rest of Article I:3, in particular I:3(a), in this analysis.

29. The representative of Japan considered that more in-depth discussion on government procurement was needed and indicated that his delegation reserved the right, at this time, to express a final position on this issue. With respect to the mandate for negotiations on procurement, he did not foresee any impediments to negotiations on market access, national treatment and MFN, in accordance with GATS Article XIII:2. While appreciating the benefits of disciplines on government procurement for services, he raised some technical questions, for instance whether commitments could be taken on procurement for each of the four modes of supply. In particular, he wondered whether commitments in procurement could be taken for modes 2 and 4 and said concrete examples would be useful to the discussion. He also asked what the procurement situation would be in a sector such as distribution services. Regarding MFN, he said that account should be taken of the current negotiations on the Government Procurement Agreement, including linkages. Finally, he stressed that the description of concrete situations or commitments would be a useful contribution to future discussions.

30. The representative of Chinese Taipei considered that the communication from the EC could serve as a basis for discussing the technical issues pertaining to government procurement in services and had some preliminary questions to raise. She first noted, as the Canadian delegation, that paragraph 18 of the EC communication invited Members to discuss procedural rules. She had some reservations on this issue, because many procedural rules would put too much of an administrative burden on entities. While special attention should be paid to the inclusion of transparency requirements, she did not think that certain procedural features such as tender publication, bidding period, tender opening, or contract awarding should be included. Instead, these should be left to each Member to regulate. Second, regarding the European Communities' proposal to include a fourth column in schedules where commitments on procurement could be made for each specific sector, she

wanted to remind delegations that procurement in services is often characterized by clusters. For example, a tender for mass transit systems might involve various service sectors, such as legal, accounting, engineering, architecture, transport, construction and other related services. Some of these sectors might be subject to commitments and others not. Therefore, she thought Japan's suggestion to discuss concrete examples could help shed some light on this aspect of the EC proposal.

31. The representative of Singapore said that his delegation had an open mind regarding the proposal by the European Communities, given that Singapore was party to the GPA and had experience with procurement disciplines in its various bilateral agreements. While still reflecting on the mandate for negotiations contained in Article XIII, his authorities thought that the EC communication provided a useful basis for domestic consultations. His first preliminary question referred to paragraph 1 of Article XIII of GATS. He sought clarification as to whether the European Communities thought that provisions such as those contained in Articles III or VI applied to government procurement in services. Second, regarding the link between the GPA and Article XIII of the GATS, he asked how the EC proposal addressed the overlap with obligations undertaken by Members in the GPA. He wondered, for example, whether paragraphs 8 and 9 of the EC communication would duplicate GPA commitments and obligations. The representative then referred to paragraph 16 of a previous Note from the Secretariat on government procurement in services, S/WPGR/W/3 of 1995, which stated that Article 3.3 of the GPA made it clear that the GPA only contained rules on the government purchase of services and did not deal with other measures affecting market access and national treatment, as these measures remained the subject of GATS. He wondered how the EC proposal would affect Article 3.3 of the GPA. Third, regarding transparency, he noted that the EC stated, in paragraph 16 of its communication, that a GATS Annex on government procurement could provide that the provisions of a future Agreement on Transparency would apply to procurement of services under the GATS. Given the post-Cancun uncertainty about the work of the Working Group on Transparency in Government Procurement, he wondered whether one needed to wait for this issue to mature in other fora and thought it would be useful to look at precedents on such procedures in RTAs and in the GPA. Fourth, in reference to questions raised by Japan, he sought clarification on how the proposal by the EC would relate to the modal nature of GATS schedules. In summing up, he welcomed the proposal from the EC, noting in particular that the creation of a fourth column in schedules provided flexibility, and said the EC might want to provide further clarification regarding the proposal to allow MFN exemptions, as this might address some issues related to the overlap with the GPA.

32. The representative of Colombia, while noting the communication from the European Communities was still being examined domestically and that her delegation's position on the issue was well known, asked whether the EC could explain the types of benefits that the proposed disciplines on procurement might bring to developing countries. She also enquired whether the EC could elaborate on paragraph 6 of its communication, concerning procurement involving a combination of goods and services, as she understood that the GATS did not apply to aspects pertaining to goods. She asked whether concrete examples could be provided in order to illustrate such situations.

33. The representative of Switzerland reiterated the importance its delegation attached to this topic, including from the point of view of service suppliers. She considered that the proposal from the EC was workable, as it would allow Members to liberalise their government procurement markets in a flexible manner, sector by sector. She considered that the flexibility contemplated in the EC proposal was in line with the structure of the GATS and took into account development levels and national policy objectives. She asked whether the EC delegation could elaborate on paragraph 16 of its communication.

34. The representative of India, noting that the position of his delegation on the mandate of Article XIII was well known, indicated that there was uncertainty regarding the WGTGP and that, in

consequence, his delegation wanted to reserve its position for the time being. Regarding this point, the Chairperson said that the situation might become clearer towards year-end, which would assist delegations in their evaluation.

35. The representative of the Republic of Korea noted that her delegation was open to further discussions regarding the development of disciplines on government procurement in services. Regarding paragraph 6 of the communication from the EC, she wondered how the proposed definition would relate to what is being discussed in the GPA and also to the definition of public services, and thought further examination of these issues would be needed. Regarding the proposal to discuss procedural rules, she thought such rules were quite technical and was not sure whether the Working Party had sufficient expertise as compared to other fora. While acknowledging there was uncertainty regarding the WGTGP, she noted the importance of ascertaining the kind of work that would be done in that Working Group. Also, she supported Japan's proposal to discuss concrete examples and asked the EC whether it could present statistics on government procurement in services, including the proportion of procurement provided by foreign suppliers.

36. The representative of Malaysia noted the uncertainty surrounding the issue of government procurement after Cancun and recalled the position of its delegation concerning the mandate contained in Article XIII. He wanted to come back at the next meeting when, possibly, there would be greater clarity about how government procurement would progress in other fora.

37. The representative of the European Communities appreciated the comments, questions, and suggestions made and indicated that she would report to her authorities and that her delegation would reply at the next meeting. In the meantime, she wanted to respond to three points. First, regarding the GPA, she explained that her delegation proposed that the MFN obligation apply to government procurement in services but, at the same time, was fully aware that the GPA represented more favourable treatment amongst parties to that agreement. She indicated that one possibility, should it be decided to apply MFN to government procurement in services, was to provide for specific exemptions to protect more favourable treatment among signatories to the GPA. Second, she reiterated that her delegation considered that a number of GATS provisions, including Articles III, VI, VII, XII, and XXIII did already apply to government procurement. While Article XIII:1 mentioned Articles II, XVI and XVII of the GATS, it was silent regarding other provisions of the GATS, which was why the proposal from her delegation examined Articles II, XVI, and XVII and how to have them apply to government procurement. Third, concerning the question raised by the delegation of Colombia on procurement that involved both goods and services, she considered that any GATS agreement on procurement, in order to be meaningful, should cover all contracts whose main object was the procurement of a service, even if such contract incidentally involved procurement of goods necessary for the supply of the service. She stressed that her delegation did not intend to extend the scope of GATS to trade in goods, but rather that the intent was to avoid reducing the meaningfulness of disciplines on procurement in services. This would be the case if services procurement contracts could be excluded simply because they also involved, for example, procurement of some construction materials, or computers, or pens and papers necessary for the provision of the service, the latter being the main subject of the contract. In conclusion, she reiterated the intention of her delegation to provide further responses at the next meeting.

38. The Chairperson thanked delegations for their participation and took note of statements made.

III. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV)

39. The Chairperson suggested that discussion on the issue of subsidies take place on the basis of the revised *Checklist on Subsidies* (JOB(03)/57), which was a tool to help delegations address in a systematic manner issues that had been raised in the negotiations under Article XV. For example, the first issue in the *Checklist* suggested that Members consider what might be an appropriate definition

of subsidies in services, what would be the relevance of the Agreement on Subsidies and Countervailing Measures (ASCM) in that regard, and whether and how services subsidies should be categorized. Another issue addressed in the *Checklist* related to concepts relevant to what should be regarded as trade-distortive subsidies and permissible or non-actionable subsidies.

40. He indicated that, as suggested at the last meeting, he had made available as room documents some past communications on the definition of subsidies so as to facilitate discussion. These communications were from Hong Kong (Job 5870), Argentina (Job 6629), and Poland (JOB(02)/84). He noted that the lack of significant progress in the information exchange certainly did not prevent discussion of such issues, although meaningful information would greatly facilitate it. He recalled that Article XV said that "Members shall exchange information concerning all subsidies related to trade in services that they provide to their domestic service suppliers". In sharing such information, Members were free to use their own working definition, possibly the one they used in scheduling limitations relating to "subsidies" in their schedules of commitments. They did not necessarily need to collect and present all information at once, but could also do it step by step. He noted that the checklist did not prejudge the position of any Member, but might help, along with submissions from Members, to focus discussions. With respect to UNCTAD's work on subsidies in services, he understood that such research was still ongoing.

41. The representative of Poland noted the interest of his delegation in further discussions on multilateral disciplines on subsidies in services, as well as in greater transparency in this area. He thought that discussing the definition of subsidy was a logical starting point in the development of disciplines. He also considered that such a discussion could contribute to the information exchange, which had been disappointing to date since a number of delegations blamed the absence of an agreed definition for lack of progress in that regard. Nevertheless, he considered that delegations could provide information on the basis of their own definition.

42. The informal paper earlier circulated by his delegation aimed at asking some questions that would need to be answered in order to make progress. He considered that the problems identified were the same as those identified in communications from Hong Kong, China and Argentina, which suggested there was a common ground to agree on a definition. He argued that two key issues for further discussion would be, first, the broad definition of subsidy, such as found in Article 1 of the ASCM, and, second, possible exclusions from such a broad definition. Regarding the latter, he noted the concepts of specificity and non-actionable subsidies in the ASCM. He thought that the text of the GATS, including Article XV, could suggest other exclusions but that attention should first be given to the broad definition of subsidies. It could be built on answers to four questions: who was granting the subsidy, to whom, what was the form of the subsidy, and, possibly, what were the benefits to the recipient of the subsidy.

43. Regarding the first question, he indicated that Article I:3(a) of the GATS provided some answers as suggested previously by the delegation of Argentina. He noted the suggestion by the delegation of Hong Kong, China to elaborate a detailed list of entities in that regard, but thought it might be technically difficult to do. He wondered whether the delegation of Hong Kong, China was thinking of a list of entities similar to what was used in the GPA. With respect to the second question, i.e., to whom was the subsidy granted, he considered that the issue essentially consisted in determining whether Article I:3(c) of the GATS was sufficient. Regarding the third question, the form of the subsidy, he considered that Article 1.1. of the ASCM provided a good basis and noted that this was also identified in earlier contributions from Hong Kong, China and Argentina. He thought that considering purchases of goods and services by governments as a form of subsidy could be problematic for services. This element of Article 1.1 of the ASCM, as well as the concept of price or income support, would need, in his view, to be the subject of further elaboration. Finally, regarding the question of benefits, he indicated that the preliminary view of his delegation was that the concept

of benefits to the recipient should be part of the definition. He noted this would imply such matters as calculation of a benefit.

44. The representative of Chile said that the contributions from Hong Kong, China, Poland and Argentina clearly suggested that a common basis for working on a definition was emerging. He noted that the three documents mentioned the concepts of financial contributions, benefits, who provided the subsidies, etc. Members thus had the necessary elements to develop a consensus definition. Turning to the issue of the information exchange on subsidies, he indicated that efforts to obtain more transparency in that regard had not been fruitful over the last years and underscored that exchange of information was fundamental in order to develop disciplines on subsidies. In considering ways to enhance the information available to delegations, he considered that Members could undertake an exercise similar to the one taking place in the Working Party on Domestic Regulation, where Members were working on a list of examples of measures that fell within the ambit of Article VI:4 of the GATS. Such examples had been submitted on a voluntary basis. It would be of interest to conduct a similar exercise in this Working Party with respect to subsidies that affected services, but without mentioning the Members that provided such subsidies. For instance, he suggested that Chile could provide information on subsidies which affected its private sector, without identifying the Member providing the subsidy. He considered that this could allow for more information on subsidies to be collected. Such information might then be used to work on some sort of a typology or to try to classify such information by areas such as social, cultural, environmental, research and development subsidies, assistance to small and medium size enterprises, subsidies contingent on exports, assistance to underprivileged regions, etc. Members could also consider the sectors, the type of contribution, the direct beneficiary, etc. In concluding, he indicated that such an exercise would help to provide more information, without Members feeling pressured or blamed, and recalled that responding to the questionnaire on subsidies prepared by the Secretariat remained important.

45. The Chairperson asked delegations to consider this proposal by the delegation of Chile and see how it could help further work in the Working Party, including on the definition of subsidies.

46. The representative of Hong Kong, China noted the importance of the definition of subsidies, but emphasized that agreeing on such a definition should not be a pre-condition for proceeding with the information exchange. He concurred with Poland that sufficient common ground existed to move forward. He looked forward to reactions and engagement from Members that had not made contributions on the issue of definition. In response to the specific question raised by Poland regarding who provided the subsidy, he explained that his delegation's starting point was Article I:3(a) and that enumeration of entities simply referred to the elements contained in Article I:3(a). He clarified that his delegation was not envisaging an explicit listing of entities and agreed with Poland that this would be a difficult exercise. Recalling the importance of fulfilling the mandate to provide information on all subsidies related to trade in services, he wondered why many Members were not able to provide such information based on their own definition. He stressed that the purpose of information exchange was not to target the practices of certain Members, but rather to evaluate the scale and types of subsidies in existence so that Members would be better equipped for discussing possible elements of disciplines, although the absence of information should not prevent such discussion either. He expressed support for the proposal earlier made by Chile and said that the Working Party should remain open to other sources of information on subsidies, including from other parts of the WTO and from other international organizations, including UNCTAD and the OECD.

47. The Chairperson noted that the delegation of Norway had put forward some years ago ideas similar to the one advanced today by the delegation of Chile.

48. The representative of the United States raised some questions regarding the presentation from the delegation of Poland and the non-paper previously distributed by that delegation. She thought, after consulting the various submissions made in the Working Party, that the situation for services

seemed different and more complex than for goods. She believed that the means by which governments supported private services were wide ranging, as governments could, for example, offset private sector risk by payments, by regulatory policies, or by legislation. She stated that her delegation was interested in considering whether it was possible or desirable to develop rules to govern these various instruments. Defining services subsidies would help to specify the type of information to be exchanged as well. For example, she wondered whether information would be sought on subsidies such as education grants, federal support for women's sports programs or scholarships, and whether these would be relevant.

49. She considered that the contribution by Poland constituted a useful basis to continue exploring such issues. In particular, regarding to whom the subsidy was granted, she asked what were the reasons for addressing such an issue for services if it was not dealt with in the ASCM. She wondered whether such reasons related to service suppliers not acting on a commercial basis, for example, whether some concrete examples could be examined, and what were the commercial interests involved. She also asked why Article I:3(c) would not be adequate in that regard and expressed interest in hearing more from other delegations on this issue. She also invited the representative of Poland to explain what was meant by the terms receipt of the benefit on the third line of page three of the informal paper. Concerning the suggestions made by the delegation of Chile, she said these ideas would be transmitted to her authorities for further examination. The list of examples used in the WPDR was illustrative; it was not presumed that these examples were indeed restrictions. Her delegation considered it important to address the question of scope and definition of services subsidies because this would help to define the type of information to put in a list of examples. She concluded by indicating that she would revert later to the proposal by Chile as well as related efforts to address the question of definition and scope.

50. The representative of Argentina did not foresee significant difficulties in coming to an agreement on what a subsidy was, especially for purposes of the exchange of information. Many Members had entries in their schedules that pertained to subsidies. He gave support to the proposal by Chile; the exercise would be straightforward, useful, and would essentially consist of providing examples of subsidy-related problems encountered by exporters of services. Once a sufficient number of examples were collected, Members could try to develop some classification, taking into account possible exclusions for particular policy objectives or with regard to trade distorting effects.

51. The representative of Colombia agreed that similarities existed between the elements of a definition identified in the contributions from Poland, Argentina and Hong Kong, China. Therefore, a good basis existed for moving to more technical discussions on this issue. She thought that, in the future, a matrix that would link the four elements highlighted by Poland to the earlier contributions by Argentina and Hong Kong, China might be help to structure discussions on the definition of subsidies. She supported the proposal by the representative of Chile, arguing that complementing the mandate of information exchange with concrete examples of support programmes that might cause trade obstacles would be useful. In addition, similarly to the representative of Hong Kong, China, she thought that the Secretariat should explore with some other international organisations such as the OECD, the World Bank, or perhaps some regional organisations, whether they had information on support programmes. She also wondered, while taking into account the workload this might involve, whether the Secretariat could analyse the notifications made by Members in the Subsidies and Countervailing Duties Committee so as to identify those that related to services.

52. The representative of Australia considered that one of the main problems with using the definition drawn from Articles 1 and 2 of the ASCM for the purpose of the information exchange was that the principle of territoriality could not be applied directly to a service. Although most subsidies in services were provided domestically this did not preclude a subsidised entity from providing services to third countries, for instance the provision of a subsidy to a company that establishes a commercial presence in another country or the provision of a subsidy to a firm sending service experts

to a third country for work. Also, he considered that the contributions from Argentina and Hong Kong, China alluded to, but did not directly consider the possible ramifications of subsidy disciplines for public services, education, health and related social services. In practice, subsidies for these types of activities should not be an issue because of the carve-out under Article I:3(b) of the GATS. However, he stressed that such sensitivities needed to be kept in mind in developing any subsidy principles on services. In this regard, point (e) in the conclusion of Hong Kong, China's paper might be further expanded. His delegation agreed with the proposition in Hong Kong, China's contribution that since not all subsidies were trade distorting, the definition of measures covered by subsidy disciplines should be limited to those that actually distorted trade in services. Experience so far with goods and agriculture, seemed to suggest that the objectives of disciplining distortive subsidies and implementing public policy were not incompatible *per se*, but that services had to be treated differently given the importance of regulatory structures and public services. He said that Members might consider the framing of common elements for the reduction, phasing out or even outlawing of certain subsidies, while at the same time permitting governments to pursue public policy objectives.

53. The representative of Cuba considered that the proposal by the delegation of Chile would help in obtaining more information on subsidies and could provide a basis for defining and categorising them. She also emphasized the need to look into possible other sources of information, such as UNCTAD and the OECD. She wondered whether the Chair could clarify the situation with respect to the presentation of work by UNCTAD in this Working Party.

54. The Chairperson said that studies by such organizations as UNCTAD could be used by WTO Members for their own analysis. He indicated that, once UNCTAD published any study, whether pertaining to subsidies or other relevant issues, there would be no problem in their coming to a meeting of the Working Party to present the study and inform delegations. He had been informed that UNCTAD was working on a study on subsidies, which was not yet completed and thought that, once finalized, the study would be presented within UNCTAD. Delegations would most certainly be invited to such a presentation and, subsequently, could consider the steps to be taken regarding the study.

55. The representative of Switzerland attached great importance to the definition of subsidies and the obligation of information exchange contained in Article XV, which did not depend on a common definition of services. More information on existing types of subsidies was needed in order to identify trade distortive measures and to proceed with the negotiations. Her delegation was convinced that the work on the definition of subsidies and the exchange of information could very well be carried out simultaneously. Regarding the proposal by Chile, she indicated that her delegation would give further consideration to it. She also asked whether those Members that had scheduled limitations regarding subsidies could elaborate on the scope of such limitations.

56. The representative of Brazil expressed support for the proposal from the delegation of Chile. He also wondered whether Members would agree, and whether the Secretariat thought it would be possible, to prepare a note on subsidy disciplines pertaining to services contained in RTAs notified under Article V of the GATS. Regarding the work being conducted by UNCTAD, he thought that Members had agreed during the last cluster of services meetings that a similar position would be adopted regarding work from the OECD and UNCTAD. Accordingly, UNCTAD would be invited to present their study in the WPGR once it was completed, without having to wait for a presentation to UNCTAD Members.

57. The Chairperson said that, once finalized, the UNCTAD study would be circulated and discussed and that it could also be looked at in this Working Party.

58. The representative of the United States agreed with Brazil and noted that there might have been a misunderstanding as the concerns previously expressed related more to this Working Party

commissioning a study from another organization. She considered that, as had been done in the past for example with respect to the OECD, Members could request that an observer organization, which had done a paper, present it in this Working Party.

59. The representative of Brazil wanted to confirm that UNCTAD, after having finished its study, was invited not only to circulate but also to present the study in this Working Party. The Chairperson said that he thought he was basically in tune with the representative of Brazil and hoped this discussion had clarified the issue.

60. The representative of Indonesia thought that no opposition had been expressed over past years with respect to the proposed definitions by Poland, Argentina and Hong Kong, China. Members' views were apparently converging on this issue and some more work could be done so as to further clarify and crystallize agreement. Spelling out more explicitly areas of agreement would be helpful in that regard. He stressed that a more concrete discussion on subsidies was needed in the WPGR in the future, especially regarding scope and definition.

61. The Chairperson explained that the Secretariat had provided an overview of services subsidies as referred to in Trade Policy Reviews (TPRs) (S/WPGR/W/25 and corresponding addendums). On the provisions governing services subsidies in RTAs, the Secretariat had prepared a note in 1996 (S/WPGR/W/12). He thought further work could be done but that there might be overlaps.

62. The representative of the Republic of Korea considered it useful to exchange views on subsidies, including those that might be trade distortive, although this should not prejudice any position. It should be kept in mind that subsidies were one of the legitimate means used by all countries to promote the development of domestic industries. She welcomed the suggestion by Chile and thought it was important to maintain the anonymity of the source of the subsidy. While it was too early to specify a classification or typology, as also suggested by Chile, her delegation would be open to discuss classification suggestions, including legitimate policy objectives such as environment or cultural protection or restructuring of domestic services industries.

63. Regarding the Secretariat Note on services subsidies in TPRs, she noted that the last update had been done in September 2002 and thought the Note could be updated or re-circulated. On the definition of subsidies, she thought that the GATS Article I:3 already provided answers with regard to who was granting the subsidies. She indicated that her delegation considered that the definition found in the ASCM was sufficient, excluding any regulatory measures; however, she had doubts about income and price support. She thought this could be further explored and was not sure how it would be applied in services. Rather than determining beforehand what might be trade distortive, it would be preferable to concentrate on basic issues such as the definition of subsidies and information sharing.

64. The representative of Thailand considered it useful to further discuss the definition of subsidies and emphasized that there was a clear mandate in the GATS to develop disciplines on subsidies. She acknowledged that the ASCM could provide a very useful starting point for the definition of subsidy in services but was still reflecting on whether this definition was sufficient in order to cover the particular characteristics of services compared to goods. She expressed support in principle for the proposal by Chile but asked for further clarifications.

65. The representative of Chile provided further explanations on his delegation's proposal. He had suggested that work could be carried along similar lines as in the WPDR, where Members had provided examples of measures that fell within Article VI:4, but not Articles XVI or XVII. Members could, on a voluntary basis, provide information on subsidies that they themselves were providing or on the subsidies provided by others that affected their service suppliers. He stressed that the purpose would be to collect as much information as possible on subsidies that affected trade in services, so as

to help develop disciplines. The elaboration of a typology to classify subsidies would only take place at a later stage. He recalled that information would be provided on a voluntary basis and that Members granting the subsidies should not be identified.

66. The representative of Hong Kong, China hoped to address the concerns expressed by some delegations with respect to the proposal by Chile. He stressed that the information would be provided on a voluntary basis and that it should be up to Members to draw from their own and preferred sources of information. The examples put forward would only represent the views of that Member. He hoped that these clarifications could help alleviate some concerns. On the definition of subsidy, he underscored that the concepts of scope and definition of a subsidy, on the one hand, and that of trade distortion, on the other hand, were quite distinct concepts which should not be equated. On the question raised by the delegation of Australia concerning public services, he indicated that the starting point for looking at this issue was Article I:3, in particular I:3(a). Article I:3(c) excluded services provided under the exercise of governmental authority, but the fact that other services would not be excluded did not necessarily mean that they could not be legitimately help to attain certain public policy objectives. He thought it would be important to obtain further information of those types of subsidies in order to elaborate the concepts of trade distortive subsidies and non-actionable subsidies.

67. The representative of Poland reacted to comments and questions made following his intervention on the definition of subsidy. Regarding the first question put forward by the representative of the United States, he said that the definition in Article I:3(a) was quite clear and straightforward. He noted that different elements were to be found within Article 1 of the ASCM, particularly in sub-paragraphs 1.1(a)(1) and 1.1(a)(1)(iv), and wondered whether each of these elements had the same meaning as what was covered by Article I:3(a) of the GATS. His delegation could agree that the definition in Article I:3(a) was sufficient, but wanted to draw attention to this issue. He thought that a more important issue concerned Article I:3(c). Looking at a situation where private suppliers of medical or education services would operate alongside public providers, he considered that Article I:3(c) would not be sufficient in order to address the question of to whom the subsidy was granted. Further consideration should be given to this issue. The concept of benefit was an important part of a definition and should be developed depending on the form of subsidies agreed to. He noted that Article XIV of the ASCM could be used and could be modified so as to take into account the specificity of the services sector. He thought the Australian intervention raised the question of a possible division of subsidies along different categories, for example prohibited subsidies, actionable subsidies, and non-actionable subsidies, but this would be a matter to be further developed after reaching agreement on the definition of subsidies. Concerning the intervention by the representative of the Republic of Korea, he considered price and income support, especially the latter, to be an important element of the definition, maybe more in services than in goods. However, this was a complex issue given the various modes of supply, although it also depended on how specificity was defined in the services area.

68. The representative of Singapore indicated that it was important to be clear about what the negotiating mandate under Article XV did not cover. In this regard, he mentioned that discriminatory subsidies were governed by the national treatment obligation, needed to be scheduled in order to be maintained, and that they were consequently not covered by Article XV. He also considered that, pursuant to Article I:3(c), subsidies granted in the context of services supplied in the exercise of governmental authority would fall outside the scope of the negotiating mandate of Article XV. One would also expect subsidies granted to achieve such legitimate objectives as, for example, education and health to be carved-out from Article XV. He also thought, looking at paragraph 1 of Article XV, that subsidies that did not have distortive effects would not be covered either. It might thus be said that the mandate, limited in scope, covered non-discriminatory subsidies that might have distortive effects. Regarding the definition of subsidy, while the ASCM might provide a good starting point, it should be kept in mind that the GATS had four modes of supply and that this raised the issue of territoriality as mentioned by Australia. This might mean that the ASCM was not readily applicable

in a GATS context; a Note by the Secretariat prepared in 1996 (S/WPGR/W/9) had discussed this issue. The representative also referred to implicit subsidies, which some might associate with certain regulations or lack thereof. He did not think that the ASCM covered such subsidies nor that GATS disciplines should do it.

69. On the question of the information exchange, the representative of New Zealand thought, like other delegations, that it was possible for Members to provide information before reaching agreement on a definition of subsidies, and that Members could also share information gradually through partial submissions. She considered favourably the proposal by Chile to compile a list of examples, but stated that such an exercise should complement, rather than substitute for, efforts already undertaken to exchange information through the use of the questionnaire. Turning to the contribution from Poland, she considered that the issue of public services would be crucial as discussions moved forward and thought that services falling under Article I:3(c) would naturally not be covered by subsidy disciplines. In that regard, her delegation saw it perfectly possible for public services to co-exist with private services without being in competition with them.

70. The Chairperson wondered whether the delegate of New Zealand could further elaborate on how she viewed the co-existence between private and public services in the context of subsidies. The representative of New Zealand said her delegation had given careful thought to this question and that addressing subsidy disciplines in a way that was consistent with Article I:3 would be helpful to discussions. She thought that addressing clearly the issue of public services, taking into account national policy objectives and the close interest from civil society and others groups, would help raise the level of ambition of negotiations on market access or subsidies.

71. The representative of Hong Kong, China thought that one example of co-existence without competition of public and private services related to cases where governments provided certain services, for example utilities, to residents in remote areas where no private supplier was present. Since the mandate in Article XV referred to subsidies that might have distortive effects on trade in services and to the development of the necessary disciplines to avoid such effects, he did not agree that discriminatory subsidies would be outside the scope of such disciplines, simply because they would be subject to scheduling under Article XVII. He signalled that the meaning of discriminatory subsidies was not necessarily always very clear given that modes 1 and 2 were defined by territory, while modes 3 and 4 were defined by the nationality of the supplier. The concept of discriminatory subsidies was not entirely clear in the context of export subsidies. In his view, the issue had not yet been settled and it seemed preferable to reserve such discussion for a later stage.

72. The representative of Poland thought that the co-existence without competition between private and public services was the exception rather than the rule. In his view, Article I:3(c) would not appear to be sufficient for the purpose of subsidy disciplines, and this issue would need to be addressed in some way in the development of disciplines, for example through the definition of to whom the subsidy was granted, or in elaborating further the concept of policy objectives that appeared in the GATS.

73. The Chairperson summarized the status of work to be undertaken on subsidies. He indicated that the Secretariat could first undertake an update of its earlier Note from 1996 on subsidy disciplines relating to trade in services in RTAs. With respect to the proposal to update the Secretariat Note on services subsidies found in WTO Trade Policy Reviews, he noted that the last update was quite recent, less than a year ago. Consequently, it seemed reasonable to work on the document on RTAs and to update the Note on TPRs at a later point. Regarding the proposal by the delegation of Chile, he thought that in order to make progress discussions would need to concentrate on the specific problems encountered with respect to subsidies that might cause trade distortions. He asked delegations to give further consideration to the exercise proposed by Chile and recalled that such an exercise would be voluntary. Each delegation would use its own sources, and the Member granting the subsidy would

not be identified. Delegations might want to raise this issue with their authorities, and he would soon like to undertake some consultations to prepare for the next meeting of the Working Party.

74. The representative of Colombia wondered about the status of the two suggestions she had made regarding further work. The first one was that the Secretariat explore with other international organizations the information existing on support programmes or subsidies. The second possibility was that the Secretariat develop a document that would look at the notifications that had been made to the Subsidies and Countervailing Duties Committee to highlight subsidies related to services sectors. She understood this was a lengthy task, but wondered whether the Secretariat could do it.

75. A representative from the Secretariat indicated, regarding the first proposal by Colombia, that the Secretariat could communicate with other international organizations with which it usually had contacts such as UNCTAD, the World Bank, and the OECD, and later come back with some feedback. With respect to the second proposal, he noted that the Secretariat was always ready to conduct work Members thought useful but said he was somewhat reluctant to analyse the notifications under the ASCM because trying to extract the elements that might be services related might involve some policy judgements and interpretations by the Secretariat.

76. The representative of Canada wondered how one could avoid that the various examples of subsidies that would be compiled be characterized as subsidies that necessarily distort trade in services. Some kind of caveat should be provided in that regard. The Chairperson indicated that, in his view, the purpose of the proposal was to gather as much information as possible and that, further ahead, this information could be used to help Members think about whether certain subsidies were trade distortive or not.

77. The representative of the United States considered that the explanation given earlier by the Chairperson on the proposal by Chile contributed to accommodating the concerns and interests of delegations. Regarding the analysis of notifications in the Committee on Subsidies and Countervailing Duties, she indicated that the kind of interpretative exercise this might involve raised concerns. She noted that her delegation was interested in suggestions that had been put forward, including the suggestion by Chile, the parameters of which were clarified by various interventions. She also thought that updates to the Secretariat Notes on TPRs and RTAs might be of use, although one would need to keep in mind the risk of value judgements. She saw as constructive the suggestion that the Secretariat find out the kind of research and information that other international organizations had available. However, her delegation had strong objections over the proposal that the Secretariat investigate subsidy notifications and try to determine those relating to services. Regarding the intervention made by Canada, she understood that the examples would be supplied on a voluntary basis and would not amount to a mechanism of reverse notification.

78. Regarding the suggestion by Chile, the Chairperson thought that time was needed for consultations as well as for further evaluation by Members. He emphasized that examples relating to subsidies in services sectors could already be found in the various updates of the Secretariat Note on information contained in Trade Policy Reviews.

79. The representative of Chile, with regard to the intervention from the delegation of Canada, explained that the fact that some Members would provide examples of subsidies would not mean that other Members agree that these were indeed subsidies. He then sought clarification from the Chairperson regarding the steps that would be taken up to the next meeting concerning the proposal from his delegation.

80. The Chairperson said he preferred leaving time for delegations to reflect further on this proposal and to conduct consultations and possibly an informal meeting in order to prepare for the meeting planned for December.

81. The representative of Mauritius thought that the issue needed to be approached with caution and that the work to be undertaken by the Secretariat should be factual rather than analytical. Information already published by other organizations should be the focus of information gathering, rather than information that would be more subject to value judgements. He was not sure that consultations should be held before seeing what is available in terms of published information. The representative of Argentina sought clarification on the work to be undertaken.

82. The Chairperson explained that it had been agreed that the Secretariat would prepare an update of the Note on RTAs and would consult with other international organizations. Afterwards, the Secretariat could do an update of the Note on TPRs. He also indicated that he would hold consultations on the proposal by Chile. The representative Argentina thought that agreement of all other Members was not necessarily needed in order for a Member to present a communication indicating the subsidies that caused problems to its suppliers, although he considered it would be preferable if all could agree beforehand. The representative of Brazil suggested that the forthcoming consultations also be used to see whether common ground could be found on the proposal by Colombia to examine the notifications. The Chairperson said that concerns had been expressed by delegations on this suggestion, but that possibilities of finding common ground could be explored.

83. The Chairperson thanked delegations for their constructive engagement on each of the issue discussed. On emergency safeguard measures, he recalled that various questions would need to be studied at the next meeting, in particular those raised in the discussion of the non-paper by the delegation of Switzerland and the responses provided by the representative of Thailand on previously asked questions. On government procurement, the Chairperson noted that a significant number of Members commented and asked questions on the proposal presented by the European Communities. Some Members had reserved the right to comment on the proposal at a later stage, given the current status of work in the Working Group on Transparency in Government Procurement. Concerning subsidies, he highlighted again the progress made.

IV. DATE OF THE NEXT MEETING

84. The Chairperson said that the next formal meeting of the Working Party was expected to take place during the next cluster of services meetings, which had been tentatively scheduled for the beginning of December.

V. OTHER BUSINESS.

85. The representative of Brazil announced that UNCTAD would be holding an expert meeting on foreign direct investment and development, which would address the experience of developing countries in privatizing services sectors. The seminar would take place in Geneva from 29 to 31 October 2003.

Working Party on GATS Rules

REPORT OF THE MEETING OF 2 AND 3 JULY 2003

Note by the Secretariat¹

1. The Working Party on GATS Rules opened its forty-third meeting under the chairmanship of Mr. Santiago Urbina, from Nicaragua. The agenda for the meeting was contained in WTO/AIR/2128. It included seven items: update to the 2002 Annual Report of the Working Party on GATS Rules to the Council for Trade in Services; stock-taking of progress made in the negotiations; subsidies; emergency safeguard measures; government procurement; date of the next meeting; and other business. To assist delegations in the preparation for the meeting, the Chairperson had prepared an Annotated Agenda contained in JOB(03)/125. The agenda for the meeting was adopted.

I. UPDATE TO THE ANNUAL REPORT OF 2002 OF THE WORKING PARTY ON GATS RULES TO THE COUNCIL FOR TRADE IN SERVICES (2003)

2. The Chairperson said that, in view of the Cancún Ministerial Meeting, a draft update to the 2002 Annual Report of the Working Party to the Council for Trade in Services had been circulated on 20 June 2003 as document S/WPGR/W/43. This report conveyed factual information on the activities carried out by the Working Party since the 2002 annual report had been issued (S/WPGR/8), and covered the time-period up to, and including, the last meeting. The Working Party was invited to adopt this report and transmit it to the Council for Trade in Services.

3. Various delegations proposed drafting changes to the draft report. The delegations of Argentina; Brazil; Canada; Chile; China; Chinese Taipei; the European Communities; Hong Kong; India; Japan; Pakistan; Philippines; Switzerland; Thailand; the United States; and Uruguay participated in the discussion, which started in formal and was continued in informal mode. A first revision of the draft report was issued as S/WPGR/W/43/Rev.1. Following further drafting changes, the Working Party adopted the Update to the 2002 Annual Report, which was circulated as document S/WPGR/12.

II. STOCK-TAKING OF PROGRESS MADE IN THE NEGOTIATIONS

4. The Chairperson recalled that the work programmes on emergency safeguard measures, subsidies and government procurement, adopted on 22 July 2002, called for the Working Party "to prepare for the opportunity provided by the Fifth Ministerial Conference to take stock of progress made in the negotiations". On 16 June, the Working Party had had an informal discussion on the possible form and content of such a stock-taking. Following that meeting, and after having discussed informally with a number of delegations, but also taking into account the limited time available, he had included a specific agenda item for this meeting. This would give delegations an opportunity within the framework of the Working Party to take stock of the progress made in the negotiations under the three agenda items. He suggested that the Chairperson's reports on emergency safeguard measures (S/WPGR/9), subsidies (S/WPGR/10) and government procurement (S/WPGR/11) be used as background documents. This stock-taking discussion would be reflected in the minutes of the

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

meeting and referred to in the Chair's oral report to the Special Session. Delegations would be free to explain their positions on that occasion as well.

5. The Chairperson briefly introduced the two reports on subsidies and government procurement which had been circulated the previous week. As indicated at the May meeting, the form of the reports followed the approach taken in the report on ESM presented in March. Practically, this meant that each report consisted of (i) a factual introduction, recalling work done so far under the relevant agenda item, and (ii) the Chair's assessment of the situation and suggestions for a way forward. The reports were circulated on his responsibility and did not prejudice the position of any delegation.

6. The representative of the United States said she wanted to focus first on process and format. Her delegation appreciated the work put into the reports on subsidies and government procurement, which had been submitted on the Chairperson's responsibility. She noted that these reports followed the format of the Report on emergency safeguard measures, although the work programmes contained different mandates. The work programme on ESM specifically stipulated that the note by the Chairperson should identify "areas of convergence and divergence among Members, with a view to providing a basis to facilitate further negotiations". The work programmes on subsidies and government procurement only provided for a note "to report on the progress of work", but did not include any reference to an assessment. On the positive side, the reports were well-done. With respect to the stock-taking, her delegation had not agreed that the Working Party should produce a report covering eight years of work. The work programmes, which had been carefully negotiated in July 2002, stipulated that the Working Party would "prepare for the opportunity provided by the Fifth Ministerial Conference to take stock of progress made in the negotiations". She enquired what an oral report from the Chair would entail, and noted that the information contained in the update to the annual report might be used for the stock-taking. The stock-taking should start in July 2002 and cover the period since.

7. The Chairperson said that it was not the intention that the Working Party produced a stock-taking report. As explained in the Annotated Agenda prepared for this meeting, he had decided, after consulting informally with delegations, to include a specific agenda item so as to allow delegations to take stock of the progress made in the negotiations under the three negotiating mandates. In this context, the Chairperson's reports on emergency safeguard measures, subsidies and government procurement could be used as background documents. This stock-taking discussion would be reflected in the minutes of the meeting and referred to in the oral report that he was expected to present to the Special Session. Delegations so wishing would then have opportunity to explain their positions at the Special Session as well.

8. The representative of the European Communities thanked the Chairperson for dedicating a specific point of the agenda to the stocktaking of progress made in the negotiations on ESM, subsidies and government procurement in services. In the EC's view, according to the work programmes adopted on 22 July 2002, the Fifth Ministerial Conference provided for an opportunity to take stock of progress. It was up to Members to decide whether they wanted to make use of that opportunity, and in this regard, the initiative of the Chairperson was timely and welcomed, because it allowed Members to express their views on how the negotiations had progressed. The Report on emergency safeguard measures by the former Chairperson and the Reports on subsidies and procurement by the present Chairperson had been submitted on their own responsibilities and could not replace Members' views. Nevertheless, the EC could agree with the Chairperson's suggestion to use these reports as background documents for today's discussion. From a general perspective, the EC wished to underline a number of elements that, in its view, emerged from the discussion in the WPGR over the past years and that, to a certain extent, were reflected in the Chairpersons' reports. First, the mandates on the three agenda items stemmed from the text of the GATS and should be treated on an equal footing, regardless of the importance that individual Members might attach to each of them. Second, the discussions on these three issues had been held without prejudice to the outcome of the negotiations. Third, while a great number of contributions on procurement and on emergency safeguard measures

were on the table, it appeared that an important amount of technical work still had to be done on subsidies. Fourth, the EC had been the most active participant in the discussions of the three issues. Indeed, it had presented several submissions and, as regards subsidies, was among the few Members that had exchanged information within the Working Party. Since the three work programmes had been adopted, the European Communities and Poland had been the only Members that had put forward submissions.

9. With respect to government procurement, the EC was of the view that technical work was well advanced thanks to 24 formal contributions by Members, as well as to the notes by the successive Chairpersons and the WTO Secretariat. Concrete proposals were now on the table and allowed the WPGR to move forward into a subsequent stage of the negotiations, provided Members showed sufficient willingness. In this context, the EC was of the opinion that the value of GATS commitments would be significantly enhanced if they were extended to government procurement of services. This was the case for many services sectors, and in particular those of specific interest to developing countries. Discussion of the EC proposals of July 2002 and May 2003 had shown that the GATS offered a flexible framework that could enable Members to move towards more transparency and increased competition in government procurement markets, leaving it to individual Members to open up on a sectoral basis where and when it suited them best. Based on the discussions, comments and suggestions of Members, the latest EC communication proposed concrete ways to achieve these aims. An Annex to the GATS could be negotiated laying down the conditions under which GATS provisions would apply to government procurement. The communication had shown that an agreement on government procurement of services was feasible and could be easily put in place, so as to enable the negotiation of commitments on procurement in the framework of the GATS. Members had underlined the need to avoid duplication of work with the Working Group on Transparency in Government Procurement (WGTGP) and to ensure compatibility between the GATS and the Agreement on Government Procurement (GPA). The EC had designed the May 2003 proposal with these concerns in mind which, hence, provided a good basis for the negotiation of a framework agreement. From a technical point of view, the negotiations could and should be completed before the end of the negotiations on specific commitments. This would allow Members wishing to undertake commitments in respect of government procurement to do so. Opening government procurement to international competition had a positive impact on national budgets, on the development of infrastructure and on economic growth. The EC was convinced of the WTO membership's keen interest in more transparency and increased competition in government procurement markets.

10. With respect to emergency safeguard measures, the EC was of the view that the question of feasibility and desirability of an ESM in services, which had not been solved at the time of concluding the GATS negotiations, remained unresolved after many years of discussions. Indeed, the EC had the feeling that scepticism over the possibility of developing an ESM within the GATS had been growing over time. In this regard, it could be observed that most of the contributions either directly addressed feasibility and desirability, or were made without prejudice to the position on these two issues. The ASEAN proposal to develop an ESM based on the model applying to trade in goods had raised a number of questions intrinsically related to desirability and feasibility (like the modal application of an ESM and the protection of acquired rights). No answer had been provided so far. In this situation, many delegations, including the EC, had tried to move forward the work of the WPGR by calling for a discussion of actual or hypothetical situations where a safeguard action might be needed, and which form that action could take. However, only one hypothetical example submitted by ASEAN was on the table and the WPGR was still examining whether it could justify an ESM within the meaning of Article X. Many delegations had raised questions that remained unanswered. It is in this context that a small number of Members had suggested to enter into negotiation on an agreement even if fundamental technical issues had not been solved. However, it was not possible to ignore the problems encountered in the development of an ESM. The EC reiterated the assessment made in its last contribution to the WPGR, which had been supported by several delegations, that an ESM could not constitute an instrument for introducing new general exceptions to the GATS or alternatives to the

situations foreseen in Article XXI. A positive conclusion on the question of an ESM presupposed: (i) the identification, in case they existed, of concrete examples, whether actual or hypothetical, of emergency situations in services that were not already addressed by GATS provisions, and (ii) a demonstration that an ESM would be feasible and desirable to deal with such situations. It had to be acknowledged that none of these two conditions had been met so far.

11. Turning to the issue of subsidies, the European Communities shared the views of the Chair that an important amount of technical work still had to be done. The exchange of information on subsidies related to trade in services that should have helped to prepare the negotiation of any eventual disciplines had practically not taken place. One of the reasons for the current situation might be the absence of an agreed definition of subsidies in the services area. In this regard, the EC wished to underline the importance of reaching such a definition, following an approach closely related to the GATS framework, as suggested in the recent report of the Chair. The EC also believed that a confusion between exchange of information and notification of subsidies had contributed to the small amount of information submitted. The EC considered that the GATS did not establish an obligation to notify subsidies, but only to exchange information. Indeed, the notification of subsidies could only result from an obligation that Members might wish to undertake in the framework of the negotiations. On that basis, the EC had already submitted a contribution explaining the Community regime for aid in the services area (Job No. 4302), and encouraged Members that had not yet provided information to follow this example in order to move forward the technical work of the WPGR. It was important to underline at this stage that the requirement under Article XV was for Members and, not for third parties, to exchange information. In this respect, the EC wished to clarify that the only contribution expected from UNCTAD was the bibliography of relevant material on subsidies.

12. The representative of the Philippines said that, in his delegation's view, this agenda item constituted THE stock-taking, and the three Chair reports provided reference material. In his understanding, there would not be a stock-taking report after this meeting, but the Chairperson of the WPGR would present, as usual, an oral report to the Special Session of the Council for Trade in Services in which he would refer to this discussion. On that occasion, each delegation would have the opportunity to make additional comments. With respect to the negotiations on emergency safeguard measures, he felt there was some confusion among certain Members concerning his delegation's position. The Philippines was not opposed to discussing technical issues if this could help to clarify feasibility of an ESM. The list of documents annexed to the Chair's Report showed that many contributions had already been made on technical issues and that extensive discussions had been held. ASEAN had offered answers to virtually all questions. Some of the answers were obviously not satisfactory to some delegations, but this did not justify allegations that answers had not been provided. For instance, concerning the issue of acquired rights, ASEAN was not in a position to dictate a solution, but had offered three options in its draft agreement. He felt that, in fact, some delegations had already decided that an ESM was not feasible. ASEAN had nevertheless continued to address questions raised by those delegations, for instance by presenting an example of a situation justifying safeguard action, in order to convince them that an ESM was feasible. With respect to the issue of desirability, his delegation attached great importance to paragraph 31 of the Chair's Report on ESM: political will from all Members was necessary in order to solve the issue of desirability and to finalize negotiations by 15 March 2004. Should it be impossible to resolve the political dimension in the Working Party, decisions then needed to be taken at a higher level (CTSSS, TNC or Ministerial Meeting). The position of the sceptics was influenced by their domestic constituencies or their own fears of how an ESM might work. This was due in part to the fact that the Agreement on Safeguards had been misused by certain Members. He noted that the Dispute Settlement Body had never upheld any safeguard measure applied in the goods area. It was imperative to get political guidance now, especially in view of the negotiating deadline. Subsidies were a difficult issue, in particular when Members tried to transpose the goods model to services. There was a "chicken-and-egg" situation and more information on services subsidies was needed in order to determine what kind of subsidies should be addressed. This information should come from Members, but international organizations should not be precluded. Article XV clearly mandated that disciplines on subsidies be established.

Concerning government procurement, he doubted that the negotiations were at a well-advanced stage, despite the active role played by the European Communities. In fact, the Working Party had not moved beyond a discussion on the scope of the mandate. Not all delegations accepted that Article XIII entailed negotiations on market access and national treatment. If Article XIII was read in light of the Vienna Convention, it was clear that the limitation contained in paragraph 1 applied to paragraph 2. He disagreed with paragraph 13 of the Chair's Report where it stated that Members had "focused on a Communication from the EC". Rather, the main focus of discussion had been the scope of the mandate (paragraph 14). Moreover, in paragraph 16 of the Report, the main reason why the issue of government procurement had been "dormant" was due to the doubts regarding the scope of the mandate. The Working Party needed to determine the scope of the mandate in the procurement negotiations, rather than the "degree of ambition" (paragraph 21).

13. The representative of Uruguay, speaking on behalf of Mercosur (Argentina, Brazil, Paraguay and Uruguay), thanked the former and the current Chairpersons for producing the reports on emergency safeguard measures, subsidies and government procurement. With respect to the negotiations on ESM, and without prejudice to their results, Mercosur was of the view that, should work continue at the current pace, it would be very difficult, if not impossible, to reach a result within the March 2004 time-frame. This was a statement of fact. The Working Party had spent eight years on this subject and had extended the deadline on four occasions. Mercosur did not consider that substantive progress had been made on the issue of subsidies either and wished to recall that, according to the Negotiating Guidelines, Members "shall aim to complete negotiations [...] prior to the conclusion of negotiations on specific commitments".² Speaking on behalf of Uruguay only, he wanted to support the statement made by the representative of the Philippines regarding paragraphs 13 and 14 of the Chair's report on government procurement: it should be clarified that the discussion focussed on the scope of the mandate, and that, in addition, comments were made on the EC proposal. He acknowledged that the report was made on the Chair's responsibility and remained in his hands.

14. The representative of Switzerland said that there was a problem of balance between the three reports. The reports on subsidies and government procurement were not as precise as the report on ESM, although Articles XV and XIII were as important as Article X. For instance, the exchange of information in Article XV should be carried out without preconditions, and this should be mentioned in the section on "way forward". Moreover, Article XV mandated negotiations on "necessary multilateral disciplines" for trade-distorting subsidies. Finally, it was not up to the Working Party to conduct a collective stock-taking, but it was for senior officials in capitals to see whether they wanted to take this opportunity and in what form.

15. The representative of the United States wished to commend the Chair for the substance of the reports on subsidies and government procurement. She recalled that her delegation had problems only with the interpretation of the mandate contained in the work programmes. However, the reports had been prepared under the responsibility of the Chairperson and should be put forward without changes. With respect to the negotiations on ESM, desirability was a question of substance, not of political will. Enforcing a safeguard measure was not the same as enforcing limitations contained in specific commitments. The "political will" that was missing was a will to provide answers to questions posed by her delegation. The problems that the "demandeurs" wanted to address with an ESM needed to be identified concretely. The United States wanted to secure liberalization, and not to provide second-best solutions. "Real" examples of situations in which an ESM might be taken should include precise indications, including the country involved and the year during which the situation arose.

16. The representative of Thailand supported the statement made by the delegation of the Philippines regarding emergency safeguard measures and government procurement. Her delegation did not want to prejudge the issue of subsidies, on which her government had not yet taken position. With respect to emergency safeguard measures, she recalled that a great deal of technical work had

² S/L/93.

been carried out since 2000. It was now time to get political guidance. Her delegation did not accept the assertion that no answers had been provided to questions posed by other delegations and, in fact, could produce a big compilation of the answers given to questions concerning the papers presented by ASEAN. ASEAN wanted to negotiate, and, therefore, was ready to be open, reasonable and constructive. The Working Party should not go back to the issue of desirability, but discuss technical issues. These could be overcome to make an ESM possible.

17. The representative of India wished to associate his delegation with the statement made by the Philippines regarding government procurement. The scope of the mandate was a fundamental issue, and negotiations were not advanced. The focus of the discussion had been on the scope of the mandate, not on the EC proposal. Therefore, his delegation disagreed with paragraphs 13 and 14 of the Chair's report. In paragraph 21, it should be indicated that the real issue was the scope of the mandate.

18. The representative of Hong Kong, China said his delegations appreciated the Chair's efforts to make the reports factual and balanced. With respect to emergency safeguard measures, fundamental questions, such as those referred to in paragraph 29 of the report, remained to be answered and technical work had to continue. The membership as a whole should come to grasp with the fact that eight years of work had not brought delegations closer to any result. Members needed to engage into substantive discussions with a view to concluding the negotiations, i.e. finding an outcome. "Demandeurs" and "sceptics" should work together so as to make a conclusion by the deadline possible. Hong Kong, China was interested in continuing the discussion on government procurement, including on the framework proposed by the EC which was the only proposal on the table so far. He acknowledged that the scope of the mandate was not settled, but noted that Members had agreed on a work programme which stated that the "undertaking of the individual items of work should be without prejudice to each other". The Working Party could, therefore, spend time discussing substantive issues raised in Members' submissions.

19. Subsidies were a systemic issue causing great concern to his delegation. A number of documents were on the table and could serve as a basis for continuing discussions. He wondered why, in paragraph 15, the Chair's report characterized the discussion on subsidies as having been "restricted". The information exchange was an important component of the mandate in Article XV and concerned all subsidies that Members provided to their service suppliers. Except for a few delegations, it had not been carried out although it was clearly compulsory ("... shall exchange information ..."). Two reasons had been given: the lack of a definition for subsidies and the fact that the amount of information to be submitted might be too burdensome. Did that imply that there were too many services subsidies? Recent discussions on definitional issues had been interesting. If the Chair's report considered discussions on government procurement in a positive light, the same could be said about subsidies: the discussions on a definition had been substantive, although engagement from some Members was still lacking. Concerning the perceived abundance of information, his delegation would be pleased to consider ways of organizing the exchange of information. However, capacity should not be a problem for those Members that had been able to prepare comprehensive requests for almost all WTO Members. He acknowledged that there was a "chicken-and-egg" dilemma and could agree that limited progress had been made on technical issues. Members should engage actively in these negotiations, including on the information exchange, which did not necessarily depend of a common definition of services subsidies. The absence of an agreed definition might affect the information exchange, but not impede it. In fact, work on the two issues should proceed in parallel and his delegation intended to make some suggestions in this regard. The purpose of an information exchange was to gather information on subsidies, which would provide the basis for evaluating and developing possible disciplines. Various sources could be used, and UNCTAD was doing interesting work in this regard.

20. The representative of Indonesia said that he supported the statement by the Philippines and Thailand regarding emergency safeguard measures. His delegation was deeply concerned about the

lack of substantial progress since the ASEAN Member had presented a draft text, nearly three years ago. The Working Party should carefully consider whether the current mode of negotiations should be maintained or whether changes might be needed to speed up the process. Substantial progress should have been made before the Cancún Ministerial Meeting. ASEAN had tried to accommodate the needs of developed and developing countries. For instance, with respect to the issue of acquired rights, ASEAN had proposed a very moderate alternative compared to its original proposal. The current ASEAN draft text provided adequate solutions for substantive and procedural issues. Trade in services presupposed that burdens were shared, not only benefits. An ESM should be seen as a mechanism for burden sharing when the domestic industry was harmed by another country's policy. Members should try to overcome the remaining issues in good faith. Indonesia could understand the benefits of examining real examples of situations in which an ESM could be used. However, this was not necessarily a good way of proving feasibility, considering that the level of specific commitments was low and that services data were underdeveloped. Case law might also help to strengthen the rules, should actual situations arise. He shared the view by India and others that, contrary to what was indicated in the Chairperson's report, the focus of the discussions on government procurement had been on the scope of the mandate, not on the EC proposal.

21. The representative of Cuba supported the statements by the Philippines and Thailand regarding the state of the negotiations on emergency safeguard measures and shared the concerns about the current stalemate. There were sufficient elements on the table to indicate to Ministers that a number of delegations attached importance to this issue and wanted to work on technical questions. Political will was needed in order to make progress; and there was a link with the negotiations on market access. With respect to subsidies, Cuba wished to continue working on the definition and categorization of subsidies that might have distortive effects on trade, taking into account "the role of subsidies in relation to the development programmes of developing countries", and the necessary flexibility for developing and least-developed country Members to implement national policies. Cuba shared the view that the negotiations on government procurement had focused on the scope of the mandate in Article XIII. Some proposals on the table exceeded this mandate which clearly excluded issues related to market access and national treatment. Finally, as a general comment, she said that imbalances in negotiations were frequent. Ministers would not be able to find their way through a great deal of factual information and would need recommendations. There was the risk that last-minute "recommendations" could lead to further unbalanced results. The negotiating process should be transparent, and a stock-taking should result in recommendations to Ministers and indicate the way forward.

22. The representative of Colombia welcomed the Chairperson's initiative to devote a specific item to a stock-taking discussion. Her delegation was concerned by the lack of progress in this Working Party, which cast doubts on its ability to comply with the agreed deadlines. Colombia was not a "demandeur" for an ESM, but was nevertheless ready to work in a constructive manner in order to achieve a result. As the deadline was drawing closer, delegations should focus on technical issues and work on the elements which might be included in an ESM. Colombia attached importance to the issue of subsidies and was disappointed by the limited progress in this area. Article XV contained a mandate to exchange information concerning all subsidies related to trade in services that Members provided to their domestic service suppliers. Nevertheless, very little information had been submitted so far, which complicated technical discussions. More information, in particular from those Members which had many subsidy programmes in place, could help promote the negotiations. Initial offers contained references to subsidy programmes. Moreover, Colombia understood that UNCTAD was collecting information on support programmes in services, independently of a possible definition and without prejudice to their impact on trade. This initiative could play a useful role in this Working Party. Concerning government procurement, Colombia was still analysing the last EC contribution and was of the view that the scope of the mandate should also be discussed.

23. The representative of Chile said there was a need to make progress on all issues and called on all delegations to be flexible. Discussions could not advance if delegations had already decided on

their final positions. Technical work should help to determine how best to solve relevant issues. Progress in this Working Party and in the market access negotiations were linked. He acknowledged there was a problem with the mandate on government procurement. Although there were no uncertainties regarding the mandate in Article XV, and in particular the fact that the information exchange concerned all subsidies, no progress had been made. One solution might be to concentrate on sectors. The lack of a definition of services subsidies was not an excuse for not progressing; delegations could use alternative definitions. Notification and exchange of information were two different issues and priority should be given to the latter. The information exchange should take advantage of all possible sources and, in this respect, a contribution from UNCTAD would be welcome.

24. The representative of Canada said that Canada remained unconvinced of the desirability and feasibility of an ESM, but was willing to continue working constructively on this issue. He recalled that, in June 2001, his delegation had submitted a written proposal for a multilateral surveillance procedure. With respect to government procurement, he considered that the scope of the mandate in Article XIII was broader than some delegations implied.

25. The representative of Egypt supported the statement made by the Philippines regarding government procurement, and the fact that the issues raised by some delegations were outside the scope of the mandate.

26. The representative of Australia understood that there would be no agreed stock-taking report by the Working Party, but that the Chair would refer to this discussion in his oral report to the Special Session. With respect to the negotiations on emergency safeguard measures, he said that very little progress had been made towards common ground and Members were still far apart. The Chairperson's report contained an accurate summary of the various options and a realistic assessment of the situation. It was not clear how the current discussion would lead to a result by the agreed March 2004 deadline, but an outcome had to be found. With respect to government procurement, he noted the Chair's comment, in paragraph 16 of the report, that this issue was important for some Members, but less so for others. Australia was not a signatory of the GPA and probably belonged to the second category. However, his delegation did not consider that the mandate was as restricted as some suggested; Article XIII would allow Members to make voluntary commitments in relation to government procurement. Duplication of work should be avoided and priority should rest with the WGTGP.

27. The representative of Japan reiterated the views expressed at the last meeting regarding emergency safeguard measures. The Working Party had had useful substantive discussions, but needed to advance its understanding of the issues at stake. His delegation welcomed the EC proposal on government procurement, which was fully within the Article XIII mandate. The Working Party should determine its level of ambition and proceed with substantive discussions based on Members' contributions. An important amount of technical work remained to be done on subsidies, and he agreed with the Chair that there was a "chicken-and-egg" situation. Japan took note of the comments by "demandeurs" that the information exchange should be carried out to provide the Working Party with relevant information. Based on the understanding that the reports on government procurement and subsidies had been issued under the Chair's responsibility, Japan did not propose changes or amendments. With respect to the stock-taking, his delegation understood, like others, that the Working Party would not issue a report. It was up to each Member to make its own assessment, based on the material available.

28. The representative of the People's Republic of China said that her delegation had not been consulted concerning the form of the stock-taking. At the informal meeting on 16 June, China was in favour of a collective stock-taking for three reasons: (i) the stock-taking was different from the Chair's reports; (ii) an objective and factual report prepared and adopted by the Working Party would have been a positive signal; and (iii) it would have helped Ministers to assess the situation, in

particular on ESM. Nevertheless, China was ready to follow the suggestion made by the Chairperson in his Annotated Agenda. Her delegation was concerned about the slowness of the negotiations on ESM. The fact that these negotiations had not led to any achievement after eight years was regrettable. Moreover, at the current pace, there would not be any result by the deadline, and this might affect the market access negotiations. The stumbling-block was that some Members, which had such a mechanism in their own schedule or in bilateral agreements, did not find it desirable for other Members. She disagreed with the argument that liberalization under GATS was less deep than under bilateral agreements, because, in some sectors, Members had undertaken full commitments. What could they do if, in the future, an emergency situation arose in one of these sectors? There was clearly a need for an ESM and it would be too late to start negotiating it once an emergency situation had arisen. With respect to the issue of feasibility, she noted that Brazil had made a useful proposal; Members having a safeguard mechanism, in their schedule or in bilateral agreements, should explain to the Working Party how they implemented it concretely. Creative solutions should be found to take into account the specificities of services trade. There was a need for political will from all Members. Finally, her delegation shared the view expressed by the Philippines regarding the negotiations on government procurement: market access and national treatment were outside the scope of the mandate.

29. The representative of Venezuela said that the negotiations on subsidies had to continue. There was abundant subsidy-related information available outside this organization, which could be compiled and analysed. He agreed with Chile that information should be exchanged on a sector basis, for instance on environmental services. UNCTAD had experts in this area who could offer considerable contributions. With respect to government procurement, he supported the statement by the Philippines regarding paragraphs 13 and 14 of the Chairperson's report. The scope of the mandate was in fact the main focus of the discussion under this agenda item. At some point, Members should also consider more closely the issue of duplication: government procurement of services should be discussed in this Working Party, not in the WGTGP. He would revert later to the issue of emergency safeguard measures.

30. The representative of Norway said it was worrying that the scope of the mandate would be considered as the only issue in the discussion on government procurement. Several contributions had been made, in particular from the EC, which had presented a useful document. Government procurement was an important part of services markets and the EC proposal could allow to develop a flexible tool to gradually open markets according to each Member's particular situation. The Chairperson's report on government procurement was well conceived.

31. The representative of the United States thanked for the clarifications given with regard to the stock-taking. She noted that the Chairperson had no mandate to make any type of recommendation. The Working Party should abide by its work programme concerning the stock-taking and, in particular, the three negotiating issues should be treated equally.

32. The Chairperson said he would make a factual presentation to the Special Session of the Council for Trade in Services, which would not contain any recommendations.

33. The representative of Chinese Taipei said that the existence of an ESM could favour domestic industry's support for trade liberalization. It was time to enter into substantive discussions on the basis of the ASEAN draft agreement. With respect to government procurement, the GATS mandate allowed to discuss any issue. On subsidies, the lack of definition should not impede other work, for instance on categorization. Discussions on trade-distorting subsidies should be based on information provided by Members.

34. The representative of Brazil said that the concerns of his delegation were reflected in the intervention made by Uruguay. He also shared the views expressed by the Philippines. Uncertainty in the rules area would lead to limited market-access commitments and expectations regarding new

commitments might not be fulfilled. Brazil wanted to engage constructively on the issues of emergency safeguard measures and subsidies, so as to avoid that some Members be tempted to craft their own solutions. The Working Party should provide solutions available to all, which would then be put under the supervision of the whole membership. Similarly to what had been done with Article XXI, Members could take a pragmatic approach, design an initial safeguard mechanism, build on it and adjust it, if necessary, in the light of experience. The Chairpersons' reports were good, but should contain initiatives in terms of procedure. This Working Party should look at other WTO negotiating bodies in order to borrow some of their methods to fasten discussions. The Chairperson should take a more proactive role in presenting alternatives, drafting initial suggestions, etc. There was a lack of political will and some delegations clearly applied a double standard in this respect. They did not want to clarify certain issues which were not in their interest, but insisted on including in the WTO agenda other questions they considered necessary to be solved. Should the same approach prevail in other areas, very little could be achieved in the WTO.

35. The representative of Malaysia said that the stock-taking exercise was important because it allowed to determine where the Working Party stood. The negotiations on rules were a complementary facet of the market access negotiations. The rules negotiations had started in 1995 and one of the mandates was still not clearly identified. A great deal of discussions had taken place on emergency safeguard measures and several deadlines had not been met. The March 2004 deadline was drawing closer and, although it was supposed to be the last extension, there were already talks that it might be extended again. Hence, Ministers could not be told that everything was going well. His delegation was pressured to accept that some issues, the desirability of which had never been discussed, be put on the WTO agenda at Cancún. For Malaysia, an ESM was desirable because it would give the necessary confidence to liberalize services. Malaysia had not tabled yet its initial offer because the private sector did not find it desirable to open the market. The Shangri La example reflected some of the problems faced by ASEAN countries. Moreover, during the 1997 financial crisis, money flowing out of Malaysia had caused an emergency situation, which had led the government to freeze all grants to students wanting to study abroad. This showed that an ESM was feasible. Ministers should be aware of the lack of progress in the rules negotiations. Further guidance was needed and Malaysia hoped that they would agree that there was a political need for an ESM. Progress in the market access negotiations was also limited, as evidenced by the statements made at the last meeting of the Special Session by developing countries complaining about the lack of mode 4 commitments. With respect to subsidies, there was a clear mandate to negotiate, and more efforts should be devoted to information gathering. Concerning government procurement, his delegation supported the statement by the Philippines. The Chairperson's report could be more balanced. His delegation was of the view that there was no progress on government procurement; the only relevant contributions concerned the scope of the mandate. Discussions on government procurement were short and totally lacked momentum.

36. The representative of Singapore agreed with Australia and Canada that the mandate in Article XIII allowed Members to raise any issue. His delegation was carefully studying the last EC contribution on this matter. With respect to emergency safeguard measures, his delegation's position was guided by the precedents of Singapore's recent free trade agreements with Members like the United States, Australia, New Zealand and EFTA. On subsidies, Singapore was examining the contribution by Poland as well as the revised Checklist.

37. The representative of the Republic of Korea supported a factual report by the Chairperson to the Special Session of the Council for Trade in Services, reflecting the stock-taking discussion. She trusted that the report would be objective. Her delegation was concerned about the lack of progress on the three agenda items. On emergency safeguard measures, "demandeurs" and "sceptics" should come to a compromise on how to approach this issue. An ESM should not be open to abuse, but if it contributed to further liberalization, Korea was willing to engage constructively. Concerning subsidies, she supported other delegations that had emphasized the need to continue the information exchange, taking advantage of various sources of information, including UNCTAD. Negotiations

were in a stalemate because many delegations had already decided on their final position. Rule-making was an important part of the services negotiations. This included government procurement where the discussion on the scope of the mandate had a flavour of *déjà-vu*.

38. The representative of New Zealand said that very limited progress had been achieved on emergency safeguard measures considering the time spent on this issue. A considerable amount of work remained to be done in order to conclude the negotiations within the deadline and her delegation was ready to continue to actively engage in this area. The Chairperson's report on subsidies contained an accurate summary of the discussions. She noted the binding nature of the requirement to provide information on all subsidies related to trade in services and recalled that her country was one of the four Members to have submitted such information. The absence of an agreed definition had not prevented them from responding to the questionnaire; it was not a prerequisite for submitting such information. Nevertheless, further technical work would facilitate discussions and, in this respect, the paper from Poland was a useful contribution.

39. The representative of the United States thanked the delegation of Malaysia for its frank statement. Her delegation was among those that continued asking questions which, in turn, were also raised by people giving political guidance in capitals. Answers were needed in order to have a proper definition of what was being negotiated since these could be no blank cheque. The reference to the 1997 financial crisis was helpful since it helped to understand what this Working Party was talking about. For any example, it would be useful to know where and when a situation justifying a safeguard action had occurred. One should also keep in mind that some emergency situations could be addressed through Article XII or XIV, for instance. She welcomed Brazil's comment that an ESM was needed in order to help promote liberalization. She enquired whether, in the view of the "demandeurs", an ESM should apply only to new market-access commitments. The matrix presented informally by New Zealand at a previous meeting could be helpful and should be used in future. It would facilitate discussion on modal application, whether with specific or hypothetical examples. The negotiations on emergency safeguard measures should be as specific as the market access negotiations.

40. The representative of the European Communities noted that the Chairperson's report on emergency safeguard measures referred to political will without prejudice to the outcome of the negotiations. In his view, all delegations had political will, but no common view on the outcome. It should be kept in mind that all three negotiating mandates were related to trade liberalization. Concerning the interpretations of treaties, he noted that, in addition to textual interpretation, contextual and teleological interpretations were also relevant. A textual interpretation of Article XIII led to the conclusion that there was a mandate to negotiate on market access and national treatment, otherwise paragraphs 1 and 2 would have been put in reverse order. A teleological interpretation led to the same result because one of the objectives of GATS was progressive liberalization of services.

41. The representative of Peru welcomed the comments by the United States because they showed interest in other delegations' position. Flexibility and political will were key to successfully conclude the negotiations. As his delegation had indicated on several occasions, the mandate in Article XIII did not cover market access and national treatment. Moreover, it did not contain a deadline, and discussions under this agenda item were most of the time short and not substantive. The comments by the European Communities did not help to bring positions closer. Emergency safeguard measures and subsidies had clear mandates. Progress in these negotiations did not only entail progressive liberalization, but promote the participation of developing countries as stipulated in Article IV. Rule-making was an essential aspect of the services negotiations. For instance, developing countries could not open their market without knowing what kind of subsidies were granted to competitors in other markets. He supported Brazil's intervention regarding consistency between the procedures applied in this Working Party and other WTO bodies.

42. The representative of the Philippines said that the United States had raised some key technical issues that the Working Party was trying to address. ASEAN had prepared answers to some of the questions posed to them at the last meeting and hoped that they would also help to solve the issues raised by the United States. Concerning the EC's comment on the Article XIII mandate, he recalled that the Appellate Body favoured a literal interpretation of WTO provisions. With respect to the view that a teleological interpretation of Article XIII was consistent with the objective of progressive liberalization, he noted that some WTO agreements, such as the TRIPs agreement, pointed in an opposite direction.

43. The Chairperson thanked delegations and took note of their statements. As indicated at the beginning of the meeting, he intended to refer to this discussion in a factual manner in his oral report to the Special Session of the Council for Trade in Services.

III. NEGOTIATIONS ON SUBSIDIES (GATS ARTICLE XV)

44. The Chairperson suggested to address the issue of subsidies first, since it had not been addressed at the last meeting due to lack of time. He recalled that, on 17 March 2003, his predecessor had circulated a revised Checklist on Subsidies (JOB(03)/57), as agreed at the February meeting. The initial Checklist had been circulated on 17 July 2000 under the then Chairperson's responsibility.³ It was meant to be used as a tool to help Members to address in a systematic manner issues which had been raised in the negotiations under Article XV. The revision, prepared under the responsibility of the Chairperson, included two changes. First, the question of categorization of subsidies was explicitly spelled out under the first point, i.e. definition of a subsidy in trade in services. Second, a new issue had been added, relating to concepts relevant to what should be regarded as trade-distortive subsidies. The *Checklist* was without prejudice to the position of any Member. At the February meeting, delegations had had an interesting exchange on the definition of subsidies in services, based in particular on an informal submission by the delegation of Poland (JOB(02)/207). Two issues had dominated the discussion: (i) the generic definition of subsidies in the services context, including the relevance of the definition contained in the SCM Agreement; and (ii) the meaning of the concept of trade-distortive or "actionable" subsidies. With respect to the latter, Poland and other delegations had referred to concepts such as specificity, public policy objectives, nature of the subsidies, permissible or non-actionable subsidies, etc. He recalled that Article XV stipulated that, for the purpose of the negotiations, "Members shall exchange information concerning all subsidies related to trade in services that they provide to their domestic services suppliers." The Working Party had not made real progress on this information exchange recently and he encouraged delegations' suggestions on this point too. It was difficult to understand why Members should not be able to submit domestically available information to this Working Party.

45. The representative of Hong Kong, China recalled that the negotiation on subsidies was important for his delegation. Services subsidies could have the same trade distortive effects as goods subsidies. Subsidies were not equally available to all Members, and multilateral disciplines would be useful to ensure a level-playing field. His delegation also recognized the value of subsidies to achieve certain policy objectives, including development; hence, the distinction between non-actionable and trade-distortive subsidies should also be discussed. His delegation had three suggestions to make. First, the information exchange should continue since it had not been fulfilled in spite of being mandatory. Members could submit information based on their own definition of "subsidy". It would be useful, but not strictly necessary, if, in addition, they would provide their working definition because it would contribute to developing a general definition for services subsidies. Secondly, the concept of subsidy was not alien to Members since a number of them had entered relevant limitations in their schedules. The Secretariat had compiled information in that regard in S/WPGR/W/13 and Add.1. Members having subsidy-related limitations in their schedules and/or in their initial offers could share their views on what the scope was for such subsidies. Thirdly, in order to address the

³ Job No. 4519, 17 July 2000.

concerns of those delegations which felt that the amount of information might be too significant for one exchange, Members could consider providing as an initial step only certain elements. For instance, they could submit information that was readily available to them. In that context, Members should be aware of the ongoing work in UNCTAD, so that information related to subsidies could be shared with this Working Party. Concerning the definition of subsidies, he noted that various Members had submitted written contributions on this issue. These papers could be re-circulated (by e-mail or as room documents), which could help focus the discussion. The issue of categorization of subsidies should also be given further thought. His delegation was open-minded and had no preconceived idea.

46. The representative of Colombia said that the negotiation on subsidies was fundamental in the perspective of progressive liberalization contemplated in Article XIX. The private sector in Colombia had expressed concerns at the prospect of liberalizing sectors which could be subsidized abroad. The information exchange should be carried out, and the suggestions just made by Hong Kong, China were interesting. Discussing subsidy-related limitations in schedules and initial offers was an interesting starting-point and the Members concerned should provide relevant information.

47. The representative of Chile agreed with the representative of Colombia and Hong Kong, China. The Working Party should ensure that all themes be discussed at the next meeting. He called for flexibility from those Members which were reluctant to seek information from UNCTAD. Article XV did not limit the sources of information that could be used. He supported Hong Kong, China's proposal that, as an initial step, Members submit information on some sectors only. His delegation would make comments on the definition of subsidies at the next meeting.

48. The representative of the United States said that her delegation did not oppose a presentation from UNCTAD or any other organisation, but wanted to know what kind of information would be submitted. Her delegation also needed to reflect on how the Chair should best liaise with UNCTAD. Moreover, any Member aware of the information available at UNCTAD could bring it to the attention of the Working Party without prior approval.

49. The representative of Brazil said that his delegation attached importance to that part of the GATS package. It was difficult to understand why a contribution from UNCTAD was so problematic, since it would not be the first time that an intergovernmental institution would make a contribution to a WTO body. It was important to know what UNCTAD was doing and to get such information first hand. Advance information on the content of the presentation should not be a precondition for UNCTAD's contribution.

50. The representative of the European Communities recalled that the Working Party had agreed at the last meeting that UNCTAD would provide a bibliography, which would have allowed Members to consult themselves the documents concerned. However, the bibliography had not been submitted. She considered that it was important for the Working Party to agree on a common definition of services subsidies, although it was not necessarily a prerequisite to exchange information. She stressed that exchange of information did not mean notification of all subsidies and recalled that the European Communities had submitted general information on its subsidy regime.

51. The representative of the United States said that her delegation had always maintained the position that, should other organizations be present, an understanding was needed as to what exactly they would present. The United States did not have any problem with UNCTAD making a presentation, but needed to understand what this would entail. As an observer, UNCTAD could intervene when something was raised concerning their work or one of their documents. Moreover, Members could consult the documents concerned, raise relevant points and then request comments from UNCTAD. She noted that the bibliography proposed at the last meeting had not been submitted.

52. The representative of Thailand said that her delegation wanted to participate constructively in this discussion. Members should have a common understanding on some key concepts in Article XV. Ignorance about services subsidies explained why it was difficult to provide information. Her delegation was nevertheless ready to participate constructively in this negotiation and did not oppose information being submitted by other international organizations.

53. The representative of Hong Kong, China said that there was a chicken-and-egg problem which had to be solved. The information exchange depended on a definition of subsidy and vice-versa. Delegations should address these issues in a constructive manner. He took note of the previous exchange regarding a contribution from UNCTAD, whereby the Working Party would obtain preliminary indications from UNCTAD as to whether and what sort of relevant information they could present. Other delegations should be flexible and open-minded on this matter.

54. The representative of Uruguay said that UNCTAD should present its work, as it had done on previous occasions and as other organizations had done as well. It would be sad if the Working Party could not accept a contribution from an organisation which had worked closely with the GATT/WTO for many years. The update report that the Working Party had just adopted stressed the necessity to collaborate with other organizations (S/WPGR/12, para. 10). His delegation wished to urge the Working Party to invite an UNCTAD representative to present the study concerned at the next meeting. Before that, UNCTAD could perhaps circulate a bibliography so that Members would be well-prepared. He further noted that not only existing schedules, but also some initial offers contained limitations relating to subsidies, as referred to in the Chair's report (S/WPGR/10, para. 20). It would be interesting to know how the Members having scheduled such limitations, or proposed them in their offers, defined "domestic supplier".

55. The representative of Chile was in favour of a presentation by UNCTAD. The organisation that had prepared a study was in a better position than anybody else to present it. Since an UNCTAD representative was in the room, the Working Party could ask him to provide some information regarding the status of the study concerned.

56. The representative of Thailand said that Members were clearly mandated to negotiate on subsidies, but the scope of this negotiation should be determined. Her capital needed to have a clearer idea on the scope (for instance, would subsidies for health services for poor people be covered?) and felt that a definition would help to negotiate disciplines.

57. The representative of the United States said that the Working Party should first be given an opportunity to consult the bibliography, which had been requested at the last meeting, so as to have an idea of the kind of information available. Moreover, the representative of UNCTAD could be asked now to give delegations some indication regarding the status of work.

58. The representative of Hong Kong, China considered that the Working Party had previously taken note that UNCTAD would be invited to provide relevant information. His delegation looked forward to listening to UNCTAD as to when they would be able to provide this information.

59. The representative of Uruguay said that UNCTAD was an observer and could present a paper. It would be useful if UNCTAD could provide such a contribution in advance of the meeting so as to allow Members to be prepared and make comments.

60. The representative of UNCTAD explained that the work undertaken on subsidies consisted of a compilation of all available data concerning different types of support programmes and other forms of governmental intervention. This work relied on secondary sources, including information from other intergovernmental organisations, as well as information made public by governments in official publications. UNCTAD avoided to define what a "subsidy" was and did not pass judgement on what would be trade-distortive and what would not. The only objective was to provide empirical evidence

on support programmes and government interventions in the area of services. A complete first draft could be available by the time of the next meeting of the Working Party.

61. The representative of Canada took note that UNCTAD was relying on secondary sources, such as international organisations and national governments. He enquired what sources had been consulted, and whether the information would be presented on a country basis or more generally.

62. The representative of UNCTAD explained that the information used came from the OECD, regional integration agreements, and national sources. The compilation attempted to establish a typology so as to facilitate reading and analysis, but did not try to determine whether there was trade-distortiveness. It was a collection of empirical data.

63. The representative of Canada enquired what would happen at the next meeting concerning the proposed UNCTAD contribution. The Chairperson recalled that, according to the rules of procedures, observers needed Members' approval to submit a document. He enquired whether Members agreed that UNCTAD would submit a bibliography and then present the study to the Working Party. The representative of Brazil said that it would be preferable if UNCTAD could present directly the actual study. In any case, a decision should be made now to save time. The Chairperson said that the bibliography would be the first step; the compilation would follow. The representative of Cuba said that the provision of information by an intergovernmental organisation was a simple issue and regretted that UNCTAD be censored. Moreover, the kind of information used by UNCTAD was not a secret. She agreed with Brazil that UNCTAD should present its document at the next meeting.

64. The representative of Chile asked whether the submission of the bibliography and the study would take place at the same meeting or at two different meetings. The Chairperson said that one possibility was for UNCTAD to circulate the bibliography well in advance of the meeting. Then, at the meeting itself, the Working Party could focus on substance and look at the compilation. The representative of Chile agreed. The representative of Peru said that the Working Party should make a decision to invite UNCTAD before the end of this meeting. The representative of the European Communities said that her delegation was not in a position to agree now to a presentation by UNCTAD at the next meeting. The representative of the United States said that her delegation could agree that UNCTAD present a bibliography, but not to invite a speaker from UNCTAD. This was partly a technical and partly a systemic issue for her delegation. An alternative would be for a Member to present the UNCTAD document, and then UNCTAD could respond to questions raised.

65. The representative of the Philippines said that, although his delegation did not agree with the United States' position, he considered that it left room for Members that were interested in an UNCTAD contribution. This should, however, not prejudice in any way the systemic approach towards the participation of an accredited observer in WTO bodies.

66. The representative of the United States said that her delegation considered that decisions regarding the submission of material by an observer should be taken on a case-by-case basis.

67. The Chairperson said that Members agreed that UNCTAD would submit a bibliography as a first step. He would consult to see whether UNCTAD could make a further presentation, taking into account the concerns expressed. At the next meeting, delegations should continue their exchange of views on the definition of services subsidies and carry on the information exchange. Considering that the Working Party had not managed to deal with the remaining agenda items, he intended to convene an informal meeting to address emergency safeguard measures, government procurement, and, time permitting, subsidies.

68. The representative of Thailand said that more time should be devoted to the rule-making part of the services negotiations.

69. The representative of Uruguay reserved his position in the discussion relating to UNCTAD, which, in his view, raised systemic concerns. It was a matter of preoccupation that some delegations wanted to see first a bibliography and the content of a paper before giving the go-ahead. The representative of Colombia shared these concerns.

IV. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (GATS ARTICLE X) AND GOVERNMENT PROCUREMENT (GATS ARTICLE XIII)

70. The Chairperson regretted that, due to lack of time, it was not possible to discuss emergency safeguard measures and government procurement at that meeting. He intended to hold an informal meeting before the next formal meeting to advance work on these issues. Time permitting, delegations would then also have an opportunity to continue their debate on subsidies.

V. DATE OF THE NEXT MEETING

71. The Chairperson said that the next formal meeting of the Working Party was expected to take place during the next cluster of services meetings, which had been tentatively scheduled from 29 September to 10 October 2003. The Working Party would meet during the first week of the cluster and the exact date would be communicated to delegations in due time.

VI. OTHER BUSINESS

72. Nothing was raised under this agenda item.

Working Party on GATS Rules

REPORT OF THE MEETING OF 13 AND 14 MAY 2003

Note by the Secretariat¹

1. The Working Party on GATS Rules opened its forty-second meeting under the chairmanship of Mr. Thomas Chan, from Hong Kong, China. The agenda for the meeting was contained in WTO/AIR/2089. It included six items: appointment of the Chairperson; negotiations on emergency safeguard measures under GATS Article X; negotiations on government procurement under GATS Article XIII; negotiations on subsidies under GATS Article XV; date of the next meeting; and other business. The Chairperson drew attention to the Annotated Agenda (JOB(03)/80) in which his successor, Mr. Santiago Urbina, proposed themes for discussion.

2. He indicated that his successor intended to have, under "other business", a first informal exchange of views on the item, contained in the three work programmes (S/WPGR/7), which called on the Working Party "to prepare for the opportunity provided by the Fifth Ministerial Conference to take stock of progress made in the negotiations". The agenda for the meeting was adopted.

A. APPOINTMENT OF THE CHAIRPERSON

3. The Chairperson said that, in accordance with the rules of procedure for meetings of the Council for Trade in Services (S/L/15), the election of the new chairperson should have taken place at the first meeting of the year in order to take effect at the end of that meeting. However, when the Working Party had met in February, the Chairperson of the Council for Trade in Services was still consulting on the slate of chairs for the subsidiary bodies. It had been decided that the election of the new Chairperson would take place at the beginning of the May meeting. He proposed that the Working Party elect Mr. Santiago Urbina, from Nicaragua, as Chairperson of the Working Party on GATS Rule.

4. Mr. Santiago Urbina was elected by acclamation.

B. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (ARTICLE X OF THE GATS)

5. The Chairperson recalled that, as mandated by the work programme on emergency safeguard measures, the outgoing Chairperson had circulated on 14 March 2003 a Report on Negotiations on Emergency Safeguard Measures (S/WPGR/9). Delegations had been invited to exchange views on this Report at an informal meeting held on 15 April. The record of that meeting was found in a Note by the Secretariat, circulated as JOB(03)/80. As agreed at the April meeting, delegations could ask that the comments they had made during that informal meeting, and which were reflected in the Secretariat's Note, be included in the formal minutes of this meeting. Delegations so wishing were invited to make further statements on this issue.

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

6. The representative of Brazil said his delegation was satisfied with the approach taken in the Chair's Report on ESM. The conclusion pointed out an essential element, i.e. that political will was needed. This observation did not pass judgement on anybody's position, but indicated that there was a need for flexibility from all Members in order to get out of the current impasse. The same questions and answers had been repeated, and there was little progress towards common views. In these conditions, there would be no substantive result by March 2004. It was also time to discuss how to approach the stocktaking.

7. The representative of the United States requested that the statement her delegation had made at the last informal meeting be reflected in the report of this meeting.² At the informal meeting, the United States had noted that the Report had been drafted under the Chair's own responsibility. Nevertheless, her delegation would have liked to have an opportunity such as this one to react and add further thought during the preparation of the report. With respect to the period covered by the Report, her delegation had understood that it would start from July 2002; she took note that the Chair had chosen a more comprehensive approach. Much of the Report highlighted areas of convergence and divergence, but some elements might have been misplaced. For instance, the question of desirability and feasibility also involved concerns regarding economic and practical feasibility, which called for a more practical and focused discussion. Her delegation agreed with the Chair's assessment that the way forward involved adopting a more practical approach. The EC paper on modal application should be further addressed. The United States was concerned with the emphasis the Report put on political will. Political will was required on both sides, and the substantive aspect of this political will could be, for instance, a willingness to engage in a more precise and concrete debate, or responsiveness on concrete examples. But it should be avoided passing judgement on delegations which had difficulties with some issues in this negotiation. Concerning the work programme, there was no need for proposing any particular way forward. Rather, it was more important to lay out the facts, the areas of convergence and divergences, and indicate where further work might be possible. In view of next year's deadline, the Working Group should focus more on specific issues, rather than preparing some sort of political decision. There should be a discussion on how to prepare for the stocktaking provided for in the work programme. The way forward should include the elements just stated by the delegation of Japan.³ For any future work on this sensitive issue, in particular the stocktaking, the United States would insist that any report be agreed by consensus of the Members, and not in the form of a Chair's note. If there was a stocktaking, Members should be able to make as much input as possible.

8. The representative of Argentina said that the Report on ESM reflected the state of play of the negotiations, i.e. that there was no convergence of views for the time being. Political will was important and was linked to the question of desirability. The issue of feasibility could be treated from a technical point of view.

9. The delegation of Japan requested that the statement that his delegation had made at the last informal meeting be reflected in the report of this meeting.⁴ At that informal meeting, Japan had agreed that the debate had not brought about any convergence of views among delegations. The reason was not a "lack of eagerness", as mentioned in paragraph 22 of the Report, but was rather due to the fact that the negotiations on emergency safeguard measures involved complex issues and were difficult to conceptualize. His delegation took note of the observations contained in the last part of the Report. The questions of feasibility and desirability were crucial and essential to the discussions. As stated in paragraph 29 of the Report, basic issues regarding the *raison d'être* of an ESM remained, such as: for what situations a safeguard was needed; when would it be needed; who should be protected; against what, etc. Answering these questions was a prerequisite because they could arise

² See JOB(03)/80, paragraph 5.

³ See paragraph 9 below.

⁴ See JOB(03)/80, paragraph 4.

later in a dispute and were related to the legal stability of the commitments. It was necessary to further discuss concrete examples because this would help answering the basic questions. His delegation was ready to participate in future discussions.

10. The representative of the European Communities requested that the statement that his delegation had made at the last informal meeting be reflected in the report of this meeting.⁵ At that informal meeting, the European Communities had said that it was important to clarify the purpose of the work undertaken under this agenda item and keep in mind that all outcomes were possible. The purpose was not necessarily the establishment of an ESM. Many basic questions remained open. With respect to paragraph 25 of the Report, the European Community was of view that the question of desirability was also linked to feasibility, and not only to the form of an ESM. On paragraph 26, she noted that many safeguard-type provisions in bilateral trade agreements referred, for instance, to balance-of-payments and infant industry problems and, hence, were not of the same nature as the GATT Article XIX safeguard provision. Moreover, these agreements were based on a top-down approach and did not entail a possibility to withdraw commitments. Since the GATS was different, another approach was required. With respect to paragraph 27, she said that the question of feasibility did not involve any political dimension. It was necessary to discuss concrete examples. As her delegation had stated at the last formal meeting, three different outcomes were possible in this negotiation: (i) should the WPGR be able to identify situations justifying an ESM and demonstrate the feasibility and desirability of an ESM to deal with them, the result could be an ESM agreement; (ii) should the WPGR have identified such situations, but failed to prove feasibility and desirability of an ESM, the result could be making Article X:2 permanent; and, (iii) should the WPGR be unable to identify such situations, this would suggest that there was no need for an ESM. Political will was needed to reach any of these three outcomes, not only to agree to establish an ESM.

11. The representative of Thailand, speaking on behalf of ASEAN, said her delegation had taken note of all the points made in the ESM Report as well as of the suggestions for a way forward. She shared the view that political will was needed in order to solve certain issues.

12. The representative of Switzerland requested that the statement his delegation had made at the last informal meeting be reflected in the report of this meeting.⁶ At that meeting, Switzerland had agreed with the Chair's Report that the discussion on emergency safeguard measures had not brought about convergence and that views remained very different. ESM was a difficult issue. The question of desirability involved a political dimension, while that of feasibility referred to technical issues. The Working Party should concentrate on the latter one. Solving the many technical problems would help to take a political decision.

13. The Chairperson thanked delegations for their comments on the Report on emergency safeguard measures. In light of the comments made at the last formal and informal meetings, but also taking into account suggestions by the outgoing Chair in his Report, he invited Members to continue their examination of concrete examples of situations where safeguard action might be needed, and of the form such action could take. With respect to the elements of a possible ESM, Members might also wish to revert to issues such as: (i) identification of possible common elements for an ESM based on the Synopsis (JOB(01)/122 + Add.1) and the Overview of the Synopsis (JOB(02)/200/Rev.1); and (ii) discussion of process-related issues, such as transparency, notification, consultation, surveillance provisions and expedited dispute settlement proceeding. Members might also wish to continue their deliberations on the issues of desirability and feasibility. He recalled that, since the last formal meeting, the European Communities had circulated a written contribution on *Scope for Emergency Safeguard Measures (ESM) in the GATS* (S/WPGR/W/41).

⁵ See JOB(03)/80, paragraph 6.

⁶ See JOB(03)/80, paragraph 11.

14. The representative of the European Communities said that the written contribution in W/41 reflected the statement made by his delegation at the last formal meeting. The objective was to focus the discussion on what the Working Party was mandated to do. Negotiations under Article X should not aim at introducing a series of exceptions into the GATS with a view to granting a specific treatment to infant industries, or to escaping the disciplines of Article XXI. A positive conclusion on the question of ESM presupposed two things. First, the identification, in case they existed, of concrete examples of emergency situations in the services area that were not already addressed by GATS provisions. In this regard, his delegation welcomed the example presented by ASEAN at the last meeting. Other such examples could also help to determine whether an ESM was necessary. Second, it should be demonstrated that an ESM would be feasible and desirable to deal with these situations, i.e. that the difficulties and concerns raised in respect of an ESM could be overcome in practice. The question of feasibility called for technical responses and it was necessary to work on examples. The matrix proposed by New Zealand could be helpful in his regard.

15. The representative of Norway said that his delegation was increasingly sceptical regarding feasibility and desirability of an ESM. He shared the doubts expressed by the European Communities in their contribution. It was difficult to identify real examples, and the goods' safeguard model was not appropriate for services. The flexibility provided by the architecture of the GATS and exception clauses such as Article XII already served as safety valves and allowed countries to defend their interests. Norway was ready to listen to more examples and to discuss desirability and feasibility.

16. The representative of Switzerland supported the contribution by the European Communities and the statement just made by Norway. His delegation was also increasingly sceptical. The structure of the GATS and existing safety nets explained why Article X referred to "the question" of an emergency safeguard measure.

17. The representative of Chile said that both the EC paper and the Shangri La example provided by ASEAN at a previous meeting could be useful means to overcome the current "stalemate" situation described by the outgoing Chair. The mandate was to finish negotiations no later than 15 March 2004. This could mean three things: (i) not reaching an agreement on a mechanism and ending these negotiations; (ii) finding a solution acceptable to all; or (iii) continuing the negotiations. Chile agreed with much of the content of the EC paper. One of the merits of the GATS was its flexibility. In addition, the GATS provided numerous escape valves, such as general exceptions, Article XXI, domestic regulations, prudential measures in the financial services sector, etc. Chile's free trade agreements with the EC and the US did not contain an ESM although they provided for a very high level of liberalization in services. Nevertheless, her delegation could understand the need of some Members to have an additional mechanism. For Chile, this mechanism would need to have certain characteristics so as not to affect the legal certainty of commitments. For example, it must only be used in times of emergency, be of a temporary nature, and adopted and applied in a transparent and objective manner. Chile wished to make the following questions with respect to the Shangri La example: Why had Shangri La made far reaching commitments in such a sensitive sector? Why and how had the employment structure in the retail sector changed with the entry of foreign companies? Was there a way, other than a safeguard measure, that would allow Shangri La to deal with this problem, for example, modification of domestic regulations or some other kind of legislative response? How much time would Shangri La need to adapt to the situation arising from the liberalization of its retail sector? At what point in time could the authorities of Shangri La distinguish between "old" service providers and "new" ones? How did they distinguish between national and foreign providers? How and when could injury be determined by the authorities of Shangri La? How did the authorities define domestic industry in Shangri La and what would happen with acquired rights? Answers to these questions could promote a concrete discussion that would allow delegations to make progress on the basic question of feasibility of an ESM. Her delegation was willing to aid in the search for answers to these and any other questions. The Working Party should use the next few

months to discuss the technical merits, or the absence of such, of an escape valve, be it called ESM or otherwise.

18. The representative of Thailand, speaking on behalf of ASEAN, said she was concerned to see that scepticism was spreading. Examining concrete examples was not everything since the mechanism to be negotiated was meant to address future situations. The GATS already contained some safety nets, but they were not necessarily adequate for a Member having undertaken extensive commitments in a sector. The flexibility provided for in Article XIX would become increasingly irrelevant as Members continued to liberalize and GATS' ultimate objective was full liberalization. Article XXI offered permanent solutions, which was different from the kind of situations contemplated under Article X.

19. The representative of the United States said that the EC contribution was useful in clarifying the scope of Article X. Her delegation hoped to get more concrete examples and to continue to fine tune the scope of these negotiations. The Working Party should also examine to what extent those examples could be addressed under existing GATS provisions. The United States shared the view of the European Communities that Article X clearly stipulated that the negotiations addressed "the question of" an ESM. The problems faced by the drafters of the GATS on this question had not been solved. The matrix presented by New Zealand should be introduced more formally because it would help future discussions. Her delegation hoped the Working Party would be able to find elements of common understanding on the concept of "emergency" and noted that this question had been raised in the informal contribution by Chile, Costa Rica and Switzerland.⁷ The comments and questions by Chile on the Shangri La example were interesting and useful. It was necessary to understand what was intended with a temporary remedy in such a situation, and whether that remedy was contemplated under Article X.

20. The representative of Brazil said his delegation took note of the EC's understanding that the GATS provided enough flexibility to allow countries to take into account concerns related to infant industries and other sectoral constraints. This position was important in view of bilateral market access negotiations. Referring to paragraph 8 of the report of the last meeting,⁸ he noted that some examples in the Secretariat's compilations referred to agreements between the European Communities and other countries. Some of these agreements might contain safeguard provisions applying to trade in goods and services. In cases where they applied to services, he enquired how the European Communities had addressed the question of desirability and feasibility when drafting these provisions.

21. The representative of Uruguay drew attention to the Note by the Secretariat in JOB(03)/20, containing a compilation of references made by delegations to safeguard type measures, which could provide possible examples. Uruguay was not a "demandeur" on this subject, but wished to have more information, in particular on certain measures notified to the Committee on Regional Trade Agreements. His delegation had mentioned some examples of safeguard-type provisions, including in agreements by the European Communities. It had been recognized that they covered services, but had not been applied. Those delegations which had notified such provisions should explain how these would be applied, based on the elements contained in the overview of the Synopsis⁹ (situation justifying an ESM, like services, domestic industry and acquired rights, compensation, etc.). Practical information could help to focus the debate. He agreed that the purpose of an ESM was not to protect infant industries or correct structural problems (para. 5 of S/WPGR/M/41), but wondered why infant industries were referred to in bilateral agreements concluded by the EC as a possible reason for a safeguard measure. He also enquired how Japan had solved feasibility and desirability problems concerning the safeguard provision contained in its schedule of specific commitments.

⁷ *Possible Comprehensive Approach for an Emergency Safeguard Mechanism*, JOB(01)/81.

⁸ S/WPGR/M/41.

⁹ JOB(02)/200/Rev.1.

22. The representative of Norway, referring to comments by Brazil, explained that the EFTA Convention had to be considered in a historical perspective. It had been negotiated in the 60's and covered only goods. Under a recent modification, it had been extended to new sectors, such as services. That explained why the safeguard provision had become general to cover goods and services. Other agreements contained a safeguard clause only for goods.

23. The representative of the European Communities noted that the representatives of Uruguay and Brazil were coming back to questions to which his delegation had already provided answers, as reflected in minutes of past meetings. He noted that delegations agreed that an ESM was not intended for infant industry protection or to address structural adjustment. Free trade agreements provided for full liberalization and did not contain an Article XXI-type provision. GATS Article XXI provided for permanent solutions, while Article X envisaged temporary protection in emergency situations. The Shangri La example could be helpful and the questions raised by Chile were pertinent. How long would it take Shangri La to correct the situation? How would it avoid a repetition of the problem? What was the damage, in particular in sectors where there was a majority of foreign suppliers? Was it really impossible to foresee the situation at the time of making the commitment? These were some questions which should be discussed.

24. The representative of the Philippines said that the debate was circular. Questions, such as those on infant industries, had been raised 3 years ago. A great deal of technical discussion had taken place in the past, in formal and informal meetings. For the time being, it was not possible to move beyond hypothetical examples. All this signalled that other delegations had done their analysis, and had decided they did not want an ESM. ASEAN still wanted to discuss technical issues. The questions by Chile were useful. His delegation would like to get indications from other Members as to what ASEAN should undertake in order to move the debate forward. These negotiations were not heading towards a conclusion because Members were discussing the same issues time and again: characteristics of an ESM, concepts of "emergency" and of "unforeseen developments", etc. Should suddenness and "unforeseen developments" be demonstrated? He enquired how the EC defined "structural adjustment". For instance, did the EC consider that the problem described in the Shangri La example was one of structural adjustment? He indicated that ASEAN was not looking for a permanent solution under Article X.

25. The representative of Argentina said that, instead of focusing on positive listing and flexibility provided for by the GATS, Members should consider to what extent the existence of an ESM would facilitate the undertaking of specific commitments.

26. The representative of Switzerland said that the Shangri La example reflected developments which a number of countries had experienced. Improved access to capital allowed to create big shops. New forms of organizing distribution were contemplated. Most countries that had moved from small to big shops, a foreseeable development, had implemented accompanying policy measures (working time, etc.). One should not assume that the overall outcome was bad only since some shops were loosing, but had to consider the global efficiency of the economy. The main aspect of the Shangri La example was that capital came from abroad and not from national sources. Why had Shangri La undertaken a full commitment? To what extent could other measures be implemented (such as opening hours, social schemes, etc.).

27. The representative of Malaysia said there was a link between this issue and the bilateral market access negotiations. His delegation did not feel obliged to participate in these negotiations if there was nothing new to add. Not reaching an agreement on an ESM could adversely affect the level of ambition in the services negotiations to the detriment of the common objective of progressive liberalization. The absence of an ESM was a perfect excuse for the private sector not to do anything. Would Malaysia be able to open its market in future rounds of negotiations? Malaysia had not made extensive commitments during the Uruguay Round, but had liberalized autonomously since. His

government might prefer not to schedule recent liberalization measures, thereby retaining sort of an "inherent" safeguard. Shangri La was a good example. The case for an ESM was not linked to the question of infant industries, but to the need for a safety valve. Both the top-down approach in FTAs or the bottom-up system of the GATS ultimately led to the same result.

28. The representative of the European Communities said that it was possible to focus the debate with examples and pertinent questions. He took note that ASEAN considered that an ESM should be available in unforeseen circumstances and applied on a temporary basis. Structural problems needed permanent solutions and conjunctural problems temporary solutions. Did the Shangri La situation require a permanent or a temporary solution? Delegations should discuss examples of conjunctural problems and examine what type of temporary solutions might be needed.

29. The representative of Uruguay noted that, while the EC delegation considered that certain provisions in bilateral agreements were not "emergency" safeguard provisions, it had not questioned that these were "safeguard" provisions. Moreover, they had been notified as such. His delegation wished to have more information on how these provisions were applied in practice. This could be useful to those Members that did not have such provisions in their bilateral agreements. He had not found a reply from the EC on this questions in the minutes of past meetings.

30. The representative of Brazil said that the report of the last meeting had motivated his questions to the EC. He wondered whether the EC had taken into account the questions of feasibility and desirability when designing the safeguard provisions in its bilateral agreements, or in the EEA. His delegation was still interested in understanding how these provisions worked. He also noted that the EC had made a distinction between safeguard and emergency safeguard. However, the question of feasibility arose with respect to both.

31. The representative of New Zealand took note of the suggestion to circulate the matrix that her delegation had presented informally at a previous meeting in a more formal way. New Zealand would be ready to do it at the July meeting, if the Working Party so wished.

32. The representative of China said that, in the goods sector, liberalization had been deepened since 1947 because the GATT provided for a safety valve. The same should apply in services. The compilation undertaken by the Secretariat showed that no delegations questioned the need for safeguard measures in agriculture, steel, etc. Unforeseen developments could occur in services trade as well. They even occurred in the TRIPs area. Thus, an ESM was desirable. She noted that, at the last meeting, the EC had stated that an ESM in agriculture was "possible". The EC did not question the desirability of such a safeguard provision, but focussed only on feasibility. Thus, the Working Party could agree now on the desirability of a services ESM and focus on feasibility.

33. The representative of Switzerland considered that the difference between the top-down approach in FTAs and the bottom-up in the GATS was crucial. Bottom-up approach allowed Members to gather experience with domestic policy adjustments, without legally binding commitments. This was unique to the GATS. The drafters of the GATS had chosen this approach because services trade involved complex questions, and it had not been possible to simply copy the goods model. Taking action against the import of a good was easy. An horizontal ESM would, however, be highly controversial: how to calculate the damage, where to find statistics, etc.

34. The representative of Japan said that the reply to the questions regarding the schedule of his country could be found in paragraph 15 of the report of the last meeting (S/WPGR/M/41). The measure referred to as "emergency safeguard measures" in the Japanese Schedule, under Road Transport Services, subsector of Freight Transport Services, aimed at ensuring a stable supply of services in exceptional situations where over-capacity in a clearly delimited area disturbed the normal operation or continuation of the business in question; the measures would allow to prevent, for a

limited period of time, operators from coming into the market or to restrict the output of already existing operators in that market. Those measures were applied on a non-discriminatory basis, i.e. they did not make any distinction between foreign and domestic suppliers and only in exceptional circumstances, as defined in detail in relevant rules and regulations, which ensured transparent application. Therefore, there was no unforeseen situation. Moreover, they concerned one specific subsector, not any sector. On the other hand, discussions under Article X addressed measures discriminating foreign suppliers, non-transparent, and potentially applicable in all services sectors.

35. The representative of the European Communities said the Working Group would not progress if questions were raised again, that had already been answered. Delegations needed to work on examples, including the questions posed by Chile and contributions from delegations such as the EC communication in S/WPGR/W/41. Work should focus on identifying situations where a safeguard action could be needed and what type of reply could be given. The EC had notified measures in bilateral agreements for transparency purposes, and this did not imply that these measures were "safeguards" within the meaning of Article X.

36. The representative of the United States said that the Working Party should address the EC contribution and earlier contributions, such as that from Chile, Costa Rica and Switzerland. The New Zealand matrix should facilitate a more specific discussion. It would be useful if the actual structure of the matrix could be circulated, because it would allow for a more concrete discussion of the EC proposal on modal application. Comparing an emergency safeguard mechanism in goods and in services amounted to comparing apples and oranges. The situation referred to in relation to the TRIPs Agreement involved a waiver (Article IX of the WTO Agreement) and not an ESM. The Shangri La example should be examined in the light of the questions raised by the EC submission on modal application.¹⁰ Her delegation had various questions with respect to this example: What was the situation involving the application of an ESM? What would be the response in a situation where people were obliged to buy more from discount and superstore shops in suburban areas? Would the government act on mode 3? Many questions had already been discussed, as mentioned by the delegation of the Philippines, but had not received an adequate answer. She wondered whether the introduction of zoning requirements might amount to closing a market. Another question was how to draw the line between responses to truly unforeseen situations and mere domestic protection. It was also necessary to discuss the question of desirability from the perspective of potentially affected foreign suppliers.

37. The representative of Thailand, speaking on behalf of ASEAN, said that the ASEAN Members had presented their Draft Agreement on ESM¹¹ (ADA) nearly three years ago. A recap of the major points contained in this draft was appropriate at this juncture because it would also respond to some of the questions just raised. The ADA contained a horizontal mechanism based on investigation and establishment of a causal link between injury and increased supply or consumption of foreign services. It was modelled on the safeguard mechanism in goods, rather than the agriculture's special safeguard or the safeguard in textiles because ASEAN felt that the majority of the membership preferred such an investigation-type mechanism. Second, the main aim had been to find a reasonable recourse to temporary measures for Members in emergency situation that might arise from their specific commitments. Because of its temporary nature, the ESM was distinct from Article XXI. Third, ASEAN had tried to use existing agreements and terms as much as possible. For example, the preamble, object and purpose, and definitions were mostly based on the GATS and other WTO agreements. Staying on familiar ground should provide some comfort for Members. Fourth, the ADA contained many elements to ensure transparency and increase accountability. For instance, the relevant authorities had to examine numerous criteria to ensure that abusive use would not occur easily. There were separate articles covering issues such as compensation, consultation, transparency,

¹⁰ *Modal Application of an Emergency Safeguard Measure*, S/WPGR/W/38.

¹¹ Job No. 6830, dated 31 October 2000.

notification and surveillance, and a reference to WTO dispute settlement. No less important were the "conditions of application" or, in other words, the situations justifying a safeguard action. Thus, the ADA contained necessary sub-mechanisms for prevention of abuse. Fifth, the draft contained some provisions for developing countries in recognition of their particular needs. The preamble mentioned developing countries' need to enhance competition in services. There were *de minimis* clauses, both for general application and for mode 4 in particular. Special consideration on timeframe was also proposed. The requirements on consultation and transparency had no special condition for developing countries because they were devised so that all WTO members could meet them comfortably.

38. She further explained that the preamble of the ADA set out the object and purpose of possible rules governing an ESM in services. It referred to Article X of the GATS and mentioned the need for Members to have reasonable recourse to temporary measures in response to emergencies. Contrary to what some had perceived, the reference to "structural adjustment" and "competition" were intended to underline the fact that a safeguard measures was not to be used for protectionist purposes. The definitions contained in Article I were borrowed from the GATS and other WTO agreements as far as possible. The two notable exceptions were "domestic industry" and "like or directly competitive services". The definition of domestic industry had to be read in conjunction with Article II on Conditions of Application, which defined the "situation justifying a safeguard action". Taking into account other views, ASEAN had come up with a middle ground solution and proposed a *de facto* use of two definitions of "domestic industry" – one for establishing injury and one for the application of the measure (ADA Articles I and II). If the ASEAN text were to be put into practice, injury caused by foreign suppliers would be a basis for safeguard action, but foreign companies might or might not be affected by the measure which protected acquired rights. Therefore, the only remaining key issue was how much and how far "acquired rights" would be protected. On this point, Article II proposed three options. Option 1 fully protected the rights of foreign investors acquired before the safeguard measure was applied, based on domestic laws and regulations. Option 2 was also based on domestic laws and regulations, but would not protect rights granted but not yet exercised, which meant that foreign companies might have to "freeze" their expansion during the period of application. Option 3 limited the rights of foreign suppliers only to those contained in the invoking Member's schedule of specific commitments. This was a workable and technically sound solution. It solved the problem of establishing mode 3 injury, without affecting already established foreign suppliers or affected them only to a limited extent, depending on the acquired rights protection. For protection of acquired rights in modes 1 and 4, the non-retroactivity provision in Article II:5 was adequate. This meant that contractual rights obtained before the use of an ESM would not be affected. Article III governed the determination of serious injury and threat thereof. The criteria were mainly derived from an earlier paper by Venezuela (Job No. 5294) while the investigation was modelled on the safeguard in goods. First, the competent authority had to determine that there was an increase in supply or consumption of foreign services on the basis of a non-mandatory, non-exhaustive list of indicators and sources of information. Second, it had to find out whether there was serious injury or threat thereof on the basis of another list of criteria. Then it had to establish the causal link between the increase and the serious injury or threat thereof.

39. In her view, Article IV provided for applicable measures, whereby Members could temporary withdraw or modify their specific commitments on market access and national treatment and any additional commitments. This would grant sufficient flexibility to Members to find suitable measures for each situation. If Members believed that they were able to enforce the limitations in their specific commitments, then they should have no problem suspending or modifying these commitments when applying a safeguard measure. Another important point in Article IV was the "necessity test", which was meant to prevent unjustified trade restrictions on a case-by-case basis. Article V referred to compensation, which was important to guarantee a reasonable use of an ESM. A compensation mechanism should be efficient but not too cumbersome. Article VII was modelled on the Agreement on Safeguards and contained provisional measures that might be applied under critical circumstances. There were some specific rules for invoking and applying provisional measures to ensure that they

would be used under strict disciplines and in a transparent manner. Transparency was an important principle to prevent abuse and was complemented by an obligation to consult. A multilateral surveillance mechanism was foreseen under Article X. These requirements were not overly burdensome, especially for developing countries. The surveillance provisions were borrowed from the goods' approach and the CTS should be the body to discharge this function. Article IX aimed at assisting developing countries and provided, *inter alia*, for a longer application period and for less cumbersome compensation. Finally, there were provisions for dispute settlement, review and entry into force of the agreement. ASEAN had done its best to come up with a possible mechanism for ESM which was usable, flexible and feasible. The investigation-based model was the best way to prevent abuse. However, ASEAN recognized that there had been other proposals and approaches, and had expressed on many occasions its readiness to work on combining elements of the ADA with other suggestions. The ADA was a good basis of any workable emergency safeguard mechanism, but ASEAN Members were open to listening to other ideas. The deadline of 15 March 2004 was drawing near and there was no more time to be wasted on rhetorical debate.

40. The representative of Brazil said that his delegation had been one of the proponents of this issue and believed that there might be some room for an ESM under the GATS. Brazil remained open to arguments. The debate should be open and frank. Concrete examples were useful to test desirability and feasibility and all Members should engage in this exercise. Members which had safeguard measures in services should be able to give information on why they had them (desirability) and how they were applied (feasibility). Further reflection would be needed on how a safeguard applying in goods could be translated in the services context. He enquired how Japan had solved the question of feasibility when it had scheduled an emergency safeguard, irrespective of whether it was an Article X type provision, and whether Japan would accept that other Members use the same device. He drew attention to footnote 29, page 102 of the US initial offer (TN/S/O/USA), which read: "Rural local exchange carriers may be exempted by a state regulatory authority for a limited period of time from the obligations of section 2.2. with regard to interconnection with competing local exchange carriers". He asked whether this could be considered a safeguard measure under mode 3 and, if so, whether the United States had solved the question of feasibility when scheduling this measure and, in particular, how it would be implemented it.

41. The representative of Canada said that desirability and feasibility were linked. If an ESM was not feasible, it was not desirable. Hence, desirability was not only a political issue. Today's discussion showed how useful it had been to present the Shangri La example. The matrix by New Zealand could be helpful too. He suggested that the Shangri La example could be tested against the different safeguard models presented by Members, which might allow to identify their merits and disadvantages.

42. The representative of Chile said that her delegation was interested in looking at how the ASEAN draft agreement and other proposals would work when applied in a Shangri La-type situation.

43. The representative of Cuba said that her delegation saw the current situation with concern. The same arguments were repeated, which showed a lack of willingness of some Members to establish an ESM. Such a mechanism was desirable and the Working Party should continue to examine concrete examples.

44. The representative of the United States took note of the suggestion made by Canada and would come back to it. Further clarification was needed. Her delegation did not want to discuss a mechanism before answering the core questions of desirability and feasibility. She was concerned about delegations going through other Members' schedules and trying to characterise certain commitments as "safeguard measures".

45. The Chairperson said that the proposal by Canada was something for Members to undertake. The representative of Canada agreed.

46. The representative of Colombia said her delegation was still considering what type of solution should be given in this negotiation. The debate should focus on technical elements. Colombia had some doubts, in particular with respect to mode 3. One could revert to the ASEAN draft agreement and also discuss how the Shangri La situation would be addressed in this context.

47. The representative of Mexico said that the discussion was in a stalemate. The suggestion by Canada might help to move forward. Feasibility and desirability were not referred to in the mandate of Article X. As noted in the Chair Report, the question of desirability was unique to this negotiation. He enquired whether the Secretariat could explain why this was the case.

48. A representative of the Secretariat said that the articulation of this debate had been in the shape of desirability. Questions of feasibility had also been raised at the beginning of the discussions on safeguards. It was true that this was the only rule-making area out of the four under the GATS in which the question of desirability and feasibility had arisen in such a focused manner.

49. The representative of Thailand, speaking on behalf of ASEAN, took note of the suggestion by Canada, and of the various questions raised during the meeting. She hoped that the next meeting would be as fruitful.

50. The representative of the European Communities remarked that the debate was not only rhetorical. It was not so easy to implement a safeguard measure. Acquired rights had to be taken into account. The EC submission on modal application raised a number of questions, and so had the representative of Chile in her intervention. This should be the basis for further work.

51. The representative of Australia said that the discussion of both the mandate of Article X and the objectives of an ESM in the context of the Shangri La example was interesting. In Australia's view, Article X provided a mandate to discuss the question of emergency safeguards. The word "emergency" should be emphasised. Relevant measures were temporary and selective; their objective was to limit imports to enable a particular services industry to adjust to heightened competition from foreign service suppliers. It was therefore essential that the industry already existed and that it was exposed to a sudden surge in imports. The timeframe for the implementation of emergency measures should be short and the remedies designed to enable industry to adjust. Article X did not provide a mandate for measures designed to achieve broader policy objectives, such as long-term plans for industrial development through protection of infant industries. His delegation welcomed the comments by Thailand on behalf of ASEAN and the reaffirmation of ASEAN's commitment to negotiations as mandated by Article X of GATS. The Working Party should focus on a procedure or mechanism to govern possible safeguard actions.

52. The representative of Chinese Taipei wondered whether it was feasible to apply an ESM to the four modes of supply. The existence of an ESM might help domestic industries support the liberalization of trade in services. In this respect, her delegation shared the view of ASEAN that Members might need to convince their domestic industries to support the further opening of their markets, reminding their industries that emergency actions might be employed whenever injury or threat of injury occurred. From this point of view, justifying the necessity of an ESM would not be a problem. Due to the different nature of each industry, whether an ESM was practicable for each mode might need to be assessed case-by-case. Nevertheless, this should not stall the negotiations. Her delegation hoped that Members would agree to step up the pace of the negotiations and enter as soon as possible into substantive discussions of the procedures for an ESM.

53. The representative of Thailand, speaking on behalf of ASEAN, said that ASEAN was open to consider any element which might allow to move forward, such as the suggestion by Canada. The Shangri La example was a first attempt. Other papers on the table should be taken into account. The matrix proposed by New Zealand was a good contribution and ASEAN would try to find examples to fill it. She recalled that the ASEAN draft agreement merely called for the suspension of measures, without prescribing what kind of action should be taken.

54. The representative of China said that her delegation supported Brazil in asking those Members which had safeguard-type provisions in their schedules to explain how they implemented them in practice.

55. The representative of the United States called for further clarification of the suggestion put forward by Canada. Her delegation wanted to see concrete examples of experiences and problems to further discuss questions of desirability and feasibility. However, the US had reservations regarding any formalised exercise involving the application of the various types of mechanisms presented by delegations to the Shangri La example.

56. The representative of Thailand, speaking on behalf of ASEAN, said that the situation described in the Shangri La example was not merely hypothetical because it was based on experiences made in various countries in retail services. She enquired how Canada's suggestion would be implemented. She encouraged delegations to read the ASEAN draft agreement again and hoped that those delegations which had been asked questions regarding safeguard-type provisions in schedules or bilateral agreements would reply.

57. With respect to the suggestion by Canada, the Chairperson felt that it was up to the Members that had presented a proposal to try and apply the Shangri La example to it. He noted that many proposals were not exhaustive, but focused on specific elements of an ESM.

58. The representative of the United States said her delegation needed to hear from delegations what problems they had encountered would justify the use of a safeguard measure. Some countries had undertaken extensive liberalization, but had not signalled any problem. The United States would carefully study the responses given by Thailand.

59. The representative of Brazil said that several tracks could be pursued. They included discussing concrete examples of safeguard provisions and experiences in implementing them.

60. The Chairperson noted some progress on substantive issues as well as on feasibility and desirability. Technical issues had also been discussed in the latter context. The Shangri La example had raised many questions. The matrix by New Zealand was welcomed. He recommended that the suggestion by Canada would be left for Members' consideration and noted that some Members were also interested in discussing safeguard provisions in RTAs.

61. The representative of the United States said that desirability and feasibility raised substantive issues, not only technical problems.

C. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII OF THE GATS)

62. The Chairperson drew attention to the work programme on government procurement, whereby Members were encouraged to put forward submissions as early as possible before 31 March 2003. It had been agreed to continue discussion on the basis of submissions from Members and materials available. He recalled that, at the last meeting, the European Communities had requested the Secretariat to undertake a compilation of transparency rules and procedures contained in bilateral and plurilateral agreements. At that meeting, it had been decided that, before undertaking this

compilation, the Secretariat would check whether relevant information was already available in the Working Group on Transparency in Government Procurement (WGTGP) and would report to the Working Party on GATS Rules. It now appeared that no such work had been undertaken in the WGTGP. The Secretariat would therefore undertake the requested compilation and endeavour to circulate it by the next formal meeting of the Working Party. A preliminary research made by the Secretariat on procurement-related provisions in various agreements showed that it was difficult to separate transparency-related provisions from other provisions. Moreover, the question of what were transparency-related provisions in the field of government procurement was still debated in the WGTGP. In order not to prejudice this issue, the document to be produced by the Secretariat would be a compilation of all provisions related to government procurement found in economic integration agreements. This document would be without prejudice to the scope and the results of the negotiations under Article XIII. With respect to information on relevant activities of the Working Group on Transparency in Government Procurement, he intended to consult informally with Ambassador Saborío Soto, the Chairperson of that Group, to see what kind of contribution could be made to this Working Party. Finally, he recalled the work programme on government procurement which stipulated, *inter alia*, that the Chairperson would "circulate a note by 30 June 2003 to report on the progress of work". As to the form of the report, his intention was to follow the approach taken in the Report on ESM. Practically, this meant that the report would consist of (i) a factual introduction, recalling work done so far under this agenda item, and (ii) the Chair's assessment of the situation and suggestions for a way forward. This report would be circulated on the Chair's responsibility and would not prejudice the position of any delegation. He would welcome comments and suggestions from delegations in this respect.

63. The representative of the European Communities recalled the EC proposal for a legal framework for services procurement (S/WPGR/W/39). Opening government procurement was beneficial, in particular to developing countries. The purpose was to develop a multilateral framework which would allow Members to liberalize their public procurement market in a flexible manner, sector by sector, according to their developmental needs and national policy objectives. It would also be possible to progressively open opportunities for bidding which would allow Members time to implement the necessary regulatory frameworks. A Member taking no commitment on its government procurement under the GATS would have no obligation. The Working Party had already discussed in detail the EC proposal, which had helped to see how such a framework could be implemented. A services procurement agreement could take the form of an annex to the GATS, which would specify the conditions under which the GATS would apply to public procurement. This annex would include three parts. First, a fourth column would be added in the current schedules, entitled "Government procurement", where Members would indicate, for each sector, the possibilities for bidding. "Unbound" would mean no commitment. "None" would indicate that foreign suppliers were allowed to bid and would be treated like nationals; limitations could be listed, concerning entities covered, thresholds, national treatment (other than those in Article XVII column). Second, most-favoured-nation treatment would apply to government procurement, except for commitments taken by signatories to the Agreement on Government Procurement under that Agreement. Exemptions to MFN treatment could be scheduled at the time of signing on the GATS Agreement on procurement. Third, procedures were indispensable to ensure non-discriminatory treatment. In order to avoid duplication, the GATS Annex on Government Procurement could refer to the future Transparency Agreement and indicate that this Agreement would apply to procurement under the GATS. The EC intended to submit a written proposal containing these elements.

64. The representative of the United States said that, although the report on government procurement would be submitted on the Chair's responsibility, Members should be given the opportunity to comment. In fact, the work programme did not indicate that the report was under the Chair's responsibility. The section of the report discussing the way forward might have serious implications for Members.

65. The Chairperson said he hoped to rely on Members' inputs and views, so that the report would be acceptable to everybody. On the other hand, it was not his intention to negotiate the draft. But Members would have ample opportunity to make their views known.

66. The representative of Switzerland stated his delegation was interested in the EC proposal. The flexibility proposed by the EC, in line with the GATS structure, would take into account development levels and the right to regulate. Commitments on government procurement would be a significant achievement from the point of view of services suppliers.

67. The representative of Thailand said that it was the prerogative of the Chairperson to draft his report. Members should be consulted, but should not be involved in drafting the report. With respect to the EC proposal, her delegation was of the view that Article XIII did not allow to engage in market access negotiations. Her delegation would further comment after seeing the EC proposal in written form.

68. The representative of Chile expressed interest in the EC proposal and the flexible framework suggested. Further clarification was needed regarding the rules of procedures.

69. The representative of India was concerned about the direction taken by the debate. The Article XIII mandate was clear: it did not include negotiations on Articles II, XVI and XVII. His delegation would come back on the EC proposal. India trusted that the report to be submitted by the Chair would be factual and balanced. Members should be granted an opportunity to give their input and all views should be taken into account. The compilation to be undertaken by the Secretariat should be without prejudice to Members' position on Article XIII.

70. The representative of Brazil said his delegation would come back to the EC proposal after it was circulated in written form. The Chair should be given the flexibility he needed to draft his report, and he should not feel compelled by any delegation. Delegations would be given an opportunity later on to disagree or criticize the report.

71. The representative of Hong Kong, China recommended, with respect to the scope of the discussion, that the EC proposal could be discussed on the understanding that it would be without prejudice to delegations' position on the scope of the mandate. Concerning the report, the Chair should consult with delegations, but needed flexibility to draft it. Moreover, having Members draft the report would be a waste of time and resources.

72. The representative of the Philippines said that the preparation of the report should left to the Chairperson. It was his prerogative to conduct consultations. Like India, his delegation understood that the compilation to be undertaken by the Secretariat would be without prejudice to Members' position on Article XIII and would be subject to comments by Members. The proposal by the EC went beyond the mandate contained in Article XIII. It was premature to consider a possible annex referring to the agreement in the Transparency Group because it was impossible to know whether there would be such an agreement. The issue should be left aside for the time being, pending a result in the other group. Inviting the Chairperson of the Transparency Group would allow to know what that Group was doing. It would be ambitious to go beyond that.

73. The representative of Peru noted that the mandate of Article XIII did not include negotiations on market access and national treatment. The report on government procurement would be on the Chair's responsibility and should be balanced.

74. The representative of Malaysia said that the mandate was limited. Transparency in government procurement was to be dealt with in another group, which had met certain difficulties in drawing the line between transparency and market access provisions. Despite the flexibility it

provided for, the EC proposal did involve market access issues. The report should be drafted under the Chairperson's responsibility. Consultations should be held to take into account Members' concerns, but Members should not be engaged in the drafting process. His delegation wanted to reflect on the suggestion to invite the Chairperson of the Transparency Group.

75. The representative of Japan said that duplication of work should be avoided. The framework proposed by the EC gave more concrete ideas on what could be done in this Working Party.

76. The representative of Chinese Taipei enquired whether the framework just presented by the EC differed greatly from the previous EC contribution in S/WPGR/W/39. At the time, transparency procedures were mentioned.

77. The representative of Indonesia said his delegation was concerned about the scope and direction of the EC proposal. According to Article XIII, the negotiations should be limited to transparency and not include Articles II, XVI and XVII. The report should be drafted under the Chair's responsibility. His delegation was ready to participate in consultations.

78. The representative of the Republic of Korea said the report should be left in the hands of the Chairperson. Discussions on the EC proposal should not prejudice the result of the negotiations and should not duplicate work in the Committee on Government Procurement. She enquired how parallel market access negotiations on government procurement would be conducted under the GATS and the Agreement on Government Procurement.

79. The representative of the United States said that her delegation preferred transparency-related issues, in relation to both goods and services, to be dealt with in the WGTGP and looked forward to Ministers giving a mandate to negotiate an Agreement on Transparency in Government Procurement. Procurement law did not always distinguish between goods and services. The United States looked forward to a more concrete discussion on how to achieve the objectives of the WGTGP. In that regard, it would be useful to keep in contact with the Chairperson of that Group. The report should be without prejudice to Members' views and positions. No position should be compromised. She wished that delegations would hold the same views in other bodies of the WTO. The section on the way forward should take into account all positions expressed in this Working Party. Her delegation was not interested in drafting the report, but would like to have an opportunity to express views. The report should be balanced, even if it were under the Chair's responsibility.

80. The representative of Singapore said that Article XIII:2 was silent on what should be the object of the negotiations. Thus, any issue could be discussed. His delegation was ready to give further consideration to the EC proposal. He enquired what implications the EC proposal would have on Article III of the Agreement on Government Procurement. Duplication of work should be avoided.

81. The representative of the European Communities said that the scope of Article XIII was not limited to transparency issues, nor constrained by the activities of another group. Despite the doubts expressed by some delegations, opening government procurement had positive effects, in particular on the budget and national economies generally. The arguments concerning the scope of the mandate, which had no foundations, served only to underline the absence of substantive arguments. The EC proposal, which was based on total flexibility, could benefit all Members, especially developing countries and his delegation was ready to listen to suggestions on how to improve it. This proposal would be circulated soon in written form. The annex in the third part could refer to the future Agreement on Transparency and, hence, avoid duplication. This was why it was also important that the Chairperson of the Transparency Group informed this Working Party, preferably at the next meeting. The negotiations of commitments would not take place in this Working Party, but in the usual context of bilateral market access negotiations. The discussion in this Working Party concerned only a general framework and the annex specifying the conditions under which government

procurement would be dealt with in the GATS. Today's proposal was a concrete follow-up of the EC proposal made last July, taking into account questions and comments made at the last meeting. Article III of the GPA did not affect market access under the GATS. The new column proposed by the EC would contain commitments under the GATS for opening possibilities to bid for government procurement, but would not exempt Members from complying with Articles XVI and XVII or the commitments under the GPA. Similarly, the GPA did not prevent Members from complying with their GATS commitments on government procurement.

82. The Chairperson said he would prepare the report under his responsibility. He would consult with the Chairperson of the Transparency Group and would revert to this issue at the next meeting. The Secretariat would undertake a compilation of provisions related to government procurement, found in economic integration agreements.

D. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV OF THE GATS)

83. The Chairperson regretted that, due to lack of time, it was not possible to discuss subsidy issues. He suggested that it would be the first agenda item at the next meeting of the Working Party.

E. DATE OF THE NEXT MEETING

84. The Chairperson said that the next formal meeting of the Working Party was expected to take place during the next cluster of services meetings, which had been tentatively scheduled from 30 June to 11 July 2003. The Working Party would meet during the first week of the cluster and the exact date would be communicated to delegations in due time.

F. OTHER BUSINESS

85. The Chairperson said that, due to lack of time, it was not possible to have a first informal exchange of views on the sentence, contained in the three work programmes (S/WPGR/7), calling on the Working Party "to prepare for the opportunity provided by the Fifth Ministerial Conference to take stock of progress made in the negotiations". He intended to convene an informal meeting for that purpose.

Working Party on GATS Rules

REPORT OF THE MEETING OF 25 FEBRUARY 2003

Note by the Secretariat¹

Corrigendum

At the request of the European Communities, the following corrections should be made:

- In paragraph 5, fifth line, the word "stiffening" should be deleted.
- Paragraph 17 should read as follows:

The representative of the European Communities said that a distinction should be made between safeguards-type provisions and emergency safeguard measures. The fact that paragraph 2 of Article X had not been invoked so far was a reason to ask the "demandeurs" to provide concrete examples. An ESM could not be used to address structural problems. The negotiating history of Article X indicated that, during the Uruguay Round, attempts had been made to set up an ESM, but it had been found unfeasible. The distinction between a "safeguard" and an "emergency safeguard measure" had not been understood. If retail distribution suffered from structural problems, an ESM would not be the right answer. On the issue of EC approach towards safeguards for agriculture, the EC recalled its communication on modal application, where it clearly indicated that safeguards for goods were feasible and that feasibility of safeguards for services had still to be proved. Some economic integration agreements, such as the agreement between the EC and Mexico, or between the EC and Chile, did not contain an ESM. On the other hand, the EEA contained a safeguard-type provision, but was based on a top-down approach and contained far reaching provisions on free movement of goods, people, services and capital which produced direct effect (i.e. that individuals could enforce through national courts).

Working Party on GATS Rules

REPORT OF THE MEETING OF 25 FEBRUARY 2003

Note by the Secretariat¹

1. The Working Party on GATS Rules held its forty-first meeting under the chairmanship of Mr. Thomas Chan, from Hong Kong, China. The agenda for the meeting was contained in WTO/AIR/2031. It included six items: negotiations on emergency safeguard measures under GATS Article X; negotiations on government procurement under GATS Article XIII; negotiations on subsidies under GATS Article XV; date of the next meeting; other business; and appointment of the Chairperson. The Chairperson drew attention to the Annotated Agenda (JOB(03)/30) in which he proposed themes for discussion. The agenda for the meeting was adopted.

A. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (ARTICLE X OF THE GATS)

2. The Chairperson recalled that the following documents, requested by Members at the meeting of 3 December 2002, had been circulated by the Secretariat: (i) a *Compilation of References Made by Delegations to Safeguard-Type Provisions*, in JOB(03)/20; (ii) a revision of the note on *Core Elements Contained in Members' Proposals – Overview of the Synopsis*, in JOB(02)/200/Rev.1; and (iii) a note on *Safeguard-Type Provisions in Economic Integration Agreements* in S/WPGR/W/4/Add.1. He drew Members' attention to a previous note by the Secretariat on *Economic Needs Tests* (S/CSS/W/118) which included a compilation of ENTs found in Members' schedules of specific commitments. Following on the informal meeting held on 29 January 2003, he invited delegations to continue their deliberations on concrete examples of situations in which a safeguard measure would be needed and how it could be applied in practice. In that regard, Members' contributions, whether actual or hypothetical, were essential. Members might wish to refer to the matrix presented at the informal meeting on 29 January 2003 as a possible way of structuring the discussion of relevant examples.² With respect to the identification, elaboration and consolidation of elements of a possible ESM, Members might also wish to revert to other issues previously discussed, including their intention: (i) to identify possible common elements for an ESM based on the Synopsis (JOB(01)/122 + Add.1); (ii) to discuss the idea of creating a procedural framework or core mechanism or combining different models that had been proposed; and (iii) to further address process-related issues, such as transparency, notification, consultation, surveillance provisions and expedited dispute settlement proceedings. Members might also wish to continue deliberations on the issues of desirability and feasibility. During the last meetings, some delegations had put forward their views on these issues, but more guidance was needed.

3. He recalled that, according to the work programme on emergency safeguard measures,³ the Chairperson would circulate a note by 15 March 2003 "to report on the results of work under item (a) [of the work programme], identifying areas of convergence and divergence among Members, with a view to providing a basis to facilitate further negotiations". Item (a) referred to Members' task "to

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

² *Summary of Comments Made During the Informal Meeting of 29 January*, Note by the Secretariat, JOB(03)/21.

³ S/WPGR/7.

identify elaborate and consolidate elements for an ESM and to address the question of feasibility and desirability of ESM". Obviously, Members' inputs and contributions were crucial in that regard. His current assessment was that the Working Party had not gone very far and that the work on these two issues had not brought forth any tangible results so far. There was very little convergence on the fundamental issues, and many basic questions remained open; different views had been expressed as to whether these should be addressed and, if so, how. He observed that, even if the Working Party were to decide to start drafting an emergency safeguard mechanism, there would appear to be no common basis among Members on how to proceed. For instance, there seemed to be no consensus on the very fundamental issue of the form of a possible ESM or on the question of whom should be protected by an ESM. It was his duty to report on this state of play.

4. The representative of the European Communities said his delegation fully supported the Chair's proposal to base discussions on the examination of concrete examples, and welcomed the matrix presented by New Zealand at the last informal meeting. Indeed, experience gathered in implementing the GATS had not brought any concrete example of emergency situation, and Article X:2 had never been used. In addition, no concrete example had been identified on a hypothetical basis in the written contributions submitted to the Working Party. The EC was looking forward to any examples that ASEAN or other interested Members like Brazil or Uruguay could share with the Working Party. His delegation had observed some confusion regarding the scope of the mandate given by Article X. It was therefore timely and necessary to recall the legal framework of an emergency safeguard measure within the context of GATS. Should there be a group of "friends of fair trade" or a group of "friends of legal certainty", all WTO Members would ask to be included. Contrary to antidumping measures that constituted a reaction to unfair trade, an emergency safeguard measure was a reaction to fair trade and challenged legal certainty. Friends of fair trade and of legal certainty would therefore consider that an emergency safeguard measure could not be a Pandora's box. With respect to the scope of an ESM, the EC wished to focus on the words "question" and "emergency", both contained in Article X.

5. First, Article X expressly referred to "emergency" safeguard measures. A safeguard measure that was in conformity with the wording and spirit of Article X needed to be based on a situation of emergency, which was characterised by its extraordinary nature and intended to deal with unforeseen developments as had been clearly indicated by ASEAN in WPGR meetings in November and December last year. Such characteristics were not met by the mere increase in trade and stiffening competition that was inherent in any liberalisation commitment. The mandate set out in Article X was not intended to allow Members to introduce new general exceptions into the GATS, nor to carry out structural adjustments or to protect infant industries. The GATS had provisions dealing with general exceptions, set out in Articles XIV and XIV*bis*. As regards structural problems, which by their very nature were not extraordinary, the bottom-up architecture of the GATS afforded Members enough flexibility to fully take them into account when undertaking commitments. Also, Article XXI provided for a procedure to deal with situations where Members decided to modify or withdraw their commitments in whole or in part. The infant industry argument was based on alleged (expected) future comparative advantages and had nothing to do with rapid (surge) market disruption. This had been clearly illustrated by Professor Messerlin during the informal seminar on ESM that ASEAN had organised in Nyon last year. Furthermore, situations of emergency related to capital movements that could seriously compromise the balance of payments or the monetary policy of Members were already contemplated by the GATS. Article XII provided a remedy for serious balance-of-payments and external financial difficulties or threat thereof. As regards capital movements causing serious difficulties for monetary policy, no specific remedy was needed since, by application of the Annex on Financial Services, the GATS did not cover the activities conducted by a central bank, a monetary authority, or any other public entity in pursuit of monetary or exchange rate policies.

6. Second, Article X clearly stipulated that negotiations would address the "question" of emergency safeguard measures. At the time of concluding GATS negotiations, notwithstanding the

existence of a precedent in the goods area, no agreement had been reached on an ESM in services because the question of its feasibility and desirability had not been solved. This explained the language in Article X, as was clearly indicated in document S/WPGR/W1. The contributions submitted to the WPGR, which, in the absence of concrete examples of emergency situations, were based on abstract considerations, showed that this question remained unresolved. Most of the proposals, whether they directly referred to feasibility and desirability or were made without prejudice to that question, had identified a number of issues showing the difficulties of applying an ESM to services (legal certainty of commitments, modal application, protection of acquired rights, applicability of the principle of non-discrimination, etc.). In all circumstances, the application of a safeguard measure to any of the four modes of supply, taking into account inter-modal relations, raised important concerns already identified by the European Communities⁴, which had not been fully addressed by the WPGR. For the European Communities, a positive conclusion on the question of ESM presupposed therefore: (i) the identification, in case they existed, of concrete examples of emergency situations in the services area that had not already been addressed by GATS provisions; and (ii) the demonstration that an ESM would be feasible and desirable to deal with the identified situations (i.e. that the difficulties and concerns that had been raised in respect of ESM could be overcome in practice). His delegation was considering the possibility of submitting a contribution to the WPGR along the lines of this statement. This input should be taken into account by the Chairperson in the preparation of his report. Turning to the Note by the Secretariat on *Safeguard-Type Provisions in Economic Integration Agreements*,⁵ he said that, although the note clearly stated that it did not purport in any way to prejudge the measures covered by Article X, it indicated that the provisions reproduced in the document were comparable to GATT Article XIX. His delegation profoundly disagreed with that affirmation. All the provisions contained in the so-called Europe Agreements concluded with Central and Eastern European countries, were infant industry provisions and, therefore, not comparable with Article XIX of GATT. They should be compared with Article XVIII of GATT, a provision that it had not been deemed necessary to introduce in the GATS.

7. The representative of Thailand, speaking on behalf of the ASEAN Members, referred to the negotiating history of GATS Article X and recalled that discussions on possible safeguard actions in services during the Uruguay Round took place in the Group of Negotiations on Services (GNS). Document MTN.GNS/W/70, dated 13 September 1989, summarised the principal points which had been made at the time with respect to safeguard concepts and provisions. Safeguard-related issues were raised in several sectoral discussions, including basic telecommunication, construction, engineering design, transport, and tourism. A number of grounds were given for invoking an emergency safeguard measure. For example, for telecommunications, construction and engineering design services, possible grounds for invoking safeguards were protection of infant industries, physical infrastructure and national culture as well as significant increase in imports and the prevention of abuse of market power (including cross-subsidisation and the monopolization of information).⁶ Under transportation and tourism, possible grounds for safeguards included protection of environment (including prevention of traffic congestion), dumping of services products, infrastructure development subsidies, and prevention of excessive market access of foreign providers; natural disasters were mentioned for tourism.⁷ At that time, grounds for safeguards and general exceptions were discussed together and participants in the GNS recognized that some of these cases could be better dealt with under general exceptions. However, the general impression remained that possible grounds for invoking safeguard provisions in the context of trade in services could still be numerous and that the need for safeguard action might differ from sector to sector.⁸ A concrete attempt by UR participants to address the issue of safeguards could be found in the draft services

⁴ S/WPGR/W/38.

⁵ S/WPGR/4/Add.1.

⁶ MTN.GNS/W/70, paragraph 17.

⁷ *Ibid.*, paragraph 19.

⁸ *Ibid.*, paragraphs 20 and 18.

agreement presented by the EC on 18 June 1990 (MTN.GNS/W/105), which contained a provision entitled *Article XI – Emergency Safeguard Measures*: "[I]f a given service is being imported into the territory of a party in such, substantially increased quantities [in absolute or relative terms] or a party is faced with such a major external cause of disturbance of its market for a given service as to cause or threaten to cause serious injury to domestic providers of like or directly competitive services, the party shall be free, subject to the conditions and procedures laid down in paragraph 2, to, suspend, in whole or in part, a liberalization commitment under this Agreement ...". Therefore, a rationale for invoking an emergency safeguard, as proposed by the EC, was the "major external cause of disturbance of its market for a given service as to cause or threaten to cause serious injury to domestic providers".

8. In her view, the UR negotiating history also revealed that negotiators had found inspiration in a number of existing agreements, for instance, the Rome Treaty establishing the EEC, the Convention establishing the EFTA and the OECD Code of Liberalisation of Current Invisible Operations. Safeguard-related provisions were not designed exclusively for services, as the agreements did not distinguish between goods or services. They simply provided for protective measures in cases where implementation of commitments led to serious economic difficulties in sectors, areas or region, or, as in the OECD Code, "serious economic or financial disturbance" in the country concerned. The Secretariat had already compiled a number of documents giving details on safeguard provisions in regional trade agreements (S/WPGR/W/2, S/WPGR/W/4 and S/WPGR/W/4/Add.1). These agreements called for various comments. First, many of them comprised at least one developed country member. For example, NAFTA, EFTA and various agreements concluded by the EC with several Central and Eastern European countries contained safeguard provisions which could affect trade in services. Few of these agreements had only developing country members. Second, safeguard provisions that could affect trade in services were being agreed upon under various regional agreements. The most recent example was the Consolidated Version of the Convention Establishing the EFTA, concluded in June 2002, and the Agreement between the EC and Slovenia, concluded in 1999. Grounds for invoking safeguard measures under these agreements were numerous. None of them required "emergency" as a prerequisite for safeguard action. ASEAN recognized that certain peculiarities of these FTAs might have necessitated these safeguard measures and it would be useful if parties to these agreements could give further clarification to the Working Party in this respect. For instance, parties to an agreement between the EC and one country "may introduce measures which derogate from the provisions of this Chapter as regards the establishment of Community companies and nationals if certain industries: are undergoing restructuring; or are facing serious difficulties, particularly where these entail serious social problems in (...); or face the elimination or a drastic reduction of the total market share held by (...) companies or nationals in a given sector or industry in (...); or are newly emerging industries in (...)". Under other agreements, the most common ground for invoking a safeguard would be "serious difficulties" which could be economic, societal or even environmental, while under NAFTA, the criteria were more specific to the financial sector.

9. She said that two examples of safeguard mechanisms could be found under the GATS framework. The first example was a measure in the schedule of Japan, under freight transport services, mode 3. No specific situation justifying invocation was provided. The commitment merely stated "Emergency safeguard measures concerning the limitations on the number of service suppliers and on the number of service operations or on the quantity of service output". The second case was the Bulgarian transitional service safeguard approved in the accession process, which had since expired. Under these provisions, Bulgaria had been allowed to "impose a suspension of its commitments to permit a foreign service supplier to establish an initial or an additional commercial presence in Bulgaria in order to address specific adjustment concerns" (WT/ACC/BGR/5, para. 88). No other specific criteria were required for Bulgaria to invoke the measure, nor were there criteria to determine what would constitute "specific adjustment concerns". In her view, the aforementioned cases indicated that the context of a safeguard action could be broad and not particularly specific. Many of these measures had been envisaged even to facilitate domestic adjustment, as in the

Bulgarian safeguard case, or nurture infant industries, as in the agreements between the EC and various countries. In the WPGR, discussions on the "context" seemed to be more specific. The ASEAN Draft Agreement on Emergency Safeguard Measures proposed that "an emergency safeguard measure may be applied to trade in services only if the applying Member has determined, in accordance with the provisions of this Agreement, that, as a result of the effect of its specific commitments undertaken under Part III of the GATS, there is an emergency where there is an increase in supply of the service concerned by a supplier or suppliers of another Member, [or consumption thereof,] either, in absolute terms or relative to domestic supply [or consumption of such domestically supplied service], which is causing or is threatening to cause serious injury to the domestic industry that supplies like or directly competitive services" (Article 11:1).

10. ASEAN wished to offer the following hypothetical example in retail services as a possible situation that justified a safeguard action. Take the case of Shangri-La, a developing country with a largely agrarian society where the population was scattered across small villages. Like in many other countries, the distribution sector was an important component of the domestic economy. Many workers were low-skilled, received relatively low-wages, worked mainly on a part-time basis and the percentage of women was higher than men. The retail sector acted as an entry point into the labour market for many of these workers. The structure of the distribution sector reflected what might be described as the early 20th century United States experience: the dominant marketing channel was a general store in small towns; in larger cities, small conveniently located stores specialized in a narrow range of items with perhaps a few large department stores selling a much wider range of goods.⁹ The fact that the level of development of a country affected the structure of its distribution sector was also confirmed by an OECD study.¹⁰ The livelihood of low-wage people depended a lot on small independent stores in villages and small towns which not only acted as major employers, but performed a vital role in providing food, basic amenities, etc. Then, Shangri-La liberalised its distribution sector, both wholesale and retail, and granted full market access and national treatment in modes 1 to 3. Within months, foreign majority-owned retail chains opened vast numbers of retail outlets. They had direct impacts on the small independent shops. People began to buy more from discount or superstores in the suburb areas, forcing small shops to close down. At the village level, independent small shops lost customers to 24-hour service shops and began to vanish. Few of the former employees could immediately get a job in the modern 24-hour shops as these often required higher education levels, such as computer skills. As a result, in a short period after full liberalization small independent shops collapsed across the country and a large number of unskilled workers in rural areas were out of work. The combined market share of foreign-owned retail businesses jumped dramatically. She said that this example was a first attempt to illustrate a situation in which a safeguard measure could be needed. ASEAN was still reflecting upon this example and reserved its right to revert to, and elaborate on, it. Her delegation was interested in hearing other Members' comments and contributions in this debate.

11. The representative of Canada shared the concerns by the European Communities regarding the underlying economic reasons for an ESM, in particular the references to structural adjustment. There was a need for concrete examples. NAFTA could not be considered as an example of a conventional safeguard. The historical account made by the delegation of Thailand was interesting, but an ESM should address circumstances not taken into account when a commitment had been undertaken.

12. The representative of Brazil said that the EC argument that an ESM would impair legal certainty was difficult to reconcile with the EC proposal of a safeguard in agriculture. In his view, the best starting-point was to discuss what an ESM should be. Reference to technical problems was not an excuse. Provisions such as GATS Articles XIV and XXI did not obviate the need for an ESM.

⁹ S/C/W/37, page 3.

¹⁰ Pilat, Dirk (1997) Regulation and Performance in the Distribution Sector, OECD, Paris.

The historical account given by Thailand was useful. Members had never used Article X because there was no framework, but this did not mean that they would not need it in future.

13. The representative of the United States said that the distinction, introduced in the Overview of the Synopsis, between "domestic industry" and "acquired rights" would be useful for examining the modal application. She agreed with the Chairperson that a reality check was needed and agreed with the points raised by the European Communities; the introduction of an ESM was not a decided issue, and concrete examples were needed. Articles XII or XIV*bis*, for instance, addressed relevant concerns. In her view, the problem raised in the example given by ASEAN could be solved through regulatory measures in the sense of Article VI. The modal application of the various elements contained in the Overview of the Synopsis should be looked at. It would be interesting to know whether positions had changed regarding the definition of "domestic industry". The creation of an ESM did not hinge only on political considerations, but very practical concerns, including concerns with regard to mode 4. The "demandeurs" had to provide examples, and demonstrate desirability and feasibility of an ESM.

14. The representative of Switzerland thanked the European Communities for their statement. He noted that the EFTA Convention covered many sectors, not only services. Moreover, the level of obligations undertaken under that agreement was very high, full market access and national treatment were extended to all sectors across the board. It provided for the free movement of natural persons and abolished all restrictions on capital movements. The EFTA Convention also contained provisions on government procurement beyond the WTO Agreement on Government Procurement. The GATS, on the other hand, was based on the principle of progressive liberalization.

15. The representative of Japan said that the safeguards-type provisions listed in S/WPGR/W/4/Add.1 obviously contemplated a very high level of liberalization. Hence, comparison with the GATS was not helpful. He further noted that many economic integration agreements did not contain any safeguard mechanism. Types and policy objectives of the measures concerned were different; some related more to balance of payment restrictions, others to prudential measures or Article XIV-type measures. Discussions under Article X had to take into account the general structure of the GATS itself. He agreed with others that concrete examples should be discussed and, in that regard, he would welcome indications as to how competent authorities would apply a safeguard measure under mode 3. Turning to the ASEAN example of liberalization in the retail sector, he enquired how injury would be measured, whether it would force disinvestment or prevent new investments. It should also be borne in mind that foreign stores would employ local people. The emergency safeguard measure in the Japanese schedule aimed at ensuring a stable supply of services on a non-discriminatory basis. It did not aim at protecting the Japanese suppliers, and did not represent an economic needs test. It was, therefore, not a safeguard-type measure.

16. The representative of Argentina noted that Article X:1, second sentence, stipulated that "the results of such negotiations shall enter into force ...". This implied that there should be a result. Moreover, it was difficult to reconcile the idea that an emergency situation should be unforeseen with the assertion that the GATS provided sufficient flexibility at the time of scheduling to take into consideration all possible problems which could arise as a result of a commitment. Recalling that the GATS called for progressive liberalization, he enquired whether a safeguard measure would be desirable when the multilateral system had reached the level of liberalization of economic integration agreements. He wished the delegation of Japan could give more details on how the emergency safeguard measure contained in the schedule would be applied.

17. The representative of the European Communities said that a distinction should be made between safeguards-type provisions and emergency safeguard measures. The fact that paragraph 2 of Article X had not been invoked so far was a reason to ask the "demandeurs" to provide concrete examples. An ESM could not be used to address structural problems. The negotiating history of

Article X indicated that, during the Uruguay Round, attempts had been made to set up an ESM, but it had been found unfeasible. The distinction between a "safeguard" and an "emergency safeguard measure" had not been understood. If retail distribution suffered from structural problems, an ESM would not be the right answer. The European Communities was in favour of introducing a safeguard for agricultural products because it was possible to implement safeguard measures in goods trade. Some economic integration agreements, such as the agreement between the EC and Mexico, or between the EC and Chile, did not contain an ESM. On the other hand, the EEA included such a mechanism, but entailed a higher level of commitments.

18. The representative of Australia agreed that progress on the question of an ESM had been limited and that there was little convergence on fundamental issues. The proposal by New Zealand to use a matrix to discuss concrete examples deserved further consideration. Work could proceed on a sectoral basis which might allow for a clearer assessment of relevant situations. He enquired whether any Member had tried to fill the matrix.

19. The representative of Thailand, speaking on behalf of the ASEAN Members, said that the fact that an ESM had not been needed so far did not mean that it would not be needed in future as further liberalization was underway. The application of a safeguard measure would amount to the temporary withdrawal of a specific commitment under Articles XVI, XVII or XVIII. The fact that Members scheduled limitations under these provisions implied that they believed it was possible to enforce the corresponding restrictions. Questioning the enforcement of a safeguard measure amounted in fact to questioning structure and functioning of the GATS.

20. The representative of Switzerland said that the EEA had entered into force at the same time as the results of the Uruguay Round. Despite a high level of commitments, no safeguard measures had been invoked, and there appeared to be no case in which an ESM would have been desirable and feasible. He enquired whether the "demandeurs" of an ESM would contemplate the liberalization of government procurement, as the EFTA agreement did. Both hypothetical and actual examples of situations where an ESM would be needed had to be discussed.

21. The representative of Canada said that more discussion was needed on how "further liberalization" could justify an ESM. Circumstances that might not have been contemplated at the time a commitment was undertaken could include changes in technology or in the regulatory framework.

22. The representative of Brazil said that the absence of any real liberalization so far in services explained why it was difficult to find actual examples. Hence, only hypothetical examples could be discussed for the time being. Should there be a real liberalization, governments ought to be able to suspend commitments, without resorting to a unilateral interpretation of what a safeguard was.

23. The representative of New Zealand welcomed the example mentioned by ASEAN. The matrix presented by his delegation at the January informal meeting might provide a framework for further discussion. He recalled that the matrix would contain two columns. A first column could describe examples of factual circumstances that might justify the imposition of a safeguard measure, ordered according to the modes of supply. These examples could draw on factual circumstances that had arisen in practice or on hypothetical situations. A second column would contain possible legislative or regulatory responses in these factual circumstances. Thus, the example introduced by ASEAN would appear in the first column, and possible measures would be listed in the second one. If, for illustrative purposes, the matrix were applied to the goods sector, the first column would describe an unexpected situation and remedial measures, such as a tariff increase, would be in the second column. Some examples could be found in the compilation prepared by the Secretariat in JOB(03)/20. He concurred that more specific examples were needed.

24. The representative of Guyana said he was concerned with the current situation. The overall intent of these negotiations was simply to establish rules governing the use of an ESM. One example of a situation justifying a safeguard action could be a terrorist act. Measures taken after such an event might affect services providers across the four modes and in various sectors (tourism, transport, health, etc). Guyana called for the completion of the negotiations on emergency safeguard measures.

25. The representative of the Republic of Korea said that an ESM was necessary if further liberalization was contemplated. The difference between GATS and economic integration agreements was not particularly significant: a "none" listed in a sector meant full liberalization. The ASEAN example was a pertinent one. In this case, employees could move to a big shop, but not the employers. Regulation discriminating foreign suppliers would be considered a violation of national treatment. To the extent that withdrawal of commitments was possible under Article XXI, it should be possible also to contemplate a temporary suspension of commitments.

26. The representative of the European Communities said that a full commitment under the GATS was still different from liberalization under an economic integration agreement to the extent that the latter went further in terms of regulatory harmonization and precluded possibilities to withdraw commitments. An ESM was not the response to a structural problem. The "results" referred to in the second sentence of Article X:1 could take three possible forms: (i) should the WPGR be able to identify situations justifying an ESM and demonstrate the feasibility and desirability of an ESM to deal with them, the result could be an ESM agreement; (ii) should the WPGR have identified such situations, but failed to prove feasibility and desirability of an ESM, the result could be making Article X:2 permanent; and, (iii) should the WPGR be unable to identify such situations, this would suggest that there was no need for an ESM. Measures taken in response to a terrorist act would be justified under Articles XIV or XIV*bis*. Examples to be discussed should be concrete and specific, whether real or not.

27. The representative of the United States said that a terrorist act was a completely inappropriate example. In any case, measures taken in the aftermath of such an event would fall under Article XIV or XIV*bis*. Article X:1 referred to negotiations on the "question" of an ESM and did not assume any particular end result. A way of moving forward was to discuss examples. She wondered what kind of safeguard measures would be contemplated in the ASEAN example. The response should be discussed mode by mode.

28. The representative of Chinese Taipei said that an ESM should not be used to address structural problems. Nevertheless, a measure to address temporary problems was needed. The concept of unforeseen developments had been used in the context of disputes. More concrete elements were necessary to define concepts such as domestic industry and to better understand the meaning of causation.

29. The representative of Chile agreed with Switzerland regarding the difference between the GATS and economic integration agreements. The latter involved a higher level of liberalization for both goods and services. The example mentioned by ASEAN could be addressed in the context of the matrix proposed by New Zealand.

30. The Chairperson noted that the discussion had focused on situations justifying an ESM. The concrete and hypothetical example presented by the delegation of Thailand, on behalf of the ASEAN Members, had prompted an interesting debate. Delegations had referred to the need for additional concrete examples, both actual and hypothetical, referring to possible situations where safeguard action were needed. There was no need to draw a hard and fast distinction between actual and hypothetical examples as today's hypothetical could be tomorrow's actual example. He reminded Members that examination of examples is just one aspect of the work on ESM. Regarding references to safeguard-type provisions in regional trade agreements, Members pointed to the differences

between the GATS and economic integration agreements. Some referred to the background and mandate of GATS Article X which had been debated before, and perhaps there was no need for another debate at this juncture. The issue of structural adjustment was not new, and had been highlighted in the Synopsis. He proposed to take note of the statements made and revert to these issues at the next meeting. With respect to the work programme on emergency safeguard measures, he recalled that the Chairperson had to circulate a note by 15 March 2003. He would take into account the discussion during the meeting.

B. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII OF THE GATS)

31. The Chairperson drew Members' attention to the work programme on government procurement agreed by the Working Party. He recalled that Members were encouraged to put forward submissions as early as possible before 31 March 2003, and that it had been agreed to continue work on the basis of submissions and materials available. Following on the discussion at the informal meeting on 29 January 2003, he suggested that delegations focus, *inter alia*, on desirability and feasibility of developing disciplines for government procurement in services and on other related issues. Discussion of these issues would be without prejudice to Members' ability to raise questions concerning the scope of negotiations.

32. The representative of the European Communities said that an interesting debate had taken place during the informal meeting on 29 January.¹¹ One conclusion had been to discuss desirability and feasibility of services procurement rules. The EC written communication¹² indicated that liberalization of government procurement could benefit developing countries. At the last informal meeting, various delegations had stressed the importance of transparency and procedural rules. There was a preference to concentrate first on horizontal disciplines before considering the need for sectoral rules. Transparency disciplines could apply to the criteria used to assess tenders, for instance. He suggested that the Secretariat be asked to undertake a compilation of transparency rules and procedures contained in bilateral and plurilateral agreements.

33. The representative of Australia said that the EC contribution dealt with various issues under consideration in the Working Group on Transparency in Government Procurement (WGTGP). Initiating a discussion on similar issues in this Working Party would duplicate work. The WPGR should delay consideration of these issues pending a result in the WGTGP.

34. The representative of the Philippines said that the mandate contained in Article XIII excluded negotiations on market access and national treatment. Moreover, the same issues should not be addressed in two different bodies. His delegation had serious objections to the desirability of rules for services procurement.

35. The representative of the United States preferred that transparency issues be addressed in the WGTGP. The Chair of the WGTGP would be welcome to share information with the WPGR, but it was not necessary to establish a formal structure for that purpose. The Chair of the WPGR could also seek coordination on his own capacity. Information could be provided on the type of issues which were being discussed in the WGTGP since 1996. The presentation should be balanced and remain oral.

36. The representative of Norway was in favour of a coordination of work with the WGTGP and supported the suggestion that its Chairperson inform the WPGR. He also supported the EC request for a compilation of transparency disciplines to be undertaken by the Secretariat.

¹¹ See *Summary of Comments Made During the Informal Meeting of 29 January*, Note by the Secretariat, JOB(03)/21.

¹² S/WPGR/W/38.

37. The representative of Chile said that transparency was an important theme, and that duplication between the WPGR and the WGTGP should be avoided. It would be useful if the Chairperson of the latter Working Party could provide information. Her delegation supported information on transparency disciplines in economic integration agreements.

38. The representative of the Republic of Korea said that it was not desirable to duplicate work. She enquired what kind of information Members were interested in.

39. The representative of Venezuela wondered whether the compilation contemplated by the European Communities would concern only ratified agreements or include draft agreements. The representative of the European Communities said that only ratified agreements should be taken into account. The representative of the United States said that her delegation would be pleased to provide transparency provisions in agreements which would soon be ratified, such as the US-Chile and US-Singapore agreements.

40. The Chairperson noted the emphasis by Members to avoid overlap of work between the WPGR and the WGTGP, and some had indicated a preference for issues relating to transparency to be addressed in the latter. Regarding the compilation of information as proposed by the European Communities, the Secretariat would first check whether the requested information was already available in the WGTGP and would report to the WPGR at the next meeting. With respect to information on relevant activities in the WGTGP, he proposed that the format and content of an information exchange should be left flexible and should not be prejudged for the time being. He or his successor could consult the Chairperson of the WGTGP on an informal basis to see how information exchange could be arranged, whether it would be a briefing by the Chair or another means.

C. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV OF THE GATS)

41. The Chairperson recalled that, according to the work programme on subsidies, Members were encouraged to put forward submissions as early as possible before 31 March 2003. It had also been agreed to continue discussion on the basis of submissions from Members and materials available. Following on the discussions at the informal meeting on 29 January¹³, which had focused on the submission by the delegation of Poland¹⁴, he suggested that delegations continue their debate on the issues raised at that meeting, including definition of subsidies in services, categorisation of such subsidies, scope of "actionable" subsidies, and possible parallels between the GATS and the SCM Agreement. In this regard, Members might wish to consider whether and, if so, how the *Checklist on Subsidies*¹⁵ should be revised with a view to structuring future discussions. The Chairperson recalled that, in November last year, a delegation had drawn attention to an UNCTAD seminar on audiovisual services during which the issue of subsidies in the audiovisual sector had been raised. The UNCTAD Secretariat had circulated a summary of the seminar to the Special Session of the Council for Trade in Services last December. Should the Working Party wish to obtain more specific information on subsidies, it could agree to invite a representative from UNCTAD to make a presentation at the next meeting. He had also been informed, on an informal basis, that UNCTAD would be ready to share information on subsidies in other services sectors as well (such as tourism, energy, construction). Delegations were invited to give their views on this issue.

42. The representative of the United States said that in the communication on audiovisual and related services, presented in the Special Session in December 2000, her delegation had proposed to

¹³ *Summary of Comments Made During the Informal Meeting of 29 January*, Note by the Secretariat, JOB(03)/21.

¹⁴ JOB(02)/207.

¹⁵ Job No. 4519/Rev.1, 6 October 2000.

consider developing an understanding on subsidies in this sector.¹⁶ It might be confusing to further discuss audiovisual services in the WPGR. Her delegation would, however, be interested in other delegations' opinion and would like to see relevant papers before deciding on whether UNCTAD should be invited to make a contribution.

43. The representative of Hong Kong, China said that his delegation was in favour of updating the Checklist. The definition of "subsidy" could be based on the SCM Agreement; an alternative definition for the authority granting the subsidy could refer to Article I:3(a). It would also be interesting to further discuss categorisation of subsidies, and the criteria and parameters for granting subsidies.

44. The representative of the European Communities said that UNCTAD had already made a presentation on the seminar on audiovisual services at the Special Session. With respect to information concerning other services sectors, her delegation was not in a position to take a decision without having seen the relevant documents. It was primarily up to Members to bring subsidy-related information to this Working Party.

45. The representative of Argentina agreed with Poland that a definition of "subsidy" could include some basic elements of Article 1 of the SCM Agreement. Three elements were essential: (i) the existence of a financial contribution, which was (ii) granted by a public authority, and (iii) conferred a benefit. GATS Article I:3(a) was broad enough and could be used as a basis for identifying entities granting the subsidy. Other important concepts included the need for a subsidy to be specific, the potential trade-distorting effects and consideration of public policy objectives. The exclusion of some sectors might be envisaged. Possible criteria for establishing a categorisation should be discussed. Any information that UNCTAD could submit would be welcome.

46. The representative of Brazil supported the comments just made by the delegation of Argentina. The WPGR should not preclude any source of information and a contribution from UNCTAD was welcomed. UNCTAD might send written material to the Working Party. The representative of Mexico said that the Working Party should be open to any source of information. The Secretariat should seek information in contacts with other international organizations. The representative of Canada expressed some doubts regarding the opportunity to invite UNCTAD to present information. His delegation wished to know what type of information UNCTAD intended to submit. The representative of Chile supported a contribution from UNCTAD. The Working Party needed to answer the questions posed by Poland. The issue of categorisation of subsidies should be included in the Checklist, as well as the question of whether countervailing duties could be applicable. The representative of Chinese Taipei said her delegation was studying the applicability of the SCM definition and how the concept of specificity could apply to services. More information on subsidies was needed. However, it was difficult to notify them without an agreed definition.

47. The representative of Australia said her delegation felt that there were three key areas. First, the issue to whom a subsidy was granted was not regulated in the SCM agreement; the test was rather whether a subsidy implied a benefit, but did not depend on whether the service was supplied on a commercial basis. Second, specificity could be defined by mode of supply; a subsidy granted to all providers within a given mode would not be specific. Third, the question of whether the concept of trade-distortiveness should be part of a definition depended on the underlying intention. Members might also want to consider whether some subsidies should be prohibited and, if so, on what basis. It should also be examined how trade distortive effects could be measured.

¹⁶ Communication from the United States on *Audiovisual and Related Services*, S/CSS/W/21, 18 December 2000.

48. The representative of the United States said that her delegation was in favour of transparency. There was a need for better defining what the Working Party meant by "subsidy" before considering types of information. Her delegation wished to have a look at documentation before it was formally presented; appropriate time should be left to coordinate with relevant services experts.

49. The representative of Indonesia said that the contribution by Poland was a useful basis for further deliberation. Indonesia supported an update of the Checklist. Information from other international organizations was welcome.

50. The representative of Switzerland said that the first step in this negotiation was to have a common understanding on the definition of a subsidy. GATS Article I referred to measures "affecting trade in services", which meant that the negotiations on services subsidies were limited to those subsidies which effectively affected trade. Among trade-distortive subsidies, his delegation considered that those subsidies having effects on third markets, i.e. export subsidies, should be given priority. He noted that other delegations shared the view that subsidies granted in the pursuit of social or other public policy objective were a sensitive issue and should be dealt with appropriately. Members' right to resort to such instruments must not be affected. National schedules of commitments offered a way to preserve public prerogatives in fulfilling policy objectives. For instance, the Swiss schedule of specific commitments limited the scope of commitments in education services to private education; as a consequence, measures concerning public education, including subsidies, were not covered by the commitment.

51. The representative of Thailand said her delegation was confused with regard to what constituted a subsidy. A definition was needed. Thailand was apprehensive of any kind of subsidy since, as a developing country, it was short of financial resources. Some public policy objectives had to be kept in mind. Her delegation was open to considering contributions from UNCTAD or any other organization.

52. The representative of China said that the contribution by Poland provided a valuable input. It was crucial to identify subsidies and their nature. The information exchange provided for in GATS Article XI was important. China supported a contribution by UNCTAD to enhance information in relevant sectors.

53. The representative of Norway recalled that his delegation had responded to the 1997 questionnaire.¹⁷ He agreed that the SCM Agreement was a useful reference point. Rules for services subsidies should coincide to the extent possible with that Agreement. Legitimate social objectives should not be affected by subsidy disciplines.

54. The representative of Poland said that the contribution from his delegation was a first step, which concentrated only on definition. He agreed that other issues, such as specificity, policy objective, had to be considered, and his delegation was prepared to join other in further work. With respect to the comment by Australia, he doubted whether specificity should be determined according to the mode of supply. His delegation supported an update of the checklist but considered it might be premature to revise it now, since the Working Party was still struggling with the first item, i.e. definition of subsidy.

55. The representative of Australia said that there was a difference between firm-specific and industry-specific subsidies. A subsidy applied to all industries within a given mode of supply would not be specific. The representative of Poland said that the SCM Agreement contained the concept of industry specificity, but modes of supply did not exist. A subsidy was not specific if all industries, no matter the mode, received it.

¹⁷ S/WPGR/W/16 and S/WPGR/W/16/Add.1.

56. The representative of the Republic of Korea supported an update of the Checklist, as well as contributions from international organizations.

57. The representative of UNCTAD indicated that the sectoral reports referred to were not focused on subsidies *per se*, but contained subsidy-related information. Her organization would be ready to point out the relevant information, which could be used as "raw material". All documents were publicly available, but quite voluminous. UNCTAD could extract the relevant information without prejudice to any issue under negotiation in this Working Party.

58. The Chairperson noted that delegations were interested to continue their debate on the definition of services subsidies. This issue included two different aspects which could be distinguished in future discussions: (i) the generic definition of subsidies in the services context, including the relevance of the definition contained in the SCM Agreement; and (ii) the meaning of the concept of trade-distortive or "actionable" subsidies. With respect to the latter, Poland and other delegations had referred to concepts such as specificity, public policy objectives, nature of the subsidies, permissible or non-actionable subsidies, etc. On the suggestion by Members to update the Checklist, he suggested including the issues of categorization of subsidies and concepts relevant to what should be regarded as trade-distortive subsidies. Information exchange concerning all subsidies related to trade in services, pursuant to Article XV, should be continued. No delegation seemed to have difficulty as a matter of principle with information submitted by UNCTAD or another organization. The Secretariat would request UNCTAD to provide a list of relevant documents before inviting them for a presentation of the relevant information. Moreover, interested delegations could get in touch directly with UNCTAD.

D. DATE OF THE NEXT MEETING

59. The Chairperson said that the next formal meeting of the Working Party was expected to take place during the next cluster of services meetings, which had been tentatively scheduled from 12 to 23 May 2003. The Working Party would meet during the first week of the cluster and the exact date would be communicated to delegations in due time.

E. OTHER BUSINESS

60. Nothing was raised under this agenda item.

F. APPOINTMENT OF THE CHAIRPERSON

61. The Chairperson said that, in accordance with the rules of procedure for meetings of the Council for Trade in Services (S/L/15), the election of a new chairperson should take place at the first meeting of the year and take effect at the end of that meeting. However, the Chairperson of the Council for Trade in Services was still consulting on the slate of chairs for the subsidiary bodies. As a consequence, the election of the new Chairperson would take place at the beginning of the next meeting.

(02-7073)

Working Party on GATS Rules

REPORT OF THE MEETING OF 3 DECEMBER 2002

Note by the Secretariat¹

1. The Working Party on GATS Rules held its fortieth meeting under the chairmanship of Mr. Thomas Chan, from Hong Kong, China. The agenda for the meeting was contained in WTO/AIR/1984. It included six items: adoption of the annual report to the Council for Trade in Services; negotiations on emergency safeguard measures under GATS Article X; negotiations on government procurement under GATS Article XIII; negotiations on subsidies under GATS Article XV; date of the next meeting; and other business. The Chairperson drew attention to the Annotated Agenda (JOB(02)/202) in which he proposed themes for discussion. The agenda for the meeting was adopted.

A. ADOPTION OF THE ANNUAL REPORT TO THE COUNCIL FOR TRADE IN SERVICES

2. The Chairperson recalled that the draft annual report of the Working Party to the Council for Trade in Services had been circulated on 20 November 2002 as document S/WPGR/W/40. Like its predecessor, this report conveyed factual information on the activities carried out by the Working Party since the 2001 annual report had been issued. He drew attention to a typo in the draft report: in paragraph 9, the informal document referred to was in fact JOB(02)/84 and not --82. This typo would be corrected in the final version of the report.

3. The representative of Poland enquired whether reference to the paper on subsidies circulated at this meeting by his delegation could be referred to in paragraph 9 of the report. The Chairperson replied that this would not be possible since the paper had not officially been circulated yet. However, it would be mentioned in the 2003 annual report.

4. The representative of the United States asked that the following words be added at the end of the first sentence of paragraph 5: "... and on desirability and feasibility of such a mechanism". This would reflect the fact that the US written contribution addressed the issue of desirability and feasibility and not that of an ESM as such. The representative of the Philippines said the issue of desirability and feasibility was already referred to in the second sentence of paragraph 5 and all delegations were aware that it was still under discussion. The text should therefore be maintained as it was. The representative of the United States recognized that the issue of desirability and feasibility was mentioned in the second sentence, which referred to issues being discussed. The first sentence, however, addressed written contributions by Members, which made it necessary there to also include a reference to desirability and feasibility. During the following exchange of views, involving the delegations of the Philippines, Thailand and the United States, the representative of Uruguay suggested that the first sentence of paragraph 5 refer to "[V]arious delegations presented formal and informal written contributions in relation to the mandate contained in Article X". The Chairperson suggested that the report be adopted, subject to this change. Further, in paragraph 9, the correct reference was JOB(02)/84 (and not -82). It was so agreed.

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

B. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (ARTICLE X OF THE GATS)

5. The Chairperson said that, as agreed at the meeting on 23 October 2002, the Secretariat had prepared a note highlighting core elements contained in the various written proposals that Members had put on the table in the negotiations under GATS Article X. This Note, entitled *Core Elements Contained in Members' Proposals – Overview of the Synopsis*, had been circulated as JOB(02)/200. The table contained in this document gave an overview of the issues raised by Members. This Note was meant to be a guide to reading the Synopsis (JOB(01)/122 + Add.1) and, therefore, followed the same structure.

6. He recalled that, according to the work programme on emergency safeguard measures agreed by the Working Party in July,² Members were encouraged to put forward submissions as early as possible before 31 December 2002. Moreover, Members had agreed, *inter alia*, to identify, elaborate and consolidate elements for an ESM, and to address the question of feasibility and desirability of an ESM. It had also been agreed that the Chairperson would circulate a note by 15 March 2003 to report on the results of such work. This meeting provided an opportunity for delegations to continue their exchange of views on the issues of desirability and feasibility. The Annotated Agenda prepared for this meeting also proposed that delegations give further thought to various issues which had been raised on 23 October, i.e.: (i) to identify possible common elements for a services ESM based on the Synopsis; (ii) to examine concrete cases or examples where a safeguard measure would be needed and how it could be applied; (iii) to discuss the idea of working out a procedural framework or core mechanism, or combining different models that have been proposed; (iv) to further address process-related issues, such as transparency, notification, consultation and surveillance provisions; and (v) to explore the idea of expedited dispute settlement proceedings. He reminded that, according to the work programme on ESM, the Chairperson was expected to circulate a note by 15 March 2003, "identifying areas of convergence and divergency among Members, with a view to providing a basis to facilitate further negotiations". Needless to say that Members' input and contributions would be crucial to enable the Chairperson to fulfill this task. He proposed that the Working Party continue discussions on emergency safeguard measures in informal mode.³ It was so agreed.

C. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII OF THE GATS)

7. The Chairperson said that the work programme on government procurement agreed by the Working Party encouraged Members to put forward submissions as early as possible before 31 March 2003, and stipulated that discussion should continue on the basis of submissions from Members and materials available. He recalled that, at the last meeting, Members had addressed the Communication from the European Communities and their Member States on government procurement of services.⁴

8. The representative of the European Communities recalled that, in some services sectors, government procurement represented more than 50 per cent of total activity, which reduced in the same proportions the value of specific commitments in these sectors. Opening government procurement was a tool for development, enabled public authorities to purchase services at the lowest cost, and could favour transfer of technology and know-how. The EC proposed that negotiations on government procurement make full use of the flexibility offered by the GATS and develop a multilateral framework taking into account Members' needs at all level of development. Members could start negotiating an understanding including rules and procedures on transparency as well as modalities for the application of Articles II, XVI and XVII. Then, they could decide which sectors

² S/WPGR/7, specifically paragraph 3.

³ See *Summary of Comments Made During the Informal Meeting of 3 December 2002*, Note by the Secretariat, JOB(02)/216.

⁴ S/WPGR/W/39.

would be opened and to what extent. Sectors in which commitments regarding access to, and national treatment in respect of, government procurement of services would be undertaken would be subject to the multilaterally agreed rules. This flexible framework would allow governments to take into account legitimate concerns. For instance, should a government wish to reserve certain procurement to local small-and-medium sized enterprises, it could determine a threshold below which the commitments would not apply. The EC was ready to discuss further any concern or comment with all interested delegations. He regretted that, due to time constraints, delegations could not engage in a substantive discussion at this meeting.

9. The representative of Switzerland said that government procurement was an important topic deserving a thorough discussion at the next meeting. The representative of the Philippines said that his delegation was concerned about the EC proposal because it exceeded the negotiating mandate in Article XIII. In his view, negotiations under this agenda item were limited to transparency issues. The representative of Canada said that his delegation attached importance to this agenda item and would forward questions to the European Communities. The representatives of Malaysia, Peru, Indonesia and Kenya supported the statement made by the representative of the Philippines.

10. The Chairperson said that he would hold an informal meeting in January or February next year to continue discussion of this topic. At that meeting, the agenda items would be addressed in the following order: government procurement, subsidies and emergency safeguard measures.

D. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV OF THE GATS)

11. The Chairperson drew attention to an informal contribution by Poland on definition of services subsidies.⁵ He regretted that, due to time constraints, discussion of this agenda item had to be postponed and suggested to revert to this issue at the next informal meeting.

E. DATE OF THE NEXT MEETING

12. The Chairperson indicated that the next formal meeting of the Working Party was expected to take place during the next cluster of services meetings, which had been tentatively scheduled from 27 February to 3 March 2003. The Working Party would meet during the first week of the cluster and the exact date would be communicated to delegations in due time.

F. OTHER BUSINESS

13. The Chairperson recalled that, at the last meeting, he had informed the Working Party that he had received a letter from Ambassador Smith, Chairman of the Special Session of the Committee on Trade and Development, requesting information on any discussions or other developments relating to special and differential (S&D) treatment that had taken place in the Working Party on GATS Rules. A few days later, he had received a letter from Ambassador Jóhannesson, Chairman of the Working Group on Trade and Transfer of Technology, seeking similar information in relation to trade and technology transfer. As agreed at the last meeting of the Working Party, he had replied to these Chairpersons, informing them in a factual manner on issues related to, respectively, S&D and trade and technology transfer, that had arisen – or not, as the case may be – in this Working Party under each of the three agenda items. Copies of the two letters were available outside the meeting room. These letters were without prejudice to the position of any Member on the issue of S&D.

⁵ JOB(02)/207.

Working Party on GATS Rules

REPORT OF THE MEETING OF 23 OCTOBER 2002

Note by the Secretariat¹

1. The Working Party on GATS Rules held its thirty-ninth meeting under the chairmanship of Mr. Thomas Chan, from Hong Kong, China. The agenda for the meeting was contained in WTO/AIR/1930. It consisted of five items: negotiations on emergency safeguard measures under GATS Article X; negotiations on subsidies under GATS Article XV; negotiations on government procurement under GATS Article XIII; date of the next meeting; and other business. The Chairperson drew attention to the Annotated Agenda (JOB(02)/144) in which he proposed themes for discussion under the three agenda items.

2. The representative of Thailand said he intended to make a statement under "Other Business". The Chairperson announced that he would inform delegations on a letter he had received from the Chairperson of the Committee on Trade and Development Special Session.

3. The agenda for the meeting was adopted.

A. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (ARTICLE X OF THE GATS)

4. The Chairperson recalled that, under the Work Programme on emergency safeguard measures adopted by the Working Party in July,² Members were encouraged to put forward submissions as early as possible before 31 December 2002. Moreover, Members had agreed, *inter alia*, to identify, elaborate and consolidate elements of an ESM and to address the question of feasibility and desirability. It had also been agreed that the Chairperson would circulate a note by 15 March 2003 to report on the results of such work. The Annotated Agenda circulated prior to this meeting proposed that, for the purpose of identifying, elaborating and consolidating elements of an ESM, delegations might continue their comparison of the various proposals on the table. In his view, five broad approaches could be identified: (a) the "horizontal" safeguard mechanism; (b) the "scheduled" safeguard; (c) the "consensus-based" safeguard mechanism; (d) the "core" safeguard mechanism; and (e) no explicit safeguard mechanism. Based on the elements contained in the Synopsis³, Members might want to identify the main differences as well as possible common elements. The question of feasibility might also be addressed in this connection. This discussion was without prejudice to the question of desirability of an ESM. Members wishing to address this question were encouraged to present submissions.

5. The representative of the United States noted that, while items (a) to (d) (paragraph 2 of the Annotated Agenda, JOB(02)/144) could be interpreted as different "approaches", item (e) should be considered as an "outcome", based on a review of the issues of feasibility and desirability. It might be useful to reformulate (e) in this sense, since the negotiations on an ESM were without prejudice to an outcome.

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

² S/WPGR/7, specifically paragraph 3. See also S/WPGR/M/38.

³ JOB(01)/122 of 7 August 2001 and JOB(01)/122/Add.1 of 21 December 2001.

6. The Chairperson replied that the five approaches were based on proposals by Members and were intended to facilitate discussions. Item (e) included the situation, raised by some Members at previous meetings, where even in the absence of an established ESM, a Member decided to inscribe an ESM in its schedule of specific commitments. He stressed that the approaches – or outcomes – identified in the Annotated Agenda were not meant to prejudge the negotiations in the Working Party.

7. The representative of Switzerland said that the option described under (e) went beyond the particular situation just described by the Chairperson and deserved further consideration, in particular in discussing desirability of an ESM. The Chairperson said that Members were invited to address the issue of desirability in this meeting.

8. The representative of the United States recalled that her delegation had submitted a proposal on desirability and feasibility and noted that these issues had been raised by other Members as well in their proposals. Members were free to put forward more submissions, but contributions already on the table should not be forgotten.

9. The Chairperson proposed that the Working Party continue discussions on emergency safeguard measures in informal mode.⁴ It was so agreed.

10. In concluding discussions under this agenda item, the Chairperson stressed that substantive inputs were needed. He noted an interest to take up further the Australian proposal in order to see how it could be merged with other approaches on the table. Clearly, more work was required on desirability and feasibility. It was also important to discuss concrete cases in which safeguard measures might be needed. With respect to the request made during the informal session for inputs by the Secretariat, he suggested that the Secretariat could highlight core elements contained in the various written proposals on the table.

B. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV OF THE GATS)

11. The Chairperson drew Members' attention to the Work Programme agreed by the Working Party. He recalled that Members were encouraged to put forward submissions as early as possible before 31 March 2003, and that it had been agreed to continue discussion on the basis of submissions and materials available. He noted that, at the last meeting, there was a general feeling that more information on subsidies was needed. Members had been invited to give consideration to a simplified questionnaire put forward by the delegations of Argentina, Chile and Hong Kong, China, for the purpose of information exchange on subsidies (JOB(02)/84). Moreover, the Secretariat had circulated an updated summary of information on subsidies contained in TPR reports (S/WPGR/W/25/Add.3). He invited delegations to continue the discussion on information exchange on the basis of these documents. Members might also wish to consider if they had other suggestions to further the gathering of information, and any other technical and analytical work.

12. The representative of Chile said that this agenda item was particularly important for her delegation. In the course of the ongoing market access negotiations, her delegation had asked Members having sent requests to Chile to provide information on the subsidies they maintained in sectors they wanted Chile to open. But no information had been provided so far. Increasing transparency on subsidies remained a key objective and any type of information was useful. In a process of market opening, addressing the issue of subsidies was in everybody's interest. She noted that it had been said on various occasions that no sufficient information was available. However, the webpage of some Members contained a wealth of information on their subsidy regimes in different sectors. The problem was that this information did not always cover important elements such as

⁴ See *Summary of Comments Made During the Informal Meeting of 23 October 2002*, Note by the Secretariat, JOB(02)/159.

amounts, beneficiaries, etc. For the next meeting, specific questions could be made to these Members on their subsidy programmes. With respect to the Secretariat document W/25/Add.3, she noted that (i) the information focused on some services sectors only (mainly tourism, transport, financial services); (ii) it was not clear whether subsidies targeted services exports, and (iii) developing countries appeared to subsidize more than developed countries. She enquired which sources were consulted when drafting TPR reports.

13. The representative of Ecuador said that the examples in W/25/Add.3 were limited to some sectors and concerned mostly developing and least-developed countries. She drew attention to a submission that Saudi Arabia had circulated in the Committee on Trade and Environment and in the Committee on Trade and Environment Special Session on *Energy Taxation, Subsidies and Incentives in OECD Countries and Their Economic and Trade Implications on Developing Countries, in Particular Developing Oil Producing and Exporting Countries*⁵ and suggested that it be circulated in this Working Party because it contained interesting information on subsidies in the energy sector. It would be important for the Working Party on GATS Rules to be aware of this document.

14. The representative of Hong Kong, China suggested that, under this agenda item, Members might also want to address the issue of permissible subsidies, including schemes aimed at promoting government policies in the health and education sectors, or research and development.

15. The representative of Uruguay said that the Working Party was mandated by Article XV to develop the necessary multilateral disciplines to avoid trade-distortive effects. Technical work and negotiations on subsidies had to be carried out on this basis, taking into account the Work Programme on subsidies.

16. The representative of Cuba enquired why the simplified questionnaire put forward by the delegations of Argentina, Chile and Hong Kong, China (JOB(02)/84, 12 July 2002) had not included the question on the policy purpose of the subsidy which was contained in the original questionnaire (see S/WPGR/W/16).

17. The representative of the Republic of Korea said that the Secretariat's document W/25/Add.3 was a good basis for furthering the information exchange. Noting that this compilation focused on some services sectors of an infrastructural nature, she suggested that Members might be more proactive in other sectors. The document also concentrated on small economies where tourism was a key sector. It might be useful to refer to previous documents to have a more general view. More information would allow to work on the form, nature and definition of services subsidies. She wondered whether incentives provided to foreign investors should be addressed. In the goods sectors, investment incentives were not covered, unless there was a violation of the TRIMs Agreement. It was interesting that tariffs and tax exemptions on goods should be considered as incentives to some services, such as tourism. Other questions included whether consumer tax exemptions on oil used for airplanes and ships, or support provided to education and training of certain professionals should be regarded as subsidies. The definition of subsidy contained in the Agreement on Subsidies and Countervailing Measures was broad and more factual data on services subsidies were needed. Work on categorisation of various services-related subsidy programmes should also be considered. The Working Party should examine how to update the checklist on subsidies.

18. The representative of New Zealand recalled that her delegation had submitted in 1997 a response to the subsidy questionnaire in S/WPGR/W/16/Add.2 and would endeavour to update this information. New Zealand would welcome if other countries, developed and developing, submitted information under the simplified questionnaire in JOB(02)/84. Her delegation was interested in any

⁵ Document WT/CTE/W/215 and TN/TE/W/9.

clarification that might emerge as to the scope of measures that were being addressed under this agenda item.

19. The representative of Chile recognized the importance of the policy objective behind subsidies. However, as a first step, it was important to obtain as much information as possible on subsidy programmes. She agreed with Hong Kong, China that the issue of permissible subsidies would need to be addressed. The representative of the Republic of Korea had raised a range of interesting questions. Chile welcomed New Zealand's intention to update its reply to the questionnaire and encouraged other countries to do the same. She enquired about the necessary procedure to circulate a document presented in one WTO body in another body.

20. The representative of Switzerland noted that W/25/Add.3 compiled information contained in documents which had been circulated in another WTO body. The Secretariat might provide via by e-mail the document referred to by the delegation of Ecuador, as it did for other documents. He wondered whether there were some guidelines for circulating documents in other bodies. Document W/25/Add.3 was a good basis. More information on the existing types of subsidies was needed in order to identify trade-distortive measures and proceed with this negotiation. Information was available because all Members should have a broad idea of the kind of subsidies they maintained. Switzerland was willing to go on with this exercise, but a critical mass of interested Members was necessary.

21. The representative of Chinese Taipei noted that some subsidy programmes listed in W/25/Add.3 were different from those in the SCM Agreement. Therefore, she agreed that, as mentioned by the Secretariat, the term "subsidy" and related concepts might not have been used in TPR reports with the SCM Agreement definition in mind. Those types included incentives and concessions relating to investment programmes, in particular in the tourism sector; subsidies through the procurement of goods and services from public entities; exemptions from indirect taxes, in particular VAT, usually not conformity with the SCM Agreement; most subsidies in W/25/Add.3 were specific, as required by the SCM Agreement. She wondered whether a broader definition would be needed in the services context, which would take into account the particular nature of services sectors. A first step would be to agree on the scope and definition of a subsidy for services. The SCM Agreement could offer some guidance, but it was not a panacea. It was not appropriate at this stage to discuss permissible subsidies before other issues, such as types and scope of subsidies, had been addressed.

22. The representative of the United States said that circulating documents from one body to another raised systemic issues and she preferred to consult her capital on this question. She supported Switzerland's practical proposal that each delegation should obtain information within its own government as quickly as possible. Further discussion was needed on what type of subsidies should be addressed under this mandate. It would be impossible to identify all subsidies. For instance, should scholarships be classified as subsidies? How many Members had such educational grants, should they be considered justified? Hence, the scope of subsidies should be discussed and only trade-distortive ones be addressed under this agenda item.

23. The representative of Paraguay said that information on services subsidies was useful in view of the ongoing market access negotiations. Members should provide information on existing subsidies, and discuss a definition for, and the scope of, services subsidies. Lack of information prevented many Members from opening their markets. His delegation supported proposals to improve transparency.

24. The representative of Mexico said that the information contained in W/25/Add.3 was limited but did nevertheless give a general idea of what types of subsidy programmes existed, and which sectors were concerned. Most subsidies granted in developing countries took the form of tax

exemptions, while other countries granted direct financial assistance for a number of policy purposes. Taking as a starting-point statistics on international trade in services, it should be possible to identify countries granting subsidies impacting on international services trade, and the sectors which were targeted. Each Member, developed and developing, could then provide information on subsidies in these sectors (type of programme, amounts involved, beneficiaries, etc.). Mexico would be ready to contribute to such an exercise. On the basis of the information collected, it could be possible to assess the potential for trade-distortive effects and identify legitimate support.

25. The representative of Mauritius enquired whether the compilation of TPR-related information on subsidies undertaken by the Secretariat covered all TPR reports since 1995.

26. The representative of Brazil said that it would be difficult to deviate from the requirement in Article XV to exchange information on all subsidies related to trade in services that were provided to domestic suppliers. This information exchange was a first and important step, and had proved to be difficult since the beginning of the negotiations. He doubted whether scholarships should be a focal issue in terms of trade-distortiveness. When negotiating the Tokyo Round Subsidy Code and the subsequent SCM Agreement, governments had moved into the negotiating phase once they had obtained all the information available on subsidies. Some information was thus needed. In the Working Party, the questionnaire W/16 had been the first procedural step to comply with the information exchange. Few delegations had replied, none of them was a large trading partner. The simplified questionnaire in JOB(02)/84 would hopefully provide more input. In addition, Members might wish to consider further refining the mechanism that had been used in order to obtain information. Information drawn from TPR reports appeared to be significantly limited since the TPR mechanism operated along specific procedures and all TPR reports had the same structure. The review of a Member's trade policy was conducted in the light of Members' obligations in the WTO, with a view to increasing transparency. In preparing the reports, the Secretariat did not focus on services subsidies since those were not the object of specific rules. For instance, the questionnaire submitted to Brazil by the Secretariat staff drafting the TPR report in 1996 and 2000 did not contain questions on services subsidies. Members could consider ways of ensuring that, in future, the TPR Division take into account the negotiations in this Working Party and include information on services subsidies, without prejudice to the question of trade-distortiveness. Seeking information in other fora had already been proposed in this Working Party. Brazil had suggested that the OECD could play an important role in providing information on export credit. The Secretariat had prepared a note on the *Arrangement on Guidelines for Officially Supported Export Credits*, including on the so-called *Yellow Book*⁶, but no data had been available on subsidies *per se* because, in his understanding, the OECD had not been in a position to provide such information. Members might want to explore again the idea of involving the OECD in the process of information gathering. Finally, it should be kept in mind that Members' schedules contained limitations for discriminatory subsidies and, hence, could be a source of information.

27. The representative of Guyana said that the GATS, and in particular Articles IV, V and XV, aimed at promoting economic development, but also ensuring the participation of developing countries. Those countries, especially the small economies, relied on services and needed to be able to use subsidies to stimulate economic growth. He wondered whether the information contained in TPR reports was accurate and reliable. For instance, the information provided, on page 16 of W/25/Add.3, on subsidies in the United States did not coincide with the relevant limitations in the US schedule of specific commitments. On the other hand, detailed information was provided for Dominica and other Members. On page 29, regarding subsidies in the TPR report of the European Communities, it was stated that "no figures are available on subsidies granted by the 15 Member States". Countries did not seem to provide the same type of information and there was a need to have a clearer view before addressing the issue of trade-distortiveness.

⁶ JOB(01)/66.

28. A representative of the Secretariat, replying to the question by the delegation of Chile, said that, in drafting TPR reports, the Secretariat relied primarily on information provided by the Member under review, but also on any pertinent source (Internet, for instance). A questionnaire was used as a working document, in particular when information was difficult to find in the public domain. It was sent to the authorities of the Member under review. Its structure reflected that of the final report. Information was sought primarily in sectors with strong government involvement. In many countries, this was typically the case for tourism, transport, telecom, etc. Other sectors, which may be economically important, but where governments intervened to a lesser extent – construction, professional services – attracted less attention. It had to be kept in mind that TPR reports were not meant to provide a systematic picture on subsidies (whether for goods or services), but focused on Members' trade policies and practices from a broad perspective with a view to enabling a multilateral assessment of the effects on the world trading system. Regarding the proposal by the delegation of Ecuador to circulate, in the Working Party on GATS Rules, a document of Saudi Arabia, which had been initially distributed in the Committee on Trade and Environment, she said that she was not aware of specific procedures in this respect. However, there might be systemic implications, and the position of the submitting delegation might need to be taken into account. She noted that the contribution in question was an official WTO document, which each delegation was free to consult; a reference to this document would be recalled in the minutes of the meeting.⁷ With respect to the question by the delegation of Mauritius, she confirmed that all TPR reports had been reviewed in the compilations undertaken by the Secretariat since 1995, which were contained in documents S/WPGR/W/25, including Add.1 to 3. With respect to the comment by Brazil regarding subsidy-related limitations in Members' schedules, she recalled that the Secretariat had compiled relevant entries in document S/WPGR/W/13 and Add.1.

29. The representative of Chile suggested that Members having scheduled limitations relating to subsidies could provide information on these subsidies.

30. The Chairperson noted that the exchange of information mandated in Article XV remained an important issue. Various delegations had referred to other possible sources of information, including the simplified questionnaire. He drew attention to the Work Programme which stipulated that the discussion should continue on the basis of submissions from Members as well as from materials available. Members should use existing sources to the fullest extent possible. Mention had been made to the need to categorise subsidies and/or clarify scope and definition of services subsidies. These issues could be further discussed at the next meeting. He was ready to update the Checklist of Issues, but substantive input from Members was needed, in particular on the issues raised during this meeting.

C. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII OF THE GATS)

31. The Chairperson drew attention to the Work Programme on government procurement agreed by the Working Party. He recalled that Members were encouraged to put forward submissions as early as possible before 31 March 2003, and had agreed to continue discussion on the basis of submissions from Members and materials available. At the last meeting, the European Communities and their Member States had introduced a communication on government procurement of services (S/WPGR/W/39), which delegations might want to further discuss.

32. The representative of the European Communities replied to questions raised at the July meeting.⁸ Concerning the coordination of work between this Working Party and the Working Group on Transparency in Government Procurement (WGTGP), he said that GATS Article XIII contained a general mandate for government procurement in services, while WGTGP's mandate was limited to

⁷ See paragraph 13 above.

⁸ See S/WPGR/M/38.

transparency, in both goods and services. Addressing transparency issues in both fora should not be problematic and discussion should continue in parallel, since progress in one forum could facilitate progress in the other. Consistency should be ensured and information exchanged so that compatible disciplines could be developed on both sides. With regard to the relationship between horizontal and sectoral disciplines, the EC was ready to discuss various approaches. He felt, however, that there was a preference for horizontal disciplines, which could be complemented, whenever necessary, with sectoral rules.

33. The representative of Chinese Taipei noted that the negotiation under Article XIII included two main aspects, i.e. procedural and market access-related issues. On procedural aspects, including transparency, general rules could be modelled on those of the Agreement on Government Procurement. It was important to ensure that challenge procedures be in the hands of independent entities. The intangible nature of services was likely to influence the nature of the contracts, and she supported a discussion on sector-specific rules. The proposal to undertake market access commitments on a sectoral basis was an interesting aspect of the paper. The Working Party should examine the provision of government procurement under the various modes of supply and their respective implications. In that respect, modes 3 and 4 seemed to be most relevant. It was important to foresee the possibility of thresholds in order to limit the administrative burden .

34. The representative of India said that the mandate contained in Article XIII paragraph 1 exempted government procurement from the application of Articles II, XVI and XVII. The discussion on government procurement in the Working Party should respect this exclusion. He noted with concern that the paper by the European Communities referred to Articles II, XVI and XVII and wanted to register his delegations's disagreement with this approach.

35. The representative of Pakistan supported the statement made by the delegation of India.

36. The representative of Egypt said that market access-related issues should be addressed in the Committee on Government Procurement. He asked the European Communities to elaborate on paragraph 7 of W/39, which stated that "MFN and national treatment requirements are not sufficient to ensure equal treatment and non-discrimination in the area of government procurement" and that "domestic procedural principles" should be developed. Finally, his delegation was of the view that MFN, national treatment and market access issues should not be addressed under Article XIII.

37. The representative of China enquired about the relationship between the MFN obligation, referred to in the EC paper, and the Agreement on Government Procurement. She supported the statements made by the delegations of India, Pakistan and Egypt regarding the scope of the mandate.

38. The representative of the European Communities recalled that their communication proposed a flexible framework for commitments on government procurement. Members could undertake such commitments on a voluntary basis, by sector and mode, whenever suitable. Some modes of supply were irrelevant for some sectors (for instance, mode 1 in the construction sector). He noted that in the Understanding on Commitments in Financial Services, some Members had opened their government procurement under mode 3 only. He agreed that it was important to allow for thresholds and it could be left to each Member to determine their level. Disciplines should be developed with respect to transparency and internal proceedings, with a view to ensuring effective market access and national treatment. The MFN obligation should apply as soon as a framework on government procurement was developed. Signatories to the Agreement on Government Procurement should be able to take MFN exemptions so as to grant more favourable treatment to other signatories.

39. The representative of the United States wondered how discussions should proceed in this Working Party in order to avoid duplication, or even contradiction, with the WGTGP.

40. The representative of the European Communities replied that an important amount of work had already been carried out in the WGTGP and could be used in this Working Party. *Vice-versa*, any relevant work in the WPGR could be useful for the WGTGP. Information could be exchanged between the two fora so as to ensure compatibility – or perhaps even identity – of disciplines.

41. The Chairperson noted that a number of interesting questions had been discussed in relation to the EC contribution. Some interventions had also been made on the scope of the mandate. He invited the Working Party to take note of the statements made and revert to this issue at the next meeting.

D. DATE OF THE NEXT MEETING

42. The Chairperson indicated that the next formal meeting of the Working Party was expected to take place during the next cluster of services meetings, which had been tentatively scheduled from 2 to 13 December. The Working Party would meet during the first week of the cluster and the exact date would be communicated to delegations in due time.

E. OTHER BUSINESS

43. The representative of Thailand informed the Working Party that his delegation had organised a brainstorming session on emergency safeguard measures in services on 26 September 2002. The purpose had been to allow Members to exchange views in a free and non-committing manner. Thailand noted with grave concern that slow progress had been made during the negotiations on ESM, even after three extensions of the mandate, over the past seven years. His delegation was of the view that the brainstorming exercise would be useful for those who had been working for some time in the field, and also for newcomers with whom Thailand would work closely in the future, to facilitate progress in the Working Party. Thailand had sent invitations to more than 30 delegations from all regions. Around 30 participants had been able to attend the seminar. Thailand wished to thank them for their active interest, as well as the Chairperson of the Working Party, and the WTO and UNCTAD Secretariats.

44. The Chairperson informed the Working Party that, on 22 October, he had received a letter from Ambassador Smith, Chairman of the Special Session of the Committee on Trade and Development. He recalled that, during its meeting held on 28 January – 1 February 2002, the TNC had agreed that "...the review of all special and differential treatment provisions with a view to strengthening them and making them more precise, effective and operational provided for in paragraph 44 of the Ministerial Declaration shall be carried out by the Committee on Trade and Development in Special Sessions." Pursuant to that mandate, the Chairperson of the Special Session of the CTD was now requesting information on any discussions or other developments relating to special and differential (S&D) treatment that had taken place in the Working Party on GATS Rules. This information should be conveyed to the Special Session of the CTD by 30 November 2002. Therefore, he intended to write a letter to the Chair of the Special Session of the CTD, recalling the mandate of this Working Party and informing him, in a factual manner, on S&D-related issues that had arisen in the Working Party, if any, under the three agenda items. This report to the CTDSS would be without prejudice to the position of any Member on the issue of S&D. It was so agreed.

Working Party on GATS Rules

REPORT OF THE MEETING OF 15 JULY 2002

Note by the Secretariat¹

1. The Working Party on GATS Rules held its thirty-eighth meeting under the chairmanship of Mr. Thomas Chan, from Hong Kong, China. The agenda for the meeting was contained in WTO/AIR/1860. It consisted of six items: work programme for the Working Party; negotiations on safeguards under GATS Article X; negotiations on subsidies under GATS Article XV; negotiations on government procurement under GATS Article XIII; date of the next meeting; and other business. The Chairperson drew attention to the *Annotated Agenda* (JOB(02)/83) which proposed themes for discussion under the three agenda items

2. The agenda for the meeting was adopted.

A. WORK PROGRAMME FOR THE WORKING PARTY

3. The Chairperson recalled that paragraph 2 of the *Communication from the Chairperson of the Working Party on GATS Rules* transmitting the *Draft Fourth Decision on Negotiations on Emergency Safeguard Measures* stipulated that, "the Chairman will carry out consultations to establish a programme structuring future work of the Working Party"². At its meeting of 3 June 2002, the Working Party had agreed that the consultations on a work programme for negotiations on emergency safeguard measures should continue and that they should include work programmes for negotiations on subsidies and government procurement as well. Members had also agreed that the possible elements for the work programmes be set out in a Note to be issued by the Chairperson under his own responsibility. On the basis of further informal consultations, he had issued a Chairperson's Note (JOB(02)/82) setting out what were, in his view, the possible elements for the work programmes on emergency safeguard measures, subsidies and government procurement. On 10 July, the Working Party had held an informal meeting at which delegations had been consulted on the elements of the draft work programme. A number of delegations had indicated that they could support the elements as they were. Some delegations had raised concerns or suggestions on individual elements, while others had expressed doubts on the need for changes. After further informal consultations, the work programme, as it now stood, struck an appropriate balance and represented, in his view, the basis on which an agreement could most likely be achieved.

4. Introducing this draft work programme, he stressed three points of understanding under which this draft had been prepared. First, the work programme should not in any way prejudice the outcome of the respective negotiations on emergency safeguard measures, subsidies and government procurement. Members would remain free to bring up any relevant issues for discussion, including the questions of feasibility and desirability, as well as the scope of the negotiations under any of the three subjects of negotiations. Second, benchmarks for submissions were indicative, with a view to encouraging Members to put forward submissions on the respective subjects as early as possible, and

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

² S/C/W/205/Rev.1.

would be without prejudice to Members' right to put forward further suggestions and raise relevant issues by way of submissions at any time, under any of the three subjects of negotiation. Third, the undertaking of individual items of work should be without prejudice to each other. For instance, the identification, elaboration and consolidation of elements for ESM should be undertaken without prejudice to addressing the question of feasibility and desirability of ESM and *vice versa*. Similarly, the raising of any relevant issues for discussion by Members should be without prejudice to the continued discussion already being undertaken and *vice versa*. He was aware that there were remaining disagreements over some elements of the work programme. However, many delegates had pointed out that the work programme was no more than a tool to assist the Working Party to organize its work, and had indicated that they were prepared to accept the programme as it was. It was in this same spirit that he wished to appeal to delegations' flexibility. He suggested to turn to informal mode to have an exchange of view on the draft work programme.

5. Upon resuming the formal meeting, the Chairperson said that the informal discussion had allowed a useful exchange. Noting that there were some remaining concerns, he proposed that Members consider adopting the work programme in JOB(02)/82 with the following changes: (i) "work programme" would read "work programmes" throughout the text to reflect that separate work programmes were established for the respective subjects of negotiations, and the first paragraph should be read as referring to all three work programmes; (ii) a reference to paragraph 7 of the Negotiating Guidelines would be added in paragraph 2 of JOB(02)/82. Moreover, the work programmes would be adopted taking note that the three subjects of negotiations were at different stages of progress, and that benchmark for submissions were only indicative. It was also understood that the work programmes would not prejudice in any way the outcome of the negotiations. With respect to the three subjects of negotiations, any issue could be raised, including on the scope of the negotiations or the mandate.

6. The representative of Mexico said that his delegation wished to advance work on all three agenda items. However, the modifications just suggested by the Chairperson did not fully address the concerns of his delegation. Further clarification was needed, in particular with respect to government procurement. Moreover, it was not appropriate to repeat the first paragraph under each agenda item because the first sentence of paragraph 1 of JOB(02)/82 related only to emergency safeguard measures. He proposed that the three points of understanding that the Chairperson had just read out in his introductory statement be included in the work programme instead of the current paragraph 1.

7. The representative of India took note of the views expressed in the informal discussion which had just taken place. His delegation wanted a work programme in place to be able to proceed with the substantive work. However, India had some remaining concerns. First, it should be explicitly reflected in the work programme that the benchmarks for submissions under the various items were only indicative and that Members could put forward submissions after that date. Second, there should be an understanding on the negotiating mandates, to ensure that delegations had a clear idea on what the Working Party was aiming at. It would be useful to have a revised proposal in writing and come back to it later on.

8. The representative of Brazil thanked Mexico for his suggestions. In the interest of adopting a work programme as quickly as possible, his delegation was ready to consider any proposal to accommodate remaining concerns. Brazil had always worked under the assumption that benchmarks for submissions were indicative. He enquired whether India could circulate its drafting suggestions in writing.

9. The representative of the Philippines, speaking on behalf of ASEAN, said that his delegation could support the changes proposed by the Chair. ASEAN was cognizant of the concerns expressed by Mexico and India, and wished to see drafting suggestions by these delegations. He noted that the deadline of 15 March 2004 for negotiations on emergency safeguard measures was compulsory and,

thus, was not an indicative benchmark. The Chairperson noted that the references to the benchmarks concerned only the benchmarks for submissions.

10. The representative of the European Communities said that her delegation had come prepared to accept the text as it was in JOB(02)/82, although it did not necessarily contain everything the EC wanted. After listening to the informal debate, the EC would also have been open to the changes suggested by the Chair. Her delegation would be prepared to look at the suggestions made by Mexico and India, but could not give any guarantee as to what it would do with them without having seen them in writing. She enquired why Mexico insisted on three separate work programmes. In her view, the proposal by the Chair to add an "s" to "work programme" throughout the text would clearly indicate that the Working Party was dealing with three different work programmes. Should it be necessary to adopt them separately, then the Uruguay Round principle "nothing is agreed until everything is agreed" would apply.

11. The representative of the United States said that his delegation could accept the work programme contained in JOB(02)/82, as well as the changes proposed by the Chairperson during this meeting. The United States took careful note of the three points made by the Chair in his introductory statement and agreed with them. He noted that the reference made, in JOB(02)/82, to the Fifth Ministerial Meeting was similar to the reference made in the Communication from the Chairperson contained in S/C/W/205/Rev.1, i.e. that the Fifth Ministerial Meeting provided an opportunity for a stock-taking.

12. The Chairperson invited the Working Party to revert to this item at the end of the meeting.

13. At the end of the afternoon session, the Chairperson drew attention to document JOB(02)/82/Rev.1, which contained a revised work programme, taking into account concerns raised during the morning. The main change was that the three points made earlier in his introductory statement were now reflected in the text and replaced the first sentence of former paragraph 1. Moreover, in line with the suggestions he had made in the morning: (i) an "s" had been added to "work programme" (title, paragraphs 1(a) and 2), to make it clear that each item had a separate work programme, and to recognize the fact that they were at different stages of progress; and, (ii) a reference to paragraph 7 of the Negotiating Guidelines had been added to the work programme on emergency safeguard measures. These changes were meant only to clarify the work programmes and he hoped that the text as it then stood could form the basis for a consensus.

14. The representative of the European Communities sought clarification regarding the last two sentences of paragraph 1(c).³ The Chairperson replied that these sentences were meant to illustrate the first sentence. This sentence reflected Members' understanding in previous consultations that the treatment of individual items of work should be without prejudice to each other. The representative of the Philippines, speaking on behalf of ASEAN, expressed concerns regarding paragraph 1(c), in particular the second sentence. He understood that the first sentence referred to the relationship among the three agenda items, and not to different elements within an item. The last sentence of the paragraph was not problematic. The Chairperson said that the second sentence of paragraph 1(c) was meant to clarify the relationship between the two elements of paragraph 3(a).⁴

³ Paragraph 1(c) of JOB(82)/82/Rev.1 reads as follows: "The undertaking of individual items of work should be without prejudice to each other. For instance, the identification, elaboration and consolidation of elements for ESM should be undertaken without prejudice to addressing the question of feasibility and desirability of ESM and vice versa. Similarly, the raising of any relevant issues for discussion by Members should be without prejudice to the continued discussion already being undertaken by Members and vice versa."

⁴ Paragraph 3(a) of JOB(02)/82/Rev.1 reads as follows: "to identify, elaborate and consolidate elements for ESM and to address the question of feasibility and desirability of ESM;"

15. The representative of Uruguay agreed with the European Communities that the last two sentences of paragraph 1(c) lacked clarity. He suggested to delete them and add, at the end of the first sentence, the following words: "... under each negotiating mandate".

16. The representative of India recalled that his delegation had concerns, in particular with respect to the benchmark and the scope of the negotiating mandate under GATS Article XIII. Paragraphs 1(a) and (b) partly addressed these concerns. With respect to paragraph 1(c), he shared the doubts of other delegations and would consider the suggestion just made by Uruguay.

17. The representative of Switzerland said that, in spite of remaining concerns, his delegation had come prepared to support the work programme as contained in JOB(02)/82, which would have enabled the Working Party to proceed in a precise manner on the substantive issues. However, the delicate balance which had been reached was once again put into question. He needed to consult his capital on this new version. He shared the concerns expressed with respect to paragraph 1(c).

18. The representative of the United States understood the concerns expressed regarding paragraph 1(c). However, the second sentence was important for his delegation and should be retained or reflected somewhere else.

19. The Chairperson felt that the Working Group was very close to an agreement. The proposal made by the representative of Uruguay could alleviate the concerns expressed with respect to paragraph 1(c). The second and third sentences of this paragraph were on record in his introductory statement and could be deleted from the text. He proposed that Members consider adopting the work programmes on an *ad referendum* basis, which meant that the text would be adopted, unless any Member(s) objected to it within one week from that meeting. The text proposed for adoption was contained in JOB(02)/82/Rev.1, with the modification proposed by Uruguay on paragraph 1(c), i.e. the second and third sentences of that paragraph would be deleted, and the words "under each negotiating mandate" would be inserted at the end of the first sentence. The one-week deadline would allow the Working Party to take advantage, for any further consultations, of the services week, should it be necessary.

20. The representative of Mexico said that the Working Party was very close to achieving a result. Paragraph 1(c) would be acceptable with the modification suggested by Uruguay. In the absence of any objection, the text could be agreed on an *ad referendum* basis. The representative of the Philippines also said he could support the *ad referendum* procedure.

21. The representative of Uruguay said that, with some flexibility, the text could be adopted at this meeting. He proposed to include a reference to feasibility and desirability in the new paragraph 1(c), so as to take into account the concern expressed by the United States with respect to the proposal his delegation had just made. Thus, a reference to "including the question of feasibility and desirability" could be inserted into the first sentence, between the words "work" and "should". The representative of the United States said that his delegation could accept this suggestion.

22. The representative of Switzerland sought further clarification concerning the *ad referendum* procedure. A representative of the Secretariat replied that the *ad referendum* procedure was used when, although there was no complete consensus, Members were very close to agreeing on a text. The *ad referendum* procedure provided a period of time during which those delegations which might still be in doubt as to whether they could join the consensus, could come back and notify the Secretariat that they were not able to join the consensus. In such a case, the *ad referendum* adoption of the text would be void and the Working Party would go back to the status quo, i.e. a draft instead of an adopted work programme. The Chairperson had suggested that Members would have one week, i.e. until Monday 22 July, for expressing any objection to the text. The representative of Switzerland said that his delegation could go along with this procedure.

23. The Chairperson clarified that the text he submitted to the *ad referendum* adoption procedure was the text contained in JOB(02)/82/Rev.1, with a new paragraph 1(c) which would read: "The undertaking of individual items of work, including the question of feasibility and desirability, should be without prejudice to each other under each subject of negotiations".

24. The Working Party adopted the work programme in JOB(02)/82/Rev.2, as modified, *ad referendum*.

B. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (ARTICLE X OF THE GATS)

25. The Chairperson invited delegations to give further consideration to the Communication from the European Communities and Their Member States on *Modal Application of an Emergency Safeguard Measure* (S/WPGR/W/38), as well to the Communication from Australia on *Elements for a Possible "Core Mechanism" for Temporary Suspension or Modification of Commitments* (JOB(02)/8).⁵ Delegations might also wish to continue their comparison of the various approaches on the table with a view to identifying possible common elements. In this regard, delegations might give some thought to what they would see as possible outcomes from a broader perspective, taking into account not only their standpoints, but also the views and positions expressed by other Members. He proposed that this discussion take place in informal mode.⁶

26. The representative of Australia said that the informal communication presented by her delegation in JOB(02)/85 reflected the intervention she had made at the informal meeting of 3 June. A few major points needed to be emphasised. The two models had been discussed, at least in general terms, and this discussion should not be repeated. The Australian model was based on less prescriptiveness and more accountability, and would allow Members in genuine emergency situations to take corrective action by temporarily suspending the commitment that was causing the emergency. A number of delegations had suggested that it might be useful to seek a compromise that would be broadly acceptable to all Members. Her delegation had suggested that a possible compromise could lie in a strengthened CTS role, somewhere between the two models suggested. The CTS role should have enough "teeth" to discourage abuse, while allowing Members facing genuine difficulties to take temporary remedial action without having to obtain explicit CTS approval. Australia had found that most of the elements of the Synopsis either clearly applied or were not relevant to the core mechanism. For example, points A to H of the Synopsis could be dealt with expeditiously since both Australian models dealt with these issues in a fairly extensive fashion and made clear whether they were applicable or not. It might, however, be useful to focus efforts on process-related issues (point I of the Synopsis), where the two models centered on guidelines and disciplines aimed at upholding good faith and creating a credible and effective mechanism for dealing expeditiously with the temporary suspension of commitments. There were a number of remaining questions, the main ones being the duration of the process once the CTS was notified and the precise role of the CTS. Notification and surveillance were important issues, which were addressed in points 1 to 5 of JOB(02)/85. But the key issue that had to be resolved *a priori* was whether a Member had an absolute right to suspend a commitment. At the next meeting, Members could focus on the issue of absolute right, and the Working Group might well conclude that Members did have a qualified right to suspend commitments in certain conditions. She was unsure, however, what these conditions would be. After having reached some understanding on this issue as soon as possible, Members would be ready to move on to the next step, which was designing a mechanism or procedure governing Members' temporary suspension of their commitments. She urged Members to avoid falling back into the trap of losing sight of the forest for the tree, in other words in getting bogged down in irrelevant details or in details that were not going to lead to anything practical. The focus should be on

⁵ See also Communication from Australia on *Questions raised at the informal meeting of the Working Party on GATS rules held on 12 February 2002*, JOB(02)/9, 13 February 2002.

⁶ See *Summary of Comments Made During the Meeting of 3 June*, JOB(02)/96.

designing a practical and workable mechanism and, then, on looking at the respective roles of the invoking Member and the CTS. Under the core mechanism proposal, Australia had spelt out quite clearly the role and the disciplines on the invoking Member, but had not managed to do so for the role of the CTS, mainly because there were too many outstanding questions in terms of process.

C. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV OF THE GATS)

27. The Chairperson invited delegations to continue their general exchange of views on subsidies. He noted that, on 12 July, an informal paper had been circulated by the delegations of Argentina, Chile and Hong Kong, China (JOB(02)/84) and invited the delegation of Chile to introduce it.

28. The representative of Chile recalled that the primary objective was to increase transparency in the area of subsidies, so as to comply with the mandate contained in Article XV and with paragraph 7 of the Negotiating Guidelines. Against this background, Chile, together with Argentina and Hong Kong, China presented a simplified questionnaire, which was based on the 1997 questionnaire circulated in document S/WPGR/W/16, to which only four Members had responded so far. Various Members had considered at the time that it was difficult to respond to the questionnaire, because there was no agreed definition for subsidy in services and the questions were too detailed. The new informal paper suggested that the definition contained in the Agreement on Subsidies and Countervailing Measures (SCM Agreement) be used as a working basis, but Members might use any other definition of subsidy, as long as it was specified. Argentina, Chile and Hong Kong, China had kept only five of the ten questions in S/WPGR/W/16, and had simplified them. It was important to obtain replies, even if, in a first round, the level of precision was not very high. What mattered was to increase transparency in services subsidies. This was particularly important at the beginning of a market access negotiations.

29. The Chairperson welcomed this new contribution which would allow to continue the debate on the need for more and improved information on services subsidies. He recalled that, at the last meeting, delegations had addressed issues such as scope, modalities, problems encountered, results achieved – or not achieved – in this information exchange to date. It had also been suggested that Members might provide information on subsidies they encountered in other markets, without identifying the trading partner(s) concerned. Moreover, several Members had suggested that the Chairperson's Checklist on Subsidies (Job No. 4519/Rev.1) be revised. He was ready to consider such a revision, should Members so wish, but concrete proposals were needed.

30. The representatives of the Republic of Korea, Canada, the United States, Mexico, Uruguay, Canada thanked Argentina, Chile and Hong Kong, China for the written contribution.

31. The representative of Hong Kong, China recalled that the Working Party had a mandate to fulfill on subsidies and hoped that this simplified questionnaire in JOB(02)/84 would help Members to address seriously the issue of subsidies.

32. The representative of the Republic of Korea said that the proposed simplified questionnaire represented a good start to gather information on subsidy programmes. At the last meeting, his delegation had suggested that the Secretariat update its note on information contained in WTO Trade Policy Reviews (S/WPGR/W/25), and undertake a compilation of subsidy-related information found in the various sectoral proposals. This information would be very helpful to facilitate discussions.

33. The Chairperson recalled that, at the last meeting, the Working Party had an inconclusive discussion on the background work that the Secretariat could usefully undertake under this agenda item. Having addressed this issue in his informal consultations, he understood that there was no objection to ask the Secretariat to update its background note on information contained in WTO Trade Policy Reviews (S/WPGR/W/25 and Addenda).

34. The representative of Canada said that the simplified questionnaire proposed in JOB(02)/84 did not seem to make it less difficult for Members to notify relevant subsidies in services. Fundamental questions remained, such as how to define a subsidy. Moreover, it was not clear whether governmental assistance to service sectors was trade-distortive. He asked further clarification with respect to the sentence, in paragraph 4, that the existence of subsidies in different markets was "relevant". The representative of Chile said that the information exchange under Article XV covered all subsidies, not only trade-distortive ones. In a second instance, the Working Party could examine the nature of the subsidies and address the various questions in the Chair's Checklist. Chile was ready to participate in market access negotiations, but wanted to be assured that its market would not be distorted by subsidies granted in other markets; this was the message that the word "relevant" tried to convey.

35. The representative of the United States said that the purpose of the discussion was to look at the need for any possible new disciplines to address trade-distortive effects of subsidies. He wondered how the Secretariat could distinguish between trade-distortive and non trade-distortive subsidies in collecting information contained in TPR reports. If the Secretariat did not make that distinction, then the undifferentiated information was not really helpful for the discussion under Article XV. A representative of the Secretariat said that the initial demand for this compilation had been triggered by the feeling that, as the information exchange under Article XV was not taking off, there was a need to find a substitute. As indicated in relevant disclaimers to documents S/WPGR/W/25 and its Addenda, the Secretariat never attempted to propose whether a given subsidy was trade-distortive or not. It was up to Members to make this judgement.

36. The representative of Mexico said that TPR reports did not allow to tell whether a subsidy was trade-distortive and it was up to Members to judge that. The informal paper by Argentina, Chile and Hong Kong, China in JOB(02)/84 contained useful ideas on what to do before discussing the need for new disciplines. It would be useful if the Secretariat could update its compilation of TPR-related information.

37. The representative of the Republic of Korea said that factual information provided by the Secretariat, such as updating information contained in TPR reports and compiling relevant elements in sectoral proposals, could be considered as part of the information exchange in Article XV, which concerned all subsidies. This was a first step which should not pose difficulties.

38. The representative of Uruguay said that there were two sources of information for subsidies. First, the information contained in TPR reports was interesting and did not prejudice whether these subsidies were trade-distortive. Second, Members could provide information on the subsidies they found in notifications or in legislations. He wondered whether the replies to the simplified questionnaire proposed in JOB(02)/84 would be given on a voluntary basis.

39. The representative of Canada enquired whether the information contained in TPR reports was based on the notifications made under Article 25 of the SCM Agreement. Should this be the case, the information would have to be read in the particular context of the SCM Agreement, in the light of the definition contained in Article 1 of that Agreement. It was important to keep in mind the distinction between trade-related and trade-distortive subsidies. Moreover, some subsidies might concern goods, but had no relevance for services. A representative of the Secretariat said that TPR reports were based on any information available. They did not distinguish between trade-distortive and non trade-distortive subsidies, nor did they necessarily indicate whether the objective of the subsidy was trade-related or, say, social.

40. The representative of Argentina said that the purpose of the simplified questionnaire was to comply with the information exchange, but not to decide whether subsidies were trade-distortive or not. He trusted that all delegations, and in particular those who traditionally emphasised the need for

transparency, could support the approach proposed in JOB(02)/82. The representative of Chile said that it was up to each Member to decide whether to reply to the simplified questionnaire.

41. The Chairperson understood that there was a general feeling among Members that more information was needed. Such information could come from Members and the Secretariat. Members were invited to give consideration to the simplified questionnaire proposed by Argentina, Chile and Hong Kong, China. The Secretariat would undertake to update its note on TPR-related information for the next meeting of the Working Party, on the same basis as in the past.

D. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII OF THE GATS)

42. The Chairperson invited delegations to continue their general exchange of views on government procurement. He noted that, on 11 July, the European Communities and their Member States had circulated a communication on government procurement of services (S/WPGR/W/39).

43. The representative of the European Communities said that the communication in S/WPGR/W/39 underscored the size of government procurement markets, as well as the particular interest developing countries would have to liberalise this sector. The EC proposed to make the best use of the flexibility provided by the GATS and to discuss the implementation of a number of general principles applying to services, and, where necessary, the possibility of choosing which sector could be opened up. In other words, each Member would be free to undertake commitments where it would be in its interest and have the possibility of opening up on a partial basis, indicating which restrictions were maintained.

44. The Chairperson recalled that, at the last meeting, Members had exchanged views on the scope of the mandate contained in Article XIII. The *Annotated Agenda* prepared for this meeting identified some references to previous discussions on the issue of the mandate, which had been first raised at this Working Party in July 2000.

45. The representatives of Chile, Japan, Canada, Venezuela, India, Philippines, Mexico, Peru and Pakistan thanked the European Communities for the communication.

46. The representative of Chile said that her delegation was aiming at the best effective access to procurement markets. In Chile, government procurement was open and transparent. Her delegation could share the objective of the EC proposal to do away with unnecessary restrictions, increase transparency and achieve simplified procedures. She enquired what the EC position was with respect to thresholds, since this issue was not mentioned in the EC communication; yet, it was an important one. Secondly, the relationship between the MFN principle and the Agreement on Government Procurement should be specified. Thirdly, more information was needed on the linkage between development of general disciplines (Section A) and sectoral disciplines (Section B).

47. The representative of Japan noted that the EC communication made a reference, in Section A, to the need for consistency between this Working Party and the Working Party on Transparency in Government Procurement (WGTGP). He enquired how the European Communities intended to ensure this consistency. Japan was open to a discussion on sector-specific rules, but would be interested in having more details on the kind of issue that should be addressed in this context. Japan had particular interest in the sectors of construction, engineering and architecture, and, in the light of further explanations from the EC, might want to submit an own contribution. Section C, dealing with commitments was ambitious, but, given the importance of government procurement in trade in services, the Working Party should work towards this objective.

48. The representative of Canada said that the EC communication contained a number of new ideas. His delegation intended to come back to it at future meetings.

49. The representative of Venezuela said the negotiations should be driven by contributions from Members. The European Communities had announced on several occasions in the past that it intended to deepen this issue. As the document was not available in Spanish, it had not been possible for her delegation to analyse it. Venezuela was prudent since procurement of services was an important aspect of development policies, and should remain so. She noted that paragraphs 8 and 15 of W/39 acknowledged that flexibility was necessary for developing countries in order to take into account national policy objectives. A mere liberalisation of markets might bring benefits, but would need to be complemented by adequate policies. She enquired which criteria had been used by the European Communities to select the various sectors referred to in paragraph 13, and whether only those sectors should be discussed.

50. The representative of India recalled that he had indicated the position of his delegation on the scope of the mandate contained in Article XIII at the last meeting, i.e. paragraph 1 of Article XIII exempted government procurement from the application of Articles II, XVI and XVII. The discussion on government procurement should be in accordance with the mandate in Article XIII. Whether transparency and the provisions on domestic regulation applied to government procurement was a matter for discussion. Transparency issues were examined in the WGTGP, which had not yet reached any conclusion. It would therefore be difficult to address the transparency issues raised in W/39. It was India's understanding that Members could not be asked to take more extensive or onerous commitments than what appeared in their schedules.

51. The representative of the Philippines, speaking also on behalf of Malaysia, took note of the direction taken in the EC proposal. Philippines and Malaysia understood, however, that the negotiating mandate under Article XIII included only transparency issues; Articles II, XVI and XVII were outside the negotiations. He expressed concern regarding paragraph 10 of W/39 and wondered how the Working Party could discuss MFN since Article II was excluded from the scope of the negotiations. Section C, which spoke about "access to" and "national treatment" raised similar concerns. The Article XIII mandate was limited to transparency issues.

52. The representative of Mexico did not share the EC view, in paragraph 10 of W/39, on the applicability of various GATS provisions to government procurement. On paragraph 12, he noted that the respective coverage of the various provisions of Article VI remained unclear. He enquired how the European Communities had selected the sectors mentioned in paragraph 13 and said that governments' participation in other sectors, such as energy, telecommunication or audiovisual services was still important in a number of countries. He asked what the difference was between the approach proposed by the EC and the undertaking of commitments under Article XVIII.

53. The representative of Peru said that the mandate in Article XIII covered only transparency-related issues in government procurement. The representative of Pakistan stressed, like others, that Articles II, XVI and XVII fell outside the scope of the negotiating mandate of Article XIII.

54. The representative of the European Communities thanked delegations for their comments and questions. The negotiating mandate in Article XIII did not contain any limitation. The issue of thresholds was important and should be further examined. With respect to the relation between the MFN obligation and its impact on the Agreement on Government Procurement, one could envisage exemptions from this obligation. The list of sectors in paragraph 13 was illustrative and his delegation was open to further suggestions. It might be useful to take one sector of interest to various Members and see which rules could be developed in that particular sectors. The respective mandates of this Working Party and of the WGTGP were different, and it should be possible to continue negotiating in the two bodies, while ensuring consistency. He reiterated that the EC proposal aimed at ensuring a maximum of flexibility, in particular for developing countries, which should be able to open their procurement markets while pursuing national policy objectives.

55. The Chairperson proposed to revert to the EC communication and to continue the general debate on the scope of the mandate under Article XIII. The minutes of past discussions on this latter issue could be found in S/WPGR/M/28 and S/WPGR/M/29.

E. DATE OF THE NEXT MEETING

56. The Chairperson indicated that the next formal meeting of the Working Party was expected to take place during the week of 21 October 2002. The definitive date would be communicated in due time.

F. OTHER BUSINESS

57. Nothing was raised under this agenda item.

Working Party on GATS Rules

REPORT OF THE MEETING OF 3 JUNE 2002

Note by the Secretariat¹

1. Mr. Hugo Cayrus, from Uruguay, opened the thirty-seventh meeting of the Working Party on GATS Rules. The agenda for the meeting was contained in WTO/AIR/1803. It consisted of six items: appointment of a new chairperson; negotiations on safeguards under GATS Article X; negotiations on subsidies under GATS Article XV; negotiations on government procurement under GATS Article XIII; date of the next meeting; and other business. He drew attention to the Annotated Agenda (JOB(02)/43, 24 May 2002) that had been prepared by the Chairperson designate, Mr. Thomas Chan, to assist delegations in their preparation for the meeting.

2. The representative of Thailand, speaking on behalf of the ASEAN Members, referred to the extension of the deadline for negotiations on emergency safeguard measures and called on Members to reflect on how to make progress. Work should focus on substantive issues. Nevertheless, a work programme should be established quickly, which should not prejudice future work.

3. The agenda for the meeting was adopted.

A. APPOINTMENT OF THE NEW CHAIRPERSON

4. The Chairperson recalled that, according to the rules of procedure for meetings of the Council for Trade in Services (S/L/15), the hand-over of the chairmanship should have taken place at the end of the last meeting of the Working Party. However, as the Chairman of the Council for Trade in Services had not finalized his consultations on the chairmanships of the subsidiary bodies at that time, it had been decided that the hand-over would take place at the beginning of the following meeting. Accordingly, he proposed that the Working Party elect Mr. Thomas Chan, from Hong Kong, China, as Chairman of the Working Party on GATS Rules.

5. Mr. Thomas Chan was elected by acclamation.

B. NEGOTIATIONS ON EMERGENCY SAFEGUARD MEASURES (ARTICLE X OF THE GATS)

1. Establishment of a Work Programme

6. The Chairperson informed the Working Party that his consultations on a work programme had revealed much convergence in views among Members. There was a common wish to arrive at a simple, broad and flexible work programme as early as possible, to enable the Working Party to move ahead with substantive work. Members had made many useful suggestions in that regard. At the last open-ended informal consultation, on 29 April 2002, he had made a report on the guiding principles and the suggested elements for the work programme. Members had expressed support for these guiding principles and had indicated that they agreed on, or had flexibility to accept many of the suggested elements. There remained, however, differences in views regarding some elements, which

¹ This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO.

prevented him from putting forward a concrete proposal for the work programme. He proposed, therefore, to continue his consultations with a view to identifying a possible formulation for a work programme, which would be acceptable to all Members. He would then set out in a Chairperson's Note, circulated on his own responsibility, the elements which would hopefully form the basis for a consensus. He stressed that, in his view, delegations were very close to reaching a consensus, and appealed to their flexibility on this matter so that an agreement could be reached as soon as possible. The Working Party took note of this statement.

7. The representative of Thailand, speaking on behalf of the ASEAN Members, said that the ASEAN Members were ready to participate constructively in the consultations on the establishment of a work programme. They hoped that it would be finalized by the next formal meeting of the Working Party. In the meantime, Members should also focus on substantive work.

2. Discussion on substantive issues

8. The Chairperson invited delegations to continue their examination of the Communication from the European Communities and Their Member States on *Modal Application of an Emergency Safeguard Measure* (S/WPGR/W/38, 21 January 2002), as well as the Communication from Australia on *Elements for a Possible "Core Mechanism" for Temporary Suspension or Modification of Commitments* (JOB(02)/8, 13 February 2002). He recalled that the Annotated Agenda circulated for this meeting identified four broad approaches emerging from the various proposals tabled by Members. Based on the elements contained in the Synopsis, Members might wish to compare these four approaches in order to identify main differences as well as possible common elements. In addition, delegations should feel free to raise any other issue relevant for the negotiations on emergency safeguard measures. Any suggestion as to how the Working Party might structure its discussions in the coming months would also be welcome; this was without prejudice to the questions of desirability and feasibility of emergency safeguard measures. He proposed that this discussion take place in informal mode.

9. With respect to future steps, the Chairperson proposed to continue the consultations on a work programme for emergency safeguard measures, with a view to setting out possible elements in a Note to be issued by the Chairperson on his own responsibility. It was so agreed.

C. NEGOTIATIONS ON SUBSIDIES (ARTICLE XV OF THE GATS)

10. The Chairperson said that, in the course of his consultations on a work programme, some Members had indicated an intention or willingness to discuss a programme structuring future work on subsidies. Taking into account paragraph 7 of the Negotiating Guidelines (S/L/93), he encouraged delegations to exchange views on how the Working Party might proceed in the coming months, and on suggestions to establish a work programme. In addition, Members were also invited to continue their general exchange of views on this item.

11. The representative of Chile recalled that the Negotiating Guidelines, stipulated, *inter alia*, that negotiations on subsidies had to be concluded "prior to the conclusion of negotiations on specific commitments". Her delegation proposed that a work programme be established for subsidies, including a timeframe to present submissions, a date for a stock-taking, as well as a report to be presented to the Fifth Ministerial Meeting. The Checklist on Subsidies (Job No. 4519/Rev.1, 6 October 2000) should be revised, in particular point 2. Article XV stipulated that the necessary disciplines be developed to avoid trade-distortive effects of subsidies. However, the exchange of information provided for in the last sentence of Article XV:1 concerned all subsidies, which was important since it would help determine the scope of work. Various background notes by the Secretariat contained information on services subsidies, and four Members had made notifications under a questionnaire circulated in 1997. Her delegation proposed that the Chairperson should

undertake informal consultations by the next meeting with a view to establishing a work programme. She drew attention to document S/WPGR/W/9, which contained a series of interesting questions to be further discussed.

12. The representative of the Republic of Korea supported the proposal to undertake consultations on a work programme for subsidies. The Working Party should focus on information gathering and analysis of the current situation. The Secretariat could do some background work, including an update of its Note on information contained in Trade Policy Reviews² and a compilation of subsidy-related information found in the various sectoral proposals submitted to the Special Session. The Checklist on Subsidies should be revised.

13. The representative of Hong Kong, China supported a work programme for subsidies, as well as a stock-taking at the Fifth Ministerial Meeting. The Working Party could review the references to subsidies found in Members' sectoral proposals to the Special Session.

14. The representative of Argentina supported the proposal to set out a work programme on subsidies, with a review at the Fifth Ministerial Meeting. He agreed with Chile that the Checklist should be revised and recalled that Article XV provided for an information exchange concerning all subsidies related to trade in services. He supported the proposal to update S/WPGR/W/25.

15. The representative of Mexico said that the mandate contained in Article XV to exchange information had not been fulfilled. A work programme should be established, building on the information exchange. The Fifth Ministerial Meeting was an appropriate date for a review. His delegation would like to participate in the consultations by the Chair.

16. The representative of Canada recalled that a questionnaire had been established in 1997 in order to fulfill the mandate of Article XV to exchange information (S/WPGR/W/16). However, very few Members had responded. Her delegation still considered that Members should first try to respond to this questionnaire before envisaging the next step.

17. The representative of the European Communities indicated that her delegation intended to make a similar proposal for a work programme on government procurement under the next agenda item. She suggested that the consultations to be undertaken by the Chair for the two issues be linked.

18. The representative of the United States said that his delegation needed a better understanding of the concerns expressed by those Members who were requesting a work programme on subsidies, in particular where, in their view, new disciplines were needed and what their objective should be. He pointed out the existing questionnaire, in respect of which his delegation had expressed its views. He requested further clarification regarding the proposed timeframe for submissions and the idea of having a stock-taking at the next WTO Ministerial Meeting.

19. The representative of Chile replied that the purpose of the transparency exercise was to gain a better understanding on existing subsidies with a view to, perhaps, classifying them. Some kind of status report or progress report could be prepared on the occasion of the Fifth Ministerial Meeting. Informal consultations could be organized with a view to reconsidering the Checklist.

20. The representative of the United States said that his delegation's understanding of Article XV was that the Working Party's mandate was limited to addressing trade-distortive subsidies, and not all subsidies. Members having information on trade-distortive subsidies should share it in order to help focus the debate. The representative of Chile agreed that Article XV mandated to negotiate the necessary disciplines to avoid trade-distortive effects of subsidies, but noted that the information

² S/WPGR/W/25 + Add 1 and 2.

exchange referred to in the last sentence of paragraph 1 of Article XV concerned all subsidies. On the basis of the information gathered with respect to all subsidies, the Working Party might then be able to identify subsidies having trade-distortive effects.

21. The representative of Venezuela recalled that the mandate referred to the "necessary" disciplines to avoid trade-distortive effects. Any information in this respect would be useful. She drew attention to the fourth sentence of Article XV:1, which stipulated that negotiations should recognize "the role of subsidies in relation to development programmes of developing countries and take into account the needs of Members, particularly developing country Members, for flexibility in this area".

22. The representative of Pakistan agreed with Chile that the information exchange concerned all subsidies. Identifying the subsidies that had a trade-distortive effect entailed subjective judgement.

23. The representative of Paraguay supported the proposal for establishing a work programme and stressed the importance of the information exchange to increase the level of transparency.

24. The representative of Brazil said his delegation was open to any suggestion which would contribute to moving the discussion ahead on this subject-matter. The exchange of information was a prerequisite for further work and covered all subsidies. The necessary disciplines to be established would then address only subsidies with trade-distortive effects, and a definition would be required for this latter concept. In the past, the Working Party had already addressed various interesting issues under this agenda item and it might be useful to refer to reports of past discussions.

25. The representative of Ecuador supported Chile's proposal to establish a work programme. More information was needed on subsidies. Ecuador did not grant subsidies to its producers, but considered that subsidies were a problem in services trade.

26. The representative of Canada added that very few Members had replied to the 1997 questionnaire on subsidies, mainly because they did not know what kind of information should be included. There was no agreed definition of "subsidy", let alone of "trade-distortive" subsidy. Addressing all subsidies was too big an exercise and delegations needed to determine a focus. It could be more useful to discuss the five points contained in the Checklist.

27. The representative of Peru supported the proposal for a work programme, including a stock-taking. Transparency was fundamental in this area and the information exchange in Article XV encompassed all subsidies. It was important to agree on common criteria to define the concepts of "subsidy" and "trade-distortive".

28. The Chairperson noted that various suggestions had referred to the need for gathering information. In that regard, submissions by Members on issues related to subsidies were welcome and could form the basis for further work. Information on subsidies in services should come primarily from Members. Only four Members had responded to the 1997 questionnaire so far. More responses would be welcome. He further suggested that the Secretariat update the background note on information contained in WTO Trade Policy Reviews (S/WPGR/W/25 and Addenda) and undertake to compile subsidy-related information contained in the sectoral proposals presented by Members to the Special Session. He was prepared to review the Checklist on Subsidies (Job No. 4519/Rev.1) and would wait for Members' concrete proposals in this respect. A representative of the Secretariat added that, following a proposal made by a delegation some time ago, Members might also want to consider providing information on subsidy problems encountered in third markets, without identifying the trading partner(s) concerned.

29. The representative of Pakistan enquired what kind of information would be included in the background note on information contained in WTO Trade Policy Reviews. His delegation needed to further reflect on the implications of such a Note. A representative of the Secretariat replied that S/WPGR/W/25 and its Addenda contained information found in individual Trade Policy Review reports, on a sector-specific basis. Since these reports were not meant to address specifically subsidy issues, TPR-based information did not necessarily provide a comprehensive picture, nor allow judgement on whether those subsidies had trade-distortive effects or not. The Secretariat had made this clear in its previous overviews. With respect to the compilation of subsidy-related information contained in sectoral proposals, the representative of the United States suggested that, in order to ease the Secretariat's task, Members should let the Secretariat know what information they wanted to be included. According to the representative of Canada, it was up to each individual delegation to examine subsidy-related information in sectoral proposals and to bring it to the attention of this Working Party.

30. The representatives of Hong Kong, China enquired why it was problematic to compile the information contained in the sectoral proposals, since they were already public. The representative of Mexico said he had difficulties to understand why some delegations objected to the Secretariat compiling existing information. The representative of Brazil noted that the background note on TPR-related information had already been updated twice and asked why it was problematic to undertake a third update.

31. The representative of Pakistan said that his delegation needed to reflect whether this would set a precedent with systemic implications. He had doubts about the modalities and the ultimate objective of addressing the Article XV mandate via TPR-reports. The representative of the United States said that the purpose of the consultations to be undertaken by the Chair should be to come up with a full approach for a work programme; TPR-based information could be an element.

32. The Chairperson noted that no Member opposed the suggestion to establish a work programme for subsidies. He would, therefore, include this issue in his consultations, with the objective of setting out possible elements which would be included in a Chairperson's Note circulated on his own responsibility. Noting Members' wish to discuss certain suggestions for work which might usefully be undertaken by the Working Party in the coming months, he proposed that these issues be addressed as well during the consultations. No request for documents would be made to the Secretariat for the time being. It was so agreed.

D. NEGOTIATIONS ON GOVERNMENT PROCUREMENT (ARTICLE XIII OF THE GATS)

33. The Chairperson said that, as in the case of subsidies, some Members had indicated an intention or willingness to discuss a programme structuring future work on government procurement. Members were, therefore, invited to exchange views on how the Working Party might proceed on this item in the coming months, and to make suggestions for a possible work programme. Members were also encouraged to continue their general exchange of views on this item.

34. The representative of the European Communities recalled that the Negotiating Guidelines provided that negotiations on government procurement in services should be completed prior to the conclusion of negotiations on specific commitments. Substantive discussions on this issue should start in the coming weeks, and the Working Party needed to structure its work under this agenda item. The European Communities wished a work programme to be established for government procurement, which could include a call for Members to make submissions and provide for a stock-taking in March 2003. The report that the Working Party would present to the Fifth Ministerial Meeting should include a section on government procurement. He said that government procurement represented more than fifty per cent of activities in certain services sectors, some of which were of particular interest to developing countries. The absence of multilateral disciplines in government

procurement was particularly problematic for these sectors. The European Communities intended to work actively on this issue in the Working Party and was ready to discuss with interested delegations their specific interests. Informal consultations might be needed.

35. The representative of India took note of the suggestion made by the European Communities. He proposed to discuss the scope of the mandate contained in Article XIII before undertaking substantive work. In his view, Articles II, XVI and XVII were excluded from any negotiations on disciplines for government procurement in services. His delegation wished to participate in informal consultations.

36. The representative of Chile supported the proposal to establish a work programme on government procurement. Her understanding of Article XIII was that Articles II, XVI and XVII did not apply pending the entry into force of negotiated disciplines, which did not mean that these provisions were excluded from the scope of the negotiating mandate. She enquired whether the Secretariat could give some indications on the intentions of the drafters of Article XIII.

37. A representative of the Secretariat said that this point had already been debated, but no conclusion had been reached. The Secretariat could undertake some research by looking at minutes of past meetings.

38. The representative of Peru supported the interpretation given by the delegation of India with regard to the scope of the mandate. Article XIII did not mandate market access negotiations for government procurement. His delegation was ready to participate in consultations on a work programme.

39. The representative of Pakistan agreed with the delegations of India and Peru. His delegation could agree that a work programme be established for government procurement. The work programmes for the three issues under consideration in this Working Party should be included in a single document.

40. The representative of Mexico agreed that a work programme for government procurement be discussed during the consultations on the work programme for emergency safeguard measures and subsidies. With respect to the scope of the mandate, his delegation considered that Articles II, XVI and XVII were not applicable to government procurement and, therefore, were outside the negotiations. Consultations should not go beyond the scope of Article XIII.

41. The representative of Venezuela agreed with the delegation of Mexico. Venezuela was ready to take part in consultation on a possible work programme, which should not go beyond the purview of Article XIII. No actual request had been made to the Secretariat to prepare any material under this agenda item. She could not support a request for a Secretariat's note on the historical background, but only a list of existing contributions by Members. The outcome of this negotiation should not be prejudged.

42. The representative of Uruguay said that the undertaking contained in doc. S/C/W/205/Rev.1 to establish a work programme concerned only emergency safeguard measures. Nevertheless, his delegation considered it made good sense to establish a work programme for subsidies and government procurement as well. Should the Secretariat be asked to undertake background work, it could only be a list of documents containing relevant contributions and discussions. The Secretariat should not be put in the difficult situation of having to make contributions which should come in fact from delegations.

43. The representative of Indonesia supported the statements made by the delegations of India, Peru and others. Before starting consultations on a work programme, his delegation would like to know what elements would be discussed.

44. The representative of Switzerland said that consultation on a work programme for government procurement should not prejudice the outcome of the negotiations. It would be more efficient to have one work programme encompassing the three issues under consideration in the Working Party. With respect to Article XIII, it might be worthwhile to go beyond the actual text and look at the preparatory work. Article XIII:1 might mean that, except for Articles II, XVI and XVII, all other GATS provisions already applied to public procurement. Pursuant to such an interpretation, what remained to be negotiated would be precisely Articles II, XVI and XVII.

45. The representative of Chile considered that the legal commitment in doc. S/L/W/205/Rev. 1 to establish a work programme concerned the three agenda items of the Working Party. The Negotiating Guidelines also mandated the completion of the negotiations on subsidies and government procurement. Her delegation would be ready to envisage some work from the Secretariat on this issue, such as a compilation of minutes. She noted that a list of documents already existed for this Working Party.

46. The representative of Canada said it was encouraging to see that delegations started to look at this issue. His delegation could agree that the Secretariat prepare a factual background document but work should otherwise be Member-driven. Consultations on a work programme should not prejudice the outcome of the negotiations. A work programme should not prevent Members from presenting submission at any time.

47. The representative of the European Communities welcomed the readiness of Members to discuss a work programme for government procurement. Looking at the minutes of the last meeting, he understood that the Chairperson was requested to carry out consultations to establish a work programme for the three issues. He agreed that it should not prejudice the outcome of negotiations. Limiting the scope of discussion would amount, however, to prejudging the outcome. The mandate in Article XIII:2 did not contain any limitation of the negotiating mandate. While paragraph 1 of Article XIII exempted government procurement from the application of Articles II, XVI and XVII, other GATS provisions did apply to government procurement.

48. The representative of Argentina said that no contribution from the Secretariat was needed for the time being. Any future contribution should be discussed within the overall framework for the negotiations, where it could be adjusted to the work programme Members might agree on.

49. The representative of Brazil said that the discussion on the scope of Article XIII mandate had a strong taste of "déjà vu". His delegation was ready to discuss it again, although this might not be very productive. Defining a work programme seemed to be the task at hand, and Brazil wished to associate itself with the statement made by Uruguay.

50. The representative of the United States said that his delegation was ready to consider work programmes for the issues of subsidies and government procurement, with the understanding that they should not prejudice the outcome of the negotiations. Since some progress had already been made in the discussions for a work programme on emergency safeguard measures, it might not necessarily be helpful to pursue one single work programme for the three issues. The scope of the mandate in Article XIII was ambiguous, and different interpretations might be possible. A detailed debate could be useful at a later stage.

51. The representative of Mexico said that Article XIII indicated that Articles II, XVI and XVII did not apply. Whatever was agreed to in negotiations under paragraph 2 of Article XIII would thus

not be applicable to these provisions. There was no consensus for the time being to ask anything from the Secretariat. Any Member could make any contribution at any time. There was a need for concrete propositions in order to be able to establish a work programme.

52. The Chairperson noted that, while no Member was opposed to establishing a work programme for government procurement, some delegations had raised the need to look at the elements which might be included. He proposed to address the issue of a work programme for government procurement in his consultations, including possible elements for such a work programme. The outcome would be set up in a Chairperson's Note to be circulated on his own responsibility. He remarked that the work programme should not prejudge the result of the negotiations and, in that sense, it might not be advisable to debate the scope of the mandate in this context.

E. DATE OF THE NEXT MEETING

53. The Chairperson indicated that the next formal meeting of the Working Party was expected to take place during the week of 15 July. The definitive date would be communicated in due time.

F. OTHER BUSINESS

54. Nothing was raised under this agenda item.

Working Party on GATS Rules

REPORT OF THE MEETINGS OF 13 AND 15 MARCH 2002

Note by the Secretariat

1. The Working Party on GATS Rules held its thirty-sixth meeting under the chairmanship of Mr. Hugo Cayrus, from Uruguay. The agenda for the meeting was contained in WTO/AIR/1727. It consisted of six items: negotiations on safeguards under GATS Article X; negotiations on subsidies under GATS Article XV; negotiations on government procurement under GATS Article XIII; date of the next meeting; other business; and appointment of a new chairperson. The agenda for the meeting was adopted.

A. NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

1. Extension of the deadline for negotiations under GATS Article X

(a) Session of 13 March 2002

2. The Chairperson recalled that the deadline for negotiations under GATS Article X would expire on 15 March 2002. Over the last two months, he had held several bilateral, plurilateral and multilateral consultations with delegations, the aim being to reach a consensus on an extension of the deadline. The main points of view raised in these consultations were as follows: (i) several delegations had expressed their frustration at the need to extend the deadline for a fourth time; other delegations, however, felt that progress had been made in the discussions; (ii) certain delegations had said that this should be the last extension of the deadline; (iii) in principle, no delegation had communicated any opposition to extending the deadline; (iv) however, different opinions had been expressed as regards the length of the extension. Some delegations were in favour of a date close to the end of the negotiations, whilst other delegations favoured a short extension (e.g. one year). Alternatives had been put forward, such as extending the deadline until the WTO's Fifth Ministerial Conference or until March 2004. Other delegations meanwhile expressed their flexibility as regards the date of the extension, but had said that there should be a progress report or a "stocktaking" of the progress made, at the Fifth Ministerial Conference. Some delegations also had made reference to establishing a work programme for these negotiations in the Working Party. The consultations had led him to the following conclusions: the two opinions at opposite extremes (i.e. a one-year extension or an extension until the end of the negotiations) should be ruled out because it was impossible to reach a consensus on either one. Moreover, several delegations supported the idea of the final deadline for negotiations on safeguards coinciding with the future Fifth Ministerial Conference, but other delegations were equally strong in expressing their opposition to this idea; so at present it was clear that there was no consensus on extending the deadline up until the Fifth Ministerial Conference. He recalled that, should no consensus be found, the mandate of the negotiations on emergency safeguard measures would end.

3. He reminded Members that, at the informal meeting of the Working Party on 7 March, he had put forward a proposal which attempted to take into account, as much as possible, the different stances taken by delegations. This proposal comprised the following items: a decision to extend the deadline until 15 March 2004, which would be accompanied by a communication from the

Chairperson containing two additional elements: (i) a reference to the Fifth Ministerial Conference in 2003 as an opportunity to carry out a "stocktaking" of the progress made in the negotiations, and (ii) a reference to the possibility of a work programme in order to structure the Working Party's future activities in this field. At the meeting on 7 March, many delegations had indicated that this proposal was acceptable. Other delegations, however, had withheld their opinion in order to consult their capitals. The proposal had then been faxed on 8 March 2002 to each delegation in the three official languages. He stressed that this proposal was the result of what the Chairperson had been able to identify as a possible solution leading to consensus on this issue.

4. A representative of the Secretariat apologised for the premature distribution of document S/C/W/205, containing the Communication from the Chairperson of the Working Party and the Draft Decision on the extension of the deadline. This document, which had been prepared to be circulated at the beginning of the meeting of the Council for Trade in Services, had been circulated by mistake in this Working Party.

5. The representatives of the European Communities, Thailand, on behalf of ASEAN, Mexico, Brazil, Canada, New Zealand, Paraguay, Mauritius, Argentina, the Republic of Korea, Japan, Chile, Poland and Turkey thanked the Chairperson for the efforts he had made in attempting to find a consensus on the extension of the deadline.

6. The representative of the European Communities said that reaching a decision on this matter had been difficult. Her delegation could now accept the draft transmitted by the Chairperson on 8 March. The representative of Thailand, on behalf of ASEAN, recalled that ASEAN attached great importance to the issue of emergency safeguard measures. ASEAN greatly appreciated the efforts made by the Chairperson and was aware of the urgency of the matter. A successful conclusion of the negotiations under Article X would have a bearing on the overall services negotiations. ASEAN had difficulties with the proposal made by the Chairperson and wished to have more time to consult in order to come up with a positive solution. The representative of Mexico said that the proposal made by the Chairperson was the result of an intensive process of consultations. Although it was not Mexico's preferred option, his delegation was ready to accept this proposal.

7. The representative of Brazil said that the issue of emergency safeguard measures was important to his delegation. There seemed to be no objection to the idea of prolonging the negotiating deadline, which was now the main objective of the Working Party. The extension of the deadline should be kept separate from the idea, raised by some delegations, of conditioning availability of an ESM on achieving a higher level of liberalisation. Brazil wished to avoid a scenario where there would be no ESM and no meaningful liberalization. In fact, Members should aim at having both an ESM and meaningful liberalisation.

8. The representative of Canada said his delegation could support the proposal made by the Chairperson. It was a well-balanced and carefully crafted text. The representative of New Zealand said that, although it did not fully reflect New Zealand's interests, the proposal of the Chairperson represented the best possibility for reaching a consensus. It was now time to go back to substantive work. The representative of Paraguay said that his delegation had shown flexibility during the consultations with the objective of finding a consensus on the extension of the deadline. He was concerned about the possible adverse effects of an eventual failure to reach a consensus on this issue. The representative of Mauritius said that the Working Party had come a long way and was close to a solution. A decision should be made as soon as possible. The representative of Argentina said that the proposal made by the Chairperson was balanced and took into account the different positions which had been expressed on this issue. It was important to continue working on an ESM.

9. The representative of the Republic of Korea said that, although it did not reflect Korea's preferred option, the draft proposed by the Chairperson was balanced and his delegation was ready to

join the consensus to adopt it. It was now time to revert to substantive issues. The representative of Japan said that his delegation had difficulties with the subject of emergency safeguard measures, but was nevertheless ready to join the emerging consensus on the basis of the proposal made by the Chairperson. The representative of Chile said that, like others, his delegation was ready to agree to the text proposed by the Chairperson. Chile still remained to be convinced of the necessity to include an ESM into the GATS, but was nevertheless ready to continue working on this matter. The representative of Poland supported the proposal made by the Chairperson. A period of two years should be sufficient for Members to reach an agreement on safeguard measures. The representative of Turkey said his delegation could support the proposal made by the Chairperson.

10. The Chairperson called for all delegations' flexibility on this issue. He said that the formal meeting of the Working Party would resume on Friday 15 March, at 9 a.m. In the meantime, he would ensure that all delegations would be kept informed of new developments.

(b) Session of 15 March 2002

11. The Chairperson resumed the meeting of the Working Party. He reminded delegations that, during the meeting of 13 March, a number of delegations had indicated that they were ready to accept the proposal he had made on 8 March 2002 regarding the extension of the deadline under GATS Article X. Some delegations, however, had asked to suspend the meeting in order to continue consultations on this matter. On 14 March, he had sent a fax to all Members, inviting them to an informal meeting on the same day, at 6 p.m. He had attached to the fax a proposal by Thailand, on behalf of the ASEAN Members, whereby the second sentence of paragraph 2 of the Communication from the Chairperson would read: "The Chairman will carry out consultations to establish a programme structuring future work of the Working Party". In the informal meeting of 14 March, no delegation had opposed the change proposed by ASEAN. Consequently, he proposed to modify his original proposal in order to take into account ASEAN's suggested text. The date of 15 March 2004 stipulated in the draft Decision would remain unchanged. The draft Decision, as well as the Communication from the Chairperson, would be transmitted to the Council for Trade in Services for approval.¹

12. It was so agreed.

2. Discussion on substantive issues

13. The Chairperson said that, since its last formal meeting, the Working Party had held two informal meetings – 17-18 January 2002 and 12 February – which had allowed a debate on various written communications:² *Communication from Cuba, Guatemala, Honduras, Nicaragua and Dominican Republic*, JOB(01)/166; *Communication from the European Communities and Their Member States*, S/WPGR/W/38; and *Communication from Australia*, JOB(02)/8 and JOB(02)/9.

14. The representative of the European Communities recalled that the Communication contained in S/WPGR/W/38 had been presented during the informal meeting of 12 February. Her delegation was interested to hear delegations' views on this paper. She requested that S/WPGR/W/38 be derestricted.

¹ See document S/C/W/205/Rev.1.

² The reports of these meetings are contained in documents JOB(02)/2 and JOB(02)/14.

B. NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

15. The Chairperson said that, in the absence of new contributions, delegations were invited to address the issue of subsidies on the basis of the Chairperson's Checklist contained in Job No. 4519/Rev.1 (6 October 2000). Delegations could comment on any point of that list.

16. The representative of Argentina said that his delegation was interested in substantive discussions. Work on this subject should continue.

17. The representative of Brazil said that this agenda item was important and work should be carried on in the coming months. Trade-distortive effects of subsidies were a matter of concern. In its communication on construction services and related services (S/CSS/W/113), Brazil indicated that subsidies played a crucial role in restricting access to foreign markets by developing country firms and proposed that that this issue be addressed in the negotiations in the context of the development of horizontal disciplines on subsidies under Article XV of the GATS, so as to ensure a level-playing field between developed and developing countries.

C. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

18. The Chairperson proposed that delegations should continue their general exchange of views on any aspect of government procurement of services.

D. DATE OF THE NEXT MEETING

19. The Chairperson indicated that the next formal meeting of the Working Party was expected to take place during the week of 27 May. The definitive date would be communicated in due time.

E. OTHER BUSINESS

20. Nothing was raised under this agenda item.

F. APPOINTMENT OF THE CHAIRPERSON

21. The Chairperson said that, in accordance with the rules of procedure for meetings of the Council for Trade in Services (S/L/15), and which had also been adopted for this Working Party, the election of a new Chairperson was to take place at the first meeting of the year and take effect at the end of that meeting. However, given that the Chairperson of the Council for Trade in Services was still holding consultations on the issue, he proposed that the election of the new Chairperson take place at the beginning of the next meeting. It would be the first item on the agenda of the next meeting.

22. It was so agreed.

Working Party on GATS Rules

REPORT OF THE MEETING OF 28 NOVEMBER 2001

Note by the Secretariat

1. The Working Party on GATS Rules held its thirty-fifth meeting under the chairmanship of Mr. Hugo Cayrus, from Uruguay. The agenda for the meeting was contained in WTO/AIR/1674. It consisted of five items: negotiations on safeguards under GATS Article X; negotiations on subsidies under GATS Article XV; negotiations on government procurement under GATS Article XIII; date of the next meeting; and other business. The agenda for the meeting was adopted.

A. NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

2. The Chairperson recalled that the Working Party had held an informal meeting on 23 November to discuss issues related to emergency safeguard measures.¹ He intended to continue this debate in informal mode.² Delegations so wishing could nevertheless make formal statements.

3. The representative of Turkey said that foreign suppliers established in his country were considered as national suppliers, regardless of any foreign equity ceiling. Foreign established suppliers (FES) should therefore be included in the definition of "domestic industry", which would also solve problems related to "acquired rights". Mode 3 should not be excluded from an emergency safeguard mechanism (ESM). Schedules of specific commitments indicated that more restrictions were listed under modes 1 and 4 than under mode 3, which meant that liberalization under the latter mode was more likely to cause injury. As long as "acquired rights" were protected, any Member wishing to take a safeguard measure in order to restrict new entrants should be entitled to do so. There should be a compensation requirement in order to prevent abuse of an ESM. However, in view of the difficulty of implementing and withdrawing compensation, a short period of time should be determined during which no compensation was required. Turkey was in favour of a horizontal ESM because the concept of a scheduled safeguard was not compatible with the unforeseen nature of an emergency situation. There was no basis in GATS Article X to support the argument that safeguards should apply only to new commitments. He noted that the specific commitments referred to in paragraph 2 of Article X, which Members were entitled to modify or withdraw, clearly referred to Uruguay Round commitments.

4. The representative of Brazil said, with respect to the Non-paper presented by New Zealand³, that having to demonstrate the existence of a relevant "circumstance" (unforeseen developments) amounted to introducing a fourth condition. The link made, in the paper presented by the United States⁴, between a safeguard measure and increased liberalization should solve the question of "desirability". Nevertheless, his delegation found it difficult to agree with the conditions proposed by the United States. In fact, the link between an ESM and increased liberalization worked the other way round: Members would feel comfortable having an ESM before making additional specific

¹ See JOB(01)/164.

² See JOB(01)/168.

³ *Situations Justifying an Emergency Safeguard Action*, JOB(01)/146.

⁴ *Desirability of a Safeguard Mechanism for Services: Promoting Liberalization of Trade in Services*, S/WPGR/W/37.

commitments. An ESM should not be limited to new commitments. He enquired what would be the conditions of application of a scheduled safeguard. Without a minimum of agreed conditions, there was a risk of ending up with many different safeguards in different sectors.

5. The representative of Mexico said that "emergency" should be an element to be considered, but should not be a fourth condition. The issue of "desirability" involved political and technical aspects, and both should be considered. Mexico's reading of the US contribution was that an ESM would be less undesirable if it were scheduled, but not that it was desirable per se. He noted that application of an ESM to mode 4 might raise difficult questions. Application to modes 1 and 2 should also be discussed more seriously. Concrete, practical examples might be useful in that context. A full assessment of the potential impact of an ESM, in particular on investments, should be made.

6. The representative of India said that an ESM should apply only to scheduled measures. The application of the concept of "unforeseen developments" would introduce an additional element which, given the problems of statistics in services, might make an ESM unworkable. No mode of supply should be excluded *a priori* from an ESM, but decisions should be made on a case-by-case basis. The definition of "domestic industry" should include only national suppliers. "Acquired rights" of FES should be protected, but this should not entail the right for them to expand. "Acquired rights" under mode 4 should be protected as well. The investigating authority should look actively for all relevant information relating to the establishment of injury, but should retain discretion in establishing the list of relevant criteria. The safeguard measure should take the form of a temporary suspension of specific commitments and should not be more trade-restrictive than necessary. Article 7.4 of the Agreement on Safeguards (AS) could be used as a model. Provisions on special and differential treatment should be included. Transparency and notification requirements were key. Article 13 of the AS could provide a model for a surveillance mechanism.

7. The representative of Australia said that, during the last three years, there had been little progress towards common ground. Members remained far apart on the definitions and elements of an ESM. The same questions and answers were being constantly recycled. Her delegation welcomed the efforts made recently by some Members to explore ways to refocus the debate in more productive directions. Australia was particularly interested in suggestions that Members focus on a procedure to handle possible safeguard actions, rather than on the "desirability" and "feasibility" of a safeguard action itself. The Non-paper by Argentina was a good step in that direction. Australia agreed that, should Members decide that an ESM was desirable – an ESM and not a safeguard action -, such a mechanism should be as simple and as transparent as possible. Her delegation doubted that trying to address every possible issue underlying a safeguard action was the most efficient way to approach the development of a GATS mechanism. If such a mechanism was abused, remedial action would be initiated. Besides, Members could always insert a clause mandating regular review of the effectiveness of the ESM. Referring to the wish of some Members to exclude mode 3 and/or mode 4 from the coverage of an ESM, she wondered whether it would be worthwhile to devote time and efforts to develop a mechanism applying only to modes 1 and 2. It might then be better to develop a horizontal mechanism and let Members decide – if and when a safeguard action took place – whether such action was justified given the circumstances, without predefining in great detail what was justifiable, what were the right circumstances, etc. Not having a mechanism would not necessarily prevent action given the flexibility of the GATS. Without prejudging Australia's position on the issue of "desirability", having a mechanism could, on the other hand, provide a structure to enhance transparency of any safeguard action and to allow for peer review and surveillance. She noted that Article XXI provided for permanent withdrawal of commitments. A similar type of mechanism for temporary withdrawal might perhaps be explored. In any case, the Working Group should aim at a decision on this matter by 15 March 2002, and that decision should then be carried out as quickly as possible so as to allow Members to focus on request/offer negotiations.

8. The Chairperson suggested to turn to the organisation of future work. He informed that, on 19 and 20 November, he had held informal consultations, which had allowed him to hear some thirty delegations on this issue, including on the question of whether or not work should start on a draft text. This issue had also been raised during the informal meeting of 23 November. The result of those consultations was the following: while some delegations would like to start working on a draft text, others considered it was premature to engage in such a work because, in their view, positions were still far apart on some fundamental issues. A third group of delegations had indicated their flexibility. He concluded that there was no consensus for the time being to work on a draft text. He stressed that the process was in Members' hands and that neither the Chairman nor the Secretariat were in a position to move the process ahead. He noted that delegations had made various suggestions on how to pursue discussions on substance, for instance: (i) continue analysis on the basis of the Synopsis and/or the Checklist of issues in order to compare the different approaches (a proposal had been made to revise the Synopsis); (ii) discuss concrete situations in which a safeguard measure might be needed; (iii) deepen understanding on basic concepts; (iv) make an inventory of points where there was convergence of views and points where positions differed. These suggestions were not mutually exclusive and could in fact be combined. On 23 November, he had made two suggestions that delegations could take into account in the preparation of future meetings: (i) with respect to the different elements contained in the Synopsis, delegations might want to examine where, in their views, there was possible common ground and where positions differed; (ii) delegations might also want to consider which elements might be common to both an horizontal and a scheduled safeguard. Work could then focus on these common elements, if any, that would need to be defined regardless of the precise context in which a possible ESM might later be used. He would prepare an Addendum to the Synopsis, which would include the new written contributions. Moreover, he intended to hold a two-day informal meeting on 17 and 18 January 2002 and another one in February (dates to be confirmed).

9. The representative of Brazil said that his delegation would have preferred engaging in drafting but could nevertheless accept the proposal just made by the Chairperson. Efforts should be made to avoid repetition.

10. The representative of Philippines, speaking on behalf of the ASEAN Members, recalled that the ASEAN Members were keen to start working on a draft text. At the very least, the Working Group should start examining areas of common ground, which would facilitate a platform for subsequent drafting. Should this not be possible, then it would clearly indicate a lack of political will. Moreover, discussions would go in circles. At this point in time, the ASEAN Members did not want to ask for an extension of the deadline. The representative of Australia wondered when a decision would be made. The Chairperson replied that these decisions were in the hands of Members.

11. The representative of Indonesia expressed concern that, after seven years, the negotiating deadline would, again, not be respected. The representative of Paraguay suggested to hold a meeting in December so as to make progress. The representative of Mexico considered that a meeting in December did not leave delegations with enough time to prepare. The representative of the Republic of Korea supported the Chairperson's intention to prepare an Addendum to the Synopsis. He stressed the need to make progress.

12. The representative of Pakistan stressed that work should move forward. The Working Group was unfortunately facing the risk of another extension of the deadline, which would send a bad political signal. The issues on the table had already been discussed many times in the past. The problem was that there was a lack of political will to make progress. Therefore, he wanted to formally propose to start working on a draft text. The representatives of Paraguay and Cuba supported the proposal made by Pakistan. The representatives of the European Communities, Canada, the United States, Japan and Switzerland said that there was no sufficient basis to start working on a draft text.

13. The Chairperson concluded that there was no consensus to start drafting and suggested to continue work on the basis of the proposal he had just made. It was so agreed.

B. NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

14. The Chairperson said that, in the absence of new contributions, delegations were invited to address the issue of subsidies on the basis of the Chairperson's Checklist contained in Job No. 4519/Rev.1 (6 October 2000). Delegations could comment on any point of that list.

15. The representative of Brazil said that it was important to negotiate disciplines on trade-distortive subsidies. He noted that several sectoral proposals circulated in the Special Session touched upon this subject. The representative of Argentina indicated that his delegation intended to submit a contribution at the next meeting. The representative of Hong Kong, China said that her delegation continued to attach great importance to this agenda item. Members, especially those who had raised subsidy-related issues in their sectoral proposals, should share their experience in this field.

C. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

16. The Chairperson proposed that delegations should continue their general exchange of views on any aspect of government procurement of services.

17. The representative of the European Communities said that this agenda item was important for her delegation. She hoped to be in a position to inject new thoughts in the discussion next year.

D. DATE OF THE NEXT MEETING

18. The Chairperson indicated that the next formal meeting of the Working Party would take place in the week of 11 March 2002, i.e. in the services "cluster".

E. OTHER BUSINESS

19. Nothing was raised under this agenda item.

Working Party on GATS Rules

REPORT OF THE MEETING OF 3 OCTOBER 2001

Note by the Secretariat

1. The Working Party on GATS Rules held its thirty-fourth meeting under the chairmanship of Mr. Hugo Cayrus, from Uruguay. The agenda for the meeting was contained in WTO/AIR/1620. It consisted of six items: negotiations on safeguards under GATS Article X; negotiations on subsidies under GATS Article XV; negotiations on government procurement under GATS Article XIII; annual report on the activities of the Working Party to the Council for Trade in Services; date of the next meeting; and other business. The agenda for the meeting was adopted.

A. NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

2. The Chairperson drew attention to a Synopsis he had circulated on his own responsibility at the beginning of August (JOB(01)/122). The Synopsis was an attempt to provide a structured overview of different options made with respect to core elements of a possible safeguard mechanism which had been discussed by Members on the basis of the ten items proposed in the Chairperson's Checklist, Job No. 1979/Rev.1. He recalled that, during the last informal meeting, on 25 September, Members had had an extensive exchange of views on these topics listed, and had addressed in a preliminary manner an informal Communication from Mauritius on *Emergency Safeguard Measures* (JOB(01)/143) as well as an informal Communication from Venezuela on *Causality Link* (JOB(01)/101/Add.1).¹ He noted that three additional written contributions had been received since the last informal meeting: New Zealand on *Situations justifying an Emergency Safeguard Action*, (JOB(01)/146); Argentina on *Elementos para establecer una salvaguardia de emergencia en servicios*, (JOB(01)/148); and the United States had presented a formal communication on *Desirability of a Safeguard Mechanism for Services: Promoting Liberalization of Trade in Services*, (S/WPGR/W/37). He suggested to turn to informal mode to discuss these various contributions.

3. The Chairperson said that the next formal meeting of the Working Party had been tentatively scheduled on 3 December. He recalled that, during the informal meeting on 2 July, he had mentioned that, in view of the negotiating deadline of 15 March 2002, the Working Group should meet at the end of November in order to discuss the organization of future work, including the possibility of working on a text. Therefore, he intended to hold an informal meeting on 23 November. In the meantime, he would welcome any suggestions from delegations. On 23 November, an opportunity would also be given to address substantive issues. In his view, work would need to be very intensive between November 2001 and the expiration of the deadline.

B. NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

4. The Chairperson said that, in the absence of new contributions, delegations were invited to address the issue of subsidies on the basis of the Chairperson's Checklist contained in Job No. 4519/Rev.1 (6 October 2000). Delegations could comment on any point of that list. He also invited comments on how to continue work under this agenda item in the coming months.

¹ See Note by the Secretariat, JOB(01)/150 dated 10 October.

5. No delegation intervened under this agenda item.

C. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

6. The Chairperson proposed that delegations should continue their general exchange of views on any aspect of government procurement of services.

7. The representative of the European Communities referred to the statement made by her delegation at the last formal meeting of the Working Party. Work on emergency safeguard measures should not preclude progress on the other two items of the agenda. With respect to government procurement, this Working Party (WPGR) should not duplicate the work of the Working Group on Transparency in Government Procurement (WGTGP), but complement it. She suggested that WPGR could focus on issues directly linked to the procurement process, such as qualifications of bidders. This issue was dealt with in WGTGP, but only to ensure that transparency was achieved. WPGR could go further and examine, for instance, the following questions: what limitations, if any, should there be to the criteria used? To what extent could the purchaser require that a service supplier demonstrate "technical capability"? Should there be rules stating how technical capability could be demonstrated? Should the purchasing entity be able to require that a service supplier be established in the country? Are there any general grounds for excluding service suppliers from eligibility, e.g. bankruptcy, severe professional misconduct? She also drew attention to two Notes by the Secretariat, circulated in November 2000, which had never been really discussed and suggested that they be examined in the Working Party (Job No. 7053 and Job No. 7072).

8. The representatives of Chile, Australia, Switzerland, New Zealand, Hong Kong, China concurred that government procurement was an important area and that the Working Party should devote more time to it. The representative of Chile sought further clarification regarding the European Communities' suggestion to work on qualifications of bidders. The representatives of Switzerland and Hong Kong, China were ready to explore the suggestion made by the European Communities. Replying to Chile, the representative of the European Communities said that the idea was to examine what kind of additional rules would be necessary to assess the qualifications of bidders and what kind of limitations could be put in place.

9. The representative of Mexico said that the Working Party should discuss the scope of the mandate contained in GATS Article XIII.

D. ADOPTION OF THE ANNUAL REPORT

10. The Chairperson drew attention to the draft Annual Report of the Working Party, which had been circulated as document S/WPGR/W/36. This document was mainly of a factual nature.

11. The representative of Venezuela said that paragraph 5 of the draft report did not really reflect the real situation with respect to government procurement. The paragraph stated that "discussions have continued on definitional as well as on possible multilateral disciplines". In her recollection, however, no such discussions had taken place during the last months. Moreover, the Spanish version referred to "debates", while the word "discusiones" would be more correct.

12. The representative of the European Communities suggested that a sentence might be added to paragraph 5 which would indicate that several delegations had stressed the importance of pursuing work on the issue of government procurement.

13. The Working Party took note of the statements made and adopted the Annual Report.

E. DATE OF THE NEXT MEETING

14. The Chairperson indicated that the next formal meeting of the Working Party had been tentatively scheduled for 3 November 2001.

Working Party on GATS Rules

REPORT OF THE MEETING OF 2 JULY 2001

Note by the Secretariat

1. The Working Party on GATS Rules held its thirty-third meeting under the chairmanship of Mr. Hugo Cayrus, from Uruguay. The agenda for the meeting was contained in WTO/AIR/1577. It consisted of five items: negotiations on safeguards under GATS Article X; negotiations on subsidies under GATS Article XV; negotiations on government procurement under GATS Article XIII; date of the next meeting; and other business. The agenda for the meeting was adopted. The Chairperson drew attention to an informal Note (JOB(01)/95) he had circulated to assist delegations in their preparation for the meeting.

A. NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

2. The Chairperson recalled that, during the last informal meeting on 26 and 27 June, Members had had an extensive exchange of views on the ten topics listed in the Chairperson's Note, Job No. 1979/Rev.1, and had addressed in a preliminary manner an informal communication from Chile, Costa Rica and Switzerland on a *Possible Comprehensive Approach for an Emergency Safeguards Mechanism (ESM)* (JOB(01)/81).¹ Three other informal written contributions had been circulated since that meeting; *Emergency Safeguard Mechanism: a Multilateral Surveillance Procedure*, by Canada (JOB(01)/100); *Negociaciones sobre Medidas de Salvaguardias Urgentes: Relación de Causalidad*, by Venezuela (JOB(01)/101); Non-paper by Japan on *Emergency Safeguard Measures* (JOB(01)/105). He suggested to turn to informal mode to discuss these contributions.²

3. With respect to the organization of future work, the Chairperson said that, as a result of the last informal meeting of the Working Party, as well as the various bilateral and plurilateral informal consultations he had held over the last weeks, it appeared that there was no consensus to work on a draft text. Taking this into account, he wished to make the following suggestion as a possible way to organise work, at least until November 2001. First, he would prepare, under his own responsibility, a synopsis which would outline the current situation of the discussion under the ten items identified in the Chairperson's Checklist (Job No. 1979/Rev.1). This synopsis would take into account written and oral contributions. It would present, in a synthetic way, the main options introduced until the end of July 2001 (written contributions, minutes, etc.) and indicate the main comments made by Members. The synopsis would be intended to facilitate further analysis by Members and would be without prejudice to the question of feasibility and desirability, nor to the form of a possible ESM. The synopsis could be presented at the beginning of September. Secondly, taking into account that the Fourth Ministerial Conference might require most of delegations' attention, he proposed that the Working Party should hold two meetings before November 2001 in order to continue the current negotiations on ESM. Tentative dates were: (i) an informal meeting on Tuesday 25 September, and (ii) a formal meeting on 3 October, during the October services "cluster". Thirdly, he wished to point out that, taking into account the deadline of 15 March 2002, the Working Party might have to

¹ See Note by the Secretariat, JOB(01)/108.

² See Note by the Secretariat, JOB(01)/109.

consider, in November, the possibility of working on a draft text. He anticipated that work would be very intensive between November 2001 until the expiration of the deadline.

4. It was so agreed.

5. Regarding how work should be structured in September and October, the Chairperson proposed that the Working Party should continue its analysis of the written contributions and work on the basis of the synopsis. Delegations might also want to concentrate on some key topics which were central to the debate, and for which different positions existed. The framework for discussion should nevertheless be flexible enough to allow delegations to address any issue they deemed appropriate. He recalled that delegations wishing to do so could raise the questions of feasibility and desirability of an ESM.

6. The delegations of the European Communities said that issues such as the exclusion of mode 3 or the link with future liberalization were among the key policy topics to be considered.

B. NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

7. The Chairperson invited delegations to address item 5 of the Chairperson's Checklist (Job No. 4519/Rev.1), i.e.: *Is there a need for additional GATS disciplines to avoid trade-distortive effects? This would include consideration of the appropriateness of countervailing procedures. Next steps.* He noted that, after completion of discussion on this topic, the Chairperson's Checklist of issues would have been exhausted. Therefore, he encouraged delegations to consider how the Working Party should continue its work under this agenda item.

8. The representative of Hong Kong, China said that some subsidies, such as tax reliefs or direct financial contributions from governments (either at the federal or sub-federal level), could have significant effects on trade. Her delegation was trying to collect evidence of trade-distortive subsidies in order to make a contribution to the Working Party. However, since Hong Kong, China seldom applied trade-distortive subsidies, this evidence was difficult to find. In her view, there was no ground to believe that, unlike industrial or agricultural subsidies, services subsidies had no trade effects and that no additional rules were needed. She suggested that Members could further discuss the issues raised in an informal paper presented by her delegation in September 2000 (Job No. 5870), including, for instance, the definitions of "financial contribution", "government", "specific supplier", and "services", as well as whether consumer subsidies should be addressed in future disciplines.

9. The representative of Chile felt that work on emergency safeguard measures took most of the time of the Working Party and that, as a result, subsidies and government procurement were not sufficiently addressed. She wondered how this concern could be addressed. The Chairperson said that negotiations under Articles XIII and XV were in the hands of Members who were always free to submit proposals. The emphasis put on emergency safeguard measure was also due, in part, to the fact that the Working Party had a deadline to complete this negotiation.

10. The representative of Mexico supported what had been said by Hong Kong, China and Chile. He agreed that it was up to Members to make contributions to move the process ahead. He noted that, while some subsidies could be justified due to their social objectives (health or education, for instance), other subsidies had trade-distortive effects.

11. The representative of Brazil agreed with Hong Kong, China that it could not be assumed that services subsidies did not have the same trade-distortive effects as similar subsidies in goods. With respect to item 5 of the Checklist, his delegation did not have specific views on the issue of countervailing measures. He noted that item 5 was closely related to item 3. Existing disciplines were not sufficient to address trade-distortive effects of subsidies, in particular because the scope of

national treatment across modes was not clear. In addition, the national treatment obligation did not solve the question of competition in foreign markets. He noted that several sectoral negotiating proposals tabled in the Special Session referred to subsidies (in audiovisual or distribution, for example). In some instances, it was proposed to negotiate sectoral rules on subsidies. Brazil wanted to caution against such work being carried out in the Special Session because it might prejudice the nature of possible disciplines to be discussed in this Working Party. With respect to future work, he suggested that Members continue their discussion on the basis of the Checklist, going back to the first item, without prejudice to the possibility of introducing new elements.

12. The representative of New Zealand said that the negotiating deadline of 15 March 2002 explained why the focus had increasingly shifted to emergency safeguard measures. With respect to future work on subsidies, his delegation would support any initiative that would stimulate work. One option could be to address all the elements of the Checklist, which would favour an overall perspective. Keeping in mind the specific mandate in Article XV, which was to address trade-distortive subsidies, any information that Members might provide with respect to such subsidies would facilitate discussions.

13. The representative of the United States said that since trade in services was different from trade in goods, it could not readily be assumed that subsidy-related problems were similar. The mandate contained in Article XV was ambivalent since it pointed out that, "in certain circumstances", subsidies "may" have trade-distortive effects. More information on actual trade distortions associated with subsidies was therefore needed. He agreed that national treatment could not necessarily solve all the problems but it was still a powerful requirement. With respect to the question of subsidies in the audiovisual sector, he suggested that a pragmatic approach could rely on scheduling. As to future work, his delegation was open, but had a preference for discussing the five items of the Checklist at the same time.

14. The representative of Australia said that, both with respect to subsidies and government procurement, it would be useful to go back to basic issues and have a clear idea on what the Working Group was mandated to do. A structure and a timeframe would greatly help discussions. Key issues should be identified.

15. The representative of the European Communities supported the proposal to address all issues of the Checklist.

16. The Chairperson concluded that the Checklist would remain on the table. Delegations having an interest in the subject were encouraged to make contributions.

C. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

17. The Chairperson proposed that delegations should continue their general exchange of views on any aspect of government procurement of services.

18. The representative of the European Communities said that work on emergency safeguard measures should not preclude progress on the other two items of the agenda. She stressed the economic importance of government procurement and considered that their exclusion from the scope of the GATS reduced the value of specific commitments. WPGR should, however, not duplicate the work of the Working Group on Transparency in Government Procurement (WGTGP), but complement it. In that regard, WPGR could focus on issues directly linked to the procurement process, such as qualifications of bidders. This issue was dealt with in WGTGP, but only to ensure that transparency was achieved. WPGR could go further and examine, for instance, when qualifications could be required or to what extent could a purchaser require that a service supplier should demonstrate technical capability.

D. DATE OF THE NEXT MEETING

19. The Chairperson indicated that the next formal meeting of the Working Party had been tentatively scheduled for 3 October 2001.

E. OTHER BUSINESS

20. Nothing was raised under this agenda item.

Working Party on GATS Rules

REPORT OF THE MEETING OF 10 MAY 2001

Note by the Secretariat

1. The Working Party on GATS Rules held its thirty-second meeting under the chairmanship of Mr. Hugo Cayrus, from Uruguay. The agenda for the meeting was contained in WTO/AIR/1542. It consisted of five items: negotiations on safeguards under GATS Article X; negotiations on subsidies under GATS Article XV; negotiations on government procurement under GATS Article XIII; date of the next meeting; and other business. The agenda for the meeting was adopted. The Chairperson drew attention to an informal Note (Job(01)/42, 1 May 2001) he had circulated to assist delegations in their preparation for the meeting.

A. NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

2. The Chairperson invited delegations to address, in informal mode, the following topics contained in the Chairperson's Note Job No. 1979/Rev.1: special and differential treatment (item 7); indicators and criteria (item 4); compensation (item 6); definition of "domestic industry" and the issue of "acquired rights" (item 1); situations justifying an ES action (item 8).¹ He drew attention to the following documents, which had been circulated since the last meeting: communication by Venezuela on *Indicators and Criteria for the Determination of Serious Injury or Threat Thereof*, JOB(01)/48 (18 April 2001); non-paper by Brazil on *Compensation*, JOB(01)/50 (19 April 2001);² communication by Mexico on *Emergency Safeguard Measures*; Note by the Secretariat on *WTO Members' Practice Relating to Article 8 of the Agreement on Safeguards*, JOB(01)/61 (3 May 2001).

3. With respect to future work, the Chairperson proposed that the Working Party hold a two-day informal meeting on 26 and 27 June. He recalled that, at the last formal meeting, his predecessor had made some suggestions on how work might be organized until the summer break.³ This proposal, on which he had been consulted, was also reflected in the Annotated Agenda prepared for the April informal meeting of the Working Party.⁴ On this basis, he wanted to propose the following arrangement for the June meeting. The first part would be related to substantive discussion, with a view to completing consideration of the Chairperson's Note Job No. 1979/Rev.1. He intended to have an open-ended debate on all items in Job No. 1979/Rev.1. Any other issue that Members might wish to raise would be considered as well. For that purpose, delegations were encouraged to indicate to the Chair, sufficiently in advance of the meeting, specific topics that they would like to address. These issues could then be reflected in an Annotated Agenda so that everybody could come fully prepared to the meeting. He might also propose some specific topics which, in his view, could benefit from further consideration. He strongly encouraged Members to submit written contributions as soon as possible. The second part of the June meeting would be a process discussion to assess what had been achieved since April 2000 and to determine what the next steps should be, including whether it might

¹ See *Summary of the Comments Made During the Informal Meeting on 10 May 2001*, Note by the Secretariat, Job (01)/74 (17 May 2001).

² These two communications were presented during an informal meeting on 23 April 2001, see JOB(01)/54 (26 April 2001).

³ See S/WPGR/M/31, para. 5.

⁴ See JOB(01)/47, 10 April 2001.

be useful to work on a text. He indicated that he intended to conduct informal consultations with delegations in the coming weeks, so as to get an idea of the range of options reasonably available. He also strongly encouraged delegations to directly contact him. The June informal meeting would be important to prepare the formal meeting in July. Members should come ready to discuss the organization of the work programme after the summer break, taking into account the 15 March 2002 deadline.

4. The representative of Mexico introduced a communication on ESM addressing the following issues which, in Mexico's view, deserved further consideration: definition of "domestic industry"; the concepts of "emergency" vs. "unforeseen developments"; the issue of "acquired rights"; determination of injury or threat thereof; and compensation.⁵ He indicated that Mexico was currently assessing the feasibility of a services ESM and reserved its right to modify its position in view of future developments.

5. The representative of Argentina said that, with respect to the mandate contained in Article X, his delegation was in favour of a pragmatic solution which should add value to the GATS. The first question to be considered was the situation in which a safeguard measures would be justified. An ESM should remain a last-resort measure. He noted that, in Argentina, the expansion of some enterprises in various sectors could be suspended, which was a form of safeguard measure. This measure applied primarily in financial services. He also pointed to the prudential carve-out in the Annex on Financial Services. The difficulties linked to availability of data and statistics should not be exaggerated. In this regard, he welcomed the non-paper submitted by Venezuela, which contributed to demystifying the problem. While the indicators and criteria listed in the paper were undoubtedly useful as a first step, a case-by-case approach should nevertheless prevail in individual cases. With respect to mode 4, the type of service concerned would determine which of the two envisaged criteria – number of suppliers or volume of services – would be relevant in a given case. As to the definition of "domestic industry", GATS Article XXVIII should remain the starting-point. Should this not be the case, what would then be the value of this provision, and what would happen to schedules of commitments containing national treatment limitations under mode 3 (such as discriminatory subsidies)? Suspending the establishment of new foreign suppliers was not appropriate if the injury was caused by established foreign suppliers. An alternative solution to consider could be a mechanism which would be quick, automatic and of short duration (18-20 months); the invoking country would not need to grant compensation and, should the measure need to be prolonged, the procedures of Article XXI should be invoked. He noted that a communication presented by the United States in S/WPGR/W/17 (13 March 1997) contained various elements which deserved further consideration.

6. The representative of the United States said that his delegation did not view paragraph 2 of the Annex on Financial Services as being a safeguard measure. This provision had specific enumerated purposes, which were different from the circumstances addressed by GATS Article X. With respect to future work, his delegation supported the approach reflected in the minutes of the last formal meeting (S/WPGR/M/31) and outlined in the April Annotated Agenda (JOB(01)/47). One of the items mentioned was the question of desirability of an ESM, which had explicitly been left aside for the time being. Nevertheless, the United States considered that it was important to discuss when and how desirability of an ESM should be addressed.

7. The representative of Argentina concurred that the prudential carve-out was not a safeguard within the meaning of GATS Article X, but had different objectives.

8. The representative of the European Communities said that a number of new issues had emerged in the course of the discussion. The representative of Brazil noted that a decision was

⁵ See JOB(01)/67, 9 May 2001.

needed, at the July meeting, on how to move forward. His delegation did not rule out working on a text. The question of desirability was not essential. An ESM was necessary and the question was how to make it operational. The representatives of Mexico and Chile agreed to the work programme proposed by the Chairperson. The representative of Paraguay associated himself with the comments made by the delegation of Brazil concerning feasibility. The representative of Thailand, speaking on behalf of ASEAN, said that the ASEAN Members were ready to discuss the next steps. The representative of Venezuela indicated that her delegation was ready to work on a text. The representative of Chile informed the Working Party that her delegation intended to present a written communication, together with other delegations, by the June meeting.

B. NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

9. The Chairperson invited delegations to address item 4 of the Chair's Checklist (Job Nno. 4519/Rev.1, 6 October 2000), which reads as follows: *(a) The wider role of subsidies, including to pursue public policy objectives; (b) The role of subsidies in relation to development, and the needs of developing country Members for flexibility, including special and differential treatment.* He drew attention to a Note prepared by the Secretariat, following a request made at the last meeting, on the *OECD Arrangement on Guidelines for Officially Supported Export Credits*, and the so-called "Yellow Book" (JOB(01)/66, 8 May 2001).

10. The representative of Hong Kong, China noted that subsidies could be used to pursue different policy objectives, such as promotion of public health or education. Moreover, the GATS recognized these objectives as perfectly legitimate. Subsidy disciplines should not affect them, but should aim at correcting trade-distortive effects. Her delegation did not question the right of governments to set their own policy objectives, but wondered whether subsidies were the proper course of action in all instances. Members should use subsidies in a proper way, so as to diminish trade-distortive effects. She noted that the level of trade-distortiveness could vary greatly from one case to another.

11. The representative of Brazil said that, when asking for information on the *OECD Arrangement on Guidelines for Officially Supported Export Credits* and the so-called "Yellow Book", his delegation intended to contribute to the process of data gathering. This was not meant to prejudge the trade-distortive effects of any subsidy. Brazil was of the view that the Arrangement might be a good source of information, given the fact that it was a public instrument and entailed a notification procedure. He noted that paragraph 8 of the Secretariat Note JOB(01)/66 indicated that the Arrangement contained "a set of procedural rules, including notification, consultation and information exchange" and paragraph 9 related to special sectoral guidelines applying to ships, nuclear power plants and aircraft. The Note further indicated, in paragraph 11, that the "Yellow Book" did not contain information on actual disbursements. He understood that the "Yellow Book" did not contain information on interest rates and other specific information on export credit and export finance. He further noted that the Arrangement applied to "all official support for export of goods and/or services", which suggested that it could be a good source of information for export subsidization practices. The issue of trade-distortive subsidies was important for Brazil, not only in services, but also in goods and agriculture. In Brazil's view, the Arrangement had had an unfortunate influence on the negotiations of the Agreement on Subsidies and Countervailing Measures and this should be avoided in the negotiations of any services disciplines.

12. A representative of the Secretariat said that the information referred to in paragraph 8 of the Note was available only to the Participants to the Arrangement. Participation was also open to non-OECD Members.

13. The representative of Canada said that subsidies were always granted in pursuit of a particular public policy objective. The basic question to be considered was whether and to what extent subsidies actually distorted trade.

14. The representative of Argentina said that Article XV clearly mandated the Working Party to address trade-distortive subsidies. It was premature to consider the objectives pursued by subsidies before having considered what kind of disciplines were needed. The Secretariat paper S/WPGR/W/9 contained interesting questions which should be further considered (he noted in particular paragraph 15). Subsidy disciplines could apply to all measures which were not captured by the schedules of specific commitments.

15. Addressing item 4(a) of the Checklist, the representative of the United States said that subsidies in services seemed to exist mainly in so-called public-good sectors, such as education, health, post and transport. It was important for governments to maintain the ability to meet public policy objectives in these areas, including by providing assistance to service suppliers and consumers. The possible trade effects should be looked at. The United States was of the view that the next step would be to consider whether existing GATS disciplines were sufficient. Concerning the evolution of subsidy rules in the goods area, he noted that the general approach had been to balance the rights of governments to take measures in furtherance of economic and social policies, with the need to offset or neutralize adverse effects of measures on the trade interests of others.

16. The representative of Singapore said that his delegation did not intend to question public policy objectives, but whether subsidies distorted trade. The representative of Australia asked the United States whether, in its view, state-funded education, provided as a result of a public policy choice, could be considered to have trade-distortive effects and, if so, how such effects did arise. The representative of the United States noted that one of the previous items on the Checklist related to evidence of trade-distortive subsidies. However, very few examples had been provided in this regard. The problem to be resolved had to be identified before developing any new disciplines. The representative of Brazil said his delegation did not question the right of governments to employ subsidies to achieve public policy objectives. The question was whether they resulted in trade-distortive effects. There was no economic reason why subsidies provided in services would not have, in similar circumstances, the same trade-distortive effects as a subsidy granted in the goods area. National treatment disciplines did not capture trade-distortive subsidies (in mode 1, for instance). He noted that some sectoral negotiating proposals tabled in the Special Session referred to the need for subsidy rules.

17. The Chairperson said that, at the next formal meeting, delegations would be invited to address the fifth and last topic of the Checklist (Job No. 4519/Rev.1), i.e.: *Is there a need for additional GATS disciplines to avoid trade-distortive effects? This would include consideration of the appropriateness of countervailing procedures. Next steps.* He noted that, with this topic, the Chairperson's Checklist of issues would have been exhausted. At the next meeting, he would like, therefore, to invite views on how delegations intended to continue work under this agenda item in order to move forward.

C. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

18. The Chairperson proposed that delegations should continue their general exchange of views on any aspect of government procurement of services.

19. The representative of Chile indicated that her delegation intended to raise some issues related Article XIII at the next meeting.

D. DATE OF THE NEXT MEETING

20. The Chairperson indicated that the next formal meeting of the Working Party had been tentatively scheduled for 2 July 2001.

E. OTHER BUSINESS

21. Nothing was raised under this agenda item.

Working Party on GATS Rules

REPORT OF THE MEETING OF 21 MARCH 2001

Note by the Secretariat

1. The Working Party on GATS Rules held its thirty-first meeting under the chairmanship of Mr. Tony Sims, from the United Kingdom. The agenda for the meeting was contained in WTO/AIR/1508. It consisted of seven items: negotiations on safeguards under GATS Article X; negotiations on subsidies under GATS Article XV; negotiations on government procurement under GATS Article XIII; organization of future work; date of the next meeting; other business; and appointment of a new chairperson. The agenda for the meeting was adopted. The Chairperson drew attention to an informal Note (Job(01)/35, 14 March 2001) he had circulated to assist delegations in their preparation for the meeting.

A. NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

2. The Chairperson invited delegations to address the issue of compensation, and to revert to the definition of "domestic industry" and the issue of "acquired rights" in informal mode.¹

3. The representative of Venezuela indicated that his delegation was working on Article III of the ASEAN Draft Agreement ("ADA") and intended to circulate a written contribution on indicators and criteria. The representative of Mexico said that his delegation intended to make a written contribution on the issues of "domestic industry" and "acquired rights". The representative of Guyana said that the whole question of an ESM was linked to GATS Article IV. The impact on smaller economies and small services providers should be taken into account. Multilateral rules had to be put in place so as to avoid bilateral solutions. His delegation wished to reserve its position on a possible emergency safeguard mechanism until his government had studied the issue in details.

4. The Chairperson suggested that the Working Party hold a two-day informal meeting in the second half of April, to discuss the following topics, contained in the Chairperson's Checklist (Job No. 1979/Rev.1, 6 October 2000): (i) applicable measures (item 5); notification, consultation, transparency and surveillance mechanism (item 9); indicators and criteria (item 4); and compensation (item 6). The dates of 23 and 24 April had been booked tentatively. It was so agreed.

5. Turning to future work, the Chairperson recalled that, at its meeting in December 2000, the CTS had agreed to extend the deadline for negotiations on a possible ESM for services to 15 March 2002. He assumed that all Members had agreed to this extension in good faith and were all committed to ensuring there was no need for any further extension. By 15 March 2002, therefore, the Working Party should expect either to have concluded that a services safeguard would not be desirable, or, alternatively, have completed work on a text which would enter into effect no later than the other results of the current round of negotiations. This raised the question of how the Working Party should organize its work in the remaining time. Having consulted with his successor, he believed it was important to continue with an intensive series of informal meetings to explore key

¹ See *Summary of Comments Made During the Informal Meeting on 21 March 2001*, Note by the Secretariat, Job(01)/45, 5 April 2001.

aspects of any ESM. The Working Party would continue to work on a thematic basis whilst giving due consideration to any texts which might be on the table – in line with the modalities agreed at the 7 July 2000 meeting. In his view, the Working Party should aim to complete its run-through of issues on the Chairperson's Note, Job No. 1979/Rev.1, by June. As agreed, a two-day informal meeting would be held in the second half of April. Then, informal discussions could take place during the May meeting. A further two-day informal meeting could take place in June. Informal and formal discussions could be held in July. Without wishing to bind his successor, he anticipated that the June meeting could be in two parts: (1) complete discussions on the items contained in Job No. 1979/Rev.1 and any other substantive issues Members wish to raise; (2) have a process discussion which would (i) assess what the Working Party had achieved since the current phase of work started in April 2000, (ii) consider whether and to what extent any preliminary conclusions could be drawn on the issues of feasibility and, perhaps, also on desirability of any ESM, and (iii) consider whether work on a text would be useful. He noted that it was too early to say much about work in the autumn, but it was clear that many Members would wish to focus on the Fourth Ministerial Meeting. With the safeguard deadline of 15 March 2002, this suggested that the Working Party would have a very intensive period of work between November 2001 and March 2002.

6. The representative of Thailand, speaking on behalf of the ASEAN Members, agreed that the list of themes contained in Job No. 1979/Rev.1 should be exhausted by the summer break. In the course of the discussion, reference should be made to the relevant provisions of the ADA. In view of the negotiating deadline, it was imperative to begin the drafting process as soon as possible after the summer break and the ADA was a suitable basis for this. The representative of the United States said that, with respect to future work, consideration of feasibility and desirability issues would influence his delegation's decision regarding a text. The representative of Brazil agreed with the proposal made by the Chairperson regarding future work. Issues of feasibility and desirability should be addressed before the summer break. The definition of "domestic industry" remained a fundamental question for Brazil. In his view, this would be one of the main preliminary conclusions to be reached before engaging in more substantive work. The representative of Cuba asked whether the Secretariat could provide input for the next meeting in the form of concrete examples of applicable measures and how they could be applied. The Chairperson replied that this kind of information should come primarily from Members.

B. NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

7. The Chairperson invited delegations to address item 3 of the Chairperson's Checklist (Job No. 4519/Rev.1, 6 October 2000).² Delegations wishing to come back on item 1 or 2 of the Checklist were welcome to do so. He recalled that, in November 2000, Members had asked the Secretariat to prepare a new update of relevant information contained in WTO Trade Policy Reviews. The revised document had been circulated on 12 December 2000 (S/WPGR/W/25/Add.2) and covered nine Reviews, completed between May and December 2000.

8. The representative of Hong Kong, China said that existing GATS disciplines for subsidies were not sufficient. She noted that GATS Article II, VIII and XVII were relevant provisions. The latter was potentially the most relevant one, but did not solve all the problems, partly because the number of specific commitments on Article XVII was limited. Moreover, it would not apply to cases where, in the absence of foreign-established suppliers, a Member wishing subsidized its domestic industry and caused import substitution. She further noted that GATS disciplines did not apply *vis-à-vis* services suppliers established in another country and that there was a lack of jurisprudence

² Item 3 reads as follows: *To what extent do WTO rules, in particular the GATS and its national treatment and most-favoured-nation disciplines, already discipline services subsidies or provide the means to do so? This would include consideration of technical issues related to the GATS, including mode specificity and the concept of "like service".*

concerning the likeness of services supplied under different modes. In her view, disciplines on domestic regulation could have an indirect relevance on the adverse effect of services subsidies. Hong Kong, China hoped to present in a near future a written contribution on the questions of the relationship between modes 1 and 2, as well as on the scope of national treatment.

9. The representative of Switzerland said that MFN was a relevant discipline in the absence of national services suppliers. When looking at the types of subsidies described in S/WPGR/W/25/Add.2, it was difficult to imagine situations where MFN would be capable of limiting the negative effects of a subsidy. National treatment was a potentially powerful instrument. Extending it to all services for the purpose of subsidy disciplines, and not only to those services for which specific commitments existed, appeared to be very ambitious. However, with respect to trade-distorting subsidies, national treatment might be subject to general disciplines. National treatment should not be used to prohibit certain measures, but only to limit possible trade-distortive effects of subsidies. The questions of likeness of services and specificity of modes were linked and should be further examined.

10. The representative of Brazil recalled that, at the last meeting, his delegation had suggested that the Secretariat could use the OECD document on "Arrangement on Guidelines for Officially Supported Export Credits", the so-called "yellow book", as a source of information since it was a public document. Turning to the applicability of existing disciplines, he said that national treatment would not capture export-enhancing subsidies. Moreover, the concept of likeness as well as the scope of national treatment deserved further consideration. Should national treatment be mode-specific, then the question of likeness might be obviated. He drew attention to paragraphs 27, 28 and 29 of document S/WPGR/W/9. The first sentence of paragraph 27 raised a fundamental question. Another crucial question, raised in paragraph 28, was that of mode-specificity, which pertained to the structure of the GATS. Brazil's preliminary view on the matter was that, should these disciplines not be considered mode-specific, there might be an inconsistency with the schedules of commitments.

11. The representative of Korea said that the MFN and national treatment obligations were insufficient to discipline the complex nature of services subsidies. Article II being a general obligation, the MFN principle should also apply to subsidies referred to in Article XV, except in the case of an MFN exemption. National treatment only applied if there were specific commitments. Different sets of rules for subsidies might be needed, depending on whether specific commitments existed or not. When trying to define a services subsidy, account should be taken of the fact that trade in services was different from trade in goods. The application of countervailing duties in services would be difficult, due to the lack of data. Specificity should not be the only criterion for regulating subsidies.

12. The representative of Guyana said that the issue of national treatment was complex. Its scope was different from country to country. In his view, there was a need for some form of standard.

13. The Chairperson said, referring to Brazil's suggestion, that the Secretariat would examine what kind of contribution it could make on the basis of the OECD "yellow book". He recalled that empirical data should come primarily from Members. He proposed that, at its next formal meeting, the Working Party address item 4 of the Checklist Job No. 4519/Rev.1.³

³ Item 4 reads as follows: "(a) *The wider role of subsidies, including to pursue public policy objectives;* (b) *the role of subsidies in relation to development, and the needs of developing country Members for flexibility, including special and differential treatment*".

C. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

14. The Chairperson proposed that delegations should continue their general exchange of views on any aspect of government procurement of services.

15. The representative of Australia said that her delegation intended to submit a written contribution under this agenda item at the next meeting of the Working Party.

D. ORGANIZATION OF FUTURE WORK

16. The Chairperson recalled that, at the informal meeting of the Council for Trade in Services held on 20 February, delegations had discussed the organization of future work. It had been suggested that Members should consider how on-going work in the subsidiary bodies could be structured in the most efficient and productive way, in terms of issues which might need to take priority and of how to allocate time among them, while taking into account the concerns and constraints of small delegations. It had been agreed that an item to that effect would be inserted in the agenda of each of the subsidiary bodies.

17. The representatives of the European Communities, Hong Kong, China, Australia and Mexico recognized that a deadline had been fixed for the negotiations on emergency safeguard measures, but stressed that work should proceed equally on the other two agenda items of the Working Party. The representative of Australia added that the Working Party should address the terms of reference on government procurement. Members should provide information to help the process in this regard. The representative of Brazil recalled that, in the discussion of the Negotiating Guidelines in the Special Session, his delegation held the view that the negotiations in all three areas should be completed. The representative of Japan noted that some kind of interaction with the Working Group on Transparency in Government Procurement would be useful. The Working Party took note of the comments made.

E. DATE OF THE NEXT MEETING

18. The Chairperson indicated that the next formal meeting of the Working Party had been tentatively scheduled for 14 May 2001.

F. OTHER BUSINESS

19. Nothing was raised under this agenda item.

G. APPOINTMENT OF A NEW CHAIRPERSON

20. The Chairperson recalled that the Chairperson of the Services Council had consulted Members on the appointment of chairpersons for the four subsidiary bodies, at the informal meetings of the Council for Trade in Services held on 7 February, 20 February and 15 March. On this basis, he proposed that the Working Party elect Mr. Hugo Cayrus, from Uruguay, as its next Chairperson.

21. Mr. Hugo Cayrus was elected by acclamation.

Working Party on GATS Rules

REPORT OF THE MEETING OF 30 NOVEMBER 2000

Note by the Secretariat

1. The Working Party on GATS Rules held its thirtieth meeting under the chairmanship of Mr. Tony Sims, from the United Kingdom. The agenda for the meeting was contained in WTO/AIR/1444. It consisted of five items: negotiations on safeguards under GATS Article X; negotiations on subsidies under GATS Article XV; negotiations on government procurement under GATS Article XIII; date of the next meeting; and other business. The agenda for the meeting was adopted.

2. The Chairperson drew attention to an informal Note (Job No. 7352, 17 November 2000) he had circulated to assist delegations in their preparation for the meeting.

A. NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

1. Discussion on substantive issues

3. The Chairperson recalled that, at the last formal meeting of the Working Party, most of the discussion on emergency safeguard measures had taken place in informal session (See Job No. 3449/Add.2, 6 October 2000). Since that meeting he had issued a revised list of themes for discussion (Job No. 1979/Rev.1, 6 October 2000). From 1 to 3 November, the Working Party had held an informal meeting at which it had considered all the themes listed in Job No. 1979/Rev.1. A summary of the meeting, made under the Chairperson's responsibility, was contained in document Job No. 6943 + /Add.1 (3 November 2000). He would invite Members to comment on the papers submitted since the last meeting. The discussion was without prejudice to the issues of desirability and form of a possible safeguard mechanism. He asked the representative of Thailand to introduce, on behalf of the ASEAN Members, their Non-paper containing a Draft Agreement on Emergency Safeguard Measures for trade in services (Job No. 6830, 31 October 2000).

4. The representative of Thailand, speaking on behalf of the ASEAN Members, recalled that this Non-paper had been introduced at the informal meeting held on 1 and 2 November 2000. He said that, as was the case with the ASEAN "Concept-paper" (S/WPGR/W/30, 14 March 2000), this latest communication was not an ASEAN position paper, but was intended to assist the Working Party in carrying out its mandate under GATS Article X. The primary objective was to provide Members with a comprehensive Draft Agreement, containing workable provisions, which had the widest possible basis for acceptance by Members. This objective helped to explain that the ASEAN Members had needed time to produce it. The Draft Agreement followed the general approach of the Concept-paper, i.e. to devise a safeguard mechanism based on prior investigation and establishment of causal link between injury and increased supply or consumption of foreign services. In ASEAN's view, the records of the Working Party showed that a large majority of the Members were in favour of such a mechanism, as opposed to some kind of "automatic" mechanism, such as those existing in the areas of agriculture and textiles. The ASEAN Members believed that the Draft Agreement and the GATS had to be complementary and that there was no inconsistency between the two sets of rules. In fact, the Draft referred to definitions contained in Articles I and XXVIII of the GATS, and new definitions

were used only in cases of absolute necessity. Therefore, most of the key definitions under the general framework of the GATS, such as "trade in services", "supply of a service", "commercial presence", "juridical person", would apply to the proposed safeguards mechanism.

5. He noted that the main elements of the Concept-paper had been retained in the Draft. Many of them had been clarified, and some had been adjusted or developed further in the light of comments made in the Working Party. Timeframes were now specified. The proposed figures were believed to be reasonable and technically appropriate. On the other hand, ASEAN Member countries still proposed "options" in some areas where they wanted to share their thoughts and reflections with the Members. ASEAN hoped to hear views and comments from the Members, which hopefully would help to find solutions. The Draft also contained some new elements. There was no "options" with regard to the definition of domestic industry because the progress achieved in the discussion has suggested that, first, the issue of domestic industry was closely linked to the question of acquired rights, and second, if "domestic industry" were to be defined only for injury determination purposes, the debate could now focus on how broad or how narrow these rights should be defined. Therefore, the options were now proposed with respect to acquired rights. Therefore, Article I:2(a) had to be read in conjunction with Article II:4 of the Draft. Another new element were the lists of indicators, sources of information, and criteria for determining increased supply or consumption and serious injury or threat thereof, which were based on the Secretariat's Note, Job No. 5294 (/Rev.1 and 2). They were now incorporated in the mechanism. The proposed list was a non-exhaustive and non-mandatory one. The provision on surveillance was also new. It reflected discussions in the Working Party but Members had to further examine this issue. As a starting point, ASEAN proposed a provision based on the Agreement on Safeguards, with the Council for Trade in Services as the body to discharge these functions. To conclude his introduction, he said that ASEAN had tried to propose a Draft Agreement that was as comprehensive as possible at this stage of negotiation and hoped that it would be used in the discussion of the ten themes listed in Job No. 1979/Rev.1 (6 October 2000). He stressed that, in preparing this Draft, ASEAN's objective was to strike a balance between, on the one hand, what they believed to be a legitimate right for Members to have recourse to emergency action in response to emergencies that resulted from specific commitments and, on the other, the need to ensure that there was no abuse in doing so. As far as ASEAN was concerned, this discussion was without prejudice to Members' positions on the issue of desirability and the question of "horizontal v. sector-specific safeguards".

6. A number of delegations thanked the ASEAN Members for submitting the Draft Agreement.

7. The representative of the Republic of Korea recalled that his delegation had tabled an informal communication at the last meeting on *Definition of the Domestic Industry* (Job No. 6034, 2 October 2000). In his view, the suggestions made in this paper had found a good adaptation in the ASEAN Draft Agreement.

8. The representative of the European Communities said that the ASEAN Draft Agreement contributed to identifying real problems. However, it did not make progress towards resolving most of the technical problems. She expressed concern regarding the lack of reference to "unforeseen developments". The object and purpose of an emergency safeguard mechanism (ESM) had to be discussed further. In her view, an ESM was a remedy to an extraordinary situation. The definition of "domestic industry" and its practical consequences also needed further consideration, as well as the standards for investigation, which should be high for a services safeguard. Invoking a safeguard measure in the area of services should not be easier than in the goods area.

9. The representative of Uruguay said that it was important to protect foreign investments. The definition of "domestic industry" and that of "acquired rights" were relevant in this regard. Acquired rights had to be protected. The representative of Argentina said that his delegation remained flexible on the issue of emergency safeguard measures and was ready to examine any workable alternative

which could be implemented within the current GATS framework. The representative of Mexico said that his delegation was particularly concerned with the protection of acquired rights of foreign investors. His delegation was ready to continue working on the ASEAN Non-Paper or on any other proposal.

10. The representative of Japan considered that feasibility of an ESM remained a key question, and its desirability was still a pending issue. Foreign investments had to be protected, hence the definition of "domestic industry" and the treatment of acquired rights were important issues. His delegation was concerned that some options might have a chilling effect on foreign investors. Moreover, it was fundamental to determine in which situations a safeguard measure could be justified. The representative of Colombia said that any definition of domestic industry should protect domestic production and employment. Therefore, a definition of "domestic industry" had to protect established services providers, regardless of ownership. Once foreign suppliers were established they should have the same rights as national providers, including the right to expand. Her delegation feared that an ESM would limit the growth of foreign participation (future foreign investments or the expansion of existing companies with additional foreign capital) in services activities in Colombia. The representative of India said that his delegation was still analyzing the ASEAN Non-paper and the comments made by delegations at the informal meeting on 1 and 2 November.

11. The representative of Norway said that it was crucial to protect foreign established suppliers. A great amount of work remained to be done. His delegation was willing to participate and to consider any proposal. The representative of Switzerland supported the comments made by the European Communities, in particular concerning the philosophy which should underlie a possible ESM. His delegation was ready to continue to discuss this subject-matter and to explore alternatives. Definition of "domestic industry", modal application of an ESM and the burden of proof were key issues. Safeguard measures should not be mere policy options. The credibility of any future mechanism that might be designed was crucial.

12. The representative of the United States believed there was common ground on some basic concepts concerning feasibility. In particular, there seemed to be a strong view that a possible ESM should not harm or discourage investments and that there should be high standards of investigation. A number of difficult issues remained to be addressed, such as the lack of reliable data for many sectors, modal application and how to avoid that an ESM would affect disproportionately mode 4.

13. The representative of Ecuador said that an ESM was important, not only as a mechanism to protect the domestic industry, but also as a tool which would facilitate Members' participation in the services round in general. Clear rules for the protection of "acquired rights" would help the opening of markets and the efforts to attract investments. An ESM would create a favourable climate for developing countries to liberalise their services sectors, knowing that that they could rely on rules to protect themselves for a limited period and in a flexible manner.

14. The representative of Canada said that his delegation still had concerns regarding how an ESM would operate. Key conceptual issues, such as the definition of "domestic industry", the concept of "acquired rights", the determination of injury, had important policy implications. He was ready to continue discussion of these issues.

15. The representative of Australia said her authorities were concerned about the definition of "domestic industry" proposed in the ASEAN Draft Agreement, particularly because it seemed to provide a narrow definition for the purpose of establishing injury and a broader one for applying the remedy. Foreign established suppliers should not be excluded from injury determination or from requesting safeguard protection. Foreign established suppliers should retain all existing rights, including those of expansion. A safeguard measure should only be applied in the mode of supply causing injury. The necessity test proposed in Article IV:1 of the ASEAN Draft Agreement might not

deter an invoking party from applying measures going beyond facilitating adjustment of domestic industry. The effect of such a necessity test should be further considered. The possibility of investigating under one mode of supply and applying the remedy in another one was problematic. Her delegation wanted to further consider the link between "unforeseen developments" and "emergency situations", in the light of recent WTO case-law.

16. The representative of Brazil said that many issues remained to be further discussed, such as the definition of "domestic industry". Like others, his delegation attached great importance to the protection of foreign direct investments. An ESM should strike a balance between the burdensome resort to GATS Article XXI and too flexible a system which might give rise to abuse. His delegation was willing to continue discussion on the basis of the ASEAN text, as well as any further contribution. The representative of Costa Rica said that any ESM should protect the acquired rights of investors. The representative of Bolivia said that it was important to have an ESM in order to pursue the opening of services sectors. An ESM should not threaten foreign investments.

17. The representative of Thailand, speaking on behalf of the ASEAN Members, said that, in ASEAN's view, the Draft Agreement dealt with the issue of situations justifying safeguard action and already reflected the philosophy behind the concept of "unforeseen developments". With respect to the Communication by the Republic of Korea (Job No. 6034), the "third option" proposed by Korea was in essence quite similar to the solution proposed in the ASEAN Draft Agreement. The solution proposed by ASEAN was basically former Option 2 of the ASEAN Concept-paper, plus protection of acquired rights, or, said differently, former Option 1, minus injury caused by established foreign suppliers. This amounted to having *de facto* two different definitions of domestic industry: one for establishing injury (former Option 2 - narrower), and one for the application of the measure (former Option 1 - broader). On this particular point, ASEAN was basically saying the same thing as Korea, viewed from another angle. The definition in Article I:2(a) of the ASEAN Draft Agreement corresponded to the definition provided under paragraph 6 of the Korean paper. Article II:4 of the ASEAN Draft, with its three options, covered the issue of application of an ESM to established foreign suppliers, or non-application, as the case may be. In this sense, it corresponded to paragraphs 5 and 11 of the Korean paper. The ASEAN Draft did not define the extent of foreign suppliers' rights which should be shielded from safeguard action. ASEAN believed that the Korean paper left room for similar flexibility in paragraph 11, where it discussed the "appropriate form" in which ESMs might be applied. He asked whether the delegation of Korea agreed with this understanding. ASEAN found the result of this comparison encouraging as it might provide the "middle ground" that Members were looking for. If Members were able to agree on this point, the only remaining issue would then be how to define acquired rights. The representative of the Republic of Korea agreed that the two papers basically coincided in this regard. Korea's Option 3 was overall reflected in the ASEAN Draft. His delegation was still considering the issue of acquired rights. He noted nevertheless that the solution proposed in the Korean paper on this issue was slightly different from Option 1 of the Concept-paper. He enquired what was meant by "rights vested upon a service supplier" (Article II:4 of the ASEAN Draft).

18. The Chairperson noted a broad recognition by delegations that the two contributions made by ASEAN this year had helped to focus the debate. In his view, three key issues had to be addressed in priority: (i) situations justifying safeguard action; (ii) the definition of "domestic industry" and the concept of "acquired rights"; and, (iii) the standards of investigation. He suggested to meet informally at the beginning of next year, in order to address these issues. A date would be communicated to Members soon. He also intended to circulate an annotated agenda.

2. Extension of the deadline under GATS Article X

19. The Chairman recalled that GATS Article X:1 provided for multilateral negotiations on the question of emergency safeguard measures, whose results should have entered into effect not later

than end-1997. This deadline had been extended already twice by the GATS Council and would expire on 15 December 2000. Since the last formal meeting of the Working Party, he had held a series of informal consultations on this issue. At an informal meeting on 3 November, he had reported to the Working Party on the results of these consultations (Job No. 6944, 3 November 2000). In his report, he indicated that, while all delegations seemed to feel that the deadline for safeguard negotiations should be extended and that work should be concluded some time before the end of the current round of negotiations, views regarding the length of the extension ranged from three months to the end of the services negotiations. The weight of opinion was, however, between twelve and eighteen months. On 3 November, he had made a two-pronged proposal (Job No. 6947, 3 November 2000): (i) to extend the deadline for safeguard negotiations by 18 months, to 15 June 2002; and (ii) provide for a stock-taking exercise in December 2001 to review progress made and to plan for the final months of the negotiations. Since that date, a number of delegations had indicated, however, that they would not be in a position to accept this proposal. Therefore, he had held a further informal meeting, on 23 November, with the objective of reaching a consensus on this issue. The results of this last informal meeting had been faxed to Members on 24 November, and, on 28 November, a new proposal had been submitted. It included a draft communication by the Chairperson of the Working Party to the Council for Trade in Services, as well as a draft decision. In this draft decision, it was proposed to extend the deadline by 15 months, i.e. until 15 March 2002.

20. The representatives of Uruguay, El Salvador, Hong Kong, China, Norway, the Republic of Korea, Guatemala, India, and Brazil supported the proposal made by the Chairperson.

21. The representative of Pakistan said that his delegations was ready to join the consensus. He would nevertheless appreciate to hear information regarding the legal basis of the decision to extend the negotiating deadline, and, in particular, what was the meaning of the words "*Having regard to the provisions of Article X*" of the GATS.

22. In response, the Secretariat pointed out that the same language had been used in two previous decisions to extend the deadline for negotiations under Article X. The fact that these two decisions had been effective and unchallenged was a legal precedent which would appear to establish the ability of the Council for Trade in Services to take such decisions and given them legal effect. Indeed, over the past five years, the Council had taken a large number of decisions with more substantive effect, including the addition to the GATS of a very large number of new commitments. There was nothing in the GATS or in the WTO Agreement that would limit the power of the Council to take such decisions, except that in cases where formal interpretation or formal amendment of the GATS was in question, the formal procedures in the WTO Agreement might be invoked. This had never yet been found to be necessary.

23. A representative of the Secretariat further added that the legal basis for any action taken by the Council for Trade in Services was based on its mandate, as stipulated in paragraph 5 of Article IV of the WTO Agreement, namely to "oversee the functioning of the GATS". This would, in principle, entitle the Services Council to adopt any decision concerning the functioning of the GATS, unless otherwise provided for in the WTO Agreement. For example, the adoption of an authoritative interpretation of, or introducing an amendment to, a provision of the GATS would have to be decided upon by the General Council (or the Ministerial Conference), as stipulated in Articles IX and X of the WTO Agreement, respectively. The question of whether the Services Council had the mandate to adopt a decision postponing the deadline for a negotiation had been raised six months after the entry into force of the WTO Agreement in 1995 with respect to the deadline of the negotiations on financial services. That decision had legal implications that were going beyond simply extending the time for negotiations. It also extended the deadline for the listing of MFN exemptions by Members in that sector. The main legal question was then whether such an extension would constitute an "amendment" to the GATS within the meaning of Article X of the WTO Agreement. The legal analysis and the discussion of this issue at the time (the details of which could be provided if

Members so wished) had concluded that the mere change of a date (i.e. extending a deadline) should not in itself be considered an amendment to the GATS. Therefore, a decision on that matter would fall within the mandate of the Services Council. As regards the second point raised by the delegation of Pakistan, concerning the phrase in the Decision "*having regard to the provisions of Article X*" of the GATS, the representative of the Secretariat stated that this phrase did not contradict the essence of the Decision, which actually carried forward all the substantive elements of Article X. The only element in the Article that the Decision altered was the deadline for the negotiations.

24. The representative of Egypt noted that the reference to a stock-taking was included in the communication and not in the decision itself. His delegation was nevertheless still prepared to accept the text proposed by the Chairperson, on the understanding that there would be an opportunity to take stock of the progress made on the occasion of the next annual report of the Working Party. The Chairperson said that there was an agreement on this point.

25. The representative of Panama said that his delegations had some doubts regarding the language used in the draft decision and did not agree entirely with the explanation given by the Secretariat. He would, however, join the consensus.

26. The representative of Thailand, speaking on behalf of the ASEAN Members, noted that it was not the first time that the deadline needed to be extended. In the view of the ASEAN Members, it would have been possible to complete the work within 12 months with the necessary political will. The ASEAN delegations would nevertheless not stand in the way of the consensus solution proposed by the Chairperson, but hoped it would be the last extension, and that an agreement would be reached by 15 March 2002.

27. The Chairperson concluded that the Working Party approved the Chairperson's communication to the Council for Trade in Services, as well as the draft decision. He would submit the draft decision to the Council for approval. It was so agreed.

B. NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

28. The Chairperson recalled that, at the last meeting, Members had addressed in informal session, item 1 of the Chairperson's Checklist on Subsidies, i.e. *Definition of a subsidy (including relevance of the definition in the Agreement on Subsidies and Countervailing Measures* (Job No. 4519, 17 July 2000). A summary of the meeting was contained in the Secretariat's Note Job No. 6142 (9 October 2000). A revised Checklist had been circulated as Job No. 4519/Rev.1 (6 October 2000).

1. Examination of evidence

29. The Chairperson invited delegations to address item 2 of the Checklist (Job No. 4519/Rev.1): *Examination of any evidence of subsidies which may have distortive effects on trade in services (including production, distribution, consumption and export subsidies). Consideration of sources of information*. He stressed that contributions from Members were needed in order to make progress on this point. With respect to data gathering, he recalled that, in their communication presented in March (S/WPGR/W/31, paragraph 9), Argentina and Hong Kong, China had made various suggestions to improve the data situation. Moreover, the Secretariat had updated two previous notes: (i) S/WPGR/W/13/Add.1 presented subsidy-related entries found in schedules attached to the Fourth and Fifth Protocol, as well as in schedules of Members which had acceded to the WTO since January 1996. In S/WPGR/W/25/Add.1, the Secretariat had compiled subsidy-related information extracted from 37 Trade Policy Reports published since December 1997.

30. The representative of Argentina said that his authorities had begun to review some practices relating to services export subsidies, a subject which had received little attention so far in the Working Party. They had gathered information on export credits for services concerning about thirty countries, based upon publicly available information. Normally, the subsidy element of an export credit resulted from the soft conditions attached to it, for instance the interest rate. Such programmes generally referred to the export of services in general. Some countries were more specific and the beneficiary sectors included construction, environmental projects, consulting services, engineering services. There was no reliable data as to the subsidy component of these programmes. Only one country had recently begun to publish information indicating the subsidy rate which, for some years, exceeded eight per cent. From an economic point of view, there should be no reason why a government practice which might distort trade in goods, would not distort services trade, if applied in the same manner. These practices affected sectors where many developing countries had competitive advantages. An UNCTAD communication (see Job No. 4235, 16 July 1999) noted, in paragraph 17, that businesses in developed countries normally benefitted from financial support of their governments. It stated, for instance, that trade flows in construction services were affected by heavy government subsidies to exporters, tied aid, external financing packages, etc.

31. The representative of Hong Kong, China said that his authorities were still consulting with the industry. It was hard to come up with concrete details because governments did not seem to be willing to state exactly what sort of subsidies they were undertaking. Many of these subsidies might be at a sub-federal level, or involve tax-related matters. The scope of the problem was potentially large. As said by Argentina, export-enhancing and import-substituting subsidies would probably have the strongest effects. But efforts to attract investments could also affect trade in services. Subsidies in the goods area could have a negative effect on trade in services. For example, it was conceivable that subsidies for a very large aircraft or for building new headquarters could have a distortive effect on related trade in services. The distortive effect would depend on the type of subsidy, how specific it was and whether it was given on a national treatment basis. Subsidies given on a national treatment basis had a less injurious effect. In turn, this called for more commitments in the national treatment area. His delegation would try to present more concrete examples.

32. The representative of Brazil said that his authorities were coordinating with the private sector and other pertinent government agencies in order to assess the types of subsidies having trade distortive effects. He noted with interest what had been said by Argentina. In that regard, the OECD document on "Arrangement on Guidelines for Officially Supported Export Credits", the so-called "yellow book", was a useful source of information to identify sectoral subsidy programmes. Another source was the compilation of Trade Policy Reports prepared by the Secretariat (S/WPGR/W/25 and -/Add.1). He suggested that this document could be updated to include the latest TPR reports. This document clearly indicated the existence of subsidies in some sectors, like maritime transport. Brazil also attached great importance to the discussion of disciplines to avoid trade-distortive effects in services. Several delegations supported Brazil's request for an update of the Secretariat's Note on Trade Policy Reports.

33. The representative of Guyana said that subsidies were necessary for his country to help its services suppliers to catch up. As in the goods context, a different treatment was needed for developing and least-developed countries.

34. The representative of the Republic of Korea noted that the fact that GATS dealt with four modes of supply, as opposed to one in the goods sector, complicated the issue. However, the concepts used in the goods context might be imported into the services context. More attention should be paid nevertheless to national treatment. He noted that it was difficult to define "regulatory subsidies"; in this context, other provisions of the GATS might be relevant. He understood the concerns regarding infrastructural services, but caution should be exercised in this regard. For instance, education provided by a government should not be considered a subsidy, but what about telecommunications?

35. The representative of the United States agreed with Argentina that, intuitively, there should be no economic reason why government action in the goods sector should be more likely to distort trade than the same type of action in services. However, in spite of efforts by his authorities to obtain inputs, US companies had not yet reported on problems they might face with distortive subsidies, and the reasons for this silence were not clear. It might be that subsidies were less prevalent in services as opposed to goods. This issue would be worth considering. It might also be related to national treatment implications and whether national treatment obligations might curb some of the more potentially distortive subsidies.

36. The representative of Argentina said that subsidy disciplines should take the need for special and differential treatment into account. From an economic point of view, the effect of subsidies granted by the fifteen main exporters in the world, who captured 82 per cent of international trade in services, was different from a subsidy granted by a relatively marginal country. He agreed that policies in some services sectors were based on legitimate objectives on which all Members could agree, such as health or education. But some subsidies were granted to sectors which had nothing to do with such objectives. There were practices directly affecting exports of services, or subsidies granted to sectors which in most cases had an international dimension, such as shipping. More information was needed in order to carry out the Article XV mandate.

37. The representative of Thailand, speaking on behalf of the ASEAN Members, said that the second item was linked to other issues on the Checklist, and flexibility was necessary in addressing them. In the light of the fact that the national treatment obligation was subject to commitments, subsidy disciplines should apply only in committed sectors. With respect to the third point of the Checklist, the representative of Panama said that it would be important to clarify the incidence of the lapsing of certain disciplines of the Agreement on Subsidies and Countervailing Measures. The role of subsidies in development and the need for special and differential treatment should also be examined. The possibility that goods subsidies could also affect services trade should be analysed, but only once a services subsidy was defined. The representative of Mexico drew attention to the legal aspects involved in subsidies. Programmes for export credits might legally not be considered a subsidy, but they nevertheless had trade-distortive effects. How Members would define a subsidy was therefore important. All programmes that had trade-distortive effects should be taken into account, whatever their legal structure. The representative of the European Communities noted that S/WPGR/W/25 merely listed subsidies, without prejudging their potential distorting effect on trade. The difficulty was to establish a benchmark to decide at what level services subsidies had trade-distortive effects. The representative of Canada said that there was no evidence of trade-distortions in this area. Many forms of government assistance were not relevant to the discussion. His delegation was interested in examining further data on governmental assistance, and in particular the effects of such assistance on services trade.

38. The Chairperson said that the starting point for some delegations was that, in principle, government assistance for services should be no more trade-distortive than for goods. Lack of empirical evidence was a problem and the reasons for it were unclear. When subsidies were identified in a given sector, this did not necessarily imply that they were trade-distorting. If Members were to start drafting some disciplines, they needed to identify such distortions. He noted that some delegations had promised written contributions. As requested by delegations, the Secretariat would update S/WPGR/W/25 to include information from new Trade Policy Reports. However, empirical evidence of any trade-distortive effects should come from Members.

2. Definition of "subsidies"

39. The Chairperson thanked the delegation of Argentina for the Non-paper on *Definition of subsidies in services* (Job No. 6629, 24 October 2000). Delegations were invited to address this Non-paper, as well as the Communication introduced by Hong Kong, China at the last meeting of the Working Party, *Definition on subsidies in services* (Job No. 5870, 27 September 2000).

40. The representative of Argentina said that the Non-paper presented by his delegation took the definition contained in the Agreement on Subsidies and Countervailing Measures (ASCM) as a starting-point. Central elements of that definition, such as "financial contribution" or "specificity", were relevant. Subsidies had to be distinguished from other regulatory practices which, although they might benefit suppliers, should fall under other disciplines of the GATS.

41. A number of delegations thanked the delegation of Argentina for submitting this Non-paper.

42. The representative of Kenya said that only rich countries could afford significant levels of subsidies. With respect to the notion of "specificity" of a subsidy, referred to in paragraphs 10 and 11 of the Argentinian paper, it was relatively easy to distinguish between general measures of economic policy and those benefitting certain firms, in particular in the context of goods. However, the distinction might be blurred in some contexts. For instance, a subsidy extended to a bank, in order to prevent it from going bankrupt and, thus, harming small-scale savers, could be said to be specific, but would in fact have wider economic policy implications. He agreed that, as stated in paragraph 14 of the Argentinian Non-paper, the definition of the ASCM might need to be further refined.

43. The representative of New Zealand agreed that the definition of the ASCM could be used as a starting-point for any services subsidy disciplines. The notions of "financial contribution" and "benefit" were important. He also felt that this definition might need to be refined, in the light of the specific mandate of Article XV. His delegation was open-minded as to the scope of any definition, and in particular as to whether regulatory measures should be included. As shown in paragraph 11 of the EC Communication (Job No. 4302, 6 July 2000), some economic advantage could be conferred by granting a services provider privileged access to infrastructure, for instance. When exploring the notion of "benefit" and "financial contribution", implications related to regulatory practices should be borne in mind. Discussion of these issues should not be foreclosed, even though it might lead to the conclusion that these practices should be dealt with under Article VI:4 of the GATS.

44. The representative of Hong Kong, China said that regulatory measures might fall under other provisions of the GATS and should not be tackled under Article XV. Introducing regulatory interventions into the equation could complicate matters. He agreed with paragraph 11 of the Argentinian Non-paper, but enquired what level of specificity would be relevant. The question of special and differential treatment was an important one. Developed countries had more resources to use for the purpose of subsidizing. In his view, disciplines should apply across the board, but the issue of whether they should apply only to committed sectors was worth discussing. He was conscious of the political realities and difficulties surrounding social subsidies and wanted to protect the WTO from being accused of telling governments what to do in the education or health sectors. He agreed with the EC that definitional elements were needed to determine trade-distortiveness. Having classes of subsidies, as in the ASCM, might be the best way to address this problem.

45. The representative of the United States considered that the Argentinian Non-paper was a constructive effort, although his delegation could not endorse all the points made. On paragraph 6, he agreed that GATS Article XIII carved-out government procurement from GATS disciplines, but would not necessarily reach the same legal conclusions. It was true, however, that government procurement might potentially confer an indirect benefit in commercial services. The analysis in paragraph 7 deserved further consideration. He noted the concerns raised in paragraph 8 regarding

measures of a regulatory nature, but wondered whether the terms used ("income or price support") would actually embrace this type of measures. The analysis on "specificity" was very sound. As pointed out by Hong Kong, China, a definition of subsidies could refer to different classes of subsidies, in terms for their potential for distortion.

46. The representative of Switzerland said that, at least at the beginning, the debate should focus on the financial nature of subsidies. Regulatory matters would fall under other provisions of the GATS. For the sake of coherence, the definition of "public body" should refer to GATS Article I (paragraph 7 of the Argentinian paper). He enquired what idea stood behind the second sentence of paragraph 8. The notion of specificity was a pragmatic approach to consider the notion of trade-distortions. Another issue was whether a subsidy in the area of goods could also affect services: if the good was not exported, it would probably be covered by GATT disciplines, but might nevertheless affect services trade.

47. The representative of Japan said that defining the scope of "subsidies" was a prerequisite to establishing disciplines. Using the ASCM as a starting-point was a good approach. He agreed that entities granting subsidies should be defined by reference to GATS Article I:3(a). Japan was interested in further discussing the issues raised in paragraph 8 of the Argentinian paper and asked what was meant by "income or price support". The representative of Canada said that, while the issue of definition was important conceptually, his delegation had not determined yet whether specific subsidy disciplines were relevant for services. With respect to paragraph 9 of the Argentinian paper, he wondered how the notion of benefit could have the effect of narrowing the scope of the definition. In the goods context, two conditions had to be satisfied for a subsidy to be deemed to exist, namely "financial contribution" and "benefit". The representative of the European Communities disagreed with the last sentence in paragraph 6 of the Argentinian paper because there were no disciplines yet on government procurement. The issue of regulatory interventions should be given further consideration. The representative of Brazil said that Article 1 of the ASCM provided a good basis for further work. The four types of financial contribution and the specificity of the subsidy were key elements. It was important to provide for a carve-out for GATS Article XIII:1. His delegation was still reflecting on the question of regulatory interventions. He concurred with the conclusion expressed in paragraph 12 of the Argentinian paper.

48. The representative of Chile commented on the exclusion of government activity from subsidy disciplines, raised in paragraph 3(d) of the Communication by Hong Kong, China (Job No. 5870, 27 September 2000). Such exclusion might have the consequence that different Members with different situations might have different disciplines. On the other hand, it should be remembered that government services not supplied on a commercial basis could have distortive effects on international trade when the relevant markets were open to competition (this was the case in air and maritime transport, for instance).

49. The representative of Argentina said that the distinction, in paragraph 6, between government procurement of goods and subsidy disciplines aimed at maintaining a distinction which already existed in goods trade, where it was recognized that public procurement as such did not fall under the ASCM. The same standard should apply in services trade. Paragraph 8 raised the question whether the concept of "income or price support" could be transferred in the context of services. It might be said that any regulatory intervention could imply price support to the extent that it granted a competitive advantage (see, for instance, footnote 5 of the Non-paper). The notion of "benefit" (paragraph 9) should not be considered in isolation, but in relation to the concepts of financial contribution and specificity. Any definition should be precise enough to avoid circumvention.

50. Responding to the comment made by Chile, the representative of Hong Kong, China pointed to paragraph 8 of Job No. 5870. The definition contained Article I:3(b) stated, *inter alia*, that services provided in the exercise of governmental authority were services not supplied on a commercial basis.

51. The Chairperson noted that the Argentinian paper had been well-received. Several topics had been identified, such as: using the ASCM definition, and its various elements, as a basis for further work; the issues of regulatory interventions and social subsidies; whether it was opportune to establish classes of subsidies. This listing was not exhaustive. At the next meeting, he would invite Members to address item 3 of the Checklist (*To what extent do WTO rules, in particular the GATS and its national treatment and most-favoured-nation disciplines, already discipline services subsidies or provide the means to do so? This would include consideration of technical issues related to the GATS, including mode specificity and the concept of "like service"*). Delegations would have an opportunity to come back on points 1 and 2 as well. He suggested that it might be useful for the Working Party to discuss these issues informally and invited reactions from delegations in this regard. As agreed earlier, the Secretariat would undertake a further update of S/WPGR/W/25.

C. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

52. The Chairperson said that, as agreed at the July meeting, the Secretariat had circulated two documents under this agenda item: (i) a list of documents dealing with relevant activities in the Working Group on Transparency in Government Procurement and the Committee on Government Procurement (Job No. 7053, 7 November 2000); and (ii) a factual note compiling services concessions made in the framework of the Agreement on Government Procurement (Job No. 7072, 8 November 2000).

D. DATE OF THE NEXT MEETING

53. The Chairperson indicated that the next formal meeting of the Working Party would take place in March 2001, as part of the cluster of services meetings. The exact date remained to be determined. He recalled that he would convene an informal meeting on the issue of emergency safeguard measures at the beginning of next year.

E. OTHER BUSINESS

54. The Chairperson recalled that, on 3 November 2000, the Secretariat had circulated draft annual reports from the Council for Trade in Services, the Special Session of the Council and the subsidiary bodies (see Job No. 6990). The annual reports had to be adopted by the Council for Trade in Services and its subsidiary bodies prior to their submission to the General Council on 7 December. Moreover, the reports had to be circulated in their final form at least 10 days before the General Council meeting. Given this requirement and the time constraints imposed by the schedule of services meetings, it had been necessary to resort to a written procedure for adopting these reports. The draft report for the Working Party on GATS Rules was contained in document S/WPGR/W/35. Delegations had been invited to communicate to the Secretariat by 17 November 2000 any views or comments they might have on these draft reports. In the absence of any comment, the report had been considered to be adopted on 17 November 2000; it had been issued in its final form on 23 November 2000 in document S/WPGR/5.

Working Party on GATS Rules

REPORT OF THE MEETING OF 27 SEPTEMBER 2000

Note by the Secretariat

1. The Working Party on GATS Rules held its twenty-ninth meeting under the chairmanship of Mr. Tony Sims, from the United Kingdom. The agenda for the meeting was contained in WTO/AIR/1381. It consisted of five items: negotiations on safeguards under GATS Article X; negotiations on subsidies under GATS Article XV; negotiations on government procurement under GATS Article XIII; date of the next meeting; and other business. The agenda for the meeting was adopted.
2. The Chairperson drew attention to an informal Note (Job No. 5538, 15 September 2000) he had circulated to assist delegations in their preparation for the meeting.
 - A. NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS
3. In the absence of new contributions from Members, the Chairperson proposed to revert to items 1 (definition of "domestic industry") and 2 (issue of "acquired rights") of Job No. 1979 (29 March 2000). Delegations were also invited to consider two informal papers prepared by the Secretariat following requests by the Working Party at its informal meeting on 22 June 2000: first, a factual background note on GATT/WTO dispute settlement practice on the concept of "unforeseen developments", as contained in GATT Article XIX (Job No. 5077, 18 August 2000); and, secondly, a technical paper on the possible forms of special and differential treatment in an emergency safeguard mechanism (Job No. 5539, 15 September 2000). Finally, in view of future thematic discussions in the Working Party, delegations would also be invited to comment on whether the Chairperson's Note Job No. 1979 should be revised. He proposed to discuss these issues in informal mode.
4. The representative of Thailand, on behalf of ASEAN, informed the Working Party that ASEAN was working intensively on a draft agreement on a possible safeguard mechanism for trade in services. He stressed that this draft was not based solely on ASEAN's position, but was an attempt to take into account, to a very large extent, the discussion so far in the Working Party. The draft was nearly completed. It would propose solutions to most of the conceptual issues raised in the Working Party. ASEAN was trying its best to circulate a well-conceived draft in the very near future.
5. The representative of Poland replied to a question posed at the July meeting by the delegation of Kenya (see para. 11 of S/WPGR/M/28) in relation to the communication presented by Poland in S/WPGR/W/34. The National Bank of Poland had confirmed that the Foreign Exchange Law was in force since 12 January 1999. The possibility, contained in Article 18 of the Law, to introduce a safeguard measure was not related to any particular reason existing in the Polish economy – there had been no currency crisis in Poland in the nineties – but was justified by the fact that the Polish economy was subject to an in-depth restructuring. A progressive liberalization of capital flows had been implemented in the country. Such policy might entail foreign exchange or financial disadvantages.

6. The Chairperson suggested to turn to informal mode to discuss the issues mentioned earlier. The Secretariat would prepare a note summarizing the comments made.¹ It was so agreed.

B. NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

7. The Chairperson drew attention to a communication circulated by the delegation of Poland in document S/WPGR/W/16/Add.4/Suppl.1 (dated 20 September 2000).

8. The representative of Poland said that this paper was a supplement to the notification made in document S/WPGR/W/16/Add.4, describing subsidy programmes and aids in services granted in the years 1997-1998. He recalled that, when presenting the initial document, his delegation had promised information on aids granted in 1999 as soon as the data were available. He noted that, although the aids in 1999 were granted only under the second of the programmes listed, all three were still in force. The third programme would be operational until 2009. The sums indicated for these programmes were in Polish zlotys (4 zlotys approximated 1 US dollar in 1999). The Chairperson thanked the delegation of Poland and urged other delegations to respond to the 1997 subsidy questionnaire.

9. The Chairperson recalled that, as agreed at the last meeting of the Working Party, he had circulated a Checklist on Subsidies (Job No. 4519, 17 July 2000). In preparing it, he had tried to maintain a balance between, on the one hand, those delegations who wanted a comprehensive list, and, on the other hand, those who were in favour of a short list. He had attempted to present topics in a logical order, so as to allow for a sequential approach. One item would be proposed for each successive meeting; however, since all these issues were interconnected, it would be artificial to ignore cross-linkages. He intended, therefore, to ensure flexibility when addressing the items on the list. It should not become a straightjacket. He enquired whether delegations had suggestions or comments to make.

10. The representative of Brazil said that point 5 of the list should include a reference to the possible need for additional GATS disciplines to avoid trade-distortive effects, including the appropriateness of countervailing procedures. This latter point was explicitly mentioned in the Article XV:1 mandate. The Chairperson said that the list would be revised to include this suggestion.

11. The representative of Canada supported the Chairperson's proposal to have a more structured discussion on subsidies. He reiterated his delegation's concerns about any discussion of the relevance of subsidies granted for public policy objectives. To the extent that WPGR wanted to engage in a substantive discussion on this point, Canada would convey strong views on this issue.

12. The Chairperson suggested to turn to informal mode to discuss item 1 of the Checklist, i.e. "Definition of a subsidy in services (including relevance of the definition in the Agreement on Subsidies and Countervailing Measures)". The Secretariat would prepare a note summarizing the comments made. It was so agreed.²

C. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

13. The Chairperson invited further comments on the informal communication presented at the last meeting by the European Communities and its Member States (*Government procurement of services – Possible developments of multilateral disciplines*, Job No. 4021, 26 June 2000). Delegations were also free to raise any other point.

¹ This Note is contained in Job No. 3449/Add.2 (6 October 2000).

² This Note is contained in Job No. 6142, (6 October 2000).

14. The representative of the European Communities said they were still reflecting on a number of issues and, following the discussion at the last meeting, examining the possibility of presenting a list of points for further consideration. These included, *inter alia*, the issues of transparency, market access and national treatment, and MFN.

15. The representative of Poland said that his delegation supported work on transparency in government procurement of services as transparency was of basic importance in this field. She noted that GATS Article III already covered transparency. Similar issues were being examined by the Working Group on Transparency in Government Procurement ("WGTGP"), and provisions ultimately agreed to in the WGTGP would cover a wider range of products, including services.

16. The representative of Thailand, on behalf of the ASEAN Members, considered that the scope of the Article XIII mandate should be discussed before embarking on a more ambitious exercise. The relationship, if any, between the first and the second paragraphs deserved further consideration. The meaning of the phrase "government procurement in services under this Agreement", in para. 2, was of fundamental importance. He enquired whether this meant that negotiations in the Working Party were subject to the exemptions specified in Article XIII:1 or whether these could be modified in the course of the negotiations.

17. The representative of Brazil said that the Article XIII mandate was not necessarily conducive to market access negotiations. The question of MFN was difficult to dissociate from market access issues. Work on transparency should concentrate in the WGTGP so as to avoid duplication, but also because of the nature of government procurement: Brazilian legislation on government procurement did not distinguish between procurement of goods and services. Economic reality also showed that, in many cases, both goods and services were involved in the same transaction. For instance, a purchase of computer equipment would often include after-sale services.

18. The representative of Venezuela said that it was important to look at the scope of the mandate of Article XIII. It was important to bear in mind the incentive mechanisms that might be used by developing countries to promote competitiveness of local suppliers. All provisions related to transparency, both in goods and services, should be analyzed in the WGTGP. Work on this subject should also take into account relevant discussions in the Special Sessions of the GATS Council concerning the assessment of services trade and the benefits of trade liberalization for developing countries. The representative of the Republic of Korea considered that work on transparency should be conducted in the WGTGP. The representative of Canada said that further reflection was needed on the scope of Article XIII mandate, as presented in the EC paper. Canada agreed with the approach outlined by the EC whereby possible disciplines should be considered first, followed, at a later stage, by discussions on market-access commitments. Canada agreed that non-discrimination and transparency obligations were two important aspects of potential disciplines that could be examined by this Working Party. The possibility of additional disciplines that might be appropriate in a services agreement, with a focus on market access, should not be precluded.

19. The representative of India disagreed with the interpretation in para. 2 of the EC communication. His delegation felt that the intention of the negotiators was to exclude the three Articles referred to in Article XIII:1 from being part of any procurement disciplines in services, while the second paragraph mandated Members to consider whether – and negotiate the extent to which – the other provisions of the GATS should apply to government procurement. The representative of Argentina expressed interest in the points raised by Brazil regarding the negotiating mandate and ways to organize work in this Working Party. He noted that the scope of the negotiating mandate was a question which had already been raised in other contexts in this Working Party. The representative of the United States expressed doubts as to whether it was useful to examine the mandate of Article XIII. Should the mandate exclude national treatment, market access, and MFN, he wondered what it would actually cover. His delegation was pleased with the progress achieved on transparency

in the WGTGP, which covered both goods and services. The representative of Hong Kong, China said that his delegation understood that the multilateral negotiations covered all GATS Articles. He shared India's view that the first sentence of Article XIII should not be interpreted to mean that all other GATS provisions already applied, but disagreed with the suggestion that Articles II, XVI and XVII would not be part of the negotiations. The representative of Egypt supported the position expressed by India on the mandate of Article XIII. The representative of Japan expressed doubts whether it could be inferred from the first paragraph of Article XIII that all GATS provisions, except Articles II, XVI and XVII, already applied. However, his delegation was of the view that these three provisions were part of the negotiations.

20. The representative of the European Communities maintained that the explicit reference to Articles II, XVI and XVII in the first paragraph of Article XIII clearly implied that the other GATS provisions did apply. He said that it was desirable to establish disciplines on transparency and suggested that this work might be pursued in parallel in this Working Party and the WGTGP which could be mutually supportive.

21. The representative of Canada said that work on transparency in government procurement was important on its own merits. It was not, however, the only element of an agreement to improve market access in government procurement. Discussions on transparency should therefore continue in this Working Party and in the WGTGP.

22. The Chairperson recalled that, as agreed in July, the Secretariat would circulate before the next meeting of the Working Party: (i) a checklist of documents dealing with relevant activities in the Committee on Government Procurement and in the WGTPG, and (ii) a factual note compiling services concessions included in the framework of the Agreement on Government Procurement

D. DATE OF THE NEXT MEETING

23. The Chairperson informed the Working Party that the next formal meeting would take place on 30 November and 1 December 2000. He recalled that, as agreed during the informal session on safeguards, he would hold a three-day informal meeting on the issue of emergency safeguard measures on 1, 2 and 3 November.

Working Party on GATS Rules

REPORT OF THE MEETING HELD ON 7 JULY 2000

Note by the Secretariat

Corrigendum

Please note the following changes, requested by the delegation of Brazil:

Paragraph 28 should read:

"28. The representative of Brazil said that document W/25/Add.1 indicated the existence of subsidy practices in various services sectors (tourism, air and maritime transport, financial services, audiovisual); subsidies might also exist in sectors such as postal services, construction, R&D and advertising. It was possible to identify certain patterns in subsidy programmes, associated with the level of development of countries; for example, subsidies in tourism were generally granted by developing countries through tax incentives, while subsidies in the audiovisual sector seemed to be mostly granted by developed countries. Work should concentrate on subsidies that were contingent upon export performance and that had an effect on international trade in services, even though no precise information was available for the time being. Subsidies affecting competition in third markets should also be taken into account. Brazil agreed with others that work should focus on a list of topics including definitional *issues*, MFN, national treatment, likeness, mode specificity of subsidies, possible exceptions, and possible use of countervailing measures. ***However, the issues should not be considered in a strictly sequential manner, but altogether. Discussions should not be limited at their initial stage, to definitional issues, for example, the definition of subsidies, but also consider the other aspects that were mentioned.***"

Paragraph 42 should read:

"42. The representative of Brazil said that paragraph 1 of the EC paper went too far since Article XIII of the GATS only mandated Members to have multilateral negotiations on government procurement in services, but did not prejudice the result. He shared other delegations' doubts regarding the applicability of Articles III and VI to government procurement. The application of Article III:1 might be envisaged, but not III:3, which applied only if there were specific commitments. The same comments would apply to Article VI, paragraphs 1, 3, 5 and 6; moreover, any disciplines developed under GATS Article VI:4 in the WPDR could apply only to scheduled sectors. His delegation ***did not view the mandate of Article XIII as necessarily conducive*** ~~could not go along with suggestions to consider eventual~~ ***to market access negotiations for government procurement because this would be outside the scope of the mandate of Article XIII.*** Work on transparency should concentrate in the WGTGP."

* In English only. Please note that the changes are indicated in bold and italics.

Working Party on GATS Rules

REPORT OF THE MEETING OF 7 JULY 2000

Note by the Secretariat

1. The Working Party on GATS Rules held its twenty-eighth meeting under the chairmanship of Mr. Tony Sims, from the United Kingdom. The agenda for the meeting was contained in WTO/AIR/1343. It consisted of five items: negotiations on safeguards under GATS Article X; negotiation on subsidies under GATS Article XV; negotiations on government procurement under GATS Article XIII; date of the next meeting; and other business. The agenda for the meeting was adopted.
2. The Chairperson drew attention to an informal Note (Job No. 4058, 27 June 2000), he had circulated to assist delegations in their preparation for the meeting.
 - A. NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS
3. The Chairperson said that good progress had been made since the beginning of this year on the question of an emergency safeguard mechanism ("ESM"). The ASEAN Concept Paper (S/WPGR/W/30, 29 March 2000, hereinafter the "ACP") was a substantive contribution which had helped to focus discussion. The Working Party had held four informal meetings which had allowed detailed exchanges on the eight themes listed in the Chairperson's Note, Job No. 1979, as well as on issues raised by Members. This process had helped Members to identify important questions to be considered, irrespective of the form of any ESM. The Secretariat had prepared, under its own responsibility, a Note summarizing the informal discussions (Job No. 3449, 7 June 2000 and 3449/Add.1, 27 June 2000). Under this agenda item, he intended to address, first, the substantive aspects of the Working Party's work on an ESM and, second, procedural matters. With respect to the substantive debate on an ESM, the Chairperson suggested that Members elaborate on issues raised in past formal and informal meetings, for instance in relation to the ACP or the eight themes listed in Job No. 1979. Members were, of course, free to raise any other issue. He pointed out three papers tabled by the Secretariat, which delegations might want to consider: S/WPGR/W/32 (15 May 2000) described past and future work of the Inter-Agency Task Force on Statistics in International Trade in Services; S/WPGR/W/33 (31 May 2000) dealt with patterns of limitations scheduled under mode 2; the Secretariat had prepared a second revision of Job No. 5294 (*Relevant Criteria, Sources and Conditions*, Job No. 5294/Rev.2) in the light of recent informal discussions held in the Working Party. Before opening the floor for the general discussion, the Chairperson invited the delegation of Poland to introduce its communication on *Emergency Safeguards Mechanism Contained in Article 18 Act of 18 December 1998 on Foreign Exchange Law* (S/WPGR/W/34, 3 July 2000).
4. The representative of Poland said that the communication was of an informative nature, intended to contribute to elaborating rules governing an ESM in services and to give an example of a situation in which such measures might be used. The mechanism described was meant to deal with events presenting an extraordinary risk to the Polish financial system, for example if the foreign exchange reserves decreased substantially. Poland had not used this mechanism so far. A number of delegations thanked Poland for presenting this communication and said they would revert to it at the next meeting of the Working Party.

5. Introducing document S/WPGR/W/32, a representative of the Secretariat indicated that, in a few years, the work on a services manual might be sufficiently advanced to use services statistics in negotiations. This did not, however, imply that they could also be used in the context of safeguard action, since these statistics would still be at quite a high level of aggregation. In that regard, it might also be worth recalling that, in the area of goods, safeguard actions were not necessarily based on official statistics, which, in many cases, were still too aggregated and too old in order to provide an empirical basis for an emergency action. The 1999 report of the Committee on Safeguards (G/L/338, 26 October 1999) listed, for instance, products such as sandals or safety matches, for which official statistics were unlikely to be available. Thus, the situation in services might not be very different from goods. The key question seemed to be what data, rather than what statistics, would be available.

6. The representative of Thailand, speaking on behalf of the ASEAN Members, informed the Working Party that ASEAN had taken the initiative to hold a series of informal meetings to discuss technical issues related to the ACP. The purpose was to provide an informal setting in which Members might further exchange views and provide ASEAN with inputs, which, together with the on-going work in the Working Party, could be used as a basis for a draft text on emergency safeguard measures. So far, two such meetings had been held at the Mission of Thailand and another meeting would be held on 25 July, open to all Member wishing to participate. ASEAN was of the view that, since the ACP had been submitted to the Working Party, a thorough and useful debate had taken place. All key issues that could possibly be identified at this stage had been examined and needed to be properly digested. ASEAN would seriously reflect on comments received and hoped to be able to submit a draft text to the Working Party in the autumn. Turning to the papers prepared by the Secretariat, he said that Job No. 5294/Rev. 2 faithfully reflected discussions in the Working Party on indicators and criteria for injury determination and would help ASEAN to update the ACP. S/WPGR/W/33 was a good attempt to establish patterns of limitations under mode 2, as these were contained in schedules of commitments. This paper showed that such limitations existed under the GATS for both horizontal and sector-specific purposes. An ESM was in essence an additional limitation to a Member's specific commitments. If such limitations already existed under mode 2, then it would only be consistent with the GATS framework to allow Members to apply a safeguard measures also under mode 2. The patterns provided in W/33 were concrete proof that, for a large number of Members, it was feasible to apply limitations to their specific commitments under mode 2. It should then also be feasible to apply and enforce an ESM under mode 2. He noted that W/33 enumerated the types of measures that might be taken as ESMs, and were not necessarily limited to measures targeted at consumers. Relevant measures included, for instance, requirements on the supplier to be locally established; some 80 Members had scheduled this type of limitation in financial services. It would then be only logical to allow that such a measure be used as an ESM. ASEAN was therefore convinced that an ESM was applicable for all modes, including mode 2.

7. The representative of Argentina said that sub-paragraphs (iii) and (iv) of paragraph 1 of the Polish communication were very interesting because they described two situations that were not included in any provision of the GATS, for example Article XII. It might be interesting to examine paragraph 1(iii) because of the obligation on all Members to authorize the inflow of capital where there were commitments, in particular in light of footnote 8 to Article XVI of the GATS. If mode 1 were to be liberalized by a Member, for instance, such a situation could occur; this was probably what Poland had in mind.

8. The representative of Egypt said that the paper presented by Poland was relevant because it indicated the circumstances in which a safeguard measure could be taken and gave some understanding of the terms "unforeseen circumstances". He hoped that other Members could also describe situations in which they would take safeguard measures. He further noted that the mechanism presented by Poland aimed at preserving the stability and integrity of the financial system and that increased supply of services in the financial sector could affect the equilibrium of the balance-of-payments.

9. The representative of India wished to encourage ASEAN Members in their efforts to present a revised text. The Working Party had to bear in mind its mandate and deadline, and all delegations should engage fully under this agenda item.

10. The representative of Brazil agreed that the Working Party had made very significant progress in the last months, thanks to the ACP and the examination of the eight points listed in Job No. 1979. The process had led to a better focus and an improved understanding of the elements which might be part of an ESM; this helped to visualise possible disciplines for an ESM which would be operational, not more burdensome than Article XXI, and would give the necessary comfort and legal certainty to Members wishing to liberalise access to their market. Brazil was pleased to participate in the process initiated by the ASEAN Members. Concerning the availability of data and statistics, Brazil was of the view that data provided by companies played a very important role and were sufficiently disaggregated; the problem of statistics should therefore not be exaggerated.

11. The representative of Kenya asked the delegation of Poland if the legislation presented in W/34 had been made necessary by capital inflows attracted in the last decade. The representative of Poland said her delegation would answer at the next meeting of the Working Party.

12. The United States said that the law referred to in W/34 might be more relevant to other areas of the GATS. He agreed that discussions on ESMs, in particular those held in informal mode, had been very fruitful and had raised an important number of questions. All delegations had constructively participated. On Job No. 5294/Rev.2, he welcomed the clarification made in table 2, but still had questions regarding the difficulties that might be encountered in obtaining reliable statistics on many of these factors, in particular those related to increases in imports. The point made by the Secretariat regarding the possible use of unofficial data and sources was worth considering. W/33 gave a good overview of the types of measures that had been scheduled under mode 2, but a large number of them were not specific to mode 2. The types of restrictions that looked most relevant for an ESM would appear to be discriminatory tax measures; restrictions on transfers; payments or capital transactions; exclusions from insurance reimbursement and public support; as well as various forms of quantitative restrictions. While all these measures might theoretically be used under an ESM, it was not clear how some very basic safeguard concepts, such as degressivity, could be incorporated.

13. The representative of the European Communities said she doubted whether the communication presented by Poland went beyond what was covered by GATS Article XII and the carve-out for prudential measures contained in the Annex on Financial Services.

14. The representative of Canada noted that an ESM raised difficult conceptual issues, but also had profound trade policy implications. Therefore, Members had to ensure that any such mechanism would be on solid ground. The question of transparency should be looked at, not only in terms of WTO procedures, but also from a domestic point of view to ensure due process. In relation to Job No. 5294/Rev.2, he wished to emphasize the importance of a clear causal link between the increased supply of foreign services and its impact on domestic suppliers. There was currently a lack of data which made it difficult to ensure that such a link was duly established. It was necessary to relate the increased participation of foreign suppliers to liberalization commitments undertaken by the Member concerned, based on objective criteria.

15. The representative of Japan expressed appreciation for the initiative taken by the ASEAN Members in tabling a concept paper and for the progress made so far in the Working Party. Japan looked forward to a revision of the ACP.

16. The representative of Venezuela suggested that a twelfth point should be added in table 2 of Job No. 5294/Rev.2, which would relate to transboundary movements in transport, whether by air,

road or sea. Information from international or national transport agencies in specific sectors would be needed. He agreed that many relevant statistics or information sources were private; in the case of services, the weight of such information could be considerable.

17. The representative of the Republic of Korea considered that the matter raised by Poland in W/34 related mainly to GATS Article XII. He acknowledged that the ACP had facilitated and focused the debate, and was looking forward to the revised text. He wished to clarify previous interventions by his delegation concerning the distinction between national and foreign firms: the reason Korea had stressed the need for this distinction was to facilitate drafting, but the intention was not to discriminate against foreign established suppliers. His delegation supported option 1 in paragraph 5 of the ACP.

18. In summing up, the Chairperson said that ASEAN and other delegations felt that the Working Party had had a detailed debate on all key issues relating to an ESM. It was now time to reflect and to consider a revised text. A number of delegations had expressed interest in participating in informal meetings held by the ASEAN Members. In his view, delegations had shown a high level of engagement in the last months. With respect to substance, it had been suggested that, in revising the ACP, ASEAN should look carefully at the issues of transparency and due process. Different opinions had been expressed on W/33: a first view was that limitations under mode 2 did exist and, thus, that it was possible to take safeguard action under this mode, but one delegation had wondered whether, in practice, such a safeguard action would work. More discussion was therefore needed on this subject. With respect to Job No. 5294/Rev.2, there clearly remained questions related to the availability of statistics, but interesting points had been made about using unofficial data sources. The importance of a causal link was stressed in this context and there seemed to be a consensus on this point. He noted that various views had been expressed with respect to the communication circulated by Poland in W/34: some saw it as a new element in the discussion, whilst others considered that the issues raised were already covered by GATS Article XII and the prudential carve-out.

19. Before concluding on this agenda item, the Chairperson suggested to consider how to organise work in the coming months in view of the 15 December deadline. He recalled that the question of principle about the desirability of a safeguard could not be prejudged and that it had been agreed to leave this question aside for the time being. Members had had very useful formal and informal discussions on a number of themes in recent months but many issues remained unresolved and discussions needed to continue. Meanwhile, ASEAN had indicated that it was planning to table a draft safeguard text in the autumn. Having any such text or texts would help the Working Party to focus on hard policy choices, including feasibility and desirability, which would have to be tackled in relation to any possible safeguard. In his view, it would therefore be appropriate to give due consideration to any such text(s) and discuss them in a comprehensive manner, whilst at the same time not excluding discussion of any other past or present contribution which might be on the table. He was of the view that, in order to keep order in the debate, it would be useful to continue to consider any contribution on a thematic basis, in the same way as the Working Party had structured its work in recent months, although it might need to be reconsidered whether the list of themes contained in Job No. 1979 needed to be expanded. Finally, he proposed that the Working Party should consider in September how to organise its time in the autumn, on the basis of what would be on the table. It was so agreed.

B. NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

20. The Chairperson drew attention to the papers prepared by the Secretariat, based on proposals by Argentina and Hong Kong, China in S/WPGR/W/31. In S/WPGR/W/25/Add.1, the Secretariat had compiled subsidy-related information extracted from 37 Trade Policy Reports published since December 1997, thereby updating a previous Note circulated in January 1998. S/WPGR/W/13/Add.1 presented subsidy-related entries found in schedules attached to the Fourth and Fifth Protocols, as

well as in schedules of Members which had acceded to the WTO since January 1996. As mandated by the Working Party, the Secretariat had also undertaken a survey of regional trade agreements notified since 1996, in order to update a previous Note (S/WPGR/W/12). However, no relevant information had been found additional to that already contained in S/WPGR/W/12. The Secretariat had also enquired whether work carried out at the OECD could provide relevant information and, in particular, whether the 1996 study on *Public Support to Industry*¹ had been updated; the answer was, in both cases, negative. The Chairperson understood that Australia and New Zealand were still considering whether they could supply any relevant information on ANZERTA. He encouraged delegations to complete the 1997 subsidies questionnaire (S/WPGR/W/16) and recalled that, in doing so, Members had the flexibility of not answering to all questions and of using their own definition of "subsidy". Moreover, any example of export subsidies would be welcome. He suggested two points for discussion: (i) delegations should give their views on the desirability and content of a possible checklist of issues, which might help the Working Party to address the issues raised in a more systematic manner; (ii) with respect to the substance, delegations might wish to focus on issues 10(a) and 10(b) of S/WPGR/W/31, i.e. "factors to be considered in developing any subsidies disciplines" and "social objectives of subsidy programmes". He invited the European Communities to introduce their informal note on *The Community Regime for State Aid in the Services Area* (Job No. 4302, 6 July 2000).

21. The representative of the European Communities said that this informal note intended to outline the EC regime for subsidies ("state aids" in EC law). The document did not give a detailed explanation of the disciplines for each sector, but simply underlined some aspects which were specific to the services area. The definition for "state aid" contained four elements: (i) transfer of state resources; (ii) economic advantage; (iii) selectivity; and (iv) effect on competition and trade between Member states. The EC aimed at establishing a competitive internal market free of distortions and, since subsidies might give an unfair advantage to one company, the principle was that state aid was prohibited. There were, however, a certain number of exceptions, in principle in exceptional circumstances, where subsidies might have a beneficial impact. Section D of Job No. 4053 described these exemptions and explained that the Commission, which was responsible for scrutinizing subsidies within the EC, had some discretion. The Commission had to verify, in particular, that the proportionality test was met, i.e. that the subsidy did not go beyond what was recognized to be the legitimate objective. The main specificities of the services area, as compared to the goods, were: (i) determination of the production capacity of services producers was much more complex; (ii) the concept of general economic interest services had to be respected, for those services, such as energy and communication, which were recognized to fulfil a public mission; and (iii) transport services, although subject to the general provisions on state aid, were subject to special rules. The EC policy in this field was not static, but evolved continuously. A number of delegations thanked the European Communities for their informal note and said they would comment on it at the next meeting of the Working Party.

22. The representative of Argentina said that W/13/Add.1 showed that national treatment could be a general discipline for subsidies. His delegation had started to do some homework on subsidies that could have distortive effects on trade (such as financing operations, export guaranties, and subsidies on interest rates) and hoped to make a contribution at the next meeting; he noted that, on pages 9, 17 and 21 of W/25/Add.1, the Secretariat had earmarked some of these subsidies. If they had a distorting effect on trade in goods, the same could arise in the case of services. He was in favour of developing a checklist of pertinent issues. In particular, the checklist should allow, as had been the case in safeguards with Job No. 1979, to discuss all subjects listed, without waiting for a conclusion on one item before moving to the next. Two subjects deserved particular consideration: (i) subsidies having a distortive effect on trade, and (ii) the application of current GATS disciplines to subsidies.

¹ Report by the Industry Committee to the Council at Ministerial Level, OCDE/GD(96)82, Paris, 1996. This study is available on request at the WTO Secretariat.

23. The representative of Hong Kong, China noted that W/13/Add.1 showed that acceding countries had frequently included a horizontal limitation for modes 1 and 2 and, sometimes, mode 3, with respect to the non-eligibility of non-nationals for subsidies. This might mean that acceding countries had particularly carefully analysed the need for such limitations or that they had made more wide-ranging commitments than most other Members. He agreed with the representative of Argentina that the question of national treatment could become a general principle in subsidies. With respect to W/25/Add.1, he took issue with the statement, in para. 5, that the application to services of the subsidy definition used in the Agreement on Subsidies and Countervailing Measures had not posed any problems in principle. It appeared to his delegation that a number of subsidies, including social and cultural subsidies, had not been mentioned at all. He said that the subsidies attributed to Hong Kong, China in table 1 of W/25/Add.1, under "Banking" and "Other financial services" reflected the intervention made by the government in the stock market in 1998; implying that this intervention had the effect of a subsidy was a subjective judgement which he would refute strongly. The government of Hong Kong, China had intervened to prevent a stock market movement which would have undermined the Hong Kong dollar; the government had bought all the constituent components of the Hang Seng Index (not just banks), but had played no part in the management of companies, and there had been no suggestion that companies in the Hang Seng Index had secured more favourable treatment. So, there was no financial contribution and no benefit conferred. He was disappointed that there was nothing to report concerning subsidy disciplines in regional trade agreements and this was perhaps due to the fact that only the ANZERTA and the EC had detailed enough rules. Concerning the follow-up on W/31, he supported the suggestion to use the points in paragraph 10 as a rolling-checklist of matters to be considered, and agreed with Argentina that all relevant issues should be addressed (such as public policy objectives, MFN, national treatment, trade-distorting effects, remedies, flexibility for developing countries) without prejudice to any final outcome.

24. Responding to the comments made by the representative of Hong Kong, China on W/25/Add.1, a representative of the Secretariat said that there was inevitably an element of subjectivity involved in classifying the content of TPR reports. He noted that the same criteria had been used throughout the TPR reports, and no account had been taken of the underlying policy intentions.

25. The representative of New Zealand supported the idea of having a rolling checklist of issues to the extent it helped to focus discussion. Documents W/31 and W/9 provided a source of useful information. He suggested to look in particular at questions raised in paragraph 41 of W/9. A checklist of issues had to focus on the essential purpose of the mandate contained in Article XV, namely the avoidance of distortive effects on services trade. There was, thus, a need to identify services subsidies having trade-distortive effect, since they would influence the shape of possible disciplines.

26. The representative of Uruguay suggested that W/25/Add.1 should be updated on a regular basis.

27. The representative of Switzerland said that W/25/Add.1 pointed out the lack of an agreed definition and confirmed that subsidies tended to concentrate on three sectors (maritime, tourism and financial services). It also highlighted the importance of determining the extent to which some sectors, such as health services, were provided under governmental authority. He noted that W/13/Add.1 was not as exhaustive as W/25/Add.1 because subsidies had been scheduled only if granted in sectors in which specific commitments had been undertaken. The problem of definition should be included in a checklist of issues, although agreement on a definition might be reached only when delegations had developed a clearer idea of the disciplines to be established. The implications of using national treatment as a disciplines should be examined more thoroughly. The scope of modes

1 and 2 and their relation with mode 3 should be clarified. Countervailing measures should also be discussed.

28. The representative of Brazil said that document W/25/Add.1 indicated the existence of subsidy practices in various services sectors (tourism, air and maritime transport, financial services, audiovisual); subsidies might also exist in sectors such as postal services, construction, R&D and advertising. It was possible to identify certain patterns in subsidy programmes, associated with the level of development of countries; for example, subsidies in tourism were generally granted by developing countries through tax incentives, while subsidies in the audiovisual sector seemed to be mostly granted by developed countries. Work should concentrate on subsidies that were contingent upon export performance and that had an effect on international trade in services, even though no precise information was available for the time being. Subsidies affecting competition in third markets should also be taken into account. Brazil agreed with others that work should focus on a list of topics including definitional issue, MFN, national treatment, likeness, mode specificity of subsidies, possible exceptions, and possible use of countervailing measures.

29. The representative of Canada said it would be useful to have general information about the frequency of use of the mechanism described by the EC in their informal Note, Job No. 4302. He considered that a checklist of issues would help to structure the discussion, but stressed that, according to the mandate of Article XV, work should focus on trade-distorting subsidies and not on subsidies in general. The checklist should concentrate on the definition of subsidies, the identification of trade-distortive subsidies in services, and the analysis of existing disciplines. It was premature to look at possible new disciplines.

30. The representative of the United States supported the idea of having a checklist of issues, whose content should be of an evolving nature. It was therefore not necessary to be comprehensive at this point. His delegation was in favour of a short and focused list to begin with. He associated himself with the suggestions made by Canada with respect to the content of the checklist and agreed that it was too early to address possible additional disciplines.

31. The representative of Thailand, speaking on behalf of the ASEAN Members, was also in favour of a checklist. Paragraph 10 of W/31 as well as elements contained in W/9 provided a good basis for such a list. He noted that some of the key issues, such as MFN, national treatment or likeness, had already been addressed in the context of the safeguard discussion and Members could refer to this discussion to the extent it was relevant for subsidies.

32. The representative of Australia said that work should concentrate on trade-distortive effects of subsidies and that a rolling checklist of issues should be short as a starting-point. There was a need to identify the core issues under this agenda item. The representative of Mexico supported the idea of a short checklist, containing the three issues mentioned earlier, i.e., definition, identification of trade-distortive subsidies, and analysis of fundamental principles (MFN and national treatment). The representative of Japan felt that a checklist of issues should give priority to definitional issues and trade-distorting effects.

33. The representative of Argentina was in favour of a longer checklist, closer to eight points than three. A real discussion was needed on the issue of trade-distortive effects because a subsidy might operate like a tariff in the subsidizing country. Any checklist should include subsidies subject to export-performance in order to discuss distortive effects on third markets.

34. The representative of Hong Kong, China said that, in order to consider questions like definition, one needed to know the scope and depth of the field of subsidies. It was essential to go through all issues before concluding on one in particular. The representative of the European Communities agreed that all the points on the checklist should be examined. MFN, national treatment

and definition should be on the list. The representative of Venezuela concurred that trade-distorting effects in third markets should be discussed and suggested that the concept of "nullification or impairment" be also included in a checklist.

35. In summing up, the Chairperson noted that there was broad support for a checklist of issues to structure the debate under this agenda item. Two different views had been expressed, however, on how to proceed: some delegations had said that all items should be addressed one after the other, while others wanted to focus first on core items. There was no need to decide at this stage how many items should be included in the list. He noted that three points had received broad support, namely: definition, trade-distortive effects and scope of current disciplines, in particular national treatment and MFN. Other points raised included the role of subsidies for developing countries, mode-specificity, likeness, remedies (including countervailing measures), public policy objectives, possible exceptions and the concept of "nullification or impairment". He suggested that, on the basis of this discussion, he would draft a checklist to be circulated by the end of July, so that the Working Party could discuss it at its next formal meeting. He also proposed that, in the September meeting, delegations start discussing the first item on the list, whatever it would be.

C. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

36. The Chairperson invited the European Communities to introduce their informal communication on *Government procurement of services – possible development of multilateral disciplines* (Job No. 4021, 26 June 2000).

37. The representative of the European Communities said that, with this paper, his delegation hoped to reactivate the debate on possible disciplines that might be established for government procurement. It was too early to discuss market access commitments and the focus should be instead on the principles of national treatment and transparency. Since GATS Article XIII:1 expressly provided that Articles II, XVI and XVII did not apply to government procurement of services, it might be inferred that other provisions of the GATS did apply, notably Articles III and VI. It might therefore be useful to explore the possibility of extending the principles of Article VI to government procurement. Concerning non-discrimination, the discussion could address, as a starting-point, such issues as MFN, treatment of bilateral or plurilateral agreements, national treatment, review mechanisms and flexibility for developing countries. With regard to transparency, he recalled the activities carried on in the Working Group on Transparency in Government Procurement ("WGTGP") and noted that, in the Working Party on Domestic Regulation ("WPDR"), the EC had submitted an informal paper in February 2000, outlining possible elements of transparency. In a number of respects, these two Working Groups examined similar elements and concepts, although discussion in the WGTGP also covered issues specific to the procurement context. In order not to duplicate work, transparency-related issues should continue to be addressed in that Group. He recalled that, in February 1998, the EC had presented a paper in the WPGR, focusing on what constituted government procurement of services.² While views expressed in this paper remained valid, he believed that, at this stage, it was preferable to avoid restarting a discussion on definitional issues. A number of delegations thanked the EC for their informal communication.

38. The representative of India said that disciplines on government procurement, if and when developed, could not impose more onerous obligations on Members than what they had committed to in schedules. This Working Party should wait for the results of the work currently going on in the WGTGP. He disagreed with the EC's interpretation, in paragraph 2 of Job No. 4021, that "... provisions, such as Articles III and VI applied to government procurement".

² Communication dated 13 February 1998, no Job No.

39. The representative of Hong Kong, China said he did not entirely agree with the priorities and the thrust of the EC informal communication. Like India, he had some doubts regarding the suggestion, in paragraph 2, that the explicit exclusion of Articles II, XVI and XVII implied that other provisions of the GATS might apply. It would first be necessary to define what government procurement was. On the question of Article VI, he wondered whether the EC was suggesting that any horizontal disciplines that might be agreed under Article VI:4 would apply to government procurement. Government procurement was not a sector as such. He recalled that accountancy disciplines applied only where specific commitments had been made. He agreed with the EC that national treatment was a vital part of any procurement disciplines but he did not see why it had to be dealt with separately from the question of market access, since both national treatment and market access were the subject of specific commitments. He asked what the EC had in mind when referring to "a subsequent phase" (paragraph 2). Transparency was an important matter in government procurement and his delegation supported work on this subject in whichever forum progress was most likely to be made. He enquired what level of government the EC suggested should be covered by any transparency provision; in his view, this should be all levels of government. He recognized, however, that, given the heavy burden this might put on developing country Members, longer phase-in provisions could be considered.

40. The representative of New Zealand said that his delegation was in the process of reviewing the EC paper, and in particular paragraph 2. It would be useful to focus on non-discrimination, including the issues suggested by the EC in paragraph 4. His delegation wondered how the EC would link the issue of transparency with the work currently going on in the WGTGP and in the WPDR. Work should not be duplicated. He was of the view that, at this stage of the process, the prime focus for government procurement in the WPGR should be on more substantive issues, for example scope and coverage, MFN and national treatment, as well as procurement procedures. He recalled that a non-paper presented by New Zealand in 1997 addressed some of these issues³ and suggested that it might be useful to have a more structured discussion under this agenda item too.

41. The representative of the United States said that the legal interpretation contained in paragraph 2 was interesting and deserved further discussion. It might be difficult to separate the issues of non-discrimination and market access and, therefore, it might be worth examining whether some sectors were of special importance for government procurement in services. The United States placed great importance on the work currently carried on in the WGTGP. He recalled that in that body, several delegations had said that services should not be included in a transparency agreement and wondered, therefore, in what forum those delegations would like to address transparency in services procurement. Transparency was essential if substantive disciplines were to be agreed upon. The United States was currently reflecting on the issue of definition.

42. The representative of Brazil said that paragraph 1 of the EC paper went too far since Article XIII of the GATS only mandated Members to have multilateral negotiations on government procurement in services, but did not prejudge the result. He shared other delegations' doubts regarding the applicability of Articles III and VI to government procurement. The application of Article III:1 might be envisaged, but not III:3, which applied only if there were specific commitments. The same comments would apply to Article VI, paragraphs 1, 3, 5 and 6; moreover, any disciplines developed under GATS Article VI:4 in the WPDR could apply only to scheduled sectors. His delegation could not go along with suggestions to consider eventual market access negotiations for government procurement because this would be outside the scope of the mandate of Article XIII. Work on transparency should concentrate in the WGTGP.

43. The representative of Canada said that the suggested approach of considering possible disciplines first and, at a later stage, discussing market-access commitments, was consistent with the

³ Non-paper from New Zealand, Job No. 5446, 30 September 1997.

views expressed by Canada in this Working Party. Non-discrimination and transparency obligations were two important aspects which could be examined by this Working Party, although other obligations might also be needed. She enquired how the EC saw the application of existing GATS disciplines, such as Articles III and VI, in the government procurement context. She recalled that Canada could not support the criteria proposed by Japan in communication Job No. 6789 (12 November 1999), focusing on determining when a governmental entity was privatized. She also believed that it was premature to establish a framework for the application of disciplines, as suggested in the Chairperson's Note Job No. 782 (11 February 2000).

44. The representative of Japan said that transparency and non-discrimination were important principles in the context of government procurement, for which it was desirable to establish disciplines, separated from market access. With respect to the informal communication from the EC, he would welcome clarification on the fourth and fifth sentences of paragraph 2. He wondered how the EC intended to address principles relating to transparency and non-discrimination in the context of market access negotiations. Japan considered that discussion on transparency in government procurement in this Working Party should be interrelated with work going on in the WGTGP and in the WPDR. With respect to transparency disciplines, it would be more appropriate that the same principles apply to both goods and services. The WPGR could give a useful input to the WGTGP.

45. The representative of Switzerland said that her delegation was in favour of focusing discussions on transparency in government procurement in the WGTGP. On non-discrimination, she supported addressing the points raised in paragraph 4 of the EC informal communication, especially the issue of national treatment. Discussions on MFN treatment would also seem important, but might be more difficult.

46. The representative of Australia sought clarification on paragraph 2 of the EC informal communication, especially the first and last sentences. The focus should be on transparency and non-discrimination and work should be coordinated with other relevant bodies dealing with government procurement. It might be useful to have a paper summarizing relevant aspects of other bodies' work in this area. The representative of Thailand, speaking on behalf of the ASEAN Members, said that it was important to look closely at the scope of the negotiating mandate under Article XIII. The ASEAN Members intended to come back to a number of points raised in the informal communication by the EC, in particular in paragraph 2. The representative of the Republic of Korea enquired whether the Secretariat could provide information on the status of concessions made by Members under the Agreement on Government Procurement in the services area. The representative of Mexico agreed with those delegations who had expressed concern regarding paragraph 2 of the informal communication by the EC, relating to the application of some GATS provisions to government procurement. Referring to the last sentence of paragraph 2, her delegation doubted whether the mandate of Article XIII:2 necessarily involved market access negotiations. It was therefore necessary to clarify the mandate before going further. Some fundamental elements, such as definition or scope of a possible agreement, would seem to deserve immediate attention. Non-discrimination was important, but certain elements listed in paragraph 4 of the EC informal communication did not fit into Article XIII mandate. On transparency, work should not duplicate activities in other fora.

47. The representative of the European Communities replied that the "subsequent phase" mentioned in paragraph 2 of the informal communication, referred to a gradual approach to liberalizing government procurement, having regard to the sensitive nature of the subject for many Members. Establishing principles on transparency and non-discrimination first would seem to be a realistic approach and further liberalization could then be considered. His view was that Article XIII mandate allowed for such a gradual approach to negotiations. On transparency, it was important not to duplicate work in other bodies. The EC was still reflecting on the scope and coverage of a possible agreement. He felt that the interpretation, in paragraph 2, regarding the applicability of Articles III

and VI of the GATS was correct, at least concerning those provisions which were not dependent upon specific commitments.

48. The representative of Hong Kong, China wondered in which body the EC intended to address transparency issues. He could not share the view, expressed by several Members, that market access might not fall within the scope of Article XIII. The extent to which Article XVI:2 would be relevant to government procurement was another question. The representative of the European Communities agreed that there should be no duplication of activities and that work on transparency in government procurement should probably take place in one body only. However, there was no need to designate it now; the Working Party should gather information on the relevant activities going on in other bodies.

49. The Chairperson noted that the informal communication by the EC had prompted strong reactions on a number of issues, for instance with respect to paragraphs 1 and 2. He noted that some delegations were interested in further exploring non-discrimination, while others found it difficult to separate this issue from market access. Delegations disagreed on the question of whether Article XIII included the mandate to address market access issues. On transparency, many delegations had questions about the relationship between work in this Working Party and activities going on in other bodies. Questions were also raised about how future work might be structured. Taking into account requests made at this meeting, he proposed that the Secretariat would, by the November meeting, (i) circulate a checklist of documents dealing with relevant activities in the Committee on Government Procurement and in the WGTPG, and (ii) prepare a factual note compiling services concessions made in the framework of the Agreement on Government Procurement. It was so agreed.

D. DATE OF THE NEXT MEETING

50. The Chairperson said that the next formal meeting had been tentatively scheduled for 27 September, which was the first day of the September/October services cluster. He proposed that an informal meeting on safeguards be held, if necessary, on 19 September; this date would be confirmed after Jeûne Genevois.

51. The representative of Brazil said that the meetings of the Working Party on GATS Rules should be scheduled, as far as possible, within the services week, so that experts from capitals could attend. The Chairperson took note of this point which was of concern to other delegations too. He had raised it with the other Chairpersons and with the Chairperson of the Services Council and they had acknowledged that the services clusters would necessarily exceed one week. Thus, one or more subsidiary body(ies) would have to meet outside this week.

Working Party on GATS Rules

REPORT OF THE MEETING OF 4 - 5 MAY 2000

Note by the Secretariat

1. The twenty-seventh meeting of the Working Party on GATS Rules was opened by Mr. Siva Somasundram, of Singapore, Chairperson of the Working Party. The agenda for the meeting was contained in WTO/AIR/1288. It consisted of six items: appointment of a new chairperson; negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting; and other business. The agenda for the meeting was adopted.

2. The Chairperson drew attention to an informal Note (Job No. 2598, 28 April 2000) he had prepared in cooperation with Mr. Tony Sims, designated new Chairperson, to assist delegations in their preparation for the meeting.

A. APPOINTMENT OF THE NEW CHAIRPERSON

3. The Chairperson recalled that Mr. Stuart Harbinson, former Chairperson of the Services Council, had circulated a list of names for the chairs of the subsidiary bodies, including the Working Party on GATS Rules. It had been agreed that, in the absence of any objections by delegations, it should be assumed that there was a consensus on these names and that the subsidiary bodies should proceed with the election of their new chairpersons. No such objections had been raised. He, therefore, proposed that Mr. Tony Sims, from the United Kingdom, be the next chairperson of the Working Party.

4. Mr. Tony Sims was elected by acclamation.

B. NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

5. The Chairperson indicated that he intended to open the floor twice on this agenda item. First, he would invite Working Party Members to continue their discussion on substantive issues. Second, he intended to have an exchange of views on how to organize work in the coming weeks and months, in view of the deadline of 15 December. He encouraged delegations to give further consideration among others to the ASEAN Concept Paper (ACP) (S/WPGR/W/30) and elaborate on preliminary comments made at the last meeting. It was important for the authors of this paper to receive as much input as possible, both in terms of general and more specific comments. Contributions were also welcomed on the eight themes listed in the Chairperson's Note of 29 March 2000 (Job No. 1979). The issues identified in this Note were earmarked mainly for informal meetings, but Members should also use opportunities to advance work during formal meetings. These issues needed to be addressed in defining possible elements of any safeguard mechanism, irrespective of its form. At the informal meeting held on 7 April, some delegations had suggested other issues to be added to the list, such as the concept of "unforeseen developments", transparency or provisional measures. Delegations might also want to address the comments and questions raised in the Chairperson's Note of 11 February (Job No. 782), since they had not really been discussed at the last meeting. Finally, he reiterated calls for hypothetical or real-life examples of situations in which emergency safeguard measures might be used.

6. The representative of Thailand, speaking on behalf of ASEAN, said that the ASEAN Members found the list of themes contained in Job No. 1979 useful. It contained the key issues identified in the ACP, as well as in other submissions, that needed to be thoroughly discussed before any substantial progress could be made. ASEAN would therefore strongly urge the Working Party to concentrate its efforts on these eight themes, so as to arrive at an early consensus on them. He wished to underline, however, that discussion of this list should not preclude the Working Party from discussing other inputs from Members, including the ACP.

7. He wished to offer comments on the Chairperson's Note Job No. 782, as well as on the informal Note by the Secretariat Job No. 5294/Rev.1. The latter was an important and positive step forward in the ESM negotiation with a view to developing a credible and well-balanced mechanism for injury investigation. The new third section would provide a key component for such a mechanism. Causality requirements were essential to prevent abuse of an ESM. It was important for the Working Party to come up with appropriate disciplines to be respected by the investigating Member, which, however, allowed for flexibility in the demonstration of a causal link. Referring to the goods area was a good starting point. "Objective evidence" of a causal link had to be demonstrated in services in the same manner as under the Agreement on Safeguards (AS). WTO practice might be referred to for the interpretation of the relevant terms. ASEAN also agreed with the suggestion that more than one injury criterion should be met in order to demonstrate injury. This was one area where the particularities of services, as opposed to goods, should be duly taken into account. Flexibility should be used as to the exact number of criteria to be met. Another possible element to be introduced into this section could be the requirement for the investigating authority to consider "factors other than increased supply or consumption of service" in order to demonstrate causality (see para. 13.3 of the ACP). To develop further rules in this regard, reference might be made for example to the Agreement on Anti-Dumping and to the relevant WTO practice in anti-dumping injury determinations. Finally, he agreed with the suggestion that transparency should be increased in the investigation phase in order to prevent abuse. This could mainly take the form of notification and consultation. ASEAN felt that Article 12 of the AS should be used as model, to be adjusted to the services context (Section X of the ACP). Turning to the Chairperson's Note Job No. 782, he said that ASEAN was in favour of a "necessity test" with regard to the choice, extent, and scope of the ESM to be applied. Article 5.1 of the AS would be, to a certain extent, a suitable model (see also paras. 9 and 14 of ACP). ASEAN believed that provisions on degressivity should be included in the mechanism, and that Article 7.4 of the AS could be referred to as a model (see also ACP para. 20). ASEAN was still reflecting on the issues of provisional safeguard measures and compensation, and would be pleased to hear Members' responses to the ACP in this regard. ASEAN was in favour of a provision on special and differential treatment (S&D) for developing countries (ACP para. 29). The ASEAN delegations would like to come back to the points raised in para. 11 of the Chairperson's Note.

8. He then referred to questions addressed by Members with respect to the ACP, and in particular to the questions posed by Canada, which appeared in Annex II of S/WPGR/M/26. A careful reading of the ACP, which had been circulated well before the last meeting, already contained many answers these questions. ASEAN agreed that the GATS dealt with "supply" rather than "consumption" of services. This basic idea underpinned the concept of the four modes; it was clear that in modes 1, 3 and 4, an ESM would affect (or restrict) the capacity to supply the service concerned. In mode 2, it was true that a restriction could only be imposed on the consumption, since the invoking Member did not have the jurisdiction to regulate supply of service outside its territory. Because of this peculiarity, mode 2 might raise some complications in the application of ESM. However, a restriction on consumption was tantamount to a *de facto* restriction of the supply itself. With respect to Canada's question concerning mode 2, ASEAN thus believed that an ESM might be applied even in this mode. This was logical, taking into account the framework of the GATS which allowed Members to include, in their respective schedules, limitations to their specific commitments in all modes, including mode 2. ASEAN suggested that the Secretariat be requested to examine Members' schedules of commitments in order to find examples of existing limitations under mode 2. If such limitations were already applied by Members, it would be logical to allow Members to apply

them as ESM under mode 2. ASEAN would also appreciate if the Secretariat could provide inputs on how Members actually implemented these limitations. With respect to the second question posed by Canada, ASEAN noted that the phrase "operating within the territory of a Member" meant what it said: there had to be some kind of physical presence by the supplier in the territory of the invoking Member. ASEAN believed that the modes of supply were of no relevance for defining the domestic industry. Taking them into account could indeed result in a farcical situation in respect of mode 2, because this could lead to a possible inclusion of foreign suppliers abroad in the domestic industry. With regard to the second part of the question on how to define domestic industry, ASEAN wished to draw attention to the ACP itself which was amply clear. Para. 5 proposed two options: the first one included foreign suppliers established in the country through commercial presence; the second option included only national suppliers. The Canadian delegation might also wish to refer to footnote 2 as well as to the Annex, which compiled relevant issues and was intended to facilitate the debate. With respect to the third question by Canada, he felt that paras. 12 and 13, in particular 13.3, of the ACP were self-explanatory. Concerning the fourth question, a careful reading of paras. 3 and 4 of the ACP clearly pointed out that, in this conceptual framework, an ESM could be applied across all modes of supply. This issue was, however, quite separate from the appropriateness of a given measure in respect of the mode of supply. It might not be possible to have a homogeneous measure that could be applied in all modes, and, presumably, account should be taken of the extent to which a particular mode of supply caused serious injury to the domestic industry.

9. Commenting on the fifth question raised by Canada, he noted that footnote 11 of the ACP suggested that Members might either refer to existing models in the goods area, or attempt to devise a new framework specific to services. In the latter instance, Members might want to work through Job No. 5294/Rev.1, which showed what indicators and criteria of quantifiable nature might be obtainable and relevant to determine serious injury or threat thereof. The collection of data would depend on the Members' respective domestic legislation. ASEAN did not believe that there was need for a multilateral provision governing the national authorities' work in implementing rights or obligations under international law. With respect to the sixth question, para. 14, in particular its chapeau, indicated that the applicable measures included "any or a combination of" the three types of measures provided for in the paragraph. With respect to the seventh question, he believed it was clear from the ACP that ASEAN was aiming at an overall equivalence of commitments under the GATS, regardless of sectors. Footnote 16 of the ACP also referred to the applicable provisions in the goods sector which, in turn implied that the key issue was the trade value of the commitments concerned.

10. In response to the eighth question, he referred to para. 16 of ASEAN's statement introducing the ACP¹ which was clear on the issue at hand. There was a significant difference between "selectively" drawing on a source, and a good faith attempt to draw inspiration from that source and to adapt its valid or applicable elements to a different context. The provisions governing safeguards in goods, and their use, constituted a useful reference, but services trade was different in many aspects. A rule that worked in the goods area might not necessarily lend itself to direct translation into the services context. In many cases, at least some adjustments were required; provisional measures were an example. Responding to the first part of question nine, he felt that no prior approval from the Council on Trade in Services (CTS) was required before the suspension of equivalent commitments by the Member affected by an ESM. The ACP intentionally used the same language as the AS, and this was also quite clear from a careful reading of paras. 15 and 16, together with footnote 16. However, in order to disapprove of such a suspension, the CTS would have to make a formal decision to that effect. In this sense, there was no "imbalance" as suggested. In fact, it would seem to be inappropriate if all procedural steps were to be approved by the CTS. If no such imbalance was perceived to exist in the context of the goods agreement, there was no logic of it being raised in the context of services. With regard to the last part of question nine, he stressed that the whole question of an ESM revolved around the issue of temporary withdrawal or modification of commitments under

¹ See Annex I of S/WPGR/M/26.

the GATS. This was wholly distinct from issues related to GATS Article XXI, which dealt with longer term developments.

11. ASEAN Members supported the Chair's proposal to hold two informal meetings in May and June, and a formal meeting in July, provided that the Working Party agreed to keep a record of informal meetings for future reference. It was ASEAN's hope that the Working Party finished discussing Job No. 1979 by the end of the informal meeting in June. The formal meeting in July would then provide an opportunity to wrap up the discussion and seriously consider a way forward for the negotiation on ESMs.

12. The representative of Japan supported a definition of "domestic industry" which included established foreign suppliers. However, it was necessary to define the concept of "established foreign suppliers" and, in particular, consider whether it included joint ventures, branches or representative offices. On the relation between domestic industry and the MFN principle, Japan noted that there had been considerable support for para. 6 of the ACP. However, further discussion might be needed with respect to the scope of "like services and service suppliers", as provided for in GATS Article II. The Working Party had to further discuss whether the definition of "acquired rights" included expansion activities (injection of additional capital, establishment of subsidiaries, mergers, acquisitions, etc); business had to be kept in mind. Japan felt that many delegations were of the view that disinvestment should not be allowed. However, what was meant by "disinvestment"? Did it include, for instance, the suspension of business, the withdrawal of licenses or authorizations? Transparency should be discussed in relation to indicators and criteria. Japan was interested in a notification mechanism along the lines of Article 12 of the AS. On applicable measures, Japan supported replacing "temporary withdrawal" with the terms "temporary suspension" (para. 14 of the ACP). Japan would like to further consider the possible impact on the scope of ESMs of the disciplines currently discussed in the context of domestic regulations and subsidies. The duration of an ESM should be as short as possible. Further work was needed to develop objective criteria for assessing "substantially equivalent level" of specific commitments (para. 16 of the ACP).

13. The representative of Peru said that, according to Peruvian legislation, all established companies operating on the Peruvian territory were considered to be domestic industries, regardless of their ownership regime. Peru therefore supported option 1 of para. 5 of the ACP. Consequently, any safeguard measure should focus in principle on new foreign competitors. As to the related question of whether this might entail a violation of the MFN principle, an analysis carried out by UNCTAD maintained that the MFN principle did not mean that foreign investors had to be treated in an equal or identical manner, regardless of their specific activities in the importing country. Differential treatment could be justified *vis-à-vis* industries from various countries if there were in objectively different situations. This analysis coincided with para. 6 of the annex to the ACP. A safeguard measure applied under mode 3 against possible foreign investors would not create a problem with regard to the MFN principle, because the decisive issue was whether the foreign supplier was already established or not, and not its nationality. Peru was still considering the merits of introducing a compensation requirement, taking into account the nature of the mechanism and the characteristics of Article XXI of the GATS. In the event of a such a requirement, there was a risk that it might be more onerous for a Member to adopt a temporary ESM than resorting to a permanent modification of commitments under Article XXI. When seeking an ESM, not only would a Member be required to compensate, as under Article XXI, but would also have to go through an investigation procedure to demonstrate injury and a causal link. One possible outcome would be to allow for the application of ESMs without compensation for specified short periods of time. A similar mechanism was provided for in the AS. What would be the relationship between the application of a provisional ESM and compensation? Would compensation be due when a provisional ESM was enforced? Para. 29 (option 2) of the ACP exempted developing countries from compensation. He believed that S&D should be included in an ESM mechanism.

14. The representative of Canada asked for the comments made by the representative of Thailand on behalf of ASEAN to be circulated in writing.

15. The representative of the European Communities considered that discussions in informal meetings should be the object of a summary record, even if only an informal one, so as to be brought to the attention of formal meetings. The position Members had on the issue of "domestic industry" was influenced by their internal legislation. Because of the specific nature of services, it would seem important that "domestic industry" be considered to include foreign-established suppliers. As pointed out by Japan, the concept of "foreign established suppliers" would need to be examined. For instance, how should branches be treated, which were instructed and controlled from other places? How should joint ventures be treated? Would there be a distinction in case of majority/minority shareholding, and could a threshold for such majority shareholding be established? The case of representative offices was perhaps easier; in the EC, representative offices were not considered to be established suppliers. With respect to acquired rights, she asked what would happen if foreign established suppliers were few in number, but represented quite a high percentage of the business in the country. Could this be seen as a form of inverted protectionism against further foreign competition? The question of further investment needed to be explored because denying the possibility of further investment could actually amount to going backward. This might apply to capital investment, but also to investment in personnel. It should be possible in principle to apply an ESM across all four modes of delivery even though questions remained as to whether it was possible to effectively apply measures under mode 2. With respect to the concept of "like service", the EC had some concerns about reference to end-use in the ACP, but was willing to further discuss the issue. Work on classification issues might not be sufficiently advanced to enable Members to identify "like" or "directly competitive" services. Case-law could be important since some issues, which could have an impact on the safeguard discussion in services, had been dealt with in dispute settlement. Indicators and criteria needed to be further examined, in particular those whose usefulness was questioned. The greater the number of relevant criteria which might be identified, the better the cause for a safeguard mechanism. She asked whether the Secretariat could give an update on the progress made by the U.N. Inter-Agency work on Statistics. The EC would also try to provide information on the type of statistics available within the Community. With respect to applicable measures, the question of additional commitments under Article XVIII needed serious study. For instance, some Members had scheduled the fact that they were developing new legislation and committed on implementing it upon completion; would such a commitment be covered by an ESM? The EC was in favour of a necessity test whose criteria might depend on the ongoing work in the domestic regulations context. With respect to compensation, she noted that the shorter the duration of an ESM, the lesser the need for a compensation requirement. She agreed with Peru that the relationship between a compensation requirement under GATS Article X and Article XXI had to be kept in mind. S&D was enshrined in the GATS, but Members might find it easier to determine its content once they had a clearer idea of the safeguard mechanism itself.

16. The representative of Pakistan generally supported the ACP and hoped that the deadline of 15 December would be met. He would revert to this matter at the next meeting.

17. The representative of the Republic of Korea did not have a final view on the definition of "domestic industry". However, he strongly believed that foreign investments and foreign firms should be protected. Should option 1 of the ACP be adopted for the definition of "domestic industry", a number of issues would need to be considered. For instance, "new entrants" should be defined, as well as the scope of "acquired rights", including the right for foreign established suppliers to expand. Korea was of the view that it would be difficult to apply an ESM to prevent the expansion of foreign established companies. To the extent that an ESM applied only to new foreign entrants, irrespective of their origin, there should not be a violation of the MFN obligation. However, there remained the possibility of a *de facto* violation, as mentioned in para. 7 of the annex to the ACP. On the other hand, a problem could arise with regard to Article X, first paragraph. If the determination of injury and causality was based on the concept of domestic industry, including foreign established suppliers,

and lead to the conclusion that the new entrants were not responsible for the injury, applying an ESM to them might be problematic. Korea was of the view that, taking into account their limited availability, a list of indicators and criteria should be illustrative. There was no need for a necessity test. An ESM should apply to specific commitments undertaken under GATS Article XVI, XVII and XVIII. The Working Party needed to discuss the re-introduction of quantitative restrictions under Article XVI. It was necessary to adopt S&D provisions depending on economic status of developing countries, including a specific *de minimis* provision.

18. The representative of Uruguay agreed to proceed on the themes identified in the Chairperson's Note Job No. 1979, with the understanding that work should also focus on the ACP. It was important to define the scope of domestic industry and ensure protection of acquired rights. S&D was an horizontal concept which had to be included.

19. The representative of Egypt supported option 1 of the ACP for defining "domestic industry" because it used the same language as that contained in Article 4 para. 1 of the AS. But various types of foreign-established suppliers still needed to be defined, as well as the relationship with the MFN principle. Egypt agreed with using the terms "supply and consumption", as proposed in the ACP. The concept of "unforeseen developments" might be more difficult to apply in services than in goods; possible criteria could be considered in this regard. Egypt recognized the temporary nature of an ESM, which should be applied to the extent necessary to prevent serious injury or threat thereof, and supported the application of a necessity test. Provisional measures should be included in an ES mechanism but should be limited and non-renewable; the range of possible measures should be more limited than those available after a full investigation procedure. An ESM needed to include a compensation requirement, in spite of the problems to determine a "substantially equivalent level". Data availability was a horizontal problem in services, which should be addressed. An ESM should also provide for S&D, in particular with respect to the relevant minimum thresholds of supply and the extension of the period of application of a safeguard measure.

20. The representative of Australia supported option 1 of the ACP for the definition of domestic industry. She shared the questions raised by Korea regarding new entrants. Predictability for investors was fundamental in the development of an ESM; the middle ground between disinvestment and full national treatment (post-establishment rights) should be explored. Australia strongly supported the development of common guidelines to establish trade and injury links; a mandatory, but not exhaustive list of relevant criteria could be established, based on the proposal by Venezuela. She was also in favour of exploring the feasibility of a necessity test to ensure that any measure adopted was not unduly trade-restrictive. It was necessary to provide for compensation, including for developing countries, in order to avoid misuse. The concept of "substantially equivalent" benefits had to be further examined in this regard. The Working Party might consider whether, when an affected party suspended a substantially equivalent level of specific commitments (para. 16 of the ACP), the MFN obligation was also suspended.

21. The representative of New Zealand sought clarification with respect to Korea's position on a necessity test. The representative of Korea, responded that the scope of an ESM should be limited to the extent necessary to prevent or remedy serious injury. However, strict criteria might be too burdensome and Members should retain a certain level of discretion.

22. The representative of the United States considered that the Chairperson's Note Job No. 1979 was a good basis for further work since it contained the issues key to the basic question of feasibility. The United States was of the view that the definition of "domestic industry" should include foreign-established suppliers and that "acquired rights" would have to be protected under a possible ESM. A number of interesting questions were raised as to how to define these concepts. As noted by the EC, restrictions on the expansion of business might in fact force suppliers to go backward. With respect to indicators and criteria, Job No. 5294/Rev.1 was a good starting-point but provided little

guidance on how to measure increased imports. Extending the concept of applicable measures to additional commitments under Article XVIII required careful consideration.

23. The representative of India shared the views expressed by Uruguay and Egypt with regard to the inclusion of S&D treatment.

24. The representative of Poland said that his capital was considering the possibility of presenting a non-paper to the Working Group. Poland was of the view that foreign-established suppliers should be included in the definition of "domestic industry". In addition, the definition should be consistent with Article XXVIII of the GATS. Poland was examining the issue of cross-modal application of ESMs, focusing on the feasibility of applying measures under mode 2. With respect to "like services", he noted some difficulties due to a lack of statistical data. Poland had some reservations against the inclusion of a compensation requirement. Examination of relevant indicators and criteria should continue. Applicable measures should include temporary suspension or modification of specific commitments under Articles XVI, XVII and XVIII. A necessity test was desirable.

25. The representative of Hong Kong, China said his delegation was not convinced of the need for compensation, primarily because an ESM should be short in duration. He was not sure that a short ESM would justify incurring all the difficulties associated with compensation. If compensation were to be introduced, questions such as cross-retaliation and data problems in assessing the "substantially equivalent level of specific commitments" needed to be looked at. The questions raised in para. 9 of Job No. 782 were also relevant. On the ACP, Hong Kong, China was concerned about para. 17, which suggested that the right of suspension of commitments should not be exercised for the first three years. Rights and benefits of services suppliers should be protected. He agreed that, in general, there should be some flexibility for developing countries, but the question remained as to what might be covered under S&D. Looking for a threshold was an interesting idea. Developing countries should not be exempted from a compensation requirement. It might be difficult for any invoking country to determine the origin of a service.

26. The representative of Guatemala said that acquired rights should be protected. Guatemala legislation did not distinguish between national and foreign established suppliers. Therefore, she preferred option 1 contained in para. 5 of the ACP.

27. The representative of Argentina said that the choice between options 1 and 2 in para. 5 of the ACP would influence the effectiveness of the measure. The first option was narrowly linked with the mode of supply in the goods sector and the AS. The questions raised by Korea in this regard were relevant: who should be protected and against what? How could a new entrant, not present in the market, cause injury? On MFN, his delegation would further reflect on the points raised by Peru. He had some doubts about the need for a compensation clause because an ESM should be of short duration. It would be interesting if the ASEAN Members could, even informally, indicate what they had in mind as to the maximum period of time for a safeguard measure.

28. The representative of Mexico said that his delegation would like to concentrate on the ACP. There were many similarities between the goods and services sectors, but also differences. To the extent possible, advantage should be taken of the experience and the legislative approach in the goods area. A safeguard mechanism was not an end in itself, but a means in order to achieve a goal. The choice between options 1 and 2 in para. 5 of the ACP would depend on what was intended to be protected. The concepts of "like services" and "acquired rights" were very important and would have a decisive influence on what might be the final result. Transparency in investigation and consultation procedures should be addressed and a maximum duration for the investigation process be determined. A national authority should be able to start an investigation procedure *ex officio*. In para. 14 of the ACP, the concept of "suspension" would be more suitable than the concept of "withdrawal". Mexico was of the view that S&D provisions should be considered.

29. The representative of El Salvador said that his delegation was in favour of option 1 of para. 5 of the ACP. The legislation of his country granted foreign-established investors the same rights as national ones; acquired rights should thus be protected. The concept of S&D should be included.

30. The representative of Brazil said that, regardless of what the definition of domestic industry would ultimately be, work should concentrate on defining more precisely "established foreign suppliers". Brazilian legislation granted full national treatment to any established firm. Brazil reserved its position concerning the need for a necessity test; the use of ESMs should not be too burdensome. His delegation was not sure whether a compensation mechanism would be necessary, especially if the duration of the measure was to be short. The possibility for cross-retaliation should be excluded. S&D-related provisions remained to be devised but, as a matter of principle, should be included.

31. The Chairperson recalled the questions raised by Peru and Argentina, and the requests for Secretariat's contributions. The representative of Thailand, on behalf of ASEAN, said he would provide answers at a later stage. A Member from the Secretariat mentioned that an example of mode 2 limitations was the exclusion, from public insurance schemes, of the costs of healthcare treatment abroad. The Secretariat would be pleased to undertake a full-scale examination of current schedules with regard to mode 2 limitations; it would be far more difficult, however, to obtain information on how these limitations were actually implemented. Concerning the U.N. Inter-Agency Work on Statistics, the Secretariat would get back to the Working Party with a progress report.

32. In summing up, the Chairperson noted that a number of delegations considered it important to proceed on the basis of Job No. 1979 to determine whether a safeguard mechanism was feasible; other delegations felt that work should concentrate on the ACP. In his view, a conceptual discussion was necessary if driven by inputs from Members. On the definition of "domestic industry", many delegations were in favour of including foreign-established suppliers; it was also suggested to further discuss the precise scope of these terms. It seemed that the Working Party was close to a consensus that there should be no disinvestment. Open questions remained, however, such as the definition of "disinvestment", expansion activities, etc. He would come back in due time to issues 1 and 2 of Job No. 1979. On indicators and criteria, a number of delegations had referred to Job No. 5294/Rev.1. It had also been suggested that the anti-dumping experience in goods should be considered more thoroughly. With respect to applicable measures, some delegations suggested that the word "suspension" be used instead of "withdrawal" in para. 14 of the ACP. A number of delegations were in favour of a necessity test, but it was also said that Members should retain some discretion. Some delegations were reluctant to consider the suspension of commitments under Article XVIII. Mixed views were expressed on compensation: a number of delegations were not sure about the need for compensation, particularly if the ESM was of short duration. Some Members had pointed out the difficulties in implementing such provisions (lack of data, cross-retaliation, etc.). Many delegations were in favour of including S&D, while noting that the content remained to be defined. Criteria were needed to specify "unforeseen developments" if the concept was to be used. He encouraged delegations to circulate any specific comments before the next meeting of the Working Party. The Secretariat would conduct a factual search in schedules in order to identify existing limitations under mode 2 and would prepare a progress report on developments on the statistical side.

33. The Chairperson sought the views of delegations on how work should be structured in the coming weeks and months. It would be useful to have had a discussion of the eight issues listed in Job No. 1979 before the summer break. The Working Group should decide on the number of meetings and whether these should be formal or informal. Ideally, the advantages of free-flowing informal discussions should be combined with some sort of record which could be referred to the future. On timing and number of meetings, the Chairperson proposed to hold the next formal meeting on 7 July; informal meetings would be held on 5 May (items 3 and 4 of Job No. 1979), 22 May (items 5 and 6) and 22 June (items 7 and 8, plus any other issue delegations might want to raise). On

record-keeping, he suggested that a Note be prepared, for instance under the Secretariat's responsibility, which would contain a summary of informal discussions.

34. The delegations of Thailand on behalf of ASEAN; the European Communities; Brazil; United States; Hong Kong, China; India; Uruguay; Japan; the Republic of Korea; and New Zealand took the floor and supported in general the proposals made by the Chair. It was so agreed.

C. NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

35. The Chairperson noted that, at their last meeting, Working Party Members had a promising discussion on this subject-matter. A number of substantive issues had been raised, in particular in relation to the Communication presented by Argentina and Hong Kong, China (S/WPGR/W/31). Para. 10 of W/31 raised a number of key points which the Working Party needed to further consider. Delegations might also want to revert to the Chairperson's Note of 14 February 2000 (Job No. 782) and should feel free to add any other pertinent issue. Factual information on Members' experience with subsidies encountered in foreign markets would greatly facilitate discussion on this item. As far as background documentation was concerned, the Secretariat was currently working on updates proposed in paras. 9(a), (b) and (c). The Secretariat would endeavour to make these documents available for the next meeting of the Working Party. Delegations should make suggestions as to how they would like to proceed with respect to paras. 9(d), (e) and (f) of W/31. With respect to disciplines on export subsidies in ANZERTA (para. 9(e)), he understood that Australia and New Zealand would come back to the Working Party. On 9(f), the Working Party was expecting a clearer indication of the types of institutions the authors of W/31 had in mind.

36. In reply, the representative of Argentina mentioned work carried out in the OECD, and in particular the 1996 study on *Public Support to Industry, Report by the Industry Committee to the Council at Ministerial Level*. The Secretariat could enquire whether updated or additional information had been made available since the publication of this report.

37. The representative of the European Communities hoped to table a document on relevant jurisprudence at the next formal meeting of the Working Party. Para. 6 of W/31 contained interesting considerations. When considering possible disciplines, there might be a need to identify policy areas which could be agreed to warrant some form of public intervention. There could also be a need to determine to what extent disciplines should be horizontal or sector-specific. The issues raised in para. 10(c) to (f) might perhaps be addressed at a later stage. Para. (a) would require in-depth examination. In her view, the concept of necessity was not directly relevant; work should focus on the trade distortive effects. The question of remedies would also be important. The Working Party also needed to look at social objectives of subsidy programmes (para. 10(b)), and determine what types of subsidies would fall into this category. Transparency should also be discussed.

38. The representative of New Zealand said, on behalf of Australia and New Zealand, that they were still considering whether any further information could be provided on ANZERTA, as suggested in para. 9(e) of W/31.

39. The representative of Hong Kong, China proposed that the Working Party agree, as a starting-point, to focus on paras. 10 (a) and (b) before addressing other issues. On the question of social subsidies, he noted that GATS Article XV stated that Members should negotiate on disciplines to avoid trade-distortive effects of subsidies. Thus, where there was no trade, there was no reason to investigate the matter. Some years ago, most social areas could have been excluded (health, education, social welfare), but now trade was increasingly taking place. Mode 3 played an important role in these areas, as well as, increasingly, modes 1 and 4. Most governments did subsidize social services and should retain the ability to do so effectively. Disciplines might, however, be needed to avoid trade-distortive effects. Would a green box be desirable? The ongoing work on domestic regulation could have an indirect impact on the activities of this Working Party, if domestic regulation

were to be based on such criteria as competency, ability to supply and not more burdensome than necessary to ensure the quality of a service. It could impact on the distribution of subsidies in a positive way. Hong Kong, China was in favour of considering a necessity test. National treatment would go a long way in reducing the adverse effect of subsidies, but would affect only mode 3. The impact on other suppliers, in particular under mode 1, would need to be considered.

40. The representative of the United States said that his authorities had initiated a new process of consultation with domestic constituencies, based in particular on W/31. He hoped to share information on the results of this process with the Working Party in a near future. Updates by the Secretariat would be most useful. His delegation was not yet fully prepared for a detailed discussion on some of the issues raised on para. 10 of W/31. Some consideration should be given to developing a rolling checklist of issues for future consideration, based on W/31 and W/9. He stressed the need for more factual information.

41. The representative of the Republic of Korea said that discussion should focus on subsidies with trade-distortive effects. The concept of a green box should be considered. He agreed with para. 10(c) of W/31 regarding countervailing measures. His delegation would try to provide information at the next meeting of the Working Party.

42. The representative of Canada was in favour of adopting a systematic approach to subsidies, starting for instance with work on definitions, examination of the relevance of the Agreement on Subsidies and Countervailing Measures, etc.

43. The representative of Uruguay agreed with suggestions for updated information contained in para. 9 of W/31. His delegation was still analysing para. 10 and was interested in views on possible ways forward. With respect to para. 43 of S/WPGR/M/26, he said that, in the fourth sentence of this paragraph, the word "industrial" should precede "goods", since export subsidies were not prohibited in all sectors, for instance in agriculture.

44. The representative of Japan, while looking forward to receiving additional information pursuant to paras. 9(e) and (f) of W/31, was also interested in information under para. 9(d). He expressed interest in a green box concept and believed that "trade distortive" effects should be addressed with priority.

45. The representative of Bolivia said that his country did not maintain any type of subsidies.

46. The Chairperson stressed the need to receive answers to the 1997 questionnaire. He understood that some delegations would endeavour to provide written contributions by the next meeting. Mentioning that was not his intention to draw any particular conclusion for the time being, he noted that the discussion had focused on issues raised under paras. 10(a) and (b) of W/31. Several delegations were in favour of further considering the issue of social subsidy programmes. He suggested that the Working Party come back to the proposal of developing a rolling checklist of issues; delegations should give further reflection to this idea. At the next formal meeting, Members might want to focus on points raised in paras. 10(a) and (b).

47. The representative Mauritius requested the Chairperson to give further thought to producing a checklist of issues for discussion. The checklist could take into account developments since 1996.

48. The Chairperson said that he intended to revert to the issue of a checklist of issues at the next meeting. Canada's suggestion of a systematic approach might impinge on the order in which issues would be addressed in a checklist; he wondered whether the Canadian delegation wanted to provide further input.

D. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

49. The Chairperson recalled that, at the last meeting, several delegations had expressed support for work being pursued in parallel on definition and possible multilateral disciplines. Delegations were thus encouraged to comment on both issues.

50. The representative of the European Communities informed the Working Party that her delegation was planning to circulate a written submission, which she hoped would be ready in June. It would focus on possible multilateral disciplines, including transparency and non-discrimination.

51. The representative of Canada said that, as stated at the last meeting, his delegation could not agree with the criteria proposed by Japan (Job No. 6789, 12 November 1999) to determine whether a governmental entity was privatized. He also believed that it was premature to establish a framework for possible disciplines in the absence of any development regarding these disciplines. The Working Party should first examine and specify disciplines before considering their application. Issues related to non-discrimination (national treatment and MFN) should be considered.

52. The representative of Japan said that the paper submitted by his delegation (Job No. 6789) was a useful basis for work. In his view, a recent dispute between Korea and the United States had arisen precisely because the current GPA lacked a precise definition of publicly-owned enterprises. He invited Members to consider how the Japanese proposal could be improved.

53. The representative of the United States said that his delegation had done further work on definitional issues, in particular in the context of the Free Trade Areas of the Americas (FTAAs) Negotiating Group on Government Procurement. A U.S. proposal presented to that Negotiating Group identified four characteristics of transactions falling within the definition of "government procurement": (i) the entity made an acquisition as a government entity, or was subject to the control or influence of a government entity; (ii) goods and services were supplied in the furtherance of governmental purposes; (iii) there was a mutual exchange of benefits; (iv) the transaction was not subject to normal competitive market forces. He hoped his delegation would be in a position to submit additional proposals in a near future. In his view, the Japanese proposal was very specific to the Agreement on Government Procurement (GPA).

54. The representative of the Republic of Korea supported that work should continue on definitional issues and disciplines. The GPA was a plurilateral agreement which covered goods and services. It might therefore be possible to borrow some definitions and disciplines, but account should be taken of the needs of developing countries.

55. The representative of Hong Kong, China said that it was time to consider disciplines and he stressed the importance of non-discrimination in this context.

56. The Chairperson looked forward to receiving, as indicated, written contributions which might help to advance the discussion on disciplines. He noted some hesitation as to whether or not it was appropriate, at this stage, to discuss a possible framework for disciplines.

57. DATE OF THE NEXT MEETING

58. The Chairperson indicated that, as previously agreed, the next formal meeting of the Working Party would take place on 7 July. In addition, an informal meeting would be held on 22 May, to address issues 5 and 6 of Job No. 1979. A second informal meeting, on 22 June, would allow Working Party Members to discuss items 7 and 8, the issue of "unforeseen developments" as well as any other issues they might want to raise.

Working Party on GATS Rules

REPORT OF THE MEETING OF 24 MARCH 2000

Note by the Secretariat

1. The Working Party on GATS Rules held its twenty-sixth meeting under the chairmanship of Mr. Siva Somasundram of Singapore. The agenda for the meeting was contained in WTO/AIR/1242. It consisted of five items: negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting; and other business. The agenda for the meeting was adopted.
2. The Chairman drew attention to an informal Note (Job No. 782, 11 February 2000) he had circulated to assist delegations in their preparation for the meeting.
 - A. NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS
3. The Chairman thanked the ASEAN delegations for the effort they had made in tabling a so-called "Concept paper" on emergency safeguard measures (ESMs) (S/WPGR/W/30).
4. The representative of Thailand, speaking on behalf of ASEAN, presented the ASEAN Concept paper.¹
5. The representative of Egypt said the Concept paper was comprehensive and included all elements which could lead the Working Party to an agreement on ESMs. The references made to provisions of other WTO agreements, such as Anti-Dumping or Safeguards would facilitate work. A number of issues, such as "like and directly competitive service", definition of "domestic industry", injury, causality and acquired rights, needed more effort to be solved.
6. The representative of Hungary shared the premise, expressed in para. 1 of the Concept paper, that, if Members were able to agree on the availability of an ESM, a standard set of rules was then needed for its application. As to the object and purpose, it should be made explicit that an ESM was a safety valve for unforeseen circumstances and that possibility of abuse should be prevented. He wondered whether there was a need to selectively quote from the preamble of the GATS (para. 2), and to define an ESM (para. 3), noting that there was no such definition in the GATT nor in the Agreement on Safeguards (AS). In paras. 3 and 14, the word "withdrawing" should be replaced with "suspending", to make clear that the measure was only temporary. The Working Party should focus on the potential implications of the application of an ESM in the context of mode 3 and, in particular, on the definition of "domestic industry". The issues raised in the annex to the Concept paper deserved in-depth discussion. Hungary was of the view that an ESM should be taken on behalf of the "domestic industry", which should include all established foreign suppliers and, thus, that an ESM should apply only to new foreign entrants; this would avoid problems with the MFN obligation. He

¹ The statement by the ASEAN Members is contained in annex I to this Note.

noted that companies established in Hungary were regarded as domestic enterprises, irrespective of their ownership; there was, thus, no legal possibility to take safeguard action against wholly or partly foreign-owned companies. With respect to Part IV, Hungary considered that an ESM should only be available in cases of unforeseen developments. Safeguard measures were taken in situations of fair competition and as a result of an obligation undertaken. The authorities should have discretion whether or not to resort to an ESM. He enquired why para. 8 referred only to the "increase in supply or consumption" of a given service in general terms and did not specify whether there was an increase in imported services. As to the conditions of application, he recommended examining the potential applicability in the services context of the footnote to Article 2 of the AS, referring to customs unions. Comparing para. 28 with Article 9.1 of the AS, he noted that the latter contained an additional condition for the non-applicability of an ESM against products originating in developing countries, namely that the collective share of small suppliers should not account for more than a specified percentage of total imports; this condition should be examined in the context of services. As to para. 29, Hungary could accept the first option but had problems with the second option exempting developing countries from the obligation to maintain substantially equivalent levels of concessions or to offer compensation

7. The representative of Uruguay said his country's position was open on this issue. With respect to the Concept paper, he supported the approach to use the AS as a working basis whenever possible. As to the definition of "domestic industry", no distinction should be made between national and foreign suppliers, as was the case in Uruguay's legal system. Thus, an ESM should apply only to new foreign suppliers, without affecting companies that were already present. "Acquired rights" had to be protected, taking into account the importance of foreign investment, in particular for developing countries. Any possible application of a safeguard measure should respect the principle of non-retroactivity. Finally, it was important that the concept of special and differential treatment of developing countries (S&D) be included.

8. The representative of Hong Kong, China noted that he remained to be convinced that an ESM was desirable from a trade liberalization point of view. Nevertheless, his delegation was ready to contribute to the Working Party's mandate in working out the details of a possible ESM, and then decide whether or not it was appropriate. The way to make progress was to focus on some fundamental issues and get agreement on them before tackling the more detailed concepts. Among those fundamental issues were "national" vs. "domestic" industry, and "acquired rights". "Domestic industry" should cover foreign established enterprises. He noted that in GATS Article XXVIII, the definition of "national" included joint ventures; if a foreign company had 49 per cent of a domestic firm, it might not be affected by an ESM whereas it would be affected if it had 51 per cent. There was no MFN problem as long as withdrawal or modifications of market-access commitments were applied to services and services suppliers from all other Members. Nor was there a problem in taking action against suppliers from Members covered by an MFN exemption: if the country was still able to offer an MFN exemption, it could be asked whether there was a real emergency situation. On the question of "acquired rights", Hong Kong, China was firmly against any measure that could lead to disinvestment. What remained to be considered was the right to expand. As to flexibility for developing countries, he felt that some of the options contained in the Concept paper might not be appropriate given that in GATS there was scope for fewer commitments from developing countries.

9. The representative of Japan recalled that the question of desirability of an ESM still remained to be solved. With respect to the Concept paper, Japan recalled that an ESM was meant to cope with unforeseen circumstances. In that regard, para. 2 put too much emphasis on strengthening domestic services and enhancing competition in services industries in developing countries. Relatively less emphasis was placed on issues associated with increased volumes of imports and unforeseen circumstances. Moreover, the preamble of the AS did not make such reference to developing countries. Japan considered that the concept of "unforeseen development" was an important condition for invoking a safeguard measure. The Working Party should further discuss the appropriateness of

using the concept of "supply and consumption". Was it possible to restrain consumption by modifying the behaviour of consumers? The definition of "domestic industry" should include established foreign suppliers. To the extent that a measure applied to all new entrants, there should not be an MFN problem. He enquired what the terms "irrespective of its mode of supply" meant in this context (para. 11). Japan would oppose discrimination among Members in the application of a safeguard measure, but needed to reflect on selection of modes of supply. Applicable measures (para. 14) should not go beyond what was really necessary. Further consideration should be given to the treatment of subsidies and domestic regulation disciplines under an ESM. In Japan's view, some reference points should be introduced (as in Article 5.1 of the AS). Due to data problems in services trade, it might be difficult to establish the appropriate level of compensation. It could be appropriate to create rules for arbitration (para. 16). The duration of a safeguard measure should be as short as possible. The concept of provisional measures should be approached with caution. With respect to S&D, it was not appropriate to exempt developing countries from compensation obligations as this might lead to abuse.

10. The representative of Mexico noted that the Concept paper relied to a large extent on the provisions of the AS, which was positive because it contributed to ensuring coherence between the goods and services areas. Various aspects required further analysis in order to determine whether an ESM was applicable in services. With respect to para. 2, she felt that a reference to the preamble of the GATS could be sufficient. An ESM was a means, not an objective as such. The definition of "domestic industry" was linked to the decision which would ultimately be taken with respect to established foreign suppliers. For Mexico, acquired rights had to be respected and maintained. The concept of "like and directly competitive services" had to be further analyzed; in services, two or more sectors could provide the same service without necessarily being in direct competition. A safeguard measure should not be applied to services which were not directly competitive. A measure should be based on three conditions: (i) an investigation had determined the increase in consumption; (ii) injury or threat of injury had been established; (iii) a causal link existed between (i) and (ii). Investigations should follow transparent procedures, including a maximum timeframe for completion. An option, which was not in the Concept paper and should be discussed, was whether an investigation could be initiated *de officio*, i.e. at the initiative of the investigating authorities. The criteria to determine injury had to be objective and quantifiable; considering the paucity of data in services, a certain amount of flexibility and creativity would be needed. Mexico agreed that applicable measures included the suspension of specific commitments under Articles XVI, XVII and XVIII. It should be made clear that these commitments would be "suspended" and not "withdrawn". When applying a safeguard measure, the four modes of delivery should be considered. The duration of a safeguard measure should be short, with a possibility of extension and flexibility for developing countries. Mexico was also considering the concepts of degressivity and of a period of non-application for a service which had already been the object of a safeguard measure. Consultation, transparency and notification requirements should be included in a possible agreement, as they were in the AS. The same applied to S&D for developing countries, similar to the AS, even though it might sometimes be difficult to determine the origin of a service.

11. The representative of Australia said that an ESM should be limited to unforeseeable developments which caused genuine injury. Australia was concerned about the possibility of suspending the right of retaliation for three years (para. 17 of the Concept paper). The possibility of determining specific timeframes (paras. 18 and 19), as well as the concept of degressivity were useful. The concept of provisional safeguard measures should be further discussed with a view to preventing abuse. With respect to developing countries, Australia supported option 1 of para. 29; however, S&D should not mean that developing countries were given a lower threshold. To promote future work, it might be useful, as Hong Kong, China had suggested, to assess the major issues in a structured fashion.

12. The representative of New Zealand considered that a safeguard measure, as envisaged by GATS Article X, would focus on assisting services suppliers that were faced with unexpected, and even adverse, developments arising from obligations under the GATS. As noted for instance by the Appellate Body in the recent case *Argentina – Safeguard Measures on Imports of Footwear*, it was clear that the object and purpose of a safeguard measure was to deal with matters out of the ordinary. A difficult issue was the application of a safeguard measure to different modes of supply, and, in particular, to mode 2. In relation to domestic industry, New Zealand preferred the first option in para. 5. Footnote 5 of the Concept paper, addressing the issue of "like or directly competitive" services, was a useful start. "Unforeseen developments" was a relevant concept. Section V underlined the need for criteria and indicators to quantify injury and help to determine causality in the absence of reliable statistics in services. Job No. 5295/Rev. 1 should be used in future discussions. With respect to para. 14, measures should be "suspended" instead of "withdrawn". Section VIII contained important procedures provisions concerning degressivity and duration, which should be part of an ESM. Option 2 of Section XI tended to leave too much scope for potential abuse. New Zealand was of the view that the Chairperson's idea of exploring a "necessity-test" in relation to an ESM (para. 7(a) of Job No. 782) was useful. An important aspect, not covered in either paper, was the link between liberalization commitments and an ESM. Arguments in favour of an ESM tended to be based on the notion that, by providing a safety valve, it would enable Members to accept a higher level of liberalization than reflected in current schedules. The Working Party should explore this link in practice. Possibilities included an ESM that would only be available for new commitments, or an ESM governed by horizontal procedural disciplines that might only apply if the opportunity to use an ESM had been negotiated with other trading partners as part of liberalization commitments.

13. Commenting on the Concept paper, the representative of the Republic of Korea said that he would prefer safeguard measures which focused on protecting the national rather than the domestic industry. Acquired rights of established foreign suppliers should be protected and there should be no forced disinvestment. As a compromise, it could be examined whether juridical persons could be included into the domestic industry concept on the basis of ownership, within the meaning of GATS Article XXVIII. Adopting the domestic industry concept might cause problems with the MFN treatment since new entrants might be discriminated. The concepts of "supply or consumption" of services (para. 3) had to be further developed. The concept of "like or directly competitive" services should be interpreted on a case-by-case basis and, thus, there was no need to define it. The concept of "unforeseen development" was unclear and difficult to prove: it should thus be excluded as a condition for the application of a safeguard measure. Para. 9 should be clarified because, in its current form, it gave a panel wide discretion in interpreting whether a safeguard measure was "necessary to prevent or remedy the serious injury...". There was a need to clarify that the injury criteria and indicators were illustrative only; guidelines could be adopted in this respect to prevent abuse of an ESM. As to compensation, it was reasonable to maintain an equivalent level of specific commitments. Provisional safeguard measures should in principle be included, in a manner similar to Article 6 of the AS, to cover cases where delays would cause irreparable damages; however, such measures should be confined to exceptional situations and made subject to strict requirements to prevent abuse. With respect to para. 8 of the Chairperson's Note, Korea was not sure that it was possible to single out the relevant criteria.

14. The representative of Switzerland said that the question of desirability and feasibility of an ESM was still unresolved for her delegation. With respect of Section II of the Concept paper, it would be more appropriate to make a general reference to the objectives listed in the GATS. An ESM should not be used by a Member to meet national policy objectives, nor to make the economy more competitive. An ESM was an emergency mechanism to overcome temporary difficulties. It allowed for structural adjustment, but was not meant to directly enhance competition. As to the definition of "domestic industry", Switzerland supported option 1 of para. 5. The maximum duration should be mentioned in the draft. With respect to the determination of serious injury or threat thereof (paras. 13.1 and 13.2), a list of the relevant indicators should be part of the draft: Venezuela's

proposal should be developed further. Switzerland could not, at this stage, support a temporary withdrawal or modification of additional commitments under Article XVIII. For further discussions, it might be useful to think about a list of commitments that should be exempt from for emergency safeguard measures. Turning to compensation, Switzerland considered that the wording contained in para. 15 ("... shall endeavour to...") was not strong enough. She enquired about the reasoning behind para. 17. She supported the idea of a progressive adjustment process, as mentioned in paras. 19 and 20, but was not sure about the need for provisional measures (para. 22). Concerning developing countries, she was not convinced that measures contained in para. 29 were necessary. With respect to the points raised in the annex to the Concept paper, Switzerland was of the view that "domestic industry" included the suppliers as a whole of like or directly competitive services, operating within the territory of the Member; therefore, foreign suppliers should have the right to invoke a safeguard measure. Switzerland could not agree with an approach that would give national suppliers the right to use a safeguard against established foreign suppliers. The concept of "acquired rights" had to be respected to enable investors to plan strategic activities many years ahead. Switzerland supported a dynamic interpretation of the concept of "acquired rights": a foreign company established in a country should have the right to expand its business activities.

15. The representative of India said that safeguard measures should be available to protect national suppliers *vis-à-vis* any foreign supplier. This was especially important for developing countries opening up their service sectors under mode 3. It should therefore be possible to apply a safeguard measure to established foreign suppliers. In order to protect acquired rights, a solution would be to prevent any further increase, not only of new entrants, but also to put a cap on the activities of existing foreign suppliers. However, an ESM might not lead to actual disinvestment by existing foreign suppliers. India supported option 2 of para. 5 of the Concept paper. The ESM should apply to all modes of supply; however, specific provisions for each mode might be necessary, in particular with respect to mode 4, to protect the interests of developing countries. The concept of S&D was also relevant for this mode which was of special importance to developing countries. With respect to the determination of serious injury to domestic industry or threat thereof, India agreed with the investigation procedure laid out in the Concept paper. Additional flexibility could be needed for the use of injury indicators in services as compared to goods. India supported the temporary withdrawal or modification of specific commitments undertaken pursuant to Articles XVI, XVII or XVIII, as proposed in the Concept paper. Compensation should not be required from developing countries invoking an ESM (option 2 of para. 29) and there should be no right for affected Members to suspend equivalent commitments. An ESM should be a temporary measure, which should be phased out at regular intervals if the situation improved. India supported the proposed provisions concerning consultation, transparency and notification.

16. Commenting on the Concept paper, the representative of Brazil said that his delegation supported option 1 (para. 5) concerning the definition of "domestic industry". Brazilian legislation did not distinguish between foreign- and domestically-owned companies. The definition of "domestic industry" was crucial in order to clarify questions related to MFN, national treatment and acquired rights. On para. 13, Brazil enquired why the term "imported services" had not been used.

17. The representative of the European Communities said her comments on the Concept paper were without prejudice to the Communities' position on the question of feasibility. On Section II, she wondered to what extent a safeguard measure could be necessary to meet national policy objectives. Moreover, since a safeguard was temporary by nature, it did not fit well with the objectives set out in paras. 2.2 and 2.3. The concept of "unforeseeable development" should be included in this Section. The EC had difficulties to figure out how an ESM could be applied to different modes, in particular mode 2. Predictability was essential in the context of mode 3, given the impact on investment. A list of illustrative measures applicable mode by mode should perhaps be envisaged. The idea of "suspension" of commitments was preferable to "withdrawal". More thought should be given to the concept of "supply or consumption" of a service. A clear definition of "domestic industry" was

needed and the EC favoured option 1 in para. 5. With respect to footnote 5, she had doubts concerning the substitutability and end-purposes of services and thought that more work was needed to define a "directly competitive" service. As mentioned by previous speakers, there were difficulties with data and statistics in services. "Serious injury" had to be clearly defined, but "threat" of serious injury might prove difficult without reliable statistics. A safeguard measure should always be applied on an MFN basis, but might vary across modes of supply. Determination of serious injury should be the result of an in-depth investigation. Section V might have to be expanded to explain the different steps of an investigation (minimum rights for defense, treatment of confidential information, deadlines for investigations, etc.). The interests of the wider public, including consumers, could also be given consideration. The notion of proportionality (least trade-restrictive measure) should be examined with respect to the applicable measures and a list of relevant measures could be elaborated. With respect to compensation, she wondered how a "substantial level of equivalent commitments" could be calculated. Some arbitration procedure should be available in case there was no agreement on the level of compensation. The EC had doubts about the denial of compensation during the first three years and about the concept of provisional measures. The envisaged duration had to be as clearly stated as possible. Finally, a set of rules on emergency safeguard measures should apply in a non-discriminatory manner to all Members, including developing countries.

18. The representative of Argentina said that, according to Argentinian legislation, any company established in the country was a domestic firm. In the context of mode 3, the definition of "domestic industry" would influence the range of measures available to a country wanting to resort to a safeguard measure.

19. The representative of Guatemala said her delegation supported a horizontal ESM, whose existence would be important in the negotiation of specific commitments. The object and purpose as described in Section II of the Concept paper were appropriate. A safeguard measure was a temporary intervention, contrary to Article XXI. Safeguard measures should not be used as protectionist instruments. In Section XI, it would be relevant to include provisions demonstrating, as a pre-requisite for the application of a safeguard measure against a developing country, that a substantive percentage of domestic industry suffered from injury or threat thereof. Finally, she wondered what form a possible agreement on safeguard could take.

20. The representative of Norway said that the Concept paper covered essentially what needed to be discussed. When stating the object and purpose, care should be taken not to rewrite the preamble of the GATS. The concept of "unforeseen development" was important and should be further discussed. Established foreign suppliers should be covered by the definition of "domestic industry". Acquired rights should cover the whole spectrum of the rights related to the provision of services, including equity holdings at the time of ESM enforcement. An ESM should be applied only to the extent necessary to prevent or remedy serious injury. If the problem was an increase in cross-border supply, the ESM should not encompass, for instance, a freeze on foreign equity acquisition under mode 3. An ESM had to be applied on an MFN basis, irrespective of the modes of supply. There was already a bias between countries that supplied services through commercial presence and those supplying the same service through mode 1 or 4. Thus, putting a lid on mode 1 but not on mode 3, could be seen as a violation of MFN. However, it seemed that the supply of individual services was in fact linked to certain modes of supply, which, in turn, might imply that the violation of MFN might not be such a problem after all. Norway considered that the concept of "like or directly competitive service" needed further discussion. Turning to the specific time-limit for the application of an ESM, she noted that this issue was linked to the question of S&D; an ESM was not really necessary, and at least not for developed countries, because the GATS already offered sufficient flexibility. Seeking longer time-frames for developing Members would perhaps mean looking for a very short time-frame in the general provisions. Applying S&D only in the context of least-developed countries might be another option to explore. She doubted whether the suspension of commitments should also include additional commitments under Article XVIII, in particular if these involved regulatory issues. A link

could be made here with the work on subsidies in the Working Party. Compensation was important to ensure that an ESM would not be misused. It was important to have clear procedural criteria for a provisional ESM. Such measure could be implemented, for instance, after the investigation was completed, but before consultations. Norway thought, like the EC, that an illustrative list of measures, but also of injury criteria, would be useful.

21. The representative of Canada wondered in what circumstances an ESM would be appropriate, given the structure of, and existing commitments under, the GATS. He also expressed concern that this mechanism would be used for purposes other than the alleviation of emergencies. Canada had already forwarded a number of questions and comments to the ASEAN Members and would be pleased to share them with the Working Party. The Chairman suggested that these questions be circulated to Working Party Members.²

22. The representative of the United States said his delegation was still sceptical about the need for an ESM. However, the recent start of a new round of services negotiations was a good opportunity to renew work on this subject, and see how a safeguard could be applied in sectors for which improved market-access commitments were being considered. The United States was still in the process of analysing the Concept paper as well as other countries' submissions on this subject. He noted that some delegations had made specific references to the contribution of an ESM to further liberalization; this was the case, for instance, in Egypt's answers to questions relating to an ESM (S/WPGR/W/15/Add.5) where it was stated that "designing a safeguard clause should encourage countries to become more forthcoming with substantive offers to liberalize". The United States would also renew the call for concrete examples of situations that would require application of a safeguard measure. More domestic industry input into the negotiations might help in this regard. The Working Party should also keep in mind alternative ways which countries had chosen to address structural adjustment concerns; for instance, the 1997 telecom negotiations and certain recent accessions had included a phase-in of commitments, as necessary. With respect to para. 2.3 of Section II of the Concept paper, the United States noted that many of the structural adjustment goals might also be met by scheduling more flexibility for the phase-in of new commitments in schedules, rather than erecting procedural hurdles at a later date via an ESM. A major concern for the United States was to avoid abuse. Transparency played a key role in the application of safeguard measures, and further information was needed on exactly how an investigation could be carried out. Some elements regarding due process in investigations appeared to be missing. The United States shared the concern already expressed with respect to option 2 of Section III; more details were needed as to how the two options related to various modes of supply, for instance, how juridical persons established in foreign countries would be treated under option 2. With respect to conditions of application and determination of injury, he enquired how terms such as "increase in supply or consumption of service", injury and causal link, would be measured, in the absence of detailed statistics. Like the EC, the United States would find a list of potentially applicable measures very useful. He was very concerned about proposals for extending application of safeguard measures to additional commitments of a regulatory nature pursuant to Article XVIII; the obvious example was basic telecommunications. On S&D, his authorities were not convinced that the concepts taken from the AS were appropriate in a services context. Job No. 5294/Rev.1 needed further reflection, there was an impression that the criteria and indicators discussed related mostly to injury rather than identifying objective criteria for determining whether imports had actually increased. On the Chairperson's Note (Job No. 782), he agreed that it would be useful to examine further alternatives to the traditional safeguard remedy, restrictions on market access, including looking at domestic subsidies, and supported further work on transparency (para. 6). Regarding S&D, he felt that, in practice, statistical problems might make it difficult for developed countries, in applying a safeguard measure, to avoid adverse impacts on trade of developing countries.

² Canada's questions and comments can be found in annex II to this Note.

23. The representative of Poland noted that the lack of statistical data was the main obstacle. A key question was whether an ESM should include a compensation requirement. For Poland, the purpose of an ESM would be to encourage Members to undertake more liberalization, by providing a possibility for temporary withdrawal or modification of commitments without the need to compensate. With compensation, an ESM would become similar to the procedure of modification of schedules under Article XXI. Definitions contained in the Concept paper needed to be further specified, such as the concept of "like or directly competitive service", "domestic industry". The application of an ESM to mode 2 raised several questions.

24. The representative of Mauritius said that the ASEAN Concept paper was a valuable contribution to the work of the Working Party. It raised a number of questions needing clarification. He regretted that, due to other meetings taking place in parallel, African countries were not able to attend this meeting. An ESM was a means to be resorted to in unforeseen and unforeseeable circumstances, and not an end in itself. The issue of S&D was central to developing countries. More contributions and proposals should be made by Members, in particular by those who had the necessary experience in the services sector.

25. The Chairman noted the range of questions raised regarding the Concept paper. A first question was why the notion of "supply or consumption of a service" was found preferable to that of "import". Second, Japan had enquired what "irrespective of its mode of supply" (para. 11) meant. Switzerland wanted to understand the reasoning behind para. 17. Canada had also posed several questions. The Chairman would welcome Thailand attempting preliminary answers to some of these questions.

26. On a preliminary basis, the representative of Thailand explained that the terms "supply or consumption" were used instead of "imports" because the latter term would not cover all possible scenarios in services trade, in particular mode 2. "Supply or consumption" had been referred to in many papers of the Working Party. ASEAN was aware, nevertheless, that the concept of "imports" needed to be captured; "supply or consumption" had been used in conjunction with the idea of "service of another Member" (see for instance paras. 3, 8 or 13) so as to ensure that only foreign – or imported – services were taken into account. The terms "irrespective of its mode of supply" (para. 11) was meant to indicate that MFN treatment would apply across all modes of supply. Para. 11 was currently between square brackets because the issue of MFN had to be solved first. For instance, there were uncertainties whether exempting some foreign suppliers under mode 3 might constitute a violation of the MFN principle. The terms "operating in the territory" (para. 3) meant that there should be a physical presence of the service supplier in the territory of the Member invoking an ESM. Para. 17 addressed the legitimate concern that an ESM should not be too burdensome for the invoking Member as compared to Article XXI. The concept of "unforeseen developments" had not been included in the Concept paper because, even though the ASEAN Members had been advocating it, they did not believe that a consensus could be reached on it. However, ASEAN remained open to further discuss this issue. The question remained whether a fourth condition should be included, relating to the circumstances in which an ESM could be invoked. If so, what criteria should be used? Should there be a reference to "unforeseen developments", as in the goods area, or to "unforeseeable developments", as suggested by some Members?

27. The Chairman said that Working Party Members had to consider how to structure future work. He intended to put forward a very short list of themes which could allow a more focused discussion on some key issues. This – non-exhaustive – list could include, for instance, the questions of defining "domestic industry" and "acquired rights", applicable measures, indicators and criteria, compensation, etc. He intended to hold an informal meeting on 7 April, at which a draft list could be discussed, and first comments be made on the issues of "domestic industry" and "acquired rights". When preparing for this meeting, delegations could usefully refer to the ASEAN Concept paper, as well as document S/WPGR/W/27/Rev.2, and various points made during this meeting.

28. The representative of Canada suggested that the issues of statistics and data, "like or directly competitive products", MFN and national treatment, S&D be included in the list. The representative of the European Communities felt that the application of an ESM to individual modes should be discussed as well.

B. NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

29. The Chairman noted that little progress had been made under this agenda item in 1999. This was largely due to the fact that the Working Party had not received, apart from a submission by Hong Kong, China, empirical information on Members' subsidy programmes. There had been no discussion of issues raised in previous Chairperson's Notes and Secretariat's papers. Nor had any information been submitted, pursuant to a proposal by Norway, on subsidy-related problems encountered in foreign markets. The two submissions for this meeting – Poland's reply to the subsidy questionnaire and a communication presented by Argentina and Hong Kong, China – might represent a new dawn of this subject-matter. The Chairman thanked the delegation of Poland for having provided its responses in the context of the information exchange (S/WPGR/W/16/Add.4). Poland was only the fourth Member to answer to the questionnaire the Working Party had agreed to and circulated in 1997. He encouraged all delegations to submit responses since there was very little the Chair or the Secretariat could do to advance the work of the Working Party without concrete inputs from delegations.

30. The representative of Poland said the notification presented by his delegation covered subsidies applied in the service sector during 1997-1998. Poland expected to submit further information on the application of these subsidy programmes in 1999, as soon the data would be available. The data submitted had already been presented, in a slightly different format, in the Committee on Subsidies and Countervailing Measures. The notification contained in W/16/Add.4 covered three subsidy programmes: (i) loans and grants from so-called EFSAL funds, a credit line in the International Bank for Reconstruction and Development; this programme was not concentrated on the services sector only; (ii) direct grants aimed at lowering the prices of some services in order to make them accessible to specific social groups; the support was available under the same conditions for national and foreign suppliers operating in Poland; (iii) various programmes for restructuring, transforming and developing the banking sector, and allowing it to operate in a market economy.

31. The representative of Hong Kong, China said that the communication his delegation was presenting jointly with Argentina (S/WPGR/W/31) was aimed at stimulating the debate on this subject and the rules that might be considered. His delegation did not have fixed views as to what the final outcome might be. An analysis of the available data showed a great paucity in this area, which was an issue to be tackled; Members were therefore strongly urged to complete the 1997 questionnaire and to come forward with any issue of interest or concern they had met. Subsidies did exist in many areas, some supported "normal" government activities and might not be considered to be subsidies in governments' mind. Other subsidies might have trade-distortive effects (such as export-enhancing or import-substituting), some might have none at all. Argentina and Hong Kong, China considered that no firm conclusion could be drawn from currently available data and, therefore, suggested that the Secretariat be asked to do additional work in this area (para. 9). With respect to para. 9(d), the idea was that the need for some MFN exemption related to subsidies given in those particular sectors; the notion of developing disciplines in subsidies – which might well include box-type approaches – could assist in the joint aim that "such MFN exemption should not exceed a period of ten years". Para. 10 set out a number of areas the Working Party should further consider. Argentina and Hong Kong, China did not have answers to many of the questions posed, nor any fixed ideas on the end-product. They accepted that all governments provided subsidies in many areas, particularly in social sectors. There was, thus, no intention to categorise all subsidies as not legitimate or not allowed, but to discuss how those subsidies with trade-distortive effects could be tackled.

32. The representative of Argentina supported what had been said by the delegation of Hong Kong, China. The communication was without prejudice to Argentina's position on this theme, but sought to stimulate the debate by presenting, in a different manner, themes which had been already tackled in the Working Party. The first problem to be addressed in this area was the lack of information. In this regard, the exchange of information on the basis of the questionnaire might be useful, although it should not necessarily be limited to the questionnaire. The remarks contained in the first part of the communication were tentative since they were based on unsystematic information. The communication thus proposed that the Secretariat looked for additional data. Para. 9(e) pointed to the only two regional agreements which specifically referred to subsidy disciplines in some services sectors; it would be useful to gain a better understanding of this experience. The second part of the document proposed themes for discussion. The objective was, as mentioned in para. 15, to address trade-distortive subsidies.

33. The representative of Chile supported the proposal that the Secretariat update document S/WPGR/W/12, since the number of regional trade agreements (RTAs) had nearly doubled since 1996. An update would give a better picture of how RTAs had dealt with this topic. The preliminary conclusions contained in para. 6 of W/31 were interesting, and the proposed update could consider these elements as well. The Secretariat should be called upon to contact and seek information from other bodies, such as UNCTAD. The Working Party should also look at some sectoral subsidies on which information might be available in more specific organizations, such as ITU, WHO or ICAO. Any analysis should take into account the needs of developing countries and the link with national policy objectives.

34. The representative of Norway noted that the available information did not allow to draw conclusions and agreed that the Secretariat's papers S/WPGR/W/12 and S/WPGR/W/25 should be updated. Norway had doubts as to how much information the analysis of subsidy-related entries in Members' specific commitments would yield, since specific commitments undertaken during the Uruguay Round did not necessarily reflect the current situation. There might be a need to more closely define "subsidy" because it was difficult to reply to the questionnaire as there was no agreement on a definition. The definition in the Agreement on Subsidies and Countervailing Measures (SCM) could be used as a working definition for the time being. The Working Party had to be careful when discussing subsidies with social objectives (health, education and social welfare), which were part of governments' responsibilities in many societies. It should not be presumed at the outset that these areas were wholly within the scope of the GATS. The creation of a green box implied defining what was an "allowable" subsidy. The Agriculture Agreement and the SCM Agreement adopted a different approach in that regard, and the Working Party might want to discuss which approach it wanted to adopt in the area of services. The consequences of having a different approach than the SCM Agreement would need to be looked at since goods and services seemed to be increasingly integrated in many sectors.

35. The representative of the United States noted that, based on contributions made to this Working Party, it was still unclear whether Members considered subsidies as posing significant problems to further services liberalization or to the stability of the commitments already made. This did not mean that additional work and study would not be productive. The SCM Agreement provided guidance but it was not clear whether its concepts could or should be directly transposed into the services context. The best lesson to be drawn from the SCM Agreement was the need to pursue subsidy rules in an evolutionary manner, based on a continuous assessment in the context of services. This might be particularly appropriate for GATS in that many services providers were involved in infrastructural activities which served broad societal needs. This idea was reflected in the joint communication by Argentina and Honk Kong, China. There might also be other reasons for special treatment on a sector-specific basis. As noted in the Chairperson's Note, certain obligations already existed in the GATS framework (MFN, national treatment), which provided some discipline for particularly trade-distorting subsidies. The GATS approach to MFN and national treatment allowed

countries to maintain socially desirable subsidies or other forms of assistance. However, it needed to be further explored how these obligations related to mode 1 and 2 commitments and this issue could have far-reaching implications for the work on subsidies. His comments should not be construed as favouring a toleration of practices which might be manifestly trade-distorting. However, the standard of "trade distortion" had to be gauged in the services context, and it should not simply be presumed that the standards applicable for goods could be readily transferable. The United States had started a process of domestic consultation and hoped to provide the Working Party with more considered views in a near future. With respect to W/31, he supported the proposals made in paras. 9(a), (b) and (e), but needed further clarification as to what was intended in paras. 9(c) and (f).

36. The representative of Argentina replied that the idea underlying para. 9(f) was that the Secretariat could examine investigative work done by other international organizations in the area of services subsidies. For instance, the OECD worked annually on a programme entitled "public support to industry", which covered nearly all economic activities. Other delegations had said that it would be interesting to gather sectoral information, which, however, would entail a great amount of work for the Secretariat. Thus, the idea was to deal with international organization of a general nature, such as OECD, UNCTAD, and maybe some regional bodies, such as APEC. With respect to 9(c), S/WPGR/W/13 could be updated in order to include commitments on basic telecommunications and financial services. The representative of Hong Kong, China added that a number of countries had acceded to the WTO since S/WPGR/W/13 had been done, and could be usefully be included.

37. The representative of the United States noted that his delegation had no problems with updating W/13 on the basis of what had been done in telecommunications, financial services and recent accessions. However, it was not for the Secretariat to interpret the schedules of commitments.

38. The representative of Switzerland supported the proposal to update factual data. The second part of the W/31 (para. 10) should be used as a basis for future work.

39. The representative of Japan agreed with the Chairperson's Note that the problem with subsidies was not their existence as such, but their trade-distorting effects. Some subsidies served good social purposes. Attention should be paid to GATS Article XIV, in addition to Articles I.3(c) and XIII. As a mechanism to justify subsidies was not necessarily covered by these provisions, but could still be considered necessary for social goods, Japan was interested in exploring the idea of a "green box". He agreed with the analysis made in paras. 4 to 8 of W/31 and supported paras. 9(a), (b) and (c); his authorities wanted to further consider (d). The issue raised in para. 10(d) was important but perhaps premature to address at this stage. On para. 10(e), Japan believed, like the United States, that there was a need to clarify the implications of national treatment, especially in relation to modes 1 and 2.

40. The representative of Canada said it would be worth examining whether government assistance in the services sector distorted trade within and across modes. Other open issues revolved around the definition of subsidies in the services context, and the appropriateness of countervailing duties as a remedy. Canada would welcome further elaboration of the possibility of a "green box". At this time, it was not clear how the consideration of social objectives related to certain modes of supply. Finally, he sought further information on the envisaged sources for data gathering and the kind of work involved.

41. The representative of Thailand, on behalf of ASEAN, said that the ASEAN Members were still reflecting on the communication presented by Argentina and Hong Kong, China.

42. The representative of New Zealand welcomed Poland's paper as an example to be followed by other Members. With respect to the communication by Argentina and Hong Kong, China, he appreciated that the paper managed to revisit a number of Secretariat's papers, in particular W/9,

which the Working Party had not fully addressed. He supported para. 9 and agreed that the Secretariat undertake what was proposed in sub-paras. (c) and (f). New Zealand, in conjunction with Australia, did not have a definitive response for sub-para. (e). Article XV contained the clear mandate to identify those subsidies which had trade-distortive effects and, from there, seek to determine what disciplines might be appropriate. The experience with subsidies in the goods area had led to the SCM Agreement and to the "traffic light" approach. New Zealand was of the view that countervailing measures were not very likely to work in the services area. Thus, the approach of capping and reducing subsidies, used in the Agriculture Agreement, could usefully be considered (paras. 15, 20-22 of W/9 contained a discussion in this regard). Better empirical information was needed on the incidence and types of subsidies occurring in the services sector. Members had to come forward with information, which needed not necessarily be limited to the questionnaire. The Chairperson's Note contained useful ideas in this regard.

43. The representative of Uruguay said that the proposals contained in the communication by Argentina and Hong Kong, China would help to move work ahead. With respect to para. 12 of the Chairperson's Note, the fact that there had not been a debate so far on "export-enhancing" subsidies did not mean that there was no problem. First, there was no factual information to indicate that "export-enhancing" subsidies did not have trade-distortive effects. Second, export subsidies were prohibited in the goods sector because they were problematic. They were the most trade-distorting type of subsidisation. He was thus not prepared to endorse statements suggesting that such subsidies would not be a problem in the area of services. The Chairman explained that, in para. 12 of his Note, he had tried to indicate that, to date, the Working Party had not received any factual information with respect to export subsidies but this was not an attempt to suggest that export subsidies were not a problem.

44. The representative of Australia noted that a number of issues raised in W/31 were being discussed in her capital with industry and other government agencies. She agreed that the Secretariat undertake a data gathering exercise under para. 9. It was also important to have more contributions from Members before considering disciplines. Like New Zealand, Australia was still considering the proposal that the Secretariat work on ANZCERTA and her delegation might be able to revert to this issue at a future meeting.

45. The representative of Brazil said that the communication presented by Argentina and Honk Kong, China provided a useful input in the Working Party's discussion on subsidies. Brazil agreed with the proposals for further data gathering.

46. The representative of Mexico noted that there remained an important amount of work to be done on the subject. Some fundamental issues had not been fully looked into, for instance, the identification of possible trade-distorting effects of subsidies in services. The structure of any particular disciplines would necessarily be complex, due to the specificity of services. One difficult problem was, for instance, the national treatment implications of granting a subsidy under mode 3 which might have distortive effects for modes 1 and 2. It would be important to consider a definition of "subsidy" or decide whether the same definition used in goods could be applied in services. Mexico supported the proposals made in paras. 9(a) and (b) of W/31.

47. The representative of the Republic of Korea said there was a need to discuss which subsidies were subject to Article XV, in light of Article I.3 of the GATS. The interlinkages between goods and services had to be kept in mind, in particular possible indirect trade-distortions. There was also a need to think of subsidies with respect to mode 3, considering that a lot of countries were trying to attract foreign capital. Referring to para. 10(b) of W/31 and para. 14 of the Chairperson's Note, Korea would like to discuss the extent to which subsidies having social objectives fell under Article XV. With respect to the need for disciplines (para. 10(c) of W/31), the applicability of the existing SCM Agreement to services subsidies, in particular key concepts contained therein (such as specificity),

might be considered. In addition, the Working Party should examine whether to consider modal or sectoral specificity in order to take into account the characteristics of services.

48. The representative of the European Communities noted they were still in the process of analysing the communication presented by Argentina and Hong Kong, China.

49. The representative of Poland said that the concept of a "green box" for subsidies would seem to imply the possibility of countervailing measures. The Working Party ought to bear in mind that, during its five-year existence, the concept of non-actionable subsidies proved inapplicable in the SCM Committee and was not prolonged. However, the concept of "specificity" contained in the SCM Agreement could be interesting. In Poland's understanding, so-called social subsidies would not be specific as they would be available under the same conditions to all suppliers.

50. The representative of Hong Kong, China expressed doubts whether it was possible to apply the goods' definition of subsidies. In W/31, it had been clearly stated that funds used in the context of normal government activities were deemed to be legitimate. A lengthy discussion on a possible definition might not be productive at this stage. With respect to Canada's question concerning the concept of a "green box", he noted that New Zealand had raised different options to be considered.

51. In summing up, the Chairman noted that most delegations seemed to want the Secretariat to undertake further background work, as suggested in para. 9 of W/31. He felt that there was a consensus for the suggestions in sub-paras. 9(a), (b) and possibly (c), provided that it was merely an update of what had been done in the financial services and basic telecommunication negotiations. He proposed that the Secretariat be mandated to carry out this work, with the objective of having this information ready for the next meeting, or soon thereafter. It was so decided.

52. The Chairman suggested that paras. 9(d), (e) and (f) be taken up at a future meeting. The Working Party could have, by that time, a clearer indication from the authors of W/31 of the type of institutions referred to under 9(f). On 9(e), he understood that Australia and New Zealand would come back to the Working Party. A number of substantive issues had been raised in relation to possible disciplines, which would deserve further consideration: the need to define subsidies, the importance of focusing on trade-distorting subsidies, the applicability of existing GATT disciplines, the treatment of subsidies aiming at social objectives, the relevance of countervailing measures, and the increasing interrelationship between goods and services. In future meetings, the Working Party should come back to the proposal made by Argentina and Hong Kong, China, and in particular its para. 10 which could form a checklist of issues that needed to be considered. Members would, of course, be free to add any other pertinent issues that they considered should be taken up under GATS Article XV. It was so agreed. The Chairman encouraged delegations to present information on their respective experiences with trade-distorting subsidies in services.

C. NEGOTIATIONS ON GOVERNMENT PROCURMENT UNDER ARTICLE XIII OF THE GATS

53. The Chairman recalled that for most of the past year the Working Party had focused its work under this agenda item on the issue of definition. At the previous meeting, however, a number of delegations indicated that they were ready to begin considering, in parallel, the scope for and structure of possible multilateral disciplines. Accordingly, he proposed to start by addressing the issue of definition – based in particular on the paper made available by the delegation of Japan (Job No. 6789, 12 November 1999). Delegations could then exchange views on disciplines and, in particular, a possible institutional framework.

54. In introducing the submission, the representative of Japan indicated that the proposal regarding the treatment of privatized entities under the Government Procurement Agreement (GPA) had been presented to the Committee on Government Procurement in the context of the on-going

review of that agreement. The GPA had a provision stipulating objective criteria for determining the range of public entities deemed to conduct government procurement, Article XXIV:6(b). According to that Article, a party could exclude an entity from the application of the agreement on the grounds that government control or influence over it had been effectively eliminated. The exercise of this right could be frustrated by the lack of clear criteria of what would constitute effective elimination of government control or influence, including privatization. The basic idea behind the proposal was that a privatized entity would be considered not to conduct government procurement when it operated in circumstances where market disciplines prevailed, endowed with independent management, not subject to any government control or influence. To determine whether market disciplines prevailed two criteria were relevant: (i) government intervention in the entity should have been removed, and (ii) its operations made subject to competition.

55. The representative of Canada expressed concern whether the wording put forth in the submission from Japan would achieve its objectives. In her view, the proposed criteria might not be sufficient to ensure that an entity was no longer under government influence and control. Conversely, it would preclude the possibility that there might be other features of a privatized entity. She inquired about the role of "market opening effects" of a privatization. The proposed criteria to identify privatized entities whose withdrawal would not be subject to compensation were difficult to apply in practice. In case of the proposed para. (b), she felt that a requirement that half the board of an entity consist of non-government appointees was insufficient to ensure the removal of influence and control by the government. She sought further clarification with respect to para. (c). The wording did not appear to preclude the existence of a significant level of government ownership of an entity when privatized, which would be inconsistent with the concept of removal of government influence and control.

56. With respect to para. (c), the representative of Japan acknowledged that there might be room for minor share holdings by the government, but the intention was to rule out significant government holdings in the entity concerned. He reiterated that the proposal was relevant for the discussion in the Working Party, particularly in relation to what constituted a public enterprise.

57. The representative of the United States said that the submission addressed a very specific provision of the plurilateral Government Procurement Agreement, relating to its coverage; its applicability to the work of the Working Party was therefore unclear. The GPA coverage was based on scheduling of specific entities rather than a generic definition of procurement. In seeking to define the meaning of privatization, Japan's paper might have some relevance for the discussion on definition of procurement, with respect to the references in Article XIII:1 to "governmental agencies" and "governmental purposes". However, if that was the intention, he could not agree with the proposed test.

58. The representative of Thailand, on behalf of ASEAN, reiterated support for a parallel track approach to the work on definition and disciplines. More time was needed to reflect on the suggestion contained in the Chairperson's note, as well as on the Japanese proposal.

59. Turning to the points raised in paras. 22 to 25 of his Note, the Chairman recalled that a useful starting-point regarding possible disciplines might be New Zealand's non-paper of 30 September 1997 (Job No. 5446). The paper referred to the responses given to the procurement questionnaire of 2 April 1996. In his view, there appeared to be two broad options for a framework of possible disciplines (irrespective of their content). Under the first option – the most ambitious one – government procurement disciplines would apply to all services sectors included in a Member's schedule. Under the second option, Members would undertake disciplines on government procurement in specifically selected areas. In turn, two alternatives seemed to be possible under the latter approach, one modelled on the Understanding on Commitments in Financial Services (UC), the other on the telecommunications Reference Paper (RP). Under an UC-type approach, Members

would indicate the sector(s) they were prepared to subject to the commonly negotiated disciplines and, if relevant, any departure therefrom. Under an RP-type approach, Members would, on the basis of a "reference procurement paper", specify the disciplines they were willing to accept in the sector(s) concerned. He invited delegations' views on these issues.

60. The representative of Canada indicated that more discussion was required before a decision on the most appropriate approach could be taken. It would be worth exploring first the issues raised in the New Zealand paper, as the concepts of non-discrimination and elimination of discriminatory provisions required substantive discussion. It was also necessary to more fully examine the implications for non-discrimination of the proposed terms of "full and fair opportunity for domestic suppliers". It was premature to go beyond basic disciplines to consider modalities such as those described in paras. 23 to 25 of the Chair's note

61. The representative of New Zealand said that, given the resumption of services negotiations, the Working Party should look into what could be achieved in the area of government procurement in the services area. Therefore, he agreed with the Chairperson's Note that it was time to look at a full range of questions, including those related to market access and national treatment. In relation to para. 23, he was aware that the GATS positive list approach raised questions with regard to the sectoral coverage of government procurement in services. It was nevertheless desirable, from the liberalization standpoint, to define services procurement as comprehensively as possible. He welcomed the clarification contained in para. 24 that the envisaged result were general solutions, which might be applied on a sectoral basis. He believed that the second option given in the Note offered a possibility to make progress in this area.

62. The representative of Hong Kong, China expressed his authorities' interest in achieving comprehensive commitments in government procurement of services. What needed to be developed was a common view on the extent to which Members were prepared to commit on government procurement in relation to the specific commitments they already had. The two possible options set out in the Chairperson's Note, i.e. an RP-type or an UP-type approach, were very similar in nature since both allowed for derogations. His delegation was flexible in this regard but wanted to cover as many sectors as possible, subject to negotiations. He hoped the Working Party could move discussions forward by taking up definition and disciplines in parallel.

63. The representative of the United States considered that the Chairperson's questions regarding the feasibility of horizontal disciplines were legitimate. He suggested that horizontal disciplines might be appropriate on issues such as transparency, but perhaps less so in relation to the liberalization of market access. All efficient public systems would apply the same transparency requirements across all sectors. His delegation was not opposed to exploring sectoral approaches for government procurement disciplines under the GATS that could include the negotiation of market-access commitments; to be effective, such commitments would have to be based on transparency disciplines. This was closely related with the on-going discussions in the Working Group on Transparency in Government Procurement, and coordination between the two fora was therefore necessary.

64. The representative of the European Communities suggested that, if work on horizontal disciplines was undertaken, both transparency and non-discrimination should be addressed.

65. In summing up, the Chairman noted different views on how to proceed with the discussion of possible disciplines. Some delegations thought it premature to talk about a framework, while others would find this discussion useful. It was also said that the Working Party should be focusing on the key concepts of national treatment and most favoured nation as they related to government procurement. He felt that the New Zealand paper remained relevant and could guide further work; this would not preclude discussion on the scope of disciplines. He suggested discussing definitional

and conceptual issues (non-discrimination, transparency, horizontal disciplines applicable to all sectors *vs.* horizontal disciplines applicable on a sectoral basis), in parallel at the next meeting. He urged Members to present submissions on these issues.

D. DATE OF NEXT MEETING

66. The Chairman indicated that the next formal meeting had been scheduled to start on 4 May, in the afternoon, and to continue in the morning of 5 May. Then, the formal meetings of the Working Party would, to the extent possible, be aligned with the meetings of the Services Council.

ANNEX I

Statement by the ASEAN Members to introduce the ASEAN Concept Paper on ESMs in Services at the meeting of WPGR on 24 March 2000

Mr. Chairman,

1. It is an honour and privilege for the ASEAN Members of the WTO (namely, Brunei Darussalam, Indonesia, Malaysia, Myanmar, Philippines, Singapore, and Thailand) to be given the opportunity today to introduce to the Working Party on GATS Rules a proposal pertaining to the negotiating mandate under Article X of the GATS on emergency safeguard measures for trade in services. This proposal has kindly been circulated to the Members by the Secretariat at our request under reference S/WPGR/W/30 dated 14 March 2000.

2. At the outset, I must state that it is not our intention to submit an ASEAN position paper on this important topic. This Concept Paper is a document intended for assisting the WP in its search for a way forward. The primary objective is therefore to produce a paper which has a widest possible basis for acceptance by Members, based on the results of the work conducted so far by the WP. This objective should, in our view, help explain the time it has taken the ASEAN Members to produce the paper.

3. Also, with this same objective in mind, ASEAN has opted for a *Safeguards Agreement approach*, as opposed to the approaches followed in Article V of the Agreement on Agriculture and Article VI of the Agreement on Textiles and Clothing. Indeed, the meeting reports of 1999 clearly show that a large majority of the Members are in favour of a safeguard mechanism based on prior *investigation* and *establishment of causal link* between injury and increased supply or consumption of foreign services.

4. Before I go into details, it is important to underline that, since we are very much still in the conceptual stage, many of the time-frames referred to in the paper are not just as yet specified, but rather left open to discussion.

With your permission I now wish to briefly go through the important points contained in the paper.

5. First, the object and purpose of a possible set of rules to govern ESMs in services. Here, we try to stay as much as possible within the framework of the GATS. The reasons are, inter alia, to recognize the particularities of the area of services, as opposed to that of goods, when it comes to applying safeguard measures. These are reflected in paragraphs 2.1 and 2.2 of the paper. The reference to "structural adjustment" and "competition" in paragraph 2.3 is intended to underline the fact that ESMs are not to be used for protectionist purposes - a point of concern formally voiced by a large number of Members.

6. Next, the definitions. As a general rule, we try to refer to Article XXVIII of the GATS to the extent possible and relevant to the application of ESMs in services. Also, where applicable, we try to refer to other provisions of the GATS, or otherwise to those of other WTO covered agreements that, in our view, may be translated into the services context without too much distortion. These are, for example, Article 4.1 of the Anti-Dumping Agreement and Article 4.1 of the Agreement on Safeguards. We feel that the Members would be more comfortable with this approach since we are not trying to depart from some of the well-established notions in the WTO system.

7. A notable exception is perhaps the notion of "like or directly competitive services" we have attempted to define in footnote 5. Here, there is no GATS definition to refer to, and the practices in

goods remain vague. Moreover, the WP has never really discussed this concept. We feel however that it would be useful to include it in the paper at this stage. We wish to encourage comments and suggestions both on the "like services" and the "directly competitive services" ideas, as well as whether Members should attempt to define these terms.

8. One important point remains the definition of the domestic industry. Here, we have decided to propose two options, due to the fact that a large number of Members are still reflecting on this important question, and also because there are still some key technical issues which are yet to be resolved among the Members before any sound decision may be made. In the Annex to the paper, we have tried to compile these issues in a systematic way in order to facilitate future discussions. We also believe that the Members should arrive at a common understanding on these issues as soon as possible.

9. The first option in the definition of domestic industry includes foreign suppliers established in the country through commercial presence, by using the criterion of "operation" within the territory of the applying Member, which indeed implies a physical presence of some sort by the supplier in that territory. The second option includes only "national" suppliers of the invoking Member - the "nationality" criteria being those contained in GATS Article XXVIII.

10. The main difference between these two options lies indeed in mode 3. In the first option, the idea is to protect from an ESM foreign suppliers established in the country through commercial presence *before* the safeguard action, or at least not to make them target of these measures. Their "acquired rights", it goes without saying, will be protected. In other words only new entrants would be affected by the safeguard measure. In the second option, these companies will be affected by the ESMs in the same manner as all other foreign companies. The issue remains, however, as to the definitions of "acquired rights", "new entrants", as well as other relevant concepts. They are addressed in the Annex. ASEAN does not, at this stage, believe that it is in a position to resolve all these issues on behalf of all other Members.

11. With regard to the conditions of application of the ESMs, we believe that paragraphs 8 to 11 cover the views of a large majority of the Members as expressed on the WP so far. One important point to note is that we use the notion of "increase in supply or consumption" instead of "increased import" as is the case for goods. This is because in our view, and in many Members' view, the notion of "import" would not be suitable for the services context. Also, paragraph 11 is kept between brackets, although we accept the notion that MFN is part of the principle of non-discrimination as mandated by GATS Article X. This is because, in our view, the applicability of MFN in this context is very much dependent on the resolution of the issues raised in Section B of the Annex.

12. With regard to the determination of serious injury or threat thereof, we use as basis the relevant provisions in the Safeguards and AD Agreements, with some "innovations" designed to adapt these provisions to the services context. We therefore propose in Section V a three-step approach for the investigation. The invoking Member must, first, demonstrate an increase in supply or consumption of foreign services; second, the existence of a serious injury or a threat thereof; and finally, establish a causal link between the injury and the increase. We believe that this is well in keeping with the work of the WP so far. A thought worth considering even at this point is the advisability of drafting detailed rules for the investigation in the same fashion as the AD or the Subsidies Agreements. In this case, elements of Job no. 5294/Rev.1, and future work on it, may be incorporated into the text. We are prepared to develop this point further in the future.

13. With regard to the applicable measures, three categories of these are identified in Section VI. We believe that these measures cover all the possible sub-categories of specific measures as discussed so far in the WP. Discussion should indeed continue and focus on specific measures such as subsidies or those affecting regulatory disciplines, such as the Telecom Reference Paper. These specific

measures, however, could and should be addressed in the context of the three types of measures identified here. But there would be no need to include an exhaustive list of specific applicable measures in the text.

14. I now turn to the issue of compensation. This issue is still very much under debate in the WP. Some delegations have expressed doubt about the utility of such a provision in the context of services. Others, on the other hand, find it relevant. Here, we have taken the language from the Agreement on Safeguards in order to stimulate debate. Members may however wish to consider how relevant such a compensation provision would be in the context of the different modes of services trade.

15. Section VIII deals with the issues of duration and review of the ESMs. It is intended to reflect the principles of "temporary basis" (paragraph 18), "degressivity" (paragraph 20), and "limited frequency of use" (paragraph 21). So far, as far as we know of, no Member has expressed objection to these principles. With regard to the question of extending an ESM, in keeping with our general approach, we believe that the rules should provide for this possibility, subject to a procedural restraint (a new investigation), and a substantive condition (evidence of adjustment of the industry concerned).

16. Paragraph 22 deals with provisional measures. This is an important issue. We need to find a balance between the necessity of providing Members with the scope to deal with critical circumstances and the legitimate concerns that arise in respect of provisional measures given the peculiarities of services trade. Provisional measures, on the condition that they are used under strict disciplines and with transparency, would allow the investigating Members to reasonably respond to critical circumstances pending conclusion of the investigation.

17. Section X deals with notification, consultation, publications of legal texts, and communication of information. The aim is to ensure transparency which is one of the best tools that we know of for preventing abuse in the application of ESMs. These rules would moreover be in keeping with the object and purpose of the GATS and the WTO Agreement.

18. Next comes the issue of developing countries. In this regard, it has been suggested that perhaps there would be no need for provisions on special treatment for developing countries, since all Members already have the opportunity to assess their commitments under the GATS. We believe however that, with the overall objective of progressive liberalization in mind, developing countries may need some protection in the process. The proposed provisions in the paper are designed to assist developing countries in their endeavours to realize this objective. Moreover, as pointed out by some delegations, developing countries may be less capable, from the technical point of view, to assess the implications of commitments made. Also, the capacity of adjustment of their domestic industry may prove to be less than that of developed countries.

19. Paragraph 28 sets the threshold for non-application of ESMs to a service of a developing country Member. Paragraph 29 allows them to extend the period of application of an ESM beyond the period provided under paragraph 18. Option 2 of paragraph 29 also exempts developing countries from the compensation obligations.

20. Paragraph 31 deals with dispute settlement. It simply refers to the DSU, including Article 22 which allows, subject to authorization by the DSB, suspension of concessions or obligations under the GATS or under another WTO covered agreement – the so-called "cross retaliation". This is a principle to which so far no Member has expressed objection.

21. Finally, I turn to the issue of review of these proposed rules. Since this is a new matter, a review of the rules after a certain period of application would be a logical step to take. With this possibility, Members should be more comfortable to agree upon the possibility of using ESMs in services.

22. Let me conclude by saying that, with its limited knowledge and expertise, ASEAN has tried its best, with good faith, to contribute to the Working Party's recent progress in ESM negotiation, by coming up with this concept paper. It is ASEAN's belief that, for the months to come, the paper should provide a most suitable basis on which the WP may continue its endeavour to bring to a successful conclusion its negotiating mandate under GATS Article X.

ANNEX II

Canada Comments/Questions on ASEAN Safeguard Concept Paper

Meeting of WPGR on 24 March 2000

1. Regarding definitions, paragraph 3 suggests that ESMs apply to both supply and consumption of services, and across modes of delivery. It would be helpful to understand how an ESM could be applied in a mode 2 consumption abroad scenario, i.e., how does one deal with situations where the consumer moves abroad to consume a service. What type of safeguard is being contemplated here? Canada believes that the GATS applies broadly to the supply, not consumption, of a service. Do ASEAN Members have a different view?
 2. In paragraph 5 under option 1, it is not clear what "operating within the territory of a Member" means. Does the paragraph only apply to modes 1, 3 and 4? Does it cover mode 2? Also, how is domestic industry to be defined; does it include foreign owned, domestically established firms? Clarification of these issues would be central to a proper determination of injury.
 3. In paragraph 6, it is not clear whether a determination of serious injury is to include, as in the case in GATT Article XIX, an examination of the causal link and, in particular, the examination of other factors that may impact on injury.
 4. In terms of the section relating to "Conditions of Application", it is not clear from reading paragraphs 8 through 11 together, whether an ESM is intended to apply across modes, or solely within a given mode.
 5. Regarding the section relating to determining serious injury, paragraphs 12 and 13 appear to set out a framework for establishing the existence of serious injury. The provisions, however, do not provide guidance on how a determination of serious injury would actually be made. The framework raises the issues of: (i) what kind of quantifiable data would be required to establish serious injury; and, (ii) how would such data be collected. Also, it would be helpful to have further guidance on indicators and criteria which in particular may be relevant for services.
 6. The section on applicable measures raises the issue of whether an ESM is to apply across GATS undertakings on market access, national treatment and other areas (i.e., GATS Article XVIII), or whether its scope is to be limited to a particular case; (e.g., where market access commitments are at issue, would market access to a particular sector be suspended?). What kinds of remedies would be contemplated?
 7. The section dealing with compensation level of commitments raises the issue of whether the level of commitment refers to the trade value of the commitment, or does the level of commitment remain the same if one commitment is exchanged for another commitment in another sector?
 8. In terms of the section on provisional measures, the paper appears to selectively draw on the Safeguard Agreement. The process for applying provisional measures appears to circumvent such procedural considerations as the affect of an increase in imports, and a preliminary investigation.
 9. With regard to paragraph 16 on compensation, is the approval of the Council on Trade in Services (CTS) required before suspension of equivalent benefits by Member affected by the ESM can be implemented? Is there an imbalance here since approval of the CTS is not required to impose an ESM? Also, how does the requirement for a CTS approval under paragraph 16 affect members' rights under GATS Article XXI?

WORLD TRADE ORGANIZATION

RESTRICTED

S/WPGR/M/25

2 November 1999

(99-4741)

Working Party on GATS Rules

REPORT OF THE MEETING OF 8 OCTOBER 1999

Note by the Secretariat

1. The Working Party on GATS Rules held its twenty-fifth meeting under the chairmanship of Mr. Siva Somasundram of Singapore. The agenda for the meeting was contained in WTO/AIR/1171. It consisted of five items: negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and other business.

2. The Chairman indicated that he would raise, under other business, the question of the Working Party's Annual Report to the Council for Trade in Services. The agenda for the meeting was adopted.

3. The Chairman drew attention to an informal Note (Job No. 5332) he had circulated on 16 September 1999, to assist delegations in their preparation for the meeting.

A. NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

4. The Chairman recalled that the Secretariat had issued a second revision of document W/27 (S/WPGR/W/27/Rev.2, 16 September 1999) as well as a brief overview of trade and injury indicators - based mainly on an informal paper from Venezuela - which could be used to identify safeguard-type situations (Job No. 5294, 13 September 1999).

5. The representative of Thailand, speaking on behalf of ASEAN, indicated that ASEAN intended to circulate a concept paper on possible rules for emergency safeguard measures before the end of the year. The objective was to produce a paper having the widest possible basis for acceptance. Turning to the Secretariat informal Note (Job No. 5294), he said that this paper should be made a formal document in due time. As to the second revision of W/27, ASEAN was of the view that it incorporated the essence of recent work. Paragraph 7 rightly pointed out that the dividing line between the concept of sector-specific safeguards and horizontal safeguards might be less sharp than initially conceived.

(a) Concepts of injury and causality

6. The Chairman proposed to focus the discussion on potential injury and causality indicators which might be used in any sort of safeguard mechanism, irrespective of whether it was sector-specific or horizontal, or any other variant under consideration. The informal note by the Secretariat (Job No. 5294) provided a checklist of possible indicators, building upon the Venezuelan proposal and including comments made at the last meeting. Quite a few blank spots remained, however, and it would be useful to have delegations' views on how to fill them.

7. The representative of the European Communities pointed out uncertainties surrounding the term "party" which appeared on page 2 of Job No. 5294 (second column, third comment). It was her

understanding that this term referred to the industry seeking safeguard protection, rather than to the Member concerned. The Chairman said that it was also his understanding that the "invoking party" was the industry making the petition for safeguard action.

8. The representative of Thailand, speaking on behalf of ASEAN, said that discussions on Job No. 5294 should not prejudge Members' position on whether national or domestic suppliers should be protected. He suggested that the structure of the paper be adjusted to better suit the objective of the Working Party's work. The second part should be divided into two sections, one dealing with indicators relating to changes in supply or consumption of services, and the other one dealing with the question of causality. In the latter context, the Working Party should discuss, *inter alia*, procedures as well as criteria to determine what factors contributed to injury, apart from increased foreign supplies of services. A further element would be the determination of the relative importance of these factors. With respect to the content of the list, ASEAN was of the view that the indicators and criteria currently contained under both headings were normally available, or could be made available, to the investigating authorities. For instance, reductions in price or number of suppliers could be monitored in a continuous manner and be a basis for safeguard action. When combined, these facts and figures were sufficiently detailed and comprehensive to allow for an objective determination. ASEAN strongly believed that the Working Party needed a consensus as soon as possible on these indicators and criteria, irrespective of the ongoing debate on whether a safeguard mechanism should be sector-specific or horizontal.

9. The representative of Japan sought further clarification on certain injury-related criteria listed on page 1 of Job No. 5294, i.e. criteria number 2 ("Decline in consolidated offers"), number 7 ("Reduced capacity utilisation") and 11 ("Changes in the level of inventories"). Secondly, she emphasized the importance of objective rules and procedures governing the application of any criteria and indicators. In this context, Japan believed that the GATT Agreement on Safeguards (AS) was relevant, as pointed out in paragraph 15 of document W/27/Rev.2. In particular, the first sentence of Article 4:2(b) of the AS might deserve further consideration. Finally, her delegation felt that certain data, such as those found in IMF Balance-of Payments statistics or OECD foreign direct investment statistics could be a useful underpinning of certain indicators.

10. The Chairman recalled that the list on page 1 of Job No. 5294 was a summary of the points contained in Venezuela's submission as well as of proposals made by Members at the last meeting, in particular Korea. He invited these Members to further elaborate on why they considered these indicators to be useful. The second issue raised by Japan was a relevant point which could be taken up in future discussions. Finally, the availability of IMF and other statistics could be reflected in the comments section of Job No. 5294.

11. The representative of the United States indicated that his delegation had taken note of the request that the Working Party should reach a consensus as soon as possible on various criteria and indicators. While the United States remained prepared to engage in a general discussion, he wished to reiterate that delegations should attempt to describe real-life situations, which could assist the Working Party in reaching some kind of common understanding on appropriate indicators or criteria.

12. Referring to the concepts of "unforeseen" and "unforeseeable" developments, the representative of India concurred with previous ASEAN statements that the term "unforeseen" was intended to capture developments which a Member could not reasonably have foreseen at the time of scheduling its commitments. Thus, it was not a totally subjective criterion; it did have scope for objective application. The concept of "unforeseeable" development might be even more subjective. On the question of injury, India considered that the relevant indicators in the goods area could be examined with a view to deciding on their adaptability to services. The indicators contained in the Venezuelan paper and additions made in the Working Party should be considered. Examples should be provided to better understand their applicability. India supported the statement made by Thailand,

on behalf of ASEAN, concerning the need for an early consensus on the indicators to be applied for determining injury and causality. In services, greater flexibility than in the goods area might be needed to cope with the complexity of the sector as well as problems in data collection and analysis.

13. The representative of New Zealand said that Job No. 5294 provided a starting-point which could help the Working Party to identify and understand how a possible emergency safeguard mechanism might work in the services area. New Zealand agreed with comments made at the last meeting that, given the inadequacy of statistics in the services area, it was important to have a broad list of indicators. Several criteria must have been met before action could be taken. Concrete examples might be needed.

14. The representative of Mexico was of the view that the two documents prepared by the Secretariat helped to focus the discussion and to define some concepts which had been discussed in an abstract context. Her authorities were asking for more concrete examples so as to better understand the desirability and scope of various criteria when applied to specific situations. It would be very useful if delegations having some kind of experience in this area could share it with the Working Party.

15. The representative of the European Communities said that the question of whether the reasons contributing to sectoral adjustment problems should affect the permissibility of a safeguard action was important. It might influence, for example, the actual form that such a mechanism could take. On previous meetings, there had been suggestions that, if government regulation were in some way contributing to an emergency situation, most governments would be reticent to admit it. The appropriate action could involve changes in regulation. The reasons contributing to the adjustment problems could thus be relevant in determining the type of safeguard measure and its period of application. Like others, the European Communities was looking for concrete examples. Although it was likely that, if there were such examples, they might already have been raised in the GATS Council under Article X.

16. The representative of the United States concurred with the European Communities that the Working Party should look more closely at the question of changes in regulation. There could be situations, as identified by the European Communities, in which regulatory changes might be the cause of increased imports, which in turn caused injury, and it was understandable that governments were hesitant to recognise that fact. Second, there might also be situations in which a change in regulation itself was the cause of injury, regardless of trade developments. For example, while imports might not be increasing, a change in regulation could lead to product innovations and shifts in sectoral demand.

17. In summing up the discussion, the Chairman noted that Members acknowledged the particular importance of trade and injury indicators, irrespective of what safeguard mechanism would be in place. It was necessary to consider more than one indicator in order to establish an increase in supplies and ensuing injury. Second, hypothetical or real-life examples would advance discussions in the Working Party. Third, to further clarify the indicators listed in Job No. 5294, it might be useful to make a distinction between, on the one hand, indicators or criteria that were relevant in establishing changes in consumption of services and, on the other hand, the causal link between a surge in imports and injury. That distinction might prove difficult to make, but was potentially very useful. Job No. 5294 might be developed in this regard. Fourth, delegations which had suggested individual indicators should try and provide answers to the questions raised during the meeting. Fifth, flexibility was a recurrent theme: the dearth of statistics on trade in services might have an impact on the kind of indicators the Working Party would eventually be able to agree upon. He noted that it might be difficult to arrive at an early consensus on indicators until the Working Party started examining their use in concrete - real-life or hypothetical - situations.

18. Referring to the interventions by the United States and the European Communities, the representative of Thailand, speaking on behalf of ASEAN, said that government regulation might be at the origin of certain adjustment problems. As a matter of principle, account should be taken by the investigating authority of all reasons contributing to injury as factors affecting the permissibility of safeguard actions. Article 4:2(b) of the AS might be used as a basis for developing rules in this regard.

(b) Horizontal *versus* sector-specific safeguards

19. The Chairman noted that the Working Party had agreed, at its last meeting, to focus on the criteria and principles which would need to govern any type of safeguard action, regardless of the basic mechanism (sector-specific, horizontal or other) which might ultimately be chosen. Relevant examples were contained in previous submissions by Hong Kong, China and the United States (S/WPRG/W/26, 10 February 1998 and S/WPRG/W/17, 13 March 1997). These referred, *inter alia*, to principles such as MFN treatment, advance notice, temporary and degressive application, clear specification of the measures envisaged, and protection of "acquired rights" of established suppliers. While the Working Party might be able to agree in principle on all these points, implementation in practice might raise difficult questions. For example, one might ask whether and how MFN treatment could be ensured if a Member, which was committed to allow only for a small number of suppliers in a sector, intended to further restrict entries on short notice. If a schedule contained very limited access guarantees in a sector, should the Member be entitled to further tighten access conditions under safeguard provisions? In past meetings, many delegations had rejected the idea of linking the use of safeguards to the quality of commitments undertaken in a sector. However, it might be useful at least to discuss the potential implications for MFN. How the protection of "acquired rights" could be guaranteed in practice would be another question. Would foreign-owned suppliers, which were already established under mode 3, continue to have exactly the same rights as any other domestically established supplier – including the right to expand their market shares through take-overs, mergers, new investment, etc.? Or was the concept of "acquired rights" meant only to protect the *status quo* of foreign suppliers – in terms of production, market share or other business indicators? If so, what would be the relevant benchmark? He felt it was important that such basic concepts be further specified and, thus, made applicable in practice.

20. The representative of Thailand, speaking on behalf of ASEAN, suggested that the Working Party discuss the basic principles that should form part of a possible set of rules governing safeguards. As reflected in document W/27/Rev.2, paragraph 7, this discussion should not prejudice the final conclusion of the Working Party on the approach to be adopted. As the first point proposed by the United States in document S/WPGR/W/17¹ was at the very heart of the debate on horizontal *vs.* sector-specific safeguards, it would be useful to revert to it once the Working Party had a clearer idea of common principles. ASEAN felt that there were a number basic principles that most, if not all, Members could readily agree on. For instance, at least four principles, which ASEAN countries viewed as relevant, were common to the papers by the United States (S/WPGR/W/17) and by Hong Kong, China (S/WPGR/W/18): (i) advance notice; (ii) temporary application; (iii) MFN treatment; and (iv) objective criteria as a basis for action. Two additional principles - referred to in the Hong Kong, China paper - were also of relevance: (i) an ESM should be limited to the minimum necessary to tackle the problems arising from an emergency situation; and (ii) any action would be subject to dispute settlement under GATS Article XXIII. With respect to the proposed clear specification of the measure, the US paper was more specific than the Hong Kong, China paper; in ASEAN's view, rules in services might go a step further than those in the goods sector by specifying the particular safeguard measures that might be applied if the investigation established injury caused by increased consumption of foreign services. Possible measures had to include suspension of

¹ This point reads: "inclusion in a schedule of a safeguards-type provision in a given sector must be paired with a commitment to liberalization in that sector".

obligations under GATS Articles XVI, XVII and XVIII, and should be applicable across all sectors. With respect to other principles identified in the US paper, ASEAN would like to have more details, for instance: on degressivity, what kind of timeframe was envisaged for the phasing-out period and would Article 7 of the AS be a suitable model? On the question of frequency in invoking safeguards, what kind of timeframe and other conditions were envisaged? On the principle of compensation, should there be no such possibility at all or would an adapted version of Article 8 of the AS be acceptable? On this last point, ASEAN was of the view that the purpose of Article XXI was different from that of a safeguard mechanism: while the former provided for longer-term or permanent adjustments, a safeguard was of temporary nature. With respect to the Hong Kong, China paper, ASEAN wished to have further clarification on two principles (contained in paragraphs 11 and 12): (i) public policy concern; and (ii) remedying the injury identified.

21. On a preliminary basis, the representative of the United States noted that the concept of degressivity, similar to that of limited duration, was linked to the stated purpose of an ESM: structural adjustment. Thus, while there could be temporary relief, an industry should be taking necessary measures to become competitive in the domestic and global market. Article 7 of the AS set forth the principle but did not contain any concrete rules on how it might be applied. His authorities were currently considering whether greater precision was needed for services. The concept of frequency was also linked to the concept of structural adjustment, in that relief should not be granted over and over again. Finally, the concept of non-compensation was related to the basic objective of a safeguard, which was distinct from that of Article XXI. The history in the goods area, predating the existence of the AS, showed that when governments were faced with requests from industries to provide relief, they would look at the various options available to them, including GATT Article XIX and Article XXVIII. The latter path was often preferred because it was the easiest one. Both provisions required compensation, but Article XIX required in addition that there be findings of injury and causality. The authorities concerned thus tended to address structural adjustment problems with Article XXVIII and, as a result, Article XIX had become a dead letter. The solution, found in the AS, was a provision allowing for safeguard measures during a short period of non-compensation. The objective was to create an incentive to use the proper measure, i.e. a safeguard, as opposed to Article XXVIII.

22. With respect to the issue of compensation and possible relevance of Article 8 of the AS, the representative of India noted that the compensation should depend on the nature of the safeguard measure adopted. This issue should be separated from GATS Article XXI. The need for compensation should be considered later, once the Working Party had reached a common understanding on the circumstances under which an ESM could be used and the types of measures that would be permissible.

23. The representative of Hong Kong, China said that the objective of the paper previously presented by his delegation was to see whether a mechanism not open to abuse could be set up and be workable. Hong Kong, China saw the need for flexibility, but also wanted to ensure that the scope for abuse was minimized. This was the intention underlying the two points identified by Thailand - public policy concern and remedying the injury identified. His delegation had a kind of "necessity test" in mind: the envisaged measure had to be necessary to address the emergency. Turning to the issue of MFN introduced by the Chairman in his opening remarks, he failed to see a problem. As to "acquired rights", he agreed this was a difficult issue which needed to be further discussed. Its relevance depended on whether an ESM differentiated between national and domestic service suppliers.

24. The Chairman said that MFN issues related, for instance, to the situation of the already established foreign services supplier, *vis-à-vis* foreign services suppliers which were outside the invoking country. Assuming that the invoking country did not impose restrictions on the established

services suppliers, what would be the impact, in terms of access, on foreign services suppliers not established.

25. The representative of Japan noted that the AS was relevant for the discussion of the Working Party. A safeguard was an exceptional action in emergency situations, which required advance notice, temporary application, degressivity, clear specification of the measures envisaged. Moreover, the measures taken should be limited to the minimum necessary to tackle the problem, and as closely specified as possible. Japan considered that any action should be taken on behalf of all domestic suppliers in a sector, irrespective of ownership.

26. The representative of the Republic of Korea said that it was necessary to clarify the meaning of "acquired rights", since it might be inconsistent with the MFN principle. The notion of "acquired rights" had to be interpreted strictly, to exclude the suspension of basic business requirements. With respect to degressivity, there was a need to examine the relationship with the principle of temporary application: if a safeguard action was temporary and short, degressivity might not be relevant.

27. In summing up, the Chairman encouraged Members to contribute to clarifying the concept of "acquired rights" in submissions. The relationship between Article XXI and any possible safeguard mechanism under Article X also needed to be further explored. This was closely related to the issue of compensation.

(c) Applicable measures and other relevant issues

28. The Chairman invited delegations to comment on three points. First, while many Members had expressed the view that it should be possible in safeguard cases to suspend commitments under Article XVIII, others had raised doubts as to whether this should include the suspension of regulatory principles (e.g. principles spelled out in the telecommunications Reference Paper). Second, delegations might want to introduce any new thoughts on whether certain types of safeguard measures, e.g. subsidies, should be preferred to others, e.g. quotas (W/27/Rev.2, para. 27). Third, delegations might need to further discuss the idea that safeguard actions under certain modes, e.g. modes 1 and 2, should be given priority over actions under other modes (W/27/Rev.2, para. 14).

29. The representative of Japan noted that a safeguard action could include the suspension of commitments under Articles XVI and XVII, but also under Article XVIII. As additional commitments varied among Members, this opened different options. His delegation felt that, in principle, it should be up to the Member concerned to choose.

30. The representative of Thailand, speaking on behalf of ASEAN, said that suspension of additional commitments under Article XVIII should be possible. However, some issues, such as regulatory disciplines, might need special consideration. ASEAN was prepared to further examine this point. Subsidies and other measures suspending national treatment commitments should be treated on an equal footing with the suspension of other obligations. Given the particularities of each mode of supply, ASEAN was willing to discuss the idea of prioritising actions under certain modes, although this might raise difficult questions.

31. The representative of the Republic of Korea said that trading conditions under modes 3 and 4 tended to be more restricted than under other modes. Considering that safeguard situations required immediate action, he doubted whether actions under certain modes should unconditionally be given priority. It was up to Members to choose the proper mode to remedy serious injury.

32. In summing up, the Chairman suggested that the Working Party come back to the points raised by Japan with respect to Article XVIII. The question of whether it should be possible to suspend regulatory principles under a safeguard mechanism was important; it went beyond the scope

of the Reference Paper in telecommunications. Should a distinction be made between the different modes of supply in safeguard situations? He noted that several views had been expressed on this question. He encouraged delegations to make written submissions to support the work of the Working Party.

B. NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

33. The Chairman recalled that the delegation of Norway had proposed at the April meeting that Members discuss subsidy-related problems they might have encountered in export markets. No submissions had been received so far on this subject.

34. The representative of New Zealand proposed that the Working Party focus on the two issues contained in the Chair's Note (Job No. 5352). His delegation intended to provide a more detailed contribution at a future meeting. The Secretariat's paper S/WPRG/W/9, dated 6 March 1996, was still a useful starting point.

35. The representative of Hong Kong, China agreed with New Zealand that W/9 should be used in future discussions and noted that, as reflected in that paper, the interpretation of the national treatment obligation was relevant in addressing subsidies. He thought it would be useful to have more background information and suggested that the Secretariat look at other papers, for instance in the area of investment, where services subsidies might have been discussed.

36. With respect to export-enhancing subsidies, the representative of Japan recommended that the Working Party consider which of the arguments used in the goods sector would be relevant for services. For example, if a government subsidized a university to attract foreign students, should this be considered as an export-enhancing subsidy under mode 2? Subsidies could result in very different types of trade distortions depending on the areas involved, and it might be necessary to develop a sectoral categorisation.

37. The representative of the European Communities noted that the subsidy programmes referred to in point (b) of the Chair's Note (Job No. 5352) appeared to be *de facto* export subsidies, although the Note did not explicitly mention it. He called for a restrictive definition of export subsidies, as laid down in Article 3 of the Agreement on Subsidies and Countervailing Measures. The interpretation of *de facto* export subsidization developed by some recent panels should be kept in mind.

38. The Chairman proposed that the Working Party address the various points contained in W/9 before considering the need for rules in this area. The relevance of the rules existing in the goods area could also be discussed in that context. He suggested that the Secretariat be requested to look at the work done in other WTO bodies, to see what could be relevant for this Working Party. It was so decided.

C. NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

39. The Chairman recalled that, at its last meeting, the Working Party had discussed the range of entities which might be deemed to carry out "government procurement". Nevertheless, doubts had remained as to whether and in what circumstances entities that were not directly owned and controlled by the government should be covered. This could include, for instance, private companies mandated to exercise some exclusive rights (such as monopoly providers of telecommunication or transport services). Another question was whether government-owned entities operating under competitive market conditions should fall under possible government-procurement disciplines.

40. The representative of Japan said the definition of "government procurement" needed to be elaborated further, based on concrete examples. He noted that the disciplines contained in

Section B.2 of the Understanding on Commitments in Financial Services were expressed in general terms. The question which arose was how to concretely ensure MFN and national treatment. Such issues were being considered in the context of the review of the Agreement on Government Procurement. Japan considered it would be appropriate to wait for the outcome of this review. This would be particularly relevant for the definition of entities deemed to carry out government procurement. Japan had submitted informal proposals on this topic in the review of the Agreement on Government Procurement.

41. The representative of Thailand, speaking on behalf of ASEAN, said that, while it was important to develop a definition of government procurement under Article XIII, ASEAN would support the idea of working on possible disciplines, including non-discrimination, at the same time. Speaking on behalf of Thailand only, he suggested that the Working Party concentrate on the wording contained in Article XIII and try to define the term "governmental agencies".

42. The representative of New Zealand asked whether it would be possible to circulate the papers Japan had referred to in its intervention, noting that not all Working Party Members participated in the Agreement on Government Procurement. The representative of Mexico supported this proposal. The Chairman indicated that he would explore this possibility.

43. The representative of the United States said that, with respect to definitions, there was a need to concentrate on the text of Article XIII. The definition contained in that provision was sufficient and had worked well in other contexts. As to the notion of government agencies, his delegation understood that it covered a wide variety of entities. Entities having some exclusive rights, without being directly controlled by the government, might be an obstacle to market access, but should not raise procurement-related issues, especially if there was no government ownership. The question of government-owned enterprises engaged in commercial activities in competitive markets was more difficult.

44. The representative of the European Communities said that the Working Party should concentrate on the mandate contained in Article XIII, i.e. consider multilateral disciplines on government procurement. Procurement was also discussed in other fora and work was currently carried out to arrive at multilateral rules on transparency. It was important for this Working Party to explore substantial rules, i.e. the application of the MFN principle and national treatment, and to examine existing discriminatory practices.

45. The Chairman invited delegations to comment on the three points contained in his Note (Job No. 5352), which built upon a paper previously submitted by New Zealand (Job No. 5446, 30 September 1997). The three points related to the substantive mandate contained in Article XIII.

46. The representative of New Zealand recalled that the paper presented by his delegation was an attempt to explore possible areas of common understanding in the application of fundamental WTO principles to government procurement in services. First, the Working Party should confirm the importance of the MFN and national treatment obligations. Second, it should examine measures departing from these obligations and weigh them against other criteria used by Members for procurement decisions. This examination should be based on an analysis of different types of measures rather than on individual Members' practices. Third, the Working Party should discuss the concept of "full and fair opportunity" for domestic suppliers and the extent to which it was compatible with the non-discrimination principle. In this regard, New Zealand acknowledged that Members, whilst seeking the best price or the economically most advantageous tender, might wish to ensure that domestic suppliers were not overlooked and had a full and fair opportunity to compete. It should therefore be examined how the concept of "full and fair opportunity" for domestic suppliers could be given effect in ways which were compatible with the non-discrimination principle. In New Zealand's view, the concept as such was consistent with MFN and national treatment. Further discussion on the

ways in which it could be given effect might help to meet some concerns that MFN and national treatment obligations in government procurement could disadvantage domestic suppliers *vis-à-vis* foreign competitors. New Zealand's preliminary thinking was that "full and fair opportunity" might call for public advertising of opportunities to tender, openness to registration of interest, market research, etc. Fourth, the Working Party might need to explore the possibility of transition mechanisms to ensure gradual implementation of the non-discrimination principle.

47. The representative of the United States said that the Working Party should continue its work on parallel tracks, i.e. on definitional issues and on possible disciplines, as mandated in Article XIII. It should take into account the work on transparency in government procurement which was going on in another forum and avoid duplication.

48. The representative of Canada agreed that the Working Party should proceed on parallel tracks and, in doing so, examine the questions raised in the New Zealand paper as well as any other pertinent issues.

49. The representative of Hong Kong, China said that the MFN principle was a very important starting-point for government procurement in services. National treatment was negotiable under the GATS but there should be as little departure as possible. Transparency was a very important principle, and the work done in the Working Group on Transparency in Government Procurement was fully relevant. At this stage, the Working Party should be focusing on more general procurement disciplines rather than pursuing the type of sectoral approach adopted in the Understanding on Commitments in Financial Services.

50. In summing up, the Chairman noted that Members were ready to focus on the substance contained in the Article XIII mandate. There seemed to be broad agreement that the Working Party should get beyond discussions on definition and begin to consider multilateral disciplines. Useful work had been carried out by other WTO bodies dealing with government procurement and the Working Party should draw on that work in fulfilling its mandate. The New Zealand paper provided a good basis but delegations should be open to additional questions. The Understanding on Commitments in Financial Services was referred to as an example but it should not prejudice the scope or direction of future work. The Chairman encouraged delegations to submit contributions.

D. DATE OF THE NEXT MEETING

51. The Chairman proposed that, in view of the preparation of the Seattle Ministerial Conference, the Working Party should hold its next meeting early next year, at a date to be announced in due course.

52. The Working Party so agreed.

E. OTHER BUSINESS

53. The Chairman said that the decision not to schedule an additional meeting this year had implications for the Annual Report which had to be submitted to the Council for Trade in Services. He intended to circulate first draft, which was modelled largely on the Working Party's last year report. He suggested to adopt an *ad referendum* procedure, i.e. delegations could forward their comments, if any, to the Secretariat by 20 October. If no comments were received by that date, the Annual Report would be considered adopted.

54. The Working Party so agreed.

Working Party on GATS Rules

REPORT OF THE MEETING OF 27 JULY 1999

Note by the Secretariat

1. The twenty-fourth meeting of the Working Party of GATS Rules was chaired by Mr. Siva Somasundram of Singapore. The agenda of the meeting was contained in WTO/AIR/1129. It consisted of five items: negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and other business.

2. The Chairman indicated that he had circulated a Note, Job No. 4141 dated 12 July 1999, to assist delegations in their preparation for the meeting. The Note recapitulated where the Working Party stood on its three negotiating issues and proposed a certain structure for the discussion.

ITEM A: NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

3. The Chairman commended delegations' efforts in reaching an acceptable compromise providing for the extension of the deadline on safeguards. The Working Party's recommendation, which was adopted by the Services Council on 24 June, testified to a spirit of cooperation and flexibility. He hoped that a similar spirit would enable the Working Party to progress with its discussions and successfully conclude the negotiations on safeguards. He urged delegations to contribute not only general statements, but concrete examples of safeguard-type situations, assessments of individual injury and causality concepts, descriptions of the adjustments required, and other relevant issues. Written submissions would be particularly welcome.

4. The Chairman proposed proceeding in accordance with what had been agreed at the previous meeting. He thus invited Members to discuss, first, the question of injury and causality based on indicators listed in Venezuela's informal submission (Job. No. 2860 of 17 May), then focus on alternative safeguard concepts and, finally, take up other items contained in document S/WPGR/W/27/Rev.1 and, in particular, the question of applicable measures.

(i) Concepts of injury and causality

5. The Chairman recalled that several delegations had noted at the previous meeting that more work was needed to explore the relevance of individual injury and causality indicators. The informal paper by Venezuela seemed to be a useful starting-point for such work; several participants had also pointed out the need for flexibility in selecting adequate indicators. He felt that that it would be most productive if delegations deepened their understanding of individual indicators – their significance and their limits – before addressing the issue of flexibility.

6. The representative of Thailand, speaking on behalf of ASEAN, said that a safeguard measure should be applied only after an investigation looking into all relevant factors of an objective and quantifiable nature. The Venezuelan paper was a useful contribution in this respect; it showed that indicators of increased imports, injury and causality were available to the invoking party. All listed indicators were relevant. They were normally available, or could be made available and used for

continued monitoring, supplemented by qualitative analysis. Referring to concerns about confidentiality, he noted that it was for the invoking party, which had the burden of proof, to provide relevant information in the event of safeguard situations. The causal link between increased supplies and injury had to be demonstrated on the basis of objective evidence, using a flexible approach which took into account the specificities of services trade.

7. The representative of the European Communities said that, given the inadequacy of services statistics, it was important to have a broad selection of indicators. They should cover a variety of causes as no single criterion was by itself sufficient. Further work on indicators would also help to determine the feasibility of a safeguard mechanism and, by implication, its desirability.

8. The representative of the Republic of Korea suggested that, in addition to the criteria listed by Venezuela, other factors might be relevant for the determination of injury. Referring to the Agreements on Safeguards and on Textiles and Clothing, he mentioned changes in the level of inventories, reductions in exports, and declining (relative) wages. Indicators based on value-added taxes (VAT) could be misleading as the relevant returns varied significantly between countries.

9. The representative of Japan expressed reservation about the emphasis that some other Members had placed on the need for flexibility; clear procedures and criteria were required to arrive at objective and transparent decisions. It would be difficult to decide *a priori* on this issue. The obligations to conduct public hearings and to grant compensation, contained in Articles III:1 and VIII:1 of the Agreement on Safeguards, were other important issues for future discussion. In addition, he enquired why the last two injury criteria listed in the Venezuelan paper referred to national suppliers only.

10. The representative of Australia concurred that the indicators proposed by Venezuela were a useful starting point to establish the existence of injury. However, substantial losses had to be involved. Before safeguards could be invoked, the link to increased supplies had to be ascertained and the impact of balance-of-payments or macroeconomic problems be ruled out. Measures should be taken on behalf of all domestic suppliers, irrespective of whether they were of national or foreign origin. *A prima facie* case had to be established before the start of an investigation, it had to be based only on factual evidence.

11. The representative of the United States said that the Venezuelan paper was useful in identifying how a possible emergency safeguard mechanism could be structured; concepts like increased imports, injury and causality were essential. He reiterated his delegation's call for real-world examples and, more generally, for problem cases which might warrant safeguard measures.

12. The representative of Venezuela, addressing questions raised in the discussion, said that the list of injury criteria was meant to be illustrative rather than exhaustive. Injury had to be evaluated with respect to a services industry and not necessarily a service. On the point raised by Japan, he noted that all proposed criteria should indeed have referred to national as well as domestic suppliers/markets. Concerning value added taxes, he noted that different tax rates in individual countries and sectors might affect their relevance as an indicator. Further comments would be provided at the next meeting of the Working Party.

13. The Chairman invited delegations' comments on a question which had been earmarked for, but not addressed, at the previous meeting. Should the reasons contributing to increased imports be relevant in determining the permissibility or the actual form of a safeguard measure? For example, should it matter if macroeconomic problems had played a role or an industry's capacity to adjust had been affected by government regulation rather than own weaknesses?

14. The representative of Venezuela said that macro-economic effects had to be eliminated in the evaluation of injury. He also felt that it was necessary, but difficult, to prove that a government's policy had done harm to its own industry. The burden rested on the invoking party.

15. The representative of the United States noted that, depending on the relevant causality standard, the responsibility to prove that injury had been caused by increased imports, rather than by a change in government regulation, might rest on the invoking party. If the increase in imports was to be considered the primary cause of injury, the invoking party had to exclude other potential causes. The representative of Venezuela added that, in his country's legal system, the party opposing the application of government measures would also have to furnish evidence in response to claims made in the administrative process. The representative of the European Communities observed that governments might have a vested interest in proving that they were not responsible for the injury suffered by their industry.

16. The representative of Thailand, speaking on behalf of ASEAN, said that the reasons contributing to increased imports needed to be taken into account in deciding on the permissibility of safeguard action. While he considered the Chairman's questions to be pertinent, he feared that identifying the role of individual factors might imply an element of subjectivity. It was important to use objective criteria. The representative of Venezuela observed that it was difficult to develop examples without a clearer picture of future safeguard disciplines.

17. The Chairman reminded delegations of the suggestion to set up a "checklist" of individual injury and causality indicators introduced in the Working Party. Such a list could be developed in conjunction with a second revision of document S/WPGR/W/27. It would be open for future suggestions and would not prejudice delegations' positions on feasibility and desirability. The Working Party agreed to request the Secretariat to produce an informal document, including the indicators proposed by Venezuela, additional concepts introduced since, and comments made in the Working Party. The Chairman noted that the informal nature of the document would not prevent Members from discussing its content in formal session.

(ii) The question of horizontal versus sector-specific safeguards

18. The Chairman recalled the Working Party's discussion of various concepts previously introduced: (1) Horizontal, generally available safeguards; (2) sector-specific safeguards which would also be generally available; (3) sector-specific safeguards whose content and inclusion in schedules would be negotiated case-by-case; and (4) a "hybrid" approach based on a general framework mechanism whose inclusion in schedules would then be decided through negotiation. Discussions had focused so far on the principle advantages of either approach in terms of transparency, predictability etc., and the relevant legal basis in the GATS. While inviting additional comments, the Chairman also mentioned the possibility, previously raised by the delegation of Japan, that the Working Party temporarily suspended this discussion and rather focused on basic elements which would form part of any safeguards mechanism. It might be possible to work out common rules and principles, which would be equally relevant for horizontal and scheduled safeguards. The United States submission of 17 March 1997 (S/WPGR/W/17) contained an illustrative list of such rules and principles. These included the requirement to give adequate advance notice before invocation; use safeguards only temporarily and with a specified maximum period of duration; limit access to a given safeguards-type provision – for example, once during the course of a specified period of time – and prevent re-invocation during the specified period; apply safeguards on a degressive basis; clearly specify the envisaged action by mode and sector or sub-sector; respect "established rights" (although a different term was used in the paper) if limits were imposed on mode 3; and waive compensation if the rules are respected. Although some of these issues had already been touched upon in the discussion of document S/WPGR/W/27/Rev.1, they might warrant greater attention with a view to reaching a common understanding.

19. The representative of Hong Kong, China found this idea useful. The paper submitted by his delegation, document S/WPGR/W/18, shared many of the elements proposed in the United States paper, such as the need for advance notice, temporary application, application on an MFN basis, objective and identifiable criteria. His delegation was still considering, however, whether a safeguard mechanism needed to be paired with a commitment to liberalize and whether compensation should be waived. Further elaboration of such issues would be a way forward.

20. The representative of Thailand, speaking on behalf of ASEAN, noted that it was widely accepted in the Working Party that sector-specific safeguards, if any, should be made generally available. No link should be established between an emergency safeguard mechanism and scheduling. Without prejudice to this question, ASEAN was ready to discuss the elements contained in the United States' paper which was a useful contribution. However, it remained limited in scope as it dealt only with scheduled safeguards whose legal basis in the GATS was not beyond doubt. He sought further clarification on the "hybrid" approach proposed by the United States delegation, in particular on the question whether general framework rules would apply across all sectors while the measures would be sector-specific.

21. The representative of Japan said that, while his delegation was still considering the different forms an EMS could take, it was inclined to support a horizontal approach. Safeguards were meant to deal with unforeseen developments which, by implication, could not be predicted and scheduled. To advance the discussion at that stage, however, the Working Party should rather focus on the basic elements of any mechanism: All elements contained in the United States' submission were relevant in this context. However, unlike the United States, his delegation felt that it was not always necessary to specify an action by mode; it should be left to Members to make this choice.

22. The representative of Switzerland echoed Japan's view that most of the elements listed in the United States' paper - such as temporary application, degressivity, clearly specified criteria, MFN application, no divestment - were central to any safeguard mechanism. On the issue of compensation, he felt like Hong Kong, China that more reflection was needed. Without a requirement to compensate, safeguards could lend themselves to abuse, especially by powerful domestic interests.

23. The representative of Mexico said that her delegation favoured horizontal safeguards on the grounds of transparency and integrity. In view of the peculiarities of services trade, however, such a mechanism might need to be flexible and, in addition to general rules, allow for sector- or mode-specific solutions. She called for practical examples to advance the discussion. A safeguard mechanism should be available to all WTO Members, without prejudice to provisions for special and differential treatment of developing countries. Access must not in any way be linked to scheduling or made contingent on other GATS provisions, such as Article XXI, which pursued different ends. Several elements listed in the United States' paper should be used, such as adequate advance notice; degressive and temporary application; maximum duration (with special treatment for developing countries); MFN application; and objective and identifiable criteria. On compensation, closer examination was necessary. Compensation would imply that safeguards protection was at a cost to the invoking Member, thus limiting its use to exceptional circumstances and preventing any protectionist abuse. In addition, the concept of adjustment could be added to ensure that the sectors protected were committed to carrying out adjustment with a view to regaining competitiveness by the time the measures were removed.

24. In response to an issue raised by Thailand, the representative of the United States noted that the principle scope of emergency safeguard measures should be addressed in a context different from the rules governing application. In his delegation's view, measures would be sector-specific and scheduled, whereas the general rules would be horizontal. Without prejudice to the final mechanism, elements of these rules could be discussed. On compensation, his delegation was still examining the issues involved - including concerns about abuse - in the light of Article XXI which was a potential

alternative. If a safeguards mechanism were to be put in place, and if it contained a compensation requirement, this might create a bias in favour of modifications of commitments under Article XXI which were available without proof of injury or causality.

25. The representative of Japan concurred that the relationship between a possible safeguard mechanism and the provisions under Article XXI needed to be clarified. A safeguard measure should be easier to invoke in principle, but only for a limited period. The need for compensation should be further examined with a view to achieving a balance between easy availability of safeguards and prevention of protectionist misuse. The experience in the area of goods could help to inform the discussion on this issue.

26. The representative of the European Communities observed that a possible safeguards mechanism and the provisions of Article XXI had to accommodate different situations. A safeguard mechanism would be in place to respond speedily to emergency cases, which could be addressed and solved within a relatively short period of time, whereas Article XXI modifications dealt with longer-term changes in competitive conditions of a systemic nature.

27. The Chairman said that the Working Party should revert to discussing basic elements of a safeguard mechanism at the following meeting. He invited delegations to re-examine the relevant submissions by the United States and Hong Kong, China.

(iii) Applicable measures and other relevant issues

28. The Chairman noted that the question of applicable measures was one of the few items of document S/WPGR/W/27/Rev.1 which the Working Party had not yet discussed in depth. He suggested that Members consider, first, whether safeguard actions should be limited to the suspension of commitments under Article XVI and XVII or also include commitments under Article XVIII, and, second, whether there should be a preference for measures such as subsidies. Their application might prove more transparent, more predictable and less distortive from a supplier's perspective than, for example, quotas, while quotas might be deemed less costly and more efficient from the invoking country's perspective.

29. The representative of Thailand, speaking on behalf of ASEAN, said that the main safeguard measures envisaged were restrictions on market access and suspensions of national treatment, but the possibility of suspending commitments made under Article XVIII should not be precluded. Subsidies as safeguard measures amounted to a suspension of national treatment; they were preferable on transparency and predictability grounds. Nevertheless, the applicability of different types of safeguard measure needed to be evaluated for each mode; actions under mode 3 had to take acquired rights fully into account.

30. The representatives of Hong Kong, China and Japan agreed that, in general, the possibility of suspending commitments under Article XVIII should not be ruled out and that priced-based measures, including subsidies, were in principle preferable to quotas. However, more time was needed to discuss concrete examples and reach a final decision. The representatives of Japan and Uruguay also said that the on-going negotiations under Article XV of GATS might help to further clarify subsidy-related questions. Noting that subsidy-type remedies represented departures from national treatment, the representative of Japan recognized that Members might also want to suspend market-access commitments.

31. The representative of the Republic of Korea observed that the Agreement on Safeguards did not specify the type of restrictions to be applied. While its Article 5 prescribed the level at which any quantitative restrictions should be set, Article 6 provided that provisional safeguard measures be price-based. He felt that it might be useful to review the historical background of these provisions

and, in addition, clarify who would pay for any subsidies. Recognizing that price-based measures were in principle preferable to quantitative restrictions, he added that, given that the main purpose was to remedy injury (or threat thereof) caused by increased imports, quota-type restrictions tended to have shorter implementation periods and produce immediate results. The representative of Egypt concurred that the choice between subsidies and quota-type measures depended on the situation to be remedied; the fact that safeguard measures were applied only for limited periods had to be taken into account.

32. The representative of the United States said that his delegation was still considering the possibility of suspending Article XVIII commitments. However, it would be a matter of concern if regulatory principles, including those under the telecommunications Reference Paper, could be suspended as well. While quotas tended to be the most disruptive type of trade restriction, it was not clear whether subsidies were able to meet all positive expectations associated with price-based measures. The representative of Uruguay expressed doubts about the perceived advantages, in terms of transparency, predictability and less distortive effects, of subsidies.

33. Concluding on this item, the Chairman said that Members recognized that applicable measures could involve the suspension of commitments under Article XVI and XVII. While some concerns had been raised about the withdrawal of Article XVIII commitments, no delegation had ruled out this possibility at that stage. The discussion on whether price-based measures (e.g. subsidies) were preferable to others (e.g. quotas) had not yet led to clear conclusions. While price-related measures were considered to be more transparent, less distortive and disruptive by some delegations, others noted that quota-type restrictions offered more immediate remedies. The key challenge was to identify the best available remedy from the perspective of all parties involved, and the Working Party would need to revert to this issue at its next meeting.

34. The Working Party requested the Secretariat to prepare a second revision of S/WPGR/W/27, tracing the discussion on emergency safeguards at this and the past two meetings. In this context, the Chairman encouraged delegations to use the summer break to reflect on the structure of future discussions and submit suggestions which he would then circulate in his preparatory Note for the next meeting. Ideally, the submissions should include concrete cases where safeguards, of one type or another, might be needed and outline the implications for future rule-making.

ITEM B: NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

35. The Chairman drew the Working Party's attention to a recent submission from Hong Kong, China under the information exchange programme pursuant to Article XV. It had been circulated as document S/WPGR/W/16/Add.3.

36. The representative of Hong Kong, China explained his authorities' response to the relevant questionnaire. It excluded expenditure for a range of social services and social welfare programmes which governments throughout the world maintained in pursuit of legitimate welfare objectives. Subsidies for services supplied in the exercise of governmental authority, as defined in Article I:3(b) of the GATS, had also been excluded. All subsidies listed in the response were granted on a national-treatment basis under mode 3. While compliance with national treatment was likely to reduce any trade distortive effects, such subsidies might nevertheless cause spill-over effects between modes. According to the Scheduling Guidelines (document MTN.GNS/W/164), Members were not obliged, however, to extend national treatment to suppliers established outside their territorial jurisdiction. Nevertheless, the submission recommended that the issues involved - distortive effects and mode specificity of subsidies - be further discussed by the Working Party. This could help to clarify the meaning of national treatment under modes 1 and 2 and, in turn, might enable Members to schedule more significant commitments for national treatment especially under these modes. As a

preliminary response to a question from the delegation of Japan, he explained that all subsidies were provided to established service suppliers only.

37. The representative of Brazil noted that discussions in the General Council had shown a broad consensus for negotiating subsidy disciplines under Article XV in the next round. Although only three delegations had yet responded to the relevant questionnaire, it was important that the mandate of Article XV be met. Subsidy disciplines were in the interest of all Members and in particular of developing countries, which often lacked the resources for active subsidization. He suggested that Members take up again relevant issues raised in the Secretariat background paper on subsidies, document S/WPGR/W/9, in order to advance work.

38. The representative of Guyana noted that some Members had excluded subsidies from national treatment obligations, while others had undertaken full commitments. The resulting imbalance was a matter of concern; it could seriously affect the competitive position of developing country suppliers in foreign markets. He felt that any disciplines to be developed under Article XV would need to take this disparity into account.

39. Summing up the discussion on this item, the Chairman reminded delegations of the information exchange requirement under Article XV. In his preparatory Note for the next meeting, he intended to draw attention to core issues raised in the Secretariat background paper on subsidies.

ITEM C: NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

40. The Chairman recalled that, during the past two meetings, several delegations had suggested definitions, or elements of a definition, of what could be considered government procurement of services. The notion of financial responsibility, i.e. the assumption of the financial risks and benefits associated with the purchase of services, seemed to be widely considered one suitable criterion to distinguish procurement from other forms of government involvement. He invited delegations to introduce any additional criteria and comments into the discussion.

41. The representative of Australia said that, following domestic consultations on how to define government procurement, her delegation now supported a broad definition. This was a pragmatic move since the processes of choosing contracts, as well as the relationship between companies and government, were generally identical and not influenced by notions of financial responsibility. Government procurement was thus considered to include all three categories in the hierarchy Australia had originally suggested: first, government purchases of services for consumption by the government; second, government purchases of services for consumption by the public; and, third, contracts between the government and private companies for the commercial provision of services to the public or to industry. The latter category was covered by the definition of GATS Article XIII because it was the government that initiated and organized the supply of the service and, thus, enabled the public to consume it.

42. The representative of Canada felt that the term "hierarchy" was not appropriate as it implied the setting of priorities; she proposed using a more neutral term such as "listing". The representative of the European Communities said that the definition offered by Australia was broad and wondered how it squared with relevant GATS provisions, given that the Working Party was mandated to deal with transactions not currently covered by the GATS.

43. The representatives of Venezuela, Brazil and Mexico noted that in their national legislations, concessions did not fall, and could not be categorized, under government procurement. The representative of Mexico suggested that examples be given under each category proposed by Australia. She wondered how this categories related to the concept of financial responsibility, which

many delegations considered relevant. In response to several requests, the representative of Australia undertook to submit her contribution in writing.

44. The representative of Hong Kong, China said that considerations related to the structure of the relevant market were important in determining what fell under government procurement. The representative of the United States suggested that the Working Party set aside its discussion on concessions for the time being and rather develop a genuine definition of government procurement. By default, it would also inform the definition of concessions.

45. As mentioned in his preparatory Note, the Chairman suggested further examining the range of entities considered to conduct government procurement. At previous meetings, it had been said that, in principle, entities at all government level should be covered, and that government ownership and control were important criteria. The legal form of operation or incorporation had not been mentioned as relevant. Some delegations had noted, however, that attention should be given primarily to entities enjoying some degree of exclusivity, i.e. to entities not fully subject to market disciplines. He invited delegations to further elaborate on these issues.

46. The representative of Canada said that government ownership and control were critical factors in defining government procurement. The representative of Hong Kong, China favoured in principle the inclusion of entities at all levels of government, but was not sure whether the legal form of operation or incorporation should be a determining factor. Criteria related to the form and structure of the markets concerned needed to be considered as well.

47. Notwithstanding the importance attached to definitional issues, the Chairman remarked that the negotiations under this item might benefit from Members giving thought to their ultimate purpose. This included in particular the question what common disciplines, if any, might be agreed upon at the end of the process. A prominent candidate would be the concept of non-discrimination. The Working Party endorsed his proposal of raising pertinent questions in the preparatory Note for the next meeting.

ITEM D: DATE OF THE NEXT MEETING

48. The next meeting is scheduled to take place in the vicinity of the October meetings of the Committee on Government Procurement and the Transparency Working Group, possibly on Friday, October 8, 1999.

ITEM E: OTHER BUSINESS

49. No matters were raised under this agenda item.

Working Party on GATS Rules

REPORT OF THE MEETING OF 21 JUNE 1999

Note by the Secretariat

1. The twenty-third meeting of the Working Party of GATS Rules was chaired by Mr. Siva Somasundram of Singapore. The agenda of the meeting was contained in WTO/AIR/1110. It consisted of five items: negotiations on safeguards under Article X of the GATS, including the extension of the deadline for the negotiations; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and other business.

2. The Chairman indicated that he had circulated a Note, Job No. 3432 dated 14 June 1999, to assist delegations in their preparation for the meeting. The Note recapitulated where the Working Party stood on its three negotiating issues and proposed a certain structure for the discussion.

ITEM A: NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

(i) Extension of the deadline

3. The Chairman recalled that Article X:1 provided for multilateral negotiations on the question of emergency safeguard measures, whose results should have entered into effect not later than end-1997. The deadline was extended in November 1997 by the Council for Trade in Services to 30 June 1999. After it had become clear that the Working Party would not be able to conclude the negotiations by that date, he had held a number of informal consultations to explore Members' views on how to proceed. While there had been broad agreement that the safeguard negotiations should continue, delegations had voiced diverging views on their future timing and the need to coordinate them with the next services round. To a certain extent, interpretation problems surrounding the meaning of the first and second sentence of Article X:1 also played a role.

4. Two drafts had finally emerged from his consultations – a Chairman Communication to the Council for Trade in Services and a draft Council Decision on the safeguards negotiations - which tried to strike a fair balance between the views expressed. He drew attention to three elements of the drafts:

First, the draft Council Decision explicitly provided for a conclusion date of the negotiations, which had not been specified in Article X:1 and the 1997 Council Decision. The date was set at 15 December 2000, reflecting many delegations' views that the current momentum in the safeguards negotiations needed to be maintained and, if possible, increased.

Second, the draft Decision set a final date for the entry into effect of the results of the safeguards negotiations, mirroring language already used in Article X:1. This date should be no later than the date of entry into force of the results of the next services round. There would thus be sufficient time after the conclusion of the negotiations to enact any necessary changes

to GATS and national legislation, possibly in conjunction with the implementation of the results of the new round. By the same token, the Decision did not preclude the possibility of an earlier implementation date should Members deem it necessary.

Third, the Chairman's draft Communication summarized the broad parameters within which Members of the Working Party wished the deadline to be extended. In particular, it made clear that the extension would not prejudice any country's position on the desirability and feasibility of an emergency safeguard mechanism in services. The second paragraph of the Communication reflected the main thrust of opinions voiced, but not necessarily agreed, during his consultations. This part of the Communication represented a finely calibrated balance between various positions.

5. The Chairman asked delegations to approve the Communication and the draft Council Decision, as they had emerged from his consultations.

6. The representative of Brazil, noting he would have preferred a more balanced text, nevertheless commended the Chairman's efforts to reach a consensus. His authorities were concerned that the draft texts failed to give sufficient legal certainty that, should no agreement be reached by 15 December 2000, the Working Party was committed to further extending the mandate of the negotiations. Although many developing countries seemed satisfied with the decision as it stood, the record of the negotiations was not satisfactory from Brazil's perspective. However, his delegation did not want to block a consensus. The representative of Poland felt that the second paragraph of the draft Decision might not be sufficiently precise, pointing out a potential inconsistency with the second sentence of Article X:1. The Chairman explained that the Council Decision, which extended the deadline in 1997, already provided for an override over this sentence. The representative of Poland stated his delegation was ready to approve the draft texts in view of this clarification.

7. The Working Party approved the Chairman's Communication to the Council for Trade in Services and the attached draft Decision ("Second Decision on Negotiations on Emergency Safeguard Measures").

8. The representative of Egypt expressed concern that again it had been necessary to extend the deadline of the negotiations although, under Article X:1 of GATS, the results should have entered into effect in January 1998. His delegation was firmly convinced that emergency safeguard measures were part of the built-in agenda resulting from the Uruguay Round and, thus, were not linked to the impending negotiations under Article XIX of GATS. He urged all Members to work in good faith towards an early conclusion on safeguards; the results should be put into force immediately after 15 December 2000 and not be postponed to an – uncertain – later date. Serious discussions should be held on the shape, elements and model of a safeguard mechanism, whose existence would foster liberalization commitments in particular by developing countries. The representatives of Morocco and India shared these views.

9. The representative of the United States said his delegation looked forward to the Working Party resuming its work on safeguards. While delegations might have different views on the question of an emergency safeguard mechanism (ESM), it was important to reach an understanding on its own merits and not to create links with other issues, such as the next services round. Since Article X:1 clearly called for negotiations on the question of safeguards, Members needed to decide first, if such a mechanism was necessary at all and then determine its elements. His delegation had been willing to take part in hypothetical discussions on what form safeguards might take, but this willingness should not be misconstrued as agreement to ESM in principle. Discussions on whether and how such a mechanism should be constructed would help Members to work through their differences more effectively, with mutual respect for each other's views.

10. The representative of Thailand, reserved the ASEAN delegations' position on the interpretation of Article X. However, if there were differing views, these should not affect Members' efforts to cooperate and come up with a concrete result. The representative of Argentina stated that Article X contained a clear mandate for negotiations on ESM; the Working Party needed to make it operational. The representative of Uruguay concurred; the safeguards negotiations were part of the Uruguay Round built-in agenda.

11. The representatives of Switzerland and Japan stated that their acceptance of the Chairman's Communication and the draft Decision did not imply an obligation to create an emergency safeguard mechanism. Questions related to the desirability and feasibility of such a mechanism were still open.

(ii) Situations justifying the application of safeguards measures

12. The Chairman recalled past discussions about the concept of "unforeseen developments". Some delegations had viewed it as a useful – or even pivotal – concept to govern the invocation of a potential safeguard mechanism. Others had felt, however, that it could not serve a reasonable purpose given, *inter alia*, its vagueness and scope for discretion. While rehearsing this debate might not be productive, he encouraged delegations to advance any new ideas and, in particular, explore the related concept of "unforeseeable developments".

13. The representative of Thailand, speaking on behalf of ASEAN, noted the customary definition of the term "unforeseen developments" in the GATT context. As explained on previous occasions, the term was intended to capture developments which negotiators of the invoking party could or should not reasonably have foreseen at the time of scheduling. Despite subjective elements, this was a meaningful and viable concept from a legal point of view. A degree of discretion, to be exercised within legal limits, was recognized in any system and did not preclude the effective application of a legal concept. It would thus be premature to reject the notion of "unforeseen developments" without discussing its possible scope for objective application. Moreover, he was not convinced that the concept of "unforeseeability" would be less subjective; the borderline between the two concepts seemed to be thin.

14. The representative of Australia said that her delegation's previous introduction of the term "unforeseeable developments" had been intended to distinguish the role of subjective and objective factors in the invocation of a potential safeguard mechanism. Australia was concerned about the potential for abuse; the distinction between "unforeseeable" and "unforeseen" developments was a secondary issue. Her delegation remained interested in developing objective tests for emergency situations, based on readily available information or standard practice.

(iii) Concepts of injury and causality

15. The Chairman suggested that delegations focus first on the individual indicators proposed in Venezuela's informal paper of May 1999 (Job No. 2860). On that basis, they might explore two issues raised in his preparatory Note: Should the reasons contributing to increased imports be relevant in determining the permissibility or the actual form of a safeguard action? What degree of flexibility should Members have in selecting adequate indicators? He drew attention to relevant provisions of the Anti-Dumping Agreement (Article 3:4), which allowed for some flexibility, and recalled a proposal by the Polish delegation to set up a non-exhaustive "checklist" of the injury and causality indicators discussed in the Working Party.

16. The representative of Thailand, speaking on behalf of ASEAN, suggested that the Working Party, as a starting-point, consider the relevant indicators in the goods area. They might need to be adapted to reflect the specificities of services trade. However, Venezuela's informal paper demonstrated that effective indicators could be developed. In response to the two questions raised by the Chairman, he observed that the reasons contributing to increased imports should be taken into

account in the application of safeguards and that, although Article 3:4 of the Anti-Dumping Agreement was a useful model, greater flexibility might be needed in the services context. The proposed checklist might prove a useful instrument. The representative of the Republic of Korea concurred that an injury determination could be based on statistical criteria. She stressed that objective indicators were essential to prevent the abuse of a safeguard mechanism. The paucity of statistics did not imply that there was no injury and that no safeguards were needed. The burden of proving injury and causality should rest on the invoking party, however. Venezuela's paper could be used as a starting point for setting up the checklist proposed by Poland.

17. The representative of the European Communities said that injury and causality indicators needed to be defined and applied more flexibly in services than in goods trade; the greater their number, the greater the possibility of providing evidence. The representative of the United States said it was necessary first to examine and apply the proposed indicators, before the need for flexibility could be discussed. He reiterated his delegation's request that concrete examples be provided to test various concepts.

18. The representative of Poland noted that the checklist proposed by his delegation would be useful in keeping track of discussions in the Working Party and identify elements on which agreement had been reached. The representative of Japan sought further clarification on various terms contained in the Venezuelan paper; the Chairman undertook to convey the relevant questions to the delegation of Venezuela.

(iii) The question of horizontal versus sector-specific safeguards

19. The Chairman recalled that previous discussions in the Working Party had focused on four principal types of safeguards: horizontal, generally available safeguards; sector-specific, generally available safeguards; sector-specific, scheduled safeguards; and sector-specific safeguards to be scheduled in accordance with a generally agreed framework. He also introduced two questions raised in his preparatory Note, which were intended to explore differences and, possibly, similarities between general (horizontal) and sector-specific safeguards. Assuming that there was a generally available ESM, would it be possible for Members under Article XVIII of GATS to forego the right to invoke it? Should the relevant invocation criteria be related to the existence of scheduled limitations in individual sectors? If delegations' answers to these questions were in the affirmative, the distinction between general (horizontal) safeguards and scheduled safeguards might prove less strict than it appeared on the surface. Responding to questions raised by the representative of the United States, he stressed that his questions were merely intended to stimulate the discussion, but not to express a position on any of the options.

20. On the question of horizontal versus sector-specific safeguards, the representative of Thailand, speaking on behalf of ASEAN, expressed a preference for a horizontal mechanism. However, he was also prepared to consider the possibility of sector-specific safeguards, in various forms, as long as these were not related to scheduling. Such a link would not be acceptable to his delegation. The conceptual and practical distinction between scheduled and non-scheduled safeguards had to be maintained; emergency safeguard measures under Article X:1 needed to be available regardless of scheduling. Members would then be free to forego, or place additional limitations on, their use.

21. The representatives of Argentina, Hong Kong, China, Guatemala and Uruguay also expressed preference for an horizontal approach to safeguards. The representative of Japan, noting that his delegation's position was still open in this respect, suggested that a horizontal approach might be used as a working hypothesis to advance discussions. The representative of Hong Kong, China observed that, while sector-specific and horizontal safeguards might achieve similar effects, a horizontal mechanism was preferable for transparency purposes. He also wondered whether Article XVIII was conceived to allow for the suspension of general rights, which one day might include an ESM,

conferred on all WTO Members under GATS. The representative of Argentina expressed similar reservations. Moreover, he rejected the idea of establishing a link between the level of commitments in a given sector and the possibility of invoking a safeguard. This would imply value judgements on the restrictiveness of limitations and, thus, introduce an element of subjectivity. He failed to see why, for safeguards purposes, full commitments should be treated differently from cases where limitations had been scheduled.

22. The representative of the United States recalled a submission which his delegation had made in March 1997 (circulated as S/WPGR/W/17). It was meant to contribute to the discussion on horizontal versus sector-specific safeguards, provided Members had decided to create an ESM. The submission explained why a horizontal approach to safeguards was neither feasible nor desirable, and then listed ten considerations relevant for developing a framework for sector-specific, scheduled safeguards. He felt that some of the comments made by proponents of a horizontal approach were not too distant from these considerations. They would also prevent the proliferation of different types of mechanisms across sectors and countries and, thus, address concerns raised by Hong Kong, China. Even if that there was no legal basis in the GATS for scheduled safeguards, as suggested by some Members, the Services Council would be free to endorse such an approach.

23. The representative of Thailand, speaking on behalf of ASEAN, noted that, while nothing in the GATS might prevent Members from scheduling sector-specific safeguards, this was not the approach foreseen in Article X.

24. The representative of the European Communities felt that considerations listed in the United States' submission could be applied to horizontal safeguards as well. As sector-specific safeguards would need to accommodate the specificities of individual sectors and modes, they could lead to a maze of different mechanisms in schedules, and further complicate the interpretation of commitments. She also wondered whether Members were able to clearly anticipate emergency situations at the level of sectors and modes.

(iv) Other issues

25. The Chairman proposed further exploring the question of compensation and the possible use of Article 8 of the Agreement on Safeguards as a model. On previous occasions, several delegations had pointed out definitional and analytical problems, raising the question whether compensation should be required at all. Alternatively, compensation could remain confined to negotiations under Article XXI, which would be triggered automatically once a pre-defined "safeguards period" had expired. It was also conceivable to establish a compensation requirement in principle which could then be waived if a country undertook genuine efforts to promote adjustment.

26. The representative of Thailand, speaking on behalf of ASEAN, expressed preference for an approach based on Article 8 of the Agreement on Safeguards. The main challenge was to define the level of "equivalent" adjustments to compensate adversely affected Members. In ASEAN's view, safeguards actions would consist of the suspension of market access and/or national treatment obligations; and the requirement to compensate would depend on the measures adopted. This issue had to be kept separate from negotiations under Article XXI. Safeguards were temporary measures which should not be confused with longer-term protection as available under Article XXI.

27. The representative of the European Communities concurred that the level of compensation had to be determined in view of the actions taken and their effects on other Members. For example, degressive application of safeguards might require less, if any, compensation. In the event of systemic problems in major sectors, Article XXI might come into play. However, this was to be decided case-by-case, possibly based on some general principles.

28. In summing up, the Chairman noted the range of views expressed on the principle approach - horizontal or sector-specific mechanism - to be adopted for safeguards. On some more technical issues, positions seemed to be closer. He proposed that, at the next meeting, the Working Party take up again the issues of causality and injury, based on the Venezuelan paper and other contributions. Members might also want to deepen their understanding of the basic rules and disciplines needed for any type of safeguards mechanism. In addition, he offered to identify further points, based on document S/WPGR/W/27/Rev.1, which had not drawn sufficient attention to date. These points, possibly including the question of applicable measures, would be flagged in his preparatory Note for the meeting. The Working Party agreed.

ITEM B: NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

29. The Chairman recalled that, at the previous meeting, some delegations had expressed interest in exploring issues raised in a Secretariat document of March 1996 (S/WPGR/W/9). In the main, these revolved around the question of "import substituting" and "export enhancing" subsidies – their empirical relevance, their treatment under current GATS provisions and the need for any additional disciplines. He invited delegations' comments and called for concrete examples of trade-distorting subsidies encountered in foreign markets.

30. The representative of Hong Kong, China indicated that his delegation might make a written contribution in respect of the information exchange exercise mandated under Article XV at the next meeting. On the cross-modal effects of subsidies, he drew delegations' attention to some basic questions which needed to be further examined. For example, although a Member had undertaken full commitments under the national treatment column for one mode, certain policies falling under that mode might affect competitive conditions under other modes. However, the structure that had been chosen for scheduling seemed to imply that there were no such cross-model impacts. On the other hand, Members were committed under Article XVII:1 to ensuring national treatment in respect of "all measures" affecting the supply of a service.

31. The representative of New Zealand said that his delegation also hoped to have a paper ready for the next meeting. He stressed his authorities' continued interest in subsidy-related issues and called for further work on the trade-distortive effects which might arise in particular from export-enhancing subsidies.

32. The Chairman reiterated the importance of the information exchange exercise mandated under Article XV.

ITEM C: NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

33. The Chairman recalled that several delegations had suggested definitions – or elements of a definition – of government procurement of services. The notion of financial responsibility seemed to be widely considered one suitable criterion. He invited delegations to introduce additional elements

34. The representative of Thailand, speaking on behalf of ASEAN, stressed the need for continued efforts to define government procurement under Article XIII. While the concept of financial responsibility was relevant, it was not sufficient in itself. "Government purpose" was another key term. However, more work was needed to arrive at a satisfactory definition.

35. The representative of Australia suggested developing a hierarchy of procurement activities, reflecting the level of government involvement. Japan's informal paper on concessions could be a starting-point. For instance, activities could be ranked as follows: government purchases for

consumption by the government; government purchases for consumption by the public; contracts with private companies for the purpose of constructing and managing industrial sites, railways, etc.; and contracts with private companies for the purpose of developing natural resources. The latter example was not to be considered government procurement.

36. The representative of New Zealand recommended that the Working Party focus on the definition of government procurement, rather than on surrounding concepts such as concessions. The criterion of financial responsibility was very useful; it implied the assumption of the financial risks and benefits of providing a service on a commercial basis. At the request of another Member, he explained that, in his delegation's view, the concept of concessions implied that a private party carried the risk of operating a service and was entitled to charge a fee in return. Thus, the private operator was financially responsible.

37. The Chairman concluded by drawing attention to three questions contained in a European Communities' informal paper of February 1998: what transactions constitute procurement?; who is the procuring entity?; and what is being procured? He felt it might be useful to further examine the range of entities which might be considered to conduct procurement activities. Some Members had expressed the view that, in principle, entities at all Government levels should be covered and that government ownership and control were important criteria. It had also been noted that the focus should be on entities enjoying some degree of exclusivity, i.e. entities not fully subject to market disciplines. He suggested that, at the next meeting, the Working Party tried to further clarify this question, in addition to advancing the discussion on definitional issues. The Working Party agreed.

ITEM D: DATE OF THE NEXT MEETING

38. The Chairman suggested holding the next meeting on Tuesday, 27 July 1999. The Working Party agreed.

ITEM E: OTHER BUSINESS

39. No matters were raised under this agenda item.

Working Party on GATS Rules

REPORT OF THE MEETING DATED 19 MAY 1999

Note by the Secretariat

Corrigendum

Paragraph 27 of document S/WPGR/M/22 summarises the views of the delegation of Hong Kong, China. The second sentence, which reads: "Such a definition should include cases in which the government did not consume directly the service.", should now read:

"However, his delegation's interpretation of the term government procurement, as used in Article XIII:1, covered purchases for government use as well as cases where the government procured, but did not consume the relevant goods and services itself. Street cleaning and garbage collection for the public were cases in point."

Working Party on GATS Rules

REPORT OF THE MEETING OF 19 MAY 1999

Note by the Secretariat

1. The twenty-second meeting of the Working Party on GATS Rules was chaired by Mr. Siva Somasundram of Singapore. The agenda of the meeting was contained in WTO/AIR/1086. It consisted of five items: negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and other business.

2. The Chairman indicated that in order to assist delegations in their preparation for the meeting he had circulated a Note, Job No. 2803 dated 11 May 1999. The Note recapitulated where the Working Party stood on the three issues and proposed a certain structure for the discussion.

ITEM A: NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

3. The Chairman recalled that at the previous meeting a useful discussion of various issues listed by the Secretariat in document S/WPGR/W/27 had been conducted. As requested at that meeting, the Secretariat had meanwhile produced a revision (S/WPGR/W/27/Rev.1) which incorporated recent contributions. He suggested using that document as a basis for the discussion and addressing relevant issues in the order suggested in the preparatory Note.

(i) Situations justifying the application of safeguards measures

4. The Chairman noted that in past discussions the concept of "unforeseen developments" had been frequently referred to. It was, however, his impression that Members had approached this concept from different angles. For instance, there was a notion that unforeseen developments related to market developments not anticipated by governments at the time they negotiated commitments. Alternatively, but not in a mutually exclusive manner, the concept had also been tied to import-related developments confronting individual services suppliers in a committed sector. This second notion corresponded to the conventional interpretation contained in Article XIX of GATT, but not explicitly taken up in the Agreement on Safeguards (AS). Based on the second notion, a previous Secretariat document (S/WPGR/W/24 of 3 September 1997) asked whether the concept of unforeseen developments could be made legally meaningful. This question had been answered by some Members in the negative. It might be helpful to further clarify these different notions of "unforeseen developments" and to determine, first, whether they were relevant to the Working Party's discussion and, second, whether it would be possible to give them legal effect. He suggested that delegations give actual or hypothetical examples.

5. The representative of Thailand observed that the Working Party had achieved some encouraging progress. Discussion on the feasibility of an emergency safeguards mechanism (ESM) for services would facilitate judgement on its desirability. The concept of "unforeseen developments" was essential to the GATT Article XIX mechanism for goods. He acknowledged that the concept might leave room for various interpretations but, thus far, had not posed serious problems in the goods area. "Unforeseen developments" should be interpreted as developments occurring after the negotiation of a tariff concession which could not be reasonably expected to have been foreseen by negotiators at the time when the concession was made. Such developments could be of different nature; they might primarily be import-related, but other market developments should also be taken into account, for instance, technological changes.

6. The representative of Canada reiterated that the main difficulty still faced by the Working Party was determining circumstances where safeguards would be warranted. The Agreement on Safeguards had been suggested as a model, but it did not include references to "unforeseen developments" because it was recognized in the Uruguay Round that the concept had never been clearly defined. By contrast, the AS referred to objective, clearly defined circumstances, i.e. import surges that might cause injury. However, such import surges were difficult to identify in services; they had to be closely circumscribed in order not to affect liberalizing commitments. The representative of Australia concurred that the legitimate role of safeguards was to facilitate adjustment to more liberal market conditions. In her view, the concept of "unforeseen developments" posed problems, one of them being its subjectivity. As an alternative, she proposed exploring the notion of "unforeseeable developments". It might be possible to develop objective criteria in this regard; they could be based, for instance, on available information, reasonable precautions, standard practices, etc. The representative of Japan echoed Australia's concern as to the concept of unforeseen developments. If it were understood to capture "market developments", the term would be very broad - including non-trade-related developments - and required a clear definition. By contrast, the concept of "import-related developments" suffered from the difficulty of specifying the term "imports" in trade in services. The representative of the European Communities associated herself with Australia's interest in exploring the concept of "unforeseeable developments" and with Japan's comments on "market developments". The latter could be linked to injury and causality in bound sectors; the relevant injury test should be conducted for the "domestic industry" as a whole.

7. The representative of Barbados requested further clarification of the criteria which might be used to test "foreseeability". In her view, the focus should be on whether or not there had been injury. The representative of Thailand added that regarding the distinction between "unforeseen" and "unforeseeable", the borderline was very thin in the GATT context.

8. The representative of the United States reiterated reservations as to whether Article XIX of GATT could be used as a model for any possible safeguard mechanism in the area of services. He also felt that the concept of "unforeseen developments" was very subjective and proposed focussing on injury rather than its cause. The example concerning technological changes was interesting; in his view, however, technological developments were foreseeable. He observed that document W/27 had placed emphasis on the protection of juridical persons, but the possibility of protecting natural persons through safeguards should also be considered.

9. The representative of Switzerland was in favour of relating the safeguards concept to the interests of domestic industry. It should cover producers of like or directly competitive products, established within the territory of a Member, regardless of ownership and control. Special and differential treatment for developing countries should be possible. Both the possibilities of horizontal and sector-specific approaches should be studied. She also suggested considering the prioritisation of individual modes; for example, safeguards on modes 3 and 4 should be possible only after action had been taken on modes 1 and 2. Members should be required to take the public interest into account, i.e. to weigh the interests of consumers, users and producers. All actions should be limited in duration. Finally, compensation should be required to ensure that measures are not taken for

protectionist purposes. The representative of Japan felt that, if the relevant criteria were met, all domestic suppliers should be protected against all new suppliers entering into the market.

10. Regarding the passive subject, the representative of Venezuela said that his delegation had no specific views on who would qualify for protection in relevant cases; it could be enterprises, industries, natural persons, etc. Article 4 of the Antidumping Agreement contained a definition of industry which could be taken into account. As to the circumstances justifying an action, he added that the effects of "unforeseen circumstances" – increases in the supply of a services and the injury caused by it - should be analysed together. The representative of Korea felt that no Member would want to open its market to an extent that a serious injury could occur. In turn, this implied that all such injury was unforeseen and that there was no need to impose both the conditions of "unforeseen development" and "serious injury". As safeguards were exceptional measures, employed when other measures were not effective, they should not be taken when a situation could be addressed under other GATS provisions. In considering whether ESMs should be taken, the benefit ensuing to the whole of the economy, as opposed to an industry, should be taken into account. Since this implied a subjective evaluation, the invocation of safeguard provisions should be left to the discretion of the Members concerned.

11. In summing up, the Chairman noted that many delegations considered the concept of "unforeseen developments" as essential, while others felt it was too subjective in nature. Alternatively, it had been suggested to discuss the concept of "unforeseeability" which might be made subject to an objective test concerning the justification of an action, the benefits for the economy as a whole and public interest issues had been mentioned. Some delegations had called for more concrete examples of situations justifying the use of safeguard measures and, in this context, an in-depth discussion of the importance of technological changes.

(ii) *The question of horizontal versus sector-specific safeguards*

12. The Chairman recalled that the delegation of Japan had proposed a conceptual distinction between three principal approaches for safeguards: (a) horizontal safeguards (available to all Members in standard format across all sectors); (b) sector-specific safeguards (available to all Members in sector-specific format); and (c) sector-specific safeguards which would be available only if included in schedules. Additional variants were possible. This conceptual distinction was also related to an issue discussed at the previous meeting, namely, the distinction between (a) *ex-ante* safeguards to be included in schedules and (b) *ex-post* safeguards which would be available whenever the relevant criteria were met.

13. The representative of Thailand, on behalf of ASEAN, said that the distinction suggested by the delegation of Japan was relevant. It made clear that a sector-specific approach did not necessarily call for scheduling. He felt that there was no legal basis in Article X for a scheduled mechanism since the Article envisioned *ex-post* safeguards to cope with unforeseen circumstances. While favouring a horizontal approach, he could also consider a sector-specific ESM which was unrelated to the scheduling of commitments. The representative of the European Communities added that an *ex-ante* approach would require Members to clearly identify possible emergency situations in advance. Instead, a general framework for safeguards might be developed, including conditions for application. Regarding sector-specific approaches, the prudential carve-out for financial services could be considered a model. The representative of Japan reiterated reservations *vis-à-vis* the inclusion of sector-specific safeguards in schedules as these could affect the quality and stability of commitments. In any case, the circumstances justifying an action should have been unforeseeable at the time of scheduling.

14. The representative of the United States observed that all approaches were potentially relevant. There was also a possibility of combining horizontal and sectoral approaches, based on a general

framework mechanism that countries could include in their schedules. It could indicate in a more specific manner the comfort level that a country might need when opening its market, given that the case for safeguards was related to liberalization. Whether the circumstances were unforeseen was not as important as reaching agreement on the level of "imports" acceptable for a country. He felt that the financial services carve-out could not be considered as a safeguard of the kind referred to in Article X. Using it for such purposes could unduly diminish the financial services commitments.

15. In summing up, the Chairman noted the additional variant introduced in the discussion, namely the combination of horizontal and sector-specific elements. In this context, basic framework rules would define general criteria for invocation, while more specific rules could deal with sectoral peculiarities. He reminded delegations that all options remained open for consideration.

(iii) *Concepts of injury and causality*

16. The Chairman thought it useful to further discuss indicators which might be used to (a) prove the existence of injury and (b) establish a causal relationship between increased foreign presence in a market and such injury. He recalled that the delegation of Venezuela had voiced some suggestions in this regard, which had also been made available in an informal paper (Job No. 2860 of 17 May 1999). It was also worth discussing on the degree of flexibility that Members should have in selecting adequate indicators; the delegation of Brazil had mentioned that Article 3 of the Antidumping Agreement could provide some guidance. Secondly, he drew delegations' attention to questions raised by the Secretariat in document W/24. In particular, (a) should the reasons which contributed to an increase in imports be taken into account, or only the increase in imports *per se*, and (b) should the existence of injury caused by increased imports be a sufficient condition for safeguard action, or should there be additional criteria (e.g. the existence of market imperfections)?

17. The representative of Thailand reiterated views previously expressed by his delegation on the use of Articles 4:2(a) and (b) of the AS and Article 3 of the Antidumping Agreement as models in determining injury and causality. Venezuela's submission demonstrated that relevant indicators were available. Confidentiality was not an issue since the burden of proof would rest on the invoking party, who would have access to information that could be considered confidential. The representative of Venezuela concurred. He suggested referring to increased "supply or consumption" of foreign services, rather than increased imports. The representative of Argentina shared these views and added that it remained to be decided how existing information could be made comparable. The representatives of Uruguay, Cuba, Poland, and Egypt welcomed the Venezuelan submission and the views expressed on the use of relevant provisions of the AS. Also, it was suggested that track should be kept of the discussion on various injury indicators in order to facilitate an overall assessment. The analysis should continue.

18. The representative of the United States felt that the criteria proposed in the Venezuelan submission were too broad. More concrete examples of real world situations, taking into account the four modes of supply, would help to clarify the proposal. Referring to a question posed in the Chairman's Note for the meeting, the representative of Japan wondered whether "market imperfections" could be taken into account in the determination of injury and causality.

19. In summing up, the Chairman observed that most delegations wished to discuss the Venezuelan submission in greater detail. Real-world examples relating to the determination of injury and causality would be helpful. Most delegations that had spoken felt that Articles 4:2 (a) and (b) of AS were relevant; given data problems in services, the approach underlying Article 3 of the Antidumping Agreement could also be taken into account. He suggested continuing at the following meeting the discussion of the concepts of injury and causality, the notions of unforeseen vs. unforeseeable developments as well as any other issues deemed relevant under this item.

ITEM B: NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

20. The Chairman recalled that at the previous meeting the delegation of Norway had suggested that Members provide any available information regarding trade-distorting subsidies encountered in foreign markets. The proposal had been well received. He invited delegations' contributions in this regard.

21. The representative of Switzerland stressed that the mandate of Article XV had to be fulfilled. Despite the lack of information, it should be possible for delegations to discuss such issues as existing subsidy disciplines in GATS, subsidies with trade-distortive effects and the definition and categorization of subsidy schemes, which had been suggested in the Chairman's Note dated 10 February 1999 (Job No. 772). She shared the view expressed in paragraph 7 of that Note regarding the national treatment obligation for mode 1. If no limitation had been inscribed for national treatment, services supplied from abroad and consumed in the country must not be discriminated against in terms of subsidies. She also felt that subsidy schemes that had an "export-enhancing" effect were a problem but no disciplines or remedies existed in the GATS. Other issues that could be discussed had been pointed out in document S/WPGR/W/9.

22. The representative of New Zealand expressed interest in contributing to a discussion along the lines suggested in Norway's submission. Subsidy schemes might undermine a services exporter's position in other markets. The representative of Japan said that in addressing trade-distortive subsidies, delegations might start from the criteria laid down in Article XVII.

23. The representative of the United States stressed the need to comply with the exchange of information mandated by Article XV; relevant information could be provided in different ways. He recalled that his delegation had clarified in the past that it would endeavour to contribute, but not necessarily by way of replying to the questionnaire. The representative of Argentina added that the principal mandate of Article XV was to develop disciplines for subsidies to avoid trade-distortive effects, and the exchange of information was not the only possibility of fulfilling that mandate.

24. In summing up, the Chairman reiterated the importance of the information exchange exercise mandated by Article XV, as pointed out by some delegations. He emphasized the term "mandated" because Members had to fulfill a common obligation under the Agreement. Even partial responses to the questionnaire would be helpful; additional contributions along the lines of Norway's proposal would be appreciated as well. He also observed an interest in continuing the discussion of questions raised in his Note of February 1999, in conjunction with issues discussed in S/C/WPGR/9, at the next meeting.

ITEM C: NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

25. The Chairman observed that at the previous meeting, the Working Party had its first discussion of issues raised in the Secretariat Note S/WPGR/W/29. Some delegations expressed the need to develop a working definition of government procurement. In that context, Australia had recommended to consider whether the term "government purposes" in Article XIII of the GATS should be interpreted to mean "government use" in a narrow sense (i.e. the government "consumes" the service) or also include cases where the government was not the actual consumer. He proposed to discuss both W/29 and these contributions in greater depth. The three questions contained in the European Communities' informal paper were closely related to these definitional issues. Additionally, Japan had introduced a typology of concessions which distinguished between three types of transactions.

26. The representative of Brazil provided a brief overview of his country's legislation which distinguished between concessions and government procurement. In Brazil, the concept of concession was not covered by the legislation that applied to government procurement (Law 8666 of June 1993), but had their own legal framework (Law 8987 of February 1995). Both legislations were applicable to federal, state and municipal governments, as well as to public enterprises, foundations and any form of institution with some level of control, directly or indirectly, by the government. While government procurement was defined to consist of acquisition of goods and services by purchase, concessions implied the delegation to a private entity of the right to supply a services. The representative of Venezuela added that the situation in his country was similar. Concessions and government procurement were different concepts regulated by separate legislations; the discussion of concessions might be of didactic value, but could not be part of negotiations on government procurement. In relation to the typology proposed by the delegation of Japan, he said that transactions pertaining to the exploitation of natural resources related to goods and not services. In Venezuela, such transactions did not involve any payment by the government; however, the government was entitled to collect taxes and royalties. In the absence of government procurement, there was no basis to apply GATS disciplines. Referring to contracts for constructing and managing industrial sites or public facilities, he noted that the financial responsibility laid with the users of the service and not the government. The third type of transaction, involving government purchase of services, could be considered government procurement rather than a concession. Concessions involved transactions in which an exclusive competence of the government was delegated to a private entity, but the rights or resources involved continued to belong to the government. He reiterated previous requests for more information on Build, Operate and Transfer contracts.

27. The representative of Hong Kong, China, would prefer a working definition of government procurement which would minimize the exclusion of transactions from GATS disciplines; such a definition should include cases in which the government did not consume directly the service. Regarding the distinction between concessions and government procurement, he felt that the criterion of financial responsibility was appropriate; if the government did not pay, a transaction could not be considered government procurement *per se*. Thus, concessions in the form of licenses and franchises would not fall under any government procurement rules. According to the representative of Thailand, the discussion should focus on defining government procurement as referred to in Article XIII. In Thailand the legal situation was clear. Relevant laws distinguished between concessions and government procurement; concessions were services supplied in the exercise of governmental authority. Contracts concerning the exploitation of natural resources were investment-related, and not particularly relevant for a discussion under Article XIII.

28. The representative of Mexico felt that the analysis of S/WPGR/W/29 should be continued. The Working Party had not considered all relevant definitional issues at that stage, and no authoritative interpretation of the term existed. Although her delegation was still considering the issues involved, she observed that one of the fundamental characteristics of government procurement was the financial responsibility by the government. Concessions involved the granting to the concessionaire of a right to exploit resources or exercise other prerogatives of the government. Any purchases by the concessionaire would constitute private acquisitions, which could not be covered by government procurement disciplines. She also echoed the request for information on Build, Operate and Transfer contracts.

29. The representative of the United States felt that the typology proposed by the delegation of Japan constituted a good starting-point for developing a working definition. The representative of Japan noted that the purpose of current discussions was to define government procurement, not concessions. His delegation considered the criterion of financial responsibility as relevant. Regarding contracts for exploitation of natural resources, he considered that the resources themselves were goods, but the exploitation activity was a service; for instance, energy services were included in the Services Sectoral Classification List (MTN.GNS/W/120).

30. The representative of Canada concurred that the discussion should focus on determining what was included in the concept of government procurement; concessions were a secondary issue. In defining government procurement, a wider range of factors needed to be considered. These included ownership, government control and the relevance of existing disciplines under the TRIMS. The representative of the European Communities referred to a Draft Interpretative Document on treatment of concessions under Community Law (O.J. C94 of 7.4.99). It included definitional elements which might be useful for the work of the Working Party such as level of exploitation, ownership, financial responsibility, etc. She felt it might be necessary to use a case-by-case approach in the determination of government procurement. The paper on concessions mentioned at the previous meeting had some factors that could be used in the work on definition, for example, level of exploitation, ownership, financial responsibility, etc. Regarding concessions, it was clear from the discussion that not all countries used such a concept.

31. In summing up, the Chairman observed that delegations felt the need to intensify work on a definition of government procurement; for that purpose, various routes were being contemplated. The criterion of financial responsibility was generally found relevant. The issues raised by the delegation of Australia were considered useful as well; in general, the concept of government use was perceived to be narrower than that of government purpose. He stressed the importance of submitting contributions in writing as a basis for further discussion.

ITEM D: DATE OF THE NEXT MEETING

32. The Chairman suggested holding the next formal meeting on Monday, 21 June 1999. The Working Party agreed.

ITEM E: OTHER BUSINESS

33. No matters were raised under this agenda item.

Working Party on GATS Rules

REPORT OF THE MEETING OF 16 APRIL 1999

Note by the Secretariat

1. The twenty-first meeting of the Working Party on GATS Rules was chaired by Mr. Siva Somasundram of Singapore, after taking over from Mr. Harald Fries of Sweden. The agenda of the meeting was contained in WTO/AIR/1053. It consisted of six items: installation of new chairman; negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and other business.

ITEM A: INSTALLATION OF NEW CHAIRMAN

2. Mr. Harald Fries, who had served as Chairman of the Working Party for 1998, announced that Mr. Siva Somasundram had been appointed Chairman for 1999 at the meeting of the Council for Trade in Services of 23 March 1999. Mr. Fries expressed his thanks to all delegations for their positive contributions and the cooperation extended to him during the past year, and to the Secretariat for its support.

ITEM B: NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

3. The Chairman (Mr. Siva Somasundram) observed that the negotiations on safeguards warranted particular attention, given the June-deadline. To assist delegations in their preparations for the meeting, an informal Note (Job No. 1998) had been circulated. It contained some background information and suggestions for discussion. It should not, however, prevent Members from raising any other issue considered relevant.

4. He gave a brief summary of points raised during the informal discussion held on 24 March in the Working Party: First, it was generally agreed that work should continue on the basis of the "List of issues for future discussion" contained in a Secretariat Note of November 1998 (S/WPGR/W/27). Second, participants welcomed a statement by Indonesia indicating that ASEAN was working on a draft text for discussion. It was felt that a concrete draft might provide fresh impetus to the work. Third, given the upcoming deadline, several delegations noted a possible need to accelerate the frequency of meetings and/or envisage informal meetings before end of June. He thus recommended that, in scheduling the next formal meeting, delegations keep the possibility of additional meetings in mind.

5. The Chairman turned to the individual issues raised in Section II of document W/27. As discussed at the informal meeting and outlined in the Chairman's note for the meeting, he stressed the need to focus on key issues. As a starting-point, he took stock of elements of past discussions whose importance appeared to be widely accepted in principle. These seemed to include:

- (a) First, definition and scope: There was a widely held view that only governments and government-mandated bodies should be authorized to take safeguard actions. Concerning the potential beneficiaries of such action, delegations had embraced the

principle that "acquired rights" of established suppliers must be respected. There were questions, however, concerning the compatibility of this principle with MFN treatment.

- (b) Second, the notions of temporariness and degressivity of safeguard actions appeared to be broadly accepted as well; Article 7 of the Agreement on Safeguards (AS) might provide a model.
- (c) Third, no delegation had questioned the need for procedural rules governing investigation of injury in the event that an injury criterion was included (modelled on Article 3 of AS).
- (d) Fourth, the range of applicable measures: many participants had expressed the view that any measures should be limited to the temporary suspension of Market Access and National Treatment obligations. However, the ensuing question whether certain measures – such as subsidies – might be preferable to others – e.g. quotas – had not drawn particular attention to date.
- (e) Fifth, the concepts of transparency and notification: again, the AS (Article 12) might be used as a model.
- (f) Sixth, the inclusion of a provision ensuring special and differential treatment of developing countries, where Article 9 of the AS might prove a useful example.

6. The Chairman stressed that the above summary was without prejudice to delegations' general position on the need for a safeguards mechanism in services, its actual form and a satisfactory solution to other open issues. In turning to the issues which seemed to warrant further discussion at this stage, he mentioned: First, questions related to the use of horizontal versus sector-specific safeguards. For example, the delegation of Japan had proposed at the previous meeting a distinction between three principal approaches for safeguards: (i) horizontal (available to all Members in standard format across all sectors); (ii) sector-specific (available to all Members in sector-specific format); and (iii) sector-specific/scheduled safeguards (available only if included in schedules). There might be even more variants, whose relevance had not been thoroughly explored. Second, situations justifying the application of safeguards measures (type of injury). The question had been raised whether there were compelling examples of situations where safeguards would be (or would have been) needed to facilitate sectoral adjustment in the absence of other remedies. Third, the availability of sufficiently precise statistical information on the existence of injury, and the possibility of establishing a causal relationship between increased foreign presence in a market and such injury.

(i) Use of horizontal versus sector-specific safeguards

7. The representative of Thailand, on behalf of ASEAN, discussed the different approaches outlined by the delegation of Japan. The distinction made between the format of a mechanism and the conditions of its use was helpful. A safeguard mechanism could adopt a horizontal or sector-specific format, depending on the outcome of the negotiations under Article X of the GATS. The conditions of use were a separate issue; the GATS did not make the availability of safeguards contingent on scheduling. The safeguard mechanism envisaged under Article X was meant to be available to Members facing unexpected problems arising from their obligation under the GATS. Thus, they could not be defined ex-ante and included in Members' schedules of commitments. Scheduled safeguards could only cope with foreseeable difficulties.

8. The representative of Hong Kong, China concurred that safeguards should be available for unforeseen situations, which was not possible with an ex-ante approach. He favoured a horizontal

mechanism applicable to all Members, but did not exclude the possibility of applying it only to certain sectors. The representative of the European Communities observed that ex-ante safeguards required reasonably precise information on the situation to be addressed, while an ex-post mechanism could be more general and, thus, cater for unforeseen circumstances. In supporting a horizontal approach, the representative of Korea felt that scheduled safeguards could not cover all possible contingencies, given the pace of technological progress. Moreover, the scheduling of safeguards would depend on bargaining power; small economies would be disadvantaged.

9. The representative of the United States favoured a sector-specific mechanism, available only if included in schedules. He emphasised the concept of liberalization, the most valid motivation for developing a safeguard mechanism. The representative of Canada appreciated the conceptual distinction introduced by the delegation of Japan. He wondered whether the application of an emergency safeguard to individual modes would create advantages for those service suppliers which could switch relatively easily between modes. However, application across several modes could prove more trade restrictive than necessary to address the perceived problem.

10. The representative of Argentina found that the distinction introduced by Japan was interesting from an analytical perspective. However, his delegation favoured a general approach, either applicable to all or some sectors. The rules should be the same for all Members, without prejudice to possible preferential treatment being accorded to developing countries. A schedule-based approach could result in fragmentation of the system. The representative of Egypt supported a horizontal approach applicable to all modes and all sectors. The representatives of Uruguay, Australia, Cuba and Hungary shared this view. While supporting a horizontal approach, the representative of India added that it might be necessary to develop separate rules for the four modes of supply in view of their particular characteristics. The representative of Brazil, also favouring a horizontal approach, acknowledged the possible need for flexibility in some sectors. The representatives of Pakistan associated himself with the comments made by Egypt and India.

11. The representatives of New Zealand and Poland, while arguing for a horizontal mechanism, did not exclude the possibility of developing sector-specific rules. The Polish representative noted that the use of a horizontal mechanism could be made subject to certain conditions in relation to modes 3 and 4. The representative of Japan felt that a schedule-based approach was excessively flexible which could lead to instability, while a sector-specific approach might suffer from data problems in virtually all sectors.

(ii) Situations justifying the application of safeguards measures

12. The representative of Thailand, on behalf of ASEAN, mentioned a situation where, as a result of unforeseen developments and of GATS obligations, a Member's market was inundated by foreign services supplied via commercial presence and/or presence of natural persons. The increase could be in absolute or relative terms, to an extent that caused or threatened to cause disruption to domestic producers of like or directly competitive services. This could happen to any Member, considering especially that the GATS required progressive liberalization. Like the representative of Egypt he suggested adopting the parameters contained in Article XIX of GATT 1994 and the Safeguards Agreement in this respect. The representative of Poland felt that a definition of the circumstances allowing for an action might need to be developed, reference to unforeseen developments was too broad a term. He acknowledge that, while Article XIX of GATT used this term, more concrete language had been provided in the AS.

13. The representative of the United States sought further clarification as to what was meant by unforeseen as against foreseen circumstances. He recognized that GATT Article XIX referred to unforeseen developments, but failed to find such reference in the Safeguard Agreements. The perceived need for safeguards implied the possibility of injury in the future; thus, any approach

involved some element of foreseeability. The representative of Japan wondered why the term "unforeseen" had been eliminated from the Safeguards Agreement.

14. The representative of Thailand felt that the concept of unforeseen developments was very relevant for legal reasons. Article 1 of the AS referred to Article XIX of GATT, which contained the terms "emergency" and "unforeseen". Those terms suggested that the mechanism was meant to cope with situations that were unexpected when the commitments were made; there was no need to repeat this notion in the Safeguards Agreement. He saw no basis for establishing a link between the availability of safeguards and scheduled commitments under Part III of the GATS.

15. The representative of India felt that a safeguard mechanism should address unforeseen emergency situations not anticipated by Members at the time of scheduling commitments under GATS. It should provide for flexibility and enable a domestic industry to gradually adjust. For instance, rapid technological changes might permit developed countries to supply services electronically through mode 1 although such supplies had not been considered feasible at the time of scheduling. Existing provisions under the GATS were not sufficient to deal with such problems.

16. Several delegations wondered whether it was possible to describe situations, actual or hypothetical, where safeguards might have been useful. The delegation of Brazil noted that a similar exercise had been carried out in the Antidumping Committee's discussion on circumvention issues.

(iii) *Injury and causality*

17. The representative of Thailand, on behalf of ASEAN, said that the relevant injury criterion should be "serious injury". It would cover an adverse situation beyond normal expectations at the time of scheduling. For the determination of injury, the concepts contained in Article 4.2(a) of the AS could be utilised. The causality requirement in the area of goods, i.e. Article 4.2(b) of the AS, could also be translated into the services context, provided some key terms were modified. The representative of Canada reiterated doubts whether there were sufficiently objective empirical criteria to apply these concepts. The representative of Brazil observed that statistical problems also existed in the goods context. The Agreement on Implementation of Article VI of GATT (Antidumping Agreement) thus provided for flexibility and allowed injury determinations to be based, for instance, on concepts such as constructed value, best information available, and even consultations with affected Members during an investigation. The representative of Egypt felt that the application of such concepts should not be prejudged and that, in any case, the burden of proof should be left to the invoking Member.

18. The representative of Australia said that the applicability of safeguards could be made contingent on the existence of adequate data. Injury and causality were important concepts, and Members should not be allowed to take action in response to injury that was unrelated to a surge in imports. To illustrate the difficulties in determining causality, the representative of the United States cited a goods case, in which all indicators pointed to the existence of injury. However, the investigating authority, seeking to establish a causal link, found that the main cause was not imports, but a downturn in the economy. Several Members noted that the lack of services statistics was a serious impediment, which could also affect the determination of appropriate remedies; the Working Party should further discuss this issue.

19. The representative of Venezuela gave examples of indicators that could be used in establishing injury: losses experienced by domestic suppliers; decline in capacity utilisation; capacity reductions; decline in sales in a sector; reduction in productivity; reduction in prices or changes in the structure of prices; declining number of domestic suppliers; and decreasing employment in the sector concerned. An increase in foreign supplies would be reflected in: tax declarations (e.g. for sales taxes); indicators related to financial transactions; statistics maintained by competent

professional associations or regulators (including information on market shares or number of foreign professionals); capital flows; and revenue figures. Such information might not be centralized in one agency, but could be available in various private and public entities. Confidentiality should not be a problem; it had been tackled in antidumping cases. For the determination of causality, data series (before and after market entry) could be used as in the goods area. The burden of proof would rest on the invoking party. He noted that any type of administrative information might be admissible in such cases. In most legal systems, the standard of proof necessary for administrative action on economic grounds was lower and allowed for more flexibility than in penal cases. The Working Group could invite antidumping experts to explain how injury determinations were made in relevant situations.

(iv) *Questions related to compensation*

20. The representative of Thailand, on behalf of ASEAN, noted that Members needed to carefully think about the conceptual issues contained in Article 8 of the AS, and their applicability to services. It might prove difficult to determine the level of any compensatory measures. In addition, he proposed considering differential treatment of developing countries; Articles 8.3 and 9 of the AS were relevant in this context. The representative of Argentina said that his authorities were studying this issue. A solution might depend on the form of the safeguard mechanism ultimately adopted; there were different approaches within the WTO. The representative of Hong Kong, China, noted difficulties with the interpretation of Article 8 of the Safeguards Agreement which might cause problems. The representative of Japan shared this view. The representative of Brazil said that, to his knowledge, Article 8 of the AS had not been used frequently. He would expect that, if Members saw an imbalance in the application of safeguards, they would seek compensation.

21. The representative of the European Communities noted that the need for compensation would depend on the type of adjustment, (e.g. minor adjustments might not require compensation), and the nature of the services industry involved. The representative of Poland said that further discussion might be useful, starting from the existing rules for goods. The representative of Korea felt that Article 8 of the AS could be a model in services. The representative of New Zealand wondered whether all aspects, in particular Articles 8.2 and 8.3, could be applied.

(v) *Other issues*

22. The representative of Thailand, on behalf of ASEAN, distinguished two broad categories of safeguard measures, relating either to market access or national treatment. The representative of Argentina expressed a preference for the suspension of market-access commitments in emergency cases.

23. The representatives of Canada and the United States reiterated their delegations' basic position concerning the desirability of safeguards; however, the discussion of feasibility issues might provide helpful insights in this context. The representative of Brazil called for a rapid conclusion of the negotiations in order to promote new liberalization commitments in the next round of services negotiations. The representative of Argentina observed an increased need for a safeguard mechanism, as the new round was expected to improve significantly on the Uruguay Round schedules. The representative of Korea also favoured an expeditious conclusion of the safeguard negotiations.

24. The representative of the European Communities added that any safeguard mechanism should address emergency situations. It should thus be used for limited periods only, otherwise Article XXI of the GATS would need to be invoked. The concept of adjustment, and how it could be best achieved, required further discussion; it was related to the principles of transparency and notification. The range of possible measures might need to be discussed case-by-case.

25. The representative of India said that it would be preferable if safeguard measures were taken only by governments, and not by agencies with delegated powers. Safeguards should protect the national industry, including natural and juridical persons, of the Member taking the measure. The interests of foreign suppliers under mode 3 should be protected and there ought to be no measures requiring disinvestment. However, it might prove necessary for developing countries to temporarily suspend national treatment obligations even for established companies. He supported the concept of special and differential treatment for developing countries, in particular with regard to mode 4. The representative of Cuba concurred. The representative of Thailand, on behalf of ASEAN, noted that special and differential treatment for developing countries was consistent with the objectives of the GATS; Article 9 of the AS would be of relevance.

26. In summarizing the discussion, the Chairman observed that the concept of unforeseen developments, as contained in Article XIX of the GATT, had been a focal issue for many delegations. It might be useful to consider its absence from the Safeguards Agreement at the next meeting. He encouraged delegations to provide examples of situations, be it even hypothetical ones, justifying the application of safeguards measures; document S/WPGR/W/24 might prove a source of inspiration. Further work was also needed on the question of compensation as provided for in Article 8 of the AS, and its applicability to services. Continued discussion of feasibility issues might assist Members in their judgement of the desirability of a safeguards mechanism. He proposed requesting the Secretariat to update document W/27 to reflect all contributions, without prejudice to delegations' positions, as a basis for future discussion. The Working Party agreed.

ITEM C: NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

27. The Chairman recalled the two issues which had been raised in the preparatory Notes for previous meetings: the applicability of current GATS disciplines to either "import-substituting" or "export-enhancing" subsidies. Cases in point were assistance programmes which might enable domestic transporters, hospitals, hotels or banks to expand their sales to foreigners at the expense of foreign suppliers. He invited delegations' comments on this or any other relevant issue.

28. The representative of Norway pointed out the lack of progress in this area. In particular, Members were very hesitant to contribute to the exchange of information mandated by Article XV of GATS and explain their subsidies regimes. To advance work, he suggested that delegations provide any available information regarding trade-distorting subsidies in other markets. Such information should be submitted without reference to any particular country. However, this was not intended to substitute for the information that Members were required to submit under Article XV of GATS. The representative of Brazil noted that, as subsidization in general was not a very transparent practice in goods, this could also be the case in services. However, subsidies might have an important trade-distorting effect. The representative of Argentina found Norway's proposal very useful. Concrete examples could also help to clarify whether the subsidy definition used in the questionnaire was appropriate, given that some Members had raised doubts in the past.

29. The representative of the United States acknowledged the lack of transparency. However, the workload on administrations should not be further increased. Subsidy experts in capitals were already inundated with reporting requirements in other fora, possibly preventing them from replying to the WPGR questionnaire. The representative of Uruguay reiterated the need for balanced discussion of all three areas covered by the Working Party's mandate. The lack of replies to the questionnaire should not prevent delegations from exploring other ways to advance work. The representative of Hong Kong, China, had no objection to the proposal made; but noted that it should not distract from the exchange of information under Article XV.

30. The Chairman encouraged delegations to submit answers to the questionnaire. In addition, he noted that several participants had expressed support for the additional initiative proposed by Norway

under which Members would provide information on subsidy-related problems encountered in export markets. He suggested that this may be a further way of taking the work on subsidies forward.

ITEM D: NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

31. The Chairman recalled that discussions at previous meetings revolved around the scope and coverage of government procurement of services. The starting point was three questions raised in an informal submission by the European Communities: (a) What transactions constitute procurement?; (b) who is the procuring entity?; and (c) what is being procured? It had been agreed to continue this discussion at today's meeting, focusing in particular on the first question and, in this context, the treatment of concessions.

32. The representative of Japan stated that concessions did not exist in his country. Without prejudging Japan's position, he noted the different forms that they might take: (a) a contract between a government agency and a private company for the purpose of developing natural resources; (b) a government contract with a private company for the purpose of constructing and managing industrial sites, railways, public water supply systems, and others; and (c) government purchases of services which may be consumed by the government, e.g. cleaning of government buildings, or by the public in general, e.g. garbage collection. In cases (a), where a company paid for the right to exploit the natural resources, and (b), where consumers paid the company, it was not evident that the relevant transactions constituted government procurement. The third case, however, where the government paid companies, seemed more typical of government procurement. The financial responsibility for a transaction might be useful in distinguishing government procurement from concessions.

33. The representative of Korea said that in his country licenses, authorizations, and approvals related to concessions were regulated by the competent ministries. For example, the Ministry of Industrial Resources was responsible for approving mining rights. Since the definition of concessions and their role in services was unclear, it might be problematic to include them in the Working Party's discussion at this stage.

34. The representative of Australia felt that the discussion of concessions showed some links to the recent Secretariat paper (S/WPGR/W/29), which she found useful. The Paper noted that the relevant GATT Articles dealing with government procurement used different wording, i.e. "governmental purpose" in Art. III and "government use" in Art. XVII. Apparently, this had not been intended to imply different meaning, suggesting a relatively narrow interpretation of "governmental purposes". She recommended that Members consider whether "government purposes" in Article XIII of the GATS should be interpreted to mean "government use" in a narrow sense, i.e. that the government "consumes" the service, or to include cases where the government was not the actual consumer. It could be argued that certain services were purchased for government purpose, but not for government use. For example, when a government contracted out training services destined for the private sector, these would be fulfilling a purpose of, but not be used by, the government. Examining the question of what constituted "governmental purposes" would help to clarify which concessions could be considered government procurement and which would be subject to normal GATS disciplines. In Australia, procurement of services was not defined in law. However, at the federal level, entities were obliged to have regard to the Commonwealth Procurement Guidelines in all procurement cases. A footnote to the Guidelines stated that the terms property and services covered all goods and services, including: consultancies and professional services of all types; real property activities; construction and related services; financial and operating leases for equipment and real property; individual and collective training and educational programmes; services obtained from public utility suppliers; and outsourcing or contracting, including programme delivery and programme support. The inclusion of the latter activities indicated a very broad interpretation of government procurement.

35. The representative of Hong Kong, China, pointed out that the draft Multilateral Agreement on Investment discussed in the OECD contained a definition of concessions, which included the delegation of activities normally carried out by a government authority to a distinct and independent legal entity. The representative of the European Communities mentioned a recent draft document on the treatment of concession under Community law which could be of interest to other delegations (Draft Interpretative Document on Treatment of Concessions under Community Law; Official Journal of the EC, C94, 7 April 1999). The representative of Venezuela noted a fundamental characteristic of concessions which needed to be analysed and borne in mind, i.e. exclusive competence of the State. Other arrangements to be discussed were Built, Operate and Transfer contracts, and contracts pertaining to the management of public utilities. The representative of Argentina noted that not much information was available on concessions; he stressed the need for factual material describing how Members defined concessions.

36. The representative of Mexico recalled that contracts of the third type described by the Japanese delegation, involving disbursement of funds by the government, had been an element that Mexico had used to identify government procurement. In addition, the Secretariat Note (S/WPGR/W/29) recounted that a panel had used payment by the government as one factor to identify government procurement. More information on Members' definition of concessions was necessary before any further analysis could be requested from the Secretariat. The representatives of Malaysia, the United States, and Uruguay concurred.

37. The representative of the United States said that it was apparent from the Secretariat's Note that the existing precedents (negotiating history or dispute panels) did not provide sufficient guidance for the interpretation of the relevant terms in GATS. The Working Party might have to develop its own working definition. The representative of Poland also called for such a definition; the responses to the procurement questionnaire might contain useful elements. In Poland, government procurement included construction procurement, the delivery of goods, and the provision of services financed fully or partially with public funds. The concept of concessions was not used in public procurement.

38. The representative of Thailand, on behalf of ASEAN, felt that the Working Party needed to fully understand the meaning of government procurement. He observed that there was no authoritative WTO interpretation of the term; the existing interpretations by various GATT/WTO bodies of Articles III:8 and XVII:2 of GATT were, however, useful. A key element to be retained was the understanding that "government purpose" and "government use" both meant government consumption. In that context, it was difficult to include the notion of concessions if it meant the supply of services in the exercise of governmental authority. According to the rules of international law interpretation, drafting history was only a supplementary means of interpretation to be used on an exceptional basis. As a rule, one had to take into account the ordinary meaning of "government procurement" in its proper context and in the light of relevant GATS provisions.

39. A representative of the Secretariat pointed out that document W/29 made reference to a 1992 panel report (GPR.DS1/R, 23 April 1992) which might be interesting for the Working Party's purposes. However, the report had never been adopted and therefore was not legally relevant. The representative of the United States emphasised that, although the panel arrived at a questionable conclusion, its report illustrated some of the difficulties implied in defining government procurement of services, as in many cases government contracts combine the supply of goods and services.

40. The Chairman encouraged the delegation of Japan to submit its contribution in writing. He suggested continuing the discussion of S/WPGR/W/29 at the next meeting, taking into account considerations contained in the 1992 panel report. To clarify the concept of concessions, it would be very useful for delegations to submit written contributions.

ITEM E: DATE OF THE NEXT MEETING

41. The Chairman suggested holding the next meeting on Wednesday, 19 May 1999. The Working Party agreed.

ITEM F: OTHER BUSINESS

42. No points were raised under this agenda item.

Working Party on GATS Rules

REPORT OF THE MEETING OF 19 FEBRUARY 1999

Note by the Secretariat

1. The twentieth meeting of the Working Party on GATS Rules was chaired by Mr. Harald Fries of Sweden. The agenda of the meeting was contained in WTO/AIR/1009. It consisted of five items: negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and other business.

2. The Chairman indicated that in order to assist delegations in their preparation for the meeting he had circulated a Note, Job. No. 772 dated 10 February 1999. The Note recapitulated where the Working Party stood on the three issues and proposed a certain structure for the discussion.

ITEM A: NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

3. The Chairman noted that at the previous meeting, the Working Party had had a first exchange of views on the Secretariat Note entitled "Issues for Future Discussions on Emergency Safeguards" (S/WPGR/W/27); delegations had agreed to continue this discussion. The Note considered, first, alternative forms that a safeguard mechanism under the GATS might take and, second, elaborated on the list of issues identified in the outline submitted by Venezuela (Job No. 5412, dated 14 October 1998). He suggested addressing the individual issues one-by-one.

Alternative forms of a safeguard mechanism

4. The Chairman recalled the initial discussion regarding the pros and cons of a sector-specific versus a uniform, generally applicable, safeguard mechanism. He invited the proponents of a sector-specific mechanism to elaborate on its possible form. Relevant issues in that context included: (i) the need for, and potential content of, any general rules and principles; (ii) the sectors for which such a mechanism should be prepared; and (iii) the possibility that either all Members had access to the mechanism or only those which had reserved the right to use it in their schedules.

5. The representative of the United States briefly summarized his delegation's previous submission on the subject (S/WPGR/W/17). It was based on the hypothesis that liberalization commitments might be facilitated if it were possible to inscribe safeguards-type provisions in schedules. The relevant disciplines would not be very different from those provided for under Article XIX of GATT, including degressivity, temporariness, etc. However, he saw no realistic possibility to include an injury test, given serious data problems. Rather, a set of conditions conferring the right to take action could be developed for a limited number of services sectors. While financial services might not be a good example, given the prudential carve-out, safeguards-type provisions could be envisaged, at least conceptually, for telecommunications.

6. Some delegations expressed concerns about a sector-specific approach incorporated in schedules. The representative of Korea felt that small economies without strong bargaining power

might have problems to achieve its inclusion in negotiations. The representative of European Communities noted conceptual difficulties in developing a list of sectors where safeguards could be needed and expressed preference for a horizontal approach. The representative of Brazil also favoured a horizontal approach, commensurate with the notion of unforeseen developments. The representative of Thailand said that data problems were not a strong argument against a horizontal mechanism since sector-specific rules would suffer from similar problems. Moreover, it would be difficult to identify sectors which, on a longer-term basis, were more prone to safeguard-type situations than others. He requested clarification as to the legal basis of a sector-specific approach. The representative of Australia said it might not be practical to develop separate disciplines for different sectors, given the statistical problems involved. The representative of New Zealand, echoing these concerns, favoured the development of horizontal rules.

7. Expressing support for a horizontal mechanism, the representative of Mexico felt that a sector-specific approach could fragment the system and jeopardize its predictability and stability. She also wondered about the legal basis. The representative of India, noting various problems, expressed strong opposition to a sector-specific approach. The representative of Uruguay stressed the conceptual difficulties involved, *inter alia*, in safeguard actions under mode 3, and the lack of comparable statistics at international level. However, the mandate of Article X of the GATS was clear and formed part of the Uruguay Round implementation process. Among the various options, Uruguay would prefer a horizontal approach. It should not necessarily be based on the models contained in the Agreements on Agriculture and on Textiles, which captured exceptional circumstances. Special and differential treatment for developing countries should be ensured in any mechanism. The representative of Thailand, while reiterating ASEAN's support for a horizontal approach, was also open to consider arguments in favour of a sector-specific model.

8. The representative of Japan distinguished three options for a safeguard mechanism: scheduled safeguards; safeguards specific to certain sectors; and a horizontal mechanism. In his view, the first option would introduce instability in scheduled commitments. The second option would be available to all Members in a certain sector, unrelated to the schedules. He suggested to discuss alternative mechanisms in parallel with the issues identified in Section II of the Secretariat Note. The representative of Canada stressed the importance of advancing the work on safeguards, and suggested discussing the individual issues in detail. In turn, this was compatible with a horizontal approach which, in any event, appeared to command more support. The representative of the United States noted that several delegations seemed to presume that the Working Party needed to decide between a horizontal and a sector-specific approach. However, the real issue to be decided was whether safeguards were needed at all. A number of considerations arguing against a horizontal approach had not been sufficiently addressed.

9. In introducing the discussion on Section II of document W/27, the Chairman emphasized the importance of certain key issues, such as situations justifying the application of safeguard measures and the concepts of injury and causality. He also called for concrete examples in this context.

Definition and scope

10. According to the Chairman, the common view seemed to be that only governments and government-mandated bodies should be authorized to apply safeguards. Regarding the potential beneficiaries, a strong majority of delegations had argued in favour of the domestic rather than the national industry only. No delegation seemed to question the principle of protecting the "acquired rights" of established foreign-owned firms. However, there were doubts as to whether such protection contravened the MFN principle. Moreover, some delegations had questioned the purpose of preventing new entries into an industry through a safeguard action under Mode 3.

11. The representative of Japan concurred that governments should be the active subjects and the domestic industry, rather than national industry, the passive subject in any safeguard action. He shared the view that established suppliers should be protected; this would not pose any MFN problem since all Members were covered in principle. He doubted whether mode-specific actions would entail serious efficiency losses and, thus, whether disciplines were necessary to prevent such actions. The representative of Korea argued that the MFN obligation required to give Members equal treatment to "like suppliers" of other Members; however, if locally established service suppliers were "like" the service suppliers established abroad, then their protection could be inconsistent with the MFN principle.

Situations justifying application (type of injury)

12. The Chairman noted three key issues under this heading: the need for compelling examples of situations where safeguards were needed to facilitate sectoral adjustment; the availability of empirical data which would allow to establish a credible link between increased foreign supplies and injury to industry; and the question of a public interest clause.

13. The representative of Venezuela said that several indicators could be used to prove the existence of injury, including the revenue from value added tax. It had been argued that information provided for tax purposes was normally confidential. However, confidentiality was protected, for instance, in antidumping and safeguards cases for goods, where one of the elements used to evaluate injury were tax declarations. Other indicators could be offer/sales statistics, which were normally maintained by private enterprises and chambers of commerce; the number of providers in the market; changes in prices and the price structure; market share; capital flows recorded by national statistical offices for individual activities, groups of enterprises and purposes; as well as statistics on the entry of foreigners and their professional activities. While delegations had emphasized the need for reliable proof, it was necessary to bear in mind that the standards of proof tended to be lower in economic investigations than in penal cases. The representative of the United States expressed reservations as to whether capital flows could be used to measure increased imports and ensuing injury. Capital flows were associated with a wide variety of economic activities and not necessarily related to sales of services. The representative of Argentina pointed out that the first step in any investigation was the determination of an "increase in imports"; the number of foreign services suppliers in a market could be used in this context as a proxy for trade under mode 4. However, he wondered how "imports" could be defined for the other modes of supply, bearing in mind paragraph 14 of the Secretariat Note. The challenge would be to find a definition consistent with the concept of domestic industry, including all established providers, and then to identify appropriate statistics.

14. The representative of Australia saw the concepts of injury and causality as important elements in any safeguards rules for services; it was necessary to ensure that measures were taken only if resulting from injury surges in imports. The representative of Japan expressed concern about the use of not properly defined "public interest" clauses. He acknowledged, however, that the concept could serve as a positive element and prevent excessive application of safeguards in individual case; Article 3 of the Safeguards Agreement provided for a public hearing system that might be used in the services context as well.

15. The representative of the European Communities recalled that the purpose of a safeguard mechanism was to facilitate adjustment in emergency situations; the concepts of injury and causality were intended to define such situations. It was clear that the focus had to be on injury caused by imports rather than on any other structural issues which might be arising at the same time. The representative of Canada recommended to discuss first the notion of injury and then link it to trade. Precise information was necessary for that purpose, and it might be useful to further consider the options mentioned by Venezuela.

Temporary or provisional measures

16. The Chairman indicated that this point combined items 3 and 6 of the initial Venezuelan proposal. All statements at previous meetings had emphasized that safeguards should provide breathing space for adjustment, i.e. that they should be temporary. Otherwise, commitments would need to be modified under Article XXI.

Applicable procedures/investigation of injury

17. According to the Chairman, there seemed to be general agreement that any safeguard disciplines should include provisions regarding the investigation of injury. Several Members had previously referred to Article 3 of the Agreement on Safeguards as a possible model, provided it could be filled with substance.

Applicable measures. National treatment and non-discrimination principles

18. The Chairman recalled a suggestion at the previous meeting that additional commitments under Article XVIII should not be affected by safeguard actions; he wondered whether there were any conflicting views. No delegation took the floor.

Transparency and notification

19. The Chairman indicated that this point combined items 7 and 8 of the Venezuelan proposal. He felt that all Members agreed on the importance of these items; the Agreement on Safeguards could be used as a model. As for the three previous items, no in-depth discussion might be necessary at that stage.

Special and differential treatment

20. The Chairman recalled various general statements made at the previous meeting. One delegation said it might be premature to conduct an in-depth discussion at present. The representative of Thailand noted the importance of the principle of special and differential treatment which was consistent with the preamble of GATS; Article 9 of the Agreement on Safeguards constituted an appropriate model.

21. In conclusion, the Chairman noted that many delegations had expressed the view that the Working Party should continue focusing on a few key issues, in parallel with discussions on alternative forms of a safeguard mechanism.

Additional Statements

22. The representative of Thailand, on behalf of ASEAN, stressed the need for the Secretariat to prepare a draft safeguards agreement. There was an obligation to implement the results of the negotiations by the deadline of end June 1999. Any other outcome could contravene the mandate of Article X and, thus, affect the rights and obligations of Members under the WTO Agreements. The representative of Poland, supporting this view, recalled his delegation's submission of May 1997 which had called on the Working Party to complete the negotiations in time. The representative of Egypt stressed that the creation of safeguards rules was not an option, but an obligations. Therefore, concrete result should be in place by end of June 1999. The representative of the United States reiterated the existence of conceptual problems that needed to be resolved. He saw no point in requesting the Secretariat to draft disciplines, given that a general agreement on the need for

safeguards had not been reached. Delegations were free to submit their own draft texts. The representative of Malaysia drew attention, again, to the question of what would be the legal basis of a sector-specific safeguard action and reminded delegations of the obligation to have rules by the June deadline. A draft prepared by the Secretariat would have been a valuable basis for further discussion.

23. The Chairman observed that there were competing views on how to proceed in the light of the obligations established under Article X. He suggested holding an informal meeting in the second half of March to address these issues in the light of the end of June deadline. The Working Party agreed.

ITEM B: NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

24. The Chairman reminded delegations of the information exchange exercise mandated under Article XV. Subsidies had not attracted much attention in past meetings. He felt that further work would benefit greatly from a collective effort to improve the Working Party's understanding of (a) the circumstances in which subsidies were likely to create trade distortions; and (b) the relevance of existing GATS disciplines in such circumstances. In his view, two scenarios seemed to warrant particular attention, i.e. the granting of either import-substituting or export-enhancing subsidies. Recalling the contribution made by Argentina at the previous meeting, he invited comments from other delegations.

25. The representative of Argentina clarified a misunderstanding which might be implied in paragraph 7 of the Chairperson's Note of 10 February 1999. While encouraging an in-depth discussion of subsidies-related issues, his delegation was not proposing a joint interpretation exercise to define the scope of current disciplines. The representative of India said that his delegation was not convinced of the need for any action, but was willing to discuss other views.

26. Given the relatively low level of participation in this area and the time constraints facing the safeguards negotiations, the Chairman proposed keeping subsidies on the agenda of future meetings; however, he would not invite any in-depth discussion. The representative of Japan concurred that it was reasonable to focus on safeguards, given the existing deadline. The representative of Argentina reiterated his delegation's interest in subsidy issues, but recognized current time constraints. He did not object to the Chairperson's proposal which he understood, would not prevent Members from raising subsidy-related issues and government procurement would be treated in the same way. The representative of Uruguay, while not objecting to the proposal, emphasized the need for balance between the three areas remitted to the Working Party.

ITEM C: NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

27. The Chairman recalled previous discussions of scope and coverage of government procurement of services. At this meeting, he would like to invite further comments to reach preliminary conclusions, not necessarily agreed, and identifying key issues for further consideration. He reminded delegations of the three questions raised in the European Communities' informal paper of February 1998: (a) What transactions constitute procurement?; (b) who is the procuring entity?; and (c) what is being procured?.

28. As to the first question, the Chairman noted that an important issue was the definition and treatment of concessions. The representative of Canada reminded the Working Party of his delegation's request for clarification from the European Communities, and indicated that the issue would be pursued bilaterally. The representative of the European Communities added that the issue raised related to the interpretation of the Government Procurement Agreement. In relation to concessions, she added that the relevant definition seemed to differ between national legislations; the

EC was preparing a submission on this subject and looked forward to contributions from other delegations as well.

29. The representative of the United States recommended to use as a starting-point the definition contained in Article XIII of the GATS, which referred to procurement in terms of services purchased "for governmental purposes and not with a view to commercial resale or with a view to use in the supply of services for commercial sale". This mirrored the language contained in Article III:8 of GATT 1994. Given the degree of ambiguity involved, he felt it would be useful if the Secretariat provided background information on the interpretation developed in the goods context. He also noted that the wording in Article XIII did not apparently capture the procurement of services with a view to their use in the supply of *goods* for commercial sale. The Working Party might want to address the definitional and legal implications of this omission. As to concessions, he noted that some delegations considered that these were outside the scope of government procurement, and some potentially strong arguments might be made. It would be very useful if further information could be provided on the relevant domestic regimes and any definitional distinctions from government procurement.

30. The representative of Australia reiterated the definitional difficulties involved and concurred that the starting-point for future work should be Article XIII of the GATS. A BOT contract might be an example of a concession; contrasting with the government's purchase of a service the costs involved were born entirely by consumers over a certain period of time. Accordingly, the relevant transactions were subject to general GATS disciplines. By contrast, services like garbage collection, which were totally or partially paid for by the government, might be considered procurement. In trying to develop general criteria, it would be useful to further discuss whether the allocation of costs were a determining factor. Another important issue was the definition of "governmental purposes" and, in this context, whether the focus should be on the government's use of a service – as in the case of maintenance and cleaning services – or its role in, and responsibility for, the provision of a service – as in the case of garbage collection. However, the role of governments differed from country to country. The relationship between the government and the private sector was also changing, as more and more companies were delivering services traditionally provided by governments.

31. The representative of Thailand agreed that it would be useful to discuss the interpretation given to the relevant GATT provisions. In Thailand, concessional regimes were provided for in many different pieces of legislation; however, they were always defined as services supplied in the exercise of governmental authority.

32. The representative of Mexico indicated variations in national legislation with regard to concessions and government procurement, for reference purposes. In her country, concessions were not assimilated with government procurement since they did not involve direct acquisition of goods or services, nor any expense, by the government. To avoid confusion, Mexico maintained different sets of legislation for, on the one hand, public works, which fell under government procurement, and concessions for the provision of public services which had their own rules. In the latter context, the State authorized one or more private companies to offer a public service and also determined the tariffs to be charged. By contrast, public works contracts did not involve the granting of any authorization to private parties to operate a public service. Another difference was that a concession could be transferred to other parties, while the responsibility for the execution of public works remained with the main contractor, notwithstanding the degree of subcontracting involved. While a concessionaire had to provide the economic resources for the execution of the works and the exploitation of the service, in the procurement of public works the costs were covered by the State. In the case of concessions, legal relationship involved not only the government and the concessionaire, but the user of the service as well; legal obligations in the sphere of public works were limited to the contractor and the procuring authority.

33. In concluding the discussion on this issue, the Chairman encouraged delegations to submit information on their national regimes, preferably in writing. In turn, the Secretariat would provide a background note on how language similar to that contained in Article XIII:1 of the GATS had been interpreted in the GATT context. He wondered whether the Working Party would find it useful if the Secretariat also prepared a note on possible forms of concessions and potentially relevant GATS provisions. The Secretariat indicated that any such note would essentially distinguish between three categories of services: those supplied in the exercise of governmental authority, which were outside the scope of the GATS; services procured by governments which fell under Article XIII; and all other services. If concessions were neither services provided in the exercise of governmental authority nor constituted government procurement, then the general MFN obligation and, where relevant, specific commitments applied to them. From a legal perspective, any Secretariat note would not be able to go significantly beyond these principle issues.

34. Several delegations, including Argentina, Venezuela and Malaysia, felt it would be useful to further discuss these issues in the Working Party, based on information provided by Members before the Secretariat was asked to prepare a background note.

35. Regarding the second question, i.e. who is the procuring entity, the Chairman recalled that two criteria had been suggested thus far: (a) government control of the entities concerned; and (b) the relevant market structure, in particular the existence of competition. The representative of Canada, agreeing with views expressed in the non-paper from the European Communities, stressed the difference between a definitional exercise, aimed at determining the types of entities to be covered by the rules, and a negotiating process, in which individual entities would be made subject to the rules. In defining the scope of procurement rules, the level of government control should be the main consideration. The representative of the United States said that the range of potentially relevant entities extended from Central to Sub-central levels of government, with the latter involving particular difficulties. As to the existence of government control, he felt that any definition should exclude procurement by entirely privately-owned enterprises since the notion of government procurement implied some degree of government ownership.

36. Regarding the third question, i.e. what is being procured, the Chairman wondered whether it was necessary to further specify services not falling under the GATS, i.e. "services supplied in the exercise of governmental authority" as stated in Article I:3. In addition, he enquired whether there were other issues to be raised in this context and/or whether the Working Party was ready to address the second item of the work programme, i.e. the basic disciplines of non-discrimination. No views were expressed. The Chairman concluded that the next meeting would continue to focus on the first item of the work programme.

ITEM D: DATE OF THE NEXT MEETING

37. The Chairman suggested holding the next formal meeting on Friday, 16 April 1999. The Working Party agreed.

ITEM E: OTHER BUSINESS

38. No matters were raised under this agenda item.

Working Party on GATS Rules

REPORT OF THE MEETING OF 1 DECEMBER 1998

Note by the Secretariat

1. The nineteenth meeting of the Working Party on GATS Rules was chaired by Mr. Harald Fries of Sweden. The agenda of the meeting was contained in WTO/AIR/980. It consisted of six items: negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; report on the activities of the Working Party to the Council for Trade in Services; date of the next meeting of the Working Party; and other business.

ITEM A: NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

2. The Chairman recalled that the Secretariat had been asked to produce a paper which had been circulated as S/WPGR/W/27. The paper considered, first, alternative forms that a safeguard mechanism under the GATS might take, based on Members' suggestions. It then elaborated on the list of issues submitted by Venezuela (Job No. 5412, dated 14 October 1998), drawing upon views expressed by delegations and the precedents in Article XIX of GATT 1994 and the Agreement on Safeguards. In structuring the discussion, he suggested that Members address the two parts of the paper separately.

Alternative forms of a safeguard mechanism

3. Several delegations emphasized the need to thoroughly examine the applicability of the different forms of safeguard mechanisms which had been identified in the Secretariat's note. The representatives of the European Communities and Mexico noted that the specificities of services trade had to be taken into account. The representative of Brazil stressed that one basic rationale of a safeguard mechanism was to serve as a remedy in the event of unforeseen developments. The representatives of Australia and the European Communities expressed support for an approach similar to that used in the Safeguards Agreement, under which all domestic firms, regardless of ownership, received the same treatment. The representative of Thailand added that a desirable mechanism could incorporate quantitative criteria as well as procedural restraints. The representative of Egypt indicated that any safeguard mechanism should combine elements contained in Article XIX of GATT 1994, Article 5 of the Agreement on Agriculture, and Article 6 of the Agreement on Textiles and Clothing.

4. The representative of Japan expressed reservations about the possibility of including sector-specific safeguard mechanisms in individual schedules. In his view, this might allow for excessive flexibility and could lead to instability in existing commitments. Such an approach could be improved, however, if it were combined with some form of common guidelines. The representative of Mexico added that the idea of sector-specific safeguard mechanisms was interesting for discussion, but could lead to fragmentation in the system. She thus felt that a horizontal or general safeguard mechanism was more appropriate. The representative of Hong Kong, China concurred. According to the representative of Hong Kong, China different types of emergency safeguard measures could

render the interpretation of schedules extremely difficult. In light of statistical problems, it might be necessary to apply a horizontal mechanism to certain sectors initially and extend it to others when statistics became available. The representative of Poland and Norway indicated their preference for a sector-specific approach. The latter recognized, however, potential negative implications for transparency as compared to a general safeguard provision. The representative of the European Communities noted that a sector-specific approach might be able to respond to specific requirements of individual service sectors. However, the Working Party had not had sufficient discussions to draw any conclusion at that stage. The representative of the United States agreed that additional work was needed on this approach before decisions could be made. The ability to invoke safeguards would depend on specific criteria associated with the characteristics of a sector. Perhaps no injury determination should be required since such a determination could not be based on sufficient empirical information.

5. In relation to Article 5 of the Agreement on Agriculture, the representative of the United States expressed doubts about its applicability to services. The policy background was very different in agriculture and while there was no injury requirement, invocation of the Article relied on a considerable amount of empirical information which was lacking in the case of services. The representative of Canada also noted that though an injury criterion was absent, rigorous data requirements had to be fulfilled in order to trigger the mechanism. These included information on the volume of imports and domestic consumption of the product in question and its import price. Also, the data had to be available for a series of consecutive years in order to set the trigger price levels. It was doubtful whether such data requirements could be met in services trade. The representative of Japan voiced similar concerns. The representative of Venezuela added that one interesting element of the mechanism was that it allowed for a continued degree of market access.

6. Referring to Article 6 of the Agreement on Textiles and Clothing, the representative of the United States noted similarities with Article XIX of GATT 1994 and, in consequence, similar data requirements. However, developments in the textiles sector were captured by excellent statistics, which was not the case in services. The representative of Canada drew the attention of the Working Party to the fact that this mechanism could be invoked in a selective manner, based on criteria such as serious damage. Such an approach would be difficult to apply to services trade. The representative of Japan voiced concerns regarding the non-MFN basis of this mechanism but regarded as positive that the burden of proof was placed on the country imposing safeguards. The representative of Venezuela recommended another element in the safeguard mechanism of the textiles agreement for closer consideration, namely the special treatment foreseen for small exporting countries and least developed countries.

Definition and scope of safeguards in services

7. The representatives of Australia and the European Communities said that safeguard measures should be applied by the Members themselves, whether via government regulation or delegated powers. From the Communities' point of view, it was important in the latter case, that the delegation of power was clear and compliance with the relevant conditions ensured. For instance, if a professional association was to be involved, it would need to follow the same steps as any government agency in applying safeguard measures.

8. The representative of Australia expressed support for an approach modelled on the Agreement on Safeguards where any action is to be taken on behalf of a domestic industry. In turn, the concept of domestic industry was defined to cover the producers as a whole of like or directly competitive products operating within the territory of a Member. The representative of Hong Kong, China said that, in principle, any measure should apply only to new entrants, not to pre-existing enterprises, and irrespective of nationality. The representative of Japan was also sceptical whether a distinction could, or should be made. He noted the importance of defining imports clearly. The

representative of Brazil felt that no distinction should be made between national and foreign own investment, and action should affect only new entrants. The representative of Canada remarked that the use of nationality criteria could have the effect of expropriating foreign investors. In turn, this could affect investment in foreign jurisdictions.

9. The representative of Australia saw the possibility of a conflict between the protection of acquired rights of locally established foreign firms and the MFN principle. Safeguards should not consist of measures which forced disinvestment or undermined the MFN obligation. The representative of the United States noted the importance both of protecting the status of established suppliers and of respecting the MFN principle. In his view, the real question was what purpose could be served by a safeguard measure which applied to mode 3. The issue of acquired rights would need to be discussed extensively. The representative of Venezuela stressed the policy interest in guaranteeing investment and ensuring predictability.

10. Discussing sectoral coverage, the representative of Australia proposed focusing on areas where adequate statistics were available. However, this was a difficult issue, given the general lack of data. With regard to modal coverage she preferred a safeguard mechanism applicable to individual modes only. While it could be argued that foreign suppliers might then focus on unrestricted modes, this possibility should not be overestimated, given the costs involved in switching between modes. However, her delegation could also support an approach which allowed for broader implementation, provided this was based on a case-by-case assessment. The representative of Brazil felt that it was important to take into account the objectives of a safeguard, e.g. protection of employment or investment. The labour intensity of many services was an important argument in favour of a safeguard mechanism. While not yet convinced of the necessity of a safeguard mechanism, the representative of the European Communities expressed preference for a horizontal approach which was more transparent. The current lack of information in many industries about the functioning of the GATS would be compounded by new sector-specific rules. She also saw no need to distinguish between modes for the purpose of safeguard actions. The representative of Egypt favoured a mechanism which covered all services and all modes of supply without deterring investment.

Situations justifying the application. Type of injury

11. The representative of the European Communities noted that the Members arguing in favour of safeguards had failed so far to give compelling examples of situations calling for emergency protection. However, it was essential that such examples be discussed. The representative of Canada reiterated that the state of statistics in the services area rendered the concept of serious injury to domestic industry irrelevant. In the goods context, a safeguard could be applied to imported products that were traded fairly, i.e. not dumped or subsidised, with a view to preventing economic displacement in the domestic market. Thus, it was essential to apply the most stringent injury standards which, in turn, needed to rely on precise information on the financial status of individual firms in the industry concerned. The representative of Australia felt that the Agreement on Safeguards could provide a model for circumstances in which such measures could be invoked in services; however, statistical deficiencies posed problems for the establishment of injury. It would also be necessary to ensure that wider public interest considerations would be taken into account in any investigation. For example, this included the interest of industries relying on the service in question as an input. The representative of Japan felt that the concept of public interest was vague and could create unnecessary uncertainty. The representative of Thailand, on behalf of ASEAN, pointed out that the Agreement on Textiles and Clothing contained provisions on the attribution of damage which should be taken into account; the burden of proof rested with the invoking Member.

Temporary or provisional measures

12. The representative of Canada observed that in the goods context safeguards were intended to allow a domestic industry to adjust to foreign competition during a limited transition period. The Working Party should consider what circumstances should be addressed by a safeguard in the services context and whether a principle of adjustment was also appropriate. The representative of Australia felt that Article 7 of the Agreement on Safeguards could provide a model. However, given the lack of statistics, she had reservations with regard to provisional safeguard measures. For the European Communities the temporary nature of the measure followed from its purpose to address an emergency situation. Permanent relief could be sought under other GATS provisions. Members needed to consider the length of an appropriate period and the remedies available if the emergency situation persisted after the period had elapsed. For instance, should there be a requirement to invoke Article XXI in such cases?

Applicable procedures. Investigation of injury

13. The representative of Canada wondered what kind of information would be used for the investigation. Reference had been made to income tax and VAT declarations; however, such information was protected in Canada, and possibly in other countries, under privacy laws. The representative of Venezuela noted that it was for the affected industry to supply the relevant information corroborating the existence of injury. The representative of Australia suggested that Article 3 of the Agreement on Safeguards could serve as basis for further discussion. Hong Kong, China, also felt that elements of this Agreement could be used in the services context.

Applicable measures. National Treatment and non-discrimination principles

14. The representative of Canada was sceptical whether safeguard actions involving temporary suspensions of market access or national treatment could ever be enforced, particularly in relation to Modes 1 and 2. For example, services provided electronically would be difficult to identify, monitor and restrict. The representative of Australia noted that while safeguard actions would involve the suspension of market access and national treatment commitments, it was doubtful whether they should affect additional commitments under Article XVIII. She felt that such actions should be available as protection against unforeseeable injury related to the scheduling of liberalizing commitments. However, her delegation was mindful of the conceptual problems involved, including the definition of unforeseen developments, and the relevant timeframe. The representative of the European Communities reiterated the MFN requirement contained in Article X of the GATS. Regarding foreign exchange restrictions, the representative of Japan reminded delegations of the relevant provisions of Article XI of the GATS. The representative of Egypt noted that a provisional suspension of market access and national treatment, on an MFN basis, should be acceptable.

Transparency and notifications

15. The representative of the European Communities recognized the importance of such obligations. The representative of Australia stressed the need for similar standards as in the area of goods.

Special and differential treatment

16. The representative of Australia, recognizing the importance of special and differential treatment, felt it premature to discuss details at that stage. The representative of the European Communities observed that there were already relevant provisions within the GATS, their extension to safeguard situations might need to be addressed case-by-case. Account could be taken, for example

of different levels of development within an industry. The representative of Egypt stressed the importance of the principle of special and differential treatment for developing countries.

Summary observations

17. The Chairman noted that many delegations were prepared to consider the option of a sector specific safeguard mechanism. However, its application should be based on general rules. While the mechanism provided for under the Agreement on Agriculture had very heavy statistical requirements; its counterpart in the textiles area was at odds with the MFN principle. There seemed to be agreement that only Member governments or officially mandated bodies should be entitled to take safeguard measures. While many delegations had indicated that there should be no distinction between domestic and national suppliers, views expressed in previous meetings suggested that this issue might require more discussion. The same applied to the concept of acquired rights, although there seemed to be agreement that existing investments should be protected. More discussion was also needed to specify circumstances justifying the application of measures and the relevant injury criteria.

18. The Working Party decided to continue the discussion of the Secretariat Note at the next meeting. The representative of Thailand emphasised the importance of producing concrete results - e.g. draft safeguard rules by the June 1999 deadline. The representative of Egypt reiterated that as a next step the Secretariat should prepare a draft agreement, based on views expressed by Members. The discussion of the current Secretariat Note would not advance the work of the Working Party.

ITEM B: NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

19. The Chairman recalled that at the previous meeting, some delegations had suggested a discussion of the two issues identified in the Chairman's Note (Job No. 5169, dated 22 September 1998). This could help to clarify the precise scope of existing GATS disciplines in the area of subsidies and identify circumstances of trade distortion, if any, which were not satisfactorily covered at present. The two issues related to subsidy programmes which had (a) an "import-substituting" effect, or (b) an "export-enhancing" effect.

20. The representative of Argentina agreed with the assessment made by the Secretariat in paragraph 39 of document S/WPGR/W/9, ("*...while the national treatment obligation does not impose any restraint on the level of subsidies that may be granted by Members, it is nevertheless a potentially powerful discipline with respect to the non-discriminatory use of subsidies. But realization of this potential depends, first of all, on the extent to which Members schedule commitments free of national treatment limitations relating to subsidies, and secondly, on whether the national treatment obligation is interpreted to extend across modes of supply.*") The clarification given in the Scheduling Guidelines (document MTN/GNS/W/164), exempting Members from adopting measures outside territorial jurisdiction, implied that there was no obligation under Article XVII to extend subsidies to suppliers located abroad. However, the Scheduling Guidelines referred exclusively to the treatment of suppliers and not of services, although both were covered by the GATS. Argentina felt that the obligation of national treatment applied to all services provided in the territory of a Member, regardless of their source or mode of supply. The limitations scheduled with regard to subsidies compiled in document S/WPGR/W/13, suggested that other Members shared this interpretation; otherwise they would not have exempted subsidies from national treatment under Modes 1 and 2

21. Regarding import-substituting subsidies effects, it was useful to distinguish between services of national and of domestic origin. If with regard to Mode 3 only national suppliers benefitted from subsidies and not the suppliers of other Members - although located on the territory of the subsidy granting Member, this would amount to a clear violation of national treatment. By contrast, if the subsidies benefitted all domestically produced services regardless the origin of the supplier, they would not normally violate national treatment under Mode 3. However, Mode 3 might expand to the

detriment of trade under other Modes. Structured that way, subsidies such as investment incentives, which were subject to the national treatment obligation with regard to Mode 3, might need to be assessed in a wider context.

22. Regarding subsidies with export-enhancing effects, their importance in practice would depend upon the predominant mode through which a service was provided. The representative of Argentina doubted, however, whether services subsidization was essentially designed to promote exports. Nevertheless, it was conceivable that investment or localization incentives promoted production not only for domestic consumption, but also for consumption by foreigners. A case in point were services which could be delivered electronically. However, as in other service areas, lack of information affected further exploration of this issue seriously.

23. The representative of Venezuela stressed the need for further clarifications of the scope of the work under Article XV. She proposed that an informal meeting or a brainstorming session be held to clarify matters. The proposal received some support and it was agreed to revert to it at a future meeting.

ITEM C: NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

24. The Chairman recalled that the previous meeting had been devoted to discussing the scope and coverage of government procurement of services. He felt that the time had come to aim at reaching conclusions and, where necessary, identifying key issues for further consideration. The discussion could then move on to the second item in the work programme, i.e. the application of the basic discipline of non-discrimination to services procurement. The discussion could be divided into three parts, based on the three questions raised in the Non-Paper from the European Communities and their Member States (dated 13 February 1998). In the context of the first question regarding *what transactions constitute procurement*, delegations had recognized that more information was needed on how concessions were defined and treated within national legislations. In response to the Questionnaire on Government Procurement of Services detailed information on concessions has been provided only by Argentina and Costa Rica. Concessions had also been mentioned in the responses of Colombia; Hong Kong, China; and Poland.

25. The representative of Argentina stressed that more information was necessary to understand what was meant by concessions. It was important in this context not to focus on definitions of transactions between the State and private suppliers since these could vary among legislations. Focus should rather be on the economic nature of the transactions. Procurement contracts had to do with public entities and covered what could be called public services. While the State was responsible for their provision, different procedures existed: the State could use its own resources and personnel or contract a third party to carry out the work. In the latter case, the contractual relationship could be of limited duration and involves only the State and an enterprise which carried out the work and was paid by the State. The other option consisted of a continuous contractual relationship with the supplier which also involved the user of service, who in a way contributed to the payment. This option had to do with public works and public service concessions, where the state allowed a private party to supply a service to the public without ceding its competence, and where the supplier normally received a payment from the individual user. The relevant price might be determined and/or subsidized by the State. Such transactions would not include concessions related to the exploitation of natural deposit, e.g. mines, which would not be covered by the GATS.

26. The representative of Canada said that the EU paper suggested that the transaction for the service itself (as distinguished from the buying or hiring of the service) did not appear to be covered by the Agreement on Government Procurement. The paper suggested that such transactions were not to the benefit or use of the government and thus would also not be covered by the current GATS

Article XIII definition of services. The actual meaning of the critical phrase in the EU paper: the transaction for the service itself is not clear. An elaboration of some examples may be useful. Would for example a contract providing a license to a private sector contractor to distribute government procurement data on an electronic tendering service and generate revenue from purchasers of the data, be considered to fit within the transaction for the service itself and, if so, on what basis would it not meet the definitions of a procurement in the AGP and GATS Article XIII? On how to proceed with the work, he suggested requesting the Secretariat to prepare a note listing the types of policies that are applied to government procurement and may not be consistent with non-discrimination, both MFN and national treatment, with a brief explanation of each.

27. The Chairman noted that definitions of concessions varied and that it would be helpful to have brief descriptions of how concessions were treated in domestic legislation provided by Members. On the Canadian proposal, he recalled that various documents had such information, namely S/WPGR/W/3, section 9 of the document S/WPGR/W/20 and the submission from New Zealand (Job. 5446 dated 30 September 1997). He also recalled the other two questions posed in the European Communities submission, i.e. who was the procuring entity and what was being procured had still to be discussed. He suggested continuing discussion in the following meeting on scope and definition, and addressing the two remaining questions in this context.

ITEM D: REPORT ON THE ACTIVITIES OF THE WORKING PARTY TO THE COUNCIL
FOR TRADE IN SERVICES

28. The Chairman noted that the draft report of the Working Party to the Council for Trade in Services had been circulated as S/WPGR/W/28. The report was essentially factual in nature. The Working Party adopted the report with a modification suggested by the representative of Thailand, on behalf of ASEAN.

ITEM E: DATE OF THE NEXT MEETING

29. The Chairman suggested holding the next formal meeting on Friday, 26 February 1999. The Working Party agreed.

ITEM F: OTHER BUSINESS

30. No matters were raised under this agenda item.

Working Party on GATS Rules

REPORT OF THE MEETING OF 6 OCTOBER 1998

Note by the Secretariat

1. The eighteenth meeting of the Working Party on GATS Rules was chaired by Mr. Harald Fries of Sweden. The agenda of the meeting was contained in WTO/AIR/916. It consisted of five items: negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and other business.

ITEM A: NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

2. The Chairman recalled that, as agreed at the previous meeting, he had circulated a Note (Job No. 4935, dated 16 September 1998), containing provisional, not necessarily agreed, responses to the four key questions concerning a possible emergency safeguard mechanism. That document also listed other related questions, some of which had been discussed during the brainstorming session held on 1 October 1998. The Chairman proposed that delegations address both the text and the questions in the Note. Since delegations were already familiar with each others basic positions, and these had been reflected in the Note, he suggested that the discussion should focus on possible solutions to problems and on how the Working Party's work should be structured over the period before the end-June 1999 deadline.

3. Regarding the points made in the Chairperson's Note, the representative of Canada said that the discussion should explore the implications of emergency safeguard measures using hypothetical examples. With respect to the question on whose behalf actions would be taken, absent from the Note was a requirement to examine the effects of a safeguard measure on services consumers and the society as a whole. This would still need to be addressed. The question whether a distinction between national and locally established foreign suppliers was feasible should be considered in terms of the national treatment obligation. The treatment of commercially established foreign suppliers and their acquired rights would touch on investment-related aspects. As to whether it could be left to a Member taking a safeguard action to justify its choice of "like or directly competitive" services, the GATT practice was that the use of exceptions should be circumscribed. As a consequence, Members should not be given the latitude to define "like or directly competitive" services. In this respect guidelines could be developed. In relation to other GATS provisions which allow for certain restrictions, the prudential carve-out in financial services also provided an element of flexibility to Members. In regard to what measures should be taken, the restrictions on capital movements were not a remedy in emergency safeguard situations where a domestic industry had to cope with unexpected foreign competition. In his view, the Working Party should continue the discussion of the issues raised in the Chairperson's Note.

4. On the procedural question, the representative of Venezuela said that the issues that had been identified so far should be dealt with methodically to identify differences and points of convergence. For that purpose an outline for future discussion could be established. Such an outline could include:

a) definition and scope of safeguards in services; b) situations justifying its application and the type of injury; c) temporary or provisional measures; d) applicable procedures and investigation of injury; e) applicable measures; f) periods of application or time-limits; g) transparency; h) notifications; i) special and differential treatment. The proposal was an attempt to put some order to the ideas that the Working Party had been debating for some time. A number of delegations expressed support for this proposal.

5. In relation to the questions in the Chairperson's Note, Egypt's delegation recalled its submission in document S/WPGR/W/15/Add. 5. Accordingly, no distinction between domestic and foreign investment, in relation to commercial presence, was intended. In Egypt, foreign direct investment was protected by domestic legislation and bilateral agreements for the protection of investment. As to how to structure the work of the Working Party, the representative felt that many delegations agreed on the need to have a safeguard mechanism in services. As the next step, he proposed that the Secretariat be requested to prepare a draft of possible safeguard disciplines to focus the discussion. Such a draft would not prejudice the position of any delegation. In that context, the Secretariat could use the information contained in Members' submissions, regional agreements, and the work conducted by other international organizations such as UNCTAD.

6. The representative of Hong Kong, China supported Egypt's proposal. His delegation had already argued that focusing on what a safeguard mechanism would look like, without prejudice to the outcome of the discussion on whether such a mechanism was merited, would be the most efficient way of taking forward the discussion. Document S/WPGR/W/26, dated 10 February 1998, contained some general and operational principles that could be embodied in the outline of a possible emergency safeguard mechanism. He recalled that Members had expressed concern about the lack of statistics and proof of causality; his delegation was thus considering submission of a paper that might shed some light on the issues related to feasibility. Other delegations such as Australia, Argentina, Brazil, Colombia, India, Norway, Poland and Thailand on behalf of ASEAN, expressed support for a text outlining a possible safeguard mechanism. Such an approach would help focus the discussion and allow delegations to raise any problems that they might have.

7. The representative of Thailand added that the Secretariat could assist this process by, first, compiling the various views expressed by delegations and, second, preparing a draft of possible disciplines. Such a draft should reflect all possible options for a safeguard mechanism including the approaches followed in Article V of the Agreement on Agriculture and Article VI of the Agreement on Textiles and Clothing. In these two cases, a causal link between imports and injury was not required.

8. The representative of the United States expressed reservations about initiating a drafting process. In his view drafting would be an appropriate next step once an agreement had been reached within the Working Party on the need for a safeguard mechanism and that was still not the case. While many questions had been addressed, the fundamental issues of desirability and feasibility had still not been resolved. A drafting exercise would not provide an answer to those questions and could distract from other possible options. He felt that Members should explore the safeguards question on a sector-by-sector basis, since a general safeguard mechanism would not work in services due to the difficulty of establishing injury and a causal link with increased imports. The Working Party should not ignore the option of building a safeguard regime on specific criteria for certain sectors. Those criteria would not necessarily be dependant upon injury, but take into account sector-specific regulatory approaches.

9. The representative of Canada also felt it would be premature to develop a draft safeguard mechanism. In light of the various options that had been put forward as basis for a draft, namely, Article XIX of the GATT, the sector-specific approach, the safeguards provisions of the Agreements on Agriculture and the Agreement on Textiles and Clothing, Members needed to decide how to

proceed. In other words, the elements that could serve as the criteria for a drafting exercise would need to be identified by Members in advance through the discussion in the Working Party. His delegation was not in a position to engage in a drafting process at that stage and he suggested reverting to this question at the following meeting. The representative of Japan shared those reservations. He suggested that at that stage it was more appropriate to request the Secretariat to prepare a list containing all issues hitherto raised by delegations. It might be useful to consider the desirability question looking at the merits of having a safeguard mechanism in the context of the next round of services negotiations. The representative of Korea argued that a draft could incorporate all options that had been mentioned by Members, which could address the concerns expressed by the United States and Canada.

10. The representative of the European Communities found the Venezuelan proposal a useful way to structure the inputs already provided by delegations. The Secretariat could prepare a summary of all inputs along those lines. In her view such a summary would reflect a variety of views as to what exactly would be covered by the different elements; this would suggest that a consideration of the summary should precede the drafting of disciplines. The representative of Uruguay favoured continuing the discussion of issues in greater depth and stressed the need to maintain a balance in addressing the different areas of work of the Working Party.

11. In summing up the discussion, the Chairman indicated that the proposal of requesting the Secretariat to draft an outline of an emergency safeguard mechanism had attracted ample support; however, some delegations had not been in a position to agree. He added that a number of delegations shared the view that a drafting exercise should be the next step, particularly in light of the June 1999 deadline. He urged delegations to consult capitals on the steps to be taken for the following meeting. A consensus seemed to have emerged on continuing the discussion based on a list of issues, including some alternative options, along the lines of the Venezuelan proposal. Members could then decide on how to structure the work over the period up to the June 1999 deadline. The Working Party agreed to this proposal.

ITEM B: NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

12. The Chairman recalled that at the June meeting the Working Party had agreed to clarify its understanding of the scope of existing GATS disciplines which covered subsidies. The objective would be to identify cases of trade distortion, if any, which were not satisfactorily covered by the existing framework. As agreed in that meeting, the discussion would be based on Section IV of the 1996 Secretariat paper on "Subsidies and Trade in Services" (S/WPGR/W/9) which had not received sufficient attention in the Working Party. Building on that paper, two issues might merit further consideration: a) the implications of subsidy programmes which had an "import-substituting" effect, and b) the implications of subsidy programmes which have an "export-enhancing" effect. In relation to the former, national treatment commitments under mode 3 and 4 ensured that locally-established foreign service suppliers were not excluded from sector-specific subsidy schemes. However, it might need to be clarified whether it was also ensured that such subsidy schemes did not disadvantage foreign services imported under mode 1 or consumed abroad under mode 2. The second class of subsidies included those granted to domestic suppliers of transport, hospital, and hotel services which might enable them to increase sales to foreigners at the expense of foreign suppliers. Were there serious problems in practice? What disciplines under the GATS, if any, would be relevant? And what remedies would be available, apart from consultations under Article XV:2, to affected suppliers? The chairman also reminded delegations of the information exchange exercise mandated under Article XV of the GATS. No reply to the questionnaire had been received since the summer of 1997. He emphasized the importance of this exercise in clarifying the extent and focus of subsidization in services.

13. The representative of Hong Kong, China reiterated his authorities' intention to submit responses to the questionnaire as soon as possible. However, definitional problems needed to be addressed. For instance, could a government's contribution to the education or health care system be considered a subsidy? That was something the Working Party would have to consider. On the questions raised by the Chairman, it would seem clear that subsidies administered on a national treatment basis were less likely to have a trade distortive effect. Concerning the potentially adverse effects of domestic subsidies on modes 1 and 2, it was generally recognized that Members had no obligation to extend benefits to a service supplier located in the territory of another Member. Nevertheless, this was a major issue that needed to be explored. Another issue for discussion was the potential distinction between types of subsidies, namely, prohibited, actionable and non-actionable. It was also necessary to determine the compensatory actions that might be taken. In his view, apart from consultations, the ultimate remedy should be provided by the dispute settlement mechanism.

14. The representative of New Zealand referred to document S/WPGR/W/9, section IV, paragraph 39. The extent to which provisions of the GATS had a disciplining effect depended on whether Members' schedules contained national treatment commitments in the sector concerned and the existence of any relevant limitations. The answers to the questionnaire were vital to advance the discussion. Without information, the Working Party lacked the basis for assessing the importance of this issue and identifying any gaps in the existing provisions.

15. The Chairman noted the difficulty of embarking in substantive discussions, and wondered whether the Working Party should discuss future priorities. For instance, in the absence of further responses to the questionnaire and submissions from Members, would it be preferable to set this agenda item aside and concentrate on safeguards and government procurement? Argentina suggested that before deciding on priorities, the Working Party should in any event attempt to address the two questions posed in the Chair's Note. These were important issues that Members needed to consider. The Working Party agreed to revert to this issue at the next meeting.

ITEM C: NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

16. The Chairman recalled that previous discussions had been focused on the scope and coverage of government procurement of services. He suggested three issues for consideration, based on the questions posed in the Non-paper by the European Communities, dated 13 February 1998. Regarding the first question concerning the transactions that constituted procurement, it had been recognized that more information was needed on how concessions were defined and treated in national legislations. Although Members had agreed to provide such information, nothing had been received so far. In replying to the questionnaire, detailed information had been provided only by Argentina and Costa Rica, while some reference to concessions was also contained in the responses of Colombia, Poland and Hong Kong, China. Regarding the second question (who is the procuring entity?), the EC paper presented two possibilities. One approach would cover procurement at all levels of government, including entities governed by public law and under the influence of government, while the second approach was based on market structure rather than on public ownership or influence *per se* - every case would be examined on its own merits, the ultimate criterion being whether the entity was subject to competition. Regarding the third question (what is being procured?), the EC paper suggested that all services falling within the scope of GATS should be covered. In this connection, the exclusion from the GATS of "services supplied in the exercise of governmental authority", raised the question of whether the GATS definition of such services was sufficiently clear. This was also related to the treatment of concessions, as some concessions might concern services provided in the exercise of governmental authority.

17. In relation to what transactions constitute procurement, the representative of Venezuela indicated, in a preliminary manner, that in his country concessions were governed by

public/administrative law rather than private/civil law. That implied an exclusive competence of the State. For instance, petroleum and minerals were regarded as State-owned resources and their exploitation was reserved for the State. When the government gave concessions, it granted a right to operate the mines to a private sector entity through a contract, which in some cases involved a royalty while in others no payment to the State was required, except for taxes on revenues. Thus, concessions did not constitute a purchase by the government since they involved no acquisition of goods or services and, therefore, they did not constitute government procurement. Additionally, given that they were an exclusive competence of the State and that their commercial and competitive nature was questionable, the granting of concessions, and the activities involved, were excluded from the coverage of GATS.

18. The representative of Argentina recalled his doubts about the interpretation of some delegations of what activities might fall under Article XIII of the GATS and the possibility that concessions would be covered under the Agreement. For instance, the case of a concession granted for operating a motorway, where the government was not buying something for itself, but rather granting the right to operate a public service to a private operator, was a clear case of a service provided in the exercise of governmental authority. It was necessary to continue studying how concessions would be considered within the GATS framework. The United States suggested that in addressing the issue in future submissions, the definition of concessions be related to the language of Article XIII, which specifically defined procurement in terms of a purchase.

19. The representative of Canada elaborated on the question of what transactions constituted procurement. The EC paper suggested that the transaction for the service itself was distinguished from the buying or hiring of the service. She asked whether the case of a contract providing a license to a private sector contractor to distribute government procurement data on an electronic tendering service, generating revenues from the purchaser of the data, would be considered to be a transaction for the service itself. If so, would it fall within the definition of procurement in GATS Article XIII?

20. In summing up, the Chairman observed that there was a need to continue the discussion on the scope and coverage of government procurement of services, and in particular on the issue of concessions, and urged Members to contribute their views in writing. He indicated that at the following meeting, the Working Party would revert to the question of how to proceed with the second step in the work programme, which concerned the application of the basic discipline of non-discrimination.

ITEM D: DATE OF THE NEXT MEETING

21. The Chairman proposed holding the next formal meeting on Tuesday, 1 December 1998.

ITEM E: OTHER BUSINESS

22. No matters were raised under this agenda item.

Working Party on GATS Rules

REPORT OF THE MEETING OF 23 JUNE 1998

Note by the Secretariat

1. The seventeenth meeting of the Working Party on GATS Rules was chaired by Mr. Harald Fries of Sweden. The agenda of the meeting was contained in WTO/AIR/854. It consisted of five items: negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and other business.
2. The Chairman said that he had circulated a Note, dated 15 June 1998, with the intention of assisting delegations in their preparation for the meeting. As indicated in the Note, he suggested a modification in the order of the agenda items to facilitate the participation of experts in government procurement. The Working Party agreed to this proposal.

ITEM A: NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF THE GATS

3. The Chairman recalled that the Working Party had agreed to structure its work as outlined in the Chair's Note dated 21 February 1997. At the previous meeting, the discussion on "the scope and coverage of government procurement of services" had already started. He drew Members' attention to the fact that in the Working Group on Transparency in Government Procurement the issues related to scope and definition of procurement were also being discussed; he had invited the Secretary of that Working Group to brief the Working Party on the status of those deliberations.
4. The Secretary of the Transparency Working Group said that an informal Note by the chairman entitled "List of Issues Raised and Points Made" (job no. 1860) had been circulated to introduce the main agenda item, i.e. transparency-related provisions in existing international instruments on government procurement and national procedures and practices. Concerning the first issue - "Definition and Scope of Government Procurement"- the view had been expressed that obligations on transparency should only be applicable if market access for foreign supplies and suppliers had been permitted. Other delegations had expressed a preference for applying transparency disciplines as broadly as possible.
5. Concerning the definition of government procurement, it had been suggested that the Transparency Working Group should employ a sufficiently broad approach to accommodate differing meanings given to the term "government procurement" in national legislations. The Group had also identified a range of issues that would need to be taken into account. In this context, a distinction had been made between the following questions: (i) who was doing the procuring? (ii) what was being procured? and (iii) what types of transactions were covered?

6. In regard to the first question, it had been suggested that entities at all levels of government, as well as enterprises owned or influenced by the government, be covered by a transparency agreement. Another suggestion was initially to apply the relevant rules only to entities at the central or federal government level and to condition the coverage of state enterprises on how they operated.

7. Regarding the second question (what was being procured?), it had been suggested that the scope of a transparency agreement be extended to all goods and services, and any combination of goods and services.

8. In relation to the third question (what types of transactions would be covered?), it had been suggested that acquisition by any contractual means, including through lease or rental, be covered. Questions had been raised as to whether concessions and build-operate-transfer (BOT) contracts should be covered as well. In connection with that issue, the delegation of Venezuela had presented a submission concerning the particular characteristics of government procurement, privatization and concession-granting systems (circulated as job no. 3295). With respect to the use of threshold values in determining the coverage of a transparency agreement, the view had been expressed that in principle all contracts should be covered, but that certain provisions might be more flexibly applied to smaller contracts. Other delegations had felt that transparency obligations should only apply above certain threshold levels in order to avoid information costs and that the Group should take into account the relevant national practices.

9. In introducing the discussion, the Chairman recalled that the Working Party on GATS Rules had initially based its deliberations on scope and coverage on a submission from the European Communities. He proposed continuing that discussion with a view to identifying issues for further consideration. Most delegations that spoke indicated an interest in developing a working definition of government procurement based on the questions in the EC submission. The need was expressed for an examination of the issue of concessions. One delegation noted that some discussion on concessions had taken place at the previous meeting and that a similar discussion was being conducted in the Working Group on Transparency in Government Procurement; it was thus important to avoid duplication and to coordinate work. In certain delegations' view, the definition of government procurement in GATS appeared to exclude concessions where services were not purchased for governmental purposes. Accordingly, those transactions would be subject to the disciplines of Articles II, XVI and XVII of the GATS. However, some delegations expressed reservations about this interpretation. They felt it was necessary first to define concessions and then to discuss the relevance of GATS disciplines. In this context, it was proposed that delegations provide information on national regimes relating to concessions. One delegation recalled that some information on this subject already existed in the responses to the questionnaire.

10. The Chairman recalled that the Working Party had agreed to address the basic principle of non-discrimination as a second step in the work programme. He reminded delegations of a non-paper submitted by New Zealand (dated 30 September 1997) which examined some issues, including definition and the principles of MFN and national treatment. While one delegation felt that for practical reasons it would be appropriate to discuss MFN-related issues first, others were of the opinion that the two principles should be dealt with in parallel since they were closely intertwined.

11. The Chairman concluded that there was a need to continue the discussion regarding and definition of procurement and, in particular, the treatment of concessions. More information on how concessions were defined and treated within national legislations was necessary; Members agreed to provide this information by the next meeting. Regarding the principle of non-discrimination, he noted that more input from delegations was needed on how to deal with this issue and encouraged Members to submit contributions by the following meeting. He would continue to coordinate work with the different fora dealing with government procurement.

ITEM B: NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

12. As indicated in his Note dated 15 June 1998, the Chairman proposed a three-pronged approach to the discussions. First the conceptual discussion should continue on the basis of the Chairperson's note of 3 April 1998. Second, delegations might wish to clarify their understanding of the precise scope of existing GATS disciplines applying to subsidies; that might help to identify circumstances of trade distortion, if any, which are not satisfactorily covered in the existing framework. Finally, given it was necessary to advance the information exchange programme mandated by Article XV and improve the common understanding of the role of subsidies in services sectors, the Chairperson asked Members to indicate when their responses to the questionnaire were likely to be ready.

13. The delegation of Australia gave examples of subsidies maintained in her country at the federal level, including an air services subsidy scheme providing assistance for regular air deliveries of educational material, general freight and passengers to remote areas; a Regional Telecommunications Infrastructures Fund; and tax concessions to companies establishing regional headquarters in Australia. In addition, government assistance for services such as education and health might be regarded as subsidies. However, such assistance would have a minimal impact on trade and would not be an appropriate area for subsidy disciplines under the GATS.

14. Some delegations argued in favour of using, as a basis for discussions in the Working Party, the definition and framework of the Subsidies Agreement. In their view, there was no difference between subsidies in goods and services as the criteria and schemes were basically the same. Other delegations, however, emphasized the need to examine whether the definition of subsidies in the Subsidies Agreement was appropriate for services sectors. In addition, it was questionable whether the remedies, i.e. countervailing measures, contained in the Subsidies Agreement could be applied to services.

15. Some delegations shared the view that conducting a discussion on the scope of existing GATS disciplines would be helpful. A previous Secretariat Note on Subsidies and Trade in Services (S/WPGR/W/9) had not been fully discussed. In light of the views expressed, the Chairman proposed conducting a discussion on the basis of document S/WPGR/W/9 at the following meeting. The Working Group agreed to this proposal.

16. Concerning the replies to the subsidies questionnaire, one delegation underlined that empirical information was a prerequisite for a substantive debate. Two delegations indicated that they aimed at submitting their replies within a few months.

ITEM C: NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

17. The Chairman proposed that the Working Party should aim at concluding the discussion on the four key questions contained in a Chairperson's Note, dated 3 June 1997, at the present meeting. He recalled that at the previous meeting the Working Party had held some discussion on the first question, i.e. on whose behalf would a safeguard action be taken? Several delegations had responded that action could be taken on behalf of all domestically established suppliers, regardless of ownership and control; while others had felt that it could be designed to protect only nationally owned suppliers. He recalled that the Secretariat had been asked to examine WTO jurisprudence relevant to the issue of

whether distinctions could be made between domestically established suppliers. The delegations concerned had expressed particular interest in the implications of the Panel Report and the Report of the Appellate Body on the European Communities regime for the importation, sale and distribution of bananas. The Reports had used the definition in Article XXVIII of GATS to affirm that juridical persons established in the territory of a Member would be regarded as service suppliers of another Member if they were owned or controlled by natural or juridical persons of that other Member. The Chairperson noted that it was for the Working Party to examine the implications, if any, of that report for its discussion.

18. Resuming the discussion of the first question, some delegations indicated that emergency safeguard measures would normally be taken to protect the national industry. This was understood to mean the totality of the natural and juridical persons supplying like or directly competitive services of the Member taking the measures according to the definition provided for in Article XXVIII of the GATS. Other delegations felt that the rules of origin contained in Article XXVIII of the GATS were not relevant for determining what "national industry" meant; in their view, the Article provided a legal definition of "service supplier of other Member" which was not a suitable concept for the purpose of a safeguard mechanism.

19. In relation to the second question, concerning the circumstances in which safeguard actions might be taken and the relevant purpose, some delegations pointed out cases where, as a result of unforeseen developments and of obligations under the GATS, there was a dramatic increase in consumption of foreign services. If such increase would cause or threaten to cause disruption of the national industry, the purpose of an action would be to provide time for adjustment to foreign competition. These delegations felt that the concept of "increased consumption of foreign services" was more appropriate than the concept of "increased imports", since the latter might not always be relevant to services given the four modes of supply. In this context, other delegations stressed the need to give concrete examples of circumstances warranting a safeguard action. In concluding this discussion, the Chairman observed that the Working Party seemed to share the view that the objective of a safeguard action should be to facilitate adjustment to foreign competition.

20. In relation to the third question, concerning the approach to be adopted in respect of injury/adverse effects and the causal link between injury/adverse effects and commitments under the GATS, some delegations felt that the relevant criterion was serious injury. It could be measured by employing, *mutatis mutandis*, the provisions of Article 4:2(a) and (b) of the Agreement on Safeguards. One delegation expressed reservations as there were important differences between GATS and the Agreement on Safeguards in Goods, including the fact that in services limitations could be scheduled in advance. Therefore, the conditions for imposing safeguards on services should be stricter than in the goods area. Some views were expressed on the issue of who carries the burden of proving causality. Delegations who spoke all agreed that the burden of proof would lie on the Member taking safeguard action. However, some delegations questioned whether it would be at all possible to prove causality in the area of services.

21. In relation to the fourth question, relating to the measures to be taken under the emergency safeguard mechanism, some delegations suggested that some measures could be temporarily applied in relation to all modes of supply, at both the pre-establishment and post-establishment stages. For instance, restrictions on market access, which could include regulations, taxes and quotas, could be applied in relation to all modes of supply, while a suspension of national treatment could be used in regard to mode 3 and mode 4. One delegation emphasized that in the case of post-establishment acquired rights would not be affected; foreign services suppliers already established might not, however, qualify for new benefits which could be granted to national suppliers. For example, only national banks could be offered subsidies in such cases, and market access could be suspended for new foreign banks.

22. Other delegations found these concrete examples very helpful, and called for more such contributions from Members. The Chairman also stressed the need for more concrete examples. He proposed preparing a note taking stock of the views expressed so far in the Working Party on the four questions and identifying appropriate issues for the brainstorming session to be held soon after the summer break. The Working Party agreed. Finally, the Chairman suggested that the Working Party would discuss at the next formal meeting what could be achieved in the period up to the negotiation deadline of 30 June 1999.

ITEM D: DATE OF THE NEXT MEETING

23. It was agreed that the Working Party would meet next on 6 October 1998.

ITEM E: OTHER BUSINESS

24. No matters were raised under other business.

Working Party on GATS Rules

REPORT OF THE MEETING OF 27 APRIL 1998

Note by the Secretariat

1. The sixteenth meeting of the Working Party on GATS Rules was chaired by Mr. Harald Fries of Sweden. The Working Party expressed its warm appreciation of the contribution made by the outgoing Chairperson, Miss Jill Courtney of Australia. The agenda for the meeting was contained in WTO/AIR/815. It consisted of five items: negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and other business.

ITEM A: NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF THE GATS

2. The Chairman recalled previous discussions on the issue of how to proceed with the negotiations on safeguards. It had been suggested that work on the formulation of disciplines, both general and operational, should proceed in parallel with an assessment of the desirability and feasibility of a safeguard mechanism for services. However, some reservations had been expressed about discussion of disciplines at that stage. In the Chairman's view, however, Members' deliberations on feasibility and desirability would have greater content if these were based on some idea of what a possible safeguard mechanism would look like. Moreover, even in addressing the four questions in the Chairperson's note of 3 June 1997, there appeared to be a close link between the twin issues of what possible disciplines could be and whether they would be desirable and feasible. The Chairman, therefore, suggested that it may be appropriate to explore these twin issues in the context of the four questions.

3. Most delegations that spoke supported the Chairman's proposal. Some were, however, keen to ensure adequate emphasis on the issues of desirability and feasibility. One delegation suggested setting time limits for the examination of each of the four questions. This suggestion was endorsed by a number of delegations, though some felt that the questions should not be treated in a compartmentalised manner. The Chairman suggested that the Working Party could aim to have some provisional responses, not necessarily agreed, after the following meeting.

4. In relation to the first question, i.e. on whose behalf emergency safeguard action would be taken, one delegation felt that the "national industry" could be protected; this was believed to be in line with the definition contained in Article XXVIII of the GATS. In addition, it might be necessary to examine the need for appropriate definitions of national and non-national services suppliers. A problem of defining nationality could arise in the case of joint ventures between national and foreign suppliers, and it might be necessary to establish a threshold percentage of equity ownership.

5. Most delegations that spoke expressed reservations about this approach; they preferred not to distinguish between national and foreign-owned suppliers in the context of establishment. Some indicated that such a distinction would be inconsistent with their domestic regimes. One delegation

suggested that it would be helpful to reach an understanding that would exclude the possibility of distinguishing between foreign and domestically owned suppliers with respect to commercial presence. Another delegation indicated that the positive contributions made by established foreign suppliers to domestic employment should be taken into account.

6. To assist the discussion, it was proposed that the Secretariat gather information on how "national or domestic industry" had been defined in various WTO instruments and jurisprudence. The Working Party endorsed that proposal.

7. The Chairman recalled previous discussions on the idea of a "brainstorming" session. He proposed that the session be held soon after the summer break. Working Party Members would meet informally possibly outside of the WTO, as individuals rather than as country representatives, to allow for a frank discussion unencumbered by the need to maintain national positions. In order to give a clear focus to the session, he offered to prepare a list of relevant issues. The Working Party agreed to this proposal.

ITEM B: NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

8. The Chairman recalled that in previous meetings the need had been expressed for detailed discussion on the scope of, and the reason for, subsidies in the services sector. In addition, some delegations had called for more analysis of the impact of subsidies on services trade to identify possible trade distortions. The Chairman had offered to prepare a note addressing the conceptual issues involved, which had been circulated as job no. 1931 on 3 April 1998. The note suggested a step-by-step approach starting with the question of the circumstances in which subsidies were likely to have trade-distortive effects.

9. One delegation indicated that before adopting the path suggested by the note, the Working Party needed to address the fundamental issue of how subsidies should be defined in the area of services; he felt that the goods definition should not be automatically applied. Some shared the view that the goods' definition was far too encompassing; it had already complicated the response to the subsidies questionnaire and hindered the exchange of information required for discussion. Other delegations noted that the only practical way to proceed was using the broad definition applied in the goods area. Some participants supported a discussion on definitional issues, but pointed out that such a discussion could not be conducted without more information on actual subsidy policies. Information submitted by Members would help to determine whether the definition for goods was suitable for services as well. The Chairman suggested that in responding to the questionnaire, Members could use their discretion in the choice of definitions and sectoral coverage. However, some concerns were expressed regarding the implications of such an approach for the comparability of information.

10. Questions were raised concerning the feasibility of countervailing procedures in services areas, given the information and definition problems involved.

11. In summing up, the Chairman observed that delegations wished to continue the discussion of definitional and feasibility issues in parallel with the questions suggested in the Chairman's note of 3 April 1998. He urged Members to make increased efforts to provide responses to the questionnaire.

ITEM C: NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII
 OF THE GATS

12. The Chairman informed delegations that another response to the questionnaire had been received, from Costa Rica (circulated as S/WPGR/W/11/Add.22). He observed that the information gathering exercise had provided a sound basis for discussion of possible multilateral disciplines. In conducting such a discussion, it would be helpful to keep in mind the non-paper submitted by New Zealand (dated 30 September 1997) which examined some of the issues arising from the application of fundamental WTO principles to government procurement in services. He also suggested that the discussion of issues could follow the order contained in the indicative tabulation relating questionnaire responses to possible elements of multilateral disciplines (Chair's note dated 21 February 1997). This would be consistent with suggestions made by delegations that work should focus initially on the definition of government procurement and then move on to the issue of non-discrimination.

13. The paper submitted by the European Communities at the previous meeting identified three relevant questions: what transactions constitute procurement, who is the procuring entity, and what is being procured? As to the first question, some delegations favoured an approach consistent with that in the Agreement on Government Procurement. Others felt that transactions excluded from the relevant definitions in Article I of the GATS provided a clue as to what transactions constituted procurement. One delegation stressed the difficulties faced in her country in defining procurement and, particularly, whether concessions should be included. Other delegations echoed the reservations and indicated that more discussion on the matter was necessary. Regarding the second question, i.e. who is the procuring entity, some stated that the level of public control should be the main consideration and that all levels of government should be included. However, others felt that in the case of enterprises owned by the government, the decisive factor should be whether the entity operated like a private enterprise in a competitive context.

14. The Chairman drew delegations' attention to the fact that the Working Group on Transparency in Government Procurement was also discussing questions of definition and scope of procurement. One delegation emphasized that the Working Party should aim to provide an input to the Working Group on Transparency and suggested that discussions focus on the specificities of government procurement of services. The Chairman indicated that he would continue consultations on how best to coordinate work with other fora dealing with government procurement.

ITEM D: DATE OF THE NEXT MEETING

15. It was agreed that the Working Party would meet next on 24 June 1998.¹

ITEM E: OTHER BUSINESS

16. One delegation requested that meetings dealing with services issues be scheduled closer together to facilitate the participation of experts from capitals. The increasing complexity of the issues involved necessitated more inputs from capitals.

¹ However, in light of the suggestion made under "Other Business", and to avoid a clash with another meeting, the date of the meeting was subsequently changed to 23 June 1998.

Working Party on GATS Rules

REPORT OF THE MEETING OF 13 FEBRUARY 1998

Note by the Secretariat

1) The fifteenth meeting of the Working Party on GATS Rules was chaired by Ms. Jill Courtney of Australia. The agenda for the meeting was contained in WTO/AIR/761. It consisted of five items: negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and other business.

ITEM A: NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF
THE GATS

2) The Chairperson noted that since the mandate for the negotiations on emergency safeguard measures had been extended until the end of June 1999, the Working Party needed to consider how to structure its work in order to use the time available most productively. She recalled that the idea of a work programme had come up in previous discussions and suggested that it might be possible to design such a programme so as to preserve a balance between different views, including those pertaining to the desirability and feasibility of safeguards. The suggestion received support from delegations.

3) One delegation expressed the view that designing a work programme did not necessarily prejudice the outcome of the discussions. In such a work programme other options, like scheduling safeguards as opposed to a safeguard mechanism, should be discussed, although it had been argued that it might not always be possible to foresee all circumstances that warrant a safeguard measure. Several delegations favoured a work programme consisting of further discussion of the questions identified in the informal note dated 3 June 1997, where conceptual issues such as injury, causal link, and likeness could also be taken up. A few delegations said that it may be useful to set time limits for the examination of each question, preserving some flexibility in view of the complexity of the issues. The Chairperson said that she would consult with delegations regarding the structure of the work programme, which would include a brainstorming session clearly focused on specific issues.

4) Hong Kong, China, made a submission on •Emergency Safeguard Measures: A way forward on the possible principles• (circulated as S/WPGR/W/26). In introducing the submission, Hong Kong, China indicated that the paper suggested possible guiding principles for an emergency safeguard mechanism. The principles had been classified into two groups, four that were general and derived from other WTO agreements, and five that were operational. Delegations were generally in agreement with most of the principles but sought clarification with regard to some of them. A few delegations said that they had no objections to discussing broad principles, but emphasized also the need to address the relevant conceptual and practical issues. One delegation noted that the principles needed to address issues raised by the four modes of supply. Several delegations expressed the view that the operational principles could be developed further. One delegation suggested the possibility of establishing a link between the duration of safeguard measures and the period of time that the modification of a schedule might take. The need for a mechanism to monitor safeguard measures was also raised. A few delegations said that they would submit comments in writing.

5) In terms of areas of parallel work, one delegation suggested that the discussions of the feasibility of such a mechanism could be advanced by further considering concepts such as unforeseen circumstances, like products, assessment of injury, and the determination of causality. It was also suggested that some idea of the desirability of a safeguard provision could be obtained if Members examined their schedules of specific commitments to identify situations where liberalization had been stalled by the absence of a safeguard provision. A few delegations expressed reservations about the usefulness of the latter approach.

ITEM B: NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF THE GATS

6) The Chairperson noted that the information exchange mandated by Article XV had not advanced significantly, and urged delegations to provide responses soon since such information would put delegations in a better position to proceed with substantive discussion. She recalled that at the previous meeting, the need to continue the technical analysis of subsidies related to services was expressed. The Secretariat had been requested to collect information on the subject from the WTO Trade Policy Reviews and other sources. A note containing such information had been circulated as document S/WPGR/W/25.

7) Most delegations that spoke regarded the note as useful, despite its necessarily partial coverage. The preliminary identification of types of subsidies used in different sectors in some countries was regarded as helpful; the note also illustrated the difficulty of identifying the final beneficiaries of subsidies in services. One delegation was of the view that Members needed to identify the objective of the current negotiations before trying to advance any discussion on disciplines. Another delegation said that due account should be taken of the developmental role subsidies had played in certain countries, particularly in areas which the private sector did not find profitable.

8) A number of delegations indicated that they had difficulty in responding to the questionnaire because its definition of subsidies was too wide. The need was expressed for detailed discussion on the scope of, and the reasons for, government involvement in the services sector. It was also necessary to carry out more analysis of the impact of subsidies on services trade, with a view to identifying trade-distortive subsidies on which a working definition should focus. One delegation suggested that Members should come up with their own definition of subsidies for the purpose of the questionnaire which, in turn, would assist the Working Group in developing a working definition more focused on trade distortion. The Chairperson offered to prepare a note identifying questions to assist Members in addressing the conceptual issues involved. The Working Group agreed to this proposal.

ITEM C: NEGOTIATIONS ON GOVERNMENT PROCUREMENT
UNDER ARTICLE XIII OF THE GATS

9) The Chairperson noted that the information gathering exercise on national procurement regimes had provided the basis for a discussion of possible multilateral disciplines which had already begun. She recalled that some delegations had suggested that work should focus initially on the definition of government procurement and the principle of non-discrimination. It was also suggested that the Working Party should consider how best to coordinate work between different fora dealing with Government Procurement in the WTO to avoid duplication of work or fragmentation of resources.

10) The European Communities made a written contribution dealing with definitional issues relevant to services procurement. In introducing the submission, the representative of the European Communities indicated that the purpose was to assist the discussion on a working definition of government procurement by addressing three questions: what transactions constitute procurement, who is the procuring entity, and what is being procured? Delegations welcomed the submission. Several reiterated the need for a working definition in view of the multiplicity of definitions of government procurement that had been identified in the replies to the questionnaire.

11) One delegation suggested that priority should be given to areas where duplication with the work of the Working Group on Transparency in Government Procurement was least likely, namely, the issue of non-discrimination and, particularly, the national treatment principle. One delegation noted that trade rules on government procurement needed to go beyond national treatment and ensure transparency. Some delegations supported the view that the work of the Working Party should add value to the rules that already existed and those that were being developed in other fora. The Chairperson indicated that she would continue consultations on the procedural issues of coordination of work, and agreed with the view that work in other fora should be beneficial for, rather than a constraint on, progress of negotiations within the Working Party.

ITEM D: DATE OF THE NEXT MEETING

- 12) It was agreed that the Working Party would meet next on Monday, 27 April 1998.

ITEM E: OTHER BUSINESS

- 13) No matters were raised under other business.

Working Party on GATS Rules

REPORT OF THE MEETING OF 26 NOVEMBER 1997

Note by the Secretariat

1) The fourteenth meeting of the Working Party on GATS Rules was chaired by Ms. Jill Courtney of Australia. The agenda for the meeting was contained in WTO/AIR/719. It consisted of five items: negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and other business, under which it was agreed to consider the finalisation of the Report of the Working Party to the Council for Trade in Services.

ITEM A: NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF GATS

2) The Chairperson informed delegations that on the basis of the discussions of the Working Party, she had proposed to the Council for Trade in Services to adopt the Decision extending the mandate for the negotiations on emergency safeguard measures under Article X of the GATS until the end of June 1999. One delegation observed that the Decision would ensure a continued mandate for negotiations under Article X without modifying Article X in any other way. In particular, paragraph 2 of Article X would still be relevant only for the modification or withdrawal of commitments within three years of their coming into force. In all such cases, paragraphs 2 to 5 of Article XXI would continue to apply after the notification procedure. Another delegation, speaking on behalf of several delegations, noted that procedures for modification of schedules under Article XXI had not yet been agreed, and that negotiations on such procedures should proceed without prejudice to negotiations under Article X.

3) One delegation suggested that it would be useful to agree on a work programme in order to use the time available most productively. One possibility was that the first six months of next year be devoted to negotiating broad-based legally binding disciplines, such as those suggested in its earlier submission (S/WPGR/W/18) and the rest of the time to more detailed discussion. It offered to submit a paper on the subject. Several delegations supported the idea, but two delegations were concerned that agreeing on such a work programme may prejudice the question of whether there should be a safeguard provision in the GATS. Some delegations suggested that the work programme could be designed to preserve a balance between different views, and a consideration of the desirability and feasibility of safeguards could proceed in parallel with a discussion of other issues. The Chairperson said that she would consult with delegations on this subject, as well as the possibility of holding a •brainstorming• session on the subject of safeguards some time next year.

ITEM B:NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF GATS

4) The Chairperson noted that so far only two responses to the questionnaire on subsidies had been received, even though 15 May 1997 had been established as the deadline for submission of responses. She urged delegations to make an effort to provide responses soon since this information would put delegations in a much better position to proceed with substantive discussions. One delegation emphasized the importance of work in this area, and suggested that the analysis of subsidies related to trade in services could continue while more responses to the questionnaire were awaited. To this end, the Secretariat was asked to collect information on the subject from the WTO trade policy reviews and other sources.

ITEM C:NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF GATS

5) The Chairperson informed delegations that at an informal meeting on procurement held on 6 November 1997, two sorts of issues had been raised. On substance, a few delegations had suggested that work should focus initially on the definition of government procurement and the principle of non-discrimination. On procedure, several delegations had emphasized the need to address the problem of duplication of work between different fora dealing with government procurement in the WTO. One delegation said that there was clearly need for discussion in the Working Party on the elements of government procurement specifically related to trade in services, such as the role of concessions on public utilities. It intended to make a written submission dealing with definitional issues and illustrating the particularities of services procurement, in order to demonstrate the need to make progress in this area within the Working Party. Another delegation said that even though previously it had been less than enthusiastic about the prospect of such work, it now fully supported the idea. It had come to the view that there was need for work to improve the understanding of what disciplines could apply to services procurement and that the goal should be to develop such disciplines. A third delegation also expressed an interest in pursuing such work within the Working Party and welcomed the positive indications of interest from other delegations.

ITEM D:DATE OF THE NEXT MEETING

6) It was agreed that the Working Party would meet next on Friday, 13 February 1997.

ITEM E:OTHER BUSINESS

7) The Working Party adopted, with minor modifications, the annual Report to the Council for Trade in Services.

WORLD TRADE ORGANIZATION

Working Party on GATS Rules

REPORT OF THE MEETING OF 1 OCTOBER 1997

Note by the Secretariat

1) The thirteenth meeting of the Working Party on GATS Rules was chaired by Ms. Jill Courtney of Australia. The agenda for the meeting was contained in WTO/AIR/668. It consisted of five items: negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and other business.

ITEM A: NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF GATS

2) The Chairperson noted that since the previous meeting, one more submission on the subject of emergency safeguard measures had been received from Peru (S/WPGR/W/23), as well as a response to the questionnaire from Cuba (S/WPGR/W/15/Add.7). The report of the last meeting (S/WPGR/M/12) had not mentioned the communication received from ASEAN on the subject of emergency safeguard measures (S/WPGR/W/22). The Chairperson recalled that the Secretariat had been requested to prepare a note on •Examples of situations in which emergency safeguards may be taken•, which had been distributed as document S/WPGR/W/24, and invited comments from Members.

3) The Secretariat paper was seen as a useful contribution to the current discussions, though two delegations felt that it had perhaps gone beyond what had originally been requested. Some delegations noted that the paper was concerned with only one of the four key questions identified by the Chairperson in the note of 3 June 1997, and a consideration of the other questions remained important. In particular, how injury would be determined, and how a causal link would be established between injury and increased services imports given the paucity of data, were identified by some delegations as key questions.

4) A number of delegations emphasized the importance of analysing the circumstances in which safeguard action may be taken. Some delegations observed that the basic role of safeguard action should be to provide temporary relief in order to make possible gradual rather than abrupt adjustment, and thus help to reduce the social costs of adjustment. A few delegations expressed doubts about the usefulness of distinguishing between injury-causing developments which were primarily domestic in origin and those which were primarily foreign in origin (discussed in Section II of S/WPGR/W/24). An increase in services trade could occur through the combined effects of domestic and foreign developments, and to distinguish between the two would be difficult. The focus, several

delegations felt, should be on whether injury had been caused by increased imports, and the underlying reasons should not be relevant to determine the permissibility of safeguards. Many delegations were of the view that •unfair• trading developments should not be the basis for safeguard action since there were other GATS provisions to deal with such situations. However, some delegations felt that the door should not be closed to the possibility of safeguard action to deal with injury caused by unfair trade practices.

5) Addressing Section III of S/WPGR/W/24, the need to limit safeguard action to deal only with unforeseen circumstances was emphasized by numerous delegations. However, some expressed doubts about the feasibility of developing objective criteria to determine whether circumstances were indeed unforeseen.

6) With regard to Section IV of S/WPGR/W/24, some delegations stated that it was not desirable to impose additional conditions for safeguard action - beyond demonstrating that injury was caused by increased imports. One delegation felt that the introduction of factors like the ones mentioned in paragraph 16 of S/WPGR/W/24 would make the mechanism too complicated to implement. A few delegations also doubted the desirability of creating a presumption in favour of economically superior instruments of safeguard action, such as subsidies. One delegation identified the reasons for its opposition to the idea. First, a Member might need to use measures with a real impact on imports over a short period of time, and so the quantitative restrictions listed in Article XVI may be more efficient. Secondly, the implementation of a subsidy as a safeguard could violate national treatment, which was not feasible in certain countries due to the nature of legal regimes. A few delegations felt that it would be desirable to include a public interest clause in an emergency safeguard mechanism. Such an inclusion would ensure that authorities took into account not only the benefits to an industry but also the costs to other sectors from safeguard action. One delegation expressed the view that if there was a need for a safeguard action at all, it should be related to national welfare objectives rather than trade policy-related objectives, since the latter were covered by GATS provisions and/or scheduled reservations.

7) Several delegations felt that the issue of how far policy objectives should be built *ex ante* into the schedules, and how much scope there should be for *ex post* safeguard action needed to be carefully considered (discussed in Section V of S/WPGR/W/24). Some delegations noted that measures listed in a schedule, to protect or to allow time for gradual adjustment, would be safeguards, but not emergency safeguards. An emergency safeguard would be to cope with an emergency situation which was unforeseen. The delegation of Mexico said that the safeguard contained in NAFTA with respect to financial services, referred to in Section V, was due to certain Mexican legislation, and did not constitute a safeguard measure to cope with an unforeseen or emergency situation. The very nature of an emergency situation, due to unforeseen circumstances, made it difficult for those situations to be provided for in legislation and to be within the control of the government. One delegation suggested that it was important to consider how far a Member could anticipate and specify the circumstances in which it would invoke a safeguard measure. It felt that the notion of scheduled safeguards, as opposed to a more general provision, should be examined on a more exhaustive basis while considering the desirability and feasibility of a safeguard provision in GATS. However, some delegations felt that scheduling safeguards in advance did not seem very useful. One delegation noted that not every injury situation and relevant remedy instrument could be fully examined in advance, and so the process of negotiating scheduled commitments would become too complicated. Another delegation said that Members should be cautious about the idea of scheduled safeguards since a situation could be created in which the possibility to respond to unforeseen circumstances, which were *a priori* the same for everybody, would be available to certain countries and not to others.

8) Several delegations addressed the modal issues raised by safeguard action. One delegation noted that in the context of mode 1, it would be difficult to restrict transactions at the border, especially electronic transactions, and that safeguards would rarely be needed for mode 2 as consumption did not occur in the country wishing to apply the safeguard. Another delegation was of the view that increased •consumption• of foreign services may be a more appropriate concept than increased •imports• since it was not clear as to how the latter notion could be applied to modes 2, 3 and 4. Several delegations expressed doubts about the desirability of application of safeguards post-establishment but some felt that, even though acquired rights should be preserved, they could be suspended during an emergency. One delegation observed that the stage at which a person was considered a foreign services supplier was not always clear. Frequently foreign service suppliers participated in joint ventures where their equity might be in the minority. Moreover, it would create an unpredictable element in the GATS if the rights that foreign suppliers had as corporate citizens of the country in which they were operating could be lessened.

9) The delegation of Thailand informed the Working Party that his delegation had organized a seminar on •Emergency Safeguard Measures in GATS•. A brief outline of the content of the seminar was provided by the Secretariat.

10) The Chairperson said that she would hold further informal meetings to continue the discussion based on the Secretariat's paper, taking into account the comments already made, and to address the other questions in the Chairperson's note of 3 June 1997. She also noted that her consultations had revealed that Members agreed, in principle, that it would not be possible to conclude the negotiations on emergency safeguard measures before the end-of-the-year deadline specified in Article X. She recalled that at the previous informal meeting, Members had agreed to consider whether a deadline of 30 June 1999 would be acceptable. She proposed that the Working Party take a decision in principle on extending negotiations until 30 June 1999 under the existing terms stipulated in Article X of the GATS. On this basis, the Secretariat would prepare a draft decision to be circulated to Members for comments within the next two weeks. Members agreed to the Chairperson's proposal.

11) One delegation sought clarification on certain aspects of the Secretariat's note of 1 October 1997 on •Extending the negotiations on safeguards•. Some Members indicated that they would need to reflect on the modalities for the extension.

ITEM B: NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF GATS

12) The Chairperson indicated that only two responses to the questionnaire on subsidies had so far been received, from Norway and New Zealand, circulated as documents S/WPGR/W/16/Add. 1 and 2, respectively. She urged delegations to make an effort to provide responses soon and stressed the importance of such information for substantive discussions on the subject.

ITEM C: NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF GATS

13) The Chairperson indicated that two more responses to the questionnaire had been received since the previous meeting, from Peru (S/WPGR/W/11/Add.20) and Turkey (S/WPGR/W/11/Add.21). She observed that the synthesis prepared by the Secretariat of the first 19 responses and the more recent responses provided a large corpus of information on national regimes. She also drew Member's attention to a non-paper submitted by New Zealand on the subject of government procurement.

14) In introducing the non-paper, the representative of New Zealand said that its purpose was to examine issues and questions arising from the application of fundamental WTO principles to government procurement in services and explore possible areas of common understanding on such principles. The non-paper did not attempt to examine the question of the possible form that the outcome of negotiations might take nor did it seek to comment on any possible relationship between the negotiations and other work in the government procurement field.

15) Norway provided some clarification regarding its procurement of construction services, which was referred to in the synthesis of different procurement regimes (S/WPGR/W/20), under the heading Laws and Regulations in Force. According to the document, procurement above specified thresholds took place through a central specialized agency. In Norway, state construction works above the WTO GPA thresholds were usually undertaken by either the Directorate of Public Construction and Property or by the Norwegian Defense Construction Service, the latter being responsible for defense entities. All Norwegian municipalities and counties, which were also covered by the WTO GPA, were however responsible for their own construction services and organised these independently and on an individual basis.

16) One delegation suggested that substantive discussion could begin by looking at the question of how government procurement should be defined. As a first step, Members needed to examine what services would be covered by any provisions on government procurement that resulted from the current negotiations. The next step would be to examine what entities would be covered, an issue for which Article I of the GATS would be relevant. Another delegation suggested that it would be appropriate to address the principle of non-discrimination, and emphasized the importance of clarifying how the work of the Working Party would relate to ongoing work on procurement in other WTO fora.

17) The Chairperson noted that more discussion was necessary in respect of definitions and/or the principle of non-discrimination. She suggested holding an informal meeting on 6 November 1997 to discuss issues related both to government procurement and safeguards. Members agreed with the Chairperson's suggestion.

ITEM D: DATE OF THE NEXT MEETING

18) It was agreed that the Working Party would meet next on Wednesday, 26 November 1997.

ITEM E: OTHER BUSINESS

19) No matters were raised under other business.

Working Party on GATS Rules

REPORT OF THE MEETING OF 23 JULY 1997

Note by the Secretariat

1) The twelfth meeting of the Working Party on GATS Rules was chaired by Ms Jill Courtney of Australia. The agenda was contained in WTO/AIR/634 and WTO/AIR/634/Add.1. The agenda consisted of six items: requests for observer status; negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on Government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and other business.

ITEM A: REQUESTS FOR OBSERVER STATUS

2) Members agreed that the IMF, OECD, United Nations, UNCTAD and World Bank, who had previously been invited to meetings on an ad hoc basis, would be granted observer status on a permanent basis.

ITEM B: NEGOTIATIONS ON SAFEGUARDS UNDER ARTICLE X OF GATS

3) The Chairperson noted that since the previous meeting, a submission on the subject of emergency safeguard measures had been received from Singapore (S/WPGR/W/19). The substantive discussion in the area of safeguards focused on the four questions identified by the Chairperson in an informal note (dated 3 June 1997):

1. On whose behalf would emergency safeguard action be taken?
2. In what circumstances would emergency safeguard action be taken and what would be the purpose of such action?
3. What approach should be adopted in respect of injury/adverse effects, and the relevant causal link between injury/adverse effects and commitments under the GATS?
4. What measures would be taken under the emergency safeguard mechanism? Are some measures deemed more suitable than others?

4) Delegations agreed that these four questions captured the key issues which needed to be addressed. Several delegations said that question 2 was the one which was most immediately relevant and should therefore be given precedence in discussions.

5) With regard to question 1, many delegations felt that safeguard actions should be taken on behalf of domestic industry, but there was some difference of opinion with regard

to how •domestic• should be defined. Several delegations felt that the definition contained in Article XIX of GATT 1994 and the Agreement on Safeguards would be adequate, and no distinction needed to be made between nationally-owned and foreign-owned domestic enterprises. However, a few delegations suggested that the latter distinction may be relevant in defining the potential beneficiaries of safeguard actions. Some delegations also pointed to the difficulty in defining •like and directly competitive• services and service suppliers, and the limitations of the Central Product Classification in this respect. One delegation said that safeguard actions should only be taken on behalf of an industry which already existed, while another noted that it must address the difficulties of the whole industry rather than those faced by only a few firms.

6) In addressing question 2, most delegations were of the view that safeguard actions should be taken to remedy or prevent injury to domestic industry caused by an increase in imports resulting from unforeseen developments and GATS commitments. Some delegations, however, expressed doubts over whether the notion of •unforeseen developments• could be made operational. One delegation suggested that it may be necessary to develop certain tests to determine whether a particular development was indeed unforeseen, for instance normal increases in trade could be exempt, a certain lapse of time could be required after entry into force of the commitment, and an appropriate level of overall concessions could be required to be maintained. Another delegation said, however, that the application of safeguard measures should not necessarily depend on a sectoral liberalization commitment.

7) All delegations who spoke agreed that safeguard action must be temporary. It was also generally felt that an emergency safeguard mechanism should deal with situations other than those covered by the existing exception provisions and Article XXI. Some delegations pointed to the need to take a wider view of economic welfare than injury to an industry as a basis for safeguard action and to take into account the economic costs of safeguard action in key infrastructural services like transportation, telecommunications and financial services. One delegation said that an emergency safeguard mechanism in services should be more than a mere extrapolation of the mechanism in goods, and should cover new areas like protection of consumers and the infrastructure, as well as addressing problems arising from dominant positions in markets. Another delegation said that safeguard measures should facilitate adjustment and not reflect long-term plans for industrial development.

8) In the context of question 3, several delegations pointed to the significant empirical difficulties that would arise in establishing injury, and the relevant causal link between injury and increased imports in services industries. But some delegations were of the view that these difficulties should not be a barrier to creative engagement in the issues under discussion. It was noted that the absence of statistics was not a difficulty faced only in the context of an emergency safeguard mechanisms, but could also arise in the context of other GATS articles, such as Article XXI dealing with modification of commitments. The need was expressed to establish clear criteria for the determination of injury, such as the levels of sales, earnings and employment.

9) While some delegations felt that question 4 was best dealt with later, others felt that it was crucially linked to other questions. For instance, the issue of who could be the beneficiaries of, and the circumstances which would prompt, safeguard action may not be separable from the type of measures that could be taken. Several delegations raised the issue of modal coverage of safeguard measures, and expressed concern about the possibility of measures being taken against locally-established foreign firms which could lead to disinvestment. Many delegations emphasized that any safeguard action must be taken on a non-discriminatory basis. Some said that safeguard measures should not be limited to

restrictions on market access but could also involve temporary suspension of national treatment. However, some delegations expressed doubts about the desirability of the latter possibility.

10) It was widely felt that future discussions, particularly of question 2, should be based on concrete examples, which the Secretariat was requested to provide. The Chair, in her summing up, identified at least three other possible sources for illustrative examples. First, certain Members' internal legislation may contain safeguard-type provisions. Secondly, Members may wish to examine their own schedules of specific commitments to indicate the type of situations where liberalization had been stalled by the absence of a safeguard provision. Finally, other international organizations like UNCTAD and the OECD may be able to provide useful examples based on their experience and research.

11) Several delegations were of the view that a seminar or brainstorming session should be held on the subject of safeguards. This could involve interested delegations, experts from the Secretariat and from other international organizations, as well as academics. The precise format and the timing of such a session needed further consideration.

12) Some delegations broached the question of whether it would be necessary to extend the deadline for the current negotiations. Others felt that it may be somewhat premature to consider an extension. One delegation said that, in any case, there was no question of the end-of-the-year deadline necessarily implying an end to debate on the question of safeguards. It was agreed that the Chair would begin informal consultations on the subject of an extension.

ITEM C: NEGOTIATIONS ON SUBSIDIES UNDER ARTICLE XV OF GATS

13) Two responses to the questionnaire on subsidies had so far been received, from Norway and New Zealand, circulated as documents S/WPGR/W/16/Add.1 and Add.2, respectively. Introducing its response, the Norwegian delegation noted that its subsidies regime did not differ between goods and services, and all schemes covered both, with the exception of schemes for the maritime transport sector. The response covered ongoing programmes, not one-shot subsidies. Norway had followed the format of the notifications for the Agreement on Subsidies and Countervailing Measures in its response to the subsidies questionnaire to reduce the administrative burden. Introducing its response, New Zealand said that it had focused on subsidies which had a bearing on trade in services. The response also included certain questions which might need to be addressed. One delegation noted that it was encountering difficulties in responding to the questionnaire since there was widespread subsidization of certain social services like education, public hospitals and social welfare, and taking account of all these subsidies would be a massive exercise.

14) The Chairperson urged other delegations to make an effort to provide their responses soon.

ITEM D: NEGOTIATIONS ON GOVERNMENT PROCUREMENT UNDER ARTICLE XIII OF GATS

15) In the area of government procurement, discussion focused on the synthesis the Secretariat had prepared of the responses to the questionnaire on national regimes (issued as document S/WPGR/W/20). The Secretariat took note of certain modifications in the synthesis suggested by some delegations to more accurately represent their current procurement regimes. Several delegations noted that the synthesis revealed considerable

similarity between national regimes as well as some diversity. Some delegations felt that the information gathering exercise had provided an adequate basis for serious negotiations on disciplines. One delegation said that it might be best to begin with the definition of government procurement, since the Working Group on Transparency was addressing the issue of transparency. Another delegation suggested that the principle of non-discrimination could also be considered at an early stage. One delegation emphasized the need to take into account the decentralized nature of most services procurement in devising disciplines, and indicated that it was in the process of preparing a paper which it hoped would help to advance discussion. The need to coordinate work with the Working Group on Transparency was emphasized by several delegations.

ITEM E: DATE OF THE NEXT MEETING

16) It was agreed that the Working party would meet next on Wednesday, 1 October 1997.

ITEM F: OTHER BUSINESS

17) No matters were raised under other business.

Working Party on GATS Rules

REPORT OF THE MEETING OF 22 MAY 1997

Note by the Secretariat

1) The eleventh meeting of the Working Party on GATS Rules was chaired by Ms. Jill Courtney of Australia. The agenda consisted of five items: negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and other business.

Negotiations on Safeguards under Article X of GATS

2) The Chairperson indicated that since the previous meeting, several delegations had provided useful responses to the written questions relating to an emergency safeguard mechanism in GATS, circulated as document (S/WPGR/W/15). In addition to Thailand, whose response had come in before the previous meeting and had been circulated as S/WPGR/W/15/Add.1, the Working Party had received responses from India (Add.2), Poland (Add.3), European Communities and their Member States (Add.4), Egypt (Add.5), and Mexico (Add.6). A submission on the subject had also been received from Hong Kong (S/WPGR/W/18).

3) Introducing its response to the questionnaire, the delegation of Egypt stated that the responses should be seen as preliminary. She said that a positive view should be taken of an emergency safeguard mechanism (ESM) since it would serve to encourage Members to make substantive liberalization commitments. Members should not rule out the possibility of an ESM in the GATS with wider objectives than those foreseen in Article XIX of GATT. Furthermore, Articles XII, XIV, and XXI of the GATS were designed to address situations very different from those in which recourse would be sought to an ESM under Article X. As to whether a distinction should be made between establishment rights *per se* and post-establishment operations in relation to possible safeguard measures under modes 3 and 4, the delegation did not see that any purpose would be served by dis-establishment, withdrawal of licenses of operating service suppliers or digressing from a Member's previous commitments. As to the definition of "domestic industry", at this stage this delegation was of the view that such a definition should

encompass established suppliers of foreign origin, including any joint ventures, as well as national suppliers.

4) The representative of Hong Kong said that the purpose of their submission was to help advance the discussion on an ESM in a focused manner. The paper suggested an approach under which the Working Party could conduct a balanced examination of a set of key issues in order to assess whether having an ESM would be appropriate. These issues related to: dealing with the four modes of supply in considering how to establish an ESM; the difficulty in demonstrating serious injury and in establishing causality; distinguishing between domestic service suppliers and national service suppliers.

5) The representative of Mexico indicated that in preparing answers to the questionnaire, the aim had been to contribute to the analysis of the possibility of having an ESM in the services sector; therefore the information contained in that document should not be interpreted as Mexico's position on the subject. She observed that in services, the different forms of access to the market were based on laws and regulations for each specific sector; it would, therefore, be important to determine whether it was appropriate to modify these laws and regulations when introducing safeguards in emergency situations. She felt that the Working Party should work on a definition of "injury", and address the difficulties presented by the lack of statistics in services.

6) In introducing its submission, the representative of India said that a safeguard measure should address an unforeseen situation and focus on specific commitments in the schedule of the Member invoking the safeguard mechanism. The measure should apply on an MFN basis, for a limited period of time, and subject to other conditions to be drawn up in the course of the discussion.

7) In Poland's view there was a need to develop an ESM under GATS. This mechanism should be intended to deal with a threat to a domestic industry arising from increased imports. It would support liberalization of services trade and help achieve higher level of commitments. The economic objective of a safeguard action should be to protect domestic production consisting of national service suppliers. The distinction between foreign and national service suppliers should be based on the definitions contained in Article XXVIII of GATS. He also said that the distinction between establishment rights *per se* and post-establishment operations should be relevant in relation to possible safeguard measures under modes 3 and 4. A Member could use the mechanism only in respect to new entrants. Safeguard actions should be applied in principle on a non-discriminatory basis except for the cases provided for in Article V of GATS. The criteria in the existing Safeguards Agreement defining critical circumstances, duration, and procedure of application could in principle be adapted to the services context.

8) The representative of the European Communities and their Member States indicated that in their view the questions of desirability and feasibility of a ESM under GATS were still unclear. Further discussion should be conducted on the question of desirability, focusing on whether a safeguard mechanism could indeed serve as a device for progressive liberalization. As to the feasibility question, she felt that the Working Party needed to pursue further discussions on the disciplines that

would be attached to a possible safeguard clause. Invoking such a clause would only be justified when a Member faced unforeseen circumstances in an area where that Member had made specific commitments. Bearing in mind that Members also had obligations under the GATS with respect to services areas where specific commitments had not been taken, it was necessary to examine whether the invocation of a safeguard would be limited to specific commitments. In light of the fact that there was not a definition or a clear understanding of what was meant by •unforeseen circumstances•, it would be useful to determine to what extent Members wanted to pursue that notion and whether they wanted to achieve a certain degree of common understanding on it. Since she was sceptical about the need for a safeguard clause because it could be used as an instrument to close the market rather than to open it, it would be useful to identify what Members could conceive as •unforeseen circumstances•. She stressed the importance of defining •injury• and, in this respect, the notion of •industry•. These questions should be addressed taking into account the different modes of supply, especially mode 3. She shared the view that for these distinctions the Working Party should take into account the definitions contained in GATS. As to the issue of how to measure imports and, in this respect, the difficulties presented by the lack of statistics, she considered that these arguments could not be decisive against the feasibility of a safeguard clause since statistics were required for other purposes within the context of GATS. Lack of data, nevertheless, raised questions about the availability of statistics and whether the information provided by those statistics was sufficient for the determination of injury. She suggested that the Working Party pursue further discussion on the notions of •increased imports• and •causal link•.

9) The representative of the United States observed that as a working proposition the notion of •injury• was based on very specific criteria that relied on sophisticated data, within the context of existing GATT Agreements. This was because countries conceived injury in different ways which made it necessary to develop specific disciplines for its determination. He said that in the absence of data in the services area, it would be preferable to use the term •adverse effects• instead of •injury• because Members could not expect, notwithstanding any effort undertaken to improve statistics, to have the kind of data in services that would enable the notion of injury to be used in a predictable and transparent manner. He raised the question of whether the Safeguard mechanism under GATS should be a generic one applied to any sector as it was under Article XIX of GATT 1994, or whether it should be designed on the basis of scheduled commitments that would include safeguard-type provisions to address specific circumstances. He expressed reservations about the possibility of justifying safeguards on the basis of unanticipated circumstances. In services, Members did not bind only a tariff, but a set of regulations that had an objective. Members should, therefore, be able to inscribe a safeguard in their schedule to address situations in which they might take a temporary measure.

10) The Chairperson summarized the informal discussion conducted on the 20 May 1997. She observed that the Working Party was making progress on this issue in terms of the range of views and ideas that had been expressed. She said that based on the previous informal consultations and the formal discussion now being conducted, Members might wish to focus on four questions: (a) On whose behalf would emergency safeguard action be taken? (b) In what circumstances would

emergency safeguard action be taken and what would be the purpose of such action? (c) How would injury be determined and how would a causal link be established with increased imports?, and (d) What measures would be taken under the emergency safeguard mechanism? Are some measures deemed more suitable than others?

11) The representative of Morocco indicated that he would like to include in the discussion whether an emergency safeguard measure would be feasible in situations where a license was required in a given sector, and also to what extent a safeguard action could be applicable to a specific sector, for instance telecommunications. The representative of Hong Kong suggested that for the time being issues of procedure could be set aside and the discussion should focus on how the principles to be attached to a possible ESM would work in practice. The Chairperson proposed circulating a non-paper containing the list of the questions referred to previously, as a basis to structure the informal consultations. The Working Party accepted this proposal.

Negotiations on subsidies under Article XV of the GATS

12) The Chairperson recalled that the Working Party had established 15 May 1997 as the deadline for submissions of responses to the subsidy questionnaire (S/WPGR/W/16). She noted that no responses had been received yet. She urged delegations to make their best effort to provide responses as soon as possible because that information would help in the substantive discussion. She stressed that the Working Party should not let any substantive discussion of the subject depend entirely on the information gathering exercise.

Negotiations on Government Procurement under Article XIII of GATS.

13) The Chairperson indicated that since the previous meeting, responses to the procurement questionnaire had been received from Mexico (S/WPGR/W/11/Add.18) and Argentina (S/WPGR/W/11/Add.19). This brought the total number of responses received to 19, including the ones that had been received previously from Norway, Switzerland, Brazil, New Zealand, Japan, United States, Canada, Colombia, Hong Kong, European Communities, Australia, Poland, Korea, India, Chile, Singapore and Hungary. She recalled that at the previous meeting Members had requested the Secretariat to obtain information on government procurement regimes gathered by APEC and FTAA. She indicated that this information had already been requested but it would probably take some time before it could be provided. She suggested that meanwhile those Members of the Working Party who were also Members of APEC and/or FTAA may choose to make available to the Working Party their submissions made in those groups. She recalled that at the previous meeting, New Zealand had shared with Members the preliminary results of their analysis of the responses to the questionnaire, and some other delegations had planned to undertake their own analysis.

14) The representative of Canada stated that the Government Procurement Expert Group, within the context of APEC, had decided to provide an input into

the work of the Working Group on Transparency in Government Procurement. That contribution, which would be in the form of the surveys and the Chairperson's summary of survey conclusions, would be forthcoming over the summer period. He said that his delegation was willing to submit individually its surveys prepared for the APEC and FTAA processes.

15) The representative of New Zealand stated that her delegation had continued with the analysis of the responses examining the third area identified in the Chairman's note of 21 February 1997, namely questions 5, 7 and 8 relating to disciplines on procurement procedures. She noted that responses suggested that government procurement in services is largely decentralised, and that procedures followed in different Members regarding publication, tender processing and post-award information, were quite similar. She said that these common threads could provide a useful basis for further analysis and discussion in the Working Party. A formal submission of the results was still being considered by her authorities.

16) The representative of Argentina indicated that they had also initiated an analysis, so far covering parts 1 and 2, relating to Scope and Coverage and Basic Disciplines, i.e. national treatment and MFN treatment. In his view, it would be important to consider whether it would be desirable to have a definition of government procurement when drawing up future disciplines or whether it was sufficient to have a definition like the one in paragraph 1 of Article III of GATS. As to coverage, he said that most replies refer to services in general, without clarifying the existence of possible exceptions relating to different sectors, which in his view did not necessarily mean that all services sectors were covered by the relevant legislation. Generally countries applied the same norms to government procurement of goods and services, while some did have distinctions. In his view, in cases where different modalities were used, the Working Party should analyze how to determine the application of the standards in mixed contracting, which included goods and services. Another issue to be reflected upon would be the degree of centralization and decentralization of both standards and operational aspects. Other aspects that deserved attention were MFN treatment, which did not seem to characterise the relations between Members in this area, and the granting of preferences to national suppliers of services, which seemed to be a common practice.

17) Noting that the delegation of New Zealand was considering the circulation to Members of the results of its examination of the responses to the questionnaire, the Chairperson encouraged Argentina to consider doing the same. She invited delegations to comment on the procedural aspects of the work in this area.

18) The representative of Norway stressed that her delegation would like to see the Working Party advancing its discussion in this area. To this effect she suggested that the Secretariat prepare a paper analysing the responses to the questionnaire that the Working Party had received so far. Based on such a paper, the Working Party could examine the similarities and differences of the various regimes more deeply. Subsequently, Members should start work on the basis of the Chairperson's note outlining the main elements to be include in an agreement. Several delegations expressed support for this proposal. Australia indicated that perhaps the Secretariat should start the analysis of parts 1 and 2, namely Scope and

Coverage and Basic Disciplines, i.e. national treatment and MFN treatment. Argentina, in supporting Australia's proposal, said that bearing in mind the fact that the third item of the note related to transparency and to avoid duplication of work, it would perhaps be useful to initiate the analysis with parts 1 and 2 only. Several delegations supported this proposal but emphasized the importance of transparency in this area and stressed the need to avoid setting any explicit or implicit priorities.

19) In summarizing the discussion, the Chairperson said that there was a general consensus that the Secretariat should be asked to prepare an analysis of the responses to the questionnaire. She indicated that in suggesting that the analysis begin with parts 1 and 2 of the Chair's note, there was no intention of setting priorities among the possible elements of multilateral disciplines but to follow a sequence in the light of what could be achieved before the following meeting.

Date of the next meeting of the Working Party.

20) The Chairperson said that a tentative date for the following meeting would be 23 July 1997. This date would be confirmed after consulting with the other bodies related to government procurement.

Working Party on GATS Rules

REPORT OF THE MEETING OF 13 MARCH 1997

Note by the Secretariat

1) The tenth meeting of the Working Party on GATS Rules was chaired by Ms. Jill Courtney of Australia. The agenda consisted of five items: negotiations on safeguards under Article X of the GATS; negotiations on Government procurement under Article XIII of the GATS; negotiations on subsidies under Article XV of the GATS; date of the next meeting of the Working Party; and Other business.

Negotiations on Safeguards under Article X of GATS

2) The Chairperson recalled that the Working Party had agreed at its eighth meeting last October that delegations would try to provide answers on a voluntary basis to a series of written questions which had been circulated in a working document S/WPGR/W/15. She also recalled that at the previous meeting several delegations had indicated their intention to submit written answers to the questionnaire. She indicated that written answers had been submitted only by the delegation of Thailand (S/WPGR/W/15/Add.1). She stressed the need for more written submissions and more general views on safeguards from Members if the Working Party was to meet the deadline of the end of 1997. Several delegations indicated that answers to the questionnaire were under preparation in capitals and would be submitted shortly.

3) In presenting the response to the questionnaire, the delegate of Thailand emphasized the preliminary nature of the submission. Not all the questions were answered, and Thailand would continue to explore the remaining aspects and would submit comments in due course. He also proposed an informal meeting of the Working Party to discuss the issue of safeguards. Several delegations expressed their support for this proposal.

4) One delegation noted that of the three areas being considered by the Working Party, the negotiations on safeguards under Article X of GATS were the only ones that had a precise deadline. Without disregarding the government procurement and subsidies negotiations, safeguards should be given an appropriate

degree of priority. He also recalled that a group of delegations had submitted on 29 July 1996 what could be points of discussions on this issue.

5) Other delegations reiterated the view that one of the objectives of an emergency safeguard mechanism in GATS would be to address an unforeseen situation affecting a Member's schedule of commitments. Such a mechanism would be available to the host country as an emergency measure, which by definition would be of a transitional nature. Another representative expressed reservations about the desirability of having a general safeguards mechanism, given the practical difficulties involved. He indicated that safeguards might be appropriate in the context of scheduling, where one would be tailoring a safeguard measure to the particular sector involved. Certain actions of a temporary nature could thus be taken in an appropriate specific sectoral context. Following this approach, some criteria would need to be developed, including with respect to different modes of supply. Perhaps the hardest obstacle to overcome was the determination of injury, which should be subject to objective criteria. He noted that the absence of data was a problem in services and therefore the notion of a safeguard had to be formulated in somewhat different terms than those applied in the context of GATT. The representative stated that he would circulate these ideas among the Members.

6) Some delegations supported the view that even though the questionnaire had been tailored to address the desirability and feasibility of safeguards in services, further analytical work was needed on the conceptual problems identified in the papers that had been submitted. One of these delegations suggested that the Working Party should discuss each mode of supply at a time, starting with the most complex one, which in his view was the commercial presence mode. He also proposed that the Secretariat prepare a paper, identifying possible safeguard measures applicable to the commercial presence mode, particularly in the post establishment phase. Such a paper should also identify the possible impact on other modes of safeguard measures adopted in the commercial presence mode. Finally, consideration should be given to the question of the applicability of safeguard measures to joint ventures and the practical difficulties inherent in their application.

7) One representative observed that a vital starting point for the discussion was the first question of the questionnaire relating to the justification and purpose of a safeguard measure. Another key question was 1(d), concerning the economic objectives of a safeguard, and she wondered whether the objectives listed in the question were in fact broad enough. She suggested that the protection of the interests of consumers and users under the general principles of competition law and policy should feature in any analysis of these issues in the services context. She suggested a postponement in the preparation of any paper identifying safeguards for the different modes of supply until the Working Party had conducted a more in-depth informal discussion of the answers to the Questionnaire and identified common issues that needed to be carried forward on an item by item basis.

8) In summing up the discussion, the Chairperson observed that there was general agreement on having informal consultations on this agenda item soon and indicated that she would be consulting on a suitable date for that purpose. As to

the issue of how to structure the discussion in an informal meeting, she noted that there had been proposals for an analytical input in respect of the justification and purpose of safeguards in a mode by mode analysis. As a response to those proposals, she said that she intended to circulate a non-paper under her own responsibility which would deal with some of the issues referred to, and which would be designed to focus the discussion on issues that needed to be addressed in order to make progress in the subject. Delegations were agreeable to the Chairperson's suggestion.

Negotiations on Government Procurement under Article XIII of the GATS

9) The Chairperson noted that since the previous meeting Singapore (S/WPGR/W/11/Add.16) and Hungary (S/WPGR/W/11/Add.17) had submitted answers to the Procurement Questionnaire. She also drew the attention of the Working Party to the note circulated by the former Chairman suggesting how some of the principles requiring discussion in the Government Procurement field might be linked to particular parts of the procurement questionnaire. She invited delegations to comment on this note and also to express views on what to do with information that the Working Party had from the replies to the procurement questionnaire.

10) The representative of New Zealand stated that her delegation had examined some of the key principles pertaining to government procurement in services together with the questionnaire responses received. The examination had been confined so far to the first two areas identified in the Chairman's note. Her delegation had sought to draw out areas where common threads appeared to emerge from the questionnaire responses, to highlight major questions requiring examination and to suggest some approaches to the further work of the Working Party in this area. She indicated her observations and said that she was considering to circulate them among the Members. Several delegations supported the view that the Working Party should not go through a process of examining Members' answers one by one, but instead should attempt to identify patterns in the information submitted. One delegation observed that in other regional groupings, specifically APEC and FTAA, questionnaires had been circulated and responses had been given by a large number of participants. He suggested expanding the scope of the exercise through inclusion of information gathered in those questionnaires.

11) One delegation expressed the concern that there may be duplication of work in the area of transparency. He therefore suggested that the Working Party should in the first instance focus on the basic disciplines of national treatment and MFN, and that transparency could then be taken up at a later stage. In his view, Members could consider how to incorporate national treatment and MFN in the present context, since the approach in GATS was different from the approach followed in the plurilateral agreement on government procurement. Another representative was of the view that the Working Party should cover all aspects of procurement. In his opinion, without a discussion of transparency, any provisions relating to national treatment and MFN would have limited meaning. The Working Party had to examine all relevant principles, and in the light of progress, determine how best to avoid overlap. Another delegation suggested that there should be coordination

with the GPA Committee and transparency body. Where possible, back-to-back meetings should be organized with the other two bodies dealing with procurement.

12) In regard to the Chairman's note dated 21 February 1997, the representative of Hong Kong suggested that for the sake of completeness, three more elements of multilateral disciplines be included in the discussion: first, exceptions which would go under item 2 of the basic principles; second, challenge procedures which could go under item 4 on enforcement mechanisms; and third, reporting requirements, which could be a new item or go under item 3.a. on disciplines on procurement procedures. Similarly, the representative of India requested the inclusion of question 2 on the administrative structure under item 3.a. on disciplines on procurement procedures so that the question would be covered by the substantive discussion.

13) In summarizing the discussion, the chairperson noted that the Working Party had expressed some concern about duplication of work in this area. Nevertheless, she stressed that these concerns should not prevent the Working Party from continuing to work on its mandate. In response to a proposal for coordination of meetings, she stated that consultations with the other bodies would be conducted to that effect. In light of the preceding discussion, the Chairperson suggested that the Secretariat be requested to compile the information gathered by ATEC and FTAA in the area of government procurement. The Working Party was agreeable to this suggestion. Also, the Chairperson noted that certain delegations had indicated their interest in including some issues not covered by the Chairman's note on linkages between various principles relevant to procurement and the questionnaire. She assured delegations that the discussion would cover these points. She also indicated her intention to hold informal consultations on the issue of procurement at an appropriate time.

Negotiations on Subsidies under Article XV of GATS

14) The Chairperson recalled that at its previous meeting the Working Party had established 15 May 1997 as the deadline for submissions of responses to the subsidy questionnaire (S/WPGR/W/16). She observed that once the information had been received, the Working Party would be in a better position to proceed with substantive discussions. She emphasized the importance of meeting the deadline and urged delegations to make every possible effort to that effect.

Date of the next meeting of the Working Party

15) The Chairperson stated that she would consult further on the date of the next meeting.

Working Party on GATS Rules

REPORT OF THE MEETING OF 23 JANUARY 1997

Note by the Secretariat

1) The ninth meeting of the Working Party on GATS Rules was chaired by Mr. Stuart Carre of Canada. The agenda consisted of five items: negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; negotiations on safeguards under Article X of the GATS; date of the next meeting of the Working Party; and Other Business.

Negotiations on subsidies under Article XV of the GATS

2) The Chairman stated that in light of the comments made at the eighth meeting of the Working Party on the subsidies questionnaire prepared by the Secretariat, and following further informal discussions, a revised draft of the subsidies questionnaire was before the Working Party. The Working Party approved the text and established 15 May 1997 as the deadline for submission of responses. The Chairman noted that the Singapore Declaration called for more analytical work in the area of subsidies and invited comments on the subject.

3) The representative of the Philippines made the following statement on behalf of ASEAN: •ASEAN acknowledges that an information exchange exercise in subsidies is mandated by Article XV of GATS. We note that the draft questionnaire requires detailed and comprehensive information on all subsidy programmes related to services trade administered by Members. As we have no indications as to how subsidy disciplines in services would eventually be devised, some of the responses to the questionnaire may not be clear and could prejudice the negotiations. In addition, we would like to underline that the statistical and conceptual problems associated with services data would make the information exchange exercise untenable. ASEAN is of the view that a more prudent and constructive approach is for the WPGR to work on the subsidy disciplines in parallel with an analytical exercise. As a start, the Secretariat could elaborate on the following questions: i) In light of the four modes of services, what could constitute subsidies in services? Should there be one definition for all four modes or individual definition of each mode?; ii) Is the definition contained in Article XV:1 of the Agreement on Subsidies and Countervailing Measures able to take into

account the differences in the four modes of supply?; iii) What are the trade distortive effects? How does one define and measure these effects under the four modes of supply?•.

4) Some delegations expressed the view that the information to be provided should be a narrative description, which could be comprehensive, but not at a level of detail that would prove excessively burdensome. One delegation added that Members should use the working definition contained in the questionnaire and avoid an alternative definition. She also stressed the importance of providing information covering all areas of services at all levels of government. Another delegation reiterated that the information exchange was mandated under Article XV of GATS and that Members expected to receive as much information as was available from other Members.

5) Several delegations observed that starting analytical work without an adequate information base would be very difficult. Others also acknowledged that conducting analytical work without completing the information exchange on subsidies might limit the discussion to a degree, but were nevertheless of the view that the analytical discussion should be started shortly.

Negotiations on government procurement under Article XIII of the GATS

6) The Chairman recalled that Ministers in Singapore referred to the need for more analytical work on procurement and invited comments from delegations. He also suggested that Members might consider the implications of the new government procurement negotiating mandate from Singapore for the work of the Working Party. He emphasized that the Working Party still had a negotiating mandate that they needed to respond to, but at the same time, it was important to avoid unnecessary duplication of work.

7) One delegation stated that it was clear there would be overlaps between the work of the Working Party and the work of the new working group mandated in Singapore. He noted that there were three potential fora for procurement in the WTO -- under the Government Procurement Agreement, under GATS Article XIII, and under the Singapore mandate. He expressed concern regarding the risk of contradictory discussions going on in parallel fora. He suggested deferring the establishment of an agenda for negotiations in the Working Party, at least until it became clearer as to what might develop in the new group mandated by the Singapore Ministerial.

8) Several delegations were of the view that the focus of attention of the Working Party should be its own agenda. It was premature to consider possible implications of the Singapore decision for the Working Party or how work might be coordinated with the new body. These questions would have to wait until the new body was up a running. A number of delegations were of the view that the Singapore decision should not slow down the pace of work in the Working Party. The Chairman proposed that the Working Party might use the material provided in answers to the questionnaire to consider some of the key principles that would need to be addressed when considering the GATS mandate on procurement. The Working Party agreed to do this at its next meeting, and the Chairman undertook

to circulate a short note that would provide an indication of how the questionnaire replies might relate to particular principles. The Chairman urged those Members who had not yet submitted replies to the questionnaire to make such submissions as soon as possible; if it was their intention to participate in the information gathering exercise.

Negotiations on safeguards under Article X of GATS

9) The Chairman recalled that at the last meeting Members agreed to provide answers on a voluntary basis to a series of written questions contained in the working document S/WPGR/W/15. He observed that such information would help the Working Party in its task and urged Members to do their utmost to provide written replies to the questions as quickly as possible. He also reminded delegations that some of them had undertaken to provide information on services safeguard measures contained in domestic legislation. He emphasized that in the safeguards area the Working Party needed to recognize that it was under time pressure, particularly in view of the Ministerial endorsement of the December 1997 deadline for negotiations on this subject. The Working Party established a target date of the end of February 1997, by which delegations would endeavour to provide written answers to the Chairman's questions. Several delegations confirmed their intention to submit written replies. The Chairman also noted that certain delegations had already made written submissions to the Working Party, which contained useful material for the discussion. It was suggested that the Working Party should agree upon a timetable for its work on safeguards at the next meeting.

Date of the next meeting of the Working Party

10) The Working Party agreed to hold its next meeting on Thursday, 13 March 1997.

Other business

11) The Chairman recalled that the standard practice in WTO was for the Chairpersons to rotate on a yearly basis. He noted that his term had expired and urged Members to reach consensus on the appointment of a new chairperson for the next meeting.

Working Party on GATS Rules

REPORT OF THE MEETING OF 8 AND 14 OCTOBER 1996

Note by the Secretariat

1) The eighth meeting of the Working Party on GATS Rules was chaired by Mr. Stuart Carre of Canada. The agenda consisted of six items: negotiations on safeguards under Article X of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; report on the activities of the Working Party to the Council for Trade in Services; date of the next meeting of the Working Party; and other business.

Negotiations on safeguards under Article X of GATS

2) The Chairman noted that since the last meeting of the Working Party, some of its Members had held useful informal discussions on the question of emergency safeguards under GATS. The representative of Switzerland formally introduced a submission to the Working Party (S/WPGR/W/14) which had previously been discussed in an informal meeting. He indicated that the paper sought to cover issues that would have to be addressed in deciding upon the question of emergency safeguards under GATS. The emphasis was upon conceptual issues rather than matters of form and practical modalities. The paper was presented without prejudice to the basic question as to whether emergency safeguard measures were desirable under GATS.

3) The Chairman stated that following informal consultations and discussions in the Working Party, it had been agreed that a series of questions presented by the Chairman on various aspects of the safeguards issue, supplemented by a number of additional questions proposed by delegations, would be issued as a document of the Working Party (S/WPGR/W/15). It was further agreed that Members of the Working Party would supply written answers to these questions on a voluntary basis, and that those intending to do so would endeavour to provide the answers by the time of the next formal meeting of the Working Party.

Negotiations on subsidies under Article XV of GATS

4) The Chairman recalled that the Working Party had requested the Secretariat to draft proposed language for a questionnaire that would serve as a

basis for the information exchange on subsidies relating to trade in services which was called for in paragraph 1 of Article XV. The relevant document was now before the Working Party. The Chairman also recalled that the Working Party had already agreed on an approach to defining subsidies for the purpose of an information exchange. The definition of subsidies would be that contained in paragraph 1 of the Agreement on Subsidies and Countervailing Measures, and Members were at liberty to vary or supplement this definition if they so desired, provided that any modifications were indicated at the time of supplying information.

5) Several delegations expressed the view that the definition of subsidies in the secretariat note should be treated as indicative, and that Members would be free to introduce their own variations as they saw fit. One representative proposed that the Working Party should consider excluding broad-based social subsidies affecting trade in services from the purview of the information exchange. Other delegations said that they preferred to avoid any *a priori* exclusion of a category of subsidy measures, particularly in light of the scarcity of readily available information on the subsidy policies of governments in the field of services. Another delegation emphasized the need for clarity with respect to the objectives and nature of subsidy measures, bearing in mind that due consideration must be given both to the potential for subsidies to distort trade and the legitimacy of certain social and economic aims underlying some subsidies. A representative stated that her delegation understood the information-gathering exercise to encompass both federal and sub-federal subsidy measures. An idea proposed by one delegation was to take as a starting point the definitions and disciplines of the Agreement on Subsidies and Countervailing Measures, and to see how far the mandate of the Working Party could be carried on this basis.

6) A number of delegations said that in their view, replies to the proposed questionnaire should be supplied on a voluntary basis. One of these delegations added that appropriate flexibility should be shown towards developing countries in relation to the responses required, and that any information provided should not be misused in the context of possible future negotiations. Another delegation challenged the view that responses to the questionnaire should be provided on a voluntary basis, bearing in mind that all Members were already committed to an information exchange under Article XV:1. One representative said that the proposed questionnaire was too detailed and would impose a substantial burden on delegations. He suggested that an alternative approach might be to focus on specific sectors, on the premise that subsidies in the field of services only affected a limited number of service activities. Other delegations were of the view that it would be inadvisable to truncate the scope of information-gathering efforts at the outset.

7) Some more specific proposals were made in relation to the draft questionnaire. One delegation suggested that the order of the fifth, sixth, seventh and eighth questions should be changed, such that questions seven and eight would come first, followed by question six and question five. It was also suggested that question 11 should be deleted, but this was opposed on the grounds that the question was already formulated in a manner which recognized that the relevant statistical information requested may not be available. Another proposal was for

the language of question 8 to be changed so as to ask about eligibility for subsidies rather than about the sectors and entities that have actually benefitted from subsidies. Finally, a delegation proposed the addition of two further questions, both of which focused on contrasting approaches and policies relating to subsidies in the respective fields of goods and services.

8) The Working Party agreed to hold informal consultations on this matter prior to the next meeting of the Working Party. In the meanwhile, the Secretariat would produce a second draft of the subsidies questionnaire, taking account of the drafting suggestions that had been made.

Negotiations on government procurement under Article XIII of GATS

9) The Chairman noted that nine countries -- Norway, Switzerland, Brazil, New Zealand, Japan, the United States, Canada, Colombia and Hong Kong -- had submitted replies to the procurement questionnaire. Certain delegations said that it was important that more Members submit replies to the questionnaire, as additional information on national procurement regimes would be useful for the negotiations. The Chairman observed that pressure of work had made it difficult to meet deadlines that had been set, and urged those delegations intending to do so to submit replies to the questionnaire at their earliest convenience. One delegation was of the view that while the exchange of basic information was useful and important, the time was approaching when the Working Party would need to engage in negotiations on substantive matters, such as the application of the principles of most-favoured-nation and national treatment, and transparency, to procurement in the sphere of services.

10) A delegation cautioned against the proliferation of duplicative work on government procurement in the WTO, bearing in mind proposals for further work in this field currently under consideration in the context of preparations for the Singapore Ministerial Meeting. This delegation was of the view that it would be possible to establish a division of labour that would avoid such duplication. The GATS exercise entailed substantive negotiations on such matters as MFN and national treatment. Other delegations emphasized that there already existed a negotiating mandate under Article XIII of GATS, although this did not preclude consideration of other proposals made elsewhere. One representative said that while the GATS Article XIII mandate was clear, the need to seek a balanced approach to procurement should be borne in mind when considering the recent initiative put forward in the context of the Singapore Ministerial Meeting.

Report on the activities of the Working Party to the Council for Trade in Services

11) Following extensive formal and informal discussions on the Working Party's report to the Council, the Chairman indicated that he would forward a text to the Council, in light of further informal consultations.

Date of the next meeting of the Working Party

12) The Chairman stated that the date of the next meeting of the Working Party would be fixed in due course, probably for January 1997.

Other business

Working Party on GATS Rules

REPORT OF THE MEETING OF 29 JULY 1996

Note by the Secretariat

1) The seventh meeting of the Working Party on GATS Rules was chaired by Mr. Stuart Carre of Canada. The agenda consisted of six items: negotiations on subsidies under Article XV of the GATS; negotiations on government procurement under Article XIII of the GATS; negotiations on safeguards under Article X of the GATS; work of the Working Party in relation to the Singapore Ministerial Meeting; date of the next meeting of the Working Party; and other business.

Negotiations on subsidies under Article XV of GATS

2) The Chairman noted that a particular theme in earlier discussions had been how to define subsidies in order to be able to proceed with the information exchange called for in paragraph 1 of Article XV. Several delegations had suggested that a starting point should be the experience gained under the Agreement on Subsidies and Countervailing Measures. The Chairman posed the question whether the definitions employed in Article 1 and Article 2 of this Agreement would be suitable as a basis for the information exchange on subsidies relating to trade in services. He noted that the basic thrust of the definition in Article 1 involved an actual or potential charge on the government account, or any income or price support, that conferred a benefit. Article 2 defined specificity. Thus, the notification requirements under the Agreement on Subsidies and Countervailing Measures concerned specific subsidies that conferred a benefit and involved an actual or potential charge on the government account (including revenue foregone) or any form of income or price support. The Chairman reminded Members that the present exercise did not involve a notification requirement, but merely an information exchange. Given the exploratory nature of the exercise, perhaps it should be kept as simple as possible in the first instance. Moreover, there was no sense in which information provided would be subject to legal interpretation. Several delegations reiterated the latter point, emphasizing that all the negotiating mandate called for was an exchange of information.

3) A number of delegations doubted the appropriateness of a questionnaire approach to the information exchange exercise. Others indicated that they saw little alternative to an approach based on a questionnaire. It was generally agreed that it

would be helpful to develop a set of relevant questions, but it was important not to insist upon excessive uniformity, as this would militate against the provision of useful information. The approach should be sufficiently flexible to allow Members to describe their subsidy policies in the manner they regarded as most useful for the work of the Working Party. It was also noted that if necessary, additional information could be solicited from Members at a later stage. One delegation stated that the approach adopted, including in relation to the definition of subsidy, should take adequate account of developing country considerations. Another delegation expressed the view that it would be more useful to focus upon the kinds of subsidies employed by Members, rather than upon the trade effects of such measures, since it would frequently be difficult to judge the trade effects of subsidies in a services context.

4) All delegations who spoke on the matter agreed that it was necessary to have a working definition of subsidies for the purpose of the information exchange. However, several delegations were of the view that the definitional element contained in Article 2 of the Agreement on Subsidies and Countervailing Measures was unsuitable for the present purposes. If the information exchange exercise related only to specific subsidies as defined in Article 2, this would truncate discussion in the Working Party and frustrate transparency. The suggestion was made that the working definition should be based on Article 1 of the Agreement, and that Members could then indicate additional definitional elements if they so wished. This approach was endorsed by the Working Party and the Chairman indicated that the Secretariat would draft a set of possible questions to be addressed in the information exchange exercise. The Working Party would consider the proposed questions at its next meeting.

Negotiations on government procurement under Article XIII of GATS

5) The Chairman referred to the discussions regarding government procurement that were taking place in the context of preparations for the Singapore Ministerial Meeting, and said that it was important to stay abreast of those discussions, as they may have implications for the Working Party's consideration of its negotiating mandate in this area. A number of delegations agreed with the Chairman, and one said that a proliferation of duplicative negotiating mandates and processes should be avoided. The representative of the United States said that his authorities had put forward a proposal in the heads of delegation preparatory process for Singapore. He said his government favoured a horizontal focus, believing that a single instrument covering all procurement was desirable, even if some specificities relating to services might have to be dealt with separately. Another delegation said that it should be borne in mind that a negotiating mandate already existed in services, whereas the comprehensive approach was still only a proposal.

6) The Chairman also reminded delegations that the Working Party had agreed to a voluntary exchange of information regarding national procurement regimes. So far, answers to the procurement questionnaire agreed by the Working Party (S/WPGR/W/11) had only been received from Norway (S/WPGR/W/11/Add.1) and Switzerland (S/WPGR/W/11/Add.2). A number of delegations indicated that answers to the questionnaire were under preparation in capitals and would be submitted shortly.

Negotiations on safeguards under Article X of GATS

7) The Chairman recalled that the Working Party had agreed at its March meeting to hold informal discussions on safeguards, and that it would be useful if delegations were to put forward some of their ideas on the question of an emergency safeguards mechanism in GATS. Although no additional submissions had been made to those of Australia (S/WPGR/W/5) and Thailand (S/WPGR/W/6), the Chairman proposed that the Working Party should hold an informal meeting prior to its next formal session. This proposal was supported by the Working Party. The Chairman expressed the hope that an informal setting would provide the opportunity to push the discussion forward both on substance and procedural questions. He noted that the deadline for completing the safeguards negotiations was 31 December 1997, which was less than a year and a half away, and that much work remained to be done.

8) The delegations of Egypt, India, Malaysia, Pakistan, Peru, Thailand and Venezuela submitted an informal note at the meeting which listed six points for discussion. These were definitional issues, criteria for determining serious threat of injury in trade in services, examination of emergency safeguard measures in other documents, the objectives of emergency safeguard measures in GATS, examination of possible emergency safeguard measures for different modes of supply, and special needs for developing countries. Eleven other delegations expressed their support for this proposal. Three other delegations voiced doubts about the merits of the case for emergency safeguards in GATS, but welcomed the informal note and agreed that the discussion needed to be advanced. Several delegations emphasized that many of the issues involved in this discussion were technically complex and in need of careful attention.

Consideration of the work of the Working Party in relation to the Singapore Ministerial Meeting

9) The Chairman raised the question whether the Ministerial Meeting in Singapore provided an opportunity to push forward the work of the Working Party on any front. It was for consideration whether there were any areas where new instructions from Ministers might be useful. Delegations indicated that these matters would be discussed in due course, including in the context of the heads of delegation process and the Council on Trade in Services.

Date of the next meeting of the Working Party

10) The Working Party agreed to hold its next meeting on the afternoon of Tuesday, 8 October 1996, immediately following an informal meeting that would take up the issue of safeguards.

Other business

11) No matters were raised under other business.

Working Party on GATS Rules

REPORT OF THE MEETING OF 3 JUNE 1996

Note by the Secretariat

1) The sixth meeting of the Working Party on GATS Rules was chaired by Mr. Stuart Carre of Canada. The agenda consisted of five items: negotiations on government procurement under Article XIII of the GATS; negotiations on subsidies under Article XV of the GATS; negotiations on safeguards under Article X of the GATS; date of the next meeting of the Working Party; and other business.

Negotiations on government procurement under Article XIII of the GATS

2) The Chairman recalled that the Working Party had agreed to set aside part of the present meeting for a discussion on the concept of transparency in the field of government procurement. In response to a request from one delegation, a representative from the Secretariat made a short presentation on transparency provisions contained in the Agreement on Government Procurement. The Secretariat representative said that transparency and non-discrimination were the twin pillars upon which the Agreement was founded. She identified three essential aspects of transparency. The first concerned pre-tendering procedures and the requirement for tendering entities to provide adequate and timely information of the intention to procure. Secondly, following the award of a contract, certain information relating to the award decision had to be made public. The third general aspect of transparency provisions under the Agreement related to the obligation to publish established rules and procedures in a readily accessible manner. The Secretariat representative also referred to discussions that had taken place in the Committee on Government Procurement in regard to the influence of information technology in promoting transparency, including through increased computerization of information relating to procurement.

3) Many delegations who spoke emphasized the key role of information in relation to procurement regimes, and therefore the need for a maximum degree of transparency. In this connection, information technology was crucial. One representative wondered whether the centralized collection and dissemination of information might be a task that could be suitably performed at the multilateral level. Another idea was to use the Internet as a medium for making information available in relation to procurement. The point was also made that while under

some national and regional procurement regimes all information was centralized, under others this was not the case, and trying to centralize all information might prove costly and difficult. Several delegations raised specific aspects of transparency, emphasizing the importance that they attached to them. These included the clarity and neutrality of technical specifications in tender documents, with emphasis where possible on performance rather than design, the prior specification of evaluation criteria, the establishment of clear and reasonable deadlines for all procedural aspects of procurement, and the use of bid challenge possibilities and other aspects of due process as instruments of transparency. One delegation expressed the view that transparency was not only important for suppliers, but was also useful in obliging purchasers to think carefully about the exact nature of the good or service to be purchased.

4) Some delegations expressed the view that although transparency was obviously of great importance, the need to promote non-discriminatory approaches to procurement and to respect due process were also vital elements of an open and competitive system of procurement. One delegation, supported by several others, said that it was also important to bear in mind the objective of progressive liberalization. Moreover, while transparency was undoubtedly crucial, it should not be over-emphasized. An excessive concern with transparency requirements could force governments and purchasing authorities into undesirable regulatory interventions whose effect might be to prejudice the openness of procurement markets. It was a matter of balance. Another representative observed that the GATS transparency requirements in Article III applied to Article XIII, and wondered what status any new transparency requirements relating to procurement might have within the structure of GATS as a whole. Would they be of general application, or applied selectively? Would they be linked to scheduled commitments, perhaps appearing as additional commitments? Other delegations agreed that these questions should be examined.

5) The representative of the United States made reference to the submission by his authorities of a proposal relating to procurement in the context of preparations for the Singapore Ministerial Meeting. He noted that this proposal emphasized the role of transparency, and foresaw a more gradual approach towards the question of non-discrimination in procurement. He urged the Working Party to keep abreast of the progress of discussions in the preparatory process for the Singapore meeting, since they could have implications for the work of the Working Party. In the meanwhile, he was of the view that the GATS exercise should move ahead in accordance with its mandate.

6) One delegation enquired about the actual coverage of the Agreement on Government Procurement (GPA) in terms of current procurement activity. The representative of the Secretariat said that extreme caution was required in making any estimates of covered procurement. However, it seemed that most central government entities (excluding defence-related entities) were covered by all GPA signatories. Perhaps somewhere between one-half and three-quarters of all sub-central procurement was similarly covered. It was important to note that these crude estimates did not capture the considerable variations in coverage that existed among countries. No estimate could be made of coverage in respect of other procurement entities, such as parastatals. One delegation emphasized the difficulty

of making reliable quantitative estimates, and added that there were vast gaps in coverage, worth trillions of dollars worldwide.

Negotiations on subsidies under Article XV of GATS

7) In considering the next steps in work on subsidies, particularly in relation to the requirement to determine a future work programme and to exchange information on subsidies related to trade in services, several delegations expressed the view that it was essential to arrive at a definition of subsidy. It was also suggested that perhaps a working definition could be agreed upon, without prejudice to any future decision regarding the nature of subsidy disciplines under GATS. A delegation said that if the concern was that the negotiations may be prejudged through the early establishment of a definition of subsidy for information gathering purposes, one way of avoiding this risk would be to focus in the first instance on the objectives of subsidies. Another delegation said that at least in the first instance, the Working Party should look at a broad definition of subsidy, going beyond the question whether a subsidy involved a direct budgetary contribution from government. The suggestion was made that as a first step, the Working Party might consider whether the Agreement on Subsidies and Countervailing Measures provided any useful guidance in the matter of a definition. The Chairman urged delegations to reflect further on this issue, which would be taken up at the next meeting.

8) A number of delegations addressed the question whether it was appropriate to distinguish between different categories of subsidy. One of these delegations made a three-fold distinction between subsidies directed explicitly at support of particular industries, subsidies designed to meet broad social and economic objectives, and other forms of government support. Another delegation said subsidy practices might be divided between those that were broad-based and permissible, those with trade effects that may need to be disciplined, and those that were clearly discriminatory and actionable, in that they focused on specific sectors or activities. A number of delegations agreed that categories such as these may correspond to different levels of discipline and available remedies that might be established, in a similar fashion to the approach adopted in the field of goods. However, further analysis would be required on this point. A delegation emphasized his view that while it may be warranted to make these kinds of distinctions, no subsidy practices should be excluded *a priori* from examination by the Working Party. A number of delegations were of the view that although it may be legitimate to exclude certain types of subsidy, such as broad-based social subsidies, from disciplines under GATS, such an approach should take into account the effects of subsidies as well as their aims. One delegation stated that any subsidy disciplines would need to accommodate the existence of different modes of supply under GATS. Referring to an earlier discussion in the Working Party, as well as to the Chilean submission in S/WPGR/W/10, a delegation expressed the view that it was as yet unclear that in choosing whether to emphasize a normative or a remedial approach to subsidy disciplines, the normative approach should be paramount. It was yet to be established that injury and causality investigations would be especially difficult in services. More generally, a good deal of analysis remained to be done in relation to the subsidy issue.

Negotiations on safeguards under Article X of GATS

9) The Chairman recalled that the Working Party had agreed it would be useful to discuss safeguards further in an informal setting, and that such a discussion would be more fruitful if it was based on written submissions by Members. Although certain delegations had indicated their intention to submit papers on safeguards, in addition to those already submitted by Australia and Thailand, these had not yet been forthcoming. The Chairman indicated his preference to wait for some written submissions before fixing a date for an informal meeting.

Next meeting of the Working Party

10) The Chairman said that the next meeting would be scheduled towards the end of July, if possible to coincide with meetings of the Committee on Subsidies and Countervailing Measures.

Working Party on GATS Rules

REPORT OF THE MEETING OF 28 MARCH 1996

Note by the Secretariat

1. The fifth meeting of the Working Party on GATS Rules was chaired by Mr. Stuart Carre of Canada. The agenda consisted of five items: negotiations on subsidies under Article VX of the GATS; negotiations on emergency safeguards under Article X of the GATS; negotiations on government procurement under Article XIII of the GATS; date of the next meeting of the Working Party; and Other Business.

Negotiations on subsidies under Article XV of GATS

2. The Chairman observed that this was the first time the issue of subsidies had been placed on the agenda. He recalled that the negotiating mandate in Article XV acknowledged that subsidies may, in certain circumstances, have distortive effects on trade in services. The mandate called upon Members to enter into negotiations with a view to developing the necessary multilateral disciplines to avoid such trade-distortive effects. The negotiations were also to address the appropriateness of countervailing procedures. The mandate further stated that the negotiations would take into account the role of subsidies in relation to the development programmes of developing countries and take into account the needs of Members, particularly developing country Members, for flexibility in this area. In addition, the Chairman observed that a footnote to paragraph 1 of Article XV required that a work programme be established to determine how, and in what time-frame, negotiations on multilateral disciplines were to be conducted. Finally, the mandate also stipulated that Members would exchange information concerning all subsidies related to trade in services that they provided to their domestic service suppliers.

3. The Chairman drew the attention of delegations to a background note by the Secretariat (S/WPGR/W/9) introducing the subject. In addition, Chile had circulated a document on subsidies immediately prior to the meeting, which would be circulated as a submission to the Working Party. In introducing his paper, the representative of Chile noted that subsidies could distort trade in services in various ways and could undermine the value of market access commitments under GATS. Moreover, subsidies could take many forms, not necessarily involving a financial

contribution by governments. It was essential to distinguish between broad-based subsidies aimed at achieving social and other national objectives, or at addressing market failure, and those subsidies designed to secure commercial advantage for a particular sub-set of services or service suppliers. These different categories of subsidy should not be treated in the same manner under GATS. It would be helpful in clarifying these issues if Members were to exchange information regarding their subsidy programmes, and a good starting point might be the notification obligations under Article 25 of the Agreement on Subsidies and Countervailing Measures.

4. The representative of Chile noted that enormous difficulties would be encountered in any attempt to define injury or causality under subsidy investigations in services, not least because of the complementarity in some circumstances of different modes of supply. A question would also arise as to the nature of countervailing measures in services. Moreover, a countervailing instrument could be misused for protectionist ends. These considerations favoured an approach that would focus on commitments to eliminate subsidies or reduce their effect on trade.

5. Recognizing the inherent complexity of the subsidy issue in services, many delegations urged a careful and systematic approach to the negotiating mandate. It was important to take full account of the structure of GATS, and the fact that certain subsidy disciplines already existed within this structure. Several delegations also noted that some lessons could be gleaned from the experience of dealing with subsidies in the field of goods, although there were important differences as well when it came to services. The difference in emphasis between *a priori* disciplines on subsidies and reliance on anti-subsidy remedies should be borne in mind. One representative stated that in exploring the kind of subsidy disciplines that might be developed, due consideration should be given to the needs of developing countries. Many delegations stressed the need for gathering information, including in relation to the subsidy practices of Members.

6. In summing up the discussion, the Chairman observed that many delegations had called for caution and careful analysis as the Working Party came to grips with the Article XV negotiating mandate. He urged delegations to put their ideas down on paper, and to give further consideration to those aspects of the negotiating mandate that called for the establishment of a work programme and the exchange of information. The Working Party agreed that the Secretariat would prepare two papers. One would identify subsidy and countervailing measure provisions applicable to services in regional agreements. The other would list subsidy measures that had been inscribed in Members' schedules of specific commitments.

Negotiations on safeguards under Article X of GATS

7. The Chairman noted that differences of view had been expressed as to whether the Article X negotiating mandate committed Members to establish safeguard disciplines, or only to explore the possibility of doing so. He urged that this issue be set aside, and that delegations focus instead on the substantive question of what a safeguard provision might be used for, and how such a provision might

work. These were the issues to be addressed in considering the mandate for a decision on “the question of emergency safeguard measures based on the principle of non-discrimination.” The Chairman observed that those arguing against the establishment of a safeguard mechanism had based their case on the view that emergency safeguards were intrinsically unnecessary in the field of services, that the nature and scope of specific commitments under GATS rendered safeguards superfluous, and that methodological and statistical difficulties in designing and implementing a safeguard provision were so severe as to outweigh any possible benefit from doing so. On the other hand, those defending the case for a safeguard had argued that action under Article XXI to withdraw or modify specific commitments was not designed as an emergency safeguard, and could not meet the need for such a provision. Those in favour of a safeguard instrument also argued that higher levels of scheduled commitments would likely be forthcoming if subsequent emergency safeguard action were possible, that some domestic legislation may already contemplate safeguards for services and would need to be accommodated in GATS, and that methodological and statistical challenges were not sufficient reason for dispensing with any further consideration of the merits of a safeguard provision. The Chairman said that these different views needed to be developed and defended with greater specificity if the Working Party were to make further progress. He urged delegations to focus on this challenge and to follow the example of those who had already made written submissions. In response to a request from several delegations, the Chairman agreed to circulate his introductory comments as an informal document.

8. In opening the discussion, the Chairman also drew the attention of delegations to a note prepared by the Secretariat entitled “Emergency Safeguard Measures in GATS: The Applicability of Concepts Applied in the WTO Agreement on Safeguards” (S/WPGR/W/8). Several delegations agreed that more work should be done in relation to the question whether a safeguard mechanism should be developed in GATS. A number of these delegations undertook to prepare written submissions. Certain representatives said that in addressing the various negotiating mandates before it, the Working Party should accord balanced treatment to all of the subjects, bearing in mind the differences in priorities and interests that existed among Members.

9. Some delegations reiterated earlier statements regarding the case for and against a safeguard mechanism. Among the important issues to be addressed as the Working Part deliberated further, delegations identified the questions of how to define an emergency, how to accommodate the needs of developing countries, how to define critical circumstances, how to provide for temporary safeguard action, and how to address differences arising from alternative modes of supply. At the suggestion of a number of delegations, the Chairman proposed that after more written submissions had been received, the Working Party should hold an informal meeting to discuss safeguards in more depth, and consider the next steps to be taken in pursuit of the negotiating mandate. Members of the working Party agreed with the Chairman’s suggestion. It was also agreed that safeguards, like the other two negotiating subjects under the Working Party’s mandate, would remain for the time being on the agenda of future meetings.

Negotiations on government procurement under Article XIII

10. The Chairman recalled that at its previous meeting, the Working Party had agreed that it would not take up government procurement in a substantive manner at the present meeting, but rather would seek to secure agreement on a set of questions that Members would attempt to answer in regard to their procurement regimes. An informal meeting had been held on 25 March 1996, at which delegations had come close to agreeing on an appropriate set of questions. The Chairman recalled the understanding that a pragmatic approach would be adopted to information-gathering, in order to ensure that this did not become an end in itself, thus crowding out substantive discussion. Delegations would make their best endeavours to provide all the information sought. Notwithstanding the voluntary nature of the exercise, the Chairman urged the Working Party to agree upon a date by which delegations would provide information. The Working Party agreed on the set of questions drafted by the Secretariat and modified at the informal meeting, and also agreed that 28 June 1996 would be the date by which delegations would attempt to provide replies to the questions. In the meantime, the set of questions would be issued as a working document.

Next Meeting of the Working Party

11. The Chairman said that the date of the next meeting of the Working Party would be set to coincide with a meeting of the Committee on Government Procurement.

Working Party on GATS Rules

REPORT OF THE MEETING OF 23 FEBRUARY 1996

Note by the Secretariat

1. The fourth meeting of the Working Party on GATS Rules was chaired by Mr. Stuart Carre of Canada. The agenda consisted of four items: negotiations on government procurement under Article XIII of the GATS, negotiations on emergency safeguards under Article X of the GATS, next meeting of the Working Party, and Other Business.

Negotiations on Government Procurement under Article XIII of the GATS

2. The Chairman observed that in deciding how to respond to the Article XIII negotiating mandate on government procurement, it was important to consider what lessons could be drawn from the existing plurilateral Government Procurement Agreement (GPA). In particular, he considered it would be useful to understand why the GPA had not attracted broader membership. One representative said that her authorities had subscribed to the Tokyo Round Agreement on Government Procurement, but had decided not to participate in the Uruguay Round Agreement because of its reciprocity-based discriminatory features. This decision had not, however, influenced the open and non-discriminatory approach to procurement maintained by her authorities. Another representative indicated that his country also maintained open, non-discriminatory and transparent procurement arrangements, but had not signed the GPA. Among the reasons for this were the fact that with its current membership, the GPA did not seem to offer significant procurement opportunities for developing countries, and membership implied significant administrative costs.

3. One delegation expressed the view that a key element of a sound procurement regime was transparency. Transparent procurement arrangements required timely publication of information on tenders and tendering decisions, equitable procedures based on clear criteria, and effective arrangements to deal with any disputes that may arise. The establishment of such arrangements did not necessarily require detailed or cumbersome procedures. A number of other delegations agreed that transparency was very important in the field of procurement. It was suggested that transparency should be the focus of discussion at a future meeting. Several delegations emphasized that in dealing with the

GATS negotiating mandate on procurement, it should be borne in mind that there were different models or approaches to the development of a multilateral procurement regime from which governments could choose.

4. The Chairman recalled that at the last meeting of the Working Party, the Secretariat had been asked to prepare a note on alternative approaches to information gathering on Members' procurement regimes. The resulting document was to be found in S/WPGR/W/7 and Addendum 1. The Chairman noted that while no delegation had questioned the need to improve the information base available to the Working Party, certain differences of emphasis were apparent as to how this might best be achieved. A number of delegations stressed the need for a systematic and reasonably detailed approach based on a questionnaire, even if this proved relatively time consuming. Other delegations emphasized a more flexible and informal approach to the issue, which would not be overly burdensome upon governments. Most of these delegations also expressed the view that information should be gathered on a voluntary basis. Among the other issues mentioned by delegations, upon which more information might be useful, were the reasons why countries had not signed the GPA, the economic impact of procurement activity, and the experience of governments with procurement regimes under regional trade agreements. It was also suggested that use might be made of information on national procurement regimes contained in the country reports prepared for the Trade Policy Review exercise. Several delegations said that whatever approach was adopted, the Working Party should be careful not to allow the search for information to become a substitute for engagement in serious discussion of the substantive issues involved in dealing with the Article XIII negotiating mandate.

5. Members agreed that the Secretariat should draw up a list of questions that governments might be requested to answer. The Chairman said that such a document would be prepared for the next meeting of the Working Party, at which time he hoped agreement could be reached to initiate an information-gathering exercise. The Chairman also proposed that at the next meeting but one, the Working Party should focus explicitly on the question of transparency in the field of government procurement. Following the suggestion of certain delegations, he also proposed that the Secretariat be available at that same meeting to answer any questions that Members might wish to raise in regard to the GPA. The Chairman informed the Working Party that, as agreed at an earlier meeting, he had conferred with the Chairman of the Committee on Government Procurement, and had agreed to maintain contact as work proceeded.

Negotiations on Safeguards under Article X of GATS

6. A number of delegations reiterated their view that it was necessary to develop an emergency safeguards mechanism in GATS. An escape clause was essential if Members were to continue to schedule specific commitments and support progressive liberalization of trade in services. Otherwise, Members would have no means to deal with unforeseen circumstances that caused or threatened injury to domestic industry. Several delegations said that the immediate task before the Working Party was to explore and define concepts necessary for a safeguard provision. In this connection, work was needed on such concepts as domestic

industry, injury, "imports," and like services. A central issue was how to design possible safeguard measures in the light of commitments under GATS based on modes of supply. In this connection, a number of delegations referred to particular problems associated with the concept of safeguards under those modes dealing with commercial presence and the movement of natural persons, where safeguard measures in a post-establishment context may be undesirable. Some delegations also observed that the nature and duration of remedies needed to be examined. Statistical problems would have to be addressed. A further question was whether rules of general applicability could be developed, or whether a sectoral focus was called for. One delegation said that while there was no doubt that practical difficulties and conceptual challenges would arise in the design of any safeguard mechanism, these factors should not prevent Members from examining the fundamental question as to whether or not there was a case for an emergency safeguard provision under GATS.

7. Other delegations continued to express reservations about the desirability of a safeguard mechanism under GATS, both on conceptual and practical grounds. In the view of some of these delegations, it would be misleading to rely too heavily on safeguard provisions relating to goods as a model for provisions in services. This was in part because import surges of the kind that might occur in the case of goods were not a phenomenon typically encountered in the field of services. Moreover, the design of GATS permitted Members to proceed gradually with liberalization commitments. Some delegations were of the view that Article XXI provided a suitable vehicle for addressing problems that may arise as a result of commitments taken under GATS. One delegation suggested that the possibility of a more flexible use of Article XXI provisions should be considered as a potential safeguard mechanism, and noted that straightforward reliance for such purposes on Article XXI as now constituted could lead to an excessively frequent use of the provision. Another delegation also noted that Article XXI did not allow action to be taken immediately, and required compensatory adjustments in Members' specific commitments.

8. A number of delegations argued that the wording of the Article X negotiating mandate meant that Members were committed to developing a safeguard mechanism. Other delegations contested this interpretation, arguing that both the wording of the mandate and the history of its negotiation indicated that no commitment had been made to agree on a safeguard provision. Rather, Members had agreed to explore the case for such a provision. Some delegations said that what was important at this stage was that Members should engage seriously in negotiations on the subject, and not merely state a position for or against a safeguard mechanism. One delegation said that it may be necessary to acquire more experience of the operation of GATS before deciding whether to institute an emergency safeguard provision.

9. In response to a request from a number of delegations, the Chairman said that the Secretariat would prepare a further note on safeguards, focusing on the applicability to trade in services of concepts and principles used in the goods context in the Agreement on Safeguards. This note would be available at the Working Party's next meeting.

Next Meeting of the Working Party

10. The Chairman said that the date of the next meeting would be decided in consultation with delegations.

Other Business

11. No matters were raised under Other Business.

Working Party on GATS Rules

REPORT OF THE MEETING OF 8 DECEMBER 1995

Note by the Secretariat

1) The third meeting of the Working Party on GATS Rules was chaired by Mr. Stuart Carre of Canada. The agenda consisted of four items: negotiations on government procurement under Article XIII of the GATS, negotiations on safeguards under Article X of the GATS, next meeting of the Working Party, and other Business.

Negotiations on Government Procurement under Article XIII of the GATS

2) The Chairman drew the attention of Members of the Working Party to a note by the Secretariat on government procurement of services (S/WPGR/W/3). Several delegations said they found the note a useful introduction to the issues. A number of delegations observed that the lack of fully multilateral rules on government procurement represented a significant gap in the multilateral trading system. It was also stated that it would be desirable to have common procurement rules covering both goods and services. Some delegations indicated their strong interest in exploring ways of inducing greater participation in disciplines on procurement. Among the important disciplines identified by delegations for inclusion in rules on procurement were most-favoured-nation treatment, national treatment, market access and effective enforcement. Delegations also laid particular emphasis on transparency, which was not only about publication of relevant rules, but also details of procedure and criteria for taking decisions. One delegation expressed the view that procurement disciplines should be comprehensive, covering such matters as the development of tender specifications on the basis of performance rather than design, reasonable qualification conditions for bidding, clear award procedures, and adequate opportunity to challenge contract award decisions.

3) Several delegations considered that it would be useful for members of the Working Party to consider why more governments had not signed the Government Procurement Agreement (GPA). While recognizing that this was an important question, some delegations cautioned against assuming too strong or explicit a link between the GATS negotiating mandate and the GPA. The nature

of the relationship between the two would emerge from the work of the Working Party, and also as experience was acquired with the GPA. Some delegations of governments who were signatories of the GPA said that they attached importance to encouraging others to join. One representative said her authorities had determined that the potential gains from signing the GPA were insufficient to outweigh the administrative costs of membership. Moreover, this assessment had been made against the background of a deregulated, non-preferential, and open government procurement policy that stressed value for money under competitive market conditions. Several delegations acknowledged that balance was required -- the attainment of broad-based commitments among governments on procurement should not be compromised by overly burdensome procedural and administrative requirements. On the other hand, the latter requirements must be strong enough to guarantee predictable market access.

4) Many delegations expressed the view that the next step the Working Party should take was to improve the information base on procurement. Some delegations suggested that information should be exchanged on national procurement requirements and procedures, as well as on laws and regulations. While some considered that a questionnaire might be designed for this purpose, others were in favour of a voluntary exchange of information along somewhat less structured lines, and still others thought a survey might be useful. One delegation said that it may be helpful to review existing procurement disciplines under the WTO. In view of the importance attached by delegations to the information-gathering aspect of the Working Party's activities at this early stage, the Chairman suggested that the secretariat would prepare a brief note on different approaches to the collection of information. The note would be an input into discussions of these issues at the next meeting of the Working Party. Delegations were agreeable to the chairman's suggestion.

5) In summing up the discussion, the Chairman said that the Working Party had held a useful preliminary exchange of views on the issues that would have to be addressed in future meetings. He referred to the critical role of information gathering for future work. He also noted the inverse relationship that might exist between burdensome procedures and a broad commitment to procurement disciplines. A question that had been raised and would seem to warrant further consideration was why more governments had not joined the GPA. He looked forward to further reflection on these and other matters in subsequent meetings, and urged delegations to bring forward information and views that would contribute to the work. The Chairman also indicated that he would consult with the Chairman of the Committee on Government Procurement in order to identify areas of common interest, and would report back to the Working Party on these consultations.

Negotiations on Safeguards under Article X of the GATS

6) The Chairman drew the attention of the Working Party to a submission on safeguards by Australia (S/WPGR/W/5). The Chairman also noted that the Secretariat had produced a further note on procedures for safeguards in various

trade agreements (S/WPGR/W/5). In introducing the Australian paper, the representative of Australia pointed out that the paper was basically non-judgemental, seeking to set out some of the issues that would have to be addressed by the Working Party in considering the development of an emergency safeguard mechanism in services. Among these were the fashion in which different modes of supply should be treated, the nature of measures available, the relationship between trade liberalization and a safeguard mechanism, and the question of compensation.

7) The representative of Thailand presented a paper explaining why, in Thailand's view, it was desirable to develop emergency safeguards in GATS. An emergency safeguard was required because existing mechanisms did not offer an adequate safety valve to deal with adverse circumstances that might arise as a consequence of a Member's specific commitments. More work was required, however, on the precise nature of a suitable mechanism. Thailand intended to circulate its paper as a working paper of the Working Party. Several delegations expressed support for Thailand's view, and agreed there was a need to explore the issue further. One delegate referred to an idea he had raised before -- that Article XXI (modification of schedules) might be used as a vehicle for introducing the necessary flexibility when emergency safeguard action was required. Other delegations repeated views expressed in previous meetings, to the effect that the design of any safeguard instrument in the field of services was a highly complex matter, fraught with practical difficulties. Several of these delegations also expressed doubt about the need for such an instrument, but expressed willingness to continue exploring the matter.

8) In summarizing the discussion, the Chairman noted that differing views were emerging in regard to the case for an emergency safeguard provisions in GATS. These views needed to be developed further, and he urged delegations to do so. He also urged delegations to provide information to the Working Party on any safeguard provisions they might have in national legislation.

Next Meeting of the Working Party

9) It was agreed that the next meeting of the Working Party would be held in February 1996, on a date to be determined .

Working Party on GATS Rules

REPORT OF THE MEETING HELD ON 18 OCTOBER 1995

Note by the Secretariat

1) The second meeting of the Working Party on GATS Rules was chaired by Ambassador Christer Manhusen of Sweden. The agenda consisted of four items: appointment of a chairperson, safeguard negotiations under Article X of the GATS, the next meeting of the Working Party, and other business.

Appointment of a Chairperson

2) The Chairman indicated that despite consultations on the appointment of a chairperson for the Working Party, a consensus had still not been achieved. He stressed that Members should come to a decision in the very near future.

Safeguard negotiations under Article X of the GATS

3) The Chairman noted that no delegations had yet made written submissions on the question of safeguards for services. The representative of Australia indicated that her authorities were working on a paper that might be available for the next meeting of the Working Party. The Chairman reminded delegations that a background paper by the Secretariat (S/WPGR/W/1) had been before the Working Party at its first meeting, and also noted that another Secretariat paper (S/WPGR/W/2) had been prepared for the second meeting, which examined safeguard provisions on services in a number of regional trade agreements. He invited delegations to comment on these papers, and to offer any other ideas they may have on the issues before the Working Party.

4) Noting that an argument for having an •emergency• safeguard provision in GATS, similar to that of Article XIX of GATT, was that such a mechanism might induce further liberalization, one delegation wondered whether this would indeed be the effect of such a provision. The possibility that a liberalizing outcome might result from the introduction of a safeguard should be weighed against the risk that such a mechanism might also be turned to protectionist ends. Moreover, there were formidable technical difficulties to be overcome in establishing a viable safeguard. Among the issues that would have to be addressed were the definition of •like product,• the determination of injury and causality, the definition of •domestic• industry in the light of commercial presence, and the nature of appropriate

remedies. In addition, the statistical requirements for managing a safeguard instrument were considerable, and the requisite information was simply not available at present.

5) This delegate said that the question of safeguard action under Mode 3 (commercial presence) was particularly delicate, as once a commercial presence had been established, safeguard action might imply some form of •disestablishment• -- a prospect that more than one delegation considered highly undesirable. In any event, it would be difficult to reconcile the notion of temporary relief via safeguard action with any disestablishment requirement under Mode 3, although it might be possible to envisage a safeguard measure under Mode 3 that would inhibit investments that had not yet occurred. As regards cross-border trade (Modes 1 and 2), safeguard measures would often prove difficult to enforce. Enforcement would be easier under Mode 4 (movement of natural persons), but would nevertheless require the establishment of enforcement machinery.

6) Several other delegations that spoke supported these views regarding the complications involved in designing and implementing an emergency safeguard. All the delegations that acknowledged these problems also stated that it would be premature to close off the discussion. More reflection was needed, as well as more experience with the operation of GATS. A representative was of the view that reflections on the case for an emergency safeguard in services should take account of the absence of provisions on anti-dumping and countervailing actions under GATS. One delegation raised the possibility of adapting Article XXI of GATS in order to provide an accelerated procedure for modifying a schedule, comparable to what is already permitted in Article X:2 as a temporary arrangement pending the completion of negotiations on emergency safeguard measures. Another delegation was of the view that in the long run, there was indeed a case for developing a safeguard instrument. He said that while •safety valves• of various kinds already existed, these were not adequate in the kind of situation envisaged under emergency safeguards. Other representatives suggested that those who believed there was a need for a services safeguard should explain in written submissions why they considered that this was the case.

7) One delegation wondered what the implication would be for a Member's right to use a services safeguard provided for in domestic legislation if no such provision existed in the GATS. A representative of the Secretariat expressed a preliminary view on the matter. He said that in the absence of a safeguard provision in the GATS, Members would be unable to suspend the application of their specific commitments in the manner permitted, for example, under Article XIX of GATT. The possibility always existed, however, of renegotiating a commitment under Article XXI. The Chairman suggested that the Working Party might revert to this question in due course if any delegation so wished.

8) In summing up the discussion, the Chairman said that the exchange of views in the working Party had been useful, and more work would be required along these lines. It was clearly premature for conclusions to be drawn. He urged delegations to make written submissions to the Working Party, particularly those who perceived a need for a safeguards mechanism. The Chairman also indicated that in response to requests made at the meeting, the Secretariat would try to identify instances in which safeguard mechanisms in agreements relating to trade in services had been invoked, and would also

provide available information on procedures and criteria established under regional trading agreements for the invocation of safeguard measures.

Next meeting of the Working Party

9) It was agreed that the next meeting of the Working Party would be held on Friday, 8 December 1995. The Working Party would first take up the GATS Article XIII mandate on negotiations in relation to government procurement, and then resume its discussion on safeguards.

Other Business

10) No matters were raised under other business.

WORLD TRADE ORGANIZATION

(95-2510)

Working Party on GATS Rules

REPORT OF THE MEETING HELD ON 17 JULY 1995

Note by the Secretariat

1. The first meeting of the Working Party on GATS Rules was chaired by Ambassador Christer Manhusen of Sweden. The agenda consisted of seven items: appointment of a chairperson, participation of observers, organization of work, requirements for technical assistance from the Secretariat, safeguards negotiations under Article X of the GATS, future meetings of the working party, and other business.

2. The Chairman noted that the Working Party on GATS Rules had been set up by the Council on Trade in Services to carry out the mandates on safeguards, government procurement and subsidies carried over from the Uruguay Round. Article X of GATS required that multilateral negotiations be held on the question of emergency safeguards, the results of which were to enter into force by 1 January 1998. Article XIII of GATS called for multilateral negotiations on government procurement within two years of entry into force of the Agreement. Finally, Article XV of GATS stipulated that negotiations would be held with a view to avoiding trade-distortive effects of subsidies and addressing the appropriateness of countervailing procedures. The Working Party was required to establish a work programme to determine how, and in what time-frame, negotiations on these multilateral disciplines would be conducted.

Appointment of a Chairperson

3. The Chairman indicated that consultations were continuing on the appointment of a chairperson for the working party. He noted that the names of two candidates had been put forward, but that consensus had not yet been achieved. The Chairman indicated that he would continue his consultations in the hope of settling the matter before the next meeting of the Working Party.

Participation of Observers

4. On the question of observers, the Chairman suggested that the Working Party should follow the precedent set by the Services Council. This would mean that the same governments invited to the Services Council would also be invited to meetings of the Working Party, along with four international organizations --

namely, the World Bank, the International Monetary Fund, UNCTAD, and the United Nations. The Working Party agreed to this proposal.

Organization of Work

5. The Chairman reminded members of the Working Party that two decisions had already been taken in the Services Council concerning the manner in which the Working Party would organize its work. The first was that the Working Party would take up the three subjects it was mandated to address in the order that they appeared in the GATS. This meant that following safeguards, the Working Party would take up government procurement and then subsidies. The second decision was that the Working Party would begin work on each of the three subjects in a staggered fashion at intervals of four months. Thus, work on safeguards would start at the present meeting, followed by government procurement around November 1995, and subsidies in March 1996. One delegation suggested that meetings on these subjects in the services sphere should, as far as practicable, be conducted back-to-back with other WTO meetings on the same subjects. The Working Party agreed that in future it would attempt to co-ordinate its meetings in this manner.

Requirements for Technical Work by the Secretariat

6. The Chairman noted that it had been agreed at the first meeting of the Services Council, on 1 March 1995, that the Secretariat would prepare background notes on each of the three topics to be addressed by the Working Party. He said that it was reasonable to anticipate that the Secretariat might be asked to prepare additional notes as the work proceeded, and that therefore the possibility should be left open for Working Party requests to be made on an *ad hoc* basis.

Safeguard Negotiations under Article X of GATS

7. The Chairman drew the attention of members of the Working Party to the Secretariat background note on safeguards, contained in document S/WPGR/W/1. He indicated that the Secretariat paper was intended as a preliminary discussion of some basic issues, which gave rise to the questions summarized in paragraph 17 of the document. The note had avoided addressing issues of detail concerning the nature and scope of possible safeguard action or the precise modalities of a safeguard instrument, on the grounds that a number of more basic issues should be considered beforehand. By examining safeguards in relation to each of the four modes of supply, the note demonstrated that the case for safeguard action was not necessarily the same under different modes. Many delegations expressed their appreciation for the Secretariat note, which they considered a useful starting point for their deliberations.

8. One representative raised the question whether examples could be found of safeguard measures already in existence in the services area. In his experience, such measures were few, and it might be useful to consider why this was the case. Perhaps the answer lay in the fact that services sectors were already sufficiently protected, or that such measures simply did not make practical sense. The Working Party agreed that the Secretariat would look for examples of the use of safeguard measures in other international agreements dealing with trade in services.

9. Another representative expressed the view that any consideration of possible safeguards instruments would need to take account of the difficulties that exist with statistics in the field of services. The issue was how to deal with such matters as injury, or more generally with the preconditions that might trigger a safeguard action, in the absence of an adequate statistical base. The Chairman agreed that this could indeed be a problem, and indicated that the forthcoming Secretariat paper on statistical issues in services may provide a useful background against which to consider the question further at a later date.

10. Several delegations noted that the negotiating mandate on safeguards, set out in Article X of GATS, did not prejudge the question whether a safeguard instrument was necessary or desirable. In particular, it was unclear what the justification might be for a safeguard measure taken in the context of establishment trade. In this case, a safeguard would constitute a departure from national treatment, resulting in discrimination between national and foreign investors in the domestic market. Some delegations also felt that the case for safeguard provisions had to be considered in the light of the nature and extent of existing commitments and of the way in which specific commitments were scheduled under GATS. Moreover, in view of the fact that current GATS commitments had entered into force in the absence of a safeguard instrument, it would seem legitimate to consider the case for a safeguard provision in the context of future, higher levels of commitment by Members.

11. Summing up, the Chairman said that the Working Party had had a useful preliminary exchange of views, and many delegations had indicated their intention to reflect further on these matters before they were discussed again in the Working Party. He encouraged delegations to make written submissions to the Working Party, in order to facilitate future discussions.

Future Meetings of the Working Party

12. The Working Party agreed that for the foreseeable future it would hold meetings approximately every two months. The next meeting of the Working Party would be held on Wednesday, 18 October 1995.

Other Business

13. No matters were raised under other business.
